Several things are occurring which should, we think, fill honorable men who served in the army from high motives with a good deal of honest shame, and which they should not witness in silence. One is the appearance on the scene, as their chief representative in making demands on national gratitude, of a noisy man in the person of Tanner, who does not appear ever to have distinguished himself on the field. He was, when wounded, a straggler, away from his regiment, and was lying down under an apple tree reading, in what was apparently a safe place, when a suddenly opened artillery fire took his legs off. He was mustered out of the service in one year after his enlistment, when only eighteen years old, and has since then in no way distinguished himself in civil life, except as a persistent office-seeker and voluble talker. It is not a reflection on him, however, to say that it seems to the rest of the world an extraordinary and somewhat humiliating circumstance that out of a million and a quarter of survivors of the war, there is nobody better than Tanner to state the claims of the veterans on the country. Surely there must be still extant among them some one who could champion their cause with better titles to public respect both as a man and as a soldier than his are.

Another thing which must be mortifying to the more self-respecting element of the Grand Army is the way in which the present controversy is stripping the soldiers who fought in the war of all poetic drapery in the eyes of the younger generation of Americans. Men over forty who saw the thin and ragged battalions which came back from the war, or visited the army in the field, know well that there is no buncombe in the stories of the suffering and self-sacrifice of those days; that the Union was really saved by the devotion of men who were ready to die for it or did die for it. But the younger men who are now rapidly coming into possession of the country and its affairs, who know nothing of the war but what their fathers have told them, are fast losing all their old and hallowed illusions about the motives which took the bulk of our troops to the field. "Veteran" is becoming in their eyes a synonym for "bummer" or "dead beat," and they begin to listen to the clamor for pensions very much as they listen to the arguments by which the street casual enforces his demand for a quarter on a cold night. It is getting to be difficult to make them believe that men went to the war in a glow of patriotic fervor, and not in the hope of filthy lucre. Any one who thinks this an exaggerated statement must remember that we have within a few months witnessed the appearance on the scene, on behalf of the veterans, of the argument that dishonorable discharge, no matter for what—cowardice, theft, drunkenness, or fraud—ought not to bar a man's claim to a pension; or in other words, that when the day comes for the nation to reward its saviors in cash, the scamp who was drummed out as a disgrace to the service ought to receive just the same consideration as the man who always stood fast in the fighting line, and was, both in battle and on the march, cheerful, obedient, faithful, and uncomplaining. Did any body of men ever before submit in silence to the operation on their own person and character of such a *reductio ad absurdum*?

The work of demolition, however, has gone even further than this. The views which some of the veterans and their friends are giving out as to the nature and object of military service in a free State, really give a *bouffe* air to the war and its results. The notion, for instance, that if the army saves a country, it ought to be allowed to treat the revenues thereof as the private property of the men; that laws regulating pensions ought not to be construed or administered like other revenue laws, but simply as general directions to spend liberally; that it is proper for an army, after being mustered out of the service, to form itself into a political party for the purpose of securing large dividends for the members out of the national exchequer—all these present a modern national army in an absolutely new light, and point to the old Italian plan of carrying on war by contract with a Boss fighter, agreeing to pay him a fixed sum for victory, and exacting large bonds as security against defeat or delay.

The crowning touch in this strange process of self-depreciation appears in the *Tribune* of Tuesday, in the shape of a letter from a Vermont clergyman, the Rev. E. J. Ranslow, a member of the Grand Army, which is endorsed by Gail Hamilton, Mr. Blaine's *alter ego*. He pleads the cause of the deserter in terms that would delight Offenbach:

> "A boy, accustomed to all the comforts of home, enlisted in an old regiment, April, 1864. In May he is pushed through the slaughter of the campaign that began at the Wilderness, and continued to the great surrender. Now patriotism and courage will endure a great deal, but not everything. While there seems to be a chance for life, men will stand up and be shot at. But when one battle follows another in quick succession, until there seems to be no chance at all for escape; when, in addition, the air is full of rumors of gross incompetence, and the story told and believed that men are being use-

lessly slaughtered by drunken and incompetent officers, is it strange that this lad, with certain death before him, as he verily believes, and a homesickness which has become acute nostalgia, should leave the field of Cold Harbor with the belief that he is justified in embracing the first opportunity to desert? For my own part I will remember the battles which he bravely fought, and defend him to the best of my ability against the sneers of those who never fought at all. It is a place for mercy to rejoice against judgment."

Of course no army organization could confine this privilege of deciding when he had fought enough to *one* "boy accustomed to all the comforts of home." Every "boy" in the field in the front of a determined enemy thinks the humblest home a wonderfully comfortable place. In all wars there are seasons of frequent reverses and great depression. At such times, too, the air is sure to be "full of rumors of gross incompetency," and the camps full of "homesickness and acute nostalgia." It is precisely for such seasons that military discipline was invented; that cowardice and desertion were first stamped with the deepest reprobation by all the conquering races of the world. The fate of great nations and of great causes depends, at such crises, on the spirit infused into the soldiers, not only by the fear of punishment, but by the expectations of people at home. No people which sent "boys" to the field with liberty to run away when the "homesickness" had developed into "acute nostalgia," has ever figured long in the pages of history or ever done much for the world. The reason is, we have said, that the right of one boy must be the right of all, and an army composed of nostalgic boys would, of course, dissolve after the first defeat, and leave the newspapers to repel the enemy. It is high time, we repeat, for our rational and manly veterans to speak out, if they mean to maintain the hold of the armies which saved the Union on the reverence and affection of coming generations

A WORD WITH SUBSCRIBERS TO THE FAIR FUND.

THE *World* suggests the following as a proper form for the subscription to the Guarantee Fund of the Exposition:

"We, the undersigned, severally subscribe to the Guarantee Fund of the World's Fair to be held in New York in 1892 the sums set opposite our respective signatures, and bind ourselves to pay the same or any part thereof upon demand of the Finance Committee, upon such terms and conditions as the Committee shall hereafter prescribe."

We suggest, however, as imperative the addition of the following clause:

"Provided, always, that the use of the Central Park, or any part thereof, for the purposes of Exposition, now forbidden by law, is not at present, and shall not hereafter form, part of the plan of the Committee."

It is hardly necessary to remind intending subscribers to the fund that the plan of taking an indeterminate portion of the Park has not been abandoned. The slow progress and uncertain results of the canvass of the property-holders outside the Park now going on make it extremely unlikely that the Committee will be provided with any site outside the Park in time for the meeting either of Congress or of the Legislature. Even if they knew exactly to-day what lots they could and what they could not get with the consent of the owners, and in what spots they would place their buildings and grounds, they would probably have, with regard to some portions of the ground, to go through a process of condemnation for public use which, if resisted, as it would be in the courts, would inevitably prove tedious. Consequently, they are by no means likely to have any clean-cut scheme ready to submit to Congress in competition with Chicago and other places, unless they offer the Central Park.

We fear that the temptation to do so, as the easiest way out of their difficulties, will be overwhelmingly strong, unless a check is put on them by the subscribers to the fund in the way we mention. We do not think it is hypercritical to say that no good citizen ought to be asked to sign any paper, under the existing resolutions of the Committee on Sites, without taking notice of the fact that the Committee's action, as it now stands on the record, is a proposal to commit an illegal act. A decent regard for public opinion and for the law of the land would have imposed on the Committee the duty of mentioning in their resolution the existence of the statute which now makes their plan with regard to the Central Park a misdemeanor punishable by fine or imprisonment. They ought, in these days when law needs so much respect and support, to have made their proposal expressly conditional on their ability to procure a repeal of the statute. Until this is done, their invitation to people to sign their paper is, in form, an invitation to enter into a "conspiracy to commit a crime," as defined by the Penal Code of this State—a most interesting little work. We grant that in one sense this is a small matter, but in another and a very important one it is a great matter. The total ignoring of the law by all the promoters of the Fair showed a state of mind about the Park which calls for increasing vigilance and caution on the part of its defenders. Any one who now signs any of their papers, without annexing to his name a qualification in behalf of the Park, may be sure that he is making himself in some degree a party to its destruction.

We say "destruction" because we have not the smallest doubt that the seizure of the whole of it is contemplated by the promoters of the Fair in a not unlikely contingency, and one which some of the most influential of them regard with favor, or at all events without dislike. Finding themselves on committees charged with high executive functions, their personal pride and credit, as is not unnatural, are enlisted in making the Fair a success, *coûte que coûte;* and they look on the Park very much as a warrior would who found it impeding his attack on an enemy's stronghold—a place to be cut and slashed as much as the occasion may require. This would be a deplorable state of mind on the part of leading New Yorkers, even if they were sure to confine themselves to their favorite slice, the part north of the Reservoir. A lovelier scene than this North Meadow is not to be found in America. The tens of thousands who use it in summer as a play-ground must all their lives long have memories of it such as no city in the world to-day, we venture to say, can supply to its young people. Any one who desires to cover its lawn with buildings and roads, and let loose on it vast crowds of sightseers to trample it out of recognition, and ruin its trees and shrubbery, which are the product of thirty years of care and labor, is not only "little to be envied," as Dr. Johnson said of the man who could "walk unmoved amid the ruins of Iona," but is "fit for treasons, stratagems, and spoils," and especially "spoils."

One of the oddest things to us about the attack on the Park is the indifference it reveals in so many estimable and public-spirited men to the part the Park has played in sowing among us the seeds of civic pride—the lack of which has proved such a curse to the city. Our population is composed of so many heterogeneous elements, is divided by so many lines of race, language, religion, tradition, tastes, and sympathies, that common municipal interests and satisfactions have almost wholly died out among us. We have no public monuments but the Park, of which everybody is proud. There is nothing in our municipal government which excites affection or admiration, by which any young man's imagination can be fired or any old man's memory softened, except the Park. In fact, there is a great deal both in the personnel and the machinery of the government which makes us all hang our heads for shame. Into this municipal darkness the Central Park has brought light. It has proved a great public work in which every class of the population glories, an ornament which we can show to foreigners without apology or explanation. It has furnished reformers with hope and encouragement in working for other improvements—docks, pavements, and cleanliness—and even in working for better administration in every department. It has shown the possibility of carrying out municipal enterprises which need long periods of persistent attention and artistic oversight for their completion, and, in truth, the possibility of spending the money of a pure democracy, without let or hindrance, on things which commend themselves mainly by their beauty. In all these ways the Park has proved of great political as well as social and æsthetic value. In fact, it might be said, without exaggeration, to have laid the foundation among us of a real municipal life. To those who think in this way, of course, the plan of converting it into a huge, desolate Fair-ground in honor—of all men in the world—of Christopher Columbus, has something absolutely barbarous as well as absurd about it. It seems like the proposal of a Goth or a Vandal to use the pillars of the Pantheon to make lime.

COLLEGE LIFE FOR WOMEN.

THE subject of the life which women lead within college walls has lately been under discussion in the *Critic*. The question whether the common-household plan, which prevails with more or less modification in all the separate colleges for women, is better or worse than the plan of scattering students and teachers about in separate houses, is one that necessarily divides itself into two parts, which are

not kept sufficiently distinct in the *Critic's* discussion: better or worse, is it meant, from the point of view of the greatest well-being of the student or of the teacher? There is never any anterior reason for supposing that the interests of both parties in a relation will be met by one and the same arrangement. The larger question, whether the plan of educating men and women together is not best of all, is answered, for both student and teacher alike, by affirming that the only way to obtain the naturalness and the strong inspiration of real social life is for men and women who are engaged in like pursuits to associate together. The conventual or the monastic character of the arrangement begins with the establishment of separate colleges, and the question of how the women or the men shall be housed after the separation has been effected, is a question of secondary importance.

But in the present transition stage between the mediæval custom of seclusion and the free and natural common life which we may look forward to in the future, there is no doubt that the household plan has immense advantages for the woman student over anything that could possibly be substituted for it. Miss Wheeler's contention is, that it would be much better for young women if they resided in homes while taking their college course of study. The poetic enchantment with which the word home is invested is the source of a curious fallacy. An ideal home is an admirable place, but not every house in which a family lives is an ideal home. No one feels a general admiration for "people," but no sooner have "people" retired into "homes" than it is too frequently taken for granted that they are turned into ideal human beings. It may be sad, but it is nevertheless true, that a great many girls go to college, having received an accidental spark of life from some remoter ancestor, who come from families in which mercantile pursuits, fashions, and religion are absolutely the only subjects which ever occupy the minds of their members. The great transformation which a college course may effect upon such young women is immensely facilitated—brutal though it may seem to say so—by securing a complete separation between her and her family.

But even if the home life is all that could be desired, there are two simple reasons why it is often well for a girl to be removed from it. The principal causes why women often carry on their lives on a lower plane than they might attain to are the trivialness and the inordinate self-sacrifice to which they fall victims. Even the best of homes are too often full of petty worries and petty interests which render impossible the free, calm life which the college student ought to live. The sudden sweeping away of all the trivial details and the unavoidable annoyances which attend housekeeping on a small scale, and the plunge into the homogeneous intellectual atmosphere of the college family, is often the cause of a sudden change in the entire mental plane of a young person's life.

Again, no nice young girl is capable of resisting the claims of other members of the family upon her sympathy and her actual practical aid in the thousand and one events of the day, even if she is not assigned her regular share in the family burdens. That brilliant young Englishwoman, Emily Watson, who died a few years ago from overwork, arose at five o'clock in the morning to do her own studying, and spent *all* the hours of daylight in teaching her younger brothers and sisters. A distinguished German, writing on female education, says that girls, if educated at all, must be educated in the house, and not at regular schools, because it is absolutely necessary to the proper development of their characters that they should be where they can rise from their books at any moment to hand a glass of water to any member of the family who may need it. This view of the functions of women we have outlived in this country, at least in theory, but many women are still, in practice, of so self-sacrificing a temperament that they need to be artificially guarded against themselves. For them the proper conditions for healthful study can only be obtained by separation from the family.

But the question whether women who go to college had better live in their own homes or not, is not a question of very much practical importance. Those young women who have the double good fortune to live in an ideal home and to have a college of high standard come and establish itself at their doors, are quite sure not to fail to take advantage of their happy lot. But they are necessarily very few in number. Baltimore and New York are the only large cities in which colleges for women exist; and even in a large city something must be done with students who come from a distance. However great a value one may attribute to home life at its best, there is a naïveté in supposing that separate homes are found for the students when they are put into separate boarding-houses, which is very amusing. The ordinary unsupervised boarding-house is as dreary a place of residence as can well be imagined, and totally destructive of that gayety and spirit with which studying must be carried on if health is to be maintained at a high level. If there is nothing better to be had, college women will take the boarding-house and be thankful to get that; but if ideal conditions are to be aimed at, the common hall, spacious and light, peopled by those who have common aims and common hopes, is vastly to be preferred.

But the question assumes a very different aspect when it is the interests of the teacher that are concerned. For the student, college is merely a four-years' episode; the teacher must seek out such conditions as it is good to spend a lifetime in. The student is thrown into intimate association with her equals if the household plan prevails; the teacher is too closely pressed upon by her inferiors. The bad effect upon ministers of a forced association with the half-educated persons who usually form the greater portion of their parishes, has often been commented upon; but that would be incomparably worse if they had not the isolation of their own homes to fall back upon. The teacher needs the feeling of dignity and of independence that she can secure only if she carries on a separate household of her own, and there ought not to be any incompatibility between her salary and this plain requirement of her well-being.

How, then, can the needs of teachers and students both be satisfied? There is a third estate—intermediate in station between teachers and students—consisting of the fellows and the graduate students. If they resided with the college family, they would furnish the stimulus of contact with something better than themselves which undergraduates need, and the teachers might be freed from the chief irksomeness of their position. It is a fundamental principle of the science of ethology—that science of which Mill hoped to lay the bases, but which still awaits a founder—that character is far more readily influenced by that which is a little higher than itself than by that which seems to be beyond its reach. The teachers cannot but seem somewhat remote and hard of comprehension to the younger students; the fellows are far more capable of inspiring them with enthusiasm, and, as Prof. Cooke said at the last Harvard Commencement dinner, in an institution of learning we cannot prize too highly the ennobling virtue of enthusiasm. The liking for hard work and the entire absence of boyishness that have from the beginning characterized the students of the Johns Hopkins University, have always been attributed by the keen observer to the presence among them of a large body of fellows and graduate students. In women's colleges, a community of students of both grades, together with such teachers, perhaps, as had a special liking for and sympathy with the young, would form an ideally constituted society; and such of the teachers as had high scholarship or large contact with the world for their chief aim would be saved from a fatiguing contact with immature minds. There is no question of restraint for college women, of course, in any college which deserves the name; and a small sprinkling of better minds, together, it is to be understood, with frequent formal social contact with a larger intellectual circle, would suffice to leaven and to reform a large amount of immaturity.

SANTA CATALINA ISLAND—II.

PORTLAND, Ore., September, 1889.

THE most serious drawback to the delightful rambles on Catalina Island is that one always has to keep an eye on the possibility of running across a "rattler." The first evening of my two weeks' sojourn I was sitting on the hotel piazza drinking in the salubrious night air, when the conversation of a group of men attracted my attention. Two of them were representatives of an English syndicate who were trying to buy the Island, and have since succeeded, I believe, in bagging it for $600,000. The reason why one of these ubiquitous English syndicates (who seem to "want the earth" at present) coveted Catalina Island, is, according to the Los Angeles papers, to be found in the fact that it abounds in silver ore, which, though not rich enough to be worked in this country, where labor is so expensive, might be carried as ballast on vessels returning to England, and profitably reduced to metal there. The agents were interviewing a resident as to the advantages and disadvantages of the island, and one of them, *inter alia*, asked about snakes. "Not a snake on the island," was the answer. This was such curious and interesting information that I jotted it down in my notebook. Next morning after breakfast, I took a walk up one of the hills, and, just after passing a little wooden building, I came across a young Englishman in a white flannel suit who was cautiously prying along the road on both sides. "Lost anything?" I asked. "No," was the reply, "I am looking for rattlesnakes. Killed one a few days ago right here, and don't like them quite so near my house." He was greatly amused when I told him how his countrymen had been "stuffed" at the hotel on the preceding evening. "The island swarms with snakes," he said. "They have never been interfered with, and have been allowed to multiply for several centuries, until they have become as abundant as ground squirrels. Only the other day a party moved their tent away from a spot over on that hill because a snake family had established a previous claim on the neighborhood. However, you need not be afraid of walking along the cañon or up the grassy sides of the hills, for they avoid the grass and haunt only the naked rocky hillsides, exposed to the

full glare of the sun, where they can be easily seen."

I soon found that the simplest way to steer clear of rattlers is to hunt for them. I spent several hours looking for them in the most likely places, because I wanted to study the nature of the beast and get a few rattles, but not one did I see. There is no doubt, however, that they exist in large numbers, and the sooner they are exterminated the better for the future prospects of the island as an all-the-year-round health resort. However, it must be said that there are few instances of men having been killed by snakes in California, while the dreaded scorpions, centipedes, and tarantulas are hardly more dangerous than hornets. According to Dr. Weir Mitchell, who has made a special study of this subject, a rattlesnake bite in the extremities rarely causes death in this country, and he has known of nine dogs being bitten by as many different snakes, and but two died. He considers them a much maligned animal, and says they have always seemed to him averse to striking. This agrees with what the late T. S. Van Dyke says in his 'Southern California': "At least a dozen times I have either been about to step directly on one, or have stepped over it, or else have set my foot directly beside it. In no case have I been struck at by them, though I have made them strike very savagely at a stick." "Hunters take no precautions against them, and children run bare-legged through the bush everywhere without thinking of them." Still, the nervous might carry in their pocket some permanganate of potash, which Dr. Mitchell considers the most potent external antidote, that has saved many lives.

It might be worth while to introduce on Catalina Island some of the "road runners" so common on the mainland—a bird, looking somewhat like a large pheasant, which runs along the roads, seldom rises on its wings, and is said to live on snakes, lizards, centipedes, and similar delicacies, and is nevertheless pronounced a good gastronomic morsel by those who have the courage to eat it. It might also be good business policy to import a few of the Arizona cowboys, who, after making the rattlers strike, catch them by the tail and swing them like a whip till the head flies off. But cowboys are objectionable neighbors on other grounds, and it would be better, all things considered, to give the freedom of the village to a dozen pigs, who would soon make rattlers scarce about camp, and who might be allowed to run wild and clean out the whole island.

There would be a precedent for this in the wild goats which were turned loose by Vancouver on this and other Pacific islands, a hundred years ago, and which have now multiplied to thousands. These wild goats form one of the most characteristic attractions of Catalina. They are hunted on horseback, and are often seen in large herds, feeding along the hillsides. It is not very easy to get near enough for a shot, but still one or two are generally brought back as the result of a morning's ride; and the next day there is always "venison" with jelly on the hotel bill of fare. If it were a little more juicy and less insipid in taste (the young ones only are eaten), it might deserve that name. Barring an occasional hunt, these wild goats lead an ideal life, which the happiest mortal must envy them—no wild beasts to prey on them, and plenty of grass-grown hillsides to climb and browse upon. They are more fortunate than their cousins, the wild goats and half-wild sheep on the neighboring island of San Clemente, which, though almost as large as Catalina, is more barren, and is said to have no water at all except the heavy morning dews which the animals sip in with their breakfast of wild clover.

To those who find goat-hunting on horseback too arduous and risky a sport, Catalina offers a variety of entertainments in its bathing facilities and the rare opportunities for botanic, mineralogic, and archæologic research, besides fishing, watching the pelicans and flying-fish, and visiting the seal rocks. Bathing in the placid bay lacks the excitement given by plunges into foaming breakers, and it must be admitted that small pebbles do not make as agreeable a beach as sand. Yet those who can swim will enjoy a bath here as much as anywhere. There is a drawback in the thought that only sixty miles to the south, at San Diego, a young man, while in bathing, a few years ago, suddenly disappeared, being doubtless carried off by a shark. However, no shark has ever been known to eat more than one man at a time, so that if several go in together, each one has a fair chance of escape. Small sharks are occasionally seen in the bay of Avalon, but no accident has ever happened. Bathers are occasionally stung by a kind of animal called a stingaree, which causes a wound that must be cauterized, and is said to be almost as dangerous as a rattlesnake bite. But then we cannot expect to have everything arranged to suit us.

The charms of Catalina's flowers to lovers of beauty and botany I have already referred to, but I must not forget to mention that the thrill of delight on coming across the first Mariposa lily will mark an epoch in their experience. Amateur mineralogists may go prospecting for silver ore. In some places they will find patches of coal-black soil, besides igneous rocks in abundance, and other evidences of former volcanic agency. But the greatest treat awaits the archæologist, who may dig in the site of the graveyards, or the former village, part way up the main cañon, for Indian relics. The objects most frequently found are the pestles and mortars of various sizes, in which the squaws ground their grain and acorns, and strings of shells. These shells were used by the Indians as money, and Catalina Island was the place where most of them were found. The Yankee, who has succeeded the Indian at Avalon, still makes money out of these shells. There are a number of varieties strewn along the beach, but the largest and most beautiful is the abalone shell, the inner surface of which is often equal to the finest mother-of-pearl, while the outer surface can be made equally attractive by persistent polishing. The professional abalone hunters, who have their stores at Avalon and ship large quantities to the East, to be made into buttons, jealous of competition, will tell you unblushingly in spring that these animals are only caught in the winter; but after a low tide you may see them rowing in with a whole boat load of them. It is interesting to watch these men at work. One of them plies the oars, and the other has a long pole to stick into the unsuspecting abalone, which immediately shuts up shop and holds on so tightly to the pole that the man at the other end easily twists the shell off the rock and hauls it in; whereupon the search for another begins. The Californians seem to consider the abalone possibly useful as well as ornamental, for there is a tradition (probably manufactured by an ingenious Catalinian) that a Chinaman one day, while bathing, put his foot into a live pair of shells, and was held till miserably drowned by the returning tide. If this story becomes known at Sacramento, a law will probably be passed forbidding abalone fishing. Besides serving as a trap for Mongolians, the abalone has also a gastronomic use, for it makes the finest soup I have ever eaten—superior to the best terrapin.

Of the fish which abound here the best flavored are the large sardines, of which a whole boat-load is easily caught with one haul of the net. There are literally miles and millions of them along the coast, and it would doubtless be a profitable industry to can them, although the oil would have to be imported, for California olive oil is too much in demand and too expensive to be used for such a purpose. But there is a serious objection to these sardines—they spoil the fishing; for the large fish have their sardinian breakfast so handy that they refuse to bite unless tempted by a special delicacy, such as a piece of lobster. In April even this ruse often fails, for then the water is filled with spawn, and when a fish has spawn to eat, he turns up his nose even at lobster. To one solely intent on catching the fish, it must be most provoking to see hundreds of them, of all sizes, swimming about his tempting crawfish bait without paying any more attention to it than if it were a pebble.

But the lover of nature can here enjoy scenes which make him oblivious of the ignoble excitement of catching fish. Catalina Island has one of the most enchanting salt-water aquariums in the world. Row out into the ocean a few hundred yards, and you will get a glimpse of a submarine garden more wonderful than anything to be seen on shore. The water is calm and as clear as crystal, showing objects fifty or seventy feet below as distinctly as if you could touch them. Kelp, anemones and sea weeds, green, purple, and yellowish, and of various forms, wave about slowly in the current. Abalone shells cling to the rocks, and jelly fish float along, expanding and contracting rhythmically. The waving sea weeds are covered everywhere with a bluish mass looking like jelly. It is the spawn, the favorite food of the hundreds of fish in sight, whose life, swimming calmly to and fro, seems to be a perpetual picnic, like that of the goats on the green hillsides. But they have their enemies everywhere—in the water, in the air, and on shore. When the spawn is gone and the sardines have migrated, the fisherman and the tourist cast their hooks and pull in dozens in a morning; although once or twice an hour they are surprised by a twenty or thirty-pound monster who swallows the hook and simply walks away with it, heedless of the tiny line which seeks to hold him. The chief excitement of ocean fishing lies in this that one never knows what kind of fish one is going to land next. More than twenty varieties are caught here, including rock cod, sheepshead, whitefish, barracuda, mackerel, etc. The most fascinating of all is a bright red fish, which haunts the rocks, as beautiful as the Chinese gold fishes kept in glass globes, but very much larger. It is almost too beautiful to kill, but it has an ugly mouth, and is good to eat, so up it comes en route to the frying-pan.

The fisherman is the least formidable enemy of these fish. The pelican and the seal are wholesale butchers in comparison. The large pelicans, with their huge, ugly bills, with which they can scoop up a dozen sardines or smelts at one fell swoop, are very abundant at Catalina Island, but at the present rate of extermination by tourists they will soon be scarce. Their wing bones make good and novel pipe-stems, and their skin, with the soft white and gray feathers, is ornamental; and that settles their fate. They are very stupid birds, and slow, and not a bit afraid of human beings, which makes them easy victims. Tourists kill them from the beach or on boats, and, after skinning them, throw the carcass overboard, where it is immediately pounced upon and disputed by a dozen greedy gulls. The seals occasionally

visit Avalon Bay on their fishing excursions, ingeniously swimming a dozen abreast in a semicircle, and driving the fish before them till they are cornered. Sometimes the terrified fish, in their eager flight, jump on the beach, where they may be picked up alive. No one should fail to pay a visit to the seal rocks and see these creatures "at home." The rocks are at the southern extremity of the island, about six miles from Avalon, and can be reached by row-boat or by the steam-tug which almost daily takes down a party. A row-boat is preferable, because the seals allow it to approach nearer than a puffing tug. On the way down observe the splendid precipitous rocks, to the sides of which some wild goats may occasionally be seen clinging like flies. The boat passes projecting rocks and rugged promontories, on which a few pelicans and seals are basking; and between them are several large curved beaches of smooth pebbles, three or four feet high, and fifty feet wide, to which every winter's storms add a foot or two. As we approach the southern end of the island the swell of the outer Pacific becomes perceptible, and at the same time the seal rocks rise up before us. The hundreds of sea-lions lying on them appear to be fast asleep, but suddenly a sentinel raises up his head, watches us a moment, and then utters a cry of alarm. Immediately the whole army is awake, and gradually assume an erect position, barking hoarsely as we approach them. Among them are some formidable monsters, large and heavy as oxen, and were they not known to be perfectly harmless, it would seem a most harzardous undertaking to row right up to them. With every stroke of the oars they become more excited and noisy, and finally, when we are within forty or fifty feet of the rock, they plunge headlong and pell-mell into the water. For a moment they are invisible, and then they are seen collecting in a body in a sort of pool between the rocks, sticking up their snake-like necks and heads, and barking louder than ever, the younger ones bleating just like sheep. But gradually, as we move away a little and throw out our fishing lines, they become convinced that our intentions are peaceful, and then, with many a groan and snap at their neighbors, they climb back clumsily to the summit of the rocks, the biggest ones securing the best places. Seal rocks are always good fishing ground; but why is it that the fish do not learn to avoid places where they hear the loud barking of their voracious enemies? In this respect their instincts would appear to fail them.

HENRY T. FINCK.

THE NEW STANDARDS OF WEIGHT AND MEASURE.

PARIS, October 2, 1889.

OF all the congresses that mark the year 1889, perhaps the one that scores the most complete results in the achievement of its object was that held last week at the International Bureau of Weights and Measures. Fourteen years ago this curious and little-known institution did not exist. It may be remembered that in May, 1875, an international convention was signed in Paris between sixteen countries: Germany, Austria-Hungary, Belgium, Argentine Confederation, Denmark, Spain, United States, France, Italy, Peru, Portugal, Russia, Sweden-Norway, Switzerland, Turkey, Venezuela, for the purpose of insuring unification of weights and measures. Many of the contracting countries were provided already with copies of the standard metre and kilogramme after the originals deposited in 1799 at the French Archives. But these copies were found to differ from each other; besides, they could not be relied on as identical with themselves from one epoch to another. These differences were due to the imperfect chemical preparations employed in their composition, and to their form, liable to atmospheric influences and the action of time. The whole work had to be begun over. Science, in its constant progress towards precision, made a rectification imperative. Geodesy in particular urged it. As long as no two nations agreed on the acceptation of the metre, the exact knowledge of the configuration of our planet was an impossibility; for when a four-metre measuring-staff, used by geodesians in the survey of a base, is the starting-point of a sixteen-kilometre observation, it is easy to realize how the slight discrepancy gets multiplied, and how discrepancies arise between the calculations of two scientists belonging to two different countries.

At the close of 1875 the National Assembly of France adopted the convention, and conceded for the use of the institution the property on the hills of St. Cloud above Sèvres, known as the Pavillon de Breteuil, once a summer residence of the Princesse Mathilde. The budget of the Bureau was fixed at 100,000 francs a year. Each nation was to contribute in accordance with its population. Later, international gossip was frequently kept alive, for several countries were delinquent in paying their quota. Turkey never brought in a sou, but—there is a god for Turkish finances—its share of the contribution was made up by the others. When the committee, composed of fourteen scientists chosen in every country, under the presidency of Gen. Ibanez of Spain, had been appointed to take the direction of the Bureau, the first question was: Ought one to make a new metre and a new kilogramme, or is it better to accept without restrictions the old standards of the Archives, and, without copying them servilely, remake upon them the new international metre and kilogramme? The works of Delambre and Méchain, who measured the meridian from Dunkirk in the north of France to Barcelona in Spain during the Revolutionary tornado, served for the first acceptation of the metre among the allied nations in 1799. It was afterwards acknowledged that the metre of 1799 might be a trifle short—for that matter, Méchain himself admitted before his death certain inexactitudes in his survey which it was then too late to repair. In 1875 the unanimous opinion recognized that to establish a new and slightly truer measure was not of so much importance as to make one that should be uniform for all—or, rather, whose copies should be rigorously determined by comparison with the new standard. To insist on the metre representing exactly its theoretic definition was to expose it to constant modifications as the progress of geodesy went on; a standard ought not to be liable to frequent changes.

This point being admitted, a new metre and a new kilogramme were made—that is, copies as exact as possible of the old standards in the Archives; only, the new ones are made of better material and of improved form, so as to insure greater guarantees of conformability. For a whole year the question of composition was discussed. The idea of quartz was entertained for a while, but ultimately a composition nine parts of platinum to one of iridium, to add resistance and solidity, was adopted. The standards in the Archives are of platinum. While rendering full homage to the knowledge and skill of the scientists of the last century—Lenoir and others—it must be admitted that, owing to the resources of the modern laboratory, the experiments made on the material of the new standards which revealed such improvements in the treatment and purification of platinum, would have been impossible a hundred years ago. The shape of the new kilogramme was very little modified, but that chosen for the metre is peculiar: a rod, two centimetres in thickness, not exactly square, but grooved on the four sides, presenting in its section somewhat the shape of the letter X. This form combines with a minimum quantity of material a maximum rigidity. The bar is one metre two centimetres in length—the *metre* being indicated by two fine marks at each end. This metre is called "à traits," differing from that of the Archives, called "à bouts," which measures exactly one metre, no margin being allowed for wear and tear. After the signing of the convention, in 1875, Servia joined in. Hence, if Austria-Hungary, Sweden-Norway are not counted singly, the observatory of weights and measures had to prepare nineteen copies of the new metre and kilogramme. This is the lengthy work just brought to a close, and which formed the object of the Congress mentioned above, when the copies were distributed to each of the adhering nations.

The scientific installation at the Pavillon de Breteuil realizes the last word in the art of precise mechanics. First of all, no better spot could have been chosen as a site for laboratories intended for experiments which the slightest trembling of the soil caused by the rumbling of vehicles would hinder. Here an unbroken stillness reigns. The visitor who has walked up the steep avenue and rings at the gateway closing from the outer bustle this temple dedicated to science, has already lost sight of the fact that he is not more than a few minutes' walk from the Seine and its puffing *bateaux-mouches*. The villa, so tried by the guns pointed from Mont Valérien at the time Breteuil was occupied by a Prussian battery, has been entirely restored, and is now occupied by the resident director, and his assistants, Mr. Benoit (French), Mr. Thiesen (German), together with the half score of attachés who complete the scientific corps. Facing the villa are the laboratories of manipulation and the rooms devoted to the studies of observation. These latter are built with very thick walls, and are lighted by sky-lights so disposed as to prevent the rays of the sun from penetrating; corridors isolate them from the exterior. These dispositions tend to insure as near as possible evenness of temperature, which for certain of the operations is a condition of success.

The works of the Bureau are divided into two sections—that pertaining to the standards of length, the other to the standards of weight. In the former took place all the comparisons of the national standards with their prototype. Each metre had to be studied not only in a normal atmosphere, but also under varied degrees of heat and cold. The *comparator*, intended to compare two metres, *in air*, is essentially composed of two microscopes sealed on heavy piles of monolithic stone mounted on deeply laid masonry. Micrometers like those used with astronomical instruments are attached. Below is the carriage bearing a metallic box with double lining in which are placed the two bars in course of observation. A lid closes the box, to avoid sudden variations of atmosphere, and special glasses disposed on the surface permit the operator to watch the thermometers placed inside. Moreover, an appropriate mechanism enables him, while keeping his eye on the microscope, to raise or lower, to

displace longitudinally or transversely the bars according to needs. The *comparator* serving to measure dilatations is likewise armed with movable carriage and fixed microscopes and micrometers; only, instead of one box the carriage has two at work. These two boxes stand three feet apart—independent, so to speak—and can be submitted to different temperatures. Thus, to measure the dilatations of a bar of iridized platinum it is placed in one of the boxes, while in the other is placed another bar called *comparative*. This latter is kept in an even temperature; the other is cooled and heated, passed in turn through a series of thermal experiments. It contracts and expands alternately, and its length is compared with the bar of comparison. One of the difficulties of this process of measurement is to preserve an even temperature. This is done by heating the liquid into which the compared staff dips by means of a continued current of hot water passing through the double lining of the tank. The heated water leaves its reservoir at an invariably even degree, and can, through a special process, be kept for hours at about 40° of heat. With this apparatus the difference between two metres can be measured up to a few thousandths of a millimetre, if the marks are traced with sufficient accuracy to stand the considerably magnified power by which they are seen. The *universal comparator* serves to compare all the subdivisions of two metres. It extends up to two metres in capacity, and contains a two metre standard rod divided throughout into centimetres, over which are disposed a couple of movable microscopes. Movable also are the microscopes serving to study the subdivisions of the metre experimented on. A geodetic *comparator*, upon which staffs of four metres can be observed, completes this remarkable collection of instruments, some of which are encased in elegant mahogany fittings.

The geodetic staffs are completely distinct from the standard proper, and have not been the object of any international agreement. Still, several of the staffs belonging to geodetic institutes or geographical services of different countries have been deposited at Breteuil to be finally regulated by the standard metre.

In the section of weights can be found the most perfect set of scales existing in the world. The house of Ruprecht of Vienna constructed the most of them. Upon these scales the errors in operations are brought down to such an infinitesimal quantity that it makes one dizzy to think of it. A kilogramme is weighed to one hundred-millionth part of its value. The operator works at a distance to avoid the influence his near presence might have on the scales, through the atmospheric perturbations. He stands at a distance of some twelve feet. Having the day before set the required weights in proper position in the glass cage of the instrument, he now, by the aid of an ingenious mechanism, places the weights upon the trays, lifts the clutch that holds them motionless, lets loose the balance frame, and measures its oscillations through the spy-glass. This spy-glass looks on a mirror bearing a subdivided scale; so, while the balance slowly oscillates, the operator follows through his glass the reflected image, notes the successive elongations, and deducts the real point of equilibrium between the two. Without leaving his position, the observer can change the weights from the right tray to the left, and vice-versa.

Now that the chief work at the observatory is completed, the door is not to be closed. Breteuil remains the depository of the new international standards, and its dwellers hold themselves in readiness to furnish further experiments asked of them; the researches of science are endless. LE COCQ DE LAUTREPPE.

GEN. ROCHECHOUART'S MEMOIRS.—II.

PARIS, October 3, 1889.

WE left Rochechouart after his mission to Bernadotte and on the eve of the battle of Leipzig. Rochechouart took such a brilliant part in this engagement that the Emperor Alexander made him a colonel. He entered the city with his new epaulettes. "I shall never forget," he says, "the emotion which I felt in crossing the battle-field and seeing 15,000 corpses in a limited area. You will judge from this of the number of dead and wounded in those two days of slaughter. But for the infamous treason of the troops of Baden, Saxony, and Würtemberg, the victory would have been even more hotly disputed." It is rather amusing to hear Rochechouart speak with so much indignation of the "treason" of the German contingent of the French army. These Germans had become unwillingly a part of the "grande armée"; they left Napoleon as soon as they found a chance. They left him, to be sure, in the very midst of a great battle, and turned their arms against him at the most critical time; but they really owed no allegiance to him. He was in their eyes the enemy of Germany. At any rate, if anybody had a right to blame them, it was not a Frenchman who was fighting a French army and was on the staff of Alexander of Russia.

Alexander met Bernadotte at Leipzig and embraced him. The King of Saxony came to pay homage to the Emperor:

"Bernadotte said: 'Sire, here is the King of Saxony who offers you his respectful homage.' The Emperor Alexander feigned not to hear, and asked: 'Where is the Queen of Saxony?' 'She is at the head of the stairs waiting for your imperial majesty, but here is her august consort who wishes to be presented to you.' 'Let us go and see the Queen.' With such severity did the Emperor Alexander treat this old King, victim of his affection for and devotion to Napoleon—a very laudable devotion, since it lasted to the end, notwithstanding the defection of his troops. I remained stupefied at the if not cruel, at least ungenerous attitude of the Emperor of Russia towards the crowned old man."

Rochechouart, you will observe, had curious notions of his own. It did not strike him that the Emperor of Russia, obliged to wage a difficult and long war against Napoleon, who had invaded his country, had no special reason for showing much interest in his enemy's allies and friends. The King of Saxony was treated as a prisoner of war and sent to Berlin, where he remained till the end of 1814. Prince Talleyrand became his advocate at the Congress of Vienna, and finally he recovered his kingdom.

After the battle of Leipzig, Rochechouart joined his Emperor at Meissingen, where he remained two days. The dowager Duchess had two charming daughters, one who married afterwards the Duke of Clarence (who became William IV.); the other, who married her cousin, Prince Bernard of Saxe-Weimar. The Emperor Alexander went to Frankfort by way of Schweinfurt and Homburg; he remained in Frankfort two months, during which he made a visit to Darmstadt. The Grand Duke was "an original, a kind of bear. As for his son, he is very insignificant. When he was presented to Napoleon, he stood without saying a word. The Emperor, seeing his singular uniform, asked him: 'What is this uniform?' '*Mon réchiment, zire*' (with the German accent). 'Ah! and how many men has your regiment?' '*Che sais pas.*' 'Who is this great fool?' said Napoleon, turning to the person who accompanied him." These were the words of the Emperor Alexander to Rochechouart when he sent him to Darmstadt to announce his visit, not as a sovereign but as a relative. The Grand Duchess was Alexander's sister-in-law.

The Russian headquarters crossed the Rhine at Bâle on the 3d of January, 1814; on the 26th of January Rochechouart was at Langres, where he heard the news of the death of his brother Louis, who had been killed in the battle of Brienne, near Bas-sur-Aube. He fell in the night on a French vanguard, who fired and screamed, "The Cossacks!" Louis Rochechouart was struck by eight balls, and died almost instantly. After they had entered the French territory, Rochechouart and his friend, Colonel Rapatel, who was also in the Russian ranks, spoke often of the reëstablishment of the Bourbons, and at Langres they saw several Frenchmen who had come from Paris—Comte Alexis de Noailles, Comte de Wall, Comte de Virieu, the Marquis of Quinsonnas. They drew up a sort of a memoir on the subject of the restoration, which Rochechouart presented to the Emperor Alexander at Langres. The Emperor said: "I approve of you and understand you, but we are not yet so sure of success that we can come to a decision. Wait till the next battle, which cannot be long postponed. You cannot doubt my interest in the august family of your ancient kings, but I can do nothing without my allies. Meanwhile, let the French declare themselves. If they do, many difficulties will be lessened."

Letters were sent to King Louis XVIII. in England and to his brothers. The Comte d'Artois was already in France, having entered by way of Bâle. Soon after the battle of Brienne a congress took place at Châtillon-sur-Seine, with a view to negotiating for peace. The allied sovereigns had not yet decided to dethrone Napoleon, and they continued to give him the title of Emperor. One moment it was thought that peace would be signed at Châtillon:

"A few of us friends were together—Rapatel, Armand and Jules de Polignac, Alexis de Noailles, and myself. Pozzo [the Corsican Pozzo di Borgo, a great enemy of Napoleon] came to announce to us the signing of the treaty; but, suddenly getting up and striking the table with his fist, he said, with his Italian animation: 'No, all is not ended; the Corsican has not signed!' This epithet of Corsican, thrown out thus suddenly, seemed to us very comical, especially as coming from another Corsican."

Pozzo was right. Napoleon refused at the last moment to accept the conditions of the allies; he was blind and rushed to his fate. The Emperor Alexander thus far had allowed Prince Schwarzenberg to conduct all the operations; he was tired of his delays, and took himself the command of his army of 300,000 men. He met and fought Napoleon at Arcis-sur-Aube. Napoleon suffered great losses, and conceived the bold idea of throwing himself on the communications of the allies. His manœuvres have been much admired. He separated for a moment the Emperor of Austria from his allies, but this separation was of no use to him, but the contrary, as it deprived Napoleon at the critical moment of the protection of his father-in-law and of Metternich.

Napoleon was given up to the Russians and to the Prussians, who were more hostile to him than Austria. Alexander was determined to push directly on Paris. He felt that the solution was in the French capital. He was not mistaken.

"The Emperor Alexander arrived in the Buttes Chaumont, at two o'clock in the afternoon; there he contemplated Paris. One heard

towards Montmartre and Vincennes a terrible fire of musketry and the continual reports of a formidable artillery. The Emperor left his horse so as to enjoy better the magnificent spectacle under his eye. He asked me to name for him the principal monuments. After a while his handsome face became thoughtful; he asked no more questions; he was absorbed in a profound meditation. What were his thoughts? God knows; he seemed to hear neither the guns, nor the musketry, nor the hum of the great city which lay before us."

He was interrupted by a bearer of proposals sent by Count Nesselrode; an immediate suspension of hostilities was decided on; Alexander ordered that no Russian soldier should enter Paris for the present, and that the firing should cease. Rochechouart had to carry the order. He put a white handkerchief at the end of his sword, and succeeded all alone in reaching Count Langeron, at Montmartre, who had already occupied the barrières Rochechouart, des Martyrs, Blanche, and Clichy. A few days afterwards the Emperor gave Rochechouart one of his orders, with the mention, "In recompense of his behavior at the battle before Paris on the 18th of March, 1814."

The first evening which Rochechouart spent in Paris was spent in a small inn at Belleville.

"We were," he says, "numerous and all French. Gen. Comte de Lambert, whose division occupied Belleville, Gen. Comte de Damas, who commanded the brigade of grenadiers of the guards, which had taken Montreuil, and my four companions [Armand de Polignac, Montpazal, Rapatel, and Boutot]. The garçon, much astonished to hear us all speak French during our supper, without uttering a word of Russian, could not conceal his surprise, and, folding his arms, said to us: 'Ah ça! for Cossacks, you don't speak French badly.'"

The next day Alexander appointed Rochechouart *Commandant de place* of Paris and Gen. Sacken Governor. Rochechouart, by order of the Emperor, with three battalions of Russian guards and two guns, took possession of the Hôtel de Ville of the Élysée, and made all the arrangements with the Prefect of the Seine for the location of the Russian troops. The Prefect was M. de Chabrol. Rochechouart himself, with his staff, took the hôtel of the Place Vendôme, where the *Commandant de place* of Paris has always resided and resides at the present moment. A great review of the allied armies took place on the Place Louis XV., now called Place de la Concorde. The exhibition of these enormous forces contributed to keep Paris completely quiet, and produced a great impression on the Parisians. The word of Tacitus is always true: "Viso milite quies." Napoleon soon afterwards signed his abdication at Fontainebleau, and took the road to the island of Elba, protected on his way by officers of the allied army.

The nomination of a Frenchman as *Commandant de place* in Paris was an act of courtesy on the part of the Emperor Alexander, who wished to prove that he was animated by the most conciliatory spirit. Rochechouart's mission was not an easy one: he had to organize a military police to patrol the capital, to maintain order in a city occupied by thousands of foreign troops belonging to various nationalities. He has been blamed for taking the statue of Napoleon down from the Vendôme Column, but he had no initiative in this respect; the order was really given by the Prefecture of Police, and signed with the name of Baron (who afterwards became Chancellor) Pasquier. The statue was melted and the bronze was employed for the new equestrian statue of Henri IV., now on the Pont Neuf (the old statue of Henri IV. had disappeared during the Revolution).

After the return of Louis XVIII., Rochechouart left the service of Russia. The Comte d'Artois promised to have him admitted into the French service with the rank of *maréchal de camp* (equivalent to the present grade of brigadier). Rochechouart confesses in his memoirs that he behaved in this matter with too much levity. After all that Alexander had done for him, he ought to have asked his permission, which certainly Alexander would have given; he contented himself with sending his resignation in writing, by the hands of Gen. Sacken. He did not even offer to accompany Alexander back to the frontiers of his empire. He says candidly that it seemed "too hard for him to leave again his country, where he had found such an agreeable existence." Sacken gave the letter of resignation to the Emperor, and two days afterwards said to him: "The Emperor is not pleased with you; he dismisses you with the grade of honorary general-major, but will not see you to receive your adieux." Alexander was perfectly right, and showed his usual kindness as much as his dignity.

The readers of these curious memoirs will find in the latter parts many interesting details on the Hundred Days, on the flight of the King to Ghent, on the second Restoration of 1815. The most dramatic pages are those which Rochechouart wrote on the execution of Marshal Ney, as he was the person charged with all the details of the execution. It must be said to his credit that he writes with much humane feeling about this terrible event. Rochechouart had honest instincts, but a narrow mind; his mediocrity gives, perhaps, all the more value to his testimony; he says very plainly all he has to say. We do not doubt that his memoirs will take rank among the documents concerning the Empire and the Restoration. After 1815 his life became very uneventful; he died on February 28, 1858, at his château at Jumilhac.

Correspondence.

REFLECTIONS AFTER A TOUR OF RESEARCH IN VIRGINIA.

To the Editor of The Nation:

Sir: During some recent visits to Virginia I have heard curious instances of callous conscience among people of literary appreciation and above want. The venerable Dr. Slaughter, historiographer of the diocese of Virginia, lost invaluable MSS. and volumes during the war. Afterwards a friend of his, visiting a fashionable lady in Philadelphia, was shown several of the rare books, the historiographer's name in them being proudly pointed out as enhancing their value. Mr. Thomas Nelson Page received a letter from the West informing him that the Nelson and Page family papers were in possession of the writer of the letter, who proposed, if the family did not purchase them, to utilize them in magazine articles. During the war the Will Book of 1743 disappeared from King George County Office (Va.), and a letter was afterwards received from New York saying that the volume would be restored if a certain amount were paid. The Board of Supervisors did not feel warranted in making the appropriation, but why they did not have the holder of the book arrested I do not know. There is little doubt that the law would reach the receivers of the Nelson papers and of the King George records. But such offers came soon after the war, when the Southern people had a morbid impression that they could gain no redress in Northern courts for injuries incident to the struggle they had brought on.

It is probable that in a majority of cases articles of this description were carried off without dishonest intent. Two years ago Dr. Loring of Salem wrote me that an humble neighbor had shown him an old land record, certain entries in which caused him to inform me of it. By this means a valuable volume, covering landed transactions in Stafford County, Va., for two years, was restored and litigation possibly prevented. The Clerk of Stafford informs me that another volume had also been returned. I regret to say, however, that there has been no return as yet of the papers abstracted from Virginia which are of especial importance to historians.

By the loss of the King George Will Book of 1743, containing the record of the will of Washington's father, the substance of that document becomes irrecoverable. The original has been stolen, the record stolen (the volume for 1744 was left), and no copy seems to exist. What Augustine Washington bequeathed to his son George is now among the unknowable things. But that is less heavy than the removal of both the original and the record of the will of Col. John Washington from Westmoreland Court-house. I have just searched for it there myself, and the clerk has continued the search, but without result. An invaluable document seems to be hopelessly lost. There is, indeed, a bare possibility that the search has been in the wrong region. Bishop Meade does, indeed, say that the will is in Westmoreland Court-house, but he does not imply that he saw it there, mentioning that he got it by aid of a friend. Now, the Rev. Dr. E. C. McGuire, writing in 1836, says that the will in question was then at Mount Vernon, with the endorsement, "The Will of Lieutenant-Colonel Washington." Dr. McGuire married a daughter of Robert Lewis, Washington's nephew and private secretary, and his statement is of sufficient weight to cause the heirs of Judge Bushrod Washington, who inherited Mount Vernon, and the Vice-Regents of Mount Vernon to institute a general search. For even if the document referred to was a copy of the will, it would be of high value in directing rightly the researches now employing Mr. Whitmore, Mr. Waters, and others.

Bishop Meade, supposing the will would always remain for inspection, preserved little more than its pious preface. He almost ingeniously omits mentioning the locality of the "large property in England" therein devised. He does not describe the seal. Fortunately, this seal has been preserved on another document—preserved under protection of another name not understanded of the autograph annexer—and I shall soon publish it in facsimile. But all light on the problem of Washington's genealogy must remain uncertain, unless the will of Washington's great-grandfather can be discovered. To some this may appear a small object to pursue; but it reaches far beyond any question of individual descent and into regions of serious history. For instance, there has been discovered by Mr. Alexander Brown of Nelson County, Virginia, the indictment, in Bermuda, 1648, of one "George Washington" for calling the King a rogue. It would be very interesting to know who that rebellious George of the early seventeenth century was, and whether he found his way to Virginia. History, Emerson tells us, is the history of a few good heads; and, since Sir Francis Galton's work on 'Hereditary Genius,' genealogy has a scientific as well as historical dignity. In this direction the autograph collector seems to possess views in advance of the average Congressional mind.

Grievous are the difficulties encountered by the student of American history through want of a bureau for the preservation, classification, and indexing of historical manuscripts and

documents. In writing the life of our first Attorney-General and second Secretary of State, I had to gather his fragments, so to say, from six different States—as widely separate as Massachusetts, Virginia, Pennsylvania, California, Kentucky, and Maryland. Had I been writing of an English or French statesman of equal eminence, I should not have had to leave London or Paris. All who have engaged in researches of this kind know of invaluable papers, resources of our national history, now mouldering in old trunks, scattered, or bought up in Europe, and lost to this nation. Senator Evarts, on certain statements of this kind made to him, urged on the Joint Library Committee of Congress the formation of such a bureau. There was printed a forcible report written by our excellent Librarian of Congress, and I am informed that the Committee unanimously agreed to recommend the scheme. It is to be hoped that another session will not pass without Congressional action on this urgent matter. It would cost but a trifle, and the advantages would be incalculably large. Historians and collectors would have a place to which their manuscripts might be bequeathed, with the certainty that they would be put to the best use. The collections now owned by the nation, but hardly available for research—such as that of Peter Force—would become of double value. If it be objected that a nation ought not to do anything merely magnanimous, or simply for culture, it may be considered that a moderate fee for copies would make such an institution a source of revenue.

MONCURE D. CONWAY.

THE PAN-AMERICAN CUSTOMS-UNION.

TO THE EDITOR OF THE NATION:

SIR: The article in the *Nation* of October 3, "European Opinions on the Pan-American Congress," has reminded me of a communication of mine to a leading German journal in St. Louis on the same subject under date of April 8, 1889, a translation of part of which may perhaps not prove quite uninteresting to the readers of the *Nation:*

"The late Richard W. Townshend of Illinois, who was the prime mover in the convocation of the Congress soon to meet, was an intimate friend of mine. When, two years ago, he submitted his plan for a Congress of all the States of this continent for the purpose of forming a union as regards customs, commerce, coinage, standard measure, arbitration, etc., to the House of Representatives, he sent me his resolutions and speeches on the subject, and asked my opinion upon it, remarking that his plan was principally built upon the German Customs-Union, and that he should feel much obliged to me if I would communicate to him some details of its origin and development.

"I gave him briefly a history of this Customs-Union, but called his attention to the articles on this subject in the 'Encyclopædia Britannica' and in Lalor's 'Cyclopædia of Political Science in the U. S.' My judgment of his plan was, however, not favorable. Beautiful and grand in theory, it would in my opinion be, I remarked, wholly incapable of being realized. The German Customs-Union, I observed to him, was the very slowly ripened fruit of nearly two generations. Infinite difficulties had to be conquered before it could expand to a certain importance. In fact, Germany had only reached unity of weights and measures and coinage, common patent laws and laws for the protection of literary property, after a bloody civil war (1866) and the great Franco-German war (1871), and after the establishment of the new Empire. A perfect Customs-Union was even at present not attained, since Hamburg and Bremen were yet out of it. (Both cities have entered it only during the present year.) And these difficulties had arisen among a people of the same race, the same language, and the same manners and customs. But what obstructions would have to be overcome between States like our own Union and countries the population of which consisted of the descendants of Spaniards and Portuguese, of creoles and pure Indians!

"What, however, would certainly make his plan a failure, was our high tariff, even if the Democrats should succeed in lowering it somewhat. Central and South America were principally countries producing raw materials, and would buy manufactured goods only in countries which would receive their products free, or under a moderate tariff. The Republican party could not surrender its protective tariff, for, without the support of the rich manufacturers and monopolists, it would soon perish. Besides, there existed, particularly in the South American republics, commercial treaties with England, Germany, and France, beneficial to all parties, which could only be abolished after the lapse of years, even if there was a disposition to set them aside.

"Townshend, in a continued correspondence, admitted in a great degree the force of my objections, but still thought that it would be worth while to make an attempt. Last fall, in a conversation with him on this subject, I called his attention to another matter. Even if a customs-union, I said, for this continent could be agreed upon by a treaty, it could not be carried out successfully under existing circumstances. It would require the enactment of a great number of rules and regulations, the execution of which could only be intrusted to an experienced, well-trained, and conscientious corps of officers, such as was by general consent to be found in Germany. Such a corps could hardly be found even in our own country, owing to the constant change of officers and the influence of politicians; but would it be possible to find such officers in Chili, Peru, the United States of Colombia, in Paraguay, Uruguay, the Argentine Republic? Townshend was somewhat surprised, and replied that he had not thought of that; that it seemed to present some difficulty.

"There is, in my opinion, a solution of this last problem, which, however, I did not communicate to Townshend, which would give to his idea an immense popularity—that is, to have a stipulation in the treaty that all offices in the administration of the Customs-Union should be filled everywhere with citizens of the United States, or with Irishmen who have taken out their first naturalization papers." G. K.

BELLEVILLE, ILL., October 14, 1889.

CHAUTAUQUA TEXT-BOOKS.

TO THE EDITOR OF THE NATION:

SIR: I believe the points in "Marcel's" criticism of Chautauqua methods well taken, and do especially agree with his statement that the Chautauqua method is the study of *books*, not the study of *subjects*.

There have lately come to my notice the "tailor-made" Chautauqua text-books in Physics and Chemistry. That an intelligent conception of the study of chemistry or physics can be obtained from the rapid perusal of these books is evidently impossible. And not alone in physics, as used in its limited sense in this text-book, but in none of the physical sciences, can the Chautauqua methods do else than give misty and even false notions of these studies. One can read Xenophon in the parlor as well, possibly, as in the class-room; or one can discuss the abstruse questions of political economy with his *confrères* or *consœurs*—as the case may be—in the enchanted "Circle" as well, perhaps, as when seated about the round table at the political-science seminary; but one can never smell H_2S in the parlor—unless, mayhap, the base-burner is in need of better draught, and then the Chautauqua scientist recognizes only a vile odor; nor can one determine the modulus of iron's elasticity by considering, at whatever length, a printed list of "queries."

The absurdity of Chautauqua science, to my mind, appeals so strongly to a believer in true scientific study, that, from his rather narrow standpoint, all else emanating from such a fountain of error and ludicrousness must seem as valueless. A little knowledge is indeed a dangerous thing, but when that little knowledge is grossly incorrect, if such a paradox can be, it is rendered doubly dangerous. Science demands the laboratory and study of the *subject* in hand, not the parlor table and the study of a prescribed *book*.

VERNON L. KELLOGG.

LAWRENCE, KANSAS, October 13, 1889.

THE MULTIPLICATION OF OATHS.

TO THE EDITOR OF THE NATION:

SIR: It was to the scandal of the clergy in an age of corruption that oaths were multiplied throughout Europe by the very class whose especial duty it was to have discouraged their use, namely, the priests. As a religious test, an oath was brought within the jurisdiction of the ecclesiastical courts, and, being exacted on the most ordinary occasions, became a source of great revenue to the Church. As was aptly said by an historian of the time, the command of our Lord, "Swear not at all," seemed to have been transformed by worldly lawgivers into "Swear on all occasions. Omit no opportunity of insisting upon an oath." While at an earlier period the followers of Christ had faithfully obeyed the precept of their master, refusing to swear, and even suffering martyrdom rather than transgress, the time had come when, from motives of avarice, their own teachers persuaded them that this injunction was not to be literally interpreted.

It is to the credit of the English Government that many superfluous oaths which were formerly required in that country have lately been abolished. It is also to the credit of some of our own people that an effort to that end was made under the late Administration. In the tariff bill proposed by the Democratic Committee of Congress in February, 1888, it was provided (sec. 12), "That all fees exacted and oaths administered by officers of the customs under or by virtue of existing laws of the United States, upon the entry of imported goods and the passing thereof through the customs, and also upon all entries of domestic goods, wares, and merchandise for exportation, be, and the same are, hereby abolished; and in case of entry of merchandise for exportation, a declaration, in lieu of an oath, shall be filed in such form and under such regulations as may be prescribed by the Secretary of the Treasury."

Judging from the article entitled "A Crop of Oaths" in your No. 1261, the "party of moral ideas" (and, strange to say, there are some good people who still claim this title for it) appears to be going in the opposite direction, and following the example of the degenerate fathers above referred to. M.

LOCKRAM.

TO THE EDITOR OF THE NATION:

SIR: Will you allow me to ask through your columns the origin of the use of the word *lockram* or *lockrum*, as meaning a long, rambling, *incredible* story? Using it in that sense the other day—in the company of several cultivated persons—I found myself called to account. No one of them had ever heard it. It was in very common use when I was a young girl, and I did not suppose it had become obsolete.

Webster says that *lockram* is a sort of coarse linen made in Locronan, in Bretagne, and took its name from the town in which it was manufactured. In "Coriolanus," act ii, scene 2, *Brutus* says, speaking of *Coriolanus:*

> "The kitchen malkin pins
> Her richest *lockram* 'bout her reechy neck,
> Clambering the walls to eye him."

It is evident that in this case *lockram* does

not mean coarse linen, but some showy gaud—perhaps a ribbon; and these two references are all I can find. I should be glad of further information.—Yours, very truly,

CAROLINE H. DALL.

WASHINGTON, October 16, 1889.

Notes.

MR. GORDON L. FORD of Brooklyn has in press a number of interesting unpublished agreements between Washington and his overseers and workmen, throwing much light upon the management of his estates as well as on the "labor question" of colonial Virginia. The agreements are copied from the originals in Washington's writing, and all date before the Revolution. In this volume will also be included a correspondence that Washington had in 1774 with a number of merchants and others concerning a scheme he entertained of importing German Palatines to settle upon his Western lands, and one of Washington's advertisements for runaway servants. Very little of this material has been published heretofore, and 'Washington as an Employer and Importer of Labor' will present a new phase of his character. The edition will be limited to 500 copies.

The 'Salon of Paris' for 1889 will be shortly issued through J. W. Bouton, 706 Broadway. Like its predecessors, it will illustrate the principal works by the photogravure process, one hundred plates being promised in various colors, and the majority of them full-page. The Holland-paper edition will be limited.

J. B. Lippincott Co. have in press 'Foods for the Fat: A Treatise on Corpulency, and a Dietary for its Cure,' by Nathaniel Edward Davies; Pierre Paris's 'Manual of Ancient Sculpture,' and M. Collignon's 'Manual of Mythology,' edited by Jane E. Harrison; 'The Maid of Orleans,' by W. H. Davenport Adams; 'Crime: Its Nature, Causes, Treatment, and Prevention,' by Sanford M. Green; and 'With Gauge & Swallow, Attorneys,' by Albion W. Tourgée.

A handsome illustrated edition of R. D. Blackmore's 'Lorna Doone: A Romance of Exmoor,' is about to be published by Burrows Bros. Co., Cleveland, O.

Harper & Bros. have nearly ready 'Cathedrals and Abbeys in Great Britain and Ireland,' the text by Richard Wheatley, D.D., the illustrations forty or more in number; 'London: A Pilgrimage,' text by Blanchard Jerrold, with Doré's designs; 'Thomas Nast's Christmas Drawings for the Human Race'; 'The Odd Number,' translations by Jonathan Sturges; and Constance Fenimore Woolson's 'Jupiter Lights.'

Fresh announcements of Charles Scribner's Sons are a reprint in book form of the late Prof. Alexander Johnston's article in the 'Encyclopædia Britannica' on 'The United States: Its History and Constitution'; 'Among Cannibals: Four Years' Travels in Australia, and Descriptions of Camp Life with the Aborigines of Queensland,' by Carl Lumholtz; 'Strange True Stories of Louisiana,' by George W. Cable; 'Sforza: A Story of Milan,' by W. W. Astor; and 'Biblical History,' Prof. C. A. Briggs's much-debated address before the Union Theological Seminary last month.

A facsimile of the first edition of John Bunyan's 'Country Rhymes,' recently acquired by the British Museum, is to be published by A. C. Armstrong & Son conjointly with Elliot Stock, London. The Rev. John Brown of Bedford furnishes an introduction giving the history of this little volume.

White & Allen announce 'Folk-Lore and Legends of Various Nations'; 'The Sleeping Beauty,' illustrated by Geo. W. Brenneman; and 'Off the Weather-bow on Life's Voyage,' by Miss E. N. Little.

Two well-known series will be continued in 'Three Vassar Girls in Russia and Turkey,' by Elizabeth W. Champney, and 'Zigzag Journeys in the British Isles,' by Hezekiah Butterworth, of which Estes & Lauriat are the publishers.

D. C. Heath & Co. issue directly Hoffmann's 'Tales from History,' and Freytag's 'Aus dem Staat Friederichs des Grossen.'

T. Fisher Unwin's list for the present season embraces 'The English Novel in the Time of Shakspere,' by J. J. Jusserand; 'God in Shakspere,' by Clelia; Ibsen's 'A Doll's House,' with portrait and photographs, and 'The Lady from the Sea,' translated by Eleanor Marx; 'A London Plane-Tree, and Other Poems,' by the late Miss Amy Levy; Sir William Jones's 'Sakuntala, or the Fatal Ring,' edited by Prof. Rhys-Davids; 'The Barbary Corsairs,' by Stanley Lane-Poole; 'The Butterfly: its Nature, Development, and Attributes,' by John Stuttard; 'Edward Thring, Teacher and Poet,' by the Rev. H. D. Rawnsley; and 'The Diary of the Parnell Commission,' revised upon the *Daily News* by John Macdonald.

Other English announcements are a complete edition of Gay's 'Fables,' by W. H. Wright, with many illustrations and notes, and a biography; 'The Literary Remains of Albrecht Dürer,' edited by Prof. W. M. Conway, and published by the Cambridge University Press; and still another life of Edward Thring, by the Rev. J. H. Skrine. We had supposed the authorized biography of this lamented teacher to have been committed to a Canadian friend.

There are few more sombre and impressive books relating to Ireland than the illustrated two-volume edition of Carleton's 'Traits and Stories of the Irish Peasantry,' published in 1843. The country has changed much for the better since those days. What was then a true picture of the condition of the Irish peasantry is not true to-day. Nevertheless, Mr. Walter Scott has exercised a wise discretion in adding to his "Camelot Series" a volume of 'Stories from Carleton.' Carleton's reputation suffered in his later works more than that of most authors who have written themselves out. But there is in his stories the impress of truth and genius, and we have here some of the best of them. No one is likely to shake off the impression left by a perusal of them. Mr. Yeats's preface is a worthy introduction to the book.

Well-appointed helps for the study of English literature multiply with great rapidity. The most elaborate of a group now on our table is 'Burns's Selected Poems,' edited for the Clarendon Press Series (Macmillan) by J. Logie Robertson. It is divided into Songs and Poems, and has been kept free of offence by exclusion and by a slight expurgation of what is admitted. A biographical introduction, a chronology, notes, and a full glossary, and a very careful and tasteful typography, make this edition worthy to be prized. Of Wordsworth one has his choice between the 'Selections' made by A. J. George (Boston: D. C. Heath & Co.) and the 'Select Poems,' edited by W. J. Rolfe in the familiar series of the Messrs. Harper. Mr. George follows the poet's last revision, and he observes the chronological arrangement (plainly marked in the table of contents). The sonnets are massed by themselves, as are the notes, which are truly useful. Mr. Rolfe's system is also chronological, but he occasionally appeals in the text from the later to the earlier Wordsworth, as in the case of the "Laodamia," and he distributes the sonnets. The Boston edition has the better print. The editor of Scott's 'Marmion' (Oxford: Clarendon Press; New York: Macmillan), Mr. Thomas Bayne, acknowledges his indebtedness to Mr. Rolfe's collation of this poem. His print is excellent, and his notes copious and scholarly. Shakspere's 'Othello' and 'Cymbeline,' both edited by K. Deighton and published by Macmillan, are of the series intended for use in the schools of India, and consequently go to an extreme in explication. Prof. Homer B. Sprague has made an unlovely book of 'Macbeth' (Chicago: S. R. Winchell & Co.). The introduction and the notes are largely eclectic. There is an index of words, phrases, and topics.

After some wanderings, Miss Anne Ayres's 'Life and Work of William Augustus Muhlenberg, D.D.,' reaches a fourth edition and takes the imprint of Thomas Whittaker. Some changes have been made which the author hopes will be final.

The newest volume in the '*Gentleman's Magazine* Library,' edited by Mr. George Laurence Gomme (Houghton, Mifflin & Co.), is devoted to a collection of bibliographical notes—on special books, often very ancient, and on special subjects, with a sample of what old almanacs have of amusement and instruction for the student of popular manners and beliefs. The volume is well fitted for deliberate browsing.

It is not many weeks since Hawthorne's 'Marble Faun' was the subject of a long communication directed to a comparison of this romance with its sources in the author's diaries. We have now before us an exquisite edition of the same work, in which the text is supplemented by abundant and uncommonly fine illustrations from nature or the real object (mostly), in photogravure (Houghton, Mifflin & Co.). The statues, the paintings, the churches, the classic ruins, the catacombs, etc., etc., referred to in the text are shown to the life in thickly set plates. The entire apparel of the two volumes is worthy of the best productions of the Riverside Press. A scarlet guard to the delicate binding of the covers is reinforced by a scarlet case. Altogether, the edition is sure of a sale at this season and at any season.

Except that there are no illustrations, the two dainty volumes of Dr. Holmes's 'Autocrat of the Breakfast Table' just issued by the same house would deserve the same praise as the foregoing. The covers are here a smooth, dark green in the best of taste. The size of the volumes is well calculated for the hand. A somewhat tall and narrow page is built up in clear type with broad margins.

T. & W. Johnson & Co., Philadelphia, have begun this month the publication of a *Law Student's Monthly*, "a periodical containing prize essays from the various law schools." No. 1 leads off with "The Law Relating to Mercantile Agencies," by Joseph W. Errant of the Chicago bar.

The actual predominates over the ideal in the newest issue, No. 13, of *Sun and Shade* (New York: Photo-Gravure Co.). A copy of Cabanel's portrait of Miss Catharine Lorillard Wolfe; a portrait from life of Henry George, with one of Lieut. Zalinski surrounded by vignettes of his dynamite gun; a beach scene, "Cockle-Gathering"; a charming group of palmettos on the Gulf Coast; the portal of a well-known Broadway office-building; "The Varnish Maker"; and an Italian fancy picture, "Gossip at the Well," make up an unusually varied and attractive number.

The sixteenth part of the new 'Stieler's Hand-Atlas' (Gotha: Justus Perthes; New

York: Westermann) reaches the United States with a sheet which takes in the region west of Lake Michigan as far as Montana and Wyoming. What is noticeable is that the two Dakotas are indicated. Indian reservations are in red. The minor names of places produce a dizzying effect from their parallelism and fineness of letter; but more could hardly be expected from the scale.

De Portefeuille, a politico-literary journal published weekly at Amsterdam, with here and there an illustration, has, with the number for October 5, very much enlarged its form, with some loss, to be sure, in handiness. It is attached to the fortunes of the Liberal party in Holland.

We have received a letter from Dr. Dörpfeld, Director of the German Archæological Institute at Athens, in reply to Mr. W. J. Stillman's article on "Prehistoric Chronology" in No. 1250 of the *Nation*. Dr. Dörpfeld denies in detail some of the statements there made with regard to the ruins of ancient buildings at Mycenae and Tiryns. We regret that the distance of the disputants, and the time which has elapsed, and the general obscurity of the subject, added to the pressure on our columns, make it impracticable for us to reopen the controversy.

—In the *Publishers' Weekly* for September 28, in a letter on "Authors' Rights," reprinted from the New York *Journal of Commerce*, Mr. W. C. Prime states his views concerning literary property without mincing words. He thinks that the moral principle underlying the whole subject of copyright is so plain that any child educated in an honest family can understand it; and he enunciates the following as "plain principles, which no honest man will dispute":

"The author of a work is, by moral law, as completely the owner of that work as the grower of a bale of cotton or a bag of wool is owner of his produce.

"No manufacturer has the right to take to his own use the cotton, the wool, or the literature, without first consulting the owner and making a contract of purchase with him.

"It is no excuse in any of the cases to say, 'If I don't steal it, some other man will.'

"It is no excuse to say the owner is a foreigner.

"It is no excuse to say, 'I will pay him something if I make money in my business out of his goods.'"

Concerning the relations of publishers with authors, Mr. Prime contends that "when a publisher proposes to himself or to an author to give the author a share of the profits of his book, he admits that the author has a property in his book"; and "if a publisher, or any man, takes and sells for his own profit in his business that which he admits is the property of another man, without first obtaining the owner's consent, he violates the moral law and is not doing an upright business."

— In the same number, in an account of the failure of the Chicago publishers, Belford, Clarke & Co., we get a curious illustration of the "if I don't steal it, some other man will" justification of literary piracy. Mr. Belford ascribes the misfortunes of the firm "mainly to the non-existence of an international copyright law," explaining that "when the system of piracy came into vogue, we, like other houses, had to adopt it in sheer self-defence; but the publication of English works has increased a hundred-fold, and the result has been that if we reprinted a work from the other side, fifty other houses were doing the same thing with the same work, and no one but the printer and binder reaped a cent of profit." An examination of their catalogue, on the contrary, would lead one to believe that an international copyright law would have served the good purpose of preventing this concern from coming into existence at all, for nearly their entire list of publications consists of works which they were able to appropriate because there were no *legal* barriers to prevent it, and their final collapse seems very like an instance of poetic justice.

— It has for some time been thought not unlikely that Shakspere's dark beauty, the "woman colour'd ill" of the Sonnets, might prove to be Mary Fitton, daughter of Sir Edward Fitton, and one of Queen Elizabeth's maids of honor. According to this theory, it was Shakspere whom Mary Fitton threw over for William Herbert, by whom she had a child, the birth of which was the occasion of Herbert's imprisonment in the Fleet. Mr. Thomas Tyler and the Rev. W. A. Harrison have been following up this line of research, and several pieces of evidence that they have discovered have been made known in print. The *Academy* of October 5 contains the last. While many facts have pointed to Mary Fitton as the dark beauty, it has hitherto been impossible to prove that she was, in fact, dark. No hint at her complexion was to be found. But lately Mr. Tyler, who desired to have a portrait of her for his forthcoming book, bethought him of her effigy upon her father's tomb at Gawsworth, and went down to Cheshire to sketch it. To his great delight, he found that, as was not uncommon in Elizabeth's time, the statues on the tomb were colored. The eyes and hair of Mary Fitton were plainly black, as were those of her sister, Anne, though their brother was fair. It seems strange enough that this piece of evidence should have been sought after for a considerable time before any one hit upon the simple plan of going to look at the tomb. Mr. Tyler's drawing will be of interest to everybody, for no one can be quite without curiosity to see what Shakspere's "evil angel" was like. The *Academy* describes her thus:

"Mary Fitton was a full-faced, bonny woman, with large, speaking eyes, and a loosish mouth, somewhat of the type of Chaucer's 'Wife of Bath,' as men imagine her. Her hair is brushed high off her forehead, and turned over a comb or wire underneath it, while a scarf or kerchief covers the rest of her hair. She wears a ruff. The sculptor has made her flat-chested, and some one has broken off her hands and the tip of her nose."

Mr. Tyler's book will be published by Mr. David Nutt. More than half of it is already in print.

— Mr. F. Legge, discoursing, in the *National Review* for September, on "The Origin of Modern Occultism," develops a fruitful idea touching the wonderful religion of Mme. Blavatsky and her enigmatic followers. This fancy, he contends, is derived, almost in its entirety, from a work by the late Rev. C. W. King, entitled 'The Gnostics and their Remains, Ancient and Mediæval.' By way of demolishing what Mr. Legge has demonstrated with a conclusiveness which few will dispute, the apostolic Col. Olcott has girded up his loins and stepped into the arena. In the issue of the *National Review* for the current month, he contrives to occupy ten pages with a true believer's history of "The Genesis of Theosophy"; and the history is one by which, like a good soldier, he has, beyond gainsay, established his intrepidity, if nothing else. According to the Colonel, the main revealers of the new faith to Mme. Blavatsky are certain far-off "Brothers," patriarchal in longevity, thanks to the efficacy of magic. Not sitting in the seat of the scornful, we leave it to others to suggest that motives of prudence have been at work in representing these "Brothers" as denizens of some secluded region, of whereabouts as yet undisclosed, safe in the bosom of the Himalaya Mountains. Their existence, it appears from the Colonel, was, however, announced somewhat prematurely. "I shall henceforth," he says, "try to abstain from even speaking of them, except to those who are prepared and anxious for the truth." Clearly enough, either they or he have blundered in policy, and likewise in prevision. As one of them travelled through the upper air all the way from Northern India to Col. Olcott's apartments in this city, abstractedly or otherwise leaving his turban behind him on his departure, it may, we should think, be surmised that he would hardly have made so long a journey if he had foreseen that he and his mates were destined to be ignominiously hushed up. Be this as it may, from that time forward, it is observable, the Colonel seems to have complacently washed his hands of his remarkable visitor, though retaining his headgear; inasmuch as, for aught that appears, he did not so much as make inquiries whether the ancient sage caught a catarrh in the course of his weary flight homeward.

—As to the doctrine of the "Brothers," none but the most imperfect and confused notion of it can be collected from what has been published about it by Mme. Blavatsky, Mr. Sinnett, Col. Olcott, or any or all of their nebulous communion. Is it that they are still dazed by the effulgence of the new light that has shone upon them? As every one is aware, the foolish things of the world have been chosen to confound the wise; and hence it is, presumably, that though not one of these illuminates has given proof of anything like even a moderate acquaintance with the Hindu religions and philosophies, they profess to have accepted them and aim to disseminate them. In the whole hierarchy there is, evidently, not a single Oriental scholar. While sprinkling their effusions with East Indian words, it is very rarely that they explain them at all correctly; and it is rather exceptional with them to know their orthography. Sanskrit and the Hindu vernaculars are to them all one. To go no farther, for evidence of what is here asserted, than Col. Olcott's paper now before us, we find in it *chelâs*—not, as he has it, "*chelas*"—spoken of as Sanskrit, though it is Hindî; and he puts "*sanyassis*" with an *n* wanting and an *s* interpolated, to say nothing of his neglect of diacritical marks, etc. Where, too, did he learn that "*mahatmas*"—rightly, *mahâtmâs*—means "perfect adepts," instead of simply "venerable persons"? That Sanskritists have not yet troubled themselves to expose the crudeness, not to say the crass nonsense, that has lately been vented about Brahmanism and Buddhism, is not to be wondered at; and yet the disagreeable task should, in the public interest, be undertaken by some one. To what extent the new-fangled Theosophists are dupes, and to what extent they are conscious impostors and charlatans, we shall, in good time, have opportunity of judging. In the meanwhile there can be no question that their crazy deliverances betray the grossest ignorance, and that these deliverances find acceptance, with minds of a certain cast, chiefly by reason of their extravagance and impudence, let alone their vesture of mysterious jargon. But does Col. Olcott do well in not cultivating friendly relations between his co-disciples and the thaumaturgic "Brothers," saints wrapped in frost and devotion in their Himalayan hermitage? Probably he does at least for the present; since, as we gather from his words quoted above, his tactics are, that introduction to nonentities should be reserved as the beatitude of hopeless gulls or advanced lunatics. Here, for once, we discern,

in the gallant Colonel's proceedings, something that savours of the wisdom of the serpent.

—For the last four or five years Dr. Maurice Bloomfield, Associate Professor of Sanskrit in the Johns Hopkins University, has been busily at work preparing a critical text-edition of the "Kāuçika Sūtra," a ritual book of the 'Atharva Veda.' This work, undertaken for the American Oriental Society, was completed during the past summer. The typographical part had of course to be done abroad, for there are no Sanskrit types in this country. The printing was, however, not done in free-trade England, for the cheapness of labor in protected Germany operated in favor of the latter country. As the International Congress of Orientalists was to meet in Christiania and Stockholm in September, a half-dozen copies of the work were struck off in Germany, so that it might be presented to the Congress, though the plates are yet to be shipped to this country, and the work will be issued from the press of the American Oriental Society in New Haven. It was most natural that the editor should desire to have in his hands one of these copies, the first fruits, as it were, of his brain-travail for so long a period, and, accordingly, two copies (large volumes of over 500 pages each) were mailed him, one for his own private use and one for the President of the University. The sheets had been merely stitched together, with a paper cover containing the title of the volume and a dedication to the Congress of Orientalists. There was no press-mark, and of course no value could be attached, *for the book is not yet published.* By some occult calculation of values, however, a tax of $1.25 was levied on these volumes by the customs inspector. The editor appealed against this exaction to the powers that be in Washington, and was rewarded for his pains with a cool refusal from Secretary Windom to adjust the matter. While other Governments undertake the cost of publishing learned books which, from the nature of the case, can appeal to but a limited circle of readers, looking to scholastic distinction as a source of national pride, and therein finding their reward, *advance sheets* of the largest work in the Sanskrit field ever undertaken by an American (if we except Prof. Whitney's share in the divided editorship of the 'Atharva Veda') have been held for the payment of customs duties.

—The American Eclipse Expedition to West Africa left New York on the man-of-war *Pensacola* on October 16. Unfortunately, the *Pensacola* cannot carry sufficient coal to steam more than ten or twelve days, even with careful economy on the part of her engineers, which will necessitate sailing for the greater part of the distance. Prof. Todd, who is in charge of the Expedition, had hoped to reach his observing station at least a month before the eclipse takes place; but Capt. Yates, commanding the *Pensacola*, expressed his opinion that St. Paul de Loanda will not be reached before December 1. The eclipse occurs on the 22d of the same month, and the preparations for observing it are very extensive. Several instruments never before used in an eclipse will be employed, and a number of mechanical devices to facilitate the rapid changing of the photographic plates have been newly applied. The apparatus is very valuable and varied, and much of it has been lent by six or eight of our leading Eastern colleges. While the party will land at St. Paul de Loanda, the capital of Angola, the eclipse is not total there, and as soon as possible the expedition will proceed to the observing station. From a study of the region, and from private letters received by Prof. Todd from Angola, he thinks the most probable point for establishing his station will be at Muxima, a small trading-post on the Quanza River, about fifty miles from its mouth. A ruined fort nearly eighty feet above the town will afford an advantageous location for the instruments, and a line of small steamers upon the river will convey the party and the apparatus to this point.

— Angola, especially near the coast, is rather dry and arid, although the banks of the Quanza —the only navigable river south of the Congo —are tropically luxuriant in vegetation. Properly Angola includes those possessions of the Portuguese on the west coast which extend from the Congo southward to Cape Frio. Its boundaries in the interior are not well determined, but there are military posts extending perhaps 1,500 miles from the coast. The whole area is estimated at about 312,000 square miles. A plan was once considered to construct a line of forts entirely across the continent to connect Angola with the Portuguese colony of Mozambique in the east, but this has never been accomplished, although the country has been somewhat explored. Angola is subdivided into four districts—Ambriz, Angola proper, Benguela, and Mossamedes—while the authority of the Portuguese is paramount only in Angola itself. Outside they have fortified places, and the native chiefs are in some sense vassals, but not always to be depended upon. The Expedition numbers fifteen specialists, not only in astronomy, physics, and meteorology, but in anthropology, biology, osteology, ornithology, geology, and other branches of science. Among the members of the party generally a cheerful determination to outwit the dreaded African fever was manifested. While it is undoubtedly prevalent, and peculiarly fatal to foreigners in many localities, careful and healthful living mitigates its severity to a considerable degree. All possible courtesies and facilities have been offered by the Portuguese authorities, and very satisfactory results from the observations are anticipated.

A SOUTHERN FIRE-EATER.

Recollections of Mississippi and Mississippians. By Reuben Davis. Boston: Houghton, Mifflin & Co. 1889.

Our titular characterization of Mr. Davis is not intended to cast upon him an injurious reflection. It merely states a fact. In the course of his narrative Mr. Davis speaks of himself as a representative of the class known as "fire-eaters," and it does not appear that he objects to being so named and known. He has given us a very interesting and valuable book, a memoir that will serve the future historian of ante-bellum times to a remarkable degree, as revealing both a type of character and a state of society that had much significance among the proximate causes of the pro-slavery rebellion. Except its personal aspect, the book contains little that is new or strange. Even such well-known lives as those of Andrew Jackson, Thomas H. Benton, and Henry Clay bring us into the same circle of wild social lawlessness, into acquaintance with similar personal traits. But if we have had before an account of these things from the inside, written with absolute sympathy and complacency, it escapes our present recollection.

The book is very readable. It is written in a fresh and vigorous style, and we may not object to its floridity. This is part of the self-revelation; the style being, as we know, the man. A sentimental strain recurs at least as often as the chapters end. This, in connection with the author's story of his bouts and brawls, suggests

> "the mildest-mannered man
> That ever scuttled ship or cut a throat."

The naïveté of the story is its greatest charm. We must go to Benvenuto Cellini for an equally unconscious mixture of murder and religion. The author has not a suspicion that he is not a strictly moral and religious man. He passes without violence from the most proper moral and religious generalizations to the most astonishing recitals of his own barbarities, or those of others which he heartily approves. The general type showed in him at its best. He was frank, generous, simple, straightforward, chivalric, honest, quick to sympathize with outraged feebleness or innocence presented to him in a concrete way. In a different order of society one can imagine that he might have been a model citizen.

The absence of dates from his narration is irritating to exasperation, and we must go elsewhere to find the year of Mr. Davis's birth. He was born in 1813 in Tennessee, of Virginian parents, who removed to Alabama when he was five years old. His father was a Baptist minister, who "never doubted that it was his duty to knock down any rascal who happened to deserve such discipline." At sixteen he left home and crossed the near border into Mississippi to study medicine in Hamilton, then the county town of Monroe County. He writes of the Mississippians of that time, that

> "Although a God-fearing people—for infidelity was unknown — there was nothing straight-laced about their religion. . . . Their creed was generally simple: A man ought to fear God and mind his business. He should be respectful and courteous to all women. He should love his friends and hate his enemies. He should eat when he was hungry, drink when he was thirsty, dance when he was merry, vote for the candidate he liked best, and knock down any man who questioned his right to these privileges."

In 1832 he passed from medicine to law, and began its practice at Athens with a young wife, and but three dollars in his pocket. What a passion there was in the community for litigation is shown by the fact that in four years he had saved $20,000. At the spring term of the County Court in 1835 he brought four hundred and eighty suits. Made District Attorney, a frequent source of embarrassment was that in criminal suits the murderer was a personal friend, "for whom he had respect and friendship," and whom he thought "justifiable under the circumstances of the killing." Once, when he had witnessed the murder, his embarrassment was so great that he went into court with $500 in his hand with which he asked the Court to furnish counsel for the prosecution. When another friend, shortly after, killed his man, Davis resigned his office and tendered his services in his defence. He pulled him through. "Since that day," he writes, "I have defended over two hundred cases tried for murder, and never had the misfortune to have my man hung." Could any statement be more expressive of the quality of mercy in the administration of justice? It is very clear it was not strained.

Davis himself had never a doubt of a man's right to defend his person or his "honor" at the risk of another's life. With him it was a word and a blow, and if the blow was not first, it was nearly simultaneous. He could not have been more than seventeen when he had his first personal encounter. There was a question of precedence of claim upon the attention of one of the ladies at a ball:

> "I no sooner withdrew my adversary from the ladies than I challenged him to defend himself, and assaulted him with my pocket-knife. . . . This action I have never regretted,

holding that a man has a right to defend his honor whenever and by whomsoever assailed. Had I submitted tamely to this insult, my whole future career would have been blighted by it, and I should have lost all claim to the respect and good opinion of my fellow-citizens."

In 1841, or thereabouts, he had a characteristic encounter with Judge Howry, "an able jurist and most accomplished gentleman." Some difference arising on a point of law, the Judge, offended by his pertinacity, fined him fifty dollars, whereupon, "in a perfect blaze of sudden fury," he threw his pocket-knife point foremost at the Judge, to the end that he might order him to jail—for which insult he meant to shoot him down. The court was suddenly adjourned, and Davis and the Judge were dragged off in different directions by their friends. Later in the day they met at their hotel, and Davis asked an explanation, which was refused. Then Davis slapped the Judge's face, and the Judge seized a claw-hammer and gave him three tremendous blows upon the head, while he hacked away blindly at the Judge's throat with his knife, which he had recovered. Again separated, Davis sent the Judge a warning not to appear unarmed, as he would attack him at sight. He, however, concluded not to do so, when reminded of a remarkable dream he had had the night before, which seemed a warning of his death.

"The court met that evening. I had put on a fur cap, with the back part before to conceal my wounds, and the judge wore his overcoat with the collar well drawn up, to hide the tokens of combat on his person. . . . I did not meet Judge Howry for seven years after this affair. . . . I promptly replied [having been approached in a friendly manner] that I thought nothing of the affair; that Howry was a gentleman, and that our difficulty was casual and without malice. Although it had been a death struggle, it had been about almost nothing."

The point of view and the local color come out strongly in the characterizations of Davis's contemporaries, which are very numerous. Davis was very soon "Old Reube," and it is Tom this and Charlie that and Jim or Jack another. "There was Joe Davis, elder brother of our revered ex-President, who was beloved by all who knew him. He was admitted arbiter of every question of honor, and his decision was always final." The mentions of Jefferson Davis are very slight, but always ardently enthusiastic. The impression given is not that which has been general at the North, where Davis has been thought of as the opposite of Lincoln, in his coldness and his inability to make himself an object of wide popular affection. We are told that "there was something about Davis which captivated the imagination and exalted him into a hero, dearer than all others to the popular heart." A very impressive account is given of the inauguration of Davis, following hard on the surrender of Fort Donelson, in which the narrator saw the beginning of the end. "From that day of evil omen he trod firmly and steadily the path that led him to his cell in Fortress Monroe, where, in his dauntless captivity, he was crowned with the passionate love and reverence of millions who had followed him to ruin and defeat."

In the description of his friends, our author's preliminary adjectives of copious praise are often in amusing contrast with the particulars that afterwards appear. He regrets how little the real character of Col. McClung, Jefferson Davis's Lieutenant-Colonel in the Mexican war, has been understood, and then he pictures him eating his solitary lunch at a restaurant, with a large duelling pistol on either side of his plate, a bottle of wine and a bowie-knife between them, in which attitude, and with a corresponding temper, he encountered him with two friends, and barely brought them off alive. Early in the war Breckinridge was often at Davis's headquarters at Bowling Green. "He was a goodly sight, sitting on stool or table, with a glass of old shuck in his hand, and that grand voice vibrating through the tent like a deep-toned bell."

There is some general praise of temperance, but it is evident that none of Mr. Davis's recollections make him happier than those of the five gallons of mint-julep at one sitting, and of many a night when he and others drank together till the morning broke. "What nights those were! How brave and generous, how gay and jovial; what wit and humor sparkled with the wine!" A drunkard's grave was the end of many a brilliant fellow. There is one lively picture of the Mississippi Legislature, in a body, gloriously drunk, parading the streets of the capital in the small hours of the morning, singing a jolly song. The hospitality was boundless as the drink. When Davis was in Congress, he invited the whole county to a party at his house. He spent as easily as he earned. He was always going security for a friend, until he reckoned that he had lost $75,000 by this genial disposition.

In the Mexican War he received a colonelcy, but he speaks with bitterness of that experience. It "broke his life in two," and he dates from it the misfortunes of his subsequent career, which consisted, so far as he reports, of political disappointments occasioned by the enmities which originated with his brief command. He had had no military training; his regiment was reduced by almost constant sickness and never got a chance to fight. And so it happened that where Jefferson Davis got much glory, he got only curses for his pains. After many disappointments he was finally elected to the National Legislature, and took his seat in the Thirty-fifth Congress in December, 1857. He had no definite convictions, but he went with the tide, and this was setting strongly towards secession. Quitman said to him at once: "You must move up, Davis, or you will be left behind." He answered: "No, not left behind, because wherever Mississippi goes she takes me with her." After that, he tells us, he kept pace with the rest, but he had the frankness to say, everywhere, that war was in sight.

The policy of the leaders was to decry the chance of war, partly because they thought secession could be accomplished without a fight, and partly because they thought secession without war would be more popular. The impression is very strong, in general, that the popular feeling had to be much forced and juggled with in order to bring it into line with the wishes of the chief conspirators. Mr. Davis's account of his two Congressional terms, and the course of secession and the war, is much too brief. He characterizes few of the men he met in Washington, but his account of Giddings is one of the most elaborate in his book, and is, despite its misconception and misrepresentation, a fine tribute to the "noblest Roman of them all":

"I never saw a more remarkable man, nor one who was inspired by a spirit of more concentrated bitterness. He was very old and infirm, but his hatred for the South and for slavery glowed like the hot fire of youth in his veins, and seemed potent enough to vivify with new energies his exhausted frame. The hoarded hate of a lifetime gleamed in his sunken eyes, and gave ferocity to a voice that was like the growl of a tiger about to spring upon his prey. I used to watch him with the sort of fascinated interest which the display of strong and sustained passion is sure to create, and I remember how the alertness of his attitude and the suppressed passion of his face used to suggest to me the idea of some fierce creature crouching for a spring. To this day I believe that it would have given him pleasure to behold the South desolated with the sword and with famine and with pestilence until neither man, woman, nor child remained. He had poured out so much tenderness upon the slaves that there was not a drop of pity in his heart for even the innocent babes of the slaveholders. Owing to the infirmities of his great age, he could not make a long speech without bringing on convulsions, but he was always in his place, suggesting and planning every movement and the soul of every aggressive measure. Instead of moderating the stormy passions of the younger men, the glare of his furious eyes woke up responsive fires in both friend and foe."

He contrasts Tom Corwin with Giddings, greatly to the latter's disadvantage. Corwin is "that good man." "He would gladly have saved the Union and averted war by any possible concession." In 1859, when there was a long fight over the Speakership, Davis spoke four hours in the fiercest manner of his set to kill time—a device necessary for the defeat of Sherman. Corwin replied to him in such a way that many a time afterwards his words came back to him like a prophecy, "especially in the dark days when defeat followed defeat and destruction was upon us."

Davis's part was henceforth a leading one in the secession movement. Immediately after the election of Lincoln, it was upon his motion that a convention was called "to secede the State of Mississippi by separate action, such action to take effect *eo instanti*." This was at a special conference to which there came a telegram from South Carolina, asking advice—whether it should secede at once, at the then imminent Secession Convention, or make its ordinance inoperative till the 4th of March. Davis moved they be advised to secede at once. Returning to Washington, "I spent much of my time," he says, "in consultation with Mr. Floyd, Secretary of War, who had been for twelve months, and still was, engaged in sending to the Southern arsenals all available arms under his control." As one of the committee of thirty-three appointed December 10, 1860, to consider the danger, serving against the wishes of Jefferson Davis, he soon proved that he was actuated by no conciliatory spirit. Making himself "the mouthpiece of a wronged and outraged people," his tone was admirably calculated to put the Northern men upon their mettle. Later he moved that the Committee adjourn and report that "no remedy remained but the final appeal to the God of battles." It was at his rooms on the 14th that a manifesto was prepared and sent to all parts of the South, declaring "that argument was exhausted, and that the whole action of the Committee showed a determination to go to the extent of emancipation," though non-extension had been the boldest word. On the 15th he proposed a resolution merely "to show the hopelessness of any agreement": "Be it resolved, that the Constitution of the United States of America recognizes property in the slave, and that it is as much the duty of the general Government to give protection to that species of property, both at sea and on land, as to any other species of property known to our institutions and laws." Corwin's vote as chairman defeated the resolution, on which there was a tie—fifteen to fifteen. This, it seems, was not a "possible concession."

"With a fierce pang of renunciation," as he crossed the Potomac on his way to Mississippi, January 5, looking back on the Capitol, he saw the Stars and Stripes drooping in the still, cold air. Appointed Major-General in place of Jefferson Davis, who had resigned in order to preside over the Southern Constitutional Convention, eighty companies

were accepted and ordered into camp at his instigation. So little general apprehension was there of the task in hand that this measure was denounced as a piece of useless and wicked extravagance, but it was justified by the event. After a brief term in the field, he went to Richmond to represent his district in the Confederate Congress. "Every step taken up to that time had been, I thought, defeated by tardiness of movement and inadequate preparation, and I could discover no indications of an improved system for the future." He never could. He was all the way along entirely out of conceit with the Southern conduct of the war. On the Military Committee of the House he urged the concentration of the whole available force of the South into two invading columns. Meeting with no response, he resigned from the Committee, and assumed the rôle of Achilles sulking in his tent. After a speech denouncing the whole military policy of the Government, which gave great offence to the Administration, so that afterwards he had no influence, and indeed no personal intercourse, with the heads of Government, he felt himself "a mere spectator in the final acts of our tragedy."

Of the twenty-five years since the fulfilment of his prophecies, there is no account—only a foregleam, in the course of the narrative, of a second marriage which brought children to a childless man, and of his separation from the Democratic party in 1878. His fiery blood was slow to cool, and in 1873 he was shot down in a court-room brawl. His impressions of the new South would have been a welcome addition to his book, but we must not ask too much. An excellent photograph, with eyes like gleaming bayonets, and a mouth like an iron clamp, is an exact reflection of the man who reveals himself to us so frankly in the pages of his book.

MEDIÆVAL ANECDOTES AND JESTS.

L'Esprit de nos Aïeux: Anecdotes et bons mots tirés des manuscrits du xiiie siècle par A. Lecoy de la Marche. Paris: C. Marpon & E. Flammarion. 18mo, pp. xvii, 306.

TWENTY years ago M. de la Marche attracted attention to a long neglected source of mediæval history by his work on the French pulpit in the middle ages ('La Chaire Française au Moyen Âge,' Paris, 1868). It was the custom then as now for preachers to enliven their sermons by the insertion of anecdotes, many of which are valuable for the history of manners and customs, and many others are of interest as throwing some light upon the question of the diffusion of popular tales. Sermons in which anecdotes (technically called *exempla*) occur are not older than the thirteenth century, and Jacques de Vitry, the historian of the Crusades, who died in 1240, is said to have been the first to introduce these stories regularly into sermons. His own are crowded with them, three or four often occurring in succession in one sermon. They were subsequently collected into books by themselves, and served as storehouses from which subsequent preachers drew, often without any acknowledgment of their source. Nor was the use of anecdotes or illustrative stories confined to sermons alone. They were profusely employed in treatises designed for preachers and in expository works; one of the most famous of the class of treatises being that of Étienne de Bourbon, 'Tractatus de diversis materiis prædicabilibus,' partially edited by M. de la Marche in 1877 for the Société de l'Histoire de France, under the title, 'Anecdotes historiques, légendes, et apologues tirés du recueil inédit d'Étienne de Bourbon.

In order to bring this interesting material to the notice of the general reader, M. de la Marche has made a selection of 150 stories, chiefly from the two preachers mentioned above, Jacques de Vitry and Étienne de Bourbon, and from a collection in the Library of Tours, MS. 454. These furnish, respectively, thirty-six, seventy-two, and twenty-eight stories, the remaining fourteen being taken from other preachers of the thirteenth century. The author has arranged his material, according to the various classes of society, into seven chapters: the secular clergy, monks, kings and queens, lords and gentlemen, citizens and people, women in general, and students and their masters. This arrangement is that adopted by some of the old collections of *exempla* and by Jacques de Vitry in his 'Sermones Vulgares.'

The contents of the collection may be broadly divided into two classes: historical anecdotes and jests; the former of great interest for the student of mediæval culture, the latter for the student of folk-lore. Sometimes the two classes blend, as in the anecdote (47) of the King Philippe-Auguste, who met one day a rogue who asked for alms on the ground that he was a relation. "On which side are you my relation?" asked the King. "On Adam's side," was the answer. "Well, give him a penny," said the King to his servants. "That is not a royal gift," remarked the beggar. "My friend," replied the King, "if I gave as much to all my relatives on that side, I should have nothing left for myself." It was the same king who once had a fever, and wanted to quench his thirst with wine, but his physician refused to give him anything but water reddened with wine. "At least," said the King, "let me drink the wine first and the water afterwards; the mixture will be the same." The physician at last consented, but when Philippe had drunk the wine, he pushed the water away and said: "Now I am no longer thirsty."

We must not rely implicitly on the historical value of all the anecdotes, as, for example, the story of Saladin (50), who on his death-bed asked a Jew which was the best religion. The Jew naturally answered his own, but acknowledged that if he abandoned it, he would choose Christianity. A Pagan made the same reply, and finally a Christian declared that if he forsook Christianity, he would hasten to choose—Christianity. After this Saladin did not hesitate to be baptized. The same Sultan, just before his death, commanded his shroud to be borne through the cities and towns of his empire with these words: "The great Saladin, lord of twelve kingdoms, takes nothing else with him from this world."

Many anecdotes show the cruelty with which the poor were treated, as where (78) a rapacious provost ordered his servant to seize the cow of a poor widow. He had no sooner uttered his order than the judgment of God smote him, and for the rest of his life he could only pronounce the words, "Touche la vache." The bailiff of a powerful lord went so far (79) as to advise his master to lay a tax upon the sun in his domains, and charge his serfs a shilling for each piece of cloth they bleached. The unjust judge is ridiculed in the widespread story (88) of the woman who was told to "grease" the judge's hand, and obeyed the injunction literally. Women as usual come in for more than than their share of bitter raillery. In one anecdote (115) a woman would not confess her sins to the priest, so he rang the bells, convoked the people, and said he was going to show them the most precious relics that had ever been preserved of any mortal except the Virgin—those of a woman who had not sinned—and announced his intention of enclosing her in a golden shrine. The sinner was naturally put to confusion and confessed her heinous deeds. A preacher (118) did not hesitate to say that the efforts which Pilate's wife made to save Christ were solely to oppose the salvation of mankind. The story of the "Matron of Ephesus" is not wanting (123), while the custom of wearing false hair and painting the face affords matter for several amusing stories.

Under the class of jests may be included also those stories which are found everywhere in popular literature, such as the "Matron of Ephesus" just mentioned. Among these are (31) the legend of the Monk Felix (in Longfellow's 'Golden Legend'), the Cranes of Ibycus (81), the priest who prided himself on his voice, and who made one of his parishioners weep—because he reminded her so of her lost donkey (13); the young hermit who was told that women, whom he saw for the first time, were geese, and later cried for one of those geese (33), a story made famous by Boccaccio; the Jew who was converted by seeing the Christian religion withstand the evil example of its professors (51), also in Boccaccio; the king who bought the advice, "In all your actions consider to what end they may lead you," which maxim, written on all the royal linen, saves the king's life by terrifying the barber who had been bribed to kill him (61), also in the 'Gesta Romanorum,' c. 103.

Many other stories equally interesting we must pass over. Much of the contents has already seen the light in the author's edition of Étienne de Bourbon, but the extracts from Jacques de Vitry are mostly inedited. They will soon appear in Prof. Crane's complete edition of that author's 'Exempla,' to be published by the English Folk-Lore Society.

MORSE'S FRANKLIN.

Benjamin Franklin. By John T. Morse, jr. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1889.

LEST the reader should not discover that this latest Franklin biography is largely a perfunctory piece of work, the author tells us that it is, and almost in so many words. This was quite unnecessary. That any one could produce a life of Franklin—of all men in the world—which could be read listlessly and with flagging interest, is well-nigh incredible; and that Mr. Morse himself, after the skilful treatment of his subject in his volume on John Quincy Adams and other members of this series, should come so near doing it, is indeed a disappointment.

Yet this is a volume which should not be passed over by readers who are interested in obtaining an adequate idea of Franklin's life and career; and it is precisely because many readers may find the temptation to do this a strong one that attention should be directed to several important portions of Mr. Morse's narrative. The first of these is his chapter on the Hutchinson letters, which, though avowedly a brief summary of the affair, is certainly one of the most adequate and satisfactory to which the reader may be referred. In this episode there are at least two distinct phases to be considered, namely, its moral quality as affecting Franklin personally, and its practical bearing as related to current political conditions. As regards the former, Mr. Morse very wisely does not reëcho the "elaborateness and vehemence of the exculpations put forth" by some previous writers. "Yet," he urges, one "would wish to know from whom these letters came to Franklin's hands, the information then given him concerning them, and the authority which the giver might be supposed to have over them." Upon these essential

matters, he adds, "there is absolutely no evidence." Scarcely less important is it to appreciate the real political bearing of these letters. It was through Hutchinson's suggestions that the sending of the troops to Boston and other similar measures had been determined on. The revulsion of feeling against the Loyalists of New England constituted for many years after the Revolution, and indeed down to a comparatively recent time, a kind of mist through which it was for the most part impossible to obtain anything but a blurred and distorted view of their standing and influence. Therefore it is in every way pertinent for Mr. Morse to remind his readers that Hutchinson, a native of Massachusetts, as well as an officer of the Government, was a man of such standing that "the English Government had a perfect right to rely upon the soundness of his statements and opinions."

Another point which Mr. Morse's account makes plain is, that Franklin, in his diplomatic endeavors abroad, had much more of a hostile influence to contend with than was represented by Arthur Lee alone. The embittered feeling which in Lee's case was so prominently manifested, was abundantly shared by Samuel Adams and a large following in New England, as an examination of the correspondence of Arthur Lee renders clear. Mr. Morse very justly observes that Samuel Adams "felt towards Franklin that distrust and dislike which a limited but intense mind often cherishes towards an intellect whose vast scope and noble serenity it cannot comprehend." Inestimable as were Samuel Adams's services in other directions, the thwarting influence which he exerted in America, while his great kinsman, John Adams, was chafing with jealousy of Franklin abroad, needs to be borne in mind in estimating the weighty results actually achieved by Franklin. Mr. Morse has, however, one comment on Mrs. John Adams which is likely to provoke inquiry in the minds of his readers. After quoting language used by her in 1775, eulogistic of Franklin in the extreme, he remarks: "The time came when her husband would not have *let* her speak thus in praise of Benjamin Franklin." We fear that Mr. Morse underestimates the independence and original force of character of Mrs. Abigail Adams.

On the subject of the Treaty of Peace with England in 1783, and the negotiations leading to it, Mr. Morse has an advantage over his predecessors, in being able to avail himself of the new and important materials brought to light within the last few years. Of these he makes good use, and this portion of his narrative may be commended as a lucid as well as compact statement of this whole series of events. It will be well worth the trouble involved if this chapter shall serve to induce his readers to study this transaction in Mr. Bigelow's eighth volume of Franklin's works, to which the repeated references given by Mr. Morse will be a direct aid. It is noteworthy that Mr. Morse, in common with nearly every recent writer, holds, in the matter of the interesting Vaughan episode, to the view maintained by Mr. John Jay in his examination of his grandfather's career, rather than to that maintained by Mr. Bancroft. Mr. Morse forbears, however, from treating this subject with any detail, since, as he announces, the volume on Jay, soon to appear in this same series, "will contain a very full and accurate presentation of this entire affair, drawn from those sources which have only very recently become public, and which go far to remove former questions out of the realm of discussion."

Mr. Morse pathetically claims the sympathy of his readers in view of the fact that, for the period ending with 1757, any modern account of Franklin maintains but an unequal competition with the immortal Autobiography of Franklin himself. It is also to be remembered that the publication, only two years ago, of Mr. McMaster's volume, devoted distinctively to Franklin "as a man of letters," removes from among the materials now available some of the most important and attractive. In many instances, however, Mr. Morse has added to the interest of his volume by quoting from Franklin's own letters or other compositions. The famous letter to William Strahan in 1775 is printed at page 203, yet it would have been well, perhaps, to add in connection with it that a later letter of Franklin to Strahan, which has recently come to light and is printed in Hale's 'Franklin in France,' makes the letter of 1775, as Mr. Hale says, "more inexplicable than ever."

It is a pleasure to state that the index, as is usual with this valuable series, is admirably complete and a distinct assistance in the use of the book. It is perhaps in accordance with a certain familiar usage that Franklin's grandson appears in this index with no other given name than Temple; but the more accurate form, William Temple Franklin, is to be preferred as being less misleading. A more distinctly incorrect citation of a name is that of Gov. Hutchinson's great-grandson, Peter Orlando Hutchinson, whose first name Mr. Morse, at page 182, makes Thomas. In general the work is marked by that accuracy which is characteristic of these useful volumes.

Grammatik der Attischen Inschriften. Von Dr. K. Meisterhans. Zweite vermehrte und verbesserte Auflage. Berlin: Weidmann.

It is not "the unexpected that happens" this time. On the appearance of the first edition in 1885, the work at once became an authority, quoted and referred to on all hands, and it was a moral certainty that its author would have to issue a second and enlarged edition. In its new form the size and number of the pages are both increased, the former slightly, the latter considerably, as we now have 217 pages against the 109 of the previous edition. The index is about twice as extensive as the first one, and the *Inhaltsübersicht* has 90 sections instead of 50. It need not be said that Meisterhans has diligently and, as he says, *gewissenhaft*, made use of the work of the last three years in his line; and those teachers who read in the *American Journal of Philology* for December, 1886 (pp. 540 and 542), about O. Riemann's articles reviewing the work of Meisterhans, and who there read that these articles were "indispensable for those who use that indispensable book," will be comforted to know that, though they may not have had access to the *Revue de Philologie*, Meisterhans in this new edition has made special acknowledgment of Riemann's recensions, so that whatever he deemed valuable in those "indispensable" articles will be found incorporated here. Of course, too, other authorities are brought up to date; and we have, for example, the second edition of G. Meyer's Greek Grammar referred to instead of the first.

If the "shining light of one of our great centres of enlightenment" spoken of by the reviewer of Prof. Allen's revision of Hadley's Grammar—the one who said: "With Greek it is different: you either know it or you don't know it; and if you know it, that is all there is to it"—will make some use of this book and compare it with the grammars in use, he will *perhaps* begin to doubt his dictum. And the "modest schoolmaster" likewise spoken of there will find light let in on various points that may have perplexed him. Many a plodding pedagogue, with all his industry, fails to find anywhere a reason for the changes he is compelled to make in familiar statements. He cannot be a specialist in the various lines of research. Most likely he is very far from being a specialist in *any* of these lines. He may even be filled with despair when he finds specialties so minutely subdivided that a question addressed to one of the most illustrious of our scholars is referred by him to "a specialist in diphthongs." But with all this he may like to have an intelligent idea of the reasons for all these changes. We will undertake to point out here the conflicting statements to be found in regard to a few of the matters that the weary schoolmaster has to present to his pupils in their elementary stages.

If he was brought up under the old edition of Hadley's Grammar, he learned ἄστεος as the genitive of ἄστυ, and was told in a note that ἄστεως occurs, but less often. In Goodwin's Grammar he finds ἄστεως in a note, and it is said to be poetic. Krüger and Kühner both give ἄστεος, and the latter devotes a note to ἄστεως, telling how extremely rare it is. But Liddell and Scott give ἄστεως as the Attic form; and the new Hadley gives it in the paradigm in good fat black type, and a note says that ἄστεος is poetic. If he can get hold of the 'Thesaurus,' he finds that the volume containing ἄστυ bears the date of 1831–1856, and ἄστεως is there given as the Attic form, with Rangabé referred to as an authority. Maybe he does not just exactly know who Rangabé was or is. Meisterhans, however, comes to his help, and quotes among his authorities the same work of Rangabé that Dindorf quotes in the 'Thesaurus,' and 1842 is the year of its publication. Well, our schoolmaster thinks, slow work that! Proof of the correctness of ἄστεως given in 1842, accepted by Dindorf in the 'Thesaurus' not later than 1856, and yet the new Hadley of 1884 is the first grammar he has found it in, and Kühner in 1869 rejected the proof and retained ἄστεος. Nay, the fight for recognition is harder than that, for, see: he takes Von Essen (one of his bosom friends by this time) and "strikes after" (as a German would say) ἄστυ in Thucydides. He finds the genitive singular given three times, all in the form ἄστεος. The text of Engelmann's translation gives this form in all three places, and so does Krüger's text. Stahl, on the contrary, has ἄστεως in the two instances in the eighth book, so that in 1874 this form received that much recognition; but then Classen, with Stahl's example before him, gives ἄστεος throughout, and this in 1878. So the matter does not seem to be settled yet. We learn from Meisterhans that ἄστεος is not found in inscriptions at all, only ἄστεως. How the doctors do differ!

What paradigms are dearer to the heart of the "gerund grinder" than γένος and βασιλεύς? They are both of them good old standbys—that is, if there are any such. The old Hadley gave only γενῶν as genitive plural. In Goodwin γενέων or γενῶν is found. So in Kühner, who says γενέων occurs very often even in Attic prose. Krüger gives both. But the new Hadley gives only the form in -ῶν, and is fully borne out by Meisterhans, the form -έων not being found in inscriptions. But if we go by this, we must write γένει in the dual, instead of γένῃ, and πόλει instead of πόλεε, and this innovation has not obtained any sort of foothold yet, so far as we know. Then, as to βασιλεύς, Prof. Allen's reviewer objected to seeing βασιλῆς treated with so little respect as to be "shoved aside into a note." Reinach had

already told us (p. 279), on the basis of Wecklein's investigations, that -ῆς was the correct form till towards 350 B. C., and had said that in Thucydides *il faut partout rétablir* -ῆς. Meisterhans gives the same data. Of making many grammars there is no end, and it remains to be seen how soon a new crop of boys will learn βασιλῆς as the nominative plural, and find βασιλεῖς in a fine-print note, and so "skip" it.

But how shall inscriptions, texts, and grammars walk together, except they be agreed, as they certainly are not now? To be taught that βασιλῆς is the right form, and to be constantly meeting βασιλεῖς, is too unsettling a matter for schoolboys. The demand will no doubt become more and more imperious that the forms handed down to us by the copyist shall be corrected in conformity with the testimony of the rocks. Some years ago we heard a very noted German professor criticise Stein's text of Herodotus, because he paid so little regard to accepted facts ascertained from inscriptions.

One of the additions in the new Meisterhans is the first paragraph under Conjugation, §61, 1, in regard to η or ει as the ending in the present middle. Unfortunately the trumpet gives a somewhat uncertain sound in this case. "Die 2. Pers. S. Med. (primär) scheint seit dem iv. Jahrhundert auf -ει geendigt zu haben." *Seems*, and only one example given, is not very encouraging, especially as we had noted the omission of anything on this point in the first edition, and were on the lookout for it. Still, the only conclusion to be drawn is that prior to 378 the ending had been η. The matter is not without interest. We were all brought up on "λύῃ or λύει." But Prof. Allen in his preface states that, "in the interest of a stricter Atticism, η in the second person singular middle has been dropped"; and in § 384 he states that ει is the form in Attic, η in all other dialects (except Ionic). This disposes summarily of Kühner's long excursus on the subject in his edition of the 'Memorabilia,' and of the long paragraph on the subject in his Grammar (p. 536). And though η occurs in the texts, that is no reason, as we have seen, for adhering to it. What is our perplexity then (and by "our" we mean the large class of teachers who are struggling to keep at least within sight of what the scholars are doing), to find that G. Meyer, §143 and §466, quietly gives η as the form. "Att. η: λύῃ." And not only so, but in a note on page 157 he speaks of βούλει and οἴει as being *exceptions* difficult to account for. How often, in the days of our childhood, have we heard about the faithful three, βούλει, οἴει, and ὄψει, that never have η in the indicative! Of course there is no need for this (in Attic), if *all* verbs have only ει. But then, what has become of ὄψει? Prof. Allen makes provision for βούλει and οἴει in the common dialect, but never a syllable about ὄψει. Meyer speaks of βούλει and οἴει, but never a syllable about ὄψει. What has become of it? It has a host of friends who intend to stand by it and see justice done.

Other matters which we look for without finding are, the dative singular of neuters of the third declension in -ας, as γῆρας, κρέας, etc. The books vary greatly between -αι and ᾳ in the dative, the tendency being towards -αι, while ᾳ still holds its ground pretty firmly in our texts. Meisterhans is equally silent about ειν or η in the pluperfect active. As we strive to trace out some of these matters, we are reminded of a sentence by the editor of the *American Journal of Philology:* There is many a man who wishes he had never been born, by reason of the connecting vowel.

Cyclopædia of Music and Musicians. Edited by John Denison Champlin. Critical editor, W. F. Apthorp. Vols. I. and II. Charles Scribner's Sons.

It is not customary for dictionaries of music or of any other art or science to be printed in an *édition de luxe*, but the present work starts out in its career in such a garb. Only 550 copies are printed, 50 of which are intended for the English market, and there will be three volumes in all at $25 each. It is not, therefore, a work so much for the student of music as for the wealthy amateur and patron of the art. This fact has apparently guided the editor in his choice of material. The student, for instance, looking for historic or technical information under such heads as Greek Music, Gregorian Chant, Counterpoint, Canon, Cantata, will be disappointed in finding no such entries; while the amateur who does not as a rule care for such information, but who often is haunted by the words of a melody which he cannot trace to its source, will be pleased to find that he has only to turn to this Encyclopædia under the first word of the song to find it referred to the opera, etc., to which it belongs; and, pursuing his search to the opera itself, he will find its plot given in full, together with the date of its first performance, the first cast, etc.

This merging of the plan of an opera-lexicon like Riemann's with the usual musical dictionary is a valuable feature of the present work; but, owing to the absence of technical and general historic articles, the title, 'Cyclopædia of Music and Musicians,' must be regarded as a misnomer. It should have been rather 'A Dictionary of Composers and their Works'—composers, and not musicians, because mere performers do not receive special notice, however famous, but only the creative musicians. There are, however, many costume portraits of eminent singers accompanying the articles on operas in which they have specially distinguished themselves—such as Materna as *Brünnhilde*, Minnie Hauck as *Carmen*, Albani as *Elsa*, etc. The list of minor biographies is more full than in any other musical cyclopædia, especially in the department of American biography, which includes not a few ephemeridæ whose names will never get into any other dictionary. Indeed, in looking at all these names, once more or less eminent in music, the transitoriness of fame is vividly brought to mind. Most of them are *vox et præterea nihil*—and to the public not even an empty name.

The portraits which accompany all these biographical notices of the first, second, and third order of merit constitute an extremely valuable feature of the work. There is one on the average to every page—more than a thousand in all; and besides these there are in the two volumes twenty-four beautiful full-page etched portraits of the great masters, including Auber, Bach, Beethoven, Bellini, Berlioz, Boieldieu, Brahms, Cherubini, Chopin, Donizetti, Franz, Gluck, Gounod, Handel, Haydn, Lasso, Liszt, Lully, Mendelssohn, Meyerbeer, Mozart, Paine, Palestrina, Purcell. Moreover, there are autographs, facsimiles of famous compositions, views of birth-places, medals, monuments, caricatures—everything, in short, that an *édition de luxe* ought to have. There are few marks of original research, and little that cannot be found in Mendel, Fétis, Riemann, and Grove. In the three features enumerated, however—the numerous portraits, the very complete biographic list, and the combining Riemann's 'Opera Lexicon' with the ordinary dictionary—Mr. Champlin's cyclopædia is unique. Nor must we omit mention of the very useful list of works on music and musicians which takes up ten pages of the first volume. The encyclopædia is printed on heavy paper and elegantly bound.

The Quiet Life. Certain Verses by Various Hands: the Motive set forth in a Prologue and Epilogue by Austin Dobson; the whole adorned with numerous Drawings by Edwin A. Abbey and Alfred Parsons. Harper & Bros. Pp. iv, 98.

Much of the contents of this book has been made familiar to us in the pages of *Harper's Magazine*. If this seems depreciatory, as implying that the book is an old story, there is, at all events, nothing more to be said, unless one were to accuse the cover of being rather harsh in effect. The design of it is an intelligent one, and smacks pleasantly of famous bindings of the last century in its sowing of gold sprigs on a dark-red ground; but something about it—either the shade of the leather, or the rather heavy outer borders, or the very large letters which form a part, or all together—make a cover less agreeable than so carefully thought-out a scheme should be. Now, as to the really delightful contents. A prologue by Mr. Austin Dobson tells the purpose of the book, namely, to aid its readers and the students of its pictures to withdraw from the racket into country quiet and remote peacefulness. An epilogue by the same author—an epilogue of four lines—may as well be quoted:

"Let the dream pass, the fancy fade!
We clutch a shape, and hold a shade.
Is peace so peaceful? Nay, who knows?
There are volcanoes under snows."

This seems to be a grim suggestion that the tranquillity which the book undertakes to preach and to give can only be temporary for unhappy men.

The body of the book is made up of well-known poems, of classics, some old, and some not so old; namely, Andrew Marvell's admirable poem beginning—

"How vainly men themselves amaze,"

which is easily the finest poem in the book, and would often be the best in any collection of which it might form a part; Abraham Cowley's stanzas known as "The Wish," and Praed's two poems, "Quince" and "The Vicar"; Pope's "Ode to Solitude"; Randolph's "To Master Anthony Stafford," and "The Married Man," by an unknown author, the three four-line stanzas like a little hymn, beginning—

"I only am the man,
Among all married men,
Who do not wish the priest
To be unlinked again."

Each of these poems is overwhelmingly illustrated, as the readers of *Harper's Magazine* will remember. There are pictures to every stanza, sometimes two or three of them, a headpiece and a tailpiece; and full-page illustrations interpose themselves between the verses of each poem. It is hardly necessary to praise or to analyze Mr. Abbey's work, which has become so well known and is always so welcome to the audience to which this book appeals. The large figure-pieces seem to be generally Mr. Abbey's; the head and tailpieces, by Mr. Parsons, are very pretty studies of landscape, details of tree and flower, and distant peeps of church spire and sky. They harmonize perfectly with Mr. Abbey's work, and it is not until we turn to the full-page landscapes, as, for instance, those which illustrate Thomas Randolph's poem, that there is any feeling of insufficiency of thought; and in suggesting this it is not meant that they are not interesting, but that the large page is, perhaps, less full of matter in proportion than the small

vignette. The landscape on page 89 seems to us the best of Mr. Parsons's designs, and that cannot be said to be lacking in interest. There is always the suspicion that the process engraving does not adequately represent the original drawing, especially in the most delicate parts; but this is more apparent in Mr. Abbey's designs than in those by his colleague. After all pros and cons are stated, the conclusion is that here is a charming book, which it will be hard for this season's collection of gift-books to surpass in permanent value.

Convenient Houses, with fifty plans for the Housekeeper. By Louis H. Gibson, Architect. Thomas Y. Crowell & Co.

SYSTEMATIC treatises on the planning of houses are rare. It takes more leisure than an experienced architect is apt to have to make such a treatise, say, as Prof. Kerr's 'English Gentleman's House,' in which the subject is analyzed and its principles logically displayed in a way to be profitable for those whose business it is to plan. So, although architectural practice in the United States has developed characteristics of plan which deserve record and study, we have still to wait for any such analysis of their principles as shall be a useful guide to the student. Meanwhile we have many books, such as Mr. E. C. Gardner's series of clever volumes, or Mr. Holly's 'Modern Dwellings,' which, aimed at the public rather than the professional student, rely on recipe more than analysis. They teach by example and comment, in a sort of kindergarten method, better adapted, perhaps, than the analytic to persons who want to get houses for themselves instead of devising them for others.

One of the most practical of these books is the one before us, which is intended, as the author says, to deal with houses in a housekeeping spirit. It contains plans for fifty houses, mostly of a very modest kind, with exteriors of several, comments, and an essay on how to build them. The author is a practising architect, who writes with knowledge, clearness, and sense. Naturally, the practical details of planning and construction get most attention. The plans do not lack invention, and the amateur house-builder should get a good deal of useful instruction from them and from their commentary. Certain technicalities and suggestions of local habit agree with the Western home rather than the Eastern; but the good sense is at home everywhere. There is sensible suggestion for the inexperienced in this:

"We often hear the statement made that one can tell nothing about the cost of a house till it is finished. One can come as near knowing what a house will cost as he can to knowing what he wants before he begins. One can get prices on what he has in mind, if his ideas be expressed. He cannot get prices on the unknown. . . . The fact that architects' estimates are often too low, is because the owner is not sufficiently informed in house-building to know what he wants until after the estimate is made. The owner usually expresses a price that he wishes to pay for his house before he expresses his idea."

Elementary Practical Physics: A Guide for the Physical Laboratory. By H. N. Chute, M.S., Teacher of Physics in the Ann Arbor High School. Boston: D. C. Heath & Co. 1889.

THE teaching of Physics in this country has been of late years very much facilitated by the introduction of good experimental courses. These are now common in the higher schools, and, with the aid of good teachers and good text-books, are likely to exert a very marked influence in the progress of science. We venture to assert that they will do more: that they will aid materially in inculcating the scientific method of looking at all questions, and the scientific as distinguished from the sentimental habit of thought. Mr. Chute's work contains a large number of simple and well-chosen experiments such as can in general be made with cheap apparatus, and is well suited to high schools and the smaller colleges. We notice a few omissions easily supplied. Thus the subject of inertia is not mentioned, yet it can be studied with great advantage by means of a common spring-balance and two or three weights. In Maxwell's admirable little work on 'Matter and Motion,' article cxxiii, there is a beautiful and simple experiment on the centre of oscillation and percussion which is well worth citing. The omissions, however, are not serious defects, and a small work has limits as to subjects. The work is a very good one, and well deserves attention.

BOOKS OF THE WEEK.

Aitkin, G. A. The Life of Richard Steele. 2 vols. Boston: Houghton, Mifflin & Co. $8.
Allen, W. B. The Red Mountain of Alaska. Boston: Estes & Lauriat. $2.50.
Ames, Lucia True. Memoirs of a Millionaire. Boston: Houghton, Mifflin & Co. $1.25.
Bell, Mrs. Hugh. Théâtre de la Jeunesse: Twelve Little French Plays for School-Room and Drawing-Room. Longmans, Green & Co. 90 cents.
Belot, A. My Good Friend. Worthington & Co. 25 cents.

WILL SELL AT AUCTION,

THURSDAY, Oct. 31, and following days,

A Library of Choice and Elegant

BOOKS,

AN UNUSUALLY WELL SELECTED COLLECTION OF

English Literature.

Copies of the best and scarce editions of the works of Standard Authors in Biography, History, Fiction, Drama and Poetry, Memoirs, Essays, Voyages, and Travels, Popular Science, also Works of Great Painters, Portrait Galleries, etc., MANY LARGE-PAPER COPIES OF LIMITED ISSUE; also a number of works in Biography, Fiction, and History, ILLUSTRATED WITH INSERTED PLATES, the books generally in excellent CONDITION. A large number uncut, and in very costly, HANDSOME AND SUBSTANTIAL BINDINGS.

Catalogues mailed upon application to the Auctioneers.

Wigmore's Australian Ballot System.

Second Edition, revised and enlarged. Cloth binding, $1.50 net.

The First Edition was published early in 1889; but there has been so widespread an interest in the subject, and so much actual or projected legislation on the lines of the Australian System that a new edition is already demanded.

In the Second Edition has been incorporated additional matter as follows: The Legislation and Attempts at Legislation of the Year 1889 on this Subject; Judicial Decisions Interpreting the System in Countries where it has been already Adopted; Estimates of the Speed and Expense of Voting; Suggestions as to Ballot Leagues; Summary of Party Votes on Ballot Reform, etc.

The work as thus enlarged includes the Secret Ballot Laws adopted or proposed in the different States of America and in Foreign Countries, with Notes explaining their accord or differences.

The Introduction gives a history of the origin and growth of the method of secret balloting which has come to be generally known as The Australian System.

Altogether, as an exhaustive discussion of a subject of vital importance, this book is essential to every public or private library and to every citizen interested either in good government or in practical politics.

*ALL OF CLARK'S FOREIGN THEOLO-*GICAL LIBRARY.

*ALL OF THE HANDBOOKS FOR BI-*BLE CLASSES.

Full lists on application.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

JUST PUBLISHED:

A NEW ROMANCE BY W. W. ASTOR.

Sforza: A Story of Milan.

By WILLIAM WALDORF ASTOR, author of 'Valentino.' 12mo, $1.50.

Again Mr. Astor takes the Italy of the Early Sixteenth Century as the scene and period for an historical romance that has all the brilliant color and stirring action of his 'Valentino.' It is a picture of the fêtes, intrigues, astrology, disguise, murders, love, and adventures of the time, strong in its dramatic development and artistic in its literary construction. Of the author's 'Valentino,' the New York *Tribune* said:

"*Incidents are presented with dramatic art. The dialogue is animated and abundant. The movement of the story never drags. The actors are natural and interesting. The accessories are highly picturesque. The views of a strangely debased society, splendid in its luxuries and savage in its brutalities, a society which loved everything beautiful except virtue, and filled the palaces of the great with poets, painters, poisoners, and bravos, are extremely effective.*"

RECENT PUBLICATIONS.

PAUL B. DU CHAILLU'S GREAT WORK.

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU, author of 'Equatorial Africa,' 'Land of the Midnight Sun,' etc.

With 1,400 Illustrations ..... 2 vols. 8vo, $7.50.

"*Nothing so important as this work has appeared for some time. The whole life of a great people is revealed, their arts, their customs, and their creeds.*"—N. Y. Commercial Advertiser.

"*It is a reconstruction of a people and their daily life, teaching us to know them as they were, and to take pride in them as worthy of being our ancestors.*"—Philadelphia Times.

"*The clear, vivid, brilliant style of Mr. Du Chaillu lends a fascination to every topic he discusses, and the text is fairly illuminated with the copious illustrations.*"—Boston Traveller.

History of the United States.

By HENRY ADAMS. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. 12mo, 2 vols., $4.00.

"*The materials which Mr. Adams has had access to are such as have been at the disposal of no previous writer. Of his abilities for investigation and statement there can be no doubt. The style is admirable; it combines clearness with elegance, and simplicity with a dignity and a gravity worthy of the greatness of the subject.*"—N. Y. Times.

DONALD G. MITCHELL'S NEW BOOK.

English Lands, Letters, and Kings.

From Celt to Tudor. By DONALD G. MITCHELL. 12mo, $1.50.

This survey of the field of English history is delightfully sketchy and full of suggestiveness. It is the most picturesque and entertaining side of history as reflected in the writings and careers of famous English authors and in the annals of the English Kings. It has all the warmth and sympathetic sentiment of Ik Marvel's earlier writings, and an added maturity of eloquence.

"*A most charming book for lovers of the purest and best literature.*"—The Hartford Post.

A Collection of Letters of Dickens.

1833-1870. 16mo, $1.25.

This collection of letters of the immortal author of 'Pickwick' and 'David Copperfield,' is compiled from already published materials, and is issued in a uniform style, both in binding and in press-work, with the popular edition of the "Collection of Letters of Thackeray." The two volumes contain the brightest and most characteristic letters of the two great novelists, and will make a popular gift set for the holiday season.

THE CAMEO EDITION.

Reveries of A Bachelor;

Or, a Book of the Heart.

Dream Life

A Tale of the Seasons.

16mo, price, each, $1.25.

The art of dainty and beautiful book-making finds full expression in this edition of Ik Marvel's most popular works. The cameo head in the centre of the cloth cover explains the name of the edition. The paper is heavy, the margins wide, and the type clear. The flat back, gilt top, and etchings by Percy Moran, combine to make the volume precious to a book-lover.

*** *An Edition de luxe is also issued, limited to two hundred copies, on Holland paper, price, per set, $7.00 net.*

*** *Sold by all booksellers, or sent, postpaid, by*

The Nation.

NEW YORK, THURSDAY, OCTOBER 31, 1889.

The Week.

It should be borne in mind that, so far as the Democrats and Independents are concerned, nothing could do more to clear the way for a Democratic Presidential candidate of high character in 1892 than the defeat of Hill's ticket this year. It would not hurt the party's prospects in any respect, and would improve them greatly. Nothing does more to prevent disappointed Republicans from leaving their party than the prominence and apparent power of Hill in the Democratic party. Then, too, the seeming approval of the Harrison Administration which a Republican victory would carry with it, would be greatly diluted by the evident fact that it was dislike of Hill and his smirched ticket rather than any liking for Republican spoils politics which decided the matter. Above and beyond all these considerations, it should be borne in mind that the duty of all good citizens is to vote for the best man, and there can be no doubt that the largest number of good men can be got into office by electing either the New York Republican ticket as a whole, or the Republican candidates for Attorney-General, Comptroller, and Court of Appeals, and the Democratic candidates for Secretary of State and State Engineer. There will also be opportunity to vote on the methods of the Harrison Administration in 1891 and 1892.

The Republicans of Buffalo have nominated for City Treasurer a man whose qualifications are found in a record as cook on a lake boat, keeper of a saloon, and understrapper in the Custom-house at $3 a day. The Democrats have nominated for the same office an able, energetic, and successful business man. The *Express* is a Republican newspaper, but it supports the Democratic candidate, "who," it says, "has every qualification and is a model candidate," on the ground that as between the two "no sane man would hesitate if he were choosing a custodian for millions which belonged to himself, nor ought he to hesitate when the millions belong to him in partnership with the remainder of the citizens of Buffalo." It is nowadays so rare to find a party journal supporting the nominee of the opposition on such common-sense grounds that a case of the sort attracts attention; but the time is coming when it will seem as absurd to go to the saloon for the treasurer of a municipal corporation as for the treasurer of a business corporation, and people will look back with wonder upon an era when such nominations were possible.

John J. O'Brien's peculiar relations to the politics of this city are revealed in even a stronger light than usual at present. As Chief of the Bureau of Elections, he has charge of all the election machinery of the city, but, as the banished Republican leader of the Eighth Assembly District, he is running as his personal candidate for the Legislature a liquor-dealer and companion of criminals, who has been declared by nine members of a jury of twelve to be guilty of bribery at elections, and he is running as his personal candidate for Alderman another liquor-dealer who has been tried for the same offence and escaped conviction. O'Brien's own reputation as a corrupter of the ballot-box is so bad that his party has been forced to expel him to escape the disgrace of further assistance from him. That such a man should be at the head of the election machinery of the city for several years after his term of office has expired, is due to our so-called non-partisan Police Board, which gets into a "deadlock" every time it attempts to appoint a successor to him. There is probably no other city in the world which would tolerate such a condition of affairs as this without making an effort to improve it.

The Hon. Elijah A. Morse, the proprietor of "The Rising Sun Stove Polish," has been delivering an address before a Congregational Club in Boston on the thesis that "American politics is not opposed to Christian living." The address, we need hardly say, abounded in "illustrations." In fact, there was little else in it. This is the one, however, which most attracted our attention:

> "But you desire living illustrations. I point you to Benjamin Harrison, President of the United States, the man who had family prayers in the cars on the journey from his home to Washington to assume the duties of his great office."

Now, the Apostle James says that "pure religion and undefiled" consists, not in having family prayers in the railroad cars, but in "visiting the widows and the fatherless in their affliction, and keeping himself unspotted from the world." What view does the Honble. Elijah A. Morse think Mrs. De La Hunt takes of President Harrison's religion under this definition? The President discovered this widow's case himself, and used it to revile a political opponent; but when the time came to "visit her in her affliction"—that is, give her back the office of which, according to his own account in the Senate, she had been shamefully despoiled—he gave it to a male politician. Can praying in railroad cars wash out an offence of this sort? Not without repentance and restitution. Moreover, in various other passages of Scripture, the keeping of solemn pledges is made an essential part of "pure religion and undefiled." Nowhere is there any distinction made in the matter of keeping faith between family life and business or political life. Nowhere is it said that if you have family prayers after breakfast, you may lawfully break your official oaths or promises—"do the things you ought not to have done, and leave undone the things you ought to have done." What, then, does the Honble. Elijah think of this promise of the President, in view of such cases as Gen. Manson's, Col. Burt's, and several others?—

> "In appointment to every grade and department, fitness and not party service should be the essential and discriminating test, and fidelity the only sure tenure of office. Only the interests of the public service should suggest removals from office."

Religion, Honble. Elijah, is only valuable, only a thing to be boasted of or pointed to with pride, in so far as it influences conduct; for conduct, as Arnold says, is three-fourths of life, and is the proof as well as the illustration of sincerity. This is what makes one of your quotations very apt, but very hard on some of your "illustrations," unctuous friend:

> "Dare to be a Daniel,
> Dare to stand alone,
> Dare to have a purpose true,
> Dare to make it known."

Another of the Honble. Elijah A. Morse's illustrations is John Wanamaker,

> "the merchant prince of Philadelphia, Postmaster-General of the United States, a man who will not travel on Sunday, who every week goes to his home in Philadelphia to superintend a Sunday-school which he organized years ago among the uncared-for children of the street. What! a godly, religious life inconsistent with eminent public service! Have you read the Book, have you read that Nebuchadnezzar and Belshazzar found no man so wise in the affairs of state as Daniel, who retired three times a day to pray?"

Does the Honble. Elijah suppose for a moment that Daniel would have raised $200,000 and given it to Belshazzar to spend as he pleased, knowing well that he was a dissolute, unprincipled man, without either fear of God or love of country, and have taken office as a reward? On the contrary, sooner than share in the corruptions of the spoilsmen of that day, he suffered himself to be cast into the lions' den. It was not his public praying that saved Daniel, but his unshakable integrity. We are not surprised, after this discourse, to find Mr. Morse recommending "the manufacturers and business men of Massachusetts who have sons to educate," to withdraw their patronage and support from Harvard College because the President and professors do not agree with him about the tariff. It is astonishing how much venality of mind can exist under cover of this fluency of religious expression. The Honble. Elijah was elected to Congress last fall without any visible fitness for the place except the possession of a large fortune derived from his Rising Sun Stove Polish, and he was openly charged with having bought his nomination—in the absence, we suppose, of any other rational explanation of his getting it. We should not notice his performances as a religious preacher but for the fact that a Congregational Club, we suppose composed mainly of ministers, invited him to deliver his discourse at their meeting. The encouragement given in this way by religious bodies to the Morse type of politician is, in fact, one of the most discouraging phenomena of the day, because it shows that the worship of money, to which

we owe much of the degradation of public life, is openly practised in the very temples of Christian morality.

Congressman Milliken, who has for some time represented the Third District of Maine in the House of Representatives, appears to have a better conception of the civil service than most of his colleagues. He is quoted as having recently said: "Only three men in my district have been superseded by appointees of the present Administration, and they were for cause. I have not asked the removal of any man whose term has not expired, and I don't intend to unless there is very great need for it in the interest of the service." When all Congressmen get upon such a platform, a hard blow will have been dealt at the spoils system. Mr. Milliken says further: "The Republicans of my district, so far as I know, don't desire their removal." This remark suggests the question whether there is anything exceptional about the feeling of the people in the Third District of Maine in regard to this matter. No reason appears why they should hold different views from people elsewhere in the country. Do people generally throughout the country really want the "clean sweep" any more than the people of Mr. Milliken's district?

The *Tribune* has made an investigation as to the attitude of Republican Congressmen regarding various matters, like the tariff, subsidies, etc. The most hopeful feature of this investigation is the amount of opposition developed to "national control of Congressional elections." Four Republican Representatives declare themselves unqualifiedly against the scheme, and no less than fourteen are noncommittal. The summary says that "several who favor national control of Congressional elections express grave doubts of the effectiveness of any legislation by Congress to that end, and the same view controls the opinions of three out of the four men who replied in the negative." One of these, "an influential Northwestern Congressman," is quoted as saying: "I am not prepared to advocate national control of Congressional elections further than at present. The difficulty in the South cannot be reached by a national election law." As the Republicans have but four more than a quorum in the new House, it is of course plain that no Federal election law can be passed with so much opposition to it among Republican Congressmen. It is encouraging to find that the discussion of the matter during the past few months has done so much to clear the public mind as to the character of the difficulty at the South and the hopelessness of expecting to cure it by passing a law. We doubt, however, whether the sound arguments against the scheme for Federal control of elections would have produced so marked an effect but for the fortunate coöperation of Boutelle, a Republican Congressman, in demonstrating, in his Bangor *Whig*, that nullification of any law, as of the prohibitory law in his city, is certain whenever local public sentiment does not sustain the law. It has been one of those perfectly logical and entirely conclusive object-lessons which the dullest Republican partisan could not fail to understand.

The Farmers' Federation of St. Louis (according to the *Tribune's* report) passed resolutions setting forth that farming, under existing laws, is a losing business, and asking Congress and the President "to make such reciprocity treaties with foreign nations as will cause such nations to remove customs duties from farm products shipped abroad, thereby resulting in a higher price for such products." The same report tells us that there was a sharp skirmish between protectionists and free-traders during the debate on the resolutions, but that the free-traders had the most votes. This is the first agricultural convention that we have ever heard of where "the free-traders had the most votes." It is also the first in which any resolutions have been passed looking to the removal of customs duties—for, of course, if we ask Germany and France to admit our breadstuffs free, we must expect to admit their goods, or some equivalent portion of them, free also. This would be a very good move, and we are wondering how President Harrison will look at it. A first-rate opportunity is presented to some rising statesman like William Walter Phelps to propose a treaty of reciprocity to Prince Bismarck, offering to admit steel and worsted goods free of duty if Germany will admit flour, wheat, and Indian corn. Then Mr. Whitelaw Reid might make the same offer to President Carnot. Minister Lincoln could not make such an offer to Lord Salisbury, because England already admits all of our agricultural products free except one. We might make a trade in that quarter by offering to admit pig-iron free in return for tobacco. This would suit New England perfectly, and is worthy of Senator Hoar's attention.

Other resolutions were passed denouncing Trusts, monopolies, and "option trading." The latter was declared a felony, or rather it was sought to have it declared such by law of Congress. Mr. Colman, ex-Commissioner of Agriculture, made a bitter speech against grain speculators, which caused excitement in the St. Louis Exchange. As nobody has ever yet shown how a farmer is harmed by speculation in grain, we shall be interested to see Mr. Colman's speech in full. We suspect that there is little more sense in it than there was in the speech of Mr. L. L. Polk at Atlanta, who, in his address to the Southern farmers, asked in a wondering way: "Why should a United States bond bearing 4 per cent. interest be worth 127 cents on the dollar, while good farms cannot be mortgaged for more than one-third their value at 7 to 10 per cent. interest?" Partly, we should say, because more people are bidding for Government bonds than for farm mortgages, but chiefly because the Government itself is bidding 127 cents for them, so that any owner of them knows where he can get that price for his holdings.

Señor Zelaya, a delegate to the Pan-American Congress from Honduras, and its Minister of Foreign Affairs, has said that an agreement by the Congress touching rates of tariff taxes "would require delicate negotiation." Any more delicate than a negotiation touching "a common silver coin" to be a universal legal tender—an international money—over all our western hemisphere? Of what avail are skilled diplomatists if they cannot safely turn awkward corners? What is to be the international ratio between silver and gold? The financial and currency conditions of Brazil and the Argentine Republic and other South American States will be a little more than, unaided, Curtis can handle, but it is in the air that Mr. Blaine intends to tackle, in an international way, the whole silver question. May he have a happy issue!

Dr. Jacinto Castellanos, the intelligent delegate from Salvador to the Pan-American Congress, frankly declared to the New York *Commercial Bulletin* the reason why our manufactures are not used by South Americans and Central Americans, when he said on his arrival: "When you ask me why we don't use more American goods than we do, all that I can answer is, that we can buy the goods cheaper from other countries. The chief demand of our country is for dry goods and machinery. The former we get from European manufacturers because we can get them cheaper; and I am afraid we get our machinery from Europe also. There is no doubt, however, that, all things being equal, our people would give the preference to American machinery." The first and chief impediment in the way of our manufactures is *price*, and to that he added another, which in effect still further diminishes English in comparison with our own prices, and which he thus explained: "American merchants do not grant us as long credits as we can obtain in Europe. Moreover, they charge us exorbitant rates of interest; San Francisco people, in fact, requiring 10 per cent. per month, while our rates are only 6 to 9 per cent. per annum. There is no satisfactory system of exchange with the United States, and we have to pay 32 to 38 per cent. to purchase letters to do business in the United States." What does President Harrison think of this desire for cheap goods? Does it not prove to him that the South Americans are "cheap men"?

A recent report to the State Department from Consul-General New at London, on British steamship subsidies, will confound Mr. William Eleroy Curtis, Mr. J. M. Lachlan, and the whole tribe of subsidy-hunters. Mr. New writes:

"The British Government does not grant subsidies, in the general sense of that term, to any steamship company, but the Post-office authorities make contracts for the conveyance of mails to the different parts of the world with the steamship companies having steamers sailing to those ports. . . . No payment other than for the conveyance of mails is specially made for maintaining communication between Great Britain and Central and South America and the West Indies."

The same authority gives the amount paid by Great Britain in 1888-9 for ocean mail service as $3,184,435. The amount stated in Mr. Lachlan's "true public documentary evidence" to Mr. Curtis was $5,151,003, or about 70 per cent. more than Mr. New's statement.

It really seems as though the Grand Army Machine were determined to destroy all admiration of the Union soldier by showing him unworthy of admiration. Abe Patterson Post of Pittsburgh has just held a meeting and adopted a resolution which must make every self-respecting soldier blush. "Whereas," say these extraordinary representatives of the Grand Army Machine, "the survivors of the Second Maryland Rebel Regiment have erected on the battlefield of Gettysburg, within four feet of the monument erected by a loyal Maryland regiment, a monument commemorating the disloyal deeds of said Rebel regiment," and "whereas there is every indication that other Rebel organizations and regiments will, if permitted, follow the example, and thus undertake to make treason honorable," therefore, the Patterson Post, "composed of men who gave their best services in defence of the flag, and many of whom shed their blood on the battlefield of Gettysburg, desire to enter their solemn protest against this sacrilege, and most emphatically denounce any such intrusion by traitors upon sacred soil, and ask that the Gettysburg Battlefield Association, the chairman of which is our worthy Governor and comrade, Hon. James A. Beaver, Governor of this Commonwealth, cause the said Rebel monument to be removed, and express orders given that no more of that nature be erected."

We are glad to see that the war now raging in eastern Kentucky is conducted on humane principles, that the women and children of Harlan Court-house are "allowed to go unmolested." The casualties up to this time are numerous. Bird Spurlock and Robert Napier are said to have been mortally wounded, the former having had his jaw shot away, and the latter having received two bullets, one of which passed through the abdomen. Ben Mitchell and George Cole were shot in the legs. Thomas Howard got a flesh wound in the thigh. Jim Spurlock "had a close call": a bullet grazed his temple, tearing away a handful of hair and a few inches of skin, but not fracturing the skull. Will Jennings was shot through the right hand. The beginning of the war is involved in some obscurity, but it is supposed to have had its origin somewhere between the close of the Mexican war and the outbreak of the Crimean war. One account says "about ten years before *the* war," meaning our civil war. The causes were the usual ones prevailing in the region, that is, a feud between the Turner family and the Howard family. The Cawoods, the Middletons, and the Conrads, leading families in the county, are said to be involved in the feud, by marriage probably. Judge Lewis, an ex-clergyman, appears to represent the Law and Order side as well as the Church militant, and he has the assistance, for the time being, of the Turners and their allies. The Governor of Kentucky is thought to be taking an interest in the matter, and may probably detail an officer to watch operations for the benefit of the militia.

One of the "youngsters" who have access to the editorial columns of the Indianapolis *Journal*, and who never think of looking up their facts before they make their comments, remarks in Monday's issue that "the bloody war in Harlan County should be treasured up by Mr. Watterson for use in the next State campaign, as an incident further illustrating the fact that Kentucky, under a Democratic administration, is still keeping abreast of the civilization of the age." If this youth had taken the trouble to look at the office copy of the *Tribune Almanac*, he would never have written the paragraph. Harlan County is one of the "Republican strongholds" of eastern Kentucky, and cast 837 votes for Harrison and only 211 for Cleveland.

Mr. Thomas G. Shearman's article in the November *Forum* entitled, "The Owners of the United States," has no relation, or only an indirect one, to the single-tax doctrine. Nor does Mr. Shearman suggest any remedies for the inequalities of wealth said to exist. On the contrary, he "wishes it to be distinctly understood that he is opposed, on principle, to all schemes for arbitrary limitations of individual wealth, whether by a graduated income tax, a heavy succession tax, or otherwise; that he is utterly opposed to communism, socialism, and anarchism; and that he is of opinion that the enormous wealth of the few in this country has been forced upon them by the votes of the very masses who have been impoverished for their benefit." Mr. Shearman considers that the inequalities of wealth have been mainly produced by general acquiescence in the system of indirect taxation. Mr. Shearman's figures purporting to show the fortunes of various individuals throughout the country we cannot estimate highly. Those set down for Trinity Church, for example ($150,000,000), must be a gross exaggeration, and, if so, a hurtful one.

Evidence of the agricultural depression in New England grows aboundingly, and Massachusetts ranges up alongside of Vermont and New Hampshire. Here is an advertisement from the Springfield *Republican* of October 22:

DON'T GO WEST,

when you can get a fine 150-acre FARM right at home, on good road, near neighbors, for EIGHT HUNDRED AND FIFTY DOLLARS. Excellent land; hay cut by machine; plenty of fruit; no end to the wood. Cottage house in good shape, good barn, sheds, etc. The farm is well located, only one-half mile to school, only five and one-half miles to Orange, as good a market as there is in the State.

If the house, barn, sheds, etc., are "in good shape," here is a case where farming land in Massachusetts must have no salable value. Is this on account of "protection" or in spite of protection? At any rate, it is not under the conditions of unrestricted trade.

The series of "bye-elections" which Mr. Chamberlain said would be a "miniature general election," closed on Friday with that of Brighton, at which Sir Robert Peel succeeded in cutting down the Conservative majority of 3,280 in 1886 to 2,507. There have been six of these elections. In one, Sleaford, the Conservatives increased their majority of 1886 by seven; in two the Liberals have wrested seats from them, in two have retained their own by increased majorities, and in one—Brighton—have cut down the Conservative majority as above stated. The outlook, as opened up by the miniature general election, is, therefore, very discouraging for the Liberal-Unionists, and the Conservative journals generally acknowledge it. The *Daily News* has introduced a new feature into English journalism, by quoting and contrasting the utterances of its Tory contemporaries before and after the elections, and they are very amusing, as the explanations of their defeats vary greatly.

The establishment of a college for Dissenters at Oxford is creating a stir in England which nobody but an Englishman can fully understand. For two hundred years Oxford has had nothing to do with people who did not belong to the Anglican Church. For a good while she refused them degrees, and then refused them office and emoluments, and has only very recently admitted them to full equality. But the religious spirit of the place is still intensely episcopal, and the young Anglican divines who are sent out from the Divinity School to fill the country parishes, cherish a very droll contempt for the "dissenting ministers" who are the religious teachers of the great majority of the English people, and indeed of the Anglo-Saxon race all over the world. Strong efforts have of late been made by the Archbishop of Canterbury and others of the higher clergy to bridge over this old chasm of social separation by entering upon friendly intercourse with dissenting clergy and religious bodies, but there is still an air of patronage about their efforts which the Nonconformists resent. Nothing will really bring the Anglicans and the Dissenters together but a recognition by the Anglican clergy of the intellectual and social equality of the dissenting clergy. It is with the view, in some degree, of accomplishing this that the Nonconformists have established a divinity school at Oxford, known as Mansfield College, under the presidency of Dr. Fairbairn, where Nonconformist theology will be taught, and graduates of the University trained for the ministry, and where the young Anglican curates will have a chance to see for themselves how silly their condescension towards "dissenting ministers" is.

A RULER OVER TRIFLES.

THE subjects to which an American President elected in 1888 might have been expected to turn his attention immediately on assuming office were—taking them in the order of their pressure—the Behring Sea question; the fisheries question; the tariff question, particularly as regards the mode of levying existing duties; the abuses and irregularities introduced into the postal or customs service by his predecessor and other wicked Democrats; the Pan-American question; the silver question; the general condition of the civil service and the mode of filling it; the consular question; the pension question. With nearly all of these it is fair to assume that Gen. Harrison, when he took office, was unfamiliar. What civilized rulers, especially those who make strong professions of deep religious feeling, usually do when they find the tremendous responsibility of dealing with such questions suddenly thrust upon them, is to sit down and study them faithfully, and, in a case like Gen. Harrison's, prayerfully. This is indeed what is their duty, both to God and man. If he had been appointed president of a trust company, and on entering on his place were ignorant to a great extent of its condition and prospects and modes of doing business, and, instead of calling the officers around him and endeavoring to make himself master of the situation, were to occupy himself for some weeks in the concoction of schemes for ousting the junior clerks to make places for the sons of his friends; for forcing the scrubbing woman to share her pay with his coachman's sister; for getting the elevator-man to resign without being dismissed, and for taking away the service of the office lunch from a white caterer in order to give it to a black or brown one, the most charitable stockholder would say he was proving false to a solemn obligation, and had shown himself unfit for his place.

Now, this is by no means an unfair illustration of the way in which President Harrison has been occupying himself for the past six months. He has been wilfully neglecting all the weighty affairs of the country, and occupying himself with trifles such as, we venture to say, have never before taken up the time of the chief ruler of a great civilized state since states were first founded. When we picture, to any ordinary American, Salisbury's, Gladstone's, Bismarck's, or Crispi's, or the Czar's giving his time to distributing clerkships and collectorships and post-offices among humble admirers, and letting foreign affairs, and taxation, and trade, and coinage, and administrative reform wait indefinitely for a particle of attention, he feels bound to laugh heartily, even though he may not be a humorous man, and may be generally puzzled by a joke.

Every now and then revelations of the kind of things which occupy the President's mind are enough to make the gravest American smile through patriotic tears. We remark one which appears in the Indianapolis *Civil-Service Chronicle*. The President went out to that city a few weeks ago to lay the foundation stone of a soldiers' monument. What does the proud American citizen suppose was one of the loads on his Chief Magistrate's intelligence during that visit? Why, to devise means of getting a very efficient Internal Revenue Collector, an old soldier, to resign his place. He "endeavored to have a conference" with the poor collector on the subject of his own causeless removal, but failed, and had to come home *re infectâ*. But did he dismiss the subject to make room for weightier cares? Not a bit of it. He kept "expecting to hear from him." He watched the mail every morning, doubtless, and was wretched when the sickening announcement was made each day by his secretary—"Nothing from Manson." At last he had to write to Manson and tell him "a change could not much longer be deferred"—probably because the Presidential mind could not much longer bear the strain. The resignation then came, and a mighty burden, as of pardoned sin, was doubtless lifted off Gen. Harrison's soul. No wonder Mr. Swift, who voted for him, wrote of this transaction in the *Chronicle:*

> "The President appears at his littlest in this transaction, and few Presidents have done littler things. He is the President of sixty millions of people, and yet he carries about in his mind, on the most solemn occasion, the edging of an efficient officer out of his place. He writes a letter that makes his best friends in Indiana ashamed, and, to add to this, appears at his elbow that efficient agent of slyness, 'Dan' Ransdell!"

Sometimes, however, he breaks down under this awful pressure, and forgets the most solemn pledges, and exposes himself to the suspicions of the uncharitable. For instance, he told Congressman Frank on the 20th of July that Louis Wittenberg was sure of an appraisership in Missouri, but that if anything happened to prevent it, Frank would get timely notice. Frank went with this promise to the Treasury, found that the Secretary of the United States Treasury had heard of it from the President, and had engraved it on the tablets of his mind. This great financier confirmed the promise, saying to Frank, "There is my hand on the compact." Could Frank have had fuller assurance of anything in this world than a "compact" thus ratified by the two chief officers of a nation of 60,000,000, etc., etc.? We trow not. Nevertheless, Wittenberg did not get the place. It was given to another man, and the President had to apologize to Frank with strong crying and tears. The compact "had escaped his recollection" in spite of his "extreme caution about making any statement in advance." So there was nothing for it but to sorrow with Frank over his "disappointment." One cannot help wondering when the President will get time for the affairs of this nation, and if, when he is able to take them up, he will have more than the wreck of a once mighty intellect to devote to them.

A DISHONEST PUBLICATION.

THE steamship-subsidy pamphlet which Mr. W. E. Curtis has written, and which the Administration has fathered, pretends to have been prepared for the International American Congress; it has really been prepared for the Fifty-first Congress of the United States. The subsidy-hunters know perfectly well their objective point. They already have President Harrison and his Cabinet committed to their schemes; they are looking to the Pan-American Congress for a lift in the shape of a courteous acquiescence of the Spanish-American delegates in our determination to spend our money as we please; and the real battle they are bracing themselves for is to be fought in the Committee of Ways and Means and on the floor of Congress. The Curtis book is ammunition for that fight; only a small part of it is relevant to the International Congress. It develops a new and ingenious argument, which we may have occasion to refer to hereafter, to overcome the opposition of Western Republican Congressmen to voting public funds to Eastern ship-owners who cannot make their business pay; it argues the whole subsidy question at great length and on general grounds; it has ten pages meant for home consumption to one intended for the Pan-American Conference. If that body will agree to some vaguely worded recommendation of increased steam communication between North and South America, it can add a little moonshine about brotherhood and arbitration, and then go hang, for all these treasury-raiders care.

This false pretence of the book is of a piece with the author's own double-dealing in the preparation of his special plea. He gives an account of the South American Commission of 1885, and pretends to add a statement of the difficulties in the way of our trade with Spanish America, as they were found to exist by the Commissioners. He enumerates some of these fairly enough, but slurs over, under the vague and misleading phrase, "other minor obstacles," the really insuperable difficulty which the Commissioners discovered, a difficulty which they mention over and over again in their report, a difficulty strongly set forth more than once under the signature of Mr. Curtis himself as one of the Commissioners—the difficulty, that is, that our prohibitory tariff on wool and sugar and copper is the main thing that prevents our having a South American trade. Mr. Commissioner Curtis says: "If our country sees its way clear to the abatement of its imposts on these products [wool and sugar], then by a reciprocity treaty with the nations of South and Central America can be effected a very persuasive tendency to more intimate national relations"; Mr. Special-Agent Curtis covers this all up under the tricking words, "other minor obstacles." Charles Sumner once indignantly declared that he was a man before he was a commissioner; it is evidently the reverse with Mr. Curtis, and it must be a remorseful conscience that makes him break out into the frequent hysterical cry, recurring through his pages, "The protective tariff has nothing to do with the question."

The citation just given from the report of the Commission of 1885 puts us on the track of the real object of that Commission appointed by a Republican President. The instructions given the Commissioners by a Republican Secretary of State had not a word to say about subsidized steamers, but laid altogether the main stress on commercial

treaties based on mutual concessions. The Commissioners everywhere bent their efforts to the negotiation of reciprocity treaties, and everywhere, as they truthfully report, ran up against the dead wall of our tariff. In the case where a commercial treaty has been found feasible—the case of Mexico—the club of the tariff beneficiaries has been shaken at Congress to prevent its ratification. So, in effect, our ex-Minister to Mexico, the Hon. John W. Foster, declared with astonishing propriety at the banquet of the Spanish-American Commercial Union last May:

"The late lamented and distinguished citizen of New York, President Arthur, initiated a policy of commercial reciprocity which, if it had been opportunely seconded by Congress, would to-day have placed us in almost complete commercial control of the countries and islands to the south of us. The legislative conduct of Congress has been strangely incomprehensible. It created and sent to Central and South America a commercial commission to investigate the best methods of developing more intimate trade relations with those countries, and then treated its most important recommendations with neglect. It authorized the President to negotiate a commercial treaty with our neighbor, Mexico, and then refused to put into operation the work of its own creation; and now, with a disregard for its own consistency, it has directed the President to convoke a Congress of American States, with a view of inaugurating a policy of more intimate commercial interchange! [Laughter.] If that august convocation—or rather, it has been earnestly desired that that august convocation should inaugurate a new era of fraternal relations and commercial prosperity between the nations of this continent; but if it does not fail in attaining its greatest objects, the Congress of the United States must radically reform its conduct."

That will do for a good Republican comment on Mr. Curtis's "other minor obstacles," and on the general dishonesty of his attempt to make the Commission of 1885 furnish water for the subsidy mill.

Of Mr. Curtis personally, we have only to remark that his present performance is in perfect keeping with the well-known fact that his pen has long been for hire. In 1884 he was an Arthur man (before the Convention), and then a Blaine man, simply and solely because his paper so ordered. In 1888 he was working for an independent paper that favored the election of Cleveland, and we find him trimming his sails accordingly; we remember, in particular, some despatches of his from Indiana, in which he showed up the unblushing preparations of the Republicans to buy the State, and which Mr. Blaine must have omitted to mention to President Harrison as among the claims to Republican favor possessed by his Special Agent.

MR. CLEVELAND'S SILVER POLICY.

An article in the Indianapolis *Journal* entitled "Cleveland's Anti-Silver Policy," making the bold statement that if President Cleveland's policy had been adopted by Congress, "the country would now be in the midst of a terrible financial panic caused by a contraction of the currency," has attracted some attention, and some newspapers in the West have found no better answer to it than "You're another." President Hayes and President Arthur, they say, made the same recommendations. President Garfield held even stronger convictions on the same side, while Secretaries Sherman, Folger, and McCulloch repeatedly and urgently pressed Congress to suspend the coinage of silver.

The *tu quoque* argument is good as far as it goes, but there is a much better one. The Indianapolis *Journal's* argument rests upon the assumption that if the silver coinage had been stopped at the time when President Cleveland recommended that policy, there would have been a fatal contraction of the currency, and consequently "a terrible financial panic." How is this conclusion reached? By the easy process of computing what amount of national-bank notes have been retired since 1886, by showing that their place has been filled by silver certificates, and then making the broad statement that, "but for the issue of silver certificates, our paper currency would have undergone a contraction during the last two years of $176,000,000 *without any means whatever of replacing it.*"

We note in passing a slight error in the amount of national-bank notes withdrawn during the past two years:

The amount of national-bank circulation outstanding in 1886 (Nov. 1) was.....	$301,013,221
In 1888 (Nov. 1).....	239,069,230
Retired.....	$61,943,991

An error of $115,000,000 in a total of $176,000,000 is not inconsiderable to an accountant, but the *Journal's* argument would have been just as fallacious and untrustworthy if all its figures had been correct. The prime error is the oversight of such an article as gold in the commerce and currency of the world. Everything in the *Journal's* reasoning rests on the fundamental assumption, broadly insisted on, that without silver certificates there would have been no means of replacing the retired bank notes.

The law authorizes the issue of gold certificates as well as of silver certificates. True, we should have been obliged to buy gold to fill the vacuum, but we have been obliged to buy silver, for that matter, and, what is more, the public—the holders of silver certificates—have been obliged to pay 100 cents gold value for every dollar of silver certificates in their possession. So nothing whatever has been gained by having silver certificates instead of gold certificates. The vacuum would have been filled just the same if there had never been a silver dollar or a silver certificate, and filled quite as easily.

It will perhaps be said that the gold could not be obtained because Europe could not spare it. That was said in 1878 and earlier, when we were preparing for specie resumption, and many honest people so believed. Yet we drew from Europe, in the ten years 1878-1887, the net sum of $198,634,763 gold, besides keeping the entire product of our own mines in the same interval, which, according to the mint reports, amounted to $353,912,218. Europe has not felt very badly in consequence, so far as we have noticed, but if she had felt ever so badly, that fact would not have distressed us. Nations are not given to bewailing each other's commercial mishaps, but rather their own.

It may be said that although we pocketed more than $550,000,000 gold in ten years, we could not continue the operation. Since we produce upwards of $30,000,000 gold a year, and since the silver coinage has been at the rate of only $25,000,000, the question is not one of drawing on Europe at all, but merely of retaining five-sixths of the product of our own mines. Probably we might do that if we were to draw a long breath and make a pull all together. It may be said further, that the law does not allow the issue of gold certificates of a lower denomination than $20; but of course an act of Congress of two lines would cure that defect.

Is anything left of the *Journal's* argument? Nothing except its chiding of Mr. Cleveland for a supposed error of judgment, which he shared with Hayes, Garfield, Arthur, Sherman, Folger, and McCulloch. We maintain that Mr. Cleveland's recommendation was perfectly right, although some fault, rather *ad captandum*, may be found with the reasoning advanced by him. Severe canons of criticism are not applied in economics except to professors of the science, or those who hold themselves out for such. In the walks of statesmanship it is sufficient if one has been right as to the main thing. In any case, an arraignment of Mr. Cleveland's policy by a critic who ignores altogether the existence of gold as an element in finance, would scarcely command attention among thinkers.

Mr. Cleveland was right when he urged the discontinuance of the silver coinage. When his letter to Congressman Warner was written, we were on the threshold of a panic brought about by the investment of some $50,000,000 of the Treasury resources in silver, over and above what had been taken into circulation in the form of certificates—this at a time when the public revenues were at an unusually low ebb. People thought that the silver standard was in sight. Some millions of gold, owned by private parties, had been transferred to England in consequence. Boxes had been hired in safe deposits to store gold in, which of course was drawn from the banks, thus tightening the money market. Mr. Cleveland's letter did much to restore confidence, although that was probably not his object in writing it. It assured the public that his efforts would be directed to prevent silver and gold from parting company. Gradually the revenues increased, and, although the excess of silver dollars over silver certificates in use increased to $72,000,000 in the following December, yet a help came quite unexpectedly from the large deposits in the Treasury by national banks withdrawing their circulation. These deposits were turned into the general fund, although shown in a separate account in the books. They served to swell the gold balance in the Treasury, because the bank-notes intended to be retired came in for redemption very slowly. So, in one way and another, the impending crisis passed off.

Of all the means open to us for filling the bank-note vacuum, the purchase and coinage of silver bullion was and is the most slovenly and expensive. The stuff has been declining in value all the time, and in consequence there has been a steady loss on it as metal. For cartage it costs sixteen times as much as gold, and for storage twenty-four times as

much. The certificates issued against it do not circulate more freely than gold certificates would, but rather less freely. The reasons why they are oftener seen are two-fold: first, because gold certificates are not issued in small denominations, and, secondly, because the banks sort them out and keep them against a rainy day. Very wise it is of them, too. Perhaps it is the infrequency of the sight of gold certificates that leads the Indianapolis *Journal* to suppose that without silver certificates there would be no money. The truth is, they are an artificial and bastard money, whose existence prevents us from having a better kind.

THE NAGLE CASE AND CONGRESS.

WHATEVER may be thought of the outcome of the celebrated case of Deputy-Marshal Nagle, who has been discharged by the Circuit Court of the United States from preliminary arrest upon a warrant charging him with the murder of Judge Terry, without other proceeding than that of habeas corpus, and upon grounds that must be finally conclusive to protect him against all attempts of the State authorities to prosecute him for the alleged murder, it is reasonable to suppose that Congress will be aroused by this case into some action which shall provide legislative regulation of the Federal police power which is involved in the circumstances. If it shall incite Congress to appoint a high commission of judges and lawyers to consider the neglected subject of Federal jurisprudence and the wretched state of existing legislation, the worthless blood of Terry will have had, after all, some beneficial use beyond the immediate purpose of its shedding.

One has only to imagine the tragedy reversed—to contemplate Judge Field as the slain, and to ask what punishment could be meted out to his assassin by the United States under its existing laws—to see how entirely neglected the subject has been. It is true that no justice of the Supreme Court has been assassinated, nor hitherto had any been slapped in the face, but deputy marshals have been often assaulted from ambush, and sometimes cruelly assassinated, and none has ever known a State to punish the assassin. Minor offences of like character are not infrequent, but a brief telegram announcing the news has been the extent of attention paid to the matter. If Nagle had been killed by Terry, perhaps not more than a telegram would have been given to it in this case; certainly, if instead of protecting a justice of the Supreme Court, he had been in attendance upon a commissioner or an examiner in chancery, or had been serving a warrant of arrest against some "moonshiner," his killing while in discharge of that duty would receive not more attention at the hands of Congress than the killing of a tramp. Yet this matter is of far more importance than that of the proper procedure when the official happens to be the slayer and not the slain in such a tragedy. Terry, for killing Nagle, could only have been imprisoned for a year under existing Congressional legislation.

In consequence of the nullification excitement of a half-century ago, Congress provided for the removal from the State courts of prosecutions of Federal officials for acts done under the authority of the *revenue* laws, and the removed cases may be tried in the United States courts. But Judge Sawyer was compelled to rely upon the Habeas-Corpus Act to get hold of the Nagle case, and the judgment he has given to effectuate his discharge will lose force in the public mind because of the interested nature of the circumstances in their relation to the Judge himself—the same interested feature being present with any other judge as well. If the prosecution against Nagle could have been removed, and he had been tried by a jury of Californians, and by them discharged upon the grounds stated by Judge Sawyer, the performance would have been more satisfactory, more in accordance with established usage, and, in a certain sense, more constitutional—if that mode of expression be permissible—as a procedure preserving the right of trial by jury beyond all question. These same Californians would have been citizens of the United States and acting for and in behalf of the United States, but none the less Californians, and the *amour propre* of the State would not have been so shocked. But it takes nullification or secession and war to arouse the national sense of duty in Congress, and already we have a class of reformers suggesting that the exercise of the Federal judicial power in its fulness is only necessary in times of civil war, and that it must be further restricted than it already has been by its old-time enemies of the States'-rights school, who are always on the alert to restrict it whenever they can catch the Federalists asleep, as they have done quite recently.

A short time prior to nullification, a craze swept over the country in favor of the liberty of the public press in its relation to the power of the courts to punish for contempts, and Congress, taking the lead, passed an act almost emasculating the courts as to all conduct in contempt not taking place in the presence of the court; but, as some compensation for the lost power, punishment by indictment, in certain cases, was provided, so that for slapping Judge Field's face or killing him, if either could be brought within the statute, Terry could have been, at the most, imprisoned three months and fined, and that is all. By the old law, his right hand might have been cut off and gibbeted, along with his body hanged by the neck, for either offence, perhaps; not by proceedings for contempt, which would have secured only indefinite imprisonment, it may be, but certainly by indictment. Yet, since the Federal jurisprudence has no common law of crimes, and Congress has never assumed in any adequate way to punish such offenders, the Federal power, so well defined by Judge Sawyer, has lain dormant for one hundred years, as it has done in so many other respects where it might be usefully exercised were it not for the supersensitiveness felt for and in behalf of the State courts and their jurisdiction, which, at most, is only concurrent with that of the Federal power in such matters. And it may be generally assumed that the State authorities are not concerned, and they never have been, about the protection of Federal officials of any rank or degree, certainly not in any especial sense as Federal officials, and have only given them the benefit of the general law, as men or citizens, and not as officials. Indeed, many of the States followed the example of Congress, and withdrew from the courts much of the power to punish for contempts; and if the withdrawal were supplemented with punishment by indictment, the penalties are ridiculous when the offence reaches the grade of murder or of assault upon a judge, which is not more reprehensible than an assault upon other officials while discharging their duty. If Terry had slain Justice Field upon the bench, he could only have been imprisoned for three months, so far as the United States could punish him, unless it should happen that the court were held on a spot of ground ceded exclusively to the United States, where an act of Congress would operate to enforce the State law in such cases and places.

Congress pays no intelligent attention to the Federal jurisprudence. It patches the holes in the organization and jurisdiction of the courts after a fashion that is the laughing-stock of the legal profession, and, with all the power of its judiciary committees, nothing useful is ever done, for the simple reason that the members of Congress know or care but little about the general subject, and they cannot take their minds off politics long enough to legislate upon any subject not involved in the campaign issues that have been or are to be formulated for the struggles over the Presidency.

That which is needed is a commission of commanding dignity, charged with the duty of overhauling the antiquated structure known as the "Federal judiciary system," but more properly to be called "Federal jurisprudence," and reporting comprehensive legislation regulating the exercise of the judicial power of the United States. At present it is the most absurd "judicial system" known to English-speaking constituencies of any grade whatever; and the tinkering it receives at the hands of Congress from time to time makes it always more absurd.

POST-ELECTION FRANCE.

"Now that the smoke of the battle-field has cleared away," to use our stock post-election newspaper phrase, the French are beginning to count their gains and losses and make their plans for the future. Their journals are, therefore, unusually interesting reading. Of course, the first point considered is what is to become of Boulanger. There is, as well as we can see, a general consensus that he is for political purposes dead, and there are broad hints that he will probably end his earthly course in poverty and obscurity. The poverty has in fact already overtaken a good many of his followers, who were, as is not uncommon in such cases, adventurers "down on their luck," who saw a chance, by attaching themselves to a pretender of the Napoleonic type, of places, and honor, and power. The memory of the Coup d'État of 1851, and of the good

things it brought to Morny, St.-Arnaud, Persigny, Fleury, and the rest, has not died out in Parisian cafés and billiard-rooms. To many of these men their connection with Boulanger brought them not only free board and lodging at the "headquarters," but a most grateful respite from the pursuit of their creditors. The election has been a cruel blow to them, and has, according to the *Figaro*, reduced some to destitution already.

As to Boulanger himself, there are many curious confessions of shame for ever having believed in him. One very interesting one describes the intoxicating effect produced on a party of artists dining at a restaurant one night, by the spectacle of a torchlight procession of cuirassiers marching to serenade the "brav' général" at his house, in the early days while he was still in the service and in command. They were so carried away by the music and the spectacle that they would have all voted to make him dictator had the opportunity offered itself at that moment. Looking back now to that incident, the party cannot understand their own frame of mind. It is interesting, as showing the standing danger to French politics which lies in the excitability of the national temperament unrestrained by strong political traditions. Each generation, as it comes forward, does not see why it too should not try to make a new France, and if, when it comes on the scene, somebody happens to beat a drum or wave a flag, there is always danger of a general rush down the nearest steep place.

The one man of standing and respectability who has lost seriously by the election is universally admitted to be the Comte de Paris, the representative of the old monarchy. He knew Boulanger to be a liar and charlatan, and yet he gave his followers directions to support him, in the hope that if Boulanger succeeded, the subsequent and inevitable confusion would give the crown back to the Bourbons. There is a degradation of royalty in all this which is now causing bitter tears to flow in select circles. The King in a conspiracy with a paltry adventurer to make the only regular government of his own country the laughing-stock of the world, is a spectacle which the faithful cannot bear to recall. And then the Republicans who expelled him are able to plead it in complete justification of their course, which at the time seemed brutal and unnecessary. "You see," they say, "he was after all nothing but an unscrupulous conspirator, whom no government could tolerate," and there is no answer to be made to them.

On the Bonapartists the effect of the election seems to have been very salutary. A good many are admitting publicly that their game is up; that, for weal or woe, the Republic is the choice of the French people, and has now a paramount claim on the allegiance of all true Frenchmen. For it must be noticed that the Republic is the first government in a century which has been able to attain its twentieth year. Most rational observers agree that had any reigning dynasty had to face public opinion at this crisis, with the usual amount of error and shortcoming to answer for, it must have gone down. The Republic has the supreme advantage of offering no man and no family to serve as a sacrifice to popular rage or discontent. If it is assailed in the streets, it does not need either to fly or abdicate, and may slaughter without mercy in its own defence. Moreover, a large number of Bonapartists are now convinced that monarchy in France, after these twenty years of abeyance, is no longer possible. Royalty has in every form gone completely out of French manners and ideas. A sacred person living in a palace, who has to be approached with the forms of divine worship, raised above all criticism, and treated as incapable of folly or wickedness, is something the new generation of Frenchmen could not understand or accept save as a joke.

To the Republicans, the lesson of their victory seems to be the necessity of getting rid of parliamentary "groups," and forming a compact party under a single leader. That the Radicals, or extreme Left, can ever be got to work under any Moderate, no one believes. But there do seem to be hopes now that the Moderates will gradually draw into their ranks a constantly increasing number of Royalists of one kind or another who have accepted the Republic, and are willing now to work for its success.

THE NEW FRENCH CHAMBER.

PARIS, October 18, 1889.

THE general elections which have taken place in France have brought no great change in our home politics nor in our foreign policy. It may be fairly said that we shall have in the new Chamber the continuation of the old Chamber: there will be the same division of parties and of groups; on all important questions the Republicans who call themselves Opportunists and who might also be simply called Ministerialists, will carry with them the Radicals and have a majority. And when I say that this majority will always be obtained, I mean on all the questions which touch the forms and principles of the republican government. The minority will be composed of the three groups of the Royalists, the Bonapartists, and the Boulangists. It may be, however, that the Boulangist group will have to dissolve as a group. A few of those who call themselves, even at this hour, Boulangists, will fall into the ranks of the conservatives; the greater number of them, following their natural instincts and tendencies, will join the extreme Radicals.

It is difficult to conceive how a purely Boulangist group could be preserved in the absence of Gen. Boulanger. "Hamlet" cannot be played long without *Hamlet;* and the collapse of Gen. Boulanger, as a political leader, seems complete.

"Quantum mutatus ab illo
Hectore qui redit exuvias indutus Achilli"—

how different is this Boulanger, now living in the solitude of Jersey, from the *brav' général* coming down the Champs Elysées on his black charger, followed at a great distance by a brilliant staff, bowing complacently to a frantic populace! How different from the Boulanger who, on the 27th of January, received 250,000 votes in the capital of France, and was proclaimed the representative of the great city, the city which Victor Hugo called "la ville lumière." All this is changed now; and it could have been prophesied, by anybody who understands the temper of the French nation, that Boulanger was committing political suicide when he left secretly for Brussels in the night, for fear of being arrested and tried before the Senate. His friends in vain found excuses for him at the time; they intimated that the life of Boulanger would not have been safe in his prison.

The discomfiture of the Boulangist party is complete, though there will be some Boulangists in the Chamber, and Paris has returned many of the General's adherents. Paris could not completely forget the overwhelming vote given on the 27th of January; but among these representatives of Boulangism there are no men of any talent or importance, except perhaps M. Laguerre, who is a remarkable speaker. There remains, so to speak, no Boulangist press. The chief supporters of Boulanger in the press have been the editors of conservative papers, such as the *Autorité* and the *Gaulois*, who have now thrown the General overboard. The editor of the Royalist *Gaulois* has said boldly that he tried to "confiscate" the General while he was popular, and to make him an instrument; but now the instrument is worthless. "The black horse," he says, "the revenge, the great sword, the promises made to all the discontented—the star, in short—has been effaced and obscured by the fogs of the Thames; and Gen. Boulanger, whose mission was to lead all the electors with him to the assault and to victory at the sound of the drum, has destroyed all the hopes he first held out; he has not given us the 'other thing' which we expected. He has thus destroyed his only excuse for being. We hope that he may find in his life some other glorious part; but we must acknowledge that for the present his mission is ended."

Boulanger read this article in Jersey after his arrival, and he immediately telegraphed to the editor of the *Gaulois:* "I have read your article of the 11th in the *Gaulois*. I have always thought you capable of all possible follies. I now think you capable of all possible treacheries. I send you the assurance of my profound contempt." To this despatch the editor of the *Gaulois* answered: "People can only betray those whom they serve. I only serve my King; I could not, therefore, betray you. Nothing can make me deviate from my duty. I leave it to the future to prove the falseness of your judgment."

This incident will give you an idea of the dissolution of the coalition which for a moment was formed between the leaders of the Royalist, the Bonapartist, and the Boulangist parties. The coalition resembles now the camp of Agramante. Much has been said, at all epochs, against the immorality of coalitions; still, it is not easy to see how they can at times be avoided. When many people suffer from the same oppression, they will always be tempted to unite their efforts, though they may greatly differ on many points and may not have the same ultimate objects. Under the reign of Napoleon III., there was a coalition formed between the Republicans and the Royalists, and the effects of it were felt even after the fall of Napoleon, since the Assembly of Versailles, composed of Royalists and Republicans, framed a Constitution which reserved the right of total revision—even the right of changing, under certain conditions, the form of government. This article of the Constitution, which provided for the right of total revision, has been repealed since in a convention, but another convention may possibly reëstablish it; and everybody feels instinctively that in our time no government, no form of government, can last long if it has not the support of the majority of the people. Revision, therefore, had become the cry of the coalition. The cry must, for the present at least, be abandoned,

and we have before us a period of four years during which it is not likely that we shall have a convention, unless M. Carnot should have to be replaced, which is not at all probable.

The Constitution gives the President the right to choose his Ministers ; but as the Cabinet is, like an English Cabinet, in constant contact with Parliament, it becomes, perforce, a mere emanation of the Chambers, and it changes at the will of the majority of the lower house. It is customary for the Cabinet, after general elections take place, to place its resignation in the hands of the President as soon as the new Chamber meets. There is no doubt that this will soon take place, and the President will, at the beginning of the session, have to exercise his prerogative.*

Whence will he borrow his Ministers? From the Republican majority?—but this majority is not completely homogeneous. It is composed for the most part of the Republicans who call themselves and who are called Opportunists—a somewhat barbarous expression, which we owe to Gambetta. By Opportunists you must understand a class of Republicans who do not pretend to any definite programme, and who will make reforms only when an opportunity presents itself. By a strange anomaly, while the Opportunist group is by far the strongest of the majority, its acknowledged leader, M. Jules Ferry, was defeated in the elections ; the army is thus left without its chief. The most important of the lieutenants of M. Ferry—a lieutenant, in fact, who has lately been the real captain—is M. Constans, the ex-Governor of Cochin-China and of Annam, the man who closed the convents of the non-authorized congregations, and who conducted the French *Kulturkampf;* who, on his return from the East, turned the Senate into a High Court of Justice, and caused Boulanger, Rochefort, and Dillon to be condemned; the man who, after the Boulanger trial, ordered the general elections; determined, not over-scrupulous, a man of action, which is rather extraordinary for an ex-professor (for the revolution and the war of 1870 found him a professor at Toulouse). Many Opportunists who have profited by his energetic action, would not, however, dislike to see him out of the Cabinet; they speak of rewarding him with the Governorship of Algeria. We cannot say what his intentions are; he certainly has, if success is good conduct, a right to remain in the Cabinet, for in politics, as Prince Bismarck one said of M. Thiers, "He who takes up the napkin has a right to eat the dinner."

After the Opportunist group, the most important Republican group is that formed by the Radicals. They are, it is said, less numerous than they were in the last Chamber. Their leader, M. Clémenceau, is politically discredited, as he has never shown any other capacity than that for destroying Cabinet after Cabinet; an able speaker, afraid of responsibility, who so far has never been willing to undertake to form an administration. In the rear of the Opportunists and of the Radicals is a small group, composed of about thirty Moderate Republicans, men of talent, of good personal character, differing only from the conservatives on the question of the form of government, having accepted the Republican form as definitive, and being obliged, in consequence, to vote often against the men who would naturally be their friends.

If this picture is exact, you will see that though the new majority is Republican, the composition of the new Assembly will not be very simple. There are elements in it for the formation of many coalitions, and cabinets will probably have as little security as they have had during late years. Under such circumstances it is difficult to prophesy what the legislative work of the Chamber will be; it will probably be minimized, though we hear it said that we are going to enter on an era, not of politics, but of business. The success of the Exhibition has been great, and a large sum of money will undoubtedly be left in France by the foreigners who come to visit it. Many schemes are being made. It has become evident that Paris wants a metropolitan railroad; getting about has at times become very difficult in the central parts of the capital, and the population has become too dense. Our great companies of deposit are preparing to start all sorts of new enterprises. Electricity tries everywhere to give us light and power. Unfortunately, the finances of the State are not in a satisfactory condition, and the enormous military preparations which are continuing will still further exhaust them. Divided as the Chamber may be on many points, there are two on which it is easy to prophesy a sort of unanimity. The Chamber will be protectionist; the reaction against free trade and against treaties of commerce has been very marked in the circulars of all the candidates. French agriculture will be more protected, and, as the peasants form the majority of the electors, they will be obeyed in the end. The Chamber will have a tendency towards protection; it will also be pacific. Not a word was said in the electoral campaign on the subject of revenge, not even by the most ardent supporters of Gen. Boulanger, not even by Déroulède, the author of the 'Chants du Soldat.'

*He has just given notice that he will not accept resignations.—Ed. Nation.

QUIVIRA.—I.

Santa Fé, October 15, 1889.

The word Quivira is one of the best known and most widely circulated geographical and ethnographical names of the North American Southwest. Nevertheless, a great deal of unnecessary mystery (or rather mysteriousness) clings to it still. Many speculate where the Quivira was, and the majority wonder what it was. There are several Quiviras. There is the one of Coronado, known since 1541; the Quivira of Oñate, of the year 1600, about. Then there is an indefinite or nondescript Quivira, talked of and searched for until the beginning of the eighteenth century. Lastly there is the Gran Quivira of to-day.

It may not be amiss to treat the Quivira question in the light of historical evidence, for the very vagueness of the ideas current about it has, during the seventeenth century and part of the nineteenth, been greatly detrimental to enterprises, particularly such as were directed to the search for precious metals. The Quivira appeared only too often in the light of a gilded spectre—not merely a vision, but a spectre, deceiving, misleading, since it led those who followed it on the path of destruction instead of the path to wealth. It bears in this respect a strange resemblance to the South American "Dorado," or the tale of the man covered with gold. The "gilded man" cost innumerable lives and countless treasures in vain; so has the Quivira—the former in South America, the latter in the North American Southwest.

The word Quivira was heard by the Spaniards in Central New Mexico, on the banks of the Rio Grande, where now stands the town of Bernalillo. That is, there the plans for the search after it were framed. But the first intimation of the existence of a country the inhabitants of which were in possession of great metallic wealth was first obtained at the Pueblo of Pecos, southeast of Santa Fé, and through an Indian from the East who was a captive among the Indians of Pecos. That Indian filled the ears of the Spaniards with tales of gold and silver. He used the word Quivira freely, and gave them to understand that it was that of a very rich country or people. Coronado believed him, and went out on the plains in the spring of 1541 in search of Quivira.

It is well known that Coronado, with thirty horsemen, reached the desired spot, and returned from it to the Rio Grande in the same year, without having met with any resistance, and without spilling a drop of blood except that of his guide. The latter proved to be not only an impostor, but a traitor, who had allured the Spaniards on the barren plains in order to destroy them. It is also known that all the tales of treasure proved false ; that neither gold nor silver was found, the only piece of metal seen being a fragment of native copper suspended from the necklace of a chief, and about the origin of which its owner could give no satisfactory account. Coronado and his lieutenant Jaramillo both assert that the Quiviras were a *wandering* tribe, *moving hither and thither with the buffalo*, and only different from the plains Indians in that they dwelt in frail round lodges made of brush and grass, and that, as the country was well watered and had a productive soil and timber, they planted some corn ; otherwise they were as good as roaming savages. These descriptions are confirmed by the reports of the other members of the exploring party. All agree in representing Quivira as a country destitute of metallic wealth, its people as savage hordes, and their numbers as comparatively small.

After studying closely not less than five original reports emanating from Coronado or from soldiers of his expeditionary corps, I have been able to locate quite closely the Quivira of 1541. It lay in northeastern Kansas, about 200 miles northeast of Great Bend. It was a fertile region. Its advantages for agriculture were recognized by Coronado, and he plainly states that it was far superior to New Mexico in that respect, that it resembled the best parts of Spain, and that its plants and trees were more like those of Europe than those of the countries which he had seen on the American continent. It is true that many of Coronado's men refused to believe these reports, and clung to the hopes created in their minds by the tales of the Indian from the east. But all the reports agree in every particular—even Castañeda's, who otherwise is so prone to find fault with his superiors and with everybody else. Furthermore, the descriptions by Coronado and his chroniclers were accepted by historians and geographers of the times. Quivira was looked upon as merely one section of the immense steppes of the North—devoid of mineral resources, thinly inhabited, cold, and principally roamed over by enormous herds of strangely shapen wild cattle.

This impression was in no manner changed by the statements of the Portuguese Andrés Docampo, when, several years after the return of Coronado, he appeared in Mexico, coming directly from Quivira. He had accompanied Fray Juan de Padilla to the Quiviras, and, when the priest was murdered, he fled, performing the enormous journey from northeastern Kansas to Tampico on foot. Docampo had nothing to say of Quivira but what fully agreed with Coronado's descriptions. And yet the fabulous reports of the treacherous Indian lin-

gered in the minds of many who took an interest in the unknown northern regions.

It is likely that the expedition which started for New Mexico under Leyva-Bonilla, against the positive orders of the superior authorities, about 1585 (the date is not, as yet, accurately known), was prompted by a desire of reaching Quivira and its supposed wealth. Nothing was ever heard of the ill-fated men, beyond that they perished in a prairie-fire somewhere on the confines of Colorado and northwestern Kansas. The course which Leyva and Humaña (who succeeded to him in command) pursued, lay east of the ranges of the Pueblo tribes—therefore, on the plains. Neither Chamuscado nor Espejo, both of whom had gone to New Mexico before (in 1581 and 1582), nor Castaño de Sosa in 1590, thought about Quivira. It was only after Juan de Oñate effectually occupied New Mexico, in 1598, that the search for the mythical region was again taken up.

"Distance lends enchantment to the view." This is as true in questions of time as it is in matters of space. Cibola, which had sounded so high and seemed so attractive immediately after its discovery by Fray Marcos of Nizza, had become well known through Coronado. It was again visited by Chamuscado and by Espejo, whereas Quivira was nearly forgotten with the exception of its name. Oñate took up the dream and followed it the more passionately as New Mexico proper failed to realize his anticipations. He set out for Quivira in 1599, penetrated into Colorado and Kansas, and came back without having found aught but steppes, buffaloes, roaming Indians, who were more or less ill-disposed, and some sections of well-irrigated and fertile country. The Indians with whom Oñate had intercourse on this journey were chiefly the Kansas. But he also met the Aijaos and the Quiviras. Reports were in circulation soon afterwards that the Aijaos had much gold; but the statement so far lacks official confirmation. Soon after, Quiviras came to New Mexico, and it was ascertained from them that their tribe lived north or northeast of that territory. It is about that time that another name for the Quiviras makes its appearance: it is the name Tindan. The Thinthon-ha, or Teton-Sioux, or "Gens des prairies," as Hennepin calls them on his map, were the most southern branch of the great Dakota or Sioux stock.

Thus far we have found the Quiviras always to the northward of New Mexico. In 1629 and thereafter they appear invariably to the east or southeast. The reports of Fray Alonzo de Benavides of 1629, the journeys of Alonzo Vaca (1634), and of Diego de Guadalajara (1654), placed the Quiviras in the Indian Territory. After 1680 they were located in northern Texas. Very soon after the reconquest of New Mexico (1692) they vanish; nothing is left of them but the name and a faint recollection of the many sacrifices which attempts at gathering illusory treasures had cost.

Not one of the Spanish expeditions in search of the Quivira resulted in more than positive increase of geographical knowledge. In that respect we are largely indebted to this phantom of the Quivira. It carried the Spaniards into Colorado, Kansas, and probably Nebraska. It brought them to the Indian Territory, and opened northern Texas. Every Spanish exploration had to keep its journal, and whereas, of course, observations upon the nature of the country, its resources and drawbacks, its people, were not made with the scientific accuracy of to-day, still they were made by practical men, well acquainted with life in the Southwest, and were faithfully recorded. From this point of view, the search for Quivira is a mine well worthy of the attention of present and future generations.

For the Spaniards themselves it was but a fatal mirage. The salutary warnings of Coronado had been forgotton, nothing but the name remained, and spectral visions of gold. These were eagerly followed by men who, thrust upon the unpromising soil of New Mexico, disappointed in the value of its mines, led a life of daily peril without any other relief to its monotony than the search for still greater risks. Such men embraced the pursuit of a ghost as a relief; not one secured remuneration for his ventures, and yet, strange to say, hardly a single one became satisfied that he had been following a mere phantom. They invariably found the truth—that is, they found a roving tribe which had gradually, in the course of a century, shifted its range from North to South. But every one of them looked for something beyond the truth, and their imperfect intercourse with the aborigines furnished information which, ill-comprehended, misinterpreted, confirmed them in their belief that the unknown beyond contained the goal of their desires. Their own numbers were so small, the means at their disposal so limited, that they were compelled to neglect the many other useful discoveries they made besides, and which did not immediately recompense the risk attendant upon the improvement of them.

In the above sketch I have not mentioned the second fruitless journey of Oñate in search of Quivira in 1606, and the problematic expedition of Peñalosa in 1662. The former went nearly due east from Santa Fé, and found the Aijaos again, whose northern neighbors were the Quiviras. The campaign brought no other results than hostilities, and a confirmation of what had been ascertained seven years previously. In regard to Peñalosa's supposed journey, while I am inclined to believe his report a forgery as far as the authorship ascribed to Fray Nicolas de Freytas is concerned, I am not yet prepared to admit that the journey itself, or some journey of the kind, was not performed by Peñalosa. He certainly attempted to penetrate into the plains, but without achieving much, if anything at all. The Maestro de Campo Juan Dominguez de Mendoza asserts that Peñalosa was well acquainted with every part of New Mexico, and had travelled over the entire country. Dominguez, it is true, is not the most reliable authority; still, as he was twenty-eight years of age when Peñalosa is supposed to have made the journey, he was fully competent to speak of the matter.

AD. F. BANDELIER.

Correspondence.

MR. LEA'S REVOLT AGAINST MR. QUAY.

TO THE EDITOR OF THE NATION:

SIR: Mr. Henry C. Lea's letter of October 15 to the *Times* of this city is remarkably characteristic of the political intelligence of a certain class of gentlemen. He will vote against Quay when the loss of his vote will do Quay no harm. And the reason why he will vote against Quay now, and why he advises others to vote against Quay now, is, because it will not hurt Quay. So long as Mr. Lea votes against Quay only when Quay doesn't want his vote, and votes for Quay when the loss of his vote would mean Quay's defeat, it does not seem likely that that gentleman's delicate susceptibilities will be affected. So long as Mr. Lea and his friends put up the money for Mr. Quay to use at the proper moment, he will generously close his eyes to any such little defections as Mr. Lea now proposes.

JOHN SAMUEL.

PHILADELPHIA, October 22.

[Mr. Lea—premising that "the President seems to have misunderstood wholly the lesson taught by the last election," has "abused the appointing power to place the party in New York under the domination of Tom Plattism, in Pennsylvania under Quayism, in Virginia under Mahoneism," has "degraded it and himself in obedience to a short-sighted opportunism which seeks to utilize the baser element of the party at the expense of the principles to which it and he alike are pledged," and is likely, if not arrested, to wreck his party by the end of his Administration—recommends reform Republicans to "omit to vote the State ticket," the only issue being "submission or revolt to Quayism." "Revolt," adds Mr. Lea, "can be safely indulged in," as it will only cut down the eighty thousand Republican majority of last year, not wipe it out.—ED. NATION.]

DR. BIRKBECK HILL'S BOSWELL.

TO THE EDITOR OF THE NATION:

SIR: A friendly but unknown correspondent, writing from the State of New York, asks me if the reprint, published by Messrs. Harper, of my edition of 'Boswell's Life of Johnson,' "differs in any particular as to the text" from the original. As I have never seen this reprint, I cannot, of course, answer his question. I have, therefore, requested him, as with your permission I will, through your valuable journal, request your readers, not to hold me answerable for any errors that may have been made.—I am, sir, your obedient servant,

GEORGE BIRKBECK HILL.

OXFORD, ENG., October 12, 1889.

COLLEGE TEMPTATIONS.

TO THE EDITOR OF THE NATION:

SIR: Apropos of the recent inquiries in your columns for a college free from temptations, I enclose the following, only adding that Nos. 4 and 5 of this circular would be conclusive reasons to my mind why I should not send my son to Sewanee:

REASONS WHY YOUR SONS SHOULD BE SENT TO SEWANEE.

(4.) Owning a domain four miles in each direction, and having absolute control over it, it can guard students against those temptations that surround them at all other institutions.

(5.) Owing to its remoteness from cities and large towns, there is not the same inducement for its students to spend money outside of the regular college charges that exists elsewhere; hence the University of the South is really cheaper than most other colleges. The fees and charges for board are greater than at some other schools, but when we consider that there are no saloons, no billiard-rooms, nor gambling places allowed within four miles of Sewanee, we can see that in its higher charges for board and tuition the University of the South can afford to give its students the best tuition, and better guard them against the evils that beset other institutions.

Yours truly, F. P.

ANDOVER, Mass., October 24, 1889.

LOCKRAM AND LOCKRUM.

TO THE EDITOR OF THE NATION:

SIR: Mrs. Dall, like other Shaksperians, has found so much in the great dramatist that she naturally expects to find everything there. Hence she confounded two different words—

lockrum, conversationally familiar to her New England childhood, and *lockram*, which she learned from Shakspere. Not finding their received meanings to agree, or to be reconcilable, she writes for the *Nation* to relieve her perplexity.

Her own inclination is to twist the Shaksperian *lockram* into a meaning antagonistic to the infallible lexicographer, Alexander Schmidt, as well as to all the commentators. She would not have been driven to this heresy, nor yet have needed to pen her letter of inquiry, had she looked for the *lockrums* of her own early experience in the 'Americanisms' of John S. Farmer—a book justly castigated in a recent issue of the *Nation*, but which is inevitable till a better one shall take its place. She would there read the following from Sam Slick's 'Clockmaker':

"I'd say to the members, don't come down here to Halifax with your *Lockrums* about politics."

Here is her American use, though it may not be clear whether it was born among Blue Noses or Yankees. As it regards *lockram*, she ought to have turned to some standard Shakspere—say the edition of Johnson and Stevens. Concerning *lockram* in the passage she quotes from "Coriolanus" (Act II., Scene 1), their comment is: It is some kind of cheap linen. They cite Green, who says of a man's dress: "His ruffe was of fine lockeram stitched very faire with Coventry blue." Again, from Beaumont and Fletcher:

"I give per annum two hundred ells of *lockram*
That there be no straight dealings in their linnens,"

etc.

Had your correspondent had these facts before her, *lockram* and *lockrum* would have been in her mind far more clearly distinguished than tweedle-dum and tweedle-dee. Nor would she have spoken of *lockram* as "evidently not linen, but some showy gaud," etc., leading a forlorn hope to attack an impregnable Shaksperian vocable. X. Y. Z.

MADISON, WIS.

THE TENNESSEE BALLOT LAW.

TO THE EDITOR OF THE NATION:

SIR: The Dortch law was passed by a Democratic Legislature avowedly for partisan ends. But it produced some curious and unlooked-for results. While many, white as well as colored, neglected to register, none of those registered were prevented from voting on account of illiteracy. The party managers provided tin slips with slots in them. When these were placed right side up over the lists of candidates, the slots indicated the proper place to check the names. This device is regarded as a legitimate feature of the system.

The bribery consisted in merely buying the certificates of registry of members of the opposite party, and was thus rendered twice as expensive as under the old method. When the Republican whips, for instance, came around to urge these Esaus to vote at once, they received the ready answer, "I 'clar, boss, I done lost my *stiffcate*."

If the law stands till another election, which is somewhat doubtful, it is expected that a much larger proportion of the people will secure their "*stiffcates*." OBSERVER.

NASHVILLE, TENN., October 23, 1889.

LIGHT READING FOR COLORED INFANTS.

TO THE EDITOR OF THE NATION:

SIR: My attention was called some Sundays ago to some literature that was sent by "some dear, good ladies in the North" to a Sunday-school for colored children here. A list of the literature sent—which is to take the place of the children's paper heretofore distributed—may interest and amuse your readers. There are numbers of copies of each paper mentioned:

The *Salmagundi*, published by the students of a seminary; the *Ladies' Home Journal*, which is a good thing in its place, but articles on the complexion and how to make handsome evening dresses and fancy articles, etc., are not of especial interest to colored children, whose complexion and dress do not disturb them very much; the *Crystal Palace and Weekly Home Journal*, telling "What Society Does in Washington," and giving an article on "Social Etiquette" and others of interest to many, could hardly be said to convey much spiritual instruction to the negro; *Literature*, published by John Alden, could not be comprehended by a single pupil in the school; and the *Standard of Cross and Crown*, a magazine published especially for clergymen and professional and business men, is also beyond them. Last, but not least, there are enough *Ogontz Mosaics* to supply the school for a month, and Sunday after Sunday it is conscientiously distributed, and it is really pitiful to see the looks of disappointment on the faces of the poor little souls as they are handed another copy of the eternal *Mosaic*. It serves to light fires, no doubt. Now, I have nothing to say against the *Mosaic*: it does the young ladies credit; but I think they would be the first to repudiate its being an attractive journal to an uneducated negro. Even the best-educated children in the Sunday-school here read with difficulty, and are about as well educated as the average white child of eight or ten years; and the older negroes, with very few exceptions, are not educated at all.

Considering the deep and tender interest that the North takes in the "poor negro," it surprises me that the "dear, good ladies" did not take more pains with their selection.

Very respectfully, N. D.

ASHLAND, VA., October 20, 1889.

A PLEA FOR CHAUTAUQUA.

TO THE EDITOR OF THE NATION:

SIR: Will you permit a Chautauqua student who has derived some benefit from the instruction received in one of the special courses, to say a few words in defence of the system?

The prescribed course of reading seems to me intended but to whet the intellectual appetite, and is supplemented by special courses under the direction of well-known instructors with established reputations in their specialties. The fee for these special courses is very small, making them attainable by almost any one who is willing to make some self-denial. I am familiar with but one of the books constituting the course of reading for this year, Prof. Ely's work on political economy. Prof. Ely calls his book 'An Introduction to Political Economy,' and in the preface states that he hopes the book will excite the readers' curiosity, and lead them to continue their economic studies. The impression he desires left with the reader after finishing the book is, "I do not so much feel that I really know a great deal about political economy as that I am now in a position to learn something." Prof. Ely, at the conclusion of each chapter, gives authorities that may be profitably consulted on the questions involved, and, at the conclusion of his book, offers helpful suggestions for pursuing the subject, and a list of works appertaining to the subject to be studied. If a Chautauqua student, after reading this book, fancies he has nothing more to learn, it is certainly not the fault of the author.

One of your correspondents finds fault with the preparation by the Chautauqua Society of special text-books. I should like to call this correspondent's attention to the fact that the demand for these books being very large may lead in the future to their preparation by the ablest minds. I suppose even a Chautauqua student may say that the pecuniary success of a text-book is very uncertain, but if such success is assured, it must lead to their composition by specialists who, without such an assurance, would hardly devote their time to them.

There are many whose means are limited, who feel the desire to improve what opportunities they may have. Unaided, they would waste time and become disheartened. To such the Chautauqua special courses offer guidance and advice, and the system should certainly not be lightly condemned, nor held responsible for those imperfections of human nature from which, I am told, the regular college graduate is not altogether free. C. A. W.

BALTIMORE, MD., October 26, 1889.

ERRONEOUS CONCEPTIONS OF MANUAL TRAINING.

TO THE EDITOR OF THE NATION:

SIR: Every close observer of educational discussion sees that the foremost question of to-day relates to manual training. This is so in spite of no small effort on the part of the conservatives to keep the subject in the background. It will come up at every convention of teachers. There are advocates who cannot be silenced, and every community is demanding definite information as to the scope, aims, methods, and results of manual training.

Under these circumstances, it is highly important that the demand be met and that correct reports be given. It is matter for extreme regret, therefore, that the educational world should have been misinformed and misled by a report read at the recent meeting of the National Association at Nashville. The Standing Committee on Pedagogics in the Council of Sixty Educators presented a report on "The Educational Value of Manual Training" which of necessity gave, directly and indirectly, a definition of manual training, and which discussed a variety of topics presumably connected with the nature and purpose of the manual-training school. What I regard as misleading and erroneous is these fugitive definitions and occasional side discussions. It is not so much what the Committee actually declare, with one or two exceptions, as what they lead the reader to infer, that is most objectionable, as will soon be shown.

This report has already been twice published in full, and it will be printed, I suppose, in the Proceedings of the Nashville Convention. I venture the assertion that an intelligent, careful reader of that report, coming to it with no previous notion of manual training, would rise from its perusal with a widely erroneous conception of the nature and function of that educational feature known as manual training. I will quote a few sentences and phrases to sustain this assertion. I am not now concerned with the deductions of the Committee as to the educational value of manual training. Let us first agree upon what a manual-training school is and what it aims at; we may then discuss its value. I quote from the text in the (Boston) *Jou* *on* of August 8. The italics are mine.

In the outset, the Committee "have proposed in this report to inquire in what precisely consists the educative value of the *branches taught in the manual-training school*." Yet we find statements like the following:

(1.) "The *trades* that deal in wood and metals include the *entire curriculum of the manual training school.*"

(2.) "Your Committee admit the reasonableness of substituting a system of manual training in special schools for the old system of apprenticeship" for teaching trades; but

(3.) They "insist that *such manual training* ought not to be begun before the completion of the *twelfth year.*"

(4.) "Your Committee understand that any amount of manual training conducted in a school is no equivalent for the school education in *letters* and *science, and ought not to be substituted for it.*"

(5.) "The economic, utilitarian opposition to the spiritual education (?) . . . *makes sure of the child's inability to ascend above manual toil by cutting off his purely intellectual training*, and making his childhood a special preparation for industry."

(6.) "The *illiterate manual laborer*, no matter how skilfully educated for his trade in wood and metal operations, *cannot read and write.*"

(7.) "Boys may love the work of the manual-training school, and dislike history, grammar, and mathematics, and all book-learning, in fact; but *to be excellent in manual training would not prevent him from being illiterate and a bad neighbor, and a bad citizen—even a dynamiter.*"

There are other passages of similar import. The report points out the wretchedness of the street gamin, stunted physically and intellectually by privation and premature care. It dwells upon the misfortune of being unable to read and write, and enumerates the things one should know besides his trade. There is nothing in the context *at any point* to suggest that these assertions and dissertations are not all relevant to the discussion of the value of manual training as taught in schools. The picture the report presents is that of an institution where boys, not yet twelve years old, are being drilled in the "drudgery" of trade work hour after hour, month after month, without "the games of youth"; without due freedom from "the cares of mature life"; without science; without letters; without mathematics; without drawing, and without instruction in the duties and responsibilities of a good neighbor and a good citizen! The "entire curriculum" is given up to trade work along narrow lines by poor unfortunate boys who cannot read and write! What a sorry picture it is! I confess it seems incredible, but I appeal to the report itself in defence of my strong language.

Of what possible use can be any discussion of the educational value of such a training as is here assumed? If the manual-training school justifies any such language as I have quoted, then it is a crime against civilization, and its advocates are criminals. But what is the truth in regard to the "branches taught," the age of pupils, and the purpose of the manual-training school? First, as to its curriculum:

(1.) As much time, study, and recitation is given to science as to tool-work.

(2.) As much time is given to mathematics as to tool-work.

(3.) As much time is given to letters (language and literature) as to tool-work.

(4.) Half as much time is given to drawing as to tool-work.

Next, as to the ages of the pupils. The practice is very nearly uniform, among all manual-training schools, of making the *minimum age of admission* thirteen or fourteen years. The average age is at least one year more.

Thirdly, as to the nature of the work. The book-work is like that in high schools; in very numerous cases it *is* the high school. The tool-work is in no sense "drudgery"—it involves none of the cares and trials of mature life—nor is it in the narrow, wasteful lines of trades. Though dealing with tools and materials familiar to industrial life, its methods are new, and as unlike the ways in which children are prepared for certain industries as science and system are unlike guesswork and chance. Instead of "a narrow circle of trades," the shop-work gives a generous grasp of the scientific and mechanical principles that underlie nearly all industries.

Finally, we prefer to state our own purposes. We do not teach trades. We believe that the proper education for all youth to-day is a preparation for the duties and responsibilities of life, and therefore that our students must come out of school with the elements of high character, with vigorous, healthy bodies and minds, able to put hands and brains to work, to enter readily into sympathetic coöperation with the institutions of their country and time.

A manual-training school is not, on the one hand, a technical school for the training of engineers, nor, on the other hand, is it a trade school for turning out basket-makers or carpenters or smiths. In a manual-training school properly so called, no attempt is made to cultivate dexterity at the expense of thought. No mere sleight-of-hand is aimed at, nor is muscular exercise of itself held to be of educational value. An exercise, whether with tools or with books, is valuable only in proportion to the demand it makes upon the mind for intelligent, thoughtful work. In the school-shop the stage of mechanical habit is never reached. The only habit actually acquired is that of *thinking*. No blow is struck, no line drawn, no motion regulated, from muscular habit. The quality of every act springs from the conscious will, accompanied by a definite act of judgment.

Knowing and believing these things, it is hard to deal patiently with reports like the one under consideration, with its homilies on Arrested Development, Conduct, Illiteracy, and the Study of Pure Science, as though these were pertinent to their declared purpose. There is enough error and misconception in the world without adding to it under the august sanction and authority of the Council of the National Association. On the other hand, let us join hands to correct errors and to spread the truth.

It must not be supposed that I charge the Committee with any intention to mislead, nor with ignorance of the several features of the full course of study. By "the branches taught in the manual-training school," and the "entire curriculum," they probably meant only the tool-work, which, as I have shown, is really a minor part of the programme. It is much to be regretted, if I am right in my conjecture, that they did not say what they meant.

Again, and here is the severest thing I have to say, the Committee knew very well when they were speaking of manual laborers who could not read and write; of tender children working long days in factories; of bad citizens and dynamiters—they knew very well they were not speaking of any manual-training school East or West. They were speaking of certain *social evils* which are more or less connected with *trade work* and with *manual labor*. Their argument appears to be that in some way manual training is to be held responsible for those evils. It appears to be assumed that manual *labor* with tools, whenever, wherever, and by whomsoever performed, is educationally the same as manual *training* scientifically and logically taught in school; and that since the former is often hedged in with intellectual, moral, and physical depravity, the latter can be only an injury to education.

I insist upon it that our pedagogical friends, gentlemen whom I hold in high esteem in spite of this unfortunate report, have as yet no adequate idea of what a manual training school aims at, nor what its activities are. They have written a report which should have been entitled "A Discussion of Certain Social Evil which Manual-Training Schools are Destined to Remove." They set out, as they declare in the beginning, "to inquire in what precisely consists the educative value of the branches taught in the manual-training school"; but it is clear that they really did no such thing. They discussed the status of tool-workers who have had no education and no training. I am anxious to prevent harm to the cause from the publication of their report.

C. M. Woodward,
Director St. Louis Manual-Training School.

Notes.

Chas. A. Wenborne, Buffalo, N. Y., has nearly ready 'Voices of the Patriarchs,' by Luther R. Marsh.

Houghton, Mifflin & Co. have in press 'Standish of Standish,' an historical novel by Mrs. Jane G. Austin, and 'The Lily among Thorns,' an interpretation of Solomon's Song, by the Rev. W. E. Griffis.

B. Westermann & Co., New York, will market in this country an illustrated work of no small pretensions, 'Paris Moderne,' published by a group of artists (Paris: Librairie Nilsson). The letter-press will be furnished by Paul Bourget, Jules Claretie, François Coppée, A. Dumas fils, Jules Lemaitre, Melchior de Vogüé, etc. Woodcuts in the text and out of it and large etchings will accompany each of the twelve monthly parts, whose issue will date from December 1. Every phase of contemporary Parisian life and scenery will be depicted.

The 'Count of Monte Cristo' makes four volumes of the uniform English edition of Dumas's works which Little, Brown & Co. are issuing in Boston. They have the handy form, the bright exterior, the capital typography of the first of the series. The illustrations consist of etchings, two to a volume. No better dress for this romance could be desired.

Estes & Lauriat have revived, in a new version by A. L. Alger, Victor Hugo's 'Notre-Dame de Paris.' It is printed in a clear type, tastefully bound, and embellished in the "Tartarin" fashion—*i. e.*, with process reproductions of brush drawings, interspersed with the reading matter. The architectural bits are generally effective; the figure tableaus are not to be praised.

Macmillan & Co. send us the latest issue of the "Temple Library" series (London: J. M. Dent & Co.), being 'Select Essays of Dr. Johnson,' by Dr. George Birkbeck Hill, who has made Johnson his province. His introduction is complete in its information, and is very readable. His notes exhibit the same indefatigable research which characterized his edition of Boswell's Life. The print, if small, is distinct and elegant, and there are some delightful little etchings of Temple Bar, the hall of Staple Inn, St. John's Gate, Lichfield Cathedral, etc. The selections from the *Rambler* fill the whole of the first volume and part of the second; the *Adventurer* and *Idler* completing the latter. Altogether the scheme has been admirably carried out.

A little more than a year ago we noticed Mr. William Francis King's 'Classical and Foreign Quotations' (New York: T. Whittaker), a useful book despite many shortcomings, including too large a share of unscholarly or typographical blunders. The work has reached a second edition, and Mr. King shows himself ready to

profit by friendly criticism, as almost all the errors we pointed out have been corrected. He has renovated his indexes, too, though not as laboriously as his scheme required. The result is certainly an improvement on its predecessor.

A second edition of Mr. John H. Wigmore's 'Australian Ballot System, as Embodied in the Legislation of Various Countries,' has just been brought out by the Boston Book Co. The original publication was most timely; and as interest in ballot reform is unabated, we may expect a great demand for this enlargement, which embraces a detailed account of what Mr. Wigmore rightly calls "the movement" in almost every State and Territory since January, 1889; a summary of the legislation of the present year (we wish the full text had been given); interpretative decisions in Great Britain, Ireland, Canada, and Australia; and much miscellaneous practical matter, regarding speed of voting, the formation of ballot leagues, voting machines, etc. In short, Mr. Wigmore has spared no pains to make a complete record of progress, and in so doing has furnished the only weapon needed by the friends of honest suffrage. We owe to him no small share of the extraordinary successes in legislation during the year now expiring.

An interesting manual of how to teach literature to children is published under the title' 'Literary Landmarks: a Guide to Good Reading for Young People, and Teacher's Assistant,' by Mary E. Burt (Boston: Houghton, Mifflin & Co.). The author brings an experience of twenty years to the subject. Her pupils have been from six to fourteen years of age, and her plan involves continuous study for the entire period of eight years. She writes clearly and minutely of each successive course, with particular directions regarding the order and treatment of topics and books. The signal distinction of this little volume is, that it maintains the capability of children to be interested in the best imaginative works of the race, beginning with the Greek and Latin classics and continuing through Dante and Shakspere. The method is to present the stories of the poets, and trace the development of the leading myths, of the ancient world, the romance of the mediæval age, and the reworking of these materials by the moderns. Miss Burt rightly says that the classics afford a simpler literature than that of later times, and are therefore the best material to begin with. She is satisfied with the success of her experiments, and her pages abound in illustrations of particular results. Diagrams and essays by the children themselves are introduced, to show how their minds took hold of the subject. The effort to give them some knowledge of the contents and the continuity of literature has been rewarded, the author thinks, even when they have left school at the age of ten, as 50 per cent. of her pupils do. Her book deserves the attention of teachers and of those who are interested in home-education in books. The complete list of books referred to, which is added in the last chapter, may also prove serviceable in the formation of children's libraries.

Another manual of literature, in the dry, hackneyed, traditional style, is Dr. Horace H. Morgan's 'English and American Literature for Schools and Colleges' (Leach, Shewell & Sanborn). The least claim that such a compilation of facts and dates can have to attention is accuracy, but this is not safely to be put forth in this case. The author's reliance on dictionaries and other works of a general character which have not been brought down to date, has led him into statements as old-fashioned as his method; his including unknown and provincial names in his lists of American authors impeaches his discrimination; and his critical remarks do not win confidence in his judgment. The use of material at second hand is constantly betrayed. The defects of the volume necessarily deny it serious consideration.

A third publication on the same general subject is Donald G. Mitchell's 'English Lands, Letters, and Kings from Celt to Tudor' (Charles Scribner's Sons), in which he has gathered a series of agreeable talks to young people about the course of English literature from Caedmon to the death of Elizabeth. The author modestly disclaims exact scholarship and learning, but we have observed no fault in this respect. He is interested in the story. He tells quite enough about the early founders of English literature without allowing their dulness to burden the mind, and he is entertaining and picturesque—altogether an excellent introducer for the young to a region of literature usually tedious to them, and (except that we could wish he had been more open to Spenser's charm) satisfactory in all he says. Older readers, too, will find these talks a pleasant means of refreshing their knowledge.

From the same publishers we have received also a new and dainty edition of Mr. Mitchell's long-popular volumes,' The Reveries of a Bachelor' and 'Dream-Life,' each with an attractive and appropriate etching by Percy Moran. Paper, typography, and a smooth dark binding (marred, we think, by the white cameo on the cover), make these volumes beautiful examples of the art. The vein of sentiment in the text (though one who renews acquaintance with it after twenty years may understand the better the author's deprecating tone in his later preface) is one of which youth never tires. It is not unwholesome, with its romantic sensibility and somewhat over-poignant pathos; it is humanizing in a true sense, and that it still continues to be read after forty years is a gratification to others besides the author.

The wants of those who desire an illustrative book of examples to serve as a companion volume to a manual of American literature are met by Huntington Smith's 'A Century of American Literature' (Thomas Y. Crowell & Co.), in which he has made selections from a hundred authors—from Franklin to Lowell. The choice of the compiler falls in with that of the popular taste in the case of the better-known authors; and in dealing with most of the one hundred he has properly restricted himself to the single pieces which have survived in reading-books and boys' declamations. There are, however, several selections which are fresh and well deserve remembrance.

'A Collection of the Letters of Charles Dickens,' 1833–1870 (Charles Scribner's Sons), gathers in a small and pretty volume examples of the correspondence of the hard-worked pen of the novelist, in which his vivacity and flow of spirits, his good-fellowship, his trials as a traveller, his public charitable spirit, and his fatherly care of his sons receive illustration in the most direct way. His immense delight in his success is one of the cheerful things in the book; but generally speaking it is not an intimate, but a jovial little collection—Dickens the friend rather than Dickens the man. It must be added, however, that in his case the friend was a large part of the man. The selection seems to have been well made.

The first number of the *No Name Magazine* (Baltimore: The American Press Co.), which is upon our table, is introduced by a hitherto unpublished boyish satire of Poe, upon an acquaintance in Richmond, which no admirer of the poet need be at much pains to look up. Other contributions (in accordance with the implied promise of the title of the magazine) are anonymous.

Another new periodical is the *Globe*, "a new quarterly review of world-literature, society, religion, art, and politics," conducted by Wm. Henry Thorne, and published at 112 North Twelfth Street, Philadelphia. It is too early, perhaps, to judge whether the editor will give reality to his long belief that "a first-class literary review could and should be published in this country." A very brief intimation of the "Characteristics of Philadelphia" points out that city's low rank in commerce, architecture, etc., but alleges that "in the matter of literature we are stronger than ever." As the editor promises to return to the subject and give it radical treatment, we will only say that a low estate in point of literary originality, independence, and productiveness has seemed to us as necessarily Philadelphia's portion as in the particulars enumerated, and from one cause mainly—perfect subserviency to the doctrine of protection. Mr. Thorne is a follower of Carlyle and of Ruskin. The unsigned review of Cabot's 'Life of Emerson' contains much truth, pungently expressed.

The Publication Agency of the Johns Hopkins University is now ready to deliver No. 1 of the *Beiträge zur Assyriologie und vergleichenden semitischen Sprachwissenschaft*, edited by Prof. Paul Haupt of that institution in connection with Prof. Friedrich Delitzsch of the University of Leipzig. This periodical will be issued at irregular intervals, and will form a pendant to the quarto volumes of Delitzsch and Haupt's "Assyriological Library." Contributions in other languages than German will be admissible. The same agency will receive subscriptions for the new monthly *Hospital Bulletin* authorized to be issued by the Trustees of the Johns Hopkins Hospital. Nine numbers will be issued annually, beginning next month.

A. C. Armstrong & Co. are to issue conjointly with Elliot Stock the London *Bookworm*, second series.

Prof. W. M. Davis's paper on "The Rivers and Valleys of Pennsylvania," in the third number of the *National Geographic Magazine*, is one of the first to stamp that publication with a character something more than dilettante. It is clearly illustrated by the writer.

An interesting account of Lake Tanganyika, read by Mr. E. C. Hore before the British Association, opens the October Proceedings of the Royal Geographical Society. This water is the drainage reservoir of an area extending some 600 miles from north to south, with an extreme breadth of 300 miles, and until recently has had no outlet. The amount of rainfall has for an unknown period exceeded the loss by evaporation, so that the lake has gradually risen until, in 1874, the time of Commander Cameron's visit, it was brimful, reaching the summit of its shore barrier in two places, one on the east, the other on the west coast. The contour of the land to the east soon checked the outflow in this direction; but to the west the land slopes rapidly, and the water cut a deep channel and flows into the Congo. In 1878, when Mr. Hore began his observations, it was a rushing torrent, and had already lowered the level of the lake, which is 420 miles long by ten to fifty broad, four feet. In the succeeding ten years the lake fell eighteen feet more, but now the outflow is very sensibly diminishing, and will probably soon represent simply the inch or two of excess of rainfall over the evaporation. A striking description is given of the peculiar meteorological phenomena, the thunder-storms of the lake. Ten distinct tribes inhabit the shores, representing all the African families, from the Gal-

las on the north to the Zulus on the south, and even including the cannibal dwarfs. It is remarkable that the oldest inhabitants make the least use of the lake, while the representatives of the Gallas, though "the most expert canoeists and fishermen, and the only users of the catamaran," have such a prejudice against "the water," as they call it, that they consider it unlucky for their principal chief to see it.

Petermann's Mitteilungen for October contains an account by Moriz von Déchy of the region about Adai-Choch, in the Caucasus, together with a description of the first ascent of the central peak. From the careful measurements of one of the glaciers it appeared that within a year it had receded twenty feet. This is followed by an enthusiastic account, by Dr. Julius Röll, of a mountain in Washington Territory, which he visited last year while collecting specimens for the German National-Arboretum at Zöschen near Merseburg. It is situated between two lakes, some twenty miles from the station of Easton, on the Northern Pacific Railroad. The view from the summit is remarkably fine, especially of Mt. Tacoma, of which he says: "I have never, neither in Switzerland nor in the Tyrol, neither in the Rocky Mountains nor in the Cascades, seen a mountain which could be compared with it, Mont Blanc and Monte Rosa not excepted." Finding that the mountain, which is about 7,500 feet high, was without a name, he called it Mt. Rigi, and he prophesies that before long there will be a railway to the top. Maps accompany both papers.

The Société Finlandaise d'Archéologie has published a handsome folio containing the inscriptions of Ienissei. There is an introduction giving the history of the discovery of the monuments, copies of the inscriptions, and photographs of the monuments.

The October number of *Le Livre* offers its readers a genuine surprise. With the end of the year, it is announced, this magazine will terminate its existence in its present shape and on its present plan, and to its twenty volumes an index will be supplied if the requisite support is forthcoming. M. Octave Uzanne will carry over the name and his personal direction to the new departure, a small octavo, which will appeal to a restricted audience—1,000 subscribers and no more—and deal with contemporary literature and biblomania, in accordance with a programme at once too extensive and too vague to summarize. It has been evident of late that *Le Livre* has been laboring to maintain its original scheme, particularly in the fore part of the magazine; and M. Uzanne gives notice that the new venture will be conveniently Protean as to the color of its covers, and even perhaps as to size and character, from time to time.

Mr. F. Gutekunst, Philadelphia, sends us the latest addition to his photographic gallery of eminent Americans—a half-life-size panel portrait of James Russell Lowell. It is, in our judgment, the most admirable of all taken in Mr. Lowell's later years, and can be heartily recommended to those who desire an adequate memorial of the poet, scholar, diplomatist, and Independent in politics.

A circular of the Harvard Law School Association shows a membership of 848 members, representing nearly the entire Union, and more than a quarter of the living alumni of the School, the fostering of which is the immediate object of the Association. A revised edition of the catalogue of the members of the School from the commencement will be distributed next year. The low fee of membership in the Association is so slight that there can be no excuse for not joining. The management is a distinguished body. The Treasurer is Mr. Winthrop H. Wade, 10 Tremont Street, Boston.

During the coming year *Harper's Magazine* will publish a series of three articles on "Three Distinctive Types of American University Life," Yale being described by Mr. Chauncey Depew, Harvard by Prof. Norton, and Princeton by Prof. Sloane. The writers just named are certainly also "distinctive types."

—The leading paper of the November *Atlantic* is a short dissertation, by Mr. Woodrow Wilson, upon the "Character of Democracy in the United States." The view taken is the well-worn one that our institutions are derived from English precedents and not from Continental thinkers, from habit and not from doctrine. The influence of Europe, the writer thinks, is now being conveyed in the streams of immigration, and will enter somewhat into the forces that shape the future. In the circumstances in which we now find ourselves, he maintains that the great want in our system is the lack of leadership in legislation. The entire article abounds in reflections, in apposite phrases, in concise and pointed thought; but the principle of legislative leadership, which appears to be the objective point of the writer, has no necessary connection with the general remarks which make up the body of the article. Although the questions raised are not new, so intelligent and aggressive a discussion of them must attract notice. The second thoughtful article of the number is Prof. Charles H. Moore's paper upon the "Materials for Landscape Art in America." The survey, which is practically confined to the New England and Middle States, is depressing to this artist. He looks for the marks of man's presence and influence on the scene, and desires also the age that gives tone and picturesqueness to the works of man, and necessarily he is disappointed; his search for the beautiful, however, among our bridges and along the roadsides, with his eyes intent only on the human element in the scene, is interesting. The career of Marie Bashkirtseff, as told in her diary, is a story likely to attract much notice as a literary sensation, and is agreeably treated in Sophia Kirk's résumé of the volume.

— *Scribner's* is of unusual interest. Col. H. G. Prout (Baroud Bey) contributes the promised article upon the Equatorial Provinces, where Emin exercises his extraordinary power, and gives in brief compass an admirable account of the geography, history, ethnology, and the present condition and prospects of the country. The view he holds seems to be that which Gordon expressed in saying, "I returned with the sad conviction that no good could be done in those parts, and that it would have been better had no expedition ever been sent." Emin, he thinks, may, by sacrificing himself to the people there, postpone the relapse into barbarism for some years; but unless physical control is exercised over the region, either through the Sudan or from the south, by some one "better than the Turk, the Arab, or the Circassian," the negro savage will return to his original state. The personal reminiscences of Gordon in the paper add to its interest. A topic which should be always a living one in this country is treated at large by Prof. J. Russell Soley of our navy, under the heading, "The Effect on American Commerce of an Anglo-Continental War." He takes up the commonly discussed phase of the question in regard to the transfer of English shipping to neutral Powers, and concludes that there would be such delay in removing the restrictions on our merchants that this country would get only a small share, if any, of the English carrying-trade. He then comes to the important question of international law in regard to the power of belligerents to declare provisions contraband, reviews the history of the subject down to the last French precedent of Tonquin, and shows the danger in which our export trade would be placed if our fleet were unable to support at once our views of neutral rights upon the ocean. The article opens the whole subject in a broad spirit. We have room only to mention Dr. Starr's paper upon "Electricity in relation to the Human Body," with special reference to its slight curative power, and Oscar Browning's description of "Goethe's House at Weimar," with its numerous cuts of the rooms so long closed to the public. Marie Bashkirtseff's career is treated also in this magazine by Josephine Lazarus.

— The history of the American stage receives entertaining illustration in the opening chapter of Joseph Jefferson's autobiography in the *Century Magazine*, in which he gathers anecdote and incident relating to his childhood and early years, more particularly in the Western and Southern circuit, and makes the reader personally acquainted with him in a frank and familiar narrative. The many cuts which adorn the instalment, principally portraits of well-known actors mentioned in the text, are full of vigor. Another interesting set of illustrations is given in connection with Mr. Brander Matthews's account of the Grolier Club of this city and the publications which have distinguished its career. No club of exactly the same character and scope is to be found in any other of the great capitals of the world, and, though its publications are for a narrow circle, the result of its influence upon the art of bookmaking in America will be, it is hoped, more widely spread. The edition of Richard de Bury's 'Philobiblon,' now in hand, will be one of the Club's "monuments," and the choice could not be bettered. Very remote from tastes so elegant and luxurious as these is the series of brief extracts from Mark Twain's 'A Connecticut Yankee in King Arthur's Court,' in which the modern age turns the light of its ridicule upon the legend of chivalry with farcical effect, and in a spirit of realism not to be approached by those who cultivate it as an art. Another humorous article of a different order is the paper of reminiscences of "The Newness," as the movement of the more extreme social reformers in New England at the period of transcendentalism was called. The vagaries of the disciples who came under the writer's observation were amusing enough, but such as to make one wonder at the toleration they met with even more than at the odium they occasionally encountered. The increasing disposition of organized Christian thought to take part in social and quasi-political discussion is signalized by the first of a series of papers, by a kind of syndicate of ecclesiastical and lay writers, entitled "Present-Day Papers."

—*Harper's* also presents a richly illustrated theatrical paper, by Mr. Laurence Hutton, under the title, "A Century of Hamlet." He reviews the acting of this character in New York from its first presentation in 1761, with a minuteness and breadth of knowledge such as is now to be expected from this well-informed authority, and with great liberality of judgment upon the various types which different temperaments have worked out under the inspiration of the play. The cuts are, in several cases, curious, and the portraits, though uneven in excellence, are generally good. "The Mexican Army," "York," and "The Republic of Colombia" are the leading articles, which have for their object general information, and

are capably done. The picturesque elements of the historic cathedral city of the north of England are made full use of both by the artist and the writer of the text; and perhaps in the case of Colombia, the timeliness of the topic may be held to compensate for the absence of illustrations. Prof. Charles Eliot Norton writes, in his accustomed vein of noble language and feeling, of the building of the Cathedral of Chartres, and gives some details of the architecture in well-chosen cuts. Mr. Gibson's "Bird-Notes" is also remarkable for its characteristic sketches of nature. The entire number is pictorial to a degree that tends to make one forget the conspicuous absence of any paper of more than passing interest.

—The initial number of the third volume of the *Journal of Morphology* (June, 1889) shows a distinct falling off from the high place hitherto maintained, although each of the four papers presents noteworthy facts and generalizations. More than half of the space is occupied by McMurrich's account of the Bahama Actinaria, containing excellent expositions of their structure, distribution, and affinities, with four fine plates. Among the general remarks, p. 71, is one to the effect that "the relationship of the West Indian Actinaria to those of the Pacific is another piece of evidence in favor of a past communication between the Atlantic and Pacific Oceans through the Isthmus of Panama." Mr. Peck's demonstration of considerable "variation of the spinal nerves in the caudal region of the domestic pigeon" shows, among other things, that the *filum terminale* of the spinal cord extends far into the coccyx, and presents a canal to its extremity, and that the bird has no *cauda equina* like that of mammals. The two papers of Dr. Shufeldt, on the anatomy of the burrowing owl and on the osteology and classification of the passerine birds of North America, are far from satisfactory in several respects. The first paragraph of the "Conclusions" in the latter paper is hardly atoned for by suggestive remarks upon, *e. g.*, the high rank of the raven. The other paper contains entire paragraphs of but little value, *e. g.*, that respecting the brain on p. 118; and on every page there is more or less of what, in a less dignified periodical, would be characterized as "padding." The number exhibits some lack of editorial supervision or of proof-reader's care: a lumen may be *distinct*, but hardly "prominent" (p. 132); on p. 123, *point* should be *level;* on p. 128, sixth line from top, *is* should be *in*. *Cœca* for *cœcum* (p. 123), and *Cathatidæ* for *Cathartidæ* (p. 121) are examples of needless typographical errors. It is gratifying to all morphologists, and particularly to those of this country, to note, from the title-page, that the editor has been made Professor of Animal Morphology in the newly opened Clark University at Worcester, Mass.

— Next to the complete absence of undergraduate work and men, and the exclusion of about nine out of every ten applicants, one of the most novel features of Clark University is the system of Docents. Their functions have just been defined as follows: The highest annual appointment is that of Docent. This rank and title is primarily intended as an honor to be awarded to those worthy of more permanent and lucrative positions, as professors or assistant-professors in colleges. It may be bestowed, without examination, upon a few men who have advanced beyond the requirements of a doctorate, and who satisfy the authorities of the University by a thesis, a public address, or in any other way, of both their scientific attainments and their teaching ability; and, if necessary, it may be accompanied by a salary. Docents may be provided with individual rooms, and special apparatus may be purchased for their research if desired and approved. They may also be equipped and sent on scientific expeditions. While they will be expected, during some part of the year, to deliver a limited number of lectures on some special chapter of their department, their time will usually be reserved for study and research in a way best adapted to qualify them still more fully for academic advancement. It is believed that by the existence of such a select body of men of guaranteed scientific training, ability, and approved power to teach, the difficulties under which college trustees sometimes succumb in selecting suitable men for their professors may be diminished, and that otherwise this academic grade will aid in raising standards of scholarships in colleges and in encouraging scientific research. In addition to this, Docents are to be entirely independent of the leading professors in all the subject matter and manner of teaching, and are accountable directly to the president and trustees. They are not assistants, but have free use of all books and apparatus for their work. It is the design of the authorities that they should illustrate the entire freedom of teaching, and be at liberty to rival or compete with any course or research of any professor. Should they become in any sense assistants of the leading professors, they will entirely fail of their function. Seven have already been appointed, and there are a number of further applications.

—It may be remembered that last January the *Matin* sent out a circular letter, of which we spoke at the time, to certain well-known literary men, and scholars and artists, asking their opinion of Gen. Boulanger. Since the last elections the *Écho de Paris* has done much the same thing, and prints a number of the answers it has received, some of which are amusing. M. A. Mézières writes seriously of the painfulness of a revolution in cold blood at the ballot-box; and with some reason, for France is perhaps the only country on earth that would consent to put its form of government on trial for its life at every election. M. Maxime Du Camp fears much angry obstructiveness on the part of the minority in the Chamber. M. Jules Simon has nothing to say of Boulanger, except that the mention of his name bores him, and that he hopes that this will cease before long. M. Goblet thinks it best to be silent, since he has just been beaten. MM. André Theuriet and Zola trust that now they may be left to write in peace. Louise Michel rises to a height of Pythian eloquence:

"They who, calm, watch the dawning of the new era, hear in the hush that goes before the cyclone the chant of Labor:

"Plutôt que travailler
Sans pain et sans s'abriter,
La tombe,
La tombe!

"Compagnes, compagnons,
Debout tous, et nous prendrons
Le monde,
Le monde!"

Paulus, the singer, makes a very light response. He has sold 300,000 copies of "En r'venant d'la r'vue," he says, and 300,000 also of the "Père de Victoire," so that honors are easy between the two parties, so far as concerns him. His new song, "La Boiteuse," will be the success of the day, doubtless, since the electoral situation seems to him also *boiteuse*. MM. Bocher, de Broglie, de MacMahon, Canrobert, Daudet, and P. Bourget decline, for various reasons, to express any opinion.

—A recent number of one of the illustrated Copenhagen papers contains a very appreciative account of our late Minister to Denmark, Mr. Rasmus B. Anderson. The writer, after commenting briefly on Mr. Anderson's services to Scandinavia as author and translator, touches upon the work accomplished by him in his official capacity as the representative of the United States. It is declared, as is undeniably true, that few ministers have gone abroad with a fuller knowledge of and a deeper sympathy with the country to which they were sent than Mr. Anderson. We learn that by his keen interest in Danish politics and literature he gained a position of influence in Copenhagen beyond that exercised by any previous representative of our country, and that by his simple, unaffected cordiality he won a place in the hearts of the Copenhageners that will always keep his memory fresh in the charming little city of the North. His general interest in Scandinavia as a whole, too, as a land with a common ancestry and common traditions, did not a little towards diminishing the ill-feeling that unfortunately exists between the sister kingdoms. Mr. Anderson, while he carefully avoided identifying himself with any special party movement, made a careful study of the political, social, and commercial conditions of Denmark. He was accordingly, on the theory of the spoils system, ripe for retirement to private life, and the change of administrations at home insured his removal.

WALLACE'S DARWINISM.

Darwinism: An Exposition of the Theory of Natural Selection with some of its Applications. By Alfred Russel Wallace, LL.D., F.L.S., etc. Macmillan & Co. 1889. 8vo, pp. xiv, 494, with map and illustrations.

THE author of this work is notoriously one of the originators of the Darwinian theory, "the origin of species by means of natural selection and the preservation of favored races in the struggle for life." The theory is familiar to all, as are also the effects of its promulgation. At a time when the minds of investigators were filled with uncertainty as to the foundations of their science, it supplied just what was needed to overthrow the belief in special creations, and to arouse to intense activity both partisans and opponents. In their zeal and confidence, the supporters of the elastic doctrine appeared to sweep everything before them. Their enthusiasm permitted no limits to their claims. With a certain class, to suspect their proof or doubt their creed was sufficient to bring a scientist into disrepute. By Natural Selection they accounted for everything; organic evolution was nothing but selection to them. This was going much too far for many of the evolutionists with whose aid they had triumphed. From the beginning of the agitation there were conservatives who would no more accept the new theory on faith than that it was to displace; these demanded proof of every step. Some of them viewed selection as only one of the numerous factors in evolution; others could see in it no real cause. For the latter it meant but a statement of the existence of effects making up the species or organism, a complex of results of the greatest number and variety of causes. In other words, Natural Selection, like special creation, was simply a screen behind which were to be sought the solutions of the many and complicated problems of life, its causes and its modifications. Fully recognizing the immense amount of good directly done by the new hypothesis, and hoping for even more from a reaction, these dissenters, if we may call them such, have worked on confident in their position and strength. From time to time they

have come forward, through their researches, with calls for more consideration, and, with more or less reluctance, it has been accorded. A consequence is seen in the modification of the Darwinian theory, until, as accepted now, it differs greatly from what it was when Darwin laid down his pen. That an adverse current has set in is evident from the contents of the book before us; but the fact is not at all to be regretted, since it leads to increase of experimental knowledge and to more correct estimates of the value of the theory it threatens.

It is well that Mr. Wallace is in the field at the moment, able to strike in defence of his creed the strongest blow since those dealt by his illustrious partner, for there is no one among the disciples so well prepared for the undertaking. While it is difficult to imagine how the subject could have been brought forward more effectively than is done here, it is very doubtful if the book will stay the tide or change its direction in the least. In this review but few of the many points worthy attention can be noticed; besides, the bulk of the matter in the book was discussed upon its appearance in the works of Darwin, our author, and others. The purpose of the volume is to give a concise presentation of the theory and the evidence, and at the same time to counteract a recent tendency to subordinate selection to laws of variation, use and disuse, intelligence, and heredity.

It is not so very easy to determine from these chapters how much their author intends to cover by the terms "Darwinism" or "Natural Selection." In the preface the intention to deal even in outline with the vast subject of evolution is disclaimed, yet, by the time the reader finishes the pages headed "Darwinism —the Geological Evidences of Evolution," he may not be blamed for concluding that in Mr. Wallace's mind Darwinism and Evolution are synonymous, or, on rising from the last chapter, "Darwinism Applied to Man," that he accounts for everything by Natural Selection plus occasional interpositions of spirit. To illustrate, compare the following quotations. Taking up the discussion of some of the more fundamental problems and difficulties advanced by eminent naturalists, Mr. Wallace says:

"It is the more necessary to do this because there is now a tendency to minimize the action of Natural Selection in the production of organic forms, and to set up in its place certain fundamental principles of variation, or laws of growth, which, it is urged, are the real originators of the several lines of development, and of most of the variety of form and structure in the vegetable and animal kingdoms. These views have, moreover, been seized upon by popular writers to throw doubt and discredit on the whole theory of evolution, and especially on Darwin's presentation of that theory, to the bewilderment of the general public, who are quite unable to decide how far the new views, even if well established, tend to subvert the Darwinian theory, or whether they are really more than subsidiary parts of it, and quite powerless without it to produce any effect whatever."

From page 444 we copy a declaration of the faith:

"While admitting, as Darwin always admitted, the coöperation of the fundamental laws of growth and variation, of correlation and heredity, in determining the direction of lines of variation or in the initiation of peculiar organs, we find that variation and natural selection are ever-present agencies, which take possession, as it were, of every minute change originated by these fundamental causes, check or favor their further development, or modify them in countless varied ways according to the varying needs of the organism. Whatever other causes have been at work, Natural Selection is supreme to an extent which even Darwin himself hesitated to claim for it. The more we study it, the more we are convinced of its overpowering importance, and the more confidently we claim, in Darwin's own words, that 'it has been the most important, but not the exclusive, means of modification.'"

Accepting this as the more exact statement, the sceptical ask, for the more moderate, proof that selection is a supreme cause, or, for the more radical, in addition to proof of its existence, proof that it is really a cause. The book will satisfy neither; in fact, its version will only be accepted with considerable modification by many of the advocates of Darwinism.

Some students recognize phases or varieties in artificial selection, as, that due to climate, food, etc., that due to the effort of the organism, and that due to the will of man; these ask what in Natural Selection corresponds to man's will. If there is such an agent, it must be present and acting in artificial selection; so that the latter equals Natural Selection with the added element, the exercise of man's choice. An approach toward an answer is seen in the "Survival of the Fittest." Survival is a consequence of compliance with the demands of circumstances, and the responses to these are regulated by the laws of growth, etc. With the diversity in demands, the causes are numerous, and by bunching them together in the phrase Natural Selection nothing is explained.

In different paragraphs Darwinism is defined as a principle, a law, a theory, a self-acting process, descent with modification, Natural Selection, or the Survival of the Fittest. On one page "it acts solely by the preservation of useful variations," on another it "acts by the life or death of the individual submitted to its action." In answer to the objection that the first rudiments of certain organs could not have been of use, we note the following: "Now, the first remark to be made on objections of this nature is, that they are really outside the question of the origin of all existing species from allied species not very far removed from them, which is all that Darwin undertook to *prove* by means of his theory." In this connection we may use Darwin's words in expressing his conviction that species have been modified during a long course of descent: "This has been effected chiefly through the natural selection of numerous successive slight favorable variations, aided in an important manner by the inherited effects of the use and disuse of parts, and in an unimportant manner—that is, in relation to adaptive structures whether past or present—by the direct action of external conditions, and by variations which seem to us, in our ignorance, to arise spontaneously." Mr. Wallace would subtract from this the inheritance of the effects of use and disuse, and of the effects of the direct action of external conditions, except, perhaps, on organisms very low in the scale.

A constant employment of the word "use" and its derivatives makes it appear as if Lamarckism had served as a foundation for the theory. According to Wallace, Lamarck attributed the change of species chiefly to the effect of changes in the condition of life—such as climate, food, etc.—and especially to the desires and efforts of animals themselves to improve their condition, leading to a modification of form and size in certain parts, owing to the well-known physiological law that all organs are strengthened by constant use, while they are weakened or even completely lost by disuse. By this a most important difference between Lamarckism and Darwinism proper lies in the process of accumulation; it is further from our author's belief in that he advocates non-inheritance of acquired characters to strengthen his position. Galton and Weismann have not helped him greatly, since he admits transmission of predispositions, as in disease, or of tendencies in lines of descent in cases like those of the flat fishes; but Darwin's recognition of the existence of tendencies, in the words, "There can be little doubt that the tendency to vary in the same manner has often been so strong that all the individuals of the same species have been similarly modified without the aid of any form of selection," is declared to be without proof, and to be so entirely opposed to all we know of the facts of variation given by Darwin himself that the important word "all" is probably an oversight. By the older theory the presence of organs or their loss would be credited to use or disuse; the variation being induced by effort, and owing increase and permanence to it and to usage. The later one alleges the variation to be fortuitous, and that the beneficial (useful) is seized upon by selection, increase being made by further spontaneous variation. Wallace says of the wingless birds: "Year after year, therefore, those individuals which had shorter wings, or which used them least, were preserved; and thus, in time, terrestrial, wingless, or imperfectly winged races or species have been produced." A modern Lamarckian would read it thus: "Year after year the effects of disuse were felt by *all* the individuals, and, from lack of effort and use, a tendency in variation was induced which, continued for generations, has led to loss of ability to fly"; thus premising a modification of all the progeny, instead of a weeding-out process. It is admitted that in individual cases something may be left to chance; we see no proof, however, that most if not all sudden extinctions are not accidental, at least in so far as directly concerns the victims. The best examples of variation cited, such as the Oahu land-shells, show no proof of a weeding out.

Use (or a derivative) may be substituted for the word selection in the majority of instances without changing the sense. Much of the evidence adduced will serve the Lamarckian equally well, with little or no modification in statement. For instance, take the paragraph relating to the flounders, on page 129, which will also indicate the transmission of acquired characters through tendencies or habits consequent upon effort and use:

"Soles, turbots, and other flat fish are, as is well known, unsymmetrical. They live and move on their sides, the under side being usually differently colored from that which is kept uppermost. Now the eyes of these fish are curiously distorted in order that both eyes may be on the upper side, where alone they would be of any use. It was objected by Mr. Mivart that a sudden transformation of the eye from one side to the other was inconceivable, while, if the transit were gradual, the first step could be of no use, since this would not remove the eye from the lower side. But, as Mr. Darwin shows by reference to the researches of Malm and others, the young of these fish are quite symmetrical, and during their growth exhibit to us the whole process of change. This begins by the fish (owing to the increasing depth of the body) being unable to maintain the vertical position, so that it falls on one side. It then twists the lower eye as much as possible towards the upper side; and the whole bony structure of the head being at this time soft and flexible, the constant repetition of this effort causes the eye gradually to move round the head till it comes to the upper side. Now, if we suppose this process, which in the young is completed in a few days or weeks, to have been spread over thousands of generations during the development of these fish, those usually surviving whose eyes retained more and more of the position into which the young fish tried to twist them, the change becomes intelligible; though it still remains one of the most extraordinary cases of degeneration, by which symmetry—which is so universal a characteristic of the higher animals—is lost, in order that the creature may be adapted to a new mode of life,

whereby it is enabled the better to escape danger and continue its existence."

The exercise of selection here is entirely suppositious, for some of the species have the eyes greatly distorted, others but little. In regard to want of symmetry, Mr. Wallace says, "When, however, it has become useful, as in the case of the single enlarged claw of many crustacea, it has been preserved by Natural Selection." It is not at all clear that this is an improvement on the explanation, "It has been induced and preserved by effort, use, and heredity."

Much of the evidence presented as new is taken from what apparently are exceptional cases, and from insufficient observations; in the conclusions drawn there is much use of such phrases as "may be due to" and "is probably due to." The presence of a great deal of assumption or guess work does not increase the value of the proof. The assumptions that the effects of dread and pain are not similar in men and other animals, that man, in general, has greater fear of death, that among lower creatures no fear is felt, that death is generally prompt, that the animal enjoys the height of pleasure in successfully escaping an enemy without experiencing the opposite in failure, etc., are far from established. The actions, shrinking, panting, trembling, struggling, moaning, shrieking, of birds or beasts in distress do not differ greatly from those of a human being in similar condition. If it is not fear of death that keeps the animal so constantly on its guard, and causes it to take such precautions for safety, we are left quite in the dark as to what occasions the terror.

A bird rejects an insect at a particular time for various reasons besides inedibility: he may not be hungry, it may be strange to him, he may prefer other food. Other individuals of his species may feed upon it readily; in other localities, or in scarcity of food more to their taste, the insect may form a considerable portion of the food supply of his own or different species. The first requisite in arguments of this kind is sufficient proof of the premises. Supposed selection through the inexperience of young birds does not appeal to us very strongly. In regard to the brown rabbits, of which "the white upturned tails of those in front serve as guides and signals to those more remote from home, to the young and feeble," it is a question whether this is founded on observation, and whether the white tail may not be more beneficial to the survivors, as keeping up the food supply by keeping down the number of rabbits, since it serves as a signal to the wolves, dogs, foxes, cats, weasels, hawks, owls, and others that prey upon them. The chapter on mimicry and warning colors is full of conjecture.

In all examples of true mimicry, Mr. Wallace says, the harmless is less abundant than the harmful, which is mimicked; from which we are to infer that, closely as some harmless snakes (for instance, Erythrolamprus venustissimus or Ophibolus doliatus) seem to copy species of Elapidæ, they are not examples of true mimicry. The idea advanced by others that the rattle of the rattlesnake is useful in preventing attack is adopted. The author says of the snake:

"If gently tapped on the head with a stick, it will coil itself up and lie still, only raising its head and rattling. It may then be easily caught. This shows that the rattle is a warning to its enemies that it is dangerous to proceed to extremities; and the creature has probably acquired this structure and habit because it frequents open and rocky districts, where protective color is needful to save it from being pounced upon by buzzards or other snake-eaters."

Garman shows the rattle to have originated as a consequence of effort and use, or habit, without need or appearance of selection; his conclusions being reached after long-continued study of the animals, of their embryology and of their anatomy. Whatever the merits of the conclusions, it seems to us that science has more to expect from the latter of the two methods employed in reaching them.

The cases of the crustaceans, Artemia salina and A. Milhausenii, the transformations of which, from one to the other, back and forth, on being taken from brackish to salt or from salt to brackish waters, or the transforming of either into or from Branchippus stagnalis of the fresh water, as noted by Semper, and so often used to illustrate the direct action of environment and the inheritance of its effects, are here met by suppositions only. Developments which in a struggle would no doubt be injurious—as the plumes in the peacock's tail or on birds of paradise—are supposed to arise from a condition of perfect adaptation to circumstances, with a surplus of vital energy which may be expended in this way without detriment. Particular degradations are said to be possibly due to correlation of growth or economy of nutrition; and different grades of reduction in other instances, it is held, may be caused by the action of several distinct causes, sometimes acting separately, sometimes in combination.

In the author's words, "The law of Natural Selection or the survival of the fittest is, as its name implies, a rigid law, which acts by the life or death of the individuals submitted to its action." Selection, as is admitted, only steps in after the variation has originated and after some use is found for it; survival is predicated only on what exists at a particular time; and it is by means of this post-factum post-mortem theory that we are to account for the origins of things. The struggle for life is usually spoken of as unceasing; on one page it is stated to be intermittent and exceedingly irregular in its incidence and severity, and on another it is said the war of nature is not incessant. To some extent what goes on among animals may be likened to what takes place on a tree full of blossoms, few of which mature in fruit, some being imperfect in the bud, some unfertilized, some destroyed by insects, some torn off by birds and mammals, some withered by the blight, some frosted, some scorched, some beaten down by the wind, the rain, and the hail, and some shrivelled up from want of nourishment because of drought, or weakness and disease in the tree. One would hardly dare to say that the fruits gathered at the end of the season survived because they were the fittest; in reality the only ones we have any warrant for calling less fit were the imperfect buds; and this book does not give proof that the proportion of destruction by accident in the case of the animals is so very much less that we can afford to drop it out of account in estimating the work of selection. There is no disproving the fact that the diverse laws act as aids or checks and counter checks to each other, and without doubt much is due to their action which now in our ignorance might be supposed due to selection.

In the last chapter the author brings forth a sort of spiritual climax, certain to give rise to much difference of opinion and to be rejected by many Darwinians. He here asserts his conviction that the theory is insufficient to account for much heretofore included, and to supply the deficiency he advocates a series of interpositions ("due, probably, to causes of a higher order than those of the material universe"), intruded in a manner like the glacial period in the earth's evolution, one of which introduced life, another sensation and consciousness, while another (or others, intellectual and moral) was limited to humanity. To establish the latter, he argues from the appearance of particular faculties, the mathematical, the musical, the artistic, the metaphysical, and the faculty of wit and humor, more or less completely lacking in savages and some or all of which are absent in the great majority of mankind. The facts given in regard to the possession of these faculties by particular communities or individuals would lead to the conclusion that they are regarded as special dispensations to the favored ones, though not stated in so many words. Reasoning powers are ascribed to instinct.

That the name of his partner is given to this book will be credited to the modesty of the author. But, after changing or abstracting entirely portions of Darwin's conclusions on which great stress was placed, as sexual selection and the progressive development of man's entire nature, and after injecting a theory of special manifestations of spiritism which Darwin himself might be most unlikely to admit, it is not quite exact to call the result Darwinism. In his splendid effort the author presents his theory as the only competent one, and asks acceptance of it as established truth. We have endeavored to indicate some of the respects in which too much has been claimed for it, believing it inimical to the best interests of science that the masses should blindly adopt it, or that students should prejudice the results of their future labors by committing themselves to a theory which is in great part unproved and of doubtful application.

BOOKS FOR CHILDREN.

THE last of the "Boy Travellers" series (Harpers) does the grand tour of Mexico. Externally the book is most attractive, with its handsome binding and profuse illustrations, and the substance Mr. Knox gives is well worth its fine dress. He has made a careful study of the best works on Mexico, to which he makes proper acknowledgments, and they, with the help of his own extensive travels, have enabled him to attain a very high degree of accuracy. There may fairly be a question whether his history and statistics are really sugar-coated for his young readers by being put into the words of "Fred" and "Frank" and "Dr. Bronson," with their frequent rather forced jocoseness; but this is already an established feature of the series, and has to pass. It would be a pity to give any intending Mexican tourists the idea that by a few weeks of hurried study they could become "able to speak Spanish very well," as is reported to have been the case with the two boys of the book, though the narrative itself, later, shows their Spanish to have been of a halting kind. The pronunciation indicated for the more difficult geographical names is usually correct, but "She-waw-waw" for Chihuahua (p. 79) is wrong all through. The so-called Calendar Stone is mistakenly located in the base of one of the Cathedral towers; it has been removed to the National Museum. Cortez burns his ships (p. 251) in the old style; probably the orators have given that error an indestructible life. To say of the battle of the 5th of May, 1862, that it "is regarded as the Waterloo or Gettysburg of the French in Mexico; it sealed the fate of Maximilian's empire and reëstablished the republic," is a most fearful and unaccountable blunder. The pressing question of drainage for the city and valley of Mexico is handled with intelligence, except for apparent ignorance that great works to solve it are now being pushed. Such slight blemishes as we have noted really detract almost

nothing from an unusually painstaking and successful book.

'The Walks Abroad of Two Young Naturalists,' by C. Beaugrand, translated and edited by David Sharp (Thos. Y. Crowell & Co.), is one of the books of the order of sugar-coated pills, but in which, to our mind, the coating is even more nauseous than the drug. The systematic zoölogy conveyed is antiquated and skeleton-like. The story in which it is imbedded is "trifling," as our Southern brothers say. The translation, though probably correct enough, is wooden and without literary merit. The original may have had a lively and agreeable style, but, if so, it is gone. The illustrations are coarse and trashy in many cases, though with some exceptions. It is hardly credible that such books as this can interest anybody in natural history. The opposite effect would seem much more likely.

Mme. P. de Nanteuil's 'Captain,' translated by Laura Ensor (George Routledge & Sons), seems to have been written to justify the Socratic oath; for the hero of the story is a supernatural, or at the very least a preternatural, dog, whom the dictates of natural piety suggest that it would be highly proper to invoke. He is a Newfoundland, whom Yvon Jossic, the human hero of the tale, picks up at St. Pierre, and starts upon an illustrious career. He saves his master from drowning and from robbers; he rescues men, women, and children from all manner of perils by sea and land; he forwards greatly Yvon's promotion in the French navy; he takes part in—we had almost said directs—the expedition to Tonkin, though he is responsible for none of the disasters of that ill-starred enterprise. He combines in himself all that has ever been good of dog since the world was. He is the dog of Ulysses, the dog of Montargis, once even the dog of Alcibiades. He leads an absolutely blameless life, and does not die at the end of the book. It will be seen that he is a dog of romance rather than of naturalism or of natural history. But this need not prevent his story from being put into the hands of young readers. It is entertaining; it has a good deal of action and liveliness in it, and some information about life at sea in the French navy and about foreign countries. It inspires kindly feelings and the home affections, and we do not know why it should not be called a very good child's book. At any rate, children will be sure to like it.

In the story of 'Plucky Smalls' (Boston: D. Lothrop Co.), Mrs. Mary Bradford Crowninshield gives a capital description of the life of an apprentice on board of one of our men-of-war. The hero is a little city wharf-rat, who gives an account of himself and his adventures in a natural and modest way, which makes him a very attractive and interesting little character. The story ends abruptly, leaving the *Manhattan* on a European cruise, but with a promise of a continuation which we should be glad to see realized.

A manly, upright boy, who has all the characteristics of his age and at the same time is animated with a higher purpose than mere pleasure-seeking, is an ideal which many writers have striven to realize with varying success. The failure generally comes from making the studious and practical side of the boy's character so prominent that the other side is entirely obscured, and the result is a prig. This was to a certain degree true of some of the earlier stories of JAK, but in the latest, 'Rolf and his Friends' (Crowell & Co.), the ideal has been more nearly reached. The hero is not a perfect boy, not even a good scholar, but a warm-hearted, unselfish little fellow, to whom we become much more strongly attached than if he had been a prodigy of good sense and learning. The astronomical chapters contain much information about the sun and moon, though most boys would much prefer to learn about them as Rolf did than in the prosaic way of reading. The story is one of quiet but sustained interest, culminating in a very well described incident.

In 'Famous Men of Science' (Crowell & Co.) Mrs. Sarah K. Bolton has brought together brief popular biographies of Galileo, Sir Isaac Newton, Linnæus, Cuvier, William and Caroline Herschel, Alexander von Humboldt, Humphrey Davy, Audubon, Morse, Lyell, Joseph Henry, Agassiz, Darwin, and Frank Buckland. Each biography is accompanied by a portrait on wood of its subject. The different articles are compiled from the usual sources, and aim to give a general idea of the experiences, struggles, and successes of famous men of science in language suited to intelligent boys and girls. Dates and dry details are shunned as much as possible. The author, on the whole, has been fairly successful in her endeavor, and we have not noticed any serious slips in matters of fact or of good taste in the manner in which the information is presented. The portraits, though coarsely made, would be tolerably good but that they have been very poorly printed.

We have in 'Daddy Jake the Runaway; and Short Stories Told after Dark by "Uncle Remus"' (The Century Co.) another glimpse into the inexhaustible world of negro superstition and folk-lore, and it is noticeable once more how familiarly Mr. Harris moves in it and how little he repeats himself. The admixture of witchcraft with the customary animal myths makes the collection essentially juvenile, while the title story, which fills nearly half the book, is expressly composed for the young. What impresses us most after closing this handsome volume is the fact that it does more (quite incidentally and unconsciously, we believe) to give children an idea, faint as it is, of the nature of slavery than all our so-called school histories put together.

Daddy Jake, a favored house servant, during the war, half kills a field overseer who attempted to give him orders and first struck him. Of course he then runs away. "In those days," explains Mr. Harris, "a negro who struck a white man was tried for his life, and, if his guilt could be proven, he was either branded with a hot iron and sold to a speculator, or he was hanged." And generally, as we know, he was not tried at all, and was apt to be lynched without ceremony. The master's little boy and girl innocently go in quest of their old friend and companion, drifting down the river in a boat. Stranded at night, the sleeping children are discovered and cared for by a negro woman, one of a band of runaways whose refuge is in the midst of a neighboring cane-brake, to which, as may be supposed, Daddy Jake has already found his way. "Crazy Sue" tells her story to her little charges, opening another vista of slaveholding atrocity. She had been a house-servant, and a mother with twins. For the crime of falling asleep while nursing them, her master sends her to a distant field to labor.

"I went, kaze I 'bleeze ter go; yit all day long, whiles I wuz hoein' I kin year dem babies cryin'. Look like sometimes dey wuz right at me, an' den ag'in look like dey wuz way off yander. I kep' on a-goin' an' I kep' on a-hoein', an' de babies kep' on a-famishin'. Dey des fade away, an' bimeby dey died, bofe un um on de same day. On dat day I had a fit an' fell in de fier, an' dat how come I burnt up so."

Mr. Harris artistically sets off but does not efface this woful recital with a comical Brer Rabbit story, from the lips of the same poor creature.

The rapt followers of Uncle Remus have long been familiar with the "patter-rollers," and perhaps have been told what was the special function of this night watch as respects the slaves who might be found abroad after dark. They give point to the amusing adventure of Becky's Bill in "How the Birds Talk," as he goes through the dark Two Mile Swamp. "He come 'long, he did, en de fus' news you know a great big ole owl flew'd up in a tree en snap he bill des like somebody crackin' a whip. . . . Den he holler out: '*Who* cooks—*who* cooks—*who* cooks fer *you*-all?'" And the frightened negro, who "sorter men' he gait," twice responds, the second time taking off his hat—"Well, sir, hit's des like I tell you. Mos' inginer'lly endurin' er de week, mammy she cooks, but on Sundays, mo' speshually w'en dey got comp'ny, ole Aunt Dicey she cooks"; and presently he takes to his heels.

Plantation life is further exhibited in the catalogue of Uncle Remus's occupations as jack-of-all-trades. There is, in short, nearly as much occasion for reflection as for amusement in this book, and we recommend it to parents with a hearty good will. The pictorial illustrations are often effective, but Uncle Remus still awaits his double with the pencil, and we hope he too may yet arise south of Mason and Dixon's line.

Teutonic Mythology. By Viktor Rydberg, Ph.D. Authorized translation from the Swedish by Rasmus B. Anderson, LL.D. London: Swan Sonnenschein & Co. 1889.

The work that Mr. Anderson has translated under the above title originally appeared in Swedish as 'Researches in Germanic Mythology,' a name that might well have been retained, since the more ambitious form given it by the translator immediately suggests and challenges in some respects an unfortunate comparison with the monumental work of Jacob Grimm. One purpose of Rydberg's researches, as stated in the chapter on the Dietrich Saga, is to show how Norse mythology, so called, is but a caricature of the real Norse mythology, as he conceives it. The sentence in which this is expressed is worthy of quotation, as it fairly shows, also, a characteristic of the translation that Mr. Anderson has given us. Speaking of the myth concerning the war between Mannus-Halfdan's sons, he says, on p. 207:

"Among the many causes coöperating in Christian times in giving what is now called 'Norse mythology' its present character, there is not one which has contributed so much as the rejection of this myth towards giving 'Norse mythology' the stamp which it hitherto has borne of a narrow, illiberal, town mythology, which, built chiefly on the foundation of the Younger Edda, is, as shall be shown in the present work, in many respects a caricature of the real Norse, and, at the same time, in its main outlines Teutonic, mythology."

That Mr. Anderson should accept such a dictum with equanimity proves how wholly he is disposed to coincide with Rydberg's views. His own 'Norse Mythology' (Chicago, 1875, and now in a second edition) is made on precisely the lines that Rydberg decries. It is apparent, however, on the other hand, why the present work should appeal to him, as it has all the detail which the other strikingly, and, no doubt, purposely, lacks. It is, nevertheless, in his mind doubtless calculated to supplement his book rather than to supplant it, and this to a great extent it does.

Rydberg's 'Mythology,' in its English form, a book of 700 pages, is the extremely clever production of a prolific contributor to the va-

rious departments of Swedish literature. His material has been drawn from almost every possible source, but in the use he makes of it he is often entirely too optimistic, and many of his interpretations are as he would have them, not as sober criticism has hitherto regarded them. He is too sanguine to be scientific. Not infrequently his assumptions are but clever guesses, which he then proceeds to use as premises upon which to build an elaborate argument. Many of his dicta are, accordingly, new, and while they outwardly bear the mark of stability, in reality rest upon insecure foundations. All this is the more to be regretted since there is need in English of a more readable mythology than Grimm's, which, after all, is but a storehouse of fact without adequate literary form. Rydberg's book is from first to last abundantly interesting. The enthusiasm of the author for his subject is infectious, and the critical reader, less sanguine than he, will feel regret that he cannot always follow him where he so fearlessly leads.

Mr. Anderson's translation is, in its English, not quite all that might have been expected of him. As a result, no doubt, of the constant association of the last few years with a foreign language, he allows himself to lapse into awkward and un-English sentences like this, for instance, on p. 82: "Thus traditions concerning immigrations from the North to Germany have been current among the continental Teutons already in the first century after Christ." Worse than this, however, because affecting more nearly the material of the work, is the orthography of Old Norse names, which have been given in a manner utterly hap-hazard and arbitrary; indeed, there is no discoverable principle in their rendition that has been consistently carried out. Vowel quantity is sometimes indicated, sometimes not. Umlaut is treated in the same inconsiderate way. We have, for instance, Fjolsvin and Fjölsvinsmal; the Völuspa, but the Volundarkvida. Final "i" is retained, as it should be, in Elli and Hjarrandi, but is replaced elsewhere by "e," which, moreover, will absolutely fail of its purpose in such names as Vile, Nide, Hate, Grane, Loke, and others, as the lay reader will inevitably pronounce them one and all as monosyllables. Names in "-ir" are also vacillating. Œgir is the only one that appears throughout in its proper form; otherwise we have "-er." Final "r" is omitted from, for instance, Dagr, forming thus the consistent and intelligible form Dag; Loptr, however, is rendered by the absolutely arbitrary form Lopta. Initial "h" before consonants is usually retained; Hloridi, however, appears as Loride on p. 31 and Lorride on p. 59. Proper names of all kinds, indeed, have fared badly in the translation. The reader will look in vain, at least on an English map, to select instances quite at random, for Kabulistan and Pendschab, or for St. Gaelen. On p. 32 we are told of "Sturlason the author of Heimskringla," which is an unfair way to render an Old Norse name, since the second member in it is a true patronymic and not a surname at all. Snorri Sturlason, or, if one chooses, Snorri, was the author of Heimskringla. Odainsakr, the field-of-the-not-dead, is, probably by a misprint, indexed as Odinsaker, and there are sins of omission from the index and of commission in the orthography of both index and text almost without end. The book is dedicated by the author and the translator to King Oscar II.

The New Eldorado: A Summer Journey to Alaska. By Maturin M. Ballou. Boston: Houghton, Mifflin & Co. 1889. 8vo, xii, 352 pp.

Mr. Ballou's journey was made on the Northern Pacific Railway, via the Yellowstone Park, to Tacoma on Puget Sound, to Alaska and return by steamer, and eastward by the Canadian Pacific Road. His book, however, is not a diary of his travels, nor are its contents restricted to matters of personal observation. He has used his line of travel as a path from which to take numerous excursions into the region of compilation, and at other times to be traversed rapidly or at leisure as occasion dictated. The author's experience in bookmaking has enabled him to combine his observations and his compiled materials with due subordination and coherency, while an easy and unpretentious style makes the whole very pleasant and not unprofitable to the reader. The book, while containing no new matters of fact, nevertheless registers the impressions of an intelligent and alert observer who is also an experienced traveller. It is on the whole a good piece of workmanship.

The author is very enthusiastic over the mineral and other resources of the Alaskan region, and has the highest praise for the beauty and novelty of the scenery along the steamer route. It is certain that, of its kind, there is nothing accessible to the ordinary traveller in any part of the civilized world which can surpass the fiords of southeastern Alaska and the glaciers and peaks of the St. Elias Alps. On the other hand, it is probable that the mineral wealth of the Territory, while doubtless great, will require a very considerable expenditure of time and capital to make it available, and that its development will be slow and fitful. The enthusiasm of Mr. Ballou and some other recent writers is, perhaps, only a natural reaction from the over-depreciation, fostered by interested parties, not long since in vogue.

Mr. Ballou's facts for the most part are well chosen and accurate, though occasional slips might be noticed in cases which have not fallen under his personal observation. We think he might have omitted the preposterous yarn which relates to the existence of living mammoths. These are appropriately located on the headwaters of the "Snake River," a stream not known to geographers, and doubtless deriving its name from the fact that there are no snakes in Alaska. The statement (p. 149) that there are no toads or similar animals is, however, quite erroneous. A small toad is not rare near Sitka, a small frog extends its range far within the Arctic circle in the Yukon region, and the bullfrog of southeastern Alaska may be seen in effigy on the rattles of every medicine-man. The inference that the whole range of the Aleutian Islands is volcanic, which might be drawn from sundry observations of the author, is also an error. This chain of islands existed long before the present volcanoes were elevated, the volcanic islets (though numerous) are in a minority, and the westernmost group of the chain is entirely free from volcanic rocks and is probably of mesozoic age.

As a whole, however, the book is unusually free from erroneous statements about the country, and is, among the numerous "tourist books" to which the Alaska excursions have given rise, decidedly the best we have examined. It is not illustrated, the presence of a map would have added much to its usefulness, and the absence of an index is to be regretted.

BOOKS OF THE WEEK.

The Little People's Calendar. White & Allen. 50 cents.
Traill, H. D. Lord Strafford. Macmillan & Co. 60 cents.
Trumbull, H. C. Principles and Practice: A Series of Brief Essays. 6 vols. Philadelphia: John D. Wattles.

HENRY HOLT & CO.

HAVE READY:

Remsen's Laboratory Manual

Containing Directions for a Course of Experiments in General Chemistry. By Ira Remsen, Professor in the Johns Hopkins University. 12mo. Teachers' price, 40 cents; by mail 46 cents.

The material is so arranged that the pupil is required to make his own observations and inferences, for the entry of which blank pages are provided. Whilst the experiments are those of the author's 'Elements of Chemistry,' the work is suited to use with the author's 'Introduction to the Study of Chemistry,' or, in fact, with any elementary text-book of chemistry.

German Scientific Monographs.

Edited for American Students by Oswald Seidensticker, Professor of the German Language and Literature in the University of Pennsylvania. 12mo. Paper.

NO. I. GOETHE'S NATURWISSENSCHAFTLICHE ARBEITEN. Vortrag gehalten im Frühling 1853 in der deutschen Gesellschaft zu Königsberg. Von H. Helmholtz. Professor an der Universität in Berlin. Teachers' price, 30 cents. By mail, 33 cents.

NO. II. UEBER BACTERIEN DIE KLEINSTEN LEBENDEN WESEN. Von Dr. Ferdinand Cohn Professor an der Universität in Breslau. Teachers' price, 30 cents. By mail, 33 cents.

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

For sale at the office of the *Nation.*

*POSTAL DICTIONARY.—A HAND*book of laws and regulations of the Post-Office Department, postage rates, etc., etc., comprising 150 titles in alphabetical order, besides detailed index. Sold by all booksellers, or mailed on receipt of price, 15 cents, by THE EVENING POST, New York.

SOCIAL ASPECTS OF CHRISTIANITY, by Professor Richard T. Ely of Johns Hopkins University. 12mo. 90 cents.

Prof. Ely, although in thorough sympathy with evangelical Christianity, finds something to criticise in the wide divergence between the professions and the practices of the Church. In this new work of his he sets forth fearlessly and yet in a kindly spirit the faults that are apparent to the eyes of a thoughtful layman. It is a book calculated to do much good, and deserves to be read by all members of all creeds.

50 cts. a copy. THE FORUM PUBLISHING CO., 253 Fifth Ave. $5 a year.

Wigmore's Australian Ballot System.

Second Edition, revised and enlarged. Cloth binding, $1.50 net.

The First Edition was published early in 1889; but there has been so widespread an interest in the subject, and so much actual or projected legislation on the lines of the Australian System that a new edition is already demanded.

In the Second Edition has been incorporated additional matter as follows: The Legislation and Attempts at Legislation of the Year 1889 on this Subject; Judicial Decisions Interpreting the System in Countries where it has been already Adopted; Estimates of the Speed and Expense of Voting; Suggestions as to Ballot Leagues; Summary of Party Votes on Ballot Reform, e c.

The work as thus enlarged includes the Secret Ballot Laws adopted or proposed in the different States of America and in Foreign Countries, with Notes explaining their accord or differences.

The Introduction gives a history of the origin and growth of the method of secret balloting which has come to be generally known as The Australian System.

Altogether, as an exhaustive discussion of a subject of vital importance, this book is essential to every public or private library and to every citizen interested either in good government or in practical politics.

Cassell's New Books.

New Zealand After Fifty Years.

By EDWARD WAKEFIELD. With numerous illustrations. 1 vol., 8vo, cloth, $2.00.

Mr. Wakefield has the faculty of being exhaustive and accurate without being tedious, partly from the habit of studying every subject thoroughly, and partly from the good fortune of possessing a clear, direct, and graphic style. He has the advantage, too, in describing strange lands, of being an excellent naturalist.

Dante Gabriel Rossetti as Designer and Writer.

Notes by WILLIAM MICHAEL ROSSETTI, including a prose paraphrase of "The House of Life." Price, $2.00.

The present is the only volume that Wm. M. Rossetti has issued regarding his famous brother. In this volume the author has not attempted to write a biographical or critical account of Dante Rossetti, shrinking modestly from a task which he would be sure to perform well. "Mine is a book of memoranda and of details," he says; but it is more than that, for the thread upon which these memoranda are strung is of spun gold, which lends a brilliancy to what might be, but is far from being, dull reading.

Subjects of Social Welfare.

By the Right Hon. Sir LYON PLAYFAIR, K.C.B., M.P., LL.D., Ph.D., F.R.S. 1 vol., 12mo, extra cloth, $3.00.

Under the general headings of Public Health—Industrial Wealth and National Education, are ably discussed Sleep and its Concomitant Phenomena, Vaccination, Vivisection, Disposal of the Dead, Agriculture and Fair Trade, Displacement of Labor by Invention, Bimetallism, Science and the State, Petroleum, Primary and Technical Education, Universities, Examining Boards, Professional Education, &c., &c.

FROM THE DIARY OF

INSPECTOR BYRNES.

Sergeant Von; or, A Long Chase.

Paper, 50 cents; cloth, 75 cents.

Reads more like a romance than the report of the detection of crime. It is of absorbing interest from beginning to end, and will be read by thousands, as it deserves to be.

The Morgesons.

By ELIZABETH STODDARD, Author of "Two Men," "Temple House," etc. Paper, 50 cents; cloth, 75 cents.

A well-known writer says of Elizabeth Stoddard's novels: "She is the Charlotte Brontë of our time, in her high, lonely, isolated genius. To read her novels is to come into the direct atmosphere of an almost unrivalled power of creative art."

An Honest Hypocrite.

By EDWARD STAATS DE GROTE TOMPKINS. Paper, 50 cents; cloth, 75 cents.

"The Great Theological Novel of the Day."

This volume is really the author's own beliefs put into the form of a story. The point that is at once raised is, "Is Christianity a sham or is it not?" There is no preaching in the work, but there is a good story and a stirring plot.

VOL. XLIX.—NO. 1271. THURSDAY, NOVEMBER 7, 1889. PRICE 10 CENTS.

JUST READY:

RECENT ECONOMIC CHANGES,

And their Effect on the Production and Distribution of Wealth and the Well-being of Society.

By DAVID A. WELLS,

President American Social Science Association.

12mo, 493-xii. pages, cloth, - - - - - Price, $2.00.

The economic changes that have occurred during the last quarter of a century have unquestionably been more important and varied than during any former period of the world's history. The problems which our advancing civilization is forcing upon the attention of society are accordingly of the utmost urgency and importance. To trace out and exhibit in something like regular order the causes and extent of the industrial and social changes and accompanying disturbances which have especially characterized the last fifteen or twenty years, and to carefully balance what seems to have been good and what seems to have been evil, have been the main purpose of the author.

PUBLISH THIS WEEK:

The Letters of Horace Walpole.

A selection of some of the most noteworthy of the epistles of a man who was perhaps the most brilliant letter-writer of his time, and whose correspondence gives a most interesting picture of social and political life in England during the latter part of the eighteenth century. Edited with an Introduction and Notes by Charles D. Yonge. Limited letter-press edition. 2 vols., 8vo, with portraits and facsimiles, $6.00.

Money. By James Platt, author of 'Business,' 'Morality,' 'Life,' 'Economy,' and 'Progress.' 75 cts.

A Hand-Book of Precious Stones.

By M. D. Rothschild. 12mo, cloth, 150 pages and illustrated, $1.00.

"The object of this little book is to convey to the merchant, the workman, and the amateur, in a condensed and accurate form, information concerning the various properties of precious stones."—*Extract from Author's Preface.*

KNICKERBOCKER NUGGETS.

American War Ballads. Comprising the noteworthy ballad poetry produced during the Revolution, the War of 1812–14, the Mexican War, and the Civil War. The latter division includes the productions of poets on both sides of Mason and Dixon's line. Very fully illustrated. 2 vols., $2.50.

The Public Regulation of Railways. By W. D. Dabney, formerly Chairman Committee on Railroads and Internal Navigation in the Legislature of Virginia. Being No. 60 of the "Questions of the Day Series." 12mo, $1.25.

Wigmore's Australian Ballot System.

Second Edition, revised and enlarged. Cloth binding, $1.50 net.

The First Edition was published early in 1889; but there has been so widespread an interest in the subject, and so much actual or projected legislation on the lines of the Australian System that a new edition is already demanded.

In the Second Edition has been incorporated additional matter as follows: The Legislation and Attempts at Legislation of the Year 1889 on this Subject; Judicial Decisions interpreting the System in Countries where it has been already Adopted; Estimates of the Speed and Expense of Voting; Suggestions as to Ballot Leagues; Summary of Party Votes on Ballot Reform, e c.

The work as thus enlarged includes the Secret Ballot Laws adopted or proposed in the different States of America and in Foreign Countries, with Notes explaining their accord or differences.

The Introduction gives a history of the origin and growth of the method of secret balloting which has come to be generally known as The Australian System.

Altogether, as an exhaustive discussion of a subject of vital importance, this book is essential to every public or private library and to every citizen interested either in good government or in practical politics.

Longmans, Green & Co.'s
NEW BOOKS.

THE LIFE OF LORD JOHN RUSSELL.

By Spencer Walpole, author of 'A History of England from 1815.' With 2 Portraits. 2 vols., 8vo, $12.00.

*** In preparing this life, at the request of Lady Russell, Mr. Walpole has had the advantage of referring to the private diaries which Lord John kept; he has had also unrestricted access to Lord Russell's official and private correspondence during his long life; and to other confidential matter in the possession of the family.

"A great career, a character of marked eminence and individuality, an abundance of novel and authentic material, all treated with sound judgment and approved literary skill by a writer singularly well qualified to handle so congenial a theme—here we have an assemblage of attractive qualities which are as certain, as they are entitled, to secure a wide popularity for 'The Life of Lord John Russell.'"—*The Times.*

A FAMILY TREE:

AND OTHER STORIES. By Brander Matthews. 12mo, Ornamental Cloth Cover, $1.25.

"We do know in the United States how to write short stories. . . . and of these short stories Mr. Brander Matthews is among our best writers," says *The New York Times.* Ingenuity, humor, and pathos are to be found in this new collection of Mr. Matthews's tales, most of which have appeared in the *Century* and *Scribner's.*

RUSSIA IN CENTRAL ASIA IN 1889:

And the Anglo-Russian Question. By the Hon. George N. Curzon, M.P., Fellow of All Souls' College, Oxford. With 16 full-page illustrations, 37 illustrations in the text, maps, appendices, and an index. 8vo, cloth, $6.00.

"This is a volume of great and varied interest. . . . The book will, of course, be read by every one desirous of keeping himself abreast of a topic which is repeatedly undergoing change, and which attracts daily increasing attention."—*The Times.*

GERALD FFRENCH'S FRIENDS.

By George H. Jessop. 12mo, ornamental cloth cover, $1.25.

The purpose of Mr. Jessop's book, which contains a sequence of stories reprinted from the *Century, Scribner's,* the *Atlantic Monthly,* etc., is to depict a few of the most characteristic types of the native Irishman modified by Californian civilization. All the incidents related are based on fact, and several of them are transcripts from actual life, with no more material alteration than seemed necessary to throw the veil of fiction over the identity of the characters.

CARDINAL LAVIGERIE AND THE AFRICAN SLAVE TRADE.

Edited by Richard F. Clarke, S.J., Trinity College, Oxford. 8vo, cloth.

HISTORY OF PHŒNICIA.

By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, Canon of Canterbury, etc., etc. With 2 Maps, 10 Plates, 133 Woodcuts in the text, and full Index. 8vo, pp. xxii.—583, cloth, $6.00.

CONTENTS—Chapter I. THE LAND—II. CLIMATE AND PRODUCTIONS—III. THE PEOPLE—ORIGIN AND CHARACTERISTICS—IV. THE CITIES—V. THE COLONIES—VI. ARCHITECTURE—VII. ÆSTHETIC ART—VIII. INDUSTRIAL ART AND MANUFACTURES—IX. SHIPS. NAVIGATION, AND COMMERCE—X. MINING—XI. RELIGION—XII. DRESS, ORNAMENTS, AND SOCIAL HABITS—XIII. WRITING, LANGUAGE, AND LITERATURE—XIV. POLITICAL HISTORY: Section (1) Phœnicia before the Establishment of the Hegemony of Tyre—(2) Under the Hegemony of Tyre—(3) During the period of its Subjection to Assyria—(4) During its Struggles with Babylon and Egypt—(5) Under the Persians—(6) In the Time of Alexander the Great—(7) Under the Greeks—(8) Under the Romans.

THE CREATION AND PHYSICAL STRUCTURE OF THE EARTH.

By John Thornhill Harrison, F.G.S., M. Inst. C. E. With Six Maps. Cloth, crown 8vo, $2.50.

EAST COAST DAYS, AND MEMORIES:

A VOLUME OF COLLECTED ESSAYS. By A. K. H. B., Author of 'Recreations of a Country Parson.' Cloth, crown 8vo, $1.25.

Messrs. Longmans, Green & Co., will be happy to forward their New General Catalogue to any address upon application.

LONGMANS, GREEN & CO.,
15 East Sixteenth Street, New York.

MACMILLAN & CO.'S
NEW PUBLICATIONS.

Professor Edward Caird's New Book.

THE CRITICAL PHILOSOPHY OF IMMANUEL KANT. By Edward Caird, LL.D., Professor of Moral Philosophy in the University of Glasgow. Two volumes, 8vo. $7.50.

"The object of this book is to give a connected view of the Critical Philosophy, showing the relations of the three *Critiques* to each other, and to the other works of Kant which may be regarded as illustrations or developments of his main argument. The first part on the *Critique of Pure Reason* deals with the same subject as my former work, entitled, *The Philosophy of Kant,* but, except in a few passages, it is not a reproduction of it."—*From the Preface.*

Francis T. Palgrave's New Work.

THE TREASURY OF SACRED SONG. Selected from the English Lyrical Poetry of Four Centuries. With Notes Explanatory and Biographical. By Francis T. Palgrave, editor of "The Golden Treasury of Songs and Lyrics." Limited edition, choicely printed on hand-made paper. Small 4to, half vellum, uncut edges, $7.00.

*** Small-paper edition. *In the Press.*

*** "To offer poetry for poetry's sake has been the editor's first aim in compiling this selection, which is intended to be representative of the entire range of English sacred poetry. The brief biographies inserted will, it is hoped, satisfy the natural desire for some acquaintance with the main facts in the lives of those whose best and deepest thoughts are here presented."—*From the Preface.*

THE MANX WITCH, and Other Poems. By T. E. Brown, author of 'Betsy Lee,' 'Fo'c's'le Yarns,' etc. 12mo. $2.00.

By Andrew Lang, M.A.

OXFORD. Brief, Historical and Descriptive Notes. By Andrew Lang, M.A. With numerous Illustrations. 12mo, $2.00.

By J. W. Clark, M.A.

CAMBRIDGE. Brief, Historical and Descriptive Notes. By J. W. Clark, M.A. With many Illustrations by A. Brunet-Debaines, H. Toussaint, and G. Greux. 12mo, $2.00.

Profusely Illustrated.

A CENTURY OF ARTISTS. With Historical and Biographical Notes. By W. E. Henley, and Descriptions of the Pictures by Robert Walker. With nine full-page Plates and 94 Illustrations. Super-royal, 8vo, $16.

*** Also a limited edition on large paper, with the plates on Japanese paper. Super-royal 4to, $35.00.

Scottish Art is fully represented from the time (1600) of George Jameson down till to-day; English Art from the Gainsborough and Reynolds period onwards to painters of to-day—such as Alma-Tadema, Albert Moore, Rossetti, Burne-Jones, Wyllie, and others; French Art from Delacroix and Corot to MM. Billet and Harpignies. Living Spanish Art also finds a place, as well as the schools of Italy, Scandinavia, Germany, and Belgium. Holland is fully represented by many noble masterpieces. Brief biographical and historical notes of each artist are given; there is a descriptive note on each picture, and a reproduction of one of each artist's most important works. The book has been choicely printed on hand-made paper by Messrs. T. & A. Constable.

New and Revised Edition Now Ready.

AMIEL'S JOURNAL,—The Journal Intime of Henri Frédéric Amiel. Translated, with an Introduction and Notes, by Mrs. Humphry Ward, author of 'Robert Elsmere,' 'Miss Bretherton,' etc. With a Portrait. New and cheaper edition. 12mo, $1.75.

"A wealth of thought and a power of expression which would make the fortune of a dozen less able works."—*Churchman.*

"A work of wonderful beauty, depth, and charm. . . . Will stand beside such confessions as St. Augustine's and Pascal's. . . . It is a book to converse with again and again; fit to stand among the choicest volumes that we esteem as friends of our souls."—*Christian Register.*

Just Ready. New Edition.

DARWINISM.—An Exposition of the Theory of Natural Selection, with some of its applications. By Alfred Russel Wallace, LL.D., F.R.S., author of 'The Malay Archipelago,' etc., etc. With Maps, Illustrations, and a Portrait. 12mo, $1.75.

"Thus the mass of intelligent people interested in the progress of science have either been sorely puzzled or have imbibed the most defective and erroneous notions of what Darwinism really is. To correct these notions, to give a clear and simple exposition of what is the Darwinism of Darwin, is the task which Mr. Wallace has set himself and which he has accomplished with a success which probably no one else could attain. Mr. Wallace's peculiar relation to Darwinism specially fits him for the service he has performed to his old friend and to the more thoughtful section of the reading public. It can never be forgotten that the two men, living on opposite sides of the world, quite unknown to each other and quite ignorant of each other's pursuits, propounded simultaneously a theory of the origin of species which was practically identical. . . . Mr. Wallace's volume may be taken as a faithful exposition of what Darwin meant. It is written with perfect clearness, with a simple beauty and attractiveness of style not common to scientific works, with a dignity and freedom from anything like personal bitterness worthy of Darwin himself, and with an orderliness and completeness that must render misconception impossible."—*Saturday Review.*

English Men of Action Series. New Volume. 12mo, cloth limp, 60 cents; edges uncut, 75 cents,

STRAFFORD. By H. D. Traill. Already published.

DAVID LIVINGSTONE. By Thomas Hughes.
HENRY THE FIFTH. By Rev. A. J. Church.
GENERAL GORDON. By Col. Sir William Butler.
LORD LAWRENCE. By Sir Richard Temple.
WELLINGTON. By George Hooper.
DAMPIER. By W. Clark Russell.
MONK. By Julian Corbett.

"An admirable set of brief biographies. . . . The volumes are small, attractive, and inexpensive."—*Dial.*

"The 'English Men of Action' promises to be a notable series of short biographies. The subjects are well chosen, and the authors almost as well."—*Epoch.*

The Nation.

NEW YORK, THURSDAY, NOVEMBER 7, 1889.

The Week.

At this writing the results of the elections in Ohio and Iowa are not accurately known, but the probabilities seem to be that the Democrats have carried both these States, as they have New York, New Jersey, and Virginia. Massachusetts has, with the aid of the Boston liquor-dealers, to whom the Democratic candidate had made himself very obnoxious, been saved by the Republicans, but by a very small majority. The drawbacks on the Democratic triumph in New York and New Jersey are that in each case an objectionable candidate—Hill in New York and Abbett in New Jersey—profits by it. But, apart from this, the situation is a most gratifying one. The prostitution of the Federal patronage to impose a corrupt demagogue on the State of Virginia, with the view of winning the negro vote over to protection, has been signally rebuked, and in a most mortifying way for President Harrison. In Ohio one of the most conspicuous of the Grand Army beggars and blatherskites, Foraker, has probably been consigned to well-merited obscurity. Iowa has undoubtedly uttered a strong protest against the Harrisonian doctrine that the dearness of the necessaries of life is a good thing for the poor man. The complete success of the Australian ballot in Massachusetts, too, is a great gain for all the reforms now before the country, and especially for tariff reform, because it means the emancipation of the workingmen from the coercion of employers, and opens up the prospect of a fair field on this question in 1892.

Mr. Cabot Lodge has taken the stump in Massachusetts demanding "a Federal election law for every district." Leading Republican newspapers, both East and West, like the Boston *Journal* in Massachusetts and the Milwaukee *Sentinel* in Wisconsin, have declared against this scheme as being unjust and unstatesmanlike, and Republican Congressmen like Mr. Butterworth of Cincinnati oppose it on the sensible ground that "the South will have to work out its own salvation." Yet a man who has enjoyed opportunities for liberal culture and thorough study of our institutions, goes about pretending to believe that the way to cure the trouble at the South is by "the strong arm of the Government." It will be remembered that in the last Congress he delivered a speech in the House in which he showed himself so untrue to the traditions of Massachusetts as to say that he was willing to have Federal troops at every poll. The fewer such "scholars in politics" the country has, the better the prospect for the future of our institutions.

There are few things more risky than to talk about the elections in a State without consulting some volume of political statistics. The Binghamton *Republican*, in a discussion of "The Race Problem," quotes a resident of Florida as telling how the negroes of that State are cheated out of their votes, and how "only ballots voted by white men are recorded in the count and returns." The editor's remedy is to "enforce the second section of the Fourteenth Amendment to the Constitution in the next apportionment of Congressional representatives. The enforcement of this section," he says, "will deprive the South of representation for its disfranchised citizens in the House of Representatives and the Electoral College. The first section of the Fourteenth Amendment, which makes the negroes citizens, has been nullified by the South, by denying the negroes the rights of citizenship and refusing them 'the equal protection of the law.' But the South cannot nullify the second section of the amendment if the North chooses to enforce it in making Congressional apportionments." If, instead of relying upon his Florida informant, the editor or his "youngster" had turned to his *Tribune Almanac*, he would have discovered that, so far from no Republican ballots being counted in Florida, the two Republican candidates for Congress last fall were credited with no less than 26,534 ballots. Moreover, if he had pushed his inquiries a little further, he would have found that the total vote in the First and Second Congressional Districts respectively was 29,541 and 37,249, whereas there was not a single Congressional district of the twelve in Massachusetts where the total vote came anywhere near 37,249, and only five where it did not fall short of 29,541. Indeed, the average vote in the twelve Congressional districts of Massachusetts was only 28,455; so that if representation is going to be cut down because the number of ballots cast is small, it is Massachusetts and not Florida that will suffer.

A fresh attempt has just been made to infuse some life into the scheme for Federal aid to education in the South through an address by the Rev. Dr. J. L. M. Curry of Richmond, Va., general agent of the Peabody Education Fund, advising the passage of the "Bill to Promote Mendicancy." His address has been sent to the press throughout the South, but the leading newspapers are not affected by its specious arguments. The Charleston *News and Courier* makes a very powerful statement of the reasons why all true friends of education in the South should oppose this demoralizing scheme. "It is a makeshift, a temporary expedient," says the Charleston paper. "It would probably be of some benefit during the few years in which it would be in operation, but at the end of that period it would leave the States and the schools in a worse condition than they are at present, or ever have been since the system of public schools was established. At the end of eight years, the period to be covered by the Blair bill, the States would find it impossible to get along without Government crutches, and we should have the mendicant policy of education fastened upon the country for eighty years or for ever." Moreover, the *News and Courier* says, the South does not need outside aid. "In spite of our poverty, the South has made progress with its public schools, and is less dependent to-day upon outside aid for their support than at any previous period since the war." A more curious spectacle cannot easily be imagined than is now presented by the effort of officious Northern men to persuade the Southern people, rejoicing in their growing prosperity, that they ought to turn beggars and ask outsiders to educate their children.

Four months ago, Postmaster-General Wanamaker, the man of business in President Harrison's Cabinet, fixed the rate for Government telegraphing at one mill per word, a rate lower than the cost of the stationery and bookkeeping for the service, so that the Western Union Company, if it had been under compulsion to accept the rate, would have saved money by not collecting the bills at all. Mr. Wanamaker has now reviewed and revised himself, and advanced the rate to seven mills, but the probability is that he will not get the service done at that rate. He proposes, however, to leave the matter open to arbitration, although the law makes no provision for arbitration in the case, but requires him to fix the rate. It is strange that we never had any difficulty of this kind until we came to have a business man for Postmaster-General. It is strange that the lawyers who have filled that office heretofore never found it necessary to advance their own rate 700 per cent. in four months, and then offer to advance it again if a board of arbitration should vote that way. We think it would be best to fall back on a "court of inquiry," as Mr. Wanamaker himself suggested last June. Let the Secretary of War detail such a court, and authorize them to take testimony and return their finding to the Judge-Advocate-General.

Mr. Depew's recent speech ratifies the scheme presented by Mr. Curtis in his State Department publication. It is subsidy, subvention, and bounty, out of the Federal treasury, for ocean steamers. The size and duration of the taxes and payments Mr. Curtis explained, on October 1, 1885, in the report by Thacher and himself to President Cleveland. Here it is:

> "The extent of the subsidy we have indicated should be such as will procure as low rates of freight and passage as can be given by the vessels of our competitors, and this assurance must be of such a character as to time as to give capital confidence in its permanence until the conditions of trade lift the new lines above the danger of disastrous competition from ships aided by foreign Powers."

In the Pan-American Congress each Gov-

ernment has one vote. Our own delegates have been selected to vote for the new taxes. Of course each of the other Governments will vote for a mandate to tax us for the benefit of those Governments, and in order that their producers and buyers may have cheap or dead-head rates of transportation to and from our ports.

Gov. Ames, Mr. McParlin, and other leading iron-manufacturers in New England will be delighted to learn that the Thomas Iron Company of Pennsylvania is now shipping pig-iron to England, or will be very soon. So the Philadelphia *Press* tells us in these words:

"There is a good deal of significance in the contract the Thomas Iron Company have made for the delivery of 1,000 tons of pig-iron in Liverpool. Owing to the beneficial effects of protection, very little pig-iron has been imported into the United States of late years, while the price has been steadily declining. Now we have reached a point where we can export pig-iron to England."

The gratification of Gov. Ames and Mr. McParlin will arise from the fact that, since protection is no longer needed for pig-iron, they will have a new and irresistible argument to lay before the Committee of Ways and Means in the new Congress when they present their petition for a reduction of the duty to $2 per ton. If Mr. Swank tells them that they cannot import any iron even with the duty reduced, they can reply that in that case he and his Iron and Steel Association will not be harmed. We shall not enter into any argument with the *Press* about the beneficial effects of protection in the past in bringing about a result so gratifying. We have our opinion on that point, but we cherish it in secret. All that we ask is, that the duty which is no longer needed to "protect home labor" shall be no longer maintained.

Jefferson Davis writes an article for *Belford's Magazine* on "A Constitutional Tariff." The article is extremely dull in composition, possessing little of the intellectual vigor that once distinguished the author, but then Mr. Davis is now past eighty-one years of age. His views of the constitutionality of a protective tariff are not likely to engage so much attention as the fact that he is taking some interest in the affairs of the United States. It is true that he concluded his book on the 'Rise and Fall of the Confederate Government,' nearly ten years ago, with an expression of hope that his literary labors might strengthen the bonds of the Union and help to make it perpetual; but the prevailing impression at the North has been that he was still sulking in his tent, and would so continue to the end of his days, however long they might be protracted. This appears not to be his frame of mind. He takes an interest in Federal legislation and taxation, and thinks that protective tariffs are contrary to the spirit of the Constitution. A good many people have thought so before; but it is doubtful whether one vote will ever be gained either way by the most ingenious and powerful arguments that can be made on the one side or on the other. It should be borne in mind that, at the time when the Constitution was adopted, protection was the universal practice. It prevailed in England and in Europe generally. It had prevailed in the colonies before the Revolution, so far as the mother country would permit its enforcement. If we interpret the Constitution in the light of contemporaneous events, we must conclude that the framers of the instrument did not have the subject in their minds at all, or that, if it entered into their thoughts, they had no intention of interfering with what was then the customary practice of nations. It is certain that the first tariff bill passed after the adoption of the Constitution was protective in some slight degree, and avowedly so. This bill was introduced by Mr. Madison, and although, as framed by him, it had no protective features—these being engrafted upon it by the representatives of special interests in the course of its progress through the House—he found no constitutional difficulty in voting for it. Indeed, that point was not once raised in the whole debate.

The truth is, that commercial freedom, like personal freedom, is a reform whose date is subsequent to the adoption of the Constitution. All analogies starting from the grand ideas which led to our separation from Great Britain and our birth as a nation, point to freedom of trade as well as to freedom of labor as the vivifying principle of the Constitution; but Mr. Davis is as good a witness as we could have that slavery was not incompatible with the Constitution, and that freedom of labor had to be fought for. So, too, must freedom of trade be fought for. Protection can never be engineered out of the national life by lawyers or law arguments any more than slavery could be. It can be voted out when the public enlightenment is sufficiently advanced. It can be got rid of in no other way.

The clearly expressed letter from Mr. Perry Belmont to the *Evening Post* on the consular notarial scandal, when added to facts already known, leaves no reasonable doubt that the permission given to Consul-General Badeau by the State Department in 1869 to call in British notaries to aid in enforcing our customs law was shrewdly obtained by the Consul-General. Mr. Manning and Mr. Belmont urged in 1886 that the notarial oaths and fees be cut away, root and branch, but the State Department, holding on to the oaths, cut the notarial fees down from 10s. 6d. to 1s. 6d. Thus the affair stood for three years, when suddenly, in the expiring hours of the Cleveland Administration, a rerater appears in the State Department, probably in its Consular Bureau, and increases the maximum fee for the British notary to 2s. 6d. In whose interest was that? How strange it is that, in our later days, no rerater makes taxes less! Now the question recurs in respect to the terms of the "great divide" of fees between American consular officers and British notarial officers. For that, the taxpayers will probably be compelled to await the assembling of Congress and inquiry of the President by one house or the other. It is to be regretted that Mr. Waller of Connecticut, who was Cleveland's Consul-General at London, has not thought it worth while to take all Democrats and taxation-reformers into his confidence, and then turn a calcium light on the international scandal.

To the *North American Review* for November Mr. Edison contributes an article on the "Dangers of Electric Lighting," which ought to engage the attention of the public authorities of this city and State and of every other city and State. Mr. Edison gives it as his conviction that electric wires operating the alternating current will be more dangerous to life under ground than above ground, and that it would be as rational to bury a mass of nitro-glycerine in the heart of the city in order to reduce its dangers as to bury wires charged with this agency. "There is," he says, "no known insulation which will confine these high-tension currents for more than a limited period; and when they are placed beneath the ground, with the present system of conduits, the result will be a series of earth-contacts, the fusion of wires, and the formation of powerful electric arcs, which will extend to other metallic conductors in the same conduit, and a whole mass of wires made to receive this dangerous current and convey it into houses, offices, stores, etc. It is thus evident that the dangers of such circuits are not confined to the wires which convey the high-tension currents, but other wires conducting harmless currents are liable to be rendered as deadly in effect as the former. It is evident, also, that a single wire carrying a current at high pressure would be a constant menace to the safety of all other wires in the same conduit. Even though these dangerous wires be placed in separate tubes in the same conduit with other tubes, the risk is not diminished." The reason why the insulation wears out is, that the vibrations of the current cause corresponding vibrations in the insulating material, and gradually impair its elasticity. When this result takes place, an avenue for the ingress of moisture is formed, and an outlet to any other electrical conductor in the neighborhood. As long as the insulating material is new and of good quality, the alternating current may be operated safely, but the safety will be only temporary.

Important news comes from San Salvador—the agreement of the Central American Diet, now in session, upon a plan of union for the five republics. The plan was laid before the Diet by a delegate from Guatemala, Señor Francisco Lainfiesta, and was approved as a whole; detailed reports on its various parts being yet to be made by committees appointed for the purpose. In brief, the plan calls for a unification of Central America in the eyes of the outside world, by the choice of a common Executive who, with the approval of a Council, shall direct all the foreign af-

fairs of the separate countries as if they were one, while the States are left in complete control of all matters of internal government. The Executive is to be chosen for a single year, and is to come from each of the republics in turn, the order of choice being fixed by lot. With him is to be associated a council of five members, one from each country. He is to have the appointment of all diplomatic and consular officers, "by and with the advice and consent" of the Council, will have power to negotiate treaties and receive foreign ambassadors, all in the name of "The Republic of Central America." The separate States retain all their existing attributes of sovereignty and independence as respects domestic affairs. Yet they are to make trade with each other free, as also navigation between their respective ports; are to have, as far as possible, a common postal system, and are at once to pass laws not only allowing, but urging, public agitation for the final merging of the distinct governments in a single federal union. It rests with the legislatures of the five republics, of course, to say whether they will adopt the recommendation of the Diet. If they do, the plan is to go into effect the 15th of next September, when the first Executive and Council will be chosen. The plan provides that if a majority of the five approve it, it shall be put into force for the States so approving, under the name of "The Greater Republic of Central America."

No provision for a federal legislature is made as yet. The Diet is to continue to meet year by year, though with a reduced representation, its functions remaining, as they are now, only advisory. It is believed, however, that these first steps towards union, which are certainly not short ones, will so hasten on public sentiment in its favor that the republics will be ready to go the whole way within ten years. The plan accordingly calls for a Constituent Assembly to meet in 1900, or sooner if public demand makes it expedient, for the purpose of drafting a complete federal constitution and putting into operation a national government. Meanwhile the Executive is to appoint a judicial commission, whose duty it shall be to consolidate and codify the existing laws of the separate States, so that all shall be ready when the moment for final union comes. The historical student will not need to be reminded of the analogies between the measures thus outlined and the steps which led up to our own Confederation and, finally, to the present form of our Government. The Central American plan is as yet too immature and too far from adoption to warrant any very positive comments; but it is fair to presume that it will get into running order with far greater smoothness than did our own, and will find its greatest dangers later on, precisely from the lack, on the part of the people of Central America, of that sturdy practice of local self-government which made our Union difficult to attain, but, once attained, wonderfully guarded (slavery apart) against centralization and despotism.

The present visit of the German Emperor to the Mediterranean is in certain ways the most important of his peregrinations. He is said to have given assurances to Russia that his visit has no political significance, but it is impossible to prevent its having significance. In the first place, the Greeks are raised to the seventh heaven of delight by the marriage of the heir to their throne with the Emperor's sister, and by having Athens made the scene of such a royal gathering as the wedding has brought about. It flatters their national pride, and fills their heads with bigger hopes than ever about the future of the kingdom, and will make them more implacable than ever in their pretensions whenever the time comes for another rearrangement of Turkish territory. The visit to Constantinople is, however, the most important, and may almost be called a great historical event, for Wilhelm is the first Christian sovereign who has set foot in the city since the fall of the Greek Empire in 1453. Russia will probably never be persuaded that the object of the visit is not to secure the Turkish Army, which is all that is left of the Ottoman Empire, for the Triple Alliance, unless Bismarck makes out successfully that it is all along of the restlessness of youth.

Next to the little brush with the Sultan of Morocco, the topic of greatest public interest in Spain, in the days before the meeting of the Cortes, was the severe measures adopted by the Minister of Justice to suppress gambling throughout the country. Señor Canalejas sent a circular-letter to all magistrates having jurisdiction in the matter, calling their attention to the common violation of those sections of the Penal Code which prohibit gambling, and rigorously enjoining them to see that the crime was suppressed. The result was a great state of activity on the part of courts and officers throughout all the provinces in breaking up notorious gambling-resorts. Finally the bolt fell even in Madrid. In a concerted movement, the police justices themselves, in their robes of office, appeared with the police in the prominent gambling-rooms of the capital on a given night, and had arrests made right and left, while gambling implements were seized and destroyed. They did not spare the richest and most aristocratic clubs where gambling was openly carried on. Even into the Grand Casino did a magistrate force his way with the officers at his back, and burst upon the astonished gaze of senators, generals, deputies, the President of the Supreme Court, a marshal of the army, nobles, politicians, journalists, bankers, several ecclesiastics—all of whom were not gambling, to be sure, but all of whom felt outraged at the invasion. The bold magistrate himself quailed in the presence of the big game he had flushed, and contented himself with arresting a few employees. The legal penalty for the offence is only a fine, so that the men were soon at liberty. This new virtue of the Government is not expected to last very long; it will certainly wear a grotesque appearance as long as Government lotteries are allowed to go on.

Although the late election in France turned almost wholly on other questions, M. Jules Ferry thought to improve his chances of a return to the Chamber by posing as an advocate of protection. He addressed a letter to the electors of his district, in which he said: "France is the first Government to give to agriculture a share in the benefits of a wise protection. The reforms in which the Ministry I directed in 1884 took the initiative have saved the cultivation of wheat in France without increasing the price of bread. They ought to be completed by levying a duty on foreign corn, which is especially needed by the farmers of the Vosges, though it has not yet succeeded in passing the Chamber." The assertion that the tax on wheat had not increased the price of bread is scarcely borne out by the facts—as by the figures of the increasing importation of bread from Belgium, for example. However his farmer constituents may have regarded this, they decided not to send Ferry back to the Chamber, though in fairness it should be said that it was not his protectionism that beat him. France appears to be fully bent on taking the protection medicine for her maladies, and, with the expiration of her existing commercial treaties, most of which she has already given notice that she will terminate, will probably give the world another lesson in the art of getting rich through taxation.

The Hungarian Parliament began its sessions October 12, after an electoral campaign in which the Opposition had most fiercely and personally attacked Minister Tisza. The last Parliament closed amid scenes of great disorder, and the present one will probably witness a repetition of the disturbances, as the Opposition presented no less than four violently worded interpellations the very first day. The most important question pending is that of a change in administering the laws, Tisza and a majority of the Parliament standing for a more centralized government, while the Radical party are vehement in championing their present rights of local control of local affairs. Financially the past year has been a prosperous one for Hungary, and Tisza can point to a lessened public debt and lower taxes. Count Taafe, meanwhile, is not finding all clear sailing in imperial matters. Prince Lichtenstein, the leader of the Right, has just resigned his membership of the Reichsrath. He says, in his letter to the President of that body, that his "presence there would be useless, as things are now." This is taken to mean that he has given up in despair his long-cherished plan of organizing the public schools on a religious basis, foreseeing that the successes of the Young Czechs in the recent elections mean disaster to that scheme. Taafe is thought to have encouraged the Czech movement, so as to add another to the feeble and warring political parties, by playing off one against another of which he might rule as he pleased. The Right are supposed to be resenting this plan of his, and Lichtenstein's resignation is a strong exhibition of their displeasure.

TRADE WITHOUT SUBSIDIES.

MANY of the facts included in the Curtis argument for subsidies as a means of promoting trade with South America must have been put in on the principle that everything tells even if it tells against you. A table of our exports to Central and South America is given, for example, from which it appears that there has been a great gain in the past two years—a gain of nearly $9,000,000, or 15 per cent. This is an awful state of things. Under a Democratic Administration, when our poor steamship-owners were flouted by Mr. Vilas, and subsidies did not dare to lift their heads, there was a gain in our exports to South America, in two years, greater than had taken place in the previous eighteen years of Republican supremacy—and good fat subsidies in many of those years, too. If only a subsidy had been put through in 1886, or even if Mr. Vilas had distributed that $400,000 in 1885, then we should have had an argument for subsidies which no man could withstand—exports leaping ahead $9,000,000 in two years under their benign influence. As things are now, according to this Department of State publication, it would be just like those stupid Minnesota and Kansas Republicans to say to the afflicted subsidy-seekers: "If it is really an increased trade you want, and if you have done so well without a subsidy in the last two years, try it for two more."

We may be asked how we reconcile this increase in exports with the fact that no changes were made in our tariff meanwhile. We have maintained, and do maintain, that our tariff is the main obstacle to a growing trade with South America—and there is nothing in the increased exports cited to contradict that. A part of the increase has undoubtedly come from the efforts of our merchants to find a market for their surplus wares. As Mr. Seth Low remarked in a speech before the Chamber of Commerce, the wealth and brains of this country, ever since the completion of the Pacific Railroad, have been absorbed in supplying our home market, to which practically a new province of a million inhabitants was being added every year. Here was the largest trade, with the greatest profits and the least risk. Beside it, foreign trade, with its slow and difficult methods and smaller returns, was not to be thought of. The consequence was that our merchants forgot how to do foreign trade, and when the time came for them to turn to it again, under the pressure of the glutted home market, they were awkward at the business to a degree. Their increased success latterly is in part due to increasing skill; they deign to consult native tastes; they give more attention to shipping and packing; they establish branch houses—in short, display an intelligent desire to have a South American trade. But the increase is very much more due to the utilization of those natural advantages which our tariff has not succeeded in entirely destroying; and how this is, the subsidy pamphlet very kindly, if unconsciously, points out.

The account of our trade with Venezuela which it gives seems expressly designed to prove that subsidies are altogether superfluous in building up foreign commerce. We are told of a trade steadily increasing, conducted mainly by a line of steamers, the "Red D," "paying expenses even against the subsidized Royal Mail Steam Packet Company, . . . and the heavily subsidized French, Spanish, and Dutch lines." We have now nearly half of Venezuela's entire foreign commerce, and might easily supply in addition, so we are assured, the $2,225,000 of cotton goods which England now exports to that country, were it not for the pig-headedness of our manufacturers. It is incidentally stated that we admit free of duty everything that Venezuela exports, but this, of course, has no bearing on the argument. Our trade with Colombia is also declared to be in a very satisfactory condition, always excepting cotton exports, and here again it is only the enterprise of our manufacturers that is said to be at fault. In an adjoining paragraph the remark is innocently made, "There is not an article that we import from Colombia taxed in our custom-houses"; but this is said wholly by the way, and, as it were, with the far-away look of one recalling with difficulty an unimportant fact.

The whole showing is evidently felt by the proprietors of the "Red D" line to be rather a damper on their plea for a subsidy, and they visibly falter in making it, their remarks appearing positively cold beside the rhetoric of the perfervid Lachlan. They make it perfectly clear that the Government's pay for carrying the mails is at a good rate, and that all that is needed is mail to carry in order to yield a handsome return. In 1884 the line received from the Government $1,046, while in 1887 "the amount of business had increased so that the money received was $4,547, and in 1888 the amount was $6,034." In view of the fact that this pay is at the rate of from twenty to thirty times, by weight, the charges of the company on ordinary freight, it seems a trifle cool for one of the proprietors of the line to write, as he does (p. 229): "We would not do the same amount of work for a private concern for anything like the miserable pittance paid us for carrying the United States mails." The words of Postmaster-General Vilas, in 1885, in his communication to the enraged ship-owners whose prey he had taken from their very mouths, are golden words, and express the exact truth about this whole question: "If the amount of mail be considerable, so that the value of its carriage to business interests shall be great, this compensation will be munificent. It will only yield small results if small service be rendered."

REMARKABLE ADMISSIONS BY A PREACHER.

ONE of the most remarkable contributions yet made to the discussion of the relations between religion and science appears in the last number of the *Forum* from the pen of Archdeacon Farrar. We doubt if any one occupying his position in the religious world has made such admissions as he makes here on behalf of his profession, touching the limitations of clerical preaching. He calls his article "Modern Claims in the Pulpit," and, if we are not greatly mistaken, he will, when it reaches England, have to listen to some pretty severe strictures from his brethren on the way in which he has taken upon himself to cut down the authority of the pulpit in nearly all the graver concerns of life. He would by no means discard preaching. He says it is an ordinance, almost a distinctive ordinance, of Christianity. Preaching is part, and an important part, of the work of the Church, and must always remain so. It has done wonders in the past: witness Origen, Ambrose, Chrysostom, Basil, Gregory, Augustine, in the ancient world; witness Leo, Gregory, Savonarola, Thomas Aquinas, Luther, Fénelon, Bossuet, Wesley, and Whitefield in the modern world. They all "woke a greedy age to nobler deeds." And then in addition to these there have always been innumerable humble and obscure preachers, whose fame has never gone beyond their own parishes, but "whose words have had an inestimable value for countless multitudes of simple and faithful souls." But times change, and the preaching must change with them.

In the first place, the Archdeacon warns ministers that they must no longer consider themselves as teachers of the ignorant. The pew nowadays often rivals or surpasses the pulpit in knowledge. Everybody reads, and many in every congregation know as much as the preacher of what is to be said on both sides of most topics of the day. "Therefore," says he, "nothing is more offensive in the modern preacher, especially when he is young and raw and ignorant, than the assumption of any right to lay down the law on disputed topics." When he leaves the ground covered by general agreement, and plunges into questions on which all Christians may lawfully differ, and mistakes the current of popular ignorance or fashionable opinion for truths which he may try to enforce by the vulgar methods of ecclesiastical controversy, "he renders himself ridiculous and base." "Let us look back through the ages and observe for our warning how enormous is the aggregate of sermon instruction which has been devoted to the service of exploded errors, blasphemous fables, and dangerous deceits." The English Church has erred, all churches have erred, councils have erred, therefore "the preacher becomes absolutely intolerable, he alienates every instructed mind and every cultivated temperament among his hearers, when he teaches what they know to be error with all the airs of sacerdotal pretension and usurped infallibility."

From two great departments of knowledge the Archdeacon inexorably warns away the preacher—science and Biblical criticism. With regard to science, he puts the Church on her knees and makes her cry "Peccavi!" in terms which we are sure many of his brethren will find humiliating. "No one who is acquainted with the history of science, and has sufficient honesty to accept facts, can possibly deny that scarcely a single truth of capital importance in science has ever been enunciated without having to struggle for life against the fury of theologi-

cal dogmatists. In every instance the dogmatists have been ignominiously defeated. The world moves, as Galileo said it did, in spite of the Inquisition. A great Puritan divine thought that he had checked the progress of astronomical inquiry when he said that he preferred to believe the Holy Ghost rather than Newton, yet Newton was absolutely right and the Puritan divine was hopelessly wrong." Geology, palæontology have, he says, had to fight for their lives against the pulpit, and he has heard from preachers, "sometimes from men who could barely scrape through the matriculation examination of a tenth-rate college, the most furious denunciations of Darwinism and evolution, to which Darwin opposed the silence of a magnanimity too noble even for the indulgence of private disdain." When, as is too often the case, "a preacher poses as Sir Oracle against some scientific theory, while he is as conspicuously ignorant of science as he is of most other subjects, he presents a spectacle which is ridiculous alike to gods and men."

As to Biblical criticism, he warns preachers that the advance of hermeneutical science makes a great deal of their deductions from Bible texts absurd, and sometimes even "appalling," to a large body of their hearers and readers. The laymen know, and they expect the minister to know, what the researches of modern scholars have done to put the most familiar passages of Scripture in new lights and to discredit old meanings. He reprehends in strong terms the importance attached to the elaborate details of the old ceremonial law as described in the Old Testament, and declares that modern criticism has made it at least doubtful whether much of this ritual was Mosaic at all, and sums up by saying: "The Old Testament can no longer be quoted and appealed to in the critical, unhistoric, and indiscriminate way to which we have been so long accustomed." He even goes so far as to affirm that

"the fact that a man is a clergyman gives him no right whatever to pronounce an opinion on such questions as the dates of various Psalms, or the authenticity of Daniel, or the time at which this or that prophet wrote, or whether the whole books of Isaiah and Zechariah were written by single authors, or the Mosaic origin of the Book of Deuteronomy, or the genuineness of the Second Epistle of St. Peter, or of the last twelve verses of St. Mark. If he has well-matured opinions on these subjects, based upon thorough inquiry and not upon the supposed sacredness of a tradition which in hundreds of instances has been proved to be not only fallible but even absurd, by all means let him say his say. But even then he is bound to do so with modesty, and with the frank admission that many who know ten times more of the subject than himself have come to conclusions different from his own. The tone adopted by some preachers —who would fain usurp the title of orthodox—upon these points of dispute, is thoroughly reprehensible. They assume that the results of the newer criticism are the consequence of something which they call 'unbelief'; and they stigmatize them, not as the result of intellectual mistake, but as the fruit of moral perversity. The unbelief and the moral perversity rest rather with themselves, when they substitute idle denunciation for serious argument, and think that anathemas will serve for refutations. He is an unbeliever, he is morally perverse, who refuses to recognize the truths revealed to us by the widening light of knowledge, and who turns the Bible into a sort of fetish or teraph, whose utterances—picked out here and there to support his own views, and interpreted exclusively in the one sense which he chooses to put upon them—he substitutes for the witness of the Spirit and the voice of God. A preacher is not bound to adopt the conclusions of modern critics, whether German or English; but what he is bound to do is to abstain from denouncing them until he has fully and fairly studied the grounds on which they rest, to abstain from confounding questions of criticism with questions of religion, and above all to abstain from the uncharitable folly of casting insinuations upon the good faith of those who hold them, and who can advance strong arguments from history and philology in favor of their views."

The whole article will well repay the perusal of everybody who occupies himself with the signs of the times either in Church or State; but we cannot say it throws much light on the question how the pulpit is best to maintain its influence and authority. It seems at first sight to make the preacher's task easier, by narrowing the sphere within which he can speak with unimpeachable claims on attention. But a little reflection will show that the smaller we make the range of his topics, the loftier must be his eloquence and the greater the spirituality and simplicity of his character. For ten men who could shine in the old school of what Archdeacon Farrar might call monopoly, there can hardly be one who could hold his own in the new school of free competition "with history, romance, the newspaper, and the political harangue, all in one." There will always be great preachers, but they must hereafter bear a smaller and smaller proportion to the mass.

A NEW ENGLISH WEEKLY.

A SECTION of the English Liberals, among whom Mr. James Bryce is prominent, propose to start in January a new English weekly to take the place, at least among men of their way of thinking, of the *Spectator*, the character of which, in their estimation, has been greatly, and indeed, as a Liberal journal, fatally, changed by its attitude on the Irish question. The new paper is to be edited by Mr. Wemyss Reid, an English journalist of great experience and capacity, and well known to the American public now as the author of the memoir of William E. Forster, one of the most delightful of recent contributions to English biography. He will have a large staff of contributors from among the ablest men in every field of thought on the Liberal side, and they have among them a great part of such talent in England as is available for the purposes of journalism. This paper will be one of the few ever started without meaning to supply "a long-felt want." The want of such a paper has not been long felt. The *Spectator*, and *Saturday Review*, and *Economist* have for thirty years given the British public such a feast of hebdomadal literature, politics, and finance as no other country could boast. The *Saturday Review*, for fully twenty years after it started, apart from its literary criticism, which was long of the very highest order, rendered by its satire a very great service to political journalism in destroying or greatly impairing popular respect for the inflated, Jupiter-Tonans, and yet thoroughly mechanical type of political "leader" established by the *Times*, and which was long slavishly imitated by the journals subsequently started. The *Review* made, by its ridicule, all newspaper writing more simple, natural, and direct, by exposing the hollowness of the old system of writing a column and a quarter of platitudes about every topic of the day. It practically destroyed or greatly weakened, in the case of all journals but the *Times*, the queer old newspaper superstition that the editor must "comment" on everything of note that happens, whether he has anything to say about it or not.

The *Spectator*, on the other hand, has been, ever since it came into the hands of its present owners, preëminently the organ of "sweetness and light." It has always been intensely Liberal, but always extremely fair to men of all parties, with a great horror of the tricks of "journalism"—the evasion, the perversion, the insolent retort, the drowning of the answer to one charge in the spray of a new one—with which newspaper readers have so much melancholy familiarity. It always maintained, too, and maintains to this day, the old reverence for sermons which the rest of the world has for fifty years been steadily losing, and sits down even now to analyze "an eloquent discourse" with a gusto which the new generation of readers finds it difficult to understand. In politics, until the Irish question came up, it rendered the inestimable service of looking at both men and measures with great impartiality, of getting at the point of view of its antagonists and doing them justice. This remarkable intellectual integrity it has in a great measure lost since the Home-Rule question arose. It not only followed Lord Hartington and Mr. Joseph Chamberlain into the Liberal-Unionist secession, but it adopted, and still produces with wearisome persistence, that view of Home Rule which deprives all its advocates both of ordinary political sagacity and of ordinary morality. The notion that Mr. Gladstone's conversion to Home Rule has not only converted that half of the British people which supports him into reckless levellers, eager to dismember the Empire, but has converted men like Lord Spencer, Lord Herschel, Lord Hampden, Lord Granville, Lord Rosebery, Sir George Trevelyan, John Morley, James Bryce, Edward Freeman, Frederic Harrison, and a host of others of the same genus, into a collection of crazy sympathizers with Irish murder and robbery, who hardly ever open their mouths except to utter foolishness—this notion, preached week after week, becomes very wearisome and very destructive of the preacher's highest powers. It has ended by alienating a very large body of the *Spectator's* old admirers, without regard to their political sympathies, particularly when they are called on to believe that the almost miraculous loss of common sense and common decency by the Gladstonians has been accompanied by the sudden bestowal of an extraordinary supply of heavenly wisdom on their Tory antagonists.

The new paper will be undoubtedly Gladstonian in its attitude towards the Irish question, but the leading contributors will be men who will not allow either the Irish ques-

tion or any other to throw them off their intellectual balance. They are men trained "to think clear and see straight," and the new journal will undoubtedly be a welcome aid to those who, during the next ten or twenty eventful years, shall seek to observe intelligently the extraordinarily interesting phenomena of English politics.

THE ARTS AND CRAFTS EXHIBITION AT THE NEW GALLERY.

LONDON, October, 1889.

IT is disappointing to find that the second Exhibition of Arts and Crafts has rather the appearance of a large shop than of an exhibition of objects of artistic merit. The falling off in the quality of the exhibits from last year is very marked, but it will be easily understood that, after last year's show, the committee had a much more restricted store to draw from, and that the desire to be unprejudiced, and to give a fair chance to any skilled form of manual labor applied to the decoration of objects in constant use, would admit much that seems commonplace and trivial. Mr. Crane, the President of the Society, says in his preface to the catalogue: "We can do no more than make an exhibition of contemporary work representative of current ideas and skill."

The general impression of the Exhibition leaves us with the conviction that, for the most part, ideas in England connected with art run in a very narrow groove, rather mercantile than artistic, and that the skill in execution is often much better than the design deserves. The depressing climate and hard conditions of life would lead one to expect this. For decorative art there is very little original feeling. Many of the exhibits show painstaking imitation of Burne-Jones, where figures of angels or cherubs are designed, and of William Morris in patterns with leaves and flowers such as are used on wall-papers and stuffs. Unfortunately, there is but little of the work of either of these two men compared to the show of last year. Mr. Morris exhibits a tapestry panel executed at his looms of Merton Abbey, a figure of Peace, clad in pink, from a design of Burne-Jones, against a background of dark-green fig-tree and fruit-bearing apple designed by J. H. Dearle. Two cherubs hold the inscription above on a white scroll, while, in each corner below, a naked babe plays among the leaves and flowers. The color throughout is very harmonious and rich. On the other side of the screen of Morris & Co. a piece of Arras in process of execution is daily worked on by a young boy, in order to initiate those who desire to understand the mysteries of tapestry. Some very bright small hand-made rugs in silk are especially attractive among the handsome stamped velvets, brocatels, and more homely damasks and cotton cloths shown by the firm.

A very original piece of work, full of movement and spirit, is a frieze of figures in high relief made entirely of colored rags on a background of old-gold plush, by Miss Anstruther Thomson. The subject is "A File of Moors Led by a Fanatic." The Moors are on horseback in white burnooses; the fanatic runs before them nearly naked. Some small boys on foot keep pace beside the horses, who are very spirited in action. It occurs to one that Miss Thomson might have spared herself much trouble by choosing some more fitting vehicle for such high relief than rags, such as *gesso duro*, and that as a frieze it would collect dust to an inconvenient degree. The figures are about twelve inches in height.

The Guild and School of Handicraft has some very good work, especially in metal. This Guild, under the direction of Mr. C. R. Ashbee, gives the East End workers having an aptitude for art the means of developing their powers and turning them to account. Their picture frames on repoussé copper (*e. g.*, No. 204) are very handsome, but a still finer one was executed by this guild for Mr. Holman Hunt's last picture, "The May Carol on Magdalen Tower." Another innovation in frames is in carved wood, stained crimson and gilt, thus producing very rich, glowing color—too powerful, perhaps, to suit many pictures. The pieces of furniture, too, exhibited by this guild, are original and well designed. No. 213, a music cabinet in yellow deal, stained with crimson, gilt, and painted, in which each compartment is labelled for the music of the great masters, is very attractive. A mirror-frame in wood, decorated with gesso flowers and fruit, shows how effective this kind of work can be, and how it could be used in endless ways for decorating furniture. They also send a very good fender in repoussé copper and wrought-iron, fire screens in wrought iron of delicate workmanship, and candlesticks in repoussé brass. Less happy in form is a coal-scuttle in repoussé and wrought copper, which certainly suggests a baptismal font, and would take up too much space to be convenient at an ordinary fireside. Quite the handsomest object in this Exhibition is Mr. Spencer Stanhope's eight-day clock case, with painted designs. Time going up hill is on the face of the clock with a summer effect, and, below, a maiden is sitting clad in yellow and olive, just dipping her feet in a pond full of water-lilies. Around her is a beautiful landscape, with the usual picturesque block of buildings which constitute a Florentine farm. On either side-panel of the clock we see a belfry with jangling bells; a girl on one side is ringing the hours, on the opposite panel a youth. These designs are painted in pure bright color, with all the beauty and careful finish Spencer Stanhope expends on his easel pictures, and with much better effect, as the best quality of his work is purely decorative, both in color and design. The walnut case of the clock is ornamented with delicate border patterns of gilt gesso-work.

Mr. Walter Crane, President of the Arts and Crafts, and the prime mover of the Exhibition, sends contributions to various arts. The colored proofs of his charming designs to 'Flora's Feast,' his Christmas book of last year, are in the gallery in different stages of printing, to show the process a colored picture-book must go through before being presented to the public. We also find here twelve page designs in black and white, enclosing his little daughter's verses for the twelve months, which illustrates very well what Mr. R. T. Blomfield says, in his essay on book-illustration in the catalogue, that "the ideal of paginal beauty would be reached by leaving both the text and the illustrative design to hand, if not to one hand." The effect of these written pages with the decorations and designs so closely allied to the beautiful character in which the lines are written, is very pleasant to the eye. It is especially in book-illustration that Walter Crane excels. His compositions in fibrous gesso in the west gallery, tinted with lacquer, do not strike us as good decorative work, especially (No. 90) "The Dance," (No. 92)"Tête-à-tête," in which the figures are sadly tortured into would-be grace of pose.

The case of book-bindings by Mr. Cobden-Sanderson is interesting, appropriate designs for each work being delicately tooled on the moroco covers. The backs are hollow, and are also covered with the pattern. The illuminated address which was presented to Mr. Gladstone on the occasion of his golden wedding by the members of the National Liberal Club, attracts a good deal of attention in its glass case. It is very splendidly got up, with paintings from the hand of Royal Academicians and other favorite artists, but seems a wordy tribute, in sufficiently ill taste to be rather an article of curiosity than of successful design.

We cannot admire Mr. Henry Holiday's designs for stained-glass windows; his figures are so weak and out of proportion, his compositions so wanting in spontaneity, that one cannot but regret that they should represent English art in the United States—being intended for St. Thomas's Church, New York, and for the Drew Theological Seminary, New Jersey. There are very few designs for stained glass this year. Mr. Burne-Jones has only one chalk drawing, rather roughly executed, for a two-light window for Morris & Co. The subject is, "By the waters of Babylon we sat down and wept." An architectural background frames the figures in groups, by the side of a river; little babies are pulling the flowers and reeds, pathetically unconscious of the sorrow of their elders, who are holding musical instruments and lamenting their captivity.

Christopher W. Whall's work is remarkable again this year for a certain feeling and pathos in his designs, an individuality of purpose which marks him as an artist—he is not a follower of any school. A cartoon in water-color and pastel for mural decoration, representing the "Te Deum," is a good example. The crown and sceptre are held aloft by two flying angels, divided by a tower, beyond which one sees a broad, sad landscape.

There are lustre tiles of De Morgan on view, not unlike some exhibited by him last year—good of their kind, but lacking in the quality of design. The sons of G. Cantagalli have a case of their imitations of old Faenza and Savona and Forli ware, with designs copied from great masters. The effect of the Faenza is so good that it is a pity the Messrs. Cantagalli do not employ more skilful draughtsmen when they copy ambitious works. There is pottery from Messrs. Doulton, also from the Aller Vale Co., and Sir Edmund Elton, but it all looks very commonplace and mechanical.

Needlework is very well represented in all its branches—lace, embroidery on linen, and every kind of embroidery in silks—applied to screens, portières, bed-covers, book-covers, mantel-boards, and every imaginable use. We have no space to make mention of any particular piece of work. Miss May Morris, who is a mistress of this art, has written the article on needlework for the catalogue.

The catalogue, by the way, in its first edition, is about as perplexing to turn to as human ingenuity can make it. The introductory notes or essays by practical workers on each are its redeeming point. Mr. William Morris treats of "Dyeing as an Art," and gives us a history of the primitive dyes used from the earliest times. He warns us against aniline colors, which he considers to have nearly destroyed the art of dyeing, although their discovery has done good service to capitalists. "Any one wanting to produce dyed textiles with any artistic quality in them, must entirely forego the modern and commercial methods in favor of those which are at least as old as Pliny, who speaks of them as being old in his time." That Mr. Morris is entirely right on this point is sufficiently proved by the deterioration of all Indian and Japanese textile fabrics since these harsh new colors were imported by Europeans in the East. They seem by their brightness to have met with

favor in the eyes of the natives, and to have utterly ruined their innate sense of harmony of color.

Mural Painting is treated of by Mr. Madox Brown, an historical painter of great eminence, who has been for some years employed in decorating the Town Hall at Manchester with spirit frescoes, the process of Gambier Parry. After executing seven works in this manner, he recognizes that it is better for such bad climates as England and France to paint on canvas, which is afterwards cemented on the wall; the series in question will be completed by this system. This, of course, has no kind of connection with the fresco painting of the early Italian school, nor would that simplicity and purity of color which is so distinctive a quality of that work be obtainable by this method. Mr. Madox Brown treats of mural painting as he practises it, and regrets that there is not more scope given to artists here for developing their best powers. He remarks that the old masters who were easel painters were always greatest in their fresco work. Mr. Madox Brown does not seem to take into consideration that there are at this moment very few men in England, we would even say in Europe, endowed with strong imaginative faculty. The attempt to tell a story is rare indeed in our exhibitions. Episodes of daily life and clever bits of painting from nature turn our galleries into a kind of picture-dealer's shop; the higher paths are left untrodden, and nothing indicates that there is much latent talent in this line.

Mr. Heywood Sumner treats of Sgraffito work, and Mr. G. T. Robinson of Stucco and Gesso. For these arts to be practised with any real success, the craftsman must be an able draughtsman and be gifted also with considerable invention. The samples of each of these arts in this Exhibition show an entire lack of both. The remaining articles are of Cast-Iron, by Lethaby, of Lace, by Alan S. Cole, of Book-Illustration and Book-Decoration, by R. T. Blomfield, and of Designs and Working Drawings, by Lewis F. Day.

The present Exhibition rather confirms the opinion of some of the promoters of Arts and Crafts that an annual display does not bring together sufficient work of the first quality to be desirable.

QUIVIRA—II.

SANTA FÉ, October 15, 1889.

THE resettlement of New Mexico in the eighteenth century, and the invasions of the Comanches, diverted the attention of the Spaniards for a long while from Quivira. In the latter half of the century, however, when the opening of direct communication with California was taken earnestly into consideration, the slumbering myth awoke again. The Lieutenant-Colonel of Royal Engineers, Don Bernardo Mier y Pacheco, having accompanied Fray Atanasio Dominguez and Fray Silvestre Velez de Escalante on their journey to the San Juan River in 1776, afterwards thought to find the ruins of Quivira in the architectural remains on the Chaca Cañon and further north, on the San Juan and the Mancos. So completely had the sober descriptions from the time of Coronado been forgotten, that Quivira was fancied to have been a large town, and situated northwest instead of northeast or east of Santa Fé. Two years later, however, Fray Silvestre Velez de Escalante set the matter right in so far that he suggested that the Quivira settlements might have been the Pawnee villages. He plainly states that the idea of large towns inhabited by Indians of high culture was unfounded. His writings on the subject scarcely became known in New Mexico, where, about the same time, the sayings of an old Indian attracted much greater attention, and directed the eyes of treasure-seekers towards the east again.

"Tio Juan Largo" (literally Uncle John Long) was an aged Jumano Indian, living on the lower Rio Grande at the time when Col. Mier began to ventilate his conjectures concerning the location of the Quivira. The Jumanos formerly roamed in the vicinity of the salt deposits near Manzano, and the mesa bordering these salt-lakes on the south bears the name of the tribe to-day. That Indian, when he heard of Mier's ideas, at once stated that the officer was entirely mistaken; that the Quiviras lived east, not west, of the Rio Grande, and that their homes had been on the plains, beyond the former abodes of his own people. This was perfectly true, since, as I have stated, the tribe had shifted southward into the Indian Territory and Texas. Excursions in the direction indicated were, however, almost impossible in the past century, or at least attended with the greatest risk, for there was no Spanish settlement south of Santa Fé beyond San Miguel de Carnué, and even that had to be forsaken in 1771, so completely were the hostile Comanches and Apaches masters of southeastern New Mexico. Still, adventurous prospectors, treasure-hunters, sporadically penetrated into the region.

At a distance of about forty-five miles east from Bélén, on the Rio Grande, they found on the hills overlooking the southeastern terminus of the "Mesa de los Jumanos" the remains of a considerable Indian pueblo. It was not the only one in that vicinity. But this one was particularly remarkable from the fact that it included the ruins of two churches, one of which was quite large, built of clumsy but very solid stone-work laid in mud-mortar (adobe), and connected with a portly "convent" of the same material. Every recollection of the pueblo, of its inhabitants, and of the builders of the churches had vanished from the minds of the people of New Mexico—in appearance at least; and the eager adventurers concluded that this must be the long-sought Quivira at last. The name of Gran Quivira became thereafter fastened to that ruin, and still clings to it to-day. The "Gran" Quivira lies about 140 miles south of Santa Fé on the southeastern apex of the triangle formed by the Jumanos Mesa, and on the so-called "médano," at an altitude of 6,407 feet above sea-level.

To this ruin in the course of time became attached a number of fairy and goblin tales. It struck the explorers very forcibly that no trace of water, no springs, no stream could be found near the place. How could the inhabitants have lived? How could they have watered their stock, irrigated their crops? The more the ruin was explored the more mysterious it appeared. The two churches further increased the mystery. Such edifices could not have been erected without wealth, so the treasure-seekers reasoned. There must be on this deserted spot hidden springs, and, at the same time, hidden treasures. The most absurd stories were circulated of millions of gold and silver buried in the ruins, and they were believed in by the people. At this day the traveller will be gravely told of spectral apparitions—of a white serpent rising from the ground where the altar of the church is supposed to have stood, of a snow-white goat appearing in the deserted church at midnight, of a subterraneous river, the roar of which is only audible on a certain spot and only about noontime. Stones and slabs, covered with cabalistic inscriptions, are stated to have been seen near the ruins on a certain day; and when the astonished shepherd to whose lot it fell to notice them afterwards returned to the spot, everything had vanished. In short, the Gran Quivira has become, for folk-tales of that sort, the "Kyffhaeuser" of New Mexico.

While all this mass of lore was gradually accumulating, nobody bethought himself of the fact that, as late as the second half of the past century, on a large official map of New Mexico, there was marked an abandoned Indian pueblo and mission in the very locality where the Gran Quivira lies, which pueblo bore the name of Tabira. Nobody remembered that, in 1778, Fray Silvestre Velez de Escalante had written to his superior Fray Agustin Morfi, that the pueblo of Tabira, inhabited by the Tompiros Indians, had been abandoned more than a century ago in consequence of the Apaches. Such historical indications were overlooked or discarded, and the Gran Quivira remained as a dream of wealth—for many, of gold and silver in the shape of buried church plate; for others, as a site of former extensive mining; for some (and these were the most sober ones) as a site where considerable bodies of water had once flowed, which had been cut off, covered up, or turned into another channel by supposed volcanic eruptions south of the place, where large bodies of lava interrupt the otherwise sedimentary formations.

Nobody stopped to consider that the tales of extensive Spanish mining in New Mexico are fables; that in 1725, for instance, it was officially stated that not a single mine of silver or gold had ever been worked in the whole Territory; that the Church of New Mexico was very poor, and that all its plate had to be brought from New Spain under a thousand difficulties and dangers, each ecclesiastic being (by agreement with the Crown) obliged to bring with him his chalice, vestments, and regalia; paying, furthermore, out of his scanty income ($330 per year) the cost of transportation from Durango to Santa Fé, which usually amounted to $260 for himself and baggage; that all the income which the missionaries derived from their Indian neophytes consisted of a few *fanegas* of corn or wheat, and the weekly assistance at the convent and in the garden patch attached to it; that the Indians themselves were very poor; that at the Quivira there was no need of irrigation for the scanty crops, since corn grows with the aid of winter-snows and of summer-rains alone; that sheep and cattle could hardly thrive there, owing to the proximity of the Apaches, who were sure to ravish the flocks at any time; and that the Spanish forces in the Territory were so insignificant as to make it impossible adequately to protect such far outlying missions.

Heedless of all these very plain facts, search for treasure, latterly search for hidden streams and springs, was continued until very recently. Large rewards were offered to him who should find water "at the Quivira." Stories were circulated of long *acequias* (irrigation-ditches) extant in connection with the ruins, and many a poor man lost his time, his scanty means, nay, his life, in fruitless search for treasure, for water, or for both. Words of warning were treated with derision, plain statements of facts simply discredited. The treasure of the Gran Quivira, as well as its hidden volume of water, remain undiscovered as yet, notwithstanding the numerous prospecting holes with which the place is perforated, to the detriment of its interesting old buildings. Of the volcanic disturbances to which the destruction of the pueblo and of its water supply are ascribed, no

trace has been found within historic times. But the outlines of the history of the village, of its churches, have come out little by little, and they place the past of the village and of its people in a much more simple and more rational light than romance would have it.

The Tompiros, a branch of the stock of Piros, inhabited, in the sixteenth century, at least three villages or pueblos in the region south of the salt lakes of Manzano and east of the Rio Grande. These were: Abó and Tenabó, in the valley of Abó, west of the Mesa of the Jumanos, and Tabira on the site now called Gran Quivira. It is likely that two or three more and smaller pueblos were also occupied during the same time, whose inhabitants afterwards clustered around the larger missions for protection. Chamuscado visited the Tompiros in 1581; Espejo in the year following; Oñate in 1598, when he received the formal submission and homage of the people. The first priest assigned to them was Fray Francisco de San Miguel, who resided at Pecos, whence he had to administer the country to the south of that village. This occurred on the 9th of September, 1598.

No churches appear to have been constructed among the Tompiros previously to 1628. After that date, and prior to the death of Fray Francisco de Acevedo (1644), the churches of Abó, of Tenabó, and of Tabira or Gran Quivira were built; the older and smaller church at the latter place therefore dates from between 1628 and 1644. The nearest neighbors of the Tompiros were the Jumanos, with whom they mostly lived at peace. But the Apaches bothered them greatly, and the Jumanos also suffered to such an extent that the latter either joined the Tompiros at Tabira or fled to Chihuahua. The new church at the Quivira was constructed after 1644, but never finished. About 1670 the mission became untenable. There were no soldiers to protect the distant locality, and the Apaches harassed the Tompiros to the utmost. It is possible that they even attacked the village. Its inhabitants fled to Abó. It is noteworthy that, at the time (1670), many Indians from Tabira and Abó were at El Paso del Norte, unable to return to New Mexico, the road being obstructed by the Apaches. Soon after the abandonment of the so-called Gran Quivira, Abó and Tenabó had also to be evacuated. One after another the villages near the salines of Manzano fell. Before 1675 all these missions were deserted, never to be occupied any more. Now the walls of their crumbling churches constitute the most picturesque, and at the same time the least known, ruins in New Mexico.

Under the auspices of the Archæological Institute of America, I visited Gran Quivira in January, 1883. I made a complete survey of the pueblo and of its churches. The village is built on a ridge that slopes down into the "médano," or sand-flow, skirting the eastern edge and southern apex of the Jumanos Mesa. All around it is barren and bleak for miles and miles; grass, "chaparro," and low cedars being the only vegetation. If one descends the incline of the mesa towards the south, he perceives at a long distance, on the brow of the ridge, the massive remains of the larger church. It is a parallelopiped, 7.4 metres wide from north to south by 35.6 metres long from east to west. Its front walls (east) are fully six feet thick, and the whole is built of light bluish-gray limestone, broken into irregular prisms or plates, and well cemented with adobe. It belongs to the class of church-work peculiar to the seventeenth century in New Mexico. There are still some carved cross-timbers. The convent adjoining the temple is constructed of the same material, and contains a number of cells and a refectory. The old church is smaller and almost completely destroyed, whereas the walls of the other still stand to the height of the roof. There is a cemetery adjoining the old church, with traces of its enclosure still visible. Both churches, though massive, are but clumsy structures. There is no more skill or art displayed in their construction than in the houses of the pueblo itself. They are typical pueblo churches of New Mexico of the seventeenth century, such as were then erected everywhere with patient and indolent Indian labor, without the aid of wealth, which nowhere existed in the Territory.

From the number of rooms in the convent it may be inferred that Tabira was intended to become a central mission, probably including, besides the Tompiros, the neighboring Jumanos—perhaps, also, a place of resort and recuperation for missionaries destined to work among the Aijaos and Quiviras further east. But such plans, if they were ever entertained (as it seems), were certainly never executed. The Apaches interfered, and forced the permanent abandonment of all the missions around the salt lakes of the Manzano.

The pueblo proper occupies the crest of the ridge. It consists of a number of long houses, three to four stories in height, built of the same material and exhibiting similar workmanship to that of the church edifices. At least six round estufas, partly subterraneous, are visible. The village is narrow. The houses crowd mostly along a narrow alley, and between them there runs a channel—the famous *acequia* of the treasure-seekers and of their tales of romance. Following this channel for about one-quarter of a mile, I rose to the highest point of the crest east of the ruins, and there had the pleasure of solving the vexed water question. On the culminating point, I found three large water-tanks, rudely constructed of earth with a rim of stone. The area of these reservoirs is sufficiently large for the requirements of a population like that of Tabira, which, judging from the number and size of the houses, and the number of rooms they contained, could never have exceeded 1,500 souls, and probably never attained that figure. No water was needed for irrigation, as corn, squash, and beans can grow by means of the annual precipitation alone. Flocks the Tompiros could not have, and if they succeeded in herding a few sheep and horses, that herding was done (as the Pueblo Indian does it to-day) away from the village, where the range affords grazing, with water and shelter combined. Many artificial products are scattered about the ruins, although many more may have been gathered already and still more of them ruthlessly destroyed. What I saw differed in no manner from the usual remains accompanying the former abodes of pueblo Indians.

Tabira, or Gran Quivira, as it has been erroneously called, is a dismal, bleak, and almost ghastly place, on the projecting brow of the bald hill, overlooking an arid slope of the Mesa de los Jumanos, with but very few trees—black cedars and junipers. It lies exposed to scorching heat in summer and to cold blasts in winter. During the three days and four nights I spent there, the northwest wind howled across the dreary expanse and shrieked among the ruins day and night. During the day the sky was resplendent, but every night we were covered up by snow. Often, at midnight, sounds were heard issuing from the empty church, the sighs of the wind imitating human moans and screams. When the moon rose and shed its unsteady light on the ashy piles of masonry, spectral forms seemed to flit in and out of the low doorway of the dismantled edifice. I could then understand why the Gran Quivira had become, in folk-lore, famous as well as dreaded. And if to these ghastly manifestations the shriek of the owl was added, sounding from the vacant choir at the hour of midnight, I forgave the lonely shepherd his childish fears and the daring fortune-seeker his queer beliefs.

The times of the Quivira are past. The misconceptions arising from careless interpretation of the earliest explorers have done their duty. They have been useful in their way, for the extension of geographical knowledge. But just as the "Dorado" in South America at last took refuge in the mythical lagune of Parime, whence it was finally dislodged by Horstmann and Humboldt, to return to the ranks of fact, as a custom peculiar to a single tribe, to a purely local rite, so the Quivira deserves to be banished from history as a populous city, a wealthy tribe, or a place of hidden treasure. Its true position is important enough: it has been a powerful factor in the annals of colonization of the Southwest. There is no need of perpetuating the illusions which, under various forms, it has upheld only too long.

AD. F. BANDELIER.

Correspondence.

THE LONDON *TIMES* FORGERY.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 1, 1888, it is suggested that the London *Times* forged quotation, "The only time that England can use an Irishman is when he emigrates to America and votes for free trade," is derived from an alleged quotation by Henry C. Carey, to the effect that "when the Celt has crossed the Atlantic, he begins for the first time in his life to consume the manufactures of this country, and indirectly to contribute to its customs," etc. Mr. Carey's book was published in 1853. The connection of the quotations is probable but not clear. It will perhaps interest your readers to know that the older form of the quotation did brave service in the Scott and Pierce campaign of 1852. It will be found in the New York *Tribune* for July 6, 1852, quoted from the Albany *Evening Journal* and attributed to the *Times*.

May it not be that it was heard in its earlier form in campaign speeches, was repeated from hearsay, and so was gradually transformed into its modern spurious but more effective shape? Or perhaps it was started on its later career by some speaker who had heard it years before when young, but, not being able to recall or verify the exact wording, gave it an appropriate shape for present service.

Yours respectfully, E. G. B.

CLEVELAND, O.

MR. H. C. LEA AND MR. QUAY.

TO THE EDITOR OF THE NATION:

SIR: Mr. John Samuel's letter in this week's *Nation* "is remarkably characteristic of the political intelligence of a certain class of gentlemen," honest and well-meaning, but practically assistants to the bosses whom they imagine themselves to be opposing. I must in charity assume that Mr. Samuel had not read my protest which he criticises, else he would scarce have exposed himself to the mortification which he must experience on finding that the foolish

non sequitur attributed to me—that I propose to vote against Mr. Quay because it will not hurt Mr. Quay—is evolved from his internal consciousness; the fact being that I expressly declared my desire for the defeat of the Republican party in Pennsylvania as a rebuke for allowing itself to be placed under the leadership of Mr. Quay. Mr. Samuel is equally the victim of figments of his own imagination when he assumes that I have given money for Mr. Quay to use. I have never knowingly placed a dollar at Mr. Quay's disposal. Moreover, when, in 1885, Mr. Quay sought a rehabilitation by running as candidate for the office of State Treasurer, and when defeat would have ended his career, I devoted both labor and money to the effort to encompass that defeat. If by any chance Mr. Samuel's letter should be brought to the attention of Mr. Quay, I can imagine the chuckle of satisfaction with which that gentleman would read it.

Very respectfully, HENRY C. LEA.

PHILADELPHIA, November 2, 1889.

A VOICE CRYING IN THE WILDERNESS.

TO THE EDITOR OF THE NATION:

SIR: I have just read in the issue of the *Nation* for the 24th inst. the article headed "The Grand Army."

Does not your statement, that "it seems to the rest of the world an extraordinary and somewhat humiliating circumstance that, out of a million and a quarter of survivors of the war, there is nobody better than Tanner to state the claims of the veterans on the country," involve the major premise that the Chief Executive of our beloved country always selects the best persons for appointment to official positions?

And would it not have been fair to notice the resolutions of Noah L. Farnham Post, a copy of which I enclose, which were adopted unanimously by that post on the 9th inst., and which appeared in most of the morning dailies on the 10th?—Yours truly, L.

LOUISVILLE, Ky., October 27, 1889.

[These resolutions had not fallen under our eye. We subjoin a part of them.—ED. NATION.]

"Whereas, The only veterans who are of right entitled to pensions are those whose pecuniary circumstances are so unfortunate as to justify them in burdening the country with their support, and who, by wounds or disability incurred in the service of the country as combatants, are prevented from earning a living in their respective callings, as they might have done had such wounds or disabilities not been incurred; and . . .

"Whereas, As much real patriotism may be displayed by refraining in time of peace from inflicting unnecessary burdens on the country as by coming to her defence in time of war; therefore be it

"Resolved, That any old soldier who applies for or accepts a pension except under the conditions above set forth is, in the opinion of this post, guilty of conduct calculated to injure the good men who were and are willing to give their blood and their lives for the country without any reward beyond the approval of their own consciences and that honorable fame which is dear to every patriot; and

"Resolved, That this post strongly condemns any attempt to make use of the Grand Army of the Republic for political purposes, or as an engine to aid in dissipating the surplus that has been accumulated in the Government Treasury by unwise and unnecessary taxation."

COAL AND THE TARIFF.

TO THE EDITOR OF THE NATION:

SIR: In the San Francisco *Examiner* of Sunday, October 20, 1889, in an article under the signature of Senator Leland Stanford, entitled: "The Future of our State," I find the following very remarkable statement; remarkable because Senator Stanford is a strong protectionist:

"The scarcity of fuel is still a drawback to this State. A ton of coal can be put on the cars in Pennsylvania for 62½ cents; here we pay from $7 to $10. The coal we get from Vancouver has to pay 75 cents per ton duty, which is excessive in view of the fact that the plea for protection is to keep wages up, and the wages paid for handling a ton of coal do not amount to anything like 75 cents. When coal only costs 25 cents to mine in Pennsylvania, it is hardly logical to charge three times as much for the admission of foreign coal here. That benefits the owner of coal lands, and not the laborer who raises the coal."

I ask, has the argument of the free-trader and tariff-reformer been more clearly or more tersely put? Y.

NEW ENGLAND FARM LANDS AND HENRY GEORGE.

TO THE EDITOR OF THE NATION:

SIR: I notice that, in an article in this week's *Nation*, in speaking of abandoned farms in New Hampshire, you "commend again to Mr. George's followers the rare opportunity to acquire land and 'fairly comfortable buildings' on the easiest terms." May I ask why you commend the opportunity to single-tax men in particular?

Referring to the editorial immediately following the one from which the above quotation is taken, let me say that I shall be somewhat surprised if the writer of the article in the *Twentieth Century* charging Mr. George with plagiarism does not prefer charges of a similar nature against Mr. J. E. Cairnes as being a plagiarist of the ideas of Mr. Mill, perhaps; or, in fact, he might make the charge with equal decency and good sense against any writer who shared the views of a previous writer on the same subject.

I would respectfully inquire why you believe that "few of Mr. George's followers" would accept the history of the single-tax theory from anybody but himself. I judge that the publication of your idea of the mental condition of Mr. George's "followers," as you are pleased to term men who believe as he does and who have been aided in their studies on this subject by the results of his labors, might prove highly interesting.

Very respectfully, A. M. PAUL.

HARTFORD, October 26, 1889.

[The reason why we recommended the abandoned farms in New Hampshire to Mr. George's followers in particular is, that the whole George philosophy goes on the assumption that land-owners have better chances to make a living than people in general. This, we think, is the mildest possible statement of the drift and scope of 'Progress and Poverty.' Take the following fundamental proposition printed in italics on page 252:

"The reason why, in spite of the increase of productive power, wages constantly tend to a minimum which will give but a bare living, is that, with increase in productive power, rent tends to even greater increase, thus producing a constant tendency to the forcing down of wages."

Now, all that we ask of those who hold this doctrine is, that they avail themselves of the notable opportunity presented in New Hampshire to prove its truth. Actual demonstration would be so much better than theory. The showing of Commissioner Bachelder would seem to refute the idea that rent tends to increase with the increase of productive power; for it will be admitted that productive power has increased in New Hampshire, while rent has been decreasing. Our suggestion is, that those who agree with Mr. George should go to New Hampshire and make some experiments, in order to satisfy doubters and confound those who deny that there is any economic law by virtue of which rent increases with the increase of productive power.

The George philosophy has been heralded in a general way as a sort of new economic revelation or discovery—not by Mr. George himself, perhaps, but by his followers, even the most distinguished of them. This is decidedly the impression one gets from reading the speeches at the Brighton Beach banquet, when Mr. George was welcomed last summer on his return from Europe. The article in the *Twentieth Century* we consider to be typical of the state of mind of most of the school; that is, evincing wonderment that the single-tax doctrine had been in print fifty years ago, and therefore leading to the conclusion that Mr. George had been guilty of plagiarism. But as we do not wish to hurt Mr. Paul's feelings, we will make an exception of him, and concede that he either knew beforehand all that the writer in the *Twentieth Century* revealed, or at least was open to conviction from any good testimony. —ED. NATION.]

THE DECAY OF FARMING IN NEW ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: Within six months from the time when the learned Massachusetts Senators denied that there had been any decay of New England farming interests, and supported their denial by the cheerful news that "mortgages were a sign of life and health," the Legislatures of New Hampshire and Vermont have deemed this decay so alarming as to call for extraordinary measures looking towards repopulating the deserted districts by immigrants—and this, too, when many regard the influx of foreigners as an evil calling for Congressional prohibition. To one conversant with the facts, it is evident that the reports of these lately appointed Commissioners do not begin to show the actual extent of the decline. Their reports are *supposed* to show only the number of "vacant farms having on them buildings in a *fair condition*"—impossible after more than five years of neglect. Instead of the 887 deserted farms reported by Commissioner Bachelder of New Hampshire in 160 towns, three times that number would probably be a low estimate.

But the *cause* of this decline must be ascertained before any intelligent attempt can be made to remedy it. Born and reared in one of the most unfortunate of these towns, the writer knows from bitter experience the true state of affairs, and believes that he understands something of the forces working this decay. The causes are mainly three:

(1.) The competition created by the invention of labor-saving machines adapted to large prairie farms, and by the increase of means of transportation and the constantly lessening cost of that transportation. There is no such thing as a "local market" in the civilized world to-day.

The broad fields of the West, worked by machines, can produce wheat and corn and beef, and deliver them in Manchester or Lowell at a less rate than can the farmer on the hillside five miles out. Every time freights are lowered, another screw is turned on the New England farmer. It is the process of the survival of the fittest—the fittest farms. While this result may be deplored on account of its social and moral aspects, economically it is all right; there is no occasion for fault-finding on this score. It is a part of that constant and painful readjustment to new conditions inevitable in a time of great industrial progress. Individuals suffer, but the masses are benefited.

(2.) But another obvious cause is direct taxation. The farmer's property is mainly in real estate and in personal property impossible to conceal; his inventory includes practically his all. But every one knows that only a small part of the personalty of the well-to-do villager is ever returned for taxation. An agent of one of the mercantile-credit agencies told the writer not long ago that it was the almost universal custom of the business men in Vermont who had money invested in stocks and Western mortgages to take false oaths on their inventories, on the ground that their neighbors did. He said this was especially common among the deacons and Sunday-school superintendents—probably because of their intimate associations with clergymen who subscribe to creeds "with mental reservations." But the farmer has no "reservation," subjective or objective. Moreover, the valuation of the farms has not been lowered even to accord with the changed values consequent on the return to specie payments ten years ago, much less to the present actual value. It would be safe, I think, to say that the average market price of New Hampshire farms to-day is less than two-thirds of the assessed valuation. With a disproportionate share of taxation put on property assessed at an over-valuation, the farmer is actually paying from 2 to 4 per cent. in taxes on the real value of his property. This is seen at its worst in towns in which a manufacturing village has grown up, calling for large outlays for streets, water-works, etc., for which the whole town is taxed, though the benefits accrue mainly to the village.

(3.) Indirect taxation, *i. e.*, the tariff. Every particle of cloth the farmer uses, whether on his back, his bed, his table, or his horse, is artificially raised in price. Every plough, harrow, mowing-machine, planter—everything involving iron, which includes *all* of his tools, wagons, and carriages; the lumber he uses in building and in repairing; the tin in his dairy or milk-wagon; the sugar on his table, which is the largest item in his grocer's bill—all these are raised in price from 10 per cent. to 150 per cent. by our tariff. What is his return? (*a*) The wool tariff, under which the manufacture of good cloth has died out, and the price of wool fallen so low that the bleat of a sheep will soon be as rare as the howl of a wolf in New England. (*b*) The tariff on potatoes, which, owing to the bulky nature of the product, has *no* effect in most of New England except in time of absolute failure of the crop, when farmers themselves have to buy potatoes from the Provinces and pay the tax of thirty cents per bushel. Two years ago, many farmers were compelled to do this. (*c*) The tariff on horses, which compels the farmer, who rarely raises a colt, to pay as much for an ugly bucking broncho as would buy a good horse from Canada. "Only this, and nothing more."

I submit that these are the *main* (not the only) causes of this decline, which even the Boston *Journal* says (August 20, 1889), "leaves a painful impression"; that the first cause alone would have produced a gradual decline, though not to anything like the present extent; that the second cause is a gross outrage on the farmer, but difficult to remedy until lies are worth more than a dollar apiece, of which there is no prospect; that the third cause, the tariff, is palpably and directly the aggravation of what were otherwise an almost unbearable condition—that it not only renders the resettlement absolutely impossible, but will work its work until, as Prof. Sumner says, "New England is mostly given up to forests and game preserves." It is to-day an absolute impossibility for a healthy man, by average industry and prudence, to live with ordinary comfort, and lay by enough to see him through his old age, on a New England farm.

Such being the facts, what will be the result of these new official efforts? Words and—a little larger tax on the farmer to pay the salaries and incidental expenses. G. W. A.

Boston, October 28, 1889.

THE BOYS OF THE WAR.

To the Editor of The Nation:

Sir: The theory of military discipline implied in the letter quoted in an editorial article in your last issue—that youth and danger excused if they did not justify desertion from the army in time of war—was to me so novel and surprising that I have made some effort to discover if it was held and acted on to any extent by our boys in the late war.

As one of the boy soldiers of that time, I have no recollection in my own experience or observation of the prevalence of any such ideas of military honor and discipline; but memory, especially of war-time, is treacherous, and a lad of fifteen must at best have only a limited field of observation. The records alone can show whether such a theory was acted on by the tens of thousands of boys, between the ages of fifteen and twenty, who poured into our armies in the last year of the war. The records accessible to me, though of but a single State, speak so decisively in the negative that I am confident they represent the general theory and practice of the time.

To illustrate: The First Maine Heavy Artillery, in the bloody campaign from the Wilderness to Petersburg, lost the most men in battle of any regiment during the war. Company L of this regiment was raised in Maine in January, 1864, and, of a total enrolment of 161, had in its ranks 80 boys under twenty years of age. This company, in that brief campaign, had the highest percentage of killed in battle of any company of the famous regiment of which it formed a part; but of those 80 boys, not one appears in the list of the 145 deserters of the regiment.

The Thirty-first Maine Infantry left that State in April, 1864, and within fifteen days found itself fighting in the bloody thickets of the Wilderness, and in less than three months had a roll of killed exceeded by few regiments in a full three-years' service. This splendid regiment took from the State 329 boys under twenty years of age, and of this number just five succumbed to their fears and deserted their colors.

The Second Maine Cavalry left the State for the Department of the Gulf in March and April, 1864, and, by an appalling combination of exposure and misfortune, in less than nine months had met with a loss by disease in that pestilential climate greater than that experienced by any white regiment in the entire army in the same length of time, and exceeded in actual number of deaths by but few regiments in the army. This regiment had in its ranks when it left the State 448 boys under twenty years of age, yet, under the tremendous strain and depression of a mortality far surpassing that of battle, only two of this entire number deserted, and of these one voluntarily returned to his regiment and was mustered out with it.

The value of these figures is not lessened when it is recalled that, while all these boys were entered on the rolls as eighteen or nineteen years of age, as a matter of fact not less than one-fourth of them were under eighteen years of age, and not legally subject to military duty. This magnificent record of the boys of the war, under what may fairly be considered the maximum of strain to which soldiers are ever subjected, is too precious a legacy to be frittered away by sentimental excuses for the few whom neither honor nor patriotism could hold to their duty. James J. Dow.

Faribault, Minn., October 27, 1889.

THE PUBLIC LIBRARY ASSAILED.

To the Editor of The Nation:

Sir: The writer of an article in the September number of the *North American Review* takes an exceedingly gloomy view of the condition and influence of the public libraries of the country. He asserts that their resources have been largely perverted from their proper work of educating to that of merely amusing, and, still worse, that they contain collections of immoral books which are positively pernicious. He believes that these evils arise from the lack of any authority competent to hold library boards to a strict accountability for their work, and suggests as a remedy that they be placed under the direction of the State Boards of Education.

Let us examine the first assertion, namely, that the managers of our libraries, forgetful of the educational purpose for which they were founded, are using them simply to furnish amusement. This is based upon the statement, drawn from the library reports, that a large proportion of the books issued are from the class fiction, and the implied assumption that all reading of fiction is simply for amusement and without educational value. In this day, when the story is being used more than ever before, not only for the illustration of history, but for the dissemination of opinion, when it has a recognized place in the curricula of our schools, when it is read and recommended by a great majority of our cultivated people, including our professional educators, it seems unnecessary to enter upon its defence. To form a fair estimate of the educational value of the library, include with the books issued from the classes history, literature, etc., whatever of good is in the fiction. If this be done, and it be borne in mind, in examining the fiction lists of our libraries, that the better books are usually largely duplicated, and also, comparing fiction as a whole with the other classes, that the average cost per volume is less than in any other branch of literature, I believe the conclusion will be reached that, not a large, but only a small part of our library funds are being used merely to amuse.

The second evil alleged, namely, the collection of immoral books, touches upon one of the most difficult problems for the librarian. There are certain well-known books which, though gross in subject and style as reflecting the age which produced them, still have a recognized place in literature, and therefore claim a place in the library. Some of them are manifestly unfit for general circulation, and these are usually kept out of the circulating library and

issued only to those who may reasonably be expected to make a proper use of them. To this extent and no further is the charge that libraries contain semi-private collections of immoral books true. That bad books, having no recognized value and only intended to gratify a prurient taste, are intentionally collected, I know to be untrue of many of our libraries, and I do not believe it true of any of them. To those who know the librarians of this country, the assertion that they would lend themselves to any such arrangement is too absurd to merit a serious denial.

As to the remedy suggested for these alleged evils, namely, that the libraries be placed under the direction of the State Boards of Education, the comment on this may be as brief as the celebrated chapter on the snakes of Iceland—that is, there are in most States no such boards. There is usually a State Superintendent of Schools, selected for his specific knowledge of and experience in school work. The libraries being an independent and important educational factor, it would be as reasonable to place the schools under the direction of a State Superintendent of Libraries, if such an officer existed, as to subordinate the libraries to one who is simply the chief schoolmaster of the State. If State Bureaus of Education, using the word in its broad sense, could be organized, the libraries, the schools, both public and private, and all other educational work might receive from them helpful guidance. Our libraries have received much valuable assistance from the United States Bureau of Education, though not in the direction suggested.

The writer upon whom I have been commenting, speaks also of the comparatively recent origin of the public library, and of its rapid growth, which has, in a little more than a generation, placed it beside the church and the school, "the complete triad of the moral and intellectual forces of the age," and then draws a picture of the ideal library, which is very like that which the librarians of the country are trying to realize. The meetings of the American Library Association, and of the local societies, as well as the practical papers published in their journals, not only bear witness to the enthusiasm and industry of the librarians of the country, but show that they, better than any others, realize the defects which still exist, and are laboring strenuously to remedy them. The public library, so far from being in its decadence, is just on the threshold of its work. WM. H. BRETT.

CLEVELAND, October 28, 1889.

INTERNATIONAL IGNORANCE.

TO THE EDITOR OF THE NATION:

SIR: The communication in the *Nation* of October 17, entitled "International Ignorance," instantly reminded me of an illustration of this which has come within my own experience. While travelling through the upper Rhone valley, I met a rector of the Church of England, a man apparently of rare gifts and high attainments. Both of us had seen the Rhine, and we were talking of its great beauty. I took occasion to compare it with the Hudson, and suggested that the mountain scenery of the American Rhine surpassed that of its namesake. "Ah, yes," he replied; "I can see how that may well be. Of course the views of the Rocky Mountains are very grand from the Hudson."

A month later I was travelling in England. In one of the northern towns I met a gentleman who interested me greatly. He talked intelligently of literature and science. I told him the very story which I have related above. He thought it a rare joke, and a matter to be greatly deplored, that an English rector should be so ignorant. "Ha, ha," he said in the midst of convulsing laughter, "a great joke, a rare joke! Why, the Rocky Mountains must be 400 miles from your Hudson River!" H. G. H.

ANDOVER, MASS., October 25, 1889.

DERELICT VESSELS.

TO THE EDITOR OF THE NATION:

SIR: Before the close of the present Marine Conference would it not be wise to suggest to them the importance of advocating a permanent international service for the especial purpose of clearing the ocean highways of derelict vessels? A SUBSCRIBER.

GERMANTOWN, PHILADELPHIA, October 30, 1889.

Notes.

THE series of "Rhode Island Historical Tracts" will in due time have added to it an essay towards a 'History of Privateering' as connected with Rhode Island during the Revolution (1776-1783). It is being prepared by Mr. Sidney S. Rider, editor of the Providence *Book Notes*.

"As You Like It," the eighth volume in Mr. Horace Howard Furness's new Variorum Shakspere, is in the press of J. B. Lippincott Co. for speedy publication.

It will probably be many years before we shall be allowed to see the ample diaries kept by the late Charles Francis Adams while he was American Minister in England, and in the meantime we may look forward with interest to a 'Life of Lord John Russell (Earl Russell, K. G.),' by Mr. Spencer Walpole, which will be published this month in two volumes by Longmans, Green & Co. The same house has also nearly ready for publication 'The Melbourne Papers,' edited, from documents in the possession of Earl Cowper, by Mr. Lloyd C. Sanders.

We have received specimen sheets of Mr. William C. Harris's forthcoming 'Fish and Fishing in America' (The Harris Publishing Co.). It will include "monographs and illustrations of over 200 fishes that are caught with hook and line in American waters." The illustrations will consist of faithfully representative studies from nature. The forty parts will be issued monthly by subscription.

D. Appleton & Co. will shortly publish 'Five Thousand Miles in a Sledge—Mid-Winter Journey across Siberia,' by Lovel F. Gowing.

Harper & Bros. announce 'Would You Kill Him?' a novel by George Parsons Lathrop, which "presents the case against capital punishment"; 'A Little Journey in the World,' by Charles Dudley Warner, described as a "trenchant satire upon modern social life in America"; 'Dorymates,' by Kirk Munroe; 'Cradle and Nursery,' by Christine Terhune Herrick; 'Winters in Algeria,' written and illustrated by the artist Frederick A. Bridgman; and 'The Political Problem,' by Albert Stickney.

A translation of Louis Leger's 'History of Austria-Hungary from the Earliest Time to the Year 1889'; 'The Sayings of Poor Richard,' edited from Franklin by Paul Leicester Ford; 'Thomas Jefferson's Views on Public Education,' by John C. Henderson; 'The First International Railway and the Early Colonization of New England,' by Laura E. Poor; and 'Spring and Summer,' poems, by William Washburn, are the latest announcements of G. P. Putnam's Sons. This firm will, early next year, join in an English serial enterprise, "Heroes of the Nations," under the supervision of Evelyn Abbott of Balliol College, Oxford.

Some of the illustrated holiday books in sight are Sheridan's 'The Rivals,' the designs, partly in water-color, by Frank M. Gregory, and 'The Arabian Nights,' with 100 full-page photogravures after designs by Stanley L. Wood, to be published by White & Allen; Wordsworth's 'Melodies from Nature,' Sir E. Lytton Bulwer's 'The Secret Way,' and Miss Elizabeth Stuart Phelps's 'A Lost Winter,' which have D. Lothrop Co.'s imprint; 'Venice,' 'Facsimiles of Aquarelles by American Artists,' with text by Ripley Hitchcock, 'Selected Etchings,' for which also Mr. Hitchcock supplies the letter-press, and Owen Meredith's 'Lucile,' which will be issued by Frederick Stokes & Bro. To the foregoing may be added Henri Bouchot's 'The Book: its Printers, Illustrators and Binders, from Gutenberg to the Present Time,' on the list of Scribner & Welford.

Dr. Daniel G. Brinton has bestowed on some sacred songs of the ancient Mexicans the title of the 'Rig Veda Americana.' He will edit them from two Nahuatl MSS. with a sixteenth-century gloss, personally collated by himself at Madrid and Florence. "They are," he says, "without doubt, the most ancient authentic examples of American language and literature in existence." Subscriptions may be addressed to Dr. Brinton at No. 2041 Chestnut Street, Philadelphia.

Dr. W. E. Griffis's 'Lily among Thorns,' already announced as in the press of Houghton, Mifflin & Co., and as explanatory of the Song of Solomon, will consist of Part I., History and Criticism; Part II., The Text in the Revised Version, with parts of speakers, solo and chorus marked; and Part III., Studies and Comments, treating of the five parts or acts and fourteen scenes into which the drama is divided. The allegorical theory is rejected, and the historical and natural view maintained.

Ginn & Co. have nearly ready 'Elementary Mathematical Tables' (of logarithms, anti-logarithms, sines and cosines, reciprocals, square roots, cube roots, exponentials, least divisors, interest tables, etc.), by Prof. A. Macfarlane of the University of Texas.

The Librairie Auguste Fontaine has in preparation a 'Nouvel Armorial du Bibliophile,' by M. Joannis Guigard, which is to be in two large octavo volumes, and to contain facsimiles of some 2,500 coats-of-arms and bindings stamped with the owners' arms. The one regret of an American who loves rich and sumptuous binding is that there is a certain snobbishness in the use of a coat-of-arms—even if by chance he may be entitled to it—for certainly there is no device more appropriate as a mark of ownership or more decorative.

'Remarkable Bindings in the British Museum,' selected for their beauty and historic interest and described by Henry B. Wheatley (London: S. Low; Paris: Gruel & Engelmann), is an English attempt to rival M. Bouchot's collection of the fine bindings in the Paris National Library. For the arrangement of the plates and the selection of the bindings to be reproduced, Mr. Joseph Cundall is responsible, Mr. Wheatley having merely prepared the descriptions, which are not always to the reader's satisfaction. The sixty-two plates were printed in Paris under the supervision of M. Léon Gruel. They seem to us to represent fairly enough the richness of the great English collection, and at the same time to reveal very plainly the small share that Englishmen have had in the progress of the art of bookbinding. It is perhaps not too much to say that there has been no great English

binder. Roger Payne was a first-rate workman—his books were admirably bound; but as an artist, as a decorator, as a "gilder" (to use the technical term), he cannot be compared with any of the great French binders.

Swan Sonnenschein & Co., London, have published a translation by Stanton Coit of Prof. Georg von Gizycki's 'Moralphilosophie,' which has already been reviewed in these columns. It is intentionally adapted for use as a text-book on ethics in colleges, and will serve this purpose admirably when the knowledge of the student has sufficiently advanced to dispense with skeletonizing. The adaptation, however, does not vary in form or matter from the original except in the particular that the appendix on Kant's and Schopenhauer's doctrine of "transcendental freedom" has been omitted. It is a part of the main contents in the original. We are glad to note that the translation is most excellent, a quality which it gets from being free and graceful, while it is faithful to the sense of the German.

A new and revised edition of Chaucer's 'Canterbury Tales,' annotated and accented, with illustrations of English life in Chaucer's time, by John Saunders (Macmillan & Co.), is an excellent modernization, in an abridged form, of the work whose full title it bears. Each tale is retold in prose, and from time to time the narrative is continued in the original words of the poet, with the purpose of retaining the best and characteristic portions. The orthography has been modernized except where the old spelling serves to indicate pronunciation. The text used is Morris's. The illustrations are the figures from the Ellesmere MS. The explanatory matter is very full. Altogether, the work is a useful substitute for the original for those who are deterred from Chaucer by the difficulties of the antiquated text, and a still better introduction to the study of it and manual of reference in connection therewith.

We can recommend as eminently fit for personal companionship the new handy-volume "red-line" edition of Wordsworth's Complete Works, manufactured by the Glasgow University Press, and published here by A. C. Armstrong & Son. The eight little volumes fill a box not too large for the trunk or handbag, and each can be most comfortably carried in the pocket. The print is very legible.

The same firm put their imprint on a reissue of Ainger's edition of 'Tales from Shakespere,' by Charles and Mary Lamb; but in this case our praise must stop short with the cover. Well-worn plates and little care in the press-work have robbed the pages of all comeliness.

Mr. Andrew Lang's 'Blue Fairy Book' (Longmans) takes its distinction from the color of its exterior. Its contents will be universally acceptable, and, though consisting of the old favorites, are in large measure fresh as being specially translated or adapted from Grimm, Mme. d'Aulnoy, H. Carnoy, etc., or condensed, as in the case of "Aladdin" and the "Voyage to Lilliput," or derived from unusual texts, like "Dick Whittington" from a Villon Society chap-book. The print, it must be confessed, is not fit even for young eyes in all lights—and who more apt than children to read into the twilight? The illustrations, too, we think, would have been much more decorative if drawn on or for the wood-block. They have the cheap "process" effect of facsimiles of pen-drawings.

The Germans also have been making lists of the hundred best books, and we find nearly two score of these gathered into 'Die besten Bücher aller Zeiten und Litteraturen' (Berlin: Friedrich Pfeilstücker; New York: F. W. Christern). They are useful to us chiefly as a means of estimating the German "national equation"—quite as distinct a factor in criticism as the "personal equation" of the astronomers. Franklin, Hawthorne, and Lowell are not on any list. Longfellow, Motley, H. M. Stanley, and "Mark Twain" are each on one list. Poe is on two; Emerson, Cooper, and Bret Harte are each on three; Irving is on four. It is worthy of remark, as indicating a certain unwillingness to surrender a first impression, that more than once are Dickens and Miss Brontë referred to as "Boz" and "Currer Bell." One of the contributors finds occasion to say emphatically that no man need know Chateaubriand or Victor Hugo.

To the little "Universal-Bibliothek" of Philipp Reclam, jr., Leipzig, has just been added a free translation, by Karl Knortz, of the late E. P. Roe's 'He Fell in Love with his Wife' ('Wie sich Jemand in seine Frau verliebt').

The October number of the *Civil-Service Record* (published, by the way, at 30 Court St., Boston) contained Mr. George William Curtis's address at the late meeting of the League in Philadelphia, and the November number contains that of Mr. Charles J. Bonaparte on the same occasion. We have had many inquiries as to both by readers who wished to procure these admirable speeches.

The double number, May - June, of the *Library Journal* is wholly given up to the proceedings of the St. Louis Conference of the American Library Association. These will be found extremely interesting, embracing numerous reports on the library architecture and legislation of the year, on Sunday opening, on alphabetizing, the keeping of scrap-books, the indexing of portraits, on reading for the young, etc.

The State Historical Society of Wisconsin has issued its first triennial catalogue of its Portrait Gallery—using this term in its broadest sense. The most noticeable painting is, perhaps, that of Eleazar Williams, by George Catlin. An original portrait of DeWitt Clinton, thought to be also by Catlin, came from Clinton's own library. A large number of the painted and crayon portraits are of men of local celebrity; a still larger number, as was inevitable, of men born elsewhere than in Wisconsin. There is a portrait of Columbus copied from the Yanez original in the National Library at Madrid; and one of Cromwell, after Cooper's portrait (1650).

We have before us the circular for 1889-90 (second year) of the National Young Folks' Reading Circle, "a national organization for the promotion of good reading among our boys and girls," of which the central office is at Champaign, Ill. One can but feel confidence in a management embracing such names as Miss Mary E. Burt, Miss C. M. Hewins, J. N. Larned, F. M. Crunden, K. A. Linderfelt, Rev. Lyman Abbott, not to mention others equally well known. The membership fee is twenty-five cents, and members are supplied at reduced rates with the books appointed to be read. A diploma is awarded for four years' compliance with the system. The readers are divided into three grades, beginning with twelve and under, and ending with seventeen and over. There are State Secretaries for half the Union.

The next Annual Convention of the Modern Language Association will be held at Harvard University during the Christmas holidays of this year. Announcements of papers that will be presented have reached the Secretary from Professors Hunt (Princeton), Gummere (Haverford), Wright (Middlebury), Primer (Providence), Tolman (Ripon), Gerber (Earlham), Schmidt-Wartenberg (University of Deseret), Kent (University of Tennessee), Grandgent (Boston), Matzke (Bowdoin), Marcou (University of Michigan), Dodge (Columbia). Precise dates and definite place of the meeting will be given in the programme which will be issued shortly before the Convention.

—We are permitted to publish the following lines addressed to Walter Savage Landor on his birthday, by the late Dr. E. Gryzanovski:

AD SAVAGIUM.

Quis te non patriâ docuit cantare Camoenâ?
Quis te Romanis plectra movere modis?
Anne Sabina tibi puero dedit ubera nutrix,
Aut haustus licuit ducere Castalios?
Eheu! templa jacent labe prostrata perenni,
Nescia jam dapibus arx resonare Deûm.
Sed quâ Maeonides maduit, quâ Lesbia vates,
Castalis unda scatet murmure perpetuo.
Nimirum lacrymâ tantas defiente ruinas
Melpomene, laticis areat unda, vetat.
Nec mora vana Deæ: Musis post aeva negata,
Pristina qui poscat pocula, Landor adest.
Fauste senex (si quae posttalia philtra senectus),
Muneribus tantis cui vacuisse datum.
Sive cient lacrymas tua carmina sive cachinnos,
Gratiâ in aeternâ posteritatis erunt.
En, jam Roma patet. Redeunt cum Cæsare sacra
Numina, Tristitiæ regna mitrata ruunt.
Te vivo, non omnis amor morietur Olympi,
Et nunquam, Landor, mortuus omnis eris.

— During the last two years there has appeared in the *Revue Bleue*, at intervals of about three months, a series of autobiographical sketches by M. Sacher-Masoch, entitled "Choses Vécues." They have been of less than the greatest importance and interest, but have been worth reading as throwing some light on the history of a writer of whose life and training little has otherwise been known. The last two of these sketches appeared in the number for October 5, and tell the story of how M. Sacher-Masoch first met Dumas *père*, and of how his own early novel, 'Don Juan de Koloméa,' came to be written. The first sketch is of the slightest, and seems to have been inspired rather by a desire to get in a blow at the naturalists than by anything else. The naturalists are about the best abused school of writers just now in France, as elsewhere, and perhaps M. Sacher-Masoch's blow, which is not in itself a deadly one, was not needed. As to Dumas, he met him in Vienna and told him long stories about the East, of which Dumas knew nothing. When their talk came to an end, Dumas looked up suddenly and said, "Do you know what lies dormant in you? A novelist!" When Sacher-Masoch repeated this remark to Dumas *fils* years afterwards, his comment was: "Well, my father gave you a bit of good counsel—for once." This utterance of filial piety is characteristic, and recalls another remark of the same good son's: "Rather than have it said that he could not keep a negro footman, I believe my father is quite capable of getting up behind the carriage himself."

— In the second sketch, M. Sacher-Masoch drops, as it were by chance, some bits of information about his early life, which was confined and studious. At the age of eight he was entered at the *gymnase*, proceeding to the University at sixteen; at twenty he was doctor of philosophy, and a year afterwards published his first book, an historical treatise upon the revolt at Ghent under Charles V., and was appointed professor of history in the University of Gratz. Up to this time he was too busy to write romances or to live them; but soon, in spite of himself, he says, he became involved in both. His first novel, which was half historical, was called 'Le Comte Donski,' and its scene was laid in the time of the Polish Revolution. Then followed 'Kaunitz,' a romance after the manner of Dumas. Then came 'Don Juan de Koloméa,' which he

wrote some time during his five years of life with a woman of high connections in Poland, whom he had taken away from her husband. After this *liaison* was broken, he made up his mind to print his book, but experienced the usual difficulties in finding a publisher. At last it appeared in 1866 in Westermann's review, and afterwards, in 1871, in the *Revue des Deux Mondes*, and the career of its author began.

—At first sight there seems something odd in the announcement that M. Ernest Renan is just about to publish his first book. But it is quite true. The volume is now in the press and will appear in December. M. Renan permits the *Temps* to tell the book's story. Its title is the 'Avenir de la Science,' and it was written as long ago as 1849, and bears marks in it of that stirring time. Renan, of course, had no personal share in the great events of the period, but indirectly they were the occasion of his beginning to write. After he came out of the Sorbonne, he led a very retired life in Paris, seeing and knowing almost nobody, and working hard at the study of Sanskrit under Eugène Burnouf. One day in June, as he was going to his lecture, he came upon a barricade, in the Rue Saint-Jacques, which he found much difficulty in passing. When at last he reached the College, he encountered Burnouf in the vestibule, who said, "Come and look at our lecture-room." They found it turned into a guard-room, and full of soldiers. Burnouf shook his head: "Let us go away again: this is not the moment for Sanskrit." Renan went away, and in the next three months of enforced leisure wrote his book. In the fall of 1849 he went to Italy, and did nothing towards the publication of his work till his return in 1850. Then Victor Leclerc and Augustin Thierry dissuaded him from printing it, on the ground that the subject was too large for a first attempt. Since then the book has lain in manuscript, and it will now be given to the world almost without a change in it. It will be very curious to compare M. Renan's earliest with his later style. He says himself that about that time his style changed greatly. He joined the *Revue des Deux Mondes* almost at that moment, and its public demanded that whatever was presented to them should be *paré*.

—The *Temps*, which has seen the first hundred pages of M. Renan's book in the proof, says that it appears to be an exposition of the ideas which drove him out of the Church into lay life. A new faith took the place of Catholicity in him, and this is his confession of it. Besides its autobiographical interest, it has another which may fairly be called historical, for the question of science or a revelation has been one which has been given to our whole age to solve. It is a question, too, that may be well studied in its working and effects upon so fine an intelligence as that of M. Renan. One thing alone is necessary, he maintains, and that is to live a complete life, to attain the perfect; and he gives to perfection a wide definition. It does not lie in morals alone, as some have thought. "The model of perfection is given us by humanity itself; the most perfect life is that which represents best humanity as a whole. But cultivated humanity is not moral only, it is also learned, curious, poetic, passionate." It is all or nothing with M. Renan: "absolute supernaturalism or rationalism without reserve." The ground he has taken is well known, and yet no one can miss seeing how much of his old religious feeling and spirit went with him into his new faith. He is a believer still, he cries passionately; nay more, the rationalist is the only true believer:

"It is you who are the sceptics and we who are the believers! We believe in the work of modern times, in its holiness, in its future, and you curse it. We believe in reason, and you insult it; we believe in humanity, in its divine destinies, in its imperishable future, and you laugh at them; we believe in the dignity of man, in the goodness of his nature, in the rectitude of his heart, in his perfectibility, and you shake your head at these consoling truths. . . . We believe in all that is true; we love all that is beautiful; and you, with eyes shut to the infinite charm of things, go through this lovely world without one smile for it. Is the world then a graveyard? Is life a funeral rite? In the place of reality you have an abstraction. Which is it who denies, you or we? And is it not the denier who is the sceptic?"

— It may, perhaps, be worth while, since we have spoken once or twice of the quarrel between MM. Erckmann and Chatrian, to note that their difficulties have been composed, and they have shaken hands and become Erckmann-Chatrian once more. Their difference has at least brought out two rather good *mots*. One is of Dumas *fils*, who is reported to have said to a friend who proposed that they should work together: "Collaborate? Why should I wish to quarrel with you?" The other is told of M. Aurélien Scholl, and neatly puts some of the truer part of the truth about collaborations into a nutshell. A yoke-fellow had been imposed on him whom, for certain good reasons, he was obliged, at least for the moment, to accept. The first morning of their work together Scholl began: "Well, my dear fellow, do you feel in trim for writing?" "Never more so, *cher maître;* I am in great form." "Sit down, then, and take your pen—I am going to dictate."

ASA GRAY'S SCIENTIFIC PAPERS.

Scientific Papers of Asa Gray. Selected by Charles Sprague Sargent. 2 vols. Boston: Houghton, Mifflin & Co. 1889.

Asa Gray never undertook the examination of any subject without becoming familiar with all of its most important relations. Every part of his work in widely diverse fields was characterized not only by a sense of due proportion springing from this habit, but also by minute accuracy. Such two-fold care places upon scientific work limitations which ordinarily render impossible its rapid performance. Hence, even to those who had best known the marvellous scientific and literary activity of Prof. Gray, the list of his writings, compiled and printed last year, was a surprise. It seemed incredible that one who was not free from college cares and administrative anxieties could have accomplished so much.

Asa Gray's writings may be divided into five natural groups, as follows: (1) Contributions to Descriptive Botany; (2) Text-books and Manuals for Instruction; (3) Essays and Critical Reviews; (4) Records of Botanical Progress, Critical Notes, Biographical Notices, and Suggestive Memoranda; (5) Philosophical Writings. Each one of these groups of papers represents a high degree of well-directed activity and an astonishing amount of work. As might naturally be expected, the results of this work are very widely scattered through the transactions of learned societies, scientific and other journals, and in independent memoirs. Some of them are no longer readily accessible.

For many years, one of Professor Gray's associates, the professor of arboriculture in Harvard University, has been acquiring copies of all the writings now referred to, and his collection, especially of the minor articles, is probably the most nearly complete of any in existence. From this immense mass of material at his command, Professor Sargent has selected papers for the two volumes now before us. From the preface to the first volume it appears that when that was printing, it was in contemplation to publish three volumes; but the plan has been changed, and the two volumes now on hand complete the series. The two volumes contain about nine hundred large octavo pages.

The basis of selection is judicious. The reprints comprise most of the more important papers (other than those dealing with descriptive botany) which are not easily within reach. Of course the earlier text-book, though now very scarce, does not appear among the papers. The papers collected by Prof. Gray in his 'Darwiniana,' and which constitute his valuable contributions to the exegesis of Darwinism, are not reprinted in this series. Nor has the compiler reprinted the Yale lectures, which belong in the same category. There are also wanting from these volumes the shorter notices in the *Nation*, the *American Journal of Science*, and so on; but the line had to be drawn somewhere, and we think it has been drawn with good judgment.

The first volume is devoted to reviews of works on botany and related subjects. The earliest paper is a review of Lindley's 'Natural System of Botany,' and bears the date 1837; the last is a review of Ball's 'Flora of the Peruvian Andes,' written in 1886. Of these papers, twenty-five are devoted to systematic botany, fourteen to physiology, and five to geographical questions regarding plants. The others are reviews of popular and elementary treatises. The student of these papers is impressed from the outset by the following features: (1) in every case the *kernel* is reached; (2) without parading his knowledge, the critic always adds to the facts or principles presented in the book under review; (3) errors are pointed out without malice. These points may be illustrated briefly by a single reference. In the review of Lindley's 'Natural System of Botany,' Gray (p. 9) indicates the essential character of Lindley's innovations; in the next place he shows what the characters of a sound system should be; and, lastly, he hints at a great improvement which Lindley might have made in the treatment of the seed and other topics.

Throughout the volume are to be found many instances of Dr. Gray's remarkable command of language, and also of his humorous way of putting things. We can quote only a few examples, since our readers ought to have the pleasure of coming upon them themselves. Thus:

"Great as the merits of the work undoubtedly are, we must nevertheless be excused from adopting the terms of extravagant, and sometimes equivocal, eulogy, employed by a popular author who gravely informs his readers that no book, since printed Bibles were first sold in Paris by Dr. Faustus, ever excited so much surprise and wonder as did Dr. Torrey's edition of Lindley's 'Introduction to the Natural System of Botany.' Now we can hardly believe that either the author or the American editor of the work referred to was ever in danger, as was honest Dr. Faustus, of being burned for witchcraft; neither do we find anything in its pages calculated to produce such astonishing effects, except, perhaps, upon the minds of those botanists, if such they may be called, who had never dreamed of any important changes in the science since the appearance of good Dr. Turton's translation of the 'Species Plantarum,' and who speak of Jussieu as a writer 'who has greatly improved upon the natural orders of Linnæus.'"

Again, alluding to certain names proposed as English appellations of plants, and not at all to his taste: "Polycarp (newly martyred) for Polycarpon."

Reviewing a popular work on the Trees of North Carolina, by a very learned man who expresses the fear that botanists will find fault with it: "Now, we are not shocked at all: indeed, we quite enjoy a glimpse of Flora en deshabille and slip-shod, and we are well aware how much easier it is, and how much better in such cases, to fit your book to its proper readers than to fit the readers to it."

In another case: "We find 144 plates, of various kinds and merits. The least satisfying to us are those of portraistic or scenic character, borrowed from the German 'Der Wald' and the very French 'Vegetable World' of Figuier; yet to others these may be the most attractive" As annotators say, note the force of the "very."

Ruskin's 'Proserpina,' a work begun in 1875, is thus noticed:

"Mr. Ruskin, 'having been privileged to found the School of Art in the University of Oxford,' now proposes to found a new school of botany. Of course, it will be a vagarious school. One crying evil to be remedied is, 'that there are generally from three or four up to two dozen Latin names current for every flower,' and 'the most current and authoritative names' are 'of the devil's own contriving.' This is not seemly. As Wesley would not allow the devil to have the singing of all the good tunes, so neither will Ruskin allow him to have the naming of all the sweet flowers. He proposes 'to substitute boldly . . . other generic names for the plants thus faultfully hitherto titled.' He 'will not even name the cases in which they have been made,' but 'will mask those which there was real occasion to alter by sometimes giving new names in cases where there was no necessity of such kind.' That is to say, the evil of a redundancy of botanical names is to be overcome by making more, some of them avowedly needless; and innocent names are to suffer, lest bad ones should become notorious by being discarded without company. For it appears that the diabolical names to be sent to their own place in this reform are not discarded because they are cacophonous, although that is the common charge, but because they are immoral. Of the two evils to be dealt with, the first is simply a superfluity of Latin names; the second, and the worse, a superfluity of naughtiness.

"As Mr. Ruskin forcibly puts it: 'The second, and a much more serious one, is of the devil's own contriving (and, remember, I am always quite serious when I speak of the devil), namely, that the most current and authoritative names are apt to be founded on some unclean or debasing association, so that to interpret them is to defile the reader's mind.' This reminds us of the fine lady who thanked Dr. Johnson for omitting indelicate words from his dictionary; to whom the blunt moralist rejoined, 'I perceive, madam, that you have been looking for them.' Now, if the case be really as it is represented, the sound practical axiom, *Quieta non movere*, would seem to suggest the proper treatment."

Again, in the same connection: "Ignorance, no doubt, has its uses; but it is questionable whether teaching is altogether the best use to put it to."

We take two illustrations of Gray's pithy way of stating propositions. "Plants are the thermometers of the ages, by which climatic extremes and climates in general through long periods are best measured." "The difficulty of a reform increases with its necessity." And, further, a single example of his management of figures: "When we gather into one line the several threads of evidence of this sort, to which we have here barely alluded, we find that they lead in the same direction with the clues furnished by the study of abortive organs: slender, indeed, each thread may be, but they are manifold, and together they bind us firmly to the doctrine of the derivation of species."

Volume ii is of a more popular character. It consists mainly of essays of a general nature, such as the Longevity of Trees, Sequoia (the big trees of California), Forest Geography, and the like, some of them being chatty and instructive accounts of journeys, and all of them distinct contributions to botanical science. They are full of enjoyment and profit. The volume closes with selections from the biographical notices contributed to the *American Journal* and the American Academy. These are frequently enriched by personal reminiscences. They are discriminating and judicial, but at the same time noticeably tender tributes, which reflect very perfectly the modest and genial character of the writer. We miss one of the biographical sketches which is the most touching of all, namely, that of Gray's life-long friend, Joseph Henry, and, while speaking of omissions, we should like to express the wish that one of the earlier articles on Development, written anterior to Darwin's era, had here found a place. But we know how difficult a task it must have been to select from so rich a storehouse, and we are indebted to Prof. Sargent for performing it so well.

A SAVIOUR OF SOCIETY.

A History of the Kansas Crusade: Its Friends and its Foes. By Eli Thayer. Introduction by Rev. Edward Everett Hale, D.D. Harper & Bros. 1889.

THIS complacent 'Guide to Posterity for the Proper Appreciation of Myself' shows the author to be a man of the old ante-Darwinian rock, and a firm believer still in special creations. Before him all was void. Up to 1854, every other instrumentality employed by Providence for the overthrow of slavery had failed ignominiously. Garrison had extinguished Lundy, and destroyed the fruits of his labors, and indefinitely postponed emancipation by fomenting slave insurrections and the disruption of the Union. The nebulous Liberty party and the diminishing Free-Soil party were absolutely impotent. On the passage of the Nebraska Bill, the whole North was given over to despair. It looked very much as if the universe were getting away with its Maker, when a happy thought brought into existence Mr. Eli Thayer of Worcester County, Massachusetts.

It would be irreverent to ask after this gentleman's antecedents, because special creations never have any. Prof. Spring, who ought to have devoted at least half his 'History of Kansas' to him, but only twice mentions his name, treats him as a heavenly visitant; but the Rev. Dr. Hale, who has his own little claim to Thayer's thunder, having "as early as 1845 . . . looked to emigration from the North as the solution of the slavery problem," in a pamphlet (only fifteen years behind Benjamin Lundy) called 'How to Conquer Texas before Texas Conquers Us,' gives his partner away. There was a past even to Eli Thayer, it seems: he was, in the spring of 1854, "fortunately, in the Legislature of Massachusetts; well known as a pronounced and eloquent Free-Soiler." We have never heard that he invented his party's doctrine of non-extension to slavery, and we are bound to say that in the present work he modestly lays no claim to the credit of the resistance offered to the admission either of Missouri or of Texas. The Almighty was still fumbling at that time with John Quincy Adams, Josiah Quincy, Harrison Gray Otis, Daniel Webster, Charles Francis Adams, John G. Palfrey, Joshua R. Giddings, and like mediocrities. For inscrutable reasons, therefore, Mr. Thayer was created with one idea which he did not invent, viz., opposition to any more slave States, and this he shared also with those detestable abolitionists who were already on the scene with a plan of their own for attaining the same end. Why two parties and Mr. Thayer were allowed to agitate for one object, at one epoch, or why he was not commissioned to snuff out the abolitionists altogether, must ever remain a mystery.

Nor did Mr. Thayer invent the idea of going to Kansas from the North. Dr. Hale is witness, in his contemporary 'Kansas and Nebraska,' to "a rapid emigration" into those Territories, "particularly into Kansas, quite independent of the Emigrant Aid Companies." The Northwestern States naturally were first on hand with adventurers ready to "go in and stake out their locations." The removal of John Brown's sons, for example, from Ohio in October, 1854, the most important of all, was perfectly spontaneous, induced by the glowing accounts of Kansas given by Northern newspapers during the previous two years. The settlers who poured in from Indiana alone, first and last, exceeded in numbers those from New England and New York combined; and in consideration of those who were drawn also from Illinois and Iowa, Kansas has sometimes been called the State of the three I's. This emigration (as in the case of the Browns) had primarily nothing to do with the slavery question. A large part of it, like that from Indiana and Illinois, must have been pro-slavery in sentiment and political affiliations. Almost all the rest of it must have had what the abolitionists called the 36° 30′ conscience of the Free-Soilers, whose resistance to slavery was regulated by parallels of latitude.

It was no part of the divine purpose, we are authoritatively assured, to effect through Mr. Thayer the filling up of the Territory with abolitionists—*i. e.*, with fanatics who refused to make a truce with slavery anywhere, and were always in excellent spirits even when statesmen like Greeley and Seward and Sumner, who were "all for the Constitution and the Union, and hostile to anarchy in whatever form or under whatever disguises," were in the dumps. The New England and other pioneers sent out by the Massachusetts Emigrant Aid Company of Mr. Thayer's founding had to repeat no shibboleth, either abolition or free-soil. His original proposal was, indeed, to crowd Kansas "with free men—with men who hate slavery"; but he abandoned this little requirement as he did so many other features of his plan. He boasted to Horace Greeley that he had "not one Garrison abolitionist" among the Society's corporators (though the list embraced Samuel E. Sewall, one of Garrison's original and indispensable supporters and warm friend still), and he now rejoices in the fact that scarcely an abolitionist was to be found among the first 20,000 inhabitants of the Territory. The Treasurer of the Society, the one man who saved the whole scheme from abortion, Amos A. Lawrence, ranged, in Mr. Sumner's words, "with his extensive connections, by blood and marriage, on the side of that quietism which submits to all the tyranny of the Slave Power." In plain English, Mr. Lawrence voted for Fillmore—that is, for the signer of the Fugitive Slave Law—in 1856, and for Bell and Everett in 1860. He was, in Mr. Thayer's own words, "a 'Hunker Whig,'" and "as far removed from sympathy with radical abolitionists as any man in the Union."

In short, Mr. Thayer's idea was on a level with the mere white-man partisanship of Free-Soilers and Republicans and Hunker Whigs. The votes of two Free-State Conventions in Kansas to exclude all negroes from the future State had, and still have, Mr. Thayer's approval. "Of course," he says, "no abolitionist could have done this, neither could any Liberty-party man; hardly any Free-Soiler. *But it was policy at that time to vote as they did.*" All the

abolitionist opposition to Mr. Thayer and his Company—such as it was, and he has enormously magnified it and misrepresented it—was directed not against their bringing in free laborers to outvote slaveholders, but against their defective anti-slavery principle. Mr. Thayer advances not one jot of evidence that they discouraged his movement *per se*. They were not disposed to go into ecstasies over the erection of a nominally free State, with black laws and a ready disposition to surrender fugitive slaves. They did not believe that slavery was imperilled by this achievement. The abolitionists were not fools, and they knew a gain for freedom when they saw it. The editor of the *Liberator* publicly approved in May, 1854, of the first hint of organized effort to people Kansas from the North—a hint from New York, which Mr. Thayer's slovenly chronology prevents our identifying with his first meeting here, though we have no doubt of their identity. This fact (and no retraction can be adduced) stamps with silliness Mr. Thayer's argument to Greeley, just previously, that the abolitionists would be against the Company: "Their purpose is to destroy the Union, and they know very well that our plan does not tend towards that result. We may, therefore, safely count on their opposition, which you well know would be far less harmful to us than their support."

Mr. Thayer has ransacked, among other sources, the *Liberator's* "Refuge of Oppression" for pro-slavery abuse of the abolitionists, and has brought together much censure of a different kind, of which the most will be found cited or referred to or typically illustrated in the now finished Life of Garrison. A greater "historical" jumble it would be hard to find, and Mr. Thayer is not above garbling, by suppression and otherwise. One instance is worth pointing out as exemplifying his spirit towards the so-called "enemies" of his "crusade." On p. 224 of vol. ii. of the Life of Garrison is given textually a passage from the diary of John Quincy Adams in 1840, in which he laments that Emerson

"starts a new doctrine of Transcendentalism, declares all the old revelations superannuated and worn-out, and announces the approach of new revelations and prophecies. Garrison and the non-resistant abolitionists, Brownson and the Marat Democrats, phrenology and animal magnetism, all come in, furnishing each some plausible rascality as an ingredient for the bubbling cauldron of religion and politics."

Mr. Thayer renders this, on p. 97, "what John Quincy Adams called the plausible rascality of Garrison and the non-resistant abolitionists," where it is evident that "the plausible rascality of Emerson and the Transcendentalists" would have been just as truthful.

Mr. Thayer led no "crusade." He devised a gigantic commercial enterprise, with five millions of capital, to make a business of State-building in the West. He estimated that he could turn out a State every two years and get his money back. He saw 20,000 colonists in view to begin with. In fact, his Boston books never showed more than 3,000 in all, and the total outlay did not exceed $140,000. He lost his interest in the project when it ceased to be mercenary and was made eleemosynary, and at the end of two years he retired. He then engaged in a puerile effort to root out slavery in Virginia, by means of a free-labor settlement, whose organ, the Ceredo *Crescent*, in sympathy with the founder, declared the abolitionists "a hated set of fanatics, knaves, and fools." This, too, he believed was a two-years' job, and the transformation of the whole South but a matter of a few years. His last folly was to colonize, or, as he called it, to Americanize, Central America. His method was "as plain and simple as it can be. It is just to form a moneyed corporation which shall have $200,000 capital."

Against this unbalanced impresario's pretensions, his real merits can be quickly summed up. He found a voluntary stream of emigration rushing into Kansas; he swelled it to some extent, partly known and partly incalculable, for we will give him the benefit of all he claims for his wide lecturing, and for the Western emigrants picked up en route by the parties sent from New England. His scheme was favorable to speedy town-planting, and unquestionably hastened the settlement of the Territory and precipitated the irrepressible conflict. It did not supply an anti-slavery—*i. e.*, a slavery-hating—population; and had it not been for border-ruffian outrages, Northern sentiment towards slavery would have been very little affected by what went on in the Territory. The Republican party leaders had practically accepted Douglas's popular-sovereignty doctrine, and professed their readiness to stay beaten if outvoted, and not to bark back to the abrogated Missouri Compromise. Mr. Thayer's exuberance was of more value to the cause of freedom than all his men, grist-mills, and town-sites. His five million dollars and great show of machinery played on the ever lively imagination of the slave oligarchy, which associated him and the Emigrant Aid Company, as it regularly did the Republicans, with the disunion abolitionists. Hence a great impulse was given to the pro-slavery invasion of Kansas, and nobody knows what the result would have been if John Brown had not been encountered. The hero of Osawatomie and of Harper's Ferry was, in Mr. Thayer's mind and expression (adopting words questionably attributed to Henry Wilson), "a d——d old fool." Lincoln was only one of the "logical sequences" of the author.

"Will mortals never know each other's station
Without the herald?"

THE FABLES OF BIDPAI.

The Earliest English Version of the Fables of Bidpai, "The Morall Philosophie of Doni," by Sir Thomas North. Now again edited and induced by Joseph Jacobs. With full-page illustration by Edward Burne-Jones, A.R.A., frontispiece from a 16th century MS. of Firdusi, and facsimiles of woodcuts in the Italian Doni of 1532. London: D. Nutt. [Bibliothèque de Carabas.] 8vo, pp. lxxxii., 264.

THE enlightened publisher of the "Bibliothèque de Carabas" has craftily spread a net wide enough to catch almost every class of reader, and the lover of handsome books besides. Those who are fond of racy sixteenth-century English will find their account in the texts now republished for the first time from rare originals, and the student of folk-lore cannot afford to do without the elaborate introductions, each by a master in his field, which accompany the text. The first two volumes, containing Adlington's version of Cupid and Psyche with an introductory essay by Andrew Lang, and an anonymous version (1584) of Herodotus's Second Book, with essays also by Mr. Lang, have already been reviewed in these columns. The third and latest volume is no less interesting than the others and no less ably edited and prefaced.

In the recent fashion in literature for tracking to their supposed Oriental home fairy-tales and fables, the latter have presented fewer difficulties and offered a firmer basis for study. Folk-tales, being for the most part the outcome of oral tradition, cannot be traced from country to country with certainty, and their origin and diffusion are still vexed questions. Fables, on the other hand, belong largely to the domain of literature, and the wanderings of a large number can be followed with ease and certainty. There remains always, it is true, the question of ultimate origin, and, like all questions of origins, it is not easy to settle. Many fables and stories, as is well known, owe their preservation to the Oriental fondness for a peculiar form of collections, in which the fables and stories are set, as it were, in a framework of narrative which binds them together and prevents their dispersion. The history of all of these collections is interesting, of none more so than the one known as the 'Pantschatantra,' which, in numberless versions, has afforded entertainment and instruction to every country in Europe and the Orient for fifteen hundred years. No less than 112 different versions in 180 editions in 38 languages are known --a remarkable testimony to the extraordinary popularity of the work.

The migration of individual fables of this collection, and of the collection as a whole, has occupied the attention of many scholars of late years, and Benfey's introduction to his German translation is one of the great achievements of modern scholarship. It was this introduction which founded a new school in the study of popular tales, and led many Continental scholars to seek the home of all folk-tales and beast-fables in India, and to attribute their origin there to the influence of Buddhism. Benfey left later scholars little to do except to investigate new material, or evolve new theories out of the materials he had already collected. The most recent worker in this field, Mr. Jacobs, has not attempted to do again what Benfey did once for all. He has, however, given a very clear account of the wanderings of the 'Pantschatantra,' in its various forms, and a valuable table of the different versions and their relation to each other.

He has, moreover, contributed something new in the discovery of the curious fact that the illustrations in the older versions were apparently translated, so to speak, along with the text. In some of the manuscripts the figures are still found, in others space is left for them and a list of the intended illustrations inserted in the proper places. This is the case with the Hebrew version from which the first form of the Latin version was made. The latter has illustrations, and these (as well as in the first German and Spanish versions which have the same plates) are identical with the list in the Hebrew version. This traditional illustration of the fable ceases, Mr. Jacobs says, after the first edition of the Latin, German, and Spanish appeared in print, so that the plates of the Italian and English versions, some of which are reproduced in the work before us, cannot be brought into connection with India.

After dealing with the external history of the work, Mr. Jacobs investigates its contents, and makes some very sensible remarks on the attempt of some scholars to trace all folk-tales to India in general, and in particular to this collection. We do not think, however, that Mr. Jacobs's argument is a strong one, viz.: that because the Fables were translated not for their interest as stories, but for their moral interest, they could not have had such an influence on European folk-tales as has been attributed to them. On the contrary, this is one of the things that led to their diffusion among the people. Jacques de Vitry, a famous preacher of the thirteenth century, uses some fifty fables as illustrative stories in his sermons, and these were repeated by other

preachers *ad infinitum*. The Indian origin of fables has, like the theory of the Indian origin of folk-tales, received a blow from the fact that similar fables (and stories) are found in Egypt, Assyria, and Judæa before any connection with India can be proved. The claim that is set up for Africa is also impaired by the fact that an Indian influence can be shown in some cases. The most curious example of this, and one of interest to American readers, is that of the "Tar-Baby" in 'Uncle Remus.' Now, in one of the Jâtakas or Buddhist Birth-Stories occurs an episode so like that in 'Uncle Remus' that it is difficult to avoid assuming a causal connection between the two. Yet if that be so, as Mr. Jacobs says, the Jâtaka of the Demon of the Matted Hair must have passed from India to Africa with Hindu merchants or Arab slave-traders, must then have crossed Equatorial Africa before Livingstone or Stanley, taken ship in the hold of a slaver across the Atlantic, and found a home in the log-cabin of South Carolina. It seems clear, however, that India is the home of beast-fables with a moral attached, and that this tendency to moralization is the outcome of Buddhism.

The English version just reprinted had become excessively scarce, and will be welcomed by all who are fond of racy Elizabethan English. Sir Thomas North chose for his original the Italian version of Anton Francesco Doni, who translated from the Spanish 'Exemplario,' which was taken from the Latin of John of Capua ('Directorium Vite Humane'), which came from the Hebrew version of the Arabic 'Kalilah wa Dimna,' the source of which was the Pehlevi (or Old Persian) translation, now lost, of Barzoye, who used the Sanskrit original, also now lost. So much for the pedigree of North's version. He confined himself to the first part of Doni's 'Moral Filosofia' (corresponding to the first chapter of the Sanskrit original). North translated freely, as the translators of that day wisely did, so that their versions have a certain literary independence. Sometimes North's original puzzled him, and then he translated literally. An amusing example of this is in a passage which Mr. Jacobs has been unable to comprehend. On p. 178 North's version reads:

"Be of good cheare, brother, the Bull perswaded by me goth to Court to seeke out the King, if he see him sturre any thing at all; and the Lion also hath my Coccomber in his bodie, and in his heade the toyes and devises that I have tolde him, looking for the Bull with many an yll thought."

Evidently North did not here understand the Italian idioms, "mettere un cocomero in corpo, avere un cocomero in corpo," which Baretti explains as meaning "to have or put a flea in one's ear."

The editor deserves great praise for his admirable Introduction, valuable table of versions, and convenient analytical table of contents. The form of the book is the same as that of the others in the series, and the illustrations equally artistic. For the benefit of the bibliographer, it may be said that a few copies of the Introduction have been printed on large paper for private distribution.

We venture to append to this notice a not irrelevant communication, the last received by us from the late Rev. Prof. Samuel Beal, on "Indications of an Early Knowledge of the Buddhist Jâtakas, in Europe and Western Asia":

"When at Gibraltar and afterwards in South America," says Mr. Beal, "I was amused by a custom generally prevalent in mixed company, viz., after sneezing, of being saluted by the persons present with the expression, 'Viva, señor!' to which the reply was, 'Y usted, señor! viva!' This custom is singularly in agreement with the story found in the Gagga-Jâtaka (Fausböll, '10 Jâtakas,' ii. 16, 5), in which we read that a certain Yakkha, dwelling in a hall near Bârânasî, had got permission from Vessavana that, among the persons entering this hall, he who when one sneezes, says, "Mayest thou live!" and he who when one says, "Mayest thou live!" replies, "Mayest thou live also!" with the exception of such saying, "Mayest thou live!" and "Mayest thou also live!" he might eat all others. Now, the custom to which I have referred as still common in Spain and among the Spanish Americans is an exact reflex of the terms of this agreement of the Yakkha with Vessavana. There can be little doubt, I should think, that the one is derived from the other.

"In No. cxxxv. of the *Fortnightly Review* (new series) is an article written by the late Mr. Matthew Arnold on 'Equality.' He takes his text from Menander's 'Fragments' (or, rather, the sententious lines printed at the end of the 'Fragments'), among which is this line: "Ἰσότητα δ' αἱροῦ καὶ πλεονεξίαν φύγε," on which words Mr. Arnold founds his essay on 'Social Equality.' But we may be bold enough to think that Menander had no such point in view when he wrote the words quoted. To show this, we must remember that Menander flourished just at the time when Buddhist literature would be introduced into Western Asia (Syria and its neighborhood), and also into Alexandria, by the return of the generals who had accompanied Alexander the Great in his expedition to India. We are told that Ptolemy Lagi specially invited Menander and Philemon to his court at Alexandria to take part in the entertainments, principally of the New Comedy of which Menander was almost the originator. We are told also that this New Comedy speedily found its way to India through Barygaza to Ujjayini (*vide* Dr. Ernst Windisch, in his paper read before the Fifth International Oriental Congress at Berlin, 'Der griechische Einfluss im indischem Drama,' p. 15).

"It is probable, therefore, that Menander heard from the soldiers and camp-followers returned from India the stories which they had picked up and amused themselves with in camp. There is no such popular story in Buddhist folk-lore as the Jâtaka known as 'Vedabbha'—so popular, indeed, that it has found its way into Chaucer (as Mr. Francis has shown) as the 'Pardoner's Tale.' Now the moral of this tale is simply the one named by Mr. Matthew Arnold, 'Choose equality, flee greed.' And, as Mr. Arnold observes, the word πλεονεξία means 'wishing or trying for the bigger share,' in agreement with the striving to get the bigger share in the Jâtaka. I think, therefore, that the apothegm of Menander is simply the application of the moral of the Jâtaka in question: 'Be contented with an equal division of the wealth, avoid a desire to get a double portion or the whole of it.' It is probable that St. Paul, in his text, 'The love of money is the root of all evil,' had in view the refrain of the Jâtaka in question, 'Verily, covetousness is the root of destruction.' But Mr. Francis has already noticed this.

"There is another sententious line of Menander's to which Mr. Arnold refers in the essay named, that is, the familiar copy-book text, 'Evil communications corrupt good manners.' This also is quoted by St. Paul. The Church historian Socrates attributes it to Sophocles, but he is probably mistaken, as no such passage has been found in that poet's works. It is from the 'Thaïs' of Menander. This text is also the moral of a Buddhist Jâtaka. (Fausböll, '5, Jâtakas,' No. 1). In this story we read of the *amba* fruit being poisoned by the *nimba*, and the moral is this: 'By reason of its connection with the bad (nimbas), therefore, the amba has bitter fruit.' That is to say, the evil acquaintance or fellowship of the nimba with the amba destroyed (far *more* than 'good *manners*'), the 'good *qualities* of the amba. I venture to suggest that this Jâtaka also is the key both to the sententious line of Menander and also to the meaning of the text of St. Paul.

"I think research on these points would disclose still further analogies."

SOME HOLIDAY BOOKS.

The Wooing of Grandmother Grey. By Kate Tannatt Woods. Illustrated. Boston: Lee & Shepard.

Little Maids. By F. Brundage. E. P. Dutton & Co. 8 sheets in portfolio.

Rab and His Friends. By John Brown, M.D. With illustrations by Hermann Simon and Edmund H. Garrett. Philadelphia: J. B. Lippincott Co.

In the "400" and Out. By C. Jay Taylor. Keppler & Schwarzmann.

Christmas Drawings for the Human Race. By Thomas Nast. New York: Harper & Bros.

'GRANDMOTHER GREY' is a rambling little poem of a hundred and twenty lines. In the old lady's own words, addressed to the only person who was likely to know all the facts, she recalls the incidents of the long-ago Christmas eve when she was asked to "name the day"; and three final stanzas tell of her easy death on the next New Year's night. The verses have no particular metre and no particular quality except simplicity. There is no false sentiment in them, and no pretence of being loftier poetry than they are. The illustrations, by Mr. Charles Copeland, are of a similar unpretending character, more like the work of twenty years ago than what one expects in a recent book of pictures. They have some artistic qualities, however. There is, for instance, a strong impression given of the wintry landscape, and the chilly interior of the old farm-house, with an open fire and candles in saucer candlesticks as the only warmth and light to be had. In a way, too, the other details of the surroundings of our couple are realized, although certainly there seems to be hesitation in the artist's mind whether he shall put his characters into the costume of sixty years since or in that of a later day. The book makes an oblong quarto, not disagreeable to see and to handle.

As to 'Little Maids,' there are seven of them in pretty colored pictures, each one having a handsome sheet of stiff paper all to herself. There are a Dutch little girl, an Italian with her tambourine, and a Japanese with her doll, a school-girl in some trouble over the third royal R, with dishevelled hair, swollen eyes, and tell-tale slate and pencil, and one with her day's trouble over, going to bed with a flat candlestick and a puppy. The set of seven is prefaced by verses made into a decorative page with blossoming branches of a fruit tree. It is a pretty gift portfolio, in a cover simulating veneer and tied with ribbon.

The latest edition of 'Rab and His Friends' is a pretty little thin quarto, with full-page woodcuts of some interest. Perhaps the half-real, half-exaggerated pathos of the story could not be much better expressed in art than by illustrations of about the character of these. The personages, human and canine, look as if they might be portraits; this, assuredly, is to be recorded as a merit.

Mr. Taylor's collection of pictures is one of the many compilations from *Puck* which have appeared during these recent years of the deserved prosperity of that journal. The American comic illustrated paper seems to have created itself in a permanent form at length, and *Puck*, with its excellent politics and political writing, its sagacious appeal to the better sense of all citizens, its unlimited supply of very good fun and fooling, and its unæsthetic appearance, is, perhaps, typical of the whole community. But why, when *Puck's* illustrations are so good, should they be so hideous? Why are the Jew broker, the rowdy Irishman, the up-country deacon, the watering-place exquisite, the girl in the bathing dress, her stout mamma, the negro wooer, President Harrison, and the

tramp, each and all made such impossible monsters of deformity? There is nothing foul in all this: delicate-minded people with an undeveloped sense of beauty will not be horrified by anything in *Puck;* but if any one has begun to see a difference between the ugly and the comely, "in nature or in book," he will be repelled, and will find it hard even to appreciate the satire or the fun conveyed in such unseemly designs. Mr. Taylor is not the only artist of *Puck* of whom this criticism is to be made, but this book of his gives enough instances of it to satisfy any one. Caricature, to be effective, need not resort to such ugliness as this.

The preface to 'Christmas Drawings' announces that this is the first collection of Mr. Nast's drawings that has been published. This seems strange, in view of the fact that Mr. Nast has been illustrating newspapers, periodicals, and the like for a generation. It is a pity that this first collection should be so slight a thing. There is none of his political-satire in it, nor any of that fun of his which used to brighten the dark days of Reconstruction and the dismal Greeley campaign of 1872. These pictures have no reason for being brought together but their common subject—Christmas—and there are some among them which have but little to do with even that well-worn common topic. They seem to be of all epochs, from war-time down. It is not possible to say much good of them, except that they may afford innocent amusement to very little children; though, as they tell no story, and appeal to no especial sympathies of childhood, even this usefulness would seem to be limited. The ungraceful rendering of childishness in face and figure, which has been always a characteristic of Mr. Nast's work, is very noticeable throughout the book.

Tenth Census of the United States. 1880. Vol. XIX. Social Statistics of Cities. Part II. Washington: Government Printing-Office.

THE most interesting, and perhaps the most valuable, feature of this volume, which has only recently appeared, is Mr. Geo. W. Cable's historical account of the city of New Orleans. It fills about eighty large quarto pages, nearly one-tenth of the total number in this part, although all the cities of the Southern and Western States are included. This is three times the space allotted to either Chicago, St. Louis, Baltimore, or Washington, and is, in fact, more than is given to either Boston, New York, or Philadelphia. It must be regarded as disproportionate, unless we consider the peculiarly interesting character of the history of New Orleans and the exceptional qualifications of Mr. Cable. So much money is wasted in public printing that it is perhaps a matter of congratulation that a brilliant and scholarly historical treatise should be published by the Government, although it is scarcely appropriate for a census report, and can be read by but few in its present form.

We cannot undertake to comment upon Mr. Cable's fascinating description of the French and Spanish régime in New Orleans, but must select as a more appropriate although less agreeable subject for notice his account of the hygienic history of that city. To the natural disadvantages of an exceptionally insalubrious site, the inhabitants added every conceivable inducement to disease that human perversity could originate. Sewers were unthought of; human bodies were buried, so to speak, above ground, in structures that soon fell to pieces; the streets were undrained, unpaved, and used as receptacles for all manner of offal; stagnant pools of water stood under houses and in vacant lots; quarantine was neglected, and houses were actually built in a district that had been used as a dumping-ground for human ordure. The salubrity of these conditions was believed in by the inhabitants with religious fervor. After a year during which there had been over 1,800 deaths from yellow fever, and when the death-rate for four years had been from 60 to 80 per 1,000, the Mayor officially announced that the city had been perfectly healthy and free from all epidemic. A noted physician declared in 1853 that the accumulation of filth in the yards and streets of the city was calculated to retard the formation of a yellow-fever atmosphere. Within two months 283 persons died of the fever in one day, and one-ninth of the population perished from this cause during that year. In three years, more than 35,000 died, in a population reduced by flight to 135,000. During the eighty-four years prior to 1880 (the fever first appearing in 1796), it is computed that 100,000 persons fell victims to this scourge within the city limits, while in the surrounding country the deaths were probably 50,000 to 75,000 more. The surviving population have not been altogether blind to the suggestion that in such a climate a total disregard of cleanliness is not prudent, and the sanitary condition of the city has materially improved, although it is very far from perfect. Still, the death-rate for 1880 is reported as only 25 per 1,000.

The case of Memphis, owing to the more recent date of its severest epidemic, is even more notorious. Without the excuse of New Orleans in its low situation, the people of Memphis had been wholly indifferent to the perils of their climate, in some cases digging their cesspools in their cellars, and, when they were full, covering them up and digging others beside them. Retribution came in 1878, after some unheeded warnings, and one-quarter of the population died. The punishment was sufficient, and, largely under the advice of Col. Waring, the editor of these volumes, an elaborate and scientific system of sewerage was introduced. The details of this system are of great interest, and its subsequent history should be full of instruction. These statistics seem to show that many of our smaller cities are running great risks by their neglect to insist upon proper sanitary observances, and it is probably only owing to more favorable climatic conditions that they have hitherto escaped severe visitation.

The statistics relating to drainage, municipal cleansing, water-supply, etc., would be of more value if the death-rates of the cities were added. But as it is, they are the most valuable of the statistics here given. A careful comparison shows that in certain respects the returns are so defective as to vitiate any inferences which we might attempt to draw from them. Thus we have what purport to be tables showing the manufactures of the different cities, but from many cities no returns are given, while in the case of others they are certainly questionable. If we compare the neighboring cities of Reading, Scranton, and Wilkesbarre, we learn that in Reading, out of a population of about 43,000, nearly 6,700 are "hands employed"; in Scranton, with 2,500 more inhabitants, the number is 3,550; while in Wilkesbarre, out of 23,340 people, only 645 are so occupied. It is almost incredible that any modern city should show so small a manufacturing population as this. Again, if we consider the rate of wages, we find suspicious variations. The highest average annual wages are paid in Galveston—$730. In Richmond they are $214, in New Orleans $391. In Petersburg they are $144, in Norfolk they are $422, in Baltimore $268. In New York they are $427, in Brooklyn $472. While these figures may be in most cases correct, yet we think they are clearly unsuitable for statistical use. Such as they are, however, they are probably more trustworthy than any figures of the kind that will be supplied by the coming census. The unfortunate selection of a superintendent whose chief recommendation consisted in his manipulation of statistics of wages in the interest of the protectionist ring, has discredited the work in advance of its appearance.

The figures giving the assessed value of property in the different cities are, of course, owing to the arbitrary rates of assessment, by themselves of little value. But by comparing the population with the amount of tax levied, we are able to determine the average amount paid by every inhabitant. What they get for their money is a question not so easy to answer. Hartford seems to have the unenviable pre-eminence of taxing its citizens more than any other city in the country. The rate there in 1880 was about $30 *per caput.* New York comes next with a rate of $23.50. The only other places that we have noted as having a rate above $20 are the two Portlands in Maine and Oregon, Boston, and San Francisco. Providence levied $15.50, New Haven $11.50, Albany and Brooklyn $11, Newark $13, Philadelphia $14, Pittsburgh the same, Wilmington $8, Baltimore $9, Charleston $13.75, New Orleans $11, Cincinnati $19, Cleveland $13, Chicago $12, St. Louis $10. The great mass of smaller towns tax their inhabitants from $7 to $10 apiece, and we are inclined to consider a rate higher than $10 as presumptive evidence of corrupt management, although, as in the case of Portland, Me., some great calamity may have caused exceptional expense. The railroad speculations of that city, however, are, perhaps, accountable for much of the burden.

We are unable to suggest any explanation for the extraordinary rate of taxation in Hartford. On the other hand, the rate in Brooklyn is, under the circumstances, surprisingly low. The lowest rate that we have noted prevailed in Scranton, being only about $4.75. The citizens of Pittsfield, Mass., seem to be most enviably situated, enjoying the advantages of their healthful climate, pure water, and beautiful surroundings at an expense for municipal taxes of only $5.50 per individual. We have made some attempt to compare the wages of the police with those prevailing in manufactures, with results indicating that policemen receive from two to three times as much as ordinary working people; but, owing to the uncertainty of the data, we can only conclude in a general way that municipal officers are likely to be paid higher than the market rates for labor.

The volumes are furnished with numerous maps of the various cities, indicating their growth, the location of sewers, etc. They would be of value to the makers of guide-books were it not for their belated appearance.

The Structure and Distribution of Coral Reefs. By Charles Darwin, M.A., F.R.S. Third edition, with an appendix by Prof. T. G. Bonney, D.Sc., F.R.S. D. Appleton & Co. 1889.

To the great body of readers in whose minds the late Charles Darwin stands as the central luminary of the modern doctrine of evolution, it is probably not known that the name of this illustrious investigator is associated with another theory which, in its application to the physics of the earth, is only less far-reaching than is that of evolution in the domain of bi-

ology. The broad conception that vast areas of the earth's surface are to-day, or have been quite recently, subsiding, while equal tracts were undergoing the process of elevation, was first established as a supposed law by the author of the 'Origin of Species,' and, for a period of thirty years or more, this law was almost unreservedly accepted as one of the canons of terrestrial dynamics. Mr. Darwin was not, it is true, the first to determine elevation or depression of the land-surface—this had been abundantly demonstrated by the time when, as he characteristically informs us in his autobiographical reminiscences, "incredibly dull" lectures on geology at Edinburgh forced on him the determination never "to read a book on geology, or in any way to study the science"; but it was he who first saw the significance of certain facts which permitted him to mark out the tracts of supposed existing weakness or solidity in the crust, and to demonstrate where, in a manner unseen, the forces of depression and elevation were operating on the most gigantic scale. It was his cogent reasoning, supplemented by that of an equally sagacious investigator in the same field of inquiry, Prof. James D. Dana, which forced geologists to recognize that the Central Pacific was one vast subsiding area, only here and there broken by points of stability or elevation; and it was the same reasoning which sought to demonstrate areas of elevation along the East African coast and in the region of the West Indian seas.

When, upwards of fifty years ago, Mr. Darwin first published his observations on the structure and distribution of coral reefs, and enunciated that brilliant generalization of coral-growth which, in the words of one of his critics, "took the scientific world by storm," but little definite was known regarding those remarkable formations which at close intervals dot the deeper parts of much of the tropical seas. Chamisso, and after him Quoy and Gaimard, Ehrenberg, and others, had already determined the narrow limits within which reef-building corals are found; but these investigators failed to correlate their observed facts with the special conditions—the abrupt and deep descent into the oceanic abyss—under which the greater number of the coral islands occur. To them and to their successors, up to the days of Mr. Darwin, the atolls of the Pacific were mere cappings to submerged mountain-peaks, a superstructure of organic origin formed within the shallow zone of 100 to 150 feet to which the coral animal is restricted. When Mr. Darwin announced to the scientific world his conclusion that these ocean-swept islands of coral-sand were in reality giant buttresses rising from the deep, and that their formation could only be accounted for on the hypothesis of continuous subsidence, it was considered that geological science had scored a triumph; while the early and independent confirmation of these views by one whose observations covered a broader field than that of his predecessor (and it might be added, than that of any of his successors), seemed to remove the hypothesis from the domain of doctrine to that of established fact.

The revulsion in the British geological mind which has been apparent during the last ten years or more, had its origin in the deep-sea researches of the *Challenger* expedition. The discovery of the endless deposit of organic sediment on the floor of the ocean, a certain knowledge of the existence of a considerable number of submerged mountain peaks rising to within a comparatively short distance of the oceanic surface, and a more intimate acquaintance with the habits of the coral-animal itself, have opened up possibilities in the way of the making of coral-structures which could scarcely have appealed to Mr. Darwin at the time of the publication of his important work. Murray, Guppy, Geikie, and Bourne, over whom has been thrown the mantle of that venerable "defender of the faith," the Duke of Argyll, have successively emancipated themselves from the assumed yoke of Darwinian authority, and proclaimed their allegiance to the standard of rebellion which had already, in a measure, been unfurled by Semper and Rein in Germany and by Agassiz in this country. The vigor with which the new school of coral-geologists, whose discordant views scarcely permit, as yet, of the formulation of a full substitute theory of coral growth, have attacked the time-honored demonstration which appears in all text-books of geology; and the bitterness with which some of their representatives have launched forth their arguments in the face of those who yet see fit to remain by the old standard, recall vividly the reception which greeted the appearance of the 'Origin of Species.' And, just as in the one case the burst of opposition was gradually silenced, or, rather, silenced itself, so in the present instance it seems not unlikely that the after-ebullition will be gradually quieted out of existence.

A full acceptance of the Darwinian hypothesis need not necessarily follow, however. The structure of coral-reefs and islands may be much more complex and embody many more details than geologists have commonly supposed, and thus it may defy immediate explanation. But it appears manifest from a study of the writings of the opposition school of geologists, that many of the more salient points urged by them against the Darwinian theory had already, with that foresight which seems never to have left the master, been anticipated and carefully weighed by Darwin himself; and it might also be added that most of the answers which have been volunteered to his critics had already been given by Darwin himself to his own criticisms. One cannot but regret that the makers of a controversy which threatens to be prolonged for some time to come should not have more carefully studied Mr. Darwin's work before lighting the torch of discord, and applied to their own observations the form of criticism to which the great English naturalist invariably subjected himself.

The publication of the present (third) edition of Mr. Darwin's work is opportune, and it is extremely fortunate that the preparation of supplemental matter has fallen into the hands of one whose mind is still open to conviction. We are, however, not sure that Prof. Bonney has made the best use of his opportunity. A rigorous adhesion to the principle of impartiality has prevented that incisive analysis and criticism of the works of the opposing schools (published since 1874, the year of publication of the second edition) which the interests of truth and science demand, and for the accomplishment of which Prof. Bonney is eminently fitted. It is true that the editor sums up his own conclusions, which are rather in favor of the Darwinian hypothesis than otherwise, but these are based more on broad principles, whether positive or negative, than on a close review of the subordinate facts which underlie or make up the groundwork of the rival theories. The book will, however, be found very useful by students, as it presents in a condensed form the special views and observations of recent investigators. We notice no reference to Semper's summaries published in his 'Animal Life' (1881), to Rice's 'Observations on the Geology of the Bermuda Islands' (1884), or to Walther's 'Korallenriffe der Sinaihalbinsel' (1888).

Antiquités Nationales. Description raisonnée du Musée de Saint-Germain-en-Laye. I. Époque des Alluvions et des Cavernes. Par Salomon Reinach. Paris: Firmin-Didot et Cie. 1889. 8vo, 322 pp.

When, four years ago, the eminent prehistoric archæologist Gabriel de Mortillet, upon the occasion of his election as deputy to the National Assembly from the Department of Seine-et-Oise, resigned, after eighteen years of most valuable service, the position of assistant keeper of the great national museum of St.-Germain (the prehistoric department of which he had organized), the question who should be appointed to succeed him became of very great importance to science. We think the present volume proves that the authorities made no mistake when they nominated to the vacant post Salomon Reinach, a young, thoroughly trained, classical archæologist, who possessed no special knowledge of prehistoric archæology. But the remarkable works already published by him, the 'Manuel de Philologie classique,' and the 'Traité d'Épigraphie grecque' (both of which have been highly commended in our pages), gave sufficient evidence of his competence to grapple with the bibliographical details of any subject; and this was the kind of service that was especially required by the new science. We have formed a very high opinion of the thoroughness, accuracy, and modesty with which his difficult task has been accomplished; and we find it quite up to the standard of his previous works.

The present portion deals only with the earliest epoch of prehistoric archæology (or the Quaternary Period)—that of the Palæolithic Man of the River-Drift and the Caverns—leaving for a subsequent volume the treatment of the Celtic and Gallo-Roman antiquities in the museum. The author gives first a brief historical sketch, illustrated by reproductions of several old engravings, of the picturesque Château of Saint-Germain, of which the earliest part dates from the time of St. Louis, but the main portion was built by Francis I. This, after undergoing thorough scientific restorations (now nearly completed), has been appropriated as the seat of the National Museum of France. Then some seventy-five pages are devoted to a condensed, systematic survey of all the numerous questions that have arisen bearing upon the facts and the hypotheses respecting the Quaternary epoch, each accompanied by ample bibliographical references. This sketch we confidently recommend to any student who desires to make a serious study of the prehistoric question. The principal part of the volume, however, is devoted to a systematic description of the contents of the thirty-five glass cases which fill the first hall, which goes by the name of "La Gaule avant les Métaux"—France in the Stone Age—and of which a view is given as the frontispiece. The plan is to furnish such a brief description, in detail, of the contents of each of the cases as would be given by a learned custodian to an intelligent and inquisitive visitor. This is supplemented, for the benefit of students at a distance, by a circumstantial and detailed account of all the objects, with full bibliographical notes about the works which have been written concerning them and the discussions to which they have given rise. The bibliographical work has been most thoroughly done, including—what is rare for a Frenchman—a notice of the contents of all the German periodical publications which deal with prehistoric subjects. A great many

of the objects are illustrated by engravings, 136 in number, nearly all made from the originals in the museum or from casts.

We regret that we cannot devote more space to pointing out the many valuable studies incidentally scattered through this useful volume. We must content ourselves with calling the particular attention of prehistoric students to the careful consideration of the subject of the characteristics of the artificial working of stone, on p. 87; to the sober survey of the vexed question of the Tertiary Man, pp. 96–101; the elaborate study upon Prehistoric Craniology, pp. 128–134; the clear and exhaustive account of the celebrated station of Solutré, and the many questions to which it has given rise, pp. 196–210; and finally to the careful and conservative discussion of the so-called *hiatus*, or the Transition from the Palæolithic to the Neolithic Age, pp. 267–282.

The Life-Work of the Author of 'Uncle Tom's Cabin.' By Florence Thayer Macray. Funk & Wagnalls. 1889.

THERE is something very noticeable in the appearance of this book on the eve of Houghton, Mifflin & Co.'s publication of a life of Mrs. Stowe by her son, which is promised at some time in November. Although the author does her best to fortify herself with the permission of Mrs. Stowe and her son to prepare a sketch of her life, it is evident from the tone of her preface that her book is or will be regarded as a breach of confidence or courtesy. It would appear that Mrs. Stowe and her son did not anticipate so full a biography as this, which is evidently, despite the disclaimer of the author, about as full as she could make it. It has various marks of haste: Such spellings as "Gerret Smith," "Thomas Carlisle," "degredation," and so on, suggest carelessness in proof-reading, if nothing worse. There is also evidence, as where Mrs. Stowe is spoken of as doing something "a few years before her death," of an intention at some time to postpone the publication of the work until after that event.

It would be a pity if any should confound this catch-penny book with the forthcoming Life, or conclude that this will answer, for it is hardly possible that a second treatment of the subject will be as poor as this. It is largely made up of paraphrases of Mrs. Stowe's books. A more ridiculous waste of type than a paraphrase of 'Uncle Tom's Cabin,' which is retold at considerable length, could hardly be conceived. The Byron-scandal episode is treated at great length, but with no helpful touch. The appearance of the book in general has been made as sensational as possible. It is a queer thing, on p. 71, the putting of Free-Soilers and Abolitionists together as equally under ban. Some of those classed as Abolitionists, including Sumner, are not deserving of the praise or blame that properly belongs to them. And what famous Abolitionist was there by the name of Baird? The frontispiece is Richmond's idealized portrait of Mrs. Stowe at the age of forty-one. It has little in keeping with her description of herself at that time—"as withered and dry as a pinch of snuff." The account of her London ovations is not such as Mrs. Stowe's modesty would have approved. It could hardly have been less delicately done.

Grammar of the Russian Language. By W. R. Morfill. Oxford: Clarendon Press; New York: Macmillan.

IT is somewhat difficult to get at Mr. Morfill's exact point of view in his Grammar, either from inspection of the book itself or from a perusal of his preface. He calls it "rudimentary," and says that "it is a scientific treatment of the Russian language which is attempted." It must be conceded that a more condensed statement of the subject would be impossible, but one may be permitted to doubt whether condensation has not been obtained at the expense of utility. Few people are gifted with sufficiently robust memories to retain all the crabbed rules, declensions, verbal aspects, and other knotty points in mind until given an opportunity to apply them in practice upon the Reading Lessons. A teacher is an almost indispensable adjunct to Mr. Morfill's Grammar—and a teacher who is capable of inventing illustrative exercises. Such teachers are rare in any language, especially in Russian and outside of Russia. For a "rudimentary" text-book, a judicious mixture of this dry, concise method with the diffuse, precept-and-practice Ollendorffian plan would seem to be the most advantageous. Assuredly the learner will desire to have some one reconcile the statement that "the genitive and accusative masculine and neuter are the same in the case of animate things; in the plural this holds good for all genders," with the statement, two pages further on, that the accusative plural of *ry'ba* a fish, is *ryby'*, while the genitive plural is *ryb*. Mr. Morfill, in his own evident mastery of the language, does not perceive how repellingly difficult he has made his handy volume, in spite of his clearness of diction and thorough classification, for all those who are not already well acquainted with Russian, or who are born philologists. However, if the learner survive the test of the thorny preliminaries, he will find the Reading Lessons well chosen and very instructive.

BOOKS OF THE WEEK.

Adams, H. History of the United States of America during the First Administration of Thomas Jefferson. Vols. I., II. Chas. Scribner's Sons. $4.
Alden, W. L. The Loss of the Swansea. Boston: D. Lothrop Co. $1.
Armstrong, W. Cleopatra's Daughter. Boston: De Wolfe, Fiske & Co. $1.25.
Aryan Sun-Myths: The Origin of Religion. Troy: Nims & Knight. $1.25.
Astor, W. W. Storza, a Story of Milan. Chas. Scribner's Sons. $1.50.
Baring-Gould, S. Grettir the Outlaw: A Story of Iceland. Scribner & Welford. $1.50.
Barnes, Mary M. Epithalamium, with drawings by Dora Wheeler. G. P. Putnam's Sons. $5.
Brackett, J. R. The Negro in Maryland: A Study of the Institution of Slavery. Baltimore: N. Murray.
Briggs, Prof. C. A. Biblical History: A Lecture with an Appendix. Chas. Scribner's Sons.
Brown, Dr. J. Rab and his Friends. Illustrated. Philadelphia: J. B. Lippincott Co. $1.50.
Bullen, A. H. Lyrics from the Dramatists of the Elizabethan Age. London: John C. Nimmo.
Burnham, Clara L. A Sane Lunatic. Boston: Houghton, Mifflin & Co. $1.25.
Burnham, Clara L. Dearly Bought: A Novel. Boston: Houghton, Mifflin & Co. $1.25.
Burnham, Clara L. "No Gentleman." Boston: Houghton, Mifflin & Co. $1.25.
Butterworth, H. Zigzag Journeys in the British Isles. Boston: Estes & Lauriat. $1.75.
Chambers's Cyclopædia. New ed. Vol. IV. Dionysius to Friction. Philadelphia: J. B. Lippincott Co. $3.
Champney, Elizabeth W. Three Vassar Girls in Russia and Turkey. Boston: Estes & Lauriat. $1.50.
Chaney, Rev. G. L. Belief. Boston: Roberts Bros. $1.
Chatterbox, 1889. Boston: Estes & Lauriat. $1.25.
Cheney, Emma, and Others. Feathers, Furs, and Fins; or, Stories of Animal Life for Children. Boston: Estes & Lauriat. $2.50.
Church, Rev. A. J. To the Lions: A Tale of the Early Christians. G. P. Putnam's Sons. $1.25.
Coleridge, E. P. "The Argonautica" of Apollonius Rhodius in English Prose. Scribner & Welford. $2.
Corson, Prof. H. Introduction to the Study of Shakspere. Boston: D. C. Heath & Co. $1.40.
Dawson, Sir J. W. Handbook of Geology for Canadian Students. Montreal: Dawson Bros.
Deane, Mary B. Three Little Maids. Boston: D. Lothrop Co. $1.50.
Deland, Mrs. M. Florida Days. Boston: Little, Brown & Co. $4.
Drew, B. Pens and Types; or, Hints and Helps to those who write, &c. New ed. Boston: Lee & Shepard. $1.25.
Du Chaillu, Paul B. The Viking Age. 2 vols. Chas. Scribner's Sons. $7.50.
Dumas, A. The Count of Monte Cristo. 4 vols. Boston: Little, Brown & Co. $6.
Eaton, A. W. Acadian Legends and Lyrics. White & Allen. $1.25.
Fausset, Rev. W. J. The Student's Cicero. From the German of Dr. Munk. London: Swann Sonnenschein & Co.
Fleetwood, J. J. Quicksands; or, His Double Life. The Minerva Publishing Co. 50 cents.
Ford, W. C. The Writings of George Washington. Vol. IV. 1776. G. P. Putnam's Sons. $5.
Foote, Mary H. The Last Assembly Ball. Boston: Houghton, Mifflin & Co. $1.25.
Freshfield, D. W., and Wharton, Capt. W. J. L. Hints to Travellers, Scientific and General. 6th ed. London: The Geographical Society.
Fuller, Marie L. The Aspen Shade. Boston: De Wolfe, Fiske & Co. $1.
Gilman, A. The Story of Boston: A Study of Independency. G. P. Putnam's Sons. $1.75.
Glover, Elizabeth. Talks about a Fine Art. T. Y. Crowell & Co. 30 cents.
Greene, H. Coal and the Coal Mines. Boston: Houghton, Mifflin & Co. 75 cents.
Harrison, J. T. The Creation and Physical Structure of the Earth. Longmans, Green & Co. $2.50.
Henty, G. A. With Lee in Virginia. Scribner & Welford. $1.50.
Henty, G. A. By Pike and Dyke: A Tale of the Rise of the Dutch Republic. Scribner & Welford. $1.50.
Henty, G. A. One of the 28th: A Tale of Waterloo. Scribner & Welford. $1.50.
Henty, G. A. Tales of Daring and Danger. Scribner & Welford. 75 cents.
Hugo, Victor. Notre-Dame de Paris. Boston: Estes & Lauriat. $3.
Jackson, G. Essentials of the Metric System. Boston: De Wolfe, Fiske & Co. 50 cents.
Krafft-Ebing, Dr. R. von. An Experimental Study of Hypnotism. G. P. Putnam's Sons. $1.25.
Lauridsen, P. Vitus Bering, the Discoverer of Bering Strait. Chicago: S. C. Griggs & Co. $1.25.
Lectures before the Thompson Street Poker Club. White & Allen. $1.50.
Leroy Beaulieu, A. L'Empire des Tsars et les Russes. Tome III. La Religion. Paris: Hachette; New York: F. W. Christern.
Lil. Boston: Roberts Bros. $1.
Lover, S. The Low-Back'd Car. Illustrated by Wm. Magrath. Philadelphia: J. B. Lippincott Co. $5.
Little, Elizabeth N. Off the Weather Bow on Life's Voyage. White & Allen. $1.50.
Little Ones' Annual. Stories and Poems for Little People. Boston: Estes & Lauriat. $1.75.

HAMILTON & BISHOP, BANKERS, 96 Broadway.

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU, author of 'Equatorial Africa,' 'Land of the Midnight Sun,' etc.

With 1,400 Illustrations. 2 vols. 8vo, $7.50.

"*Nothing so important as this work has appeared for some time. The whole life of a great people is revealed, their arts, their customs, and their creeds.*"—N. Y. Commercial Advertiser.

"*The clear, vivid, brilliant style of Mr. Du Chaillu lends a fascination to every topic he discusses, and the text is fairly illuminated with the copious illustrations.*"—Boston Traveller.

WILLIAM WALDORF ASTOR'S NEW NOVEL.

Sforza: A Story of Milan.

Handsomely bound, 12mo. $1.50.

"*As in his successful work, 'Valentino,' Mr. Astor chooses historical and romantic Italy for the scene of his novel. It is a tale of one of the most famous families of mediæval Italy, and gives the author the richest possible material for a dramatic plot, several well-drawn and sharply accentuated characters, and a succession of brilliantly-worded pen-pictures of the times he portrays.*"—Brooklyn Times.

"*The movement throughout is spirited, the reproduction of bygone times and people is realistic. Mr. Astor has made excellent use of his historical material, and has written a romance which will heighten the reputation he made by 'Valentino.'*"—N. Y. Tribune.

History of the United States.

By HENRY ADAMS. THE FIRST ADMINISTRATION OF THOMAS JEFFERSON. 12mo, 2 vols., $4.00.

"*A most important and critical period is embraced in the first Administration of Mr. Jefferson, and this book covers it with a clearness and interest, as well as minuteness, that assures it an immediate and high place in the standard literature of the country.*"—Washington Post.

Aspects of the Earth.

A Popular Account of some Familiar Geological Phenomena. By PROF. N. S. SHALER. With 100 Illustrations, 8vo, $4.00.

The general reader unacquainted with natural science is here given an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanoes, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

The United States:

ITS HISTORY AND CONSTITUTION. By Prof. Alexander Johnston. 12mo. $1.00.

Prof. Johnston's work, compact and yet thorough and comprehensive, presents the best survey attainable in a single volume of the history of the United States down to the present time. The author's analysis of the political and constitutional development of the country is terse, popular, and authoritative.

The Bursting of a Boom.

A Semi-Tropical Love Story. By Frederick R. Sanford. 12mo. Cloth. $1.25.

Adrift:

A STORY OF NIAGARA. By Julia Ditto Young. 12mo. Cloth. $1.25.

*** For sale by all booksellers, or will be sent, postpaid, on receipt of the price.*

J. B. LIPPINCOTT COMPANY,

PUBLISHERS,

715 and 717 Market St., Philadelphia,

Wigmore's Australian Ballot System.

Second Edition, revised and enlarged. Cloth binding, $1.50 net.

The First Edition was published early in 1889; but there has been so widespread an interest in the subject, and so much actual or projected legislation on the lines of the Australian System that a new edition is already demanded.

In the Second Edition has been incorporated additional matter as follows: The Legislation and Attempts at Legislation of the Year 1889 on this Subject; Judicial Decisions interpreting the System in Countries where it has been already Adopted; Estimates of the Speed and Expense of Voting; Suggestions as to Ballot Leagues; Summary of Party Votes on Ballot Reform, e c.

The work as thus enlarged includes the Secret Ballot Laws adopted or proposed in the different States of America and in Foreign Countries, with Notes explaining their accord or differences.

The Introduction gives a history of the origin and growth of the method of secret balloting which has come to be generally known as The Australian System.

Altogether, as an exhaustive discussion of a subject of vital importance, this book is essential to every public or private library and to every citizen interested either in good government or in practical politics.

The Boston Book Co., Boston.

"The initial number is magnificent."—*The Pilot, Boston.*

"It claims to be 'a mirror of European life and letters.' It is superb in its typography and the first number justifies its claim."—*New York Herald.*

"The idea is an excellent one, and the contents of the paper completely justify the venture."—*Daily News, Chicago.*

"The *Transatlantic* is a happy addition to periodical literature."—*Transcript, Boston.*

THE PARAGON OF PERIODICALS.

NO. 3 NOW READY.

THE TRANSATLANTIC.

A Mirror of European Life and Letters.

Each issue contains a piece of foreign music, the selection for this issue being the beautiful

HYMN OF LOVE,

A chorus for sopranos and tenors, from the

ODE TRIOMPHALE,

the symphonic poem, written for the French Centenary by the famous young Irish woman,

AUGUSTA HOLMES,

and lately performed in Paris before 60,000 people.

This is the first selection ever printed in America from the works of the first woman who ever wrote a symphony.

A faithful and finely executed

PORTRAIT OF EMILIO CASTELAR,

the great Spanish orator, adorns the cover of this issue.

Other contents are a continuation of the serial, "Rosmersholm," by Henrik Ibsen; a long poem, "The Compass," by Jean Richepin; a short story, "The Man of Mars," by Guy de Maupassant; "My Experience with the Sun Cure," by Mrs. Mona Caird: "Russian Degeneracy," by the Archbishop of Odessa; "The European Situation," by Emilio Castelar; "Augusta Holmes," by Louis Besson and Jean Lorrain; "Damp, That is the Enemy," by Sir Edwin Chadwick; "The Happy Ones of this World," by "Caliban"; and many smaller articles.

Every person paying $2.00 for a year's subscription to the *Transatlantic* gets in the course of the year 24 beautifully-printed pieces of choice music, any one of which would cost from 25 to 50 cents at the music-dealers, and 24 fine half-tone portraits of foreign celebrities, all of which can be effectively framed.

Subscription Price, $2.00 a year.

Ask your newsdealer for it, or send your subscription, or 10 cents for a sample copy to

TRANSATLANTIC PUBLISHING COMPANY,
P. O. Box 210, Boston, Mass.

SATURDAY BOOKS.

Wyndham Towers.

A Narrative Poem of the Time of Elizabeth, by Thomas Bailey Aldrich. Carefully printed and bound in an unusual and tasteful style. Crown 8vo, $1.25.

Betty Leicester.

A delightful Story for Girls of Fifteen or thereabouts. By Sarah Orne Jewett, author of 'Deephaven,' 'A White Heron,' 'Play Days,' etc. 18mo, $1.25.

The Lily Among Thorns.

By William Elliot Griffis, D.D., author of 'The Mikado's Empire,' etc. 16mo, $1.25; in white cloth, with gilt top, $1.50.

An engaging book, showing the literary and æsthetic characteristics of The Song of Solomon.

Emerson's Essays.

First and Second Series. Popular Edition, in one volume, cloth, $1.00. In Riverside Paper Series, 50 cents.

*** For sale by all booksellers. Sent by mail, postpaid, on receipt of price by the publishers.*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 East Seventeenth Street, New York.

CATALOGUE NO. 29, NEARLY ready, will contain a great deal out of the common, in a variety of lines. Box-office now open. A. S. CLARK, Bookseller, 34 Park Row, New York City.

A Dictionary of Quotations in Prose.

By Anna L. Ward. Crown 8vo, cloth, beveled boards, $2.00; half calf, $4.00.

This is a companion volume to Miss Ward's 'Dictionary of Quotations from the Poets.' It is arranged on the same general principle, and contains upwards of six thousand short and pithy apothegms placed under the head of general subjects in alphabetical order. A complete index makes the volume still more convenient for handy reference, and a mass of biographical material adds to its value.

Victor Hugo's Works.

Library Edition. Over 600 full-page illustrations. Calendered paper. 15 volumes in 8. 12mo, cloth, gilt top (sold only in sets), $15.00.

Cambridge Book of Poetry and Song.

New and revised edition, with 40 fac-simile poems in autograph, and 32 full-page illustrations from original designs. Over 900 pp., [illegible] 8vo, gilt edges, $5.00; full levant, gilt, $[illegible]; tree calf, gilt, $10.00.

To All Who May Be Interested in

THE REFORM OF THE TARIFF:

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff; and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose. The first part of this directory, containing particulars of about one hundred organizations, was published October 17. Copies may be had at 3 cents each.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST, NEW YORK.

Jerusalem.

The City of Herod and Saladin. By WALTER BESANT and E. H. PALMER. Map and Frontispiece. New edition, revised and enlarged, Crown 8vo, cloth, $3.00.

The Book:

ITS PRINTERS, ILLUSTRATORS, AND BINDERS. From Gutenburg to the Present Time. By HENRI BOUCHOT of the National Library, Paris. With a Treatise on the Art of Collecting and Describing Early Printed Books, and a Latin-English and English-Latin Topographical Index of the Earliest Printing Places. Edited by H. GREVEL. Containing 172 facsimiles of Early Typography, Book-Illustrations, Printers' Marks, Bindings, etc., etc. *Limited edition.* Royal 8vo. Cloth, $7.50 *net.*

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. SEELEY, author of 'Horace Walpole and His World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

The Works of George Borrow.

Post 8vo, 5 vols., cloth, $5.00.

"The career and works of George Borrow are well worthy of study. He may have been 'a vagabond' by taste and habit, but he was eminently a Christian and a gentleman, and many men have earned greater name and fame without half his claims to the gratitude of society."—*Saturday Review.*

I. THE BIBLE IN SPAIN; or, the Journeys and Imprisonments of an Englishman in an attempt to circulate the Scripture in the Peninsula. With portrait.

II. THE ZINCALI: An Account of the Gypsies of Spain; their Manners, Customs, Religion, and Language.

III. LAVENGRO: The Scholar, the Gypsy, and the Priest.

IV. THE ROMANY RYE: A Sequel to 'Lavengro.'

V. WILD WALES: Its People, Language, and Scenery.

Days with Industrials:

Adventures and Experiences among Curious Industries. By ALEXANDER H. JAPP, LL.D., F.R.S.E., Author of 'Industrial Curiosities,' 'Golden Lives,' &c., &c. Crown 8vo, cloth, $2.25.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

READY SATURDAY.

The American Railway.

Its Construction, Development, Management, and Appliances. Written by the most eminent authorities in all branches of railway work.

CONTENTS:

AN INTRODUCTORY. *By Judge Thomas M. Cooley,* Chairman of Inter-State Commerce Commission.

THE BUILDING OF A RAILWAY. *By Thomas Curtis Clarke.*

FEATS OF RAILWAY ENGINEERING. *By John Bogart.*

AMERICAN LOCOMOTIVES AND CARS. *By M. N. Forney.*

RAILWAY MANAGEMENT. *By Gen. E. P. Alexander.*

SAFETY IN RAILROAD TRAVEL. *By H. G. Prout.*

RAILWAY PASSENGER TRAVEL. *By Gen. Horace Porter.*

THE FREIGHT-CAR SERVICE. *By Theodore Voorhees.*

THE PREVENTION OF RAILWAY STRIKES. *By Charles Francis Adams.*

HOW TO FEED A RAILWAY. *By Benjamin Norton.*

THE RAILWAY MAIL SERVICE. *By Thomas L. James.*

THE RAILWAY IN ITS BUSINESS RELATIONS. *By Arthur T. Hadley.*

EVERY-DAY LIFE OF RAILROAD MEN. *By B. B. Adams, Jr.*

STATISTICAL RAILWAY STUDIES. *By Fletcher W. Hewes.*

With 225 Illustrations; 13 Maps; 19 Charts, many being colored; and full index. Bound in half leather. 8vo, $6.00 *net.*

For the first time there is presented in this book an adequate account of the American Railway, an industry representing over nine thousand million dollars in its 150,000 miles of road. The above enumeration of the subjects which are treated in the volume is sufficient to show its value and importance, and in preparing it nothing has been left undone which might add to the lasting value and interest of the work.

JUST ISSUED:

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU.

With 1,400 Illustrations. 2 vols. 8vo, $7.50.

"The work is destined to heave up old traditions and to compel men to new views of the history of civilization in Europe."—*N. Y. Commercial Advertiser.*

"These luxuriously printed and profusely illustrated volumes embody the fullest account of our Norse ancestors extant. Mr. Du Chaillu has gone very fully and very carefully over the whole of his ground. This extensive and important work must be of high interest to all English-speaking people."—*N. Y. Tribune.*

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By N. S. SHALER, Prof. of Geology at Harvard. With 100 Illustrations. 8vo, $4.00.

The general reader will find here an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanoes, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 14, 1889.

The Week.

NEXT to the burial of Mahone, the chief cause for national rejoicing over the results of the late elections is found in the defeat of Foraker in Ohio. Never before in any Northern State has the Republican party sunk so low in its standards as when it made this demagogue its leader in campaign after campaign. He was the first politician in American history to try to make an "issue" out of the fact that a lady declined to shake hands with him, and the incident furnished a good measure of the man. So far as his influence went, it was always thrown in favor of sectional strife, and it will be a great relief to the national ear to get rid of his loud and tiresome mouth.

We commend to those persons who are maintaining that there was no tariff-reform significance in these elections the careful perusal of the tariff planks of the Democratic platforms in New York, Massachusetts, Ohio, and Iowa. It was noted at the time they were adopted in convention that they marked a new departure in tariff platform utterances. They all went straight to the point, without shuffling or evasion of any kind, and without any recognition of the Republican humbugging assertion that the high tariff benefits the laboring man by keeping his wages high. Formerly a Democratic utterance on the tariff was supposed to be unsafe unless there was added, after the demand for reform, a saving clause, to the effect that, while favoring a reduction of duties, the party was at the same time determined that "just compensation should be afforded to labor." There is nothing of this kind to be found in any of the platforms quoted, and the party for the first time took its stand squarely and fearlessly upon ex-President Cleveland's ground that a high tariff was not a benefit to the workingmen. The result vindicates the wisdom of this course. As a further indication of the entrance of the tariff-reform issue in the canvass, we cite the following despatch which Mr. Frank Rice, the Democratic candidate for Secretary of State, in New York, sent to the *Times* from Canandaigua on the night of election: "Abbey is elected Assemblyman. He is the largest sheep-raiser in the county, and the author of a series of articles favoring free wool." This indicates not only that Mr. Rice, who led his ticket by several thousand votes, recognizes the presence of the tariff-reform issue, but that he is in thorough sympathy with it also.

The most significant revelation made by this year's elections is that which comes from the agricultural districts. It was demonstrated in last year's elections that the laboring men in the cities and towns had been educated on the tariff and were no longer to be deluded by high-tariff fallacies. Now the evidence comes from Ohio, Iowa, and Massachusetts that the farmers are beginning to see a similar light, and no more ominous news has reached Republican ears for many a day. The election in Ohio of a candidate for Governor who voted for free wool in the last Congress, and who made large gains in all the wool-growing districts of the State; the overthrow of the Republican party in Iowa, the election there of an avowed tariff-reform candidate for Governor, and the bare escape of Senator Allison from defeat after his discreditable tergiversations on the tariff question in the Senate; and the large increase of the Democratic vote in the rural districts of Massachusetts with a pronounced tariff-reformer as the Democratic candidate for Governor, are all signs not to be misunderstood. Whatever else they mean, they indicate unmistakably that the expenses of another national high-tariff campaign would be vastly greater than those of the last one were.

The St. Louis *Republic* gives a timely admonition to the Democratic party not to drop a good issue, in which they have made a notable gain and substantial progress, in order to take up one of doubtful present advantage; in other words, not to drop the tariff in order to take up free coinage of silver, as Mr. Bland and Senator Reagan advise. The warning comes very opportunely, since a free-coinage convention has been called to meet at St. Louis on the 26th of the present month. Up to this time there has been no great stir indicating public desire to take part in the Convention, although arrangements have been made with the railroads for reduced rates of fare. The indications are that the Convention will fall pretty flat. It certainly will if the Democrats in the West heed the advice of the *Republic*, than which nothing can be more prudent. The Democratic party now has an issue on which it is united, and is certainly gaining ground both East and West. To take up free coinage of silver would certainly divide the party and scatter its energies. Whatever may be the present inclinations and preferences of a majority of the voters, no man can tell what they might be at the end of a campaign in which that should be the principal issue. The demand for free coinage cannot possibly be as strong as was the demand for "paying the bonds in greenbacks" in 1868. Yet at the end of a thorough discussion of that issue, the Greenbackers were routed horse, foot, and dragoons, although they had the countenance and to some extent the assistance of such notable Republican Senators as Morton of Indiana and Sherman of Ohio. A few years later the same faction broke out again with what was known as the "Inflation Bill," and although they appeared to be carrying all before them, they were again routed. To follow Bland and Reagan in their silver craze would be for the Democratic party the dog's dropping his meat in the stream in order to seize the reflection of it.

The Democratic victory in Iowa assures the adoption of the Australian system in that State. The Democratic Convention came out strongly in favor of the reform, and Gov.-elect Boies made the issue prominent in his campaign speeches. The Republicans began their canvass by sneering at the proposition, but they were forced to change their tone, and, although they control the Legislature by a narrow majority, they will not dare to oppose the reform. It is noticeable that in all those States in the Legislatures of which ballot-reform bills were considered last winter, but failed to pass, the newspapers are practically unanimous in saying that the Massachusetts demonstration removes all objections to the new system, and that it must be adopted everywhere at the earliest possible moment. In Maine, where an excellent bill, closely modelled upon the Massachusetts law, was defeated through the influence of the Blaine Republican machine led by "Joe" Manley in person and by the Bangor *Whig*, sentiment is now so strong in favor of the reform that it is only a question of time when the State will have a law embodying it. Unfortunately, the Legislature does not meet next winter, there being only biennial sessions. In April next the Rhode Island law, which is a close copy of the Massachusetts statute, will have its first trial. This will be the third experiment of the system in an entire State, Montana having preceded Massachusetts, and there is no doubt that it will be equally successful. It seems to be a safe prediction that within five years every State in the Union will have the system in operation, and it is not improbable that a majority will have it in time for use in the next national election. Nine States already have it in practically the Massachusetts form, and two others, Connecticut and Michigan, in a modified and inferior form.

Mr. Henry George writes at much length in the *Standard* of last week in commendation of the new Ballot Law of Massachusetts, whose workings he went to Boston to witness. He says that the new system "more than fulfilled every anticipation of its friends, and falsified every prediction of its enemies"; that, after the election was over, "Republicans, Democrats, Prohibitionists, all alike rejoiced over an election from which the disgusting concomitants of the old system had as by magic disappeared," and that in the "worst districts of Boston, where previously the polls were surrounded by a jostling crowd of 'heelers,' 'workers,' 'ticket-peddlers' and 'floaters' waiting to see what votes might be worth, and where, a square off, the approaching voter was importuned to take this or that ticket, were as quiet as any other parts of similar streets." He calls attention to a fact which has occurred to other observers—that is, that the

elimination of noisy, jostling crowds from the polls "does away with the current objections to the voting of women."

The full returns of the Massachusetts election show very plainly the change which is coming over the constituencies of the two parties. The plurality of the Republican candidate for Governor is only 5,984, and he owes this solely to the support of the saloons in Boston. The secret of Republican advocacy of a State police system for the city of Boston was the fact that such a system, instead of taking the administration of the Police Department out of politics, enables the dominant party to make "deals" with the saloon-keepers, and extort their support of the Republican State ticket by threats to deprive them of their licenses through the control of the Police Commission, which is appointed by the Governor. Mr. Russell, the Democratic candidate for Governor, is an excellent type of the educated, progressive, and courageous young men who are coming to the front in that party since Mr. Cleveland made the party mean something; and all through the State, outside of Boston, he gained adherents among the independent voters. The same thing held true in those parts of Boston where such voters abound, the Republican plurality in Ward 11, for example, being cut down from 960 to 508. On the other hand, Brackett, the Republican candidate, whose course in the Legislature had made him a favorite with the liquor interest, made heavy gains in the "slums," cutting down the Democratic plurality in one ward from 2,285 to 1,572. It appears clear that he won on the saloon issue in Boston many more than the 3,000 votes which have been ordinarily cast for the Democratic candidate, and which, if so cast this year, would have elected him. In the long run, however, such a change will be the best thing in the world for the Democrats, as the alliance of the Republicans with the saloon interest in Boston will strengthen the tendency towards Democracy of the young voters throughout the State who incline that way, but have hitherto been deterred from joining the party by its ill-repute in the metropolis of the State. Russell winning support from the colleges, but beaten, has a far better outlook than Brackett successful through his gains in the "slums."

No feature of the Virginia result is more gratifying than the evidence that the more intelligent of the negroes in the Republican party joined the same class among the whites in voting against Mahone. The remarks of the *Valley Virginian* on this point should open the eyes of Republican editors at the North. "It is the common impression," says this journal, "that the colored voters of Virginia have a ring in their noses and are led by party bosses as sheep to the slaughter. The election on Tuesday dispelled this delusion. They demonstrated that they are citizens of the State, who feel an interest in the welfare of the commonwealth, and that they have the courage to break away from party association when the commonwealth is in peril. All over the State such characters are found, and it is to their grit and moral courage that much of the credit is due for the overwhelming defeat of Mahone. They deserve the thanks of all good citizens for the part they took in effecting the result." The Staunton newspaper thinks that the fact "gives a new and impressive phase to the colored man's relation to politics," and the Democratic committees in the "black-belt" counties are reported to be preparing barbecues for the negroes who voted with them against Mahone. It will be a great service rendered by this demagogue to his State and to the whole South if his candidacy proves to have been an agency in breaking down the color-line in politics, by showing that the negroes are becoming fit to exercise the suffrage.

Only county elections were held in Kansas on Tuesday week, but the result in two cases is of interest outside the State. A movement has already been started to abolish prohibition, by the election in 1890 of a Legislature which will resubmit the constitutional amendment adopted in 1880; and in the counties of which Leavenworth and Wichita are the seats the issue was made in the county elections this year. In each case the resubmission ticket swept the county. This shows that the same spirit of opposition to prohibition which contributed to the overthrow of the Republicans in Iowa is coming to be felt in Kansas. The difficulties in the way are greater, however, because prohibition is stronger in Kansas as a State more largely composed of farming towns and with fewer cities, and because the principle is there embodied in the Constitution, and cannot be so easily dislodged as when incorporated only in a statute which can be repealed by a majority of one in the Legislature. At the same time it requires only a majority of the popular vote to change the Constitution, and the resubmissionists are confident that this can be ultimately secured.

That favorite theory of the "practical politicians," that candidates for the Presidency and the Cabinet must be selected from certain States because, by so doing, the party will be strengthened therein, has received rude shocks from the elections of this year. Gen. Harrison was chosen from Indiana, and he took one of his Cabinet officers from the same State. But in the first election held there after his inauguration—that in Indianapolis—the majority was changed from Republican to Democratic. The Secretary of the Navy was taken from New York. In the first election in that State subsequent to the Secretary's installation the Republican majority of 14,373 was changed to a Democratic one of over 20,000. The Republican majority in the Postmaster-General's State was only saved from a serious reduction by Democratic dissensions in Philadelphia, which kept more than half the Democrats there away from the polls (the Republican vote of the State fell off 193,484); but the State of the political head of that Department—the man who has dealt out more pap than any other member of the Administration—went Democratic for the first time since the war. It is plain enough that the voters of this country are not to be cajoled into changing their politics simply by tickling their local pride. The strongest candidate at the polls is the ablest one; and the way for a President, after his election, to increase his party's strength is to call in as advisers the ablest members of his party at his command, wherever he can find them, and then to live up to his own promises, and see that his advisers and assistants do not make these promises a mockery.

According to the annual report of the Treasurer of the United States, "the amount of public moneys held by depository banks ran down during the past year from $58,712,511 to $47,259,714, *the result mainly of the voluntary acts of the banks in surrendering the deposits and withdrawing their bonds.*" So it appears that although, in the estimation of Mr. James G. Blaine last year, there was "not a shadow of foundation in law" for depositing the public money in national banks, and although such deposits were a gratuity to the banks, and although, according to the same authority, the money had been deposited with favorite banks, and particularly Eastern banks, to the prejudice of the West, yet after the Harrison Administration has been in office eight months the money is all there, just as Secretary Fairchild left it, except about $9,000,000 which these favored banks have voluntarily surrendered because it was not profitable for them to keep it. When the Plumed Knight made this brilliant dash at Secretary Fairchild, he said that he was not speaking at random, but that he knew what he was talking about—a much needed admonition after his discourse in New York about the comparative deposits in savings banks in Massachusetts and Great Britain. When Mr. Blaine takes his seat as President of the Pan-American Congress, let us hope that he may confine himself mainly to the evils of standing armies and the benefits of arbitration, for there is no knowing what confusion he might produce among the foreign delegates if he should wander into the field of commercial law and statistics.

In a work of rare merit entitled 'Recent Economic Changes,' just published by the Appletons, Mr. David A. Wells has presented some facts regarding the capabilities and resources of Great Britain and the United States respectively in the production of iron and steel, to which we invite serious attention. The point of the argument is, that, if the duty on pig-iron were wholly and at once repealed, Great Britain could not supply to this country any considerable amount without at once raising the price to our level, and this is proved conclusively. But it happens by an amazing coincidence that before Mr. Wells's chapter, written some months ago, was actually published, the increased demand for British iron for exportation to other countries than the United States has carried the price up to a point where American iron can be and now is shipped at a profit to Liverpool. This remarkable verification of a prediction of what would happen if *we* should become purchasers, to a considerable amount, of British iron, adds new interest to Mr. Wells's treatment of the subject.

The Fair Committee on Friday formally abandoned their attack on the Central Park, after fighting for it by all the means at their command for a period of nearly two months, in the teeth of steadily increasing public hostility, and agreed to provide themselves with a site outside its limits. They have covered their retreat by the announcement that they are able to give up the Park because they have at last been able to secure the grounds of the Bloomingdale Asylum on reasonable terms. The announcement was fortified by a characteristic confession from Mr. Flower, on behalf of the Committee on Sites, which we should have expected to elicit an indignant protest from any gentlemen who serve with him on that Committee, and indeed a request from them that, for the credit of the Fair and of the city, he should get out of their company. What he unblushingly avowed was, that the attempt to get the Park was a mere pretence, intended to act as a bugbear on the property-holders outside the Park so as to make them surrender their lots on low terms. In other words, he declared, not only without shame but apparently with a touch of pride, that the first step taken by our great commercial city to prepare for a memorial fête in honor of the discovery of America was a mock auctioneer's trick for knocking down the cost of the site. We believe, however, that the reason Mr. Flower gave for playing the part of a "Peter Funk" was untrue. We have excellent authority for saying that the governors of the Bloomingdale Asylum had not been approached by the Fair Committee on the subject of surrendering their grounds until within the last week; so that it seems probable that when Mr. Flower said he had been playing the mock auctioneer, and never meant to take the Park, he was making use of a mock auctioneer's most valuable privilege; that he really meant to take the Park all along if he could get it; and that he fell back on the Asylum grounds as a last resort. The Committee will now have an opportunity of finding out whether they can get the necessary money for a site outside, to which nobody has any objection if the property-owners have none; but every honorable man in the community must blush or groan, as his manner may be, over the fact that we are to face the civilized world on such an occasion through representatives of the Flower type.

The *Home Market Bulletin* of Boston is as silly as a moth about the candle in the matter of that Home Market Club quotation from the London *Times*—"The only time an Irishman is of any service to England is when he emigrates to the United States and joins the Democratic party and votes for free trade." When we ran this to earth in the campaign of 1888, we were referred to Congressman Butterworth, who, in answer to our inquiries, said he had used it in a speech in Congress, in which he gave it as something he had read "some years ago" in the London *Times*, but he could not give the date. A correspondent of ours in Cleveland, O., has since found it in the New York *Tribune* of July 5, 1852, quoted from the Albany *Evening Journal*, and attributed to the London *Times*, showing that it was started at a very early period. Now here comes the *Home Market Bulletin* and says Col. Dudley, who was Consul in Liverpool under Lincoln—that is, from 1861 to 1864—heard it then from a certain Mr. William Evans, M.P., at a dinner at the Reform Club. But the *Bulletin* will now see that if Evans, M.P., ever said this, he must have stolen it either from the New York *Tribune* or Albany *Evening Journal*, and the *Bulletin* must remember that when it was circulating it in 1888, it had not heard of Evans, M.P., or any other authority for it. We now caution the *Bulletin* again against taking up this lie and expounding or ornamenting it without consulting the New York *Tribune* of July 5, 1852.

That elaborate legal device, intended to suppress competition in the sugar trade, called the Sugar Refiners' Company, or Sugar Trust, received a telling blow on Thursday from the General Term of the Supreme Court affirming the decision of Judge Barrett, which dissolved one of the amalgamated corporations for violation of charter. We presume that greater pains were never taken in the preparation of legal instruments than were in the case of the Sugar Trust to make the consolidation iron-clad and bomb-proof in contemplation of law. We have held from the beginning that, however carefully the lawyers might have done their work, the holders of Trust certificates could have no standing in the courts to enforce the rights appertaining to shareholders of incorporated companies, and hence that they were putting their money into a blind pool. Judge Daniels's decision amply confirms this conclusion, and it goes much further. It takes from the Trust the element of continuity, or right of succession, and leaves it swinging in the air without rest or support of any kind. Nobody except the "head centre" can know from day to day where he stands. Nobody can get any information as a matter of right. The payment of dividends cannot be enforced even after they have been declared, because the certificates are not legal evidence of anything.

Of course an appeal will be taken, but in the meantime the position of certificate-holders other than the managers of the Trust is most unsatisfactory. They have no legal status. They must depend upon the honesty of the officers altogether. There is no reason to doubt their integrity or their responsibility, but it has been shown within a few days that the officers of the Cotton-Oil Trust, men of as fair name and of as good purposes as any in the street, lost more than half-a-million dollars speculating with the money of the Trust, in attempts to "sustain the market," and that they were able to make good out of their own pockets only one-half of the deficit. This should be a warning to the public to let what are called "industrial stocks" alone. The captains of this sort of industry may be all right now, but the chevaliers will get possession in due time. There is nothing that will answer in the place of publicity and legal remedies to protect investors in the long run.

The Court of Appeals has recently decided a case of which the circumstances are unprecedented in our jurisprudence. About the year 1880 one Francis Palmer, a farmer somewhat advanced in years, made a will by which he gave his estate, subject to certain charges, to his grandson, Elmer Palmer. This Elmer was a boy of about fourteen years of age, who seems to have been a favorite with his grandfather, living with him and being aware of the provisions of his will. Unfortunately for several of the parties interested, the elder Palmer incontinently proceeded, being a widower, to involve himself anew in the toils of matrimony, and, as might have been expected, began to talk of making another will. His affectionate grandson, who had by this time reached the age of sixteen years, was naturally distressed at this untoward change in his prospects, and effectively prevented all further vacillation by administering to his grandfather a dose of poison. A considerate jury found that this act was murder only in the second degree, and the ingenious Elmer was committed to the Elmira Reformatory, and in due time proceeded to claim his grandfather's estate under his will—somewhat after the manner of the parricide who besought the court for mercy on the ground that he was an orphan. The lower courts, being unable to find any authority for altering the will of the testator, felt compelled to grant this request. The majority of the Court of Appeals, however, were unable in this instance to extinguish the man in the lawyer, and held, in an opinion by Judge Earl which is a very pretty specimen of judge-made law, that it would not do to allow legatees to expedite the course of nature in this shocking fashion. They went further and declared that the same principles should govern inheritance.

It is true that cases of this kind are provided for in the civil law, but, as shown by Judge Gray in his dissenting opinion, this rather makes against the conclusion of the court; for the Roman law punishes such crimes by forfeiting the inheritance to the State, which shows that the testamentary disposition, or the law of inheritance, is permitted to operate, and that then the law steps in and deprives the legatee or heir of his property. This is not the law as settled by the Court of Appeals. They hold that the principle that no one shall be permitted to take advantage of his own wrong is sufficient to exclude those who murder testators or ancestors from claiming under their wills or as their heirs. They are not able to cite any case in support of this opinion except one from the United States Supreme Court, which certainly goes far to support their position. In that case a person procured insurance upon the life of another, and then murdered him. The Court held that to allow a recovery on the policy would be like allowing a man to get the insurance upon a building that he had set on fire. But in the latter case the terms of the policy preclude recovery, and the Supreme Court must sustain its position upon the maxims of equity alone,

PATRONAGE AND THE ELECTIONS.

THERE appears to be no question in any quarter that Tuesday week was a very bad day for the Republican party as well as for the Administration. Both were defeated in New York, Virginia, Ohio, and Iowa, and came very near being defeated in Massachusetts. What was the cause of this catastrophe? The President says, we observe, and his private secretary, Mr. Elijah Halford, confirms him, that it was all due to "local causes," working in an "off year." But as we, and we believe the public generally, understand the matter, the redistribution of offices in which the President and his Cabinet have been busily engaged during the past eight months, was intended to operate as a general preventive of disaster of this nature from any cause whatever. It was as a general insurance against *all* risks that Mr. Clarkson has made his 20,000 changes in the post-offices, and that the President and Mr. Windom have made all the custom-house and internal-revenue changes. When the President began to turn out the Democrats and put in "good Republicans" in their places, in Virginia to oblige Mahone, in Ohio to oblige Foraker, in New York to oblige Platt, and in Iowa to oblige Clarkson himself, he did not say, "I do this to secure the party against defeat on account of the tariff, or silver, or civil-service reform, or pensions, or other Federal questions, but I do not guarantee it against defeat from local causes in off years." He said: "I do this to produce harmony among Republicans of all shades, so that when election day comes they will act together so as to win victories at the polls; this, and not mutual edification, being the object for which parties exist. I would not undertake the immense labor of the last half-year in satisfying claims, for any object less important than this. I am making the party safe against all known risks."

What has happened must therefore spread dismay through the ranks of the faithful. They have relied on the proper distribution of the offices to put both the Mugwumps and the Democrats to shame and confusion. They have been so confident that they had hit on the right instrument for the purpose that they have thrown aside the civil-service promises of their platform with a grin over the simplicity of those who took them seriously. If they have no security against "local causes," they have no security at all, for who can tell the moment when a "local cause" may show itself? The President's plan is, in fact, like insuring a ship against loss from all causes except fire or collision. It is but just to President Harrison, however, to say that while he was still Senator, he recognized the fact that there was no safety for an administration in spoils. In that great speech of his, on the 26th of March, 1886, from which we have so often quoted, he said:

> "I freely say to my colleague that the Republican party would be stronger in Indiana if you put every Republican out of office; and I think the Democratic party would be weaker in precisely the same proportion that you put Democrats in."

This is exactly what has happened in Iowa. In no State has there ever been such a clearing out of post-offices as the wise and able Mr. Clarkson—an Iowa statesman and publicist—has made in Iowa. What with his precautions and the natural tendency of the Iowans to Republicanism, the Republican majority ought, on the spoils theory, to have been about 75,000. Instead of this, they have lost the State for the first time since the Republican party was founded in 1854! In Ohio, Foraker has had everything he could ask for in the shape of help from the patronage—with the result that we see. He has been sunk by collision, and now finds to his astonishment that his policy of insurance does not include this very serious and very common risk. Judge Thurman explained the whole matter when he said to a reporter that the Republican defeat was due "primarily" to the fact that "the national Administration and President Harrison have not been acceptable to the Republicans so far as the distribution of patronage is concerned, and the Ohio Republicans have not received what they consider their full share."

This, we admit, does give the President a loophole of escape from responsibility. He may very well ask how can he make the party safe in any State if he has not offices enough to go round. Give him offices enough, he may add, and he will carry any State in the country, but with the present limitations on the number of post-offices and custom-houses, how is he to keep the enemy from climbing over the breastworks?

We do not think it will be easy for Foraker or Mahone to answer these questions satisfactorily. The difficulty caused by the inadequate supply of offices has been present to the minds of Republican statesmen ever since the party was formed. They have all felt, ever since they came into possession of the Government, the force of Senator Sherman's remark the other day, that as there are usually seven candidates for every post-office, when you give it to one, you necessarily make enemies of the other six. This is true of all offices. Each satisfies one man, but exasperates and disappoints a good many. In earlier days, the spoils system was prevented from working the party ruin by the strong hold on the voters of the party ideas. Of late years the managers have relied less and less on ideas and more and more on the offices. Under President Harrison they have actually undertaken to face the country with offices alone, knowing well that their supply of these was short, but thinking that public praying and Sunday-school-teaching would carry them through. But voters must have ideas. They will not be satisfied with other men's getting post-offices. If they cannot have national ideas, they will get up local ones and vote on them without regard to national consequences. The high tariff is as great an electoral failure as the post-offices, and for precisely the same reason. It does not make profits enough to go round. The mass of the voters hear of the fine dividends of the manufacturers, but they never see the color of the money themselves. Other people's prosperity excites no man's enthusiasm. When you bring politics down to a purely cash basis, you have to make the dividends as well as the salaries reach the million, in order to produce really widespread satisfaction.

Every right-minded man must sympathize with the President and Mr. Clarkson. They have done the best they could with the means at their command. The results of eight months' patient, prayerful labor have vanished in a day. And Mr. Quay, who went down into Virginia with his "mailed hand," and Senator Hoar, who was watching through his spectacles for the "morning sun" in that quarter—what shall we say of them? May this affliction be blessed to them both! May they put their trust in better things than post-offices and custom-houses!

THE KENTUCKY TRAGEDY.

AN attempt to explain the double murder committed in Lexington, Ky., on Friday last, has been made in the *Evening Post* by an old resident in the State; but it does not hang together with the local view of it, which we copy from the *Kentucky Leader* of Saturday:

> "The sad affair which threw the entire city into a state of excitement Friday, is to be deplored more than pen can chronicle. The excitement lasted only for a brief period, and was succeeded by a feeling of sorrow so deep that it bordered on gloom. There seems to be no feeling of resentment in the matter towards either Col. Swope or Col. Goodloe. The general expression is one of sorrow. None has been heard to utter bitter words against either of the combatants. Anger has been overshadowed by the blacker clouds of grief, and if anybody has been disposed to take sides in the matter, they have been restrained by the awfulness of the situation. The citizens of Lexington appreciate full well the length and breadth and depth of the calamity that has fallen upon them by their home having been selected as the scene for such a terrible encounter. The families of both the principals in this, the deadliest duel ever fought within the confines of our fair city, have the unbounded sympathy of a whole community. Col. Swope had no wife or children; Col. Goodloe had. It is on them that the main burden of a weight of woe rests. They deserve the greatest sympathy, and it may be a consolation to them to know that a city and a nation share their sorrow."

The state of feeling described here is in a large degree what the state of feeling would be if Tom Platt had met Mr. Warner Miller in the Post-office, and they had brutally murdered each other. There would be "a feeling of sorrow bordering on gloom." There would be no resentment towards the two murderers, because it is hard to feel resentment towards dead men. There would be considerable disgust at having the city made the scene of such an encounter. Finally, there would be great sympathy for the unfortunate families of the deceased. But it is because such an occurrence would be received in this way that none of us thinks of it as a possibility. It is because no man among us raised by education or social position above the "toughs," gamblers, confidence men, or professional thieves and burglars, thinks for one moment of either killing or being killed as among even the remotest chances of his day, that such encounters as this never take place among us. What is puzzling and mysterious about this Kentucky horror is that the whole community, including the newspapers and the clergymen, receives the news of it just as it would be received in a

community where decent men never carry arms, or engage in street-fights, or think for one moment of murdering or being murdered by an enemy, or of settling disputes in any way except by litigation or arbitration. The post-mortem sentiments of Kentuckians are, in fact, in astounding contradiction to their ante-mortem sentiments. The entire city of Lexington, high and low, knew well that a murderous collision between Swope and Goodloe was among the probabilities of every day that dawned. They knew well, too, that every man in the city who cared for his good standing with his neighbors was expected, if he quarrelled with anybody about anything, to be in a state of readiness for a murderous armed conflict with him in the public highway. They knew that boys in that State are brought up to consider the taking of life in petty disputes to be often necessary, and possibly praiseworthy, and to consider armed self-protection, in disregard of police and courts, and churches, and colleges, manly and admirable, and not brutal, savage, and degrading.

Why, then, this "sorrow" and "gloom" and sensation and sympathy, and so forth, when the moral sentiment of the State is expressed in action? Could there be an odder caricature of Christian casuistry than the excuse for Swope put forth by Elder Strouse in his funeral sermon, that Swope was not carrying the pistol with which he shot Goodloe, for Goodloe, but "for a less honorable opponent, who he thought might take advantage of him when he was unarmed"? Is Kentucky in a much more advanced condition socially than Ireland in the fifteenth century, when one of the Fitzgeralds defended himself in good faith, before the Council, for having burned down the Cathedral of Cashel, by alleging that he thought the Archbishop, with whom he had had a "difficulty," was inside? And how will Goodloe's boys interpret his death in the light of Kentucky social morality? Will they think of it as meaning anything but "Be ready to take offence; be ready to avenge insults and settle quarrels by knifing and shooting; be ashamed to restrain your temper, to respect the law, to respect human life, to set an example of peaceableness and forbearance and legality to the ignorant and poor, and to raise the credit of your State among the civilized communities of the world"?

Goodloe was, we are informed by those who knew him well, a man of high character and considerable cultivation and refinement, who abhorred the Kentucky standard of "honor," and would have left the State and brought up his family under better social conditions if he could have afforded it. Other men of the same kind have, we know, done what he wished to do. What really civilized man wishes to live in a community where the most trifling dispute with a neighbor over a fence, over a stray hog, over a trespassing hen, over an unpleasant remark in a speech, over a boy's quarrel on a playground, may compel him to "go armed" and bid a last farewell to his family every time he leaves his house? But the more light Goodloe had on the detestable nature of his moral surroundings, the less excuse there is for the final act of his life. Nothing makes the Kentucky situation seem so hopeless as the readiness of those who loathe it to accept and live under its requirements, and die under them if necessary. This barbarism is retarding the growth of a State which is extraordinarily blessed in "sun and soil and station." It turns away emigration, and expatriates, or weeds out by assassination, men who have either force of character or strong convictions, as the Inquisition did for so long in Spain. Such men naturally seek regions where they can speak the thing they will, and lead the secure lives of modern gentlemen, and not the terror-haunted existence of African savages or mediæval Jews.

THE WAGER OF BATTLE.

For a long while Sir Jonah Barrington's recollections of the humors of Irish duelling and faction-fighting in his youth, at the close of the last century, were considered the best reading of their kind in English literature. But of late the Southerners have been far outdoing the Irish in this department of human comedy. There is a ferocity, too, in their fun which was not visible in that of the Irish, and can hardly be paralleled except in the stories of the feuds of the Scotch Highlanders before '45. In fact, there is, except Corsica, no country in the civilized world to-day which recalls so vividly as some parts of the South, do the state of society in which some of the Macgregors served up under a dish-cover, at a house where they were staying, the head of their hostess's brother, whom they had slain in a "difficulty" an hour previously.

We ask any one who thinks this an exaggerated or highly colored statement to read the account (say that which was printed in the Baltimore *Sun*) of a little encounter which occurred last Friday in a court-room at Brownsburg, Rockbridge County, West Virginia. Henry Miller was charged by Mrs. Dr. Z. J. Walker with having insulted her in the absence of her husband, Dr. Walker. On hearing of it the Doctor — presumably a man of education—determined to inflict capital punishment on him without any of the preliminaries which in other communities precede the execution of the death sentence. He accordingly started in pursuit of Miller with a shotgun, and Miller, hearing of this, and being naturally desirous of putting in a defence of some kind before his death, swore out a warrant and had the Doctor brought before a magistrate, with the view of doing what we at the North are constantly urging Southerners to do in like circumstances, namely, having his enemy bound over to keep the peace. The case was heard, and the Doctor was called on to give bail in $500 to keep the peace for twelve months. He refused, and was then gently threatened by the Justice, "an experienced official, and a man of high personal worth," with commitment to prison. Here the fun began.

The Doctor at this point asked, whether as a right or as a privilege we do not know, to be allowed first to eat his dinner and then to "slap Henry"—the prosecutor—"in the face." As Bishop Eastburn said of the demand of Dives on Lazarus for a cup of water—"to this apparently reasonable but, under the circumstances, wholly inadmissible request"—a negative answer was returned by the upright magistrate. He did not absolutely forbid the slapping anywhere, but said it could not be done "here," *i. e.*, in the court-room. Dr. Walker then rose with the air of a man who had a painful duty to perform, and drew his revolver. It was wrenched from him by a son of Miller, after which the scene in the court-room was said by the presiding justice to have become "indescribable." The parties and the audience rolled together in an undistinguishable mass, with much "shuffling of feet." Some were peace-makers, apparently, and some were fighting men, but all were firing pistols or wielding chairs or knives. Some fled from the room, but this, doubtless, only facilitated the work or play of the combatants. Dr. Walker got at Henry with a large dirk-knife, and managed to hold him firmly while he stabbed him effectively in various parts of his person, Henry being more than sixty years old and the Doctor about fifty-five. But the "Miller boys" were in the meantime operating on the Doctor's rear, with such effect that he had to let Henry alone and go and lie down on a bench. Here he was promptly attended by his wife with a bottle of smelling salts, and while engaged in this wifely office she was slain by the Miller fire, and dropped on the floor. The Doctor tumbled down beside her, and while he lay here the Miller boys finished him with repeated shots.

The best of the story has still to come. Justice Bosworth, who had previously been acting as a magistrate, now turned coroner, as, apparently, the local law allows, and held an inquest on the parties who had been pleading before him. The jury found that James Miller killed Mrs. Walker, that the Miller boys, collectively, killed Dr. Walker, and that Dr. Walker killed Henry Miller. Besides these casualties D. O. Miller is mortally wounded, T. A. Beaver has a knife wound in the neck, and John Dempsey a pistol wound in the side. What puzzles Justice Bosworth now is where all the pistols came from which were used in the fray, and he advances the theory, though with diffidence, that some were brought into the room after the fight began, that there were several varieties of them, and that one man had a "gun." No light is thrown, however, on the magistrate's own rôle during the mêlée. There must be many precedents regulating the conduct of a presiding justice when the parties to a cause or proceeding suspend their pleadings, and fall to with deadly weapons, but we are not acquainted with them. We surmise that in this case the magistrate hid under his bench until peace was restored, and then prepared to discharge his duties as coroner.

But battles in court-rooms are not, to our minds, so enjoyable as the fights in school-rooms and churches. There was a fight out-

side a church-door in Tennessee a year or two ago, when the wife of one of the combatants was prevented by the roll of the organ from hearing the pistol-shots, and a fight of school trustees in Mississippi about the same time, which seemed to us to unite the sacred and profane, the tragic and ridiculous, more pleasingly than any other we have heard of. In Mississippi the sight of the blood and hair of the trustees on the benches and walls, when the children came to school the next day, must have been a most impressive and improving experience for the little dears.

MEXICAN RETALIATION.

If it be true, as is reported, that the Government of Mexico intends to retaliate upon us, in a commercial sense, for Secretary Windom's obstruction of importations of silver-lead ore from that country, what a spectacle will greet the Pan-American Conference when it meets, a few days hence. The two countries, members of the Conference, lying nearest each other, the two having the greatest facilities for mutual trade, having lately spent millions upon millions of dollars in building railways, opening mines, and constructing smelting works for the explicit purpose of promoting such trade, are now taking steps, in the face and eyes of all the conferees, to undo the work in which they have spent so much time and money, and to bring to naught the very aims of the great international conference. Is not this a brave encouragement to the other members to try and bring about closer commercial relations when they see existing ones, that have been created by private enterprise, frustrated by the Governments of the two countries?

We hope that Mexico will retaliate to the fullest possible extent and by all the means in her power. It is of the first importance that all the interests in this country which depend in part upon Mexican trade should feel the thumb-screw that Secretary Windom has applied to the smelting industry, so that all may make common cause in removing the pressure. Señor Francisco Bulnes, who made a speech in the Mexican Congress the other day calling attention to Mr. Windom's "regulations," is an enlightened statesman and economist and an especial friend of the United States. He was never more a friend than when he denounced those regulations and advised that retaliatory steps be taken.

The regulations are as contrary to law (our law) as they are to common sense. One of them prescribes that the products of different Mexican mines shall not be mixed together before arriving at our custom-houses—as though *we* have any right to instruct foreigners what they shall or shall not do with their own property within their own territory. What we have the right to do, when a consignment of ore comes to the frontier, is to determine whether it is silver ore or lead ore in contemplation of our tariff. Mr. Windom himself has said that if it contains more silver value than lead value, it is silver ore, and hence duty free. If it has more of value in lead than in silver, it is subject to a tax of 1½ cent per pound. It is the duty of customs officers to decide which is the preponderating metal. They have means for reaching such decision and they rest under responsibilities well defined in the law. If the importers bring any ores in which the lead preponderates over the silver in value, they have the alternative to pay the duty or to take the ore back. In any case of attempted fraud the Government may confiscate the lot. All this is plain, legal, and customary, but the new device for restricting trade is extra-legal, and therefore illegal. A regulation forbidding English manufacturers to mix wool and worsted together in cloths, or brass and nickel in buttons, to be sent to this country, would be just as outré and indefensible.

The other regulation, which prescribes that the value of lead in Mexican ores shall be the value of lead in New York minus one cent per pound, has no foundation in law, but is opposed to express provisions of law, which assign to appraisers the duty of fixing the values of all imported merchandise and determining the methods of procedure in all cases of doubt, and require them, in such cases, to ascertain the value in the principal markets of the *exporting country*, not the importing country.

It is evident that Mr. Windom, being satisfied at an early stage of the game that he could not rule these ores to be lead ores, took steps to satisfy the carbonate mine-owners by indirection. But he has not satisfied them. Their newspapers in Montana are now demanding his removal from office because he did not "go the whole figure," and the Mexican press is holding language which ought to make every American blush for shame. Says the Mexican *Financier* of October 26:

> "If the Mexican delegates to the Pan-American Congress promptly withdrew, refusing to participate in a conference called under the pretence of increasing international trade, and assembling just at a time when the American Secretary of the Treasury was doing his best to restrict that trade, they would be justified by enlightened public opinion in this country."

And in another article the same paper says:

> "The Mexican delegates will, we hope, ask bluntly what the policy of President Harrison's Administration is to be regarding the importation of the characteristic staple products of this country; but, if that Administration has no satisfactory reply ready, it is difficult to see any reason why the Mexican delegates should remain to discuss the glittering generalities of international relations."

The Mexican *Financier* is perhaps not aware that the prime object of the Pan-American Conference on our part is to promote steamship subsidies rather than to promote trade. Lead ores from Mexico would not be carried by water in any case. It is of no importance to our Government whether the trade that goes by land is killed or not. Or, rather, viewing the case in the light of Secretary Windom's regulations, it *is* of importance to us that it should be obstructed in every possible way. If the Mexican delegates will "stand by" long enough to vote that the United States ought to pay some millions a year out of its abounding surplus to half-a-dozen steamship lines, they will render us the only service we expect from them. They can then return home with our blessing, and send their raw ores and coarse wools to John Bull to the end of the chapter, and we shall not mind a little retaliation, because all such things go to the further obstruction of trade.

SOUTH AMERICAN MAILS.

Some surprise has been expressed that the subsidy-hunters should have been at such pains to win Mr. Wanamaker over to their schemes, and should let out the fact that they have won him by complacently addressing him as "your good self." It is because they know that a subsidy must be disguised to pass Congress, and they count upon the Postmaster-General to recommend it under the mask of payment for carrying the mails. Shipping subsidies in the United States came to an end in 1875, when Congress, by an almost unanimous vote, rescinded the contracts with the Pacific Mail Company, on the ground of fraud. What the fraud was, the *Tribune* declared when it said: "It has been abundantly proved that a million dollars, more or less, has been spent by the Pacific Mail Company to get its subsidy passed." It will be good news to the lobbyists that it is proposed to bring back those good old times. What the subsidy really was, we leave the *Tribune* of those days to say—"a wanton theft of $500,000 under the plea of sustaining American commerce." It will be sad news to the taxpayers that it is proposed to renew the same sort of thieving under the same plea. But the attempt will now have to be made indirectly; the reek of the Pacific Mail scandal still attaches too unpleasantly to a subsidy pure and simple.

The steamship-owners assert that the Government does not pay them decently for carrying the mails. To be entirely fair, we will admit that one part of their complaint appears to be well grounded—their actual pay is made considerably less than their nominal pay, through their having to meet some incidental expenses which it would seem the Government ought to provide for—expenses of cartage and delivery, for example. If their only aim were to have some such slight injustices remedied, no one could object. But when they attempt to make out a case of peculiar hardship for themselves, assert that the Government asks them to perform a great public service for a pitiful return, and even go so far as to argue a studied discrimination against them in favor of foreign steamship lines, they forfeit all claim to sympathy or respect.

There is a discrimination, but it is in their favor. Postmaster-General Vilas concisely stated the fact when he told the complaining proprietors of the American lines that their rate of pay was three times as great as that "for carriage across the Atlantic," and also "three times as great as foreigners are willing to serve it [the Government] for" on the same routes as those followed by their vessels. That is to say, Mr. Vilas took advantage of section 4009 of the Revised Statutes, which allowed him to pay both sea and inland postage to the American lines, or to make their rate of pay $1.60 per pound for letter mail and 8 cents per pound for papers

and parcels. This, for letters, is at the rate of 320 times the freight charges of the Brazil line on coffee, and sixteen times for papers. Yet this is the rate spoken of as a "miserable pittance." To state the facts in another way: for the year ending June 30, 1887, the mails carried by American lines amounted to but one-tenth of all our foreign mails, but for performing that service they were paid one-fourth of the total outlay for carrying foreign mails. That is the sort of discrimination there is.

The real pinch comes, of course, from the fact that our South American mails are so small that even these high rates of pay for carrying them do not yield large returns. All the indignant declamation over the smallness of the sums paid for the carriage of those mails really only serves to call attention to the fact that our business relations with Spanish America are too slight to create a heavy correspondence. For example, the Brazil mail, about which such Homeric lamentations are made, was, in 1886, only one-hundredth part of the bulk of the mail to Great Britain, one-eighth of that to Austria, about the same as that to Portugal, and only about twice as great as our mail to Turkey. The mail to the Argentine Republic, in the same year, was actually less than the mail to Turkey. This famous Brazilian mail amounted, in the year named, to about 2,000 pounds of letters, less than 2,000,000 letters and postal cards, or about half as many as were mailed in the New York Post-office in six days of that same year.

But, say the subsidy-hunters, look at the enormous distances we travel. Is it right that a steamer running between Portland and Halifax should be paid as much as one plying between New York and Rio de Janeiro? That depends upon the amount of service. This is something almost impossible to get into the head of a man with subsidies before his eyes. He will not look upon the Post-office as a business department of the Government, seeking to serve the people, adjusting its pay to the service rendered, and watching the balance between outlay and income with the jealous eye of a responsible business man, but wants it to forget everything but "the flag" and "the encouragement of commerce." How would the argument from distance work when applied to our domestic postal service? Texas, with its vast area and difficult routes, had expended upon its mail service in 1888 $1,642,967, at the same time that New York, a State of far less extent and much greater ease of communication, drew from the Treasury $6,129,223. This is wholly inexplicable from the subsidy point of view, but is perfectly natural from the business point of view, since the mail receipts from Texas were but $1,010,414, while from New York they were $9,270,151.

The obvious truth that business creates mails, and not mails business, with its consequence—that the way to get large pay for carrying the mails is to get large mails to carry—is hard for the advocates of subsidies to learn, plainly as the statistics of trade and of correspondence teach it. We have before spoken of the increase of trade with South America during the past two years—a gain of 15 per cent. in our exports; in perfect keeping with this is the fact that the letter mail to Central and South America, in 1887, increased 19 per cent., and the pay for its carriage correspondingly. In that year there were 831 sailings of steamships for South America from the ports of New York, New Orleans, and San Francisco, as against 712 for the preceding year. Yet the subsidy men think that the way to get warmer weather is to carry the thermometer to the fire.

THE PANAMA CANAL.

PANAMA, October 19, 1889.

WHEN we sighted the coast of Colombia, the air was full of rain, and a mist spread over the waters, half obscuring the line of hills close by the sea, and wholly eclipsing the higher inland ranges toward the south, which later emerged from the shifting clouds. The day was sunless, but sultry. In sheltered nooks the perspiration flowed freely; exposed to the breeze, the drops still stood out upon the forehead, and clothes clung damp and clammy to the flesh, while a chill penetrated to one's very bones. At times a fresh breeze stirred the clouds, giving glimpses of serrated mountains clothed to their summits with dark-green tropical forests. Nowhere was to be seen the suggestion of any endeavor to compel nature to subserve the needs of man—no clearing, no house, no settlement save Porto Bello, tucked away in a narrow gorge, with a schooner or two at anchor in front of it. Even Porto Bello, with its history dating back to the days of early conquest, has no sign of a garden or of a banana grove—has apparently only a few adobe houses, the ruins of an ancient fort, and what may perhaps be a wharf. Late in the day the steamer came into the Bay of Limon, or Navy Bay, with the green-painted, red-roofed houses of Aspinwall set among cocoa-palms on one side, and a long low point of land looking like a tangled maze of cloud and jungle on the other. The mists and showers are now succeeded by a drenching flood of rain, followed by the sudden fall of a tropical night.

Our first morning on the Isthmus, and it is a fair type of those which succeeded, opened with a bright, clear sun shining over the tranquil bay, and illumining the silvery mists that rose from the marshes in the distance, but in less than a quarter of an hour the sky was dark and threatening, and then the floods descended again. With equal unexpected suddenness the sun reappeared with scorching heat; again the clouds closed over it, with more pelting showers, and so continued, like the alternating swing and return of a pendulum. The air was too dense to be inhaled with comfort. There was no exhilaration in it, and the rich fragrance of tropical plants made it still more oppressive. Inland it is just the same, for the marshland continues throughout the width of the Isthmus. Whole villages are built on piles—mere slender posts driven into the reeking swamp, with board walks similarly supported leading from house to house. Some of the towns are on higher ground, but even that would be deemed uninhabitable marshland in the United States. On the hills here and there are buildings erected by the Canal Company, in which the questions of drainage and ventilation have been well considered; but even these are not far removed from the pestilential morasses below, and the earth to the very crests of the little peaks is a saturated vegetable mould, which it were all but impossible to drain and render free from decaying matter.

In such a place as this, where the utmost caution can with difficulty protect an unacclimated stranger from disease, it would require an extraordinary faculty for the organization and management of workmen to achieve results at all commensurate with the force employed. The climate exercises a most deleterious moral effect. The imagination, haunted with the fear of speedy death, leads to reckless and fatal exposure, or to a numbing of the faculties, from apprehensions of danger, which serves only the more readily to ripen disease in the system. The influence of luxury-loving officials, enjoying almost the comforts of Paris in their exotic hotels, sallying forth on horseback in order to avoid fatigue and hardship, is not such as to inspire workmen with confidence of security in their own less protected habitations, or in the exposure incident to laboring in the rain and heat and miasmatic airs of a tropical climate. The problem of controlling and caring for men on such an enterprise, under such conditions, requires something of the military genius for its solution. The luxury, and the excessive precautionary measures which have attached to the average Frenchman in every detail of his life here, diminished the courage of the workmen to an extent which has been poorly appreciated. More of that plain living which gives physical endurance to the soldier in the field, more sober prudence and less tremulous caution on the part of officials, while it would not have proved a panacea for the troubles besetting the undertaking, would certainly have resulted in a larger cube excavated to date, and would have eliminated many pages from the history of trials, delays, and disasters at Panama.

There are many "ifs" on the lips of those interested, in reviewing the unfortunate past: *if* the negroes were less shiftless, *if* they would not carouse from sunset on Saturday to sunrise on Monday, *if* the Colombian Government did not license gambling houses, and a host more of like sort; but it may be answered that a work of the magnitude and importance of a trans-isthmian canal need not be conducted in the manner of building a railway in a populous and healthy region; its international character would give warrant for the strictest discipline of employees, for protection of them against imprudence and the snares of licensed dens for drink and gambling. A rigid system, assuming responsibility over the workmen even to the details of dress and diet, would have rendered it far easier to secure a full quota while yet there were resources within reach of the Company.

The thought of reviving the Panama Canal scheme, which has so evidently entered the list of historic failures, may seem laughable in the United States. We think confidently of our Nicaragua plan, and smile at the impetuous Frenchman, whom many fancy as dreaming that he could cut his way at random across lofty mountain ranges. There seems to be a misconception in the popular mind regarding the physical characteristics of the Isthmus. It is very mildly mountainous, quite as mildly so as the region of the Orange Mountains of New Jersey. Passing from coast to coast, it appears very low indeed, and the hills seem not aligned into ranges, but scattered promiscuously about, with deep gaps between. In fact, Culebra, the highest summit, barely exceeds 500 feet, and the canal cut at this section, to bring it down to sea level, would only be 269 feet in depth. Such excavations are not un-

paralleled. Nochistongo, in the valley of Mexico, was dug out to a depth of 700 feet some two centuries or more ago. It required thirty years to do it, to be sure, but then there were no steam drills, no dynamite, no excavators, no patent dump-cars to make it easy, in those days either. Other great cuts are on record, and a sane body of English engineers has recently threatened to dig a canal from the Mediterranean to the valley of the Jordan, and thence to the Red Sea, on the line of which would be a trench 728 feet from top to bottom! Still, Culebra has been the point from which contractors have recoiled in despair. There is much in the statement of M. Charles de Lesseps that this section "is a great and difficult work." One-fourth of the entire cube of the canal is included in this section, the exact figures being, according to the Company's estimate, 95,150,000 cubic metres for the original total, and 23,000,000 cubic metres for Culebra alone.

Of the total cube it is fair to say that nearly one-third has been excavated up to the present time. But a difficulty of equal magnitude, and more perplexing than Culebra, is met in the control of the Rio Chagres. Much has been heard of the proposed Gamboa dam, which is intended to restrain and regulate the waters of this stream, but it is worth while to state once more its dimensions, which, by the plans, were to be 115 feet in height and 980 feet wide at the base, and all this to be of solid masonry. It is almost impossible to estimate the cost of such a structure on the Isthmus of Panama, but it would be enormous. Then comes the question of its ability to serve its purpose, even with a storage capacity of over 250,000,000,000 gallons, in a country having an average annual rainfall of 119 inches! The Chagres crosses the line of the canal twenty-eight times in a distance of twenty-seven and one-third miles, which has necessitated an extensive system of "derivations," or artificial channels, connecting the natural channel from point to point on each side of the canal, so that when completed there would be two rivers instead of one, with the canal between them.

On the Pacific slope the same difficulty is met, but in a less degree, in the control of the Rio Grande. Two aqueducts are contemplated in the Company's plans for conveying the waters of this stream across the canal, in addition to a system of "derivations." The total length of these "derivations" would be forty miles, only six miles less than the total length of the main canal. The cross section, however, would be so much smaller that the estimated cube would only amount to 10,000,000 cubic metres, or about one-tenth that of the canal proper, of which nearly 5,000,000 cubic metres have already been excavated.

Work, as is well known, has entirely ceased, but the canal has not been abandoned to the mercy of the elements, as is commonly believed. Large forces of workmen are constantly engaged in painting the machinery and doing what is needful for its protection. A very large portion of the plant of the canal is well housed in sheds, where it is safe enough, and roofs have been erected over excavators and other heavy machinery where it stood when work was discontinued. So far as could be seen, careful attention has been paid to the preservation of the minor parts of all machinery, and the condition of the plant seems to be exceptionally good when the nature of the climate is considered. There are scrap heaps and side-tracks on which cars and worn-out engines are to be seen rusting out, and at least one dredge is going to decay within sight of the passing tourist; and these may have been the basis for many hasty and ill-founded generalizations to the effect that canal, plant, and all were speeding towards ruin and obliteration.

A commission of engineers will visit the Isthmus during the month of November, whose first duty will be to take an inventory of the entire equipment of the Company, and then to consider once more the threadbare question as to the practicability of completing the work for any reasonable sum of money. American engineers have the answer all ready for them, but the hopeful Frenchmen, the Colombian politicians, and the practical business men on the Isthmus reply, "The talk of the Americans about the ease of building the Nicaragua Canal, and the difficulties at Panama, is all part of a big game of bluff. When they find that they can buy out the concessions and plant of the Panama Canal Company for a mere song, they will transfer all their ardor and enthusiasm to the Isthmus." This is the current feeling on all sides here, and they point out a dozen obstacles at Nicaragua which are never heard of at home. The only circumstance lending any color of reason to the argument is the fact that, although only one-third of the work has been finished, enormous difficulties have been overcome by the installation of the plant, a benefit which any purchaser would find of immense value. At the same time the almost utter impossibility of controlling the unruly Chagres, and the excess of excavation over that to be done at Nicaragua, will of themselves preclude the revival of the Panama Canal.

The French have left their impress upon the Isthmus in other works than the canal. Art and comfort follow them from France and take root wherever they plant their banner. On approaching Aspinwall, the first object which attracts the eye is a fine statue in bronze of Columbus standing at the end of a concrete pier overlooking the Bay of Limon. On this pier are also the palaces of the high officials of the canal, surrounded by a thriving grove of young cocoa palms. The city of Panama has profited even more by the spirit of convenience inherent in the recent occupants. From being a filthy, ill-kept town it has been transformed into a clean and well-paved city. The old board side-walks, which used to rot and breed disease, have been replaced by concrete, and the road to the railway station, which was formerly one long puddle of mud, is now as firm and smooth a driveway as one could wish for. The yellow adobe houses still crowd close upon the street, with artistic balconies overhanging, so that none of the old-time quaintness has been lost. The plazas, the courtyards filled with bananas and palms, the gardens, with their luxuriant foliage and gorgeous flowers, are still there, only enhanced in beauty by the aid of the Chinese, who, swarming to the Isthmus, have brought with them from Cathay the skill in landscape gardening which the Colombian has not been slow to utilize for the adornment of his home. Panama has much of beauty in it, the land is high and not difficult to drain, and there is seldom a day when a breeze sweet and cool from the Pacific fails to sweep across the town. It is difficult to see why Panama should not be a comfortable and healthy place.

ENGLAND.—THE TORY SUCCESSION.

LONDON, October 25, 1889.

EACH of the two great historical English parties is at present in a predicament which, with some differences, presents some remarkable similarities. Each feels that it will before long have to select a new leader; each is sorely puzzled over the selection. The Liberals cannot hope to enjoy for many more years the chieftainship of Mr. Gladstone, for, great as is his physical and mental vigor, he must before long think of withdrawing to a less fatiguing life. It is generally supposed that when he retires, his place as head of the whole party will be offered to a much respected peer, Lord Spencer; but this will leave unsettled the more troublesome question of who should lead in the House of Commons. The Tories have similarly to provide not only for the contingency of Lord Salisbury's abdication—and his health is far from strong—but for the nearer difficulty of providing a successor to Mr. William H. Smith in the leadership of the House of Commons. As there is nobody among the Tories in the House of Lords sufficiently eminent or influential to become Prime Minister, the choice of a leader in the lower house will be virtually the choice of a head to the party as a whole, and a successor to Lord Salisbury in the place of First Minister of the Crown.

There are practically only two members of the present Tory Government who are "in the running," as it is expressed, for this great post —Mr. Goschen, the present Chancellor of the Exchequer, and Mr. A. J. Balfour, the present Chief Secretary for Ireland. The other members of the Cabinet are, with two exceptions, too insignificant personally to be thought of as possible candidates. Lord George Hamilton, for instance, or Mr. Stanhope, or Mr. Chaplin has neither the debating power, nor the influence in the party at large, nor the weight of character that is needed to make a man available. Sir Michael H. Beach has a better position, and once did lead the House of Commons for two months; but his health is not strong, and he has latterly fallen into the background. Mr. Matthews, the Home Secretary, has plenty of talent, but has not won authority either in the House of Commons or in the country. Neither could be thought of for a moment as against the two whom I have first named. It is these two who have practically done all the debating work of the Government during the last three years, and have thereby established a strong claim to the confidence of the party. Mr. Smith, though nominally their chief, has neither the gifts nor the taste for oratorical conflicts, and has confined himself to attending to the order of business and making such almost formal motions as devolve on the leader of the House. Every one on both sides likes and respects his amiable and upright character, so that little of the fire of Opposition or Irish Nationalist invective has been directed against his head.

The choice between Mr. Goschen and Mr. Balfour is a difficult one, and not the less difficult because their qualifications are diverse in nature. The Chancellor of the Exchequer is much the older man, and has a range of knowledge and experience wide in proportion to his age. He is a thoroughly trained economist, specially conversant with financial questions, and well acquainted with the politics of Continental Europe. He has filled a great many different administrative posts: has been Chancellor of the Duchy of Lancaster, President of the Local Government Board, First Lord of the Admiralty, Ambassador at Constantinople, all in the service of Liberal Governments. It is a great advantage to know something of the inner working of various departments, and to be acquainted with the character and capacity of the chiefs of the permanent civil service. His oratory, if not graceful or polished, is ready and forcible. Few speakers used to be listened to with more general and close attention; and, though both in matter and in style his

speeches have suffered from the more declamatory tone which he has lately adopted, he is unquestionably one of the four or five best debaters in the House, and probably, taken all round, the strongest man on the Conservative side. He has almost too much of that pugnacity which is a useful quality in a Parliamentary leader, for he often insists on attacking or refuting an opponent when it would be more prudent, and conduce much more to the progress of business, to display that indifference or contempt which was one of Mr. Disraeli's most effective weapons. However, if he is rather too prone to irritate his foes, he succeeds in inspiriting his friends; he is always ready to say the strong things which the Tory party relishes, and he is never at a loss for some sort of argument which, whether sound or not when examined in cold blood, will pass muster in debate.

The chief objection to him, besides his slightly too eager or pugnacious temper, is that he was not born a Tory, but is a recent recruit to the Government, and would indeed probably still prefer to describe himself as a Liberal-Unionist. No one can blame him for joining a Tory Administration, for he had been left in the rear by the rapid march of his former party even before the great home-rule schism broke out, and it was at the express request of Lord Hartington, the chief of the Liberal-Unionist section, that he placed his great talents at the disposal of Lord Salisbury. Still, the rank and file of the Tory party do not feel the same attachment to and the same kind of trust in a former opponent as they felt towards a politician bred up in their own beliefs and imbued with their own traditions. So far as one can judge from conversation with average Conservatives, whether in or out of Parliament, Mr. Goschen has not become to them one of themselves, and they do not yet appreciate at their due value his abilities and the services which he renders to their party. They do not quarrel with his opinions; in fact, he is more of a Conservative than many among them, having no liking for the so-called "Tory-Democratic programme," in which the future strength of the Tory party is generally supposed to lie. But identity of opinion has less influence on most men than identity of sympathies and habits. The career of Mr. Disraeli shows that an English party can subordinate its sympathies to its interests when the need arises; but it took Mr. Disraeli many years to acquire his unparalleled ascendancy over those who had at first regarded him as an unscrupulous Jewish adventurer. Mr. Goschen has no such prejudices to overcome. In position and character he is everything which Mr. Disraeli was not. But it is not yet three years since he joined the Tory Government, and he has within his own party, within that very Government, what Mr. Disraeli never had to contend against—a formidable House of Commons rival, whose rising brilliance distracts the attention of the crowd.

Mr. Arthur Balfour's qualifications and claims are less easily summed up, because his record has been much shorter than Mr. Goschen's. Both his possibilities and his limitations are more largely matter of conjecture, because he is seventeen years younger, and has filled comparatively few official posts. It may indeed be said that his administrative capacity is still unproved, for it has been tested only in the government of Ireland; and party spirit rages so fiercely round everything that proceeds from the Irish Government that even a dispassionate observer, standing outside the tempest of charges and countercharges which surrounds Mr. Balfour and his Nationalist foes, finds it hard to judge acts done under circumstances which are described quite differently by friends and foes, and whose results have (in many instances) not yet appeared. Such a dispassionate observer would, however, probably say that Mr. Balfour had not yet proved himself to possess any qualities beyond those of courage and consistency. Tact—the sort of tact which avoids difficulties—he would appear to want; while as to foresight, and that kind of judgment which refuses to employ stronger means than the desired end requires, it is too soon to pronounce an opinion, because the outcome of the policy of coercion has not yet appeared.

But though this might be the view of the detached observer, it is not the view of those in whose hands Mr. Balfour's fortune lies—the rank and file of the Tory party. They are full of admiration, an unbounded and undoubting admiration, not only for his courage and consistency, but also for his penetration, his skill, his mastery of the whole position. Their common praise for him is "the greatest Minister since Pitt." This admiration is strongest among those feminine politicians who have now become a powerful and effective battalion in the Conservative host. It prevails also among the working members of local Conservative organizations, and is perhaps least strong among the calculating middle-aged Parliamentarians, who fear that the "vigor" by which Mr. Balfour fascinates the vehement men of the party, may provoke a reaction among that large class which is waiting to judge his Irish policy by its results a year or two hence. In the House of Commons Mr. Balfour deserves less hesitating praise. He is not a great speaker, and gives little promise, so far, of becoming one. But he is rapidly becoming an excellent debater. He is quick, keen, ingenious, full of courage, willing to encounter Mr. Gladstone at the shortest notice, and even when he feels his position to be a weak one, he seldom betrays it by his manner. It used to be said of him that his mind was too scholastic, too purely dialectical—that he argued, so to speak, *in vacuo*, like one supporting an academical thesis rather than endeavoring to persuade ordinary men, many of them slow or obtuse. But his immersion in affairs, and the need thrown on him of dealing in every speech with facts, have gone far to cure this fault.

His weak points would seem rather to be an extreme scepticism, or rather "negativism," of mind, which makes him far more effective in demolishing an antagonist's case than in supporting his own, and an unnecessary bitterness of tone and scornful attitude towards his opponents, which tend to make the debates he joins in more fierce and more protracted than they might otherwise be. Like his uncle, Lord Salisbury, whom, consciously a little and unconsciously much more, he imitates, he has not only a great power of sarcasm, but a great pleasure in indulging it, and often aggravates the difficulties of his position by a sneer or a scoff which prudence would have suppressed. He is by no means malignant, and is much more socially popular in the world of London than Lord Salisbury has ever been; but his supercilious manner has roused against him an antagonism which is to some extent personal as well as political, and is to be regretted in the public interest as well as in his own. The ferocity of partisanship at this moment, particularly in the press, but largely also in the speeches of the more active politicians, exceeds anything England has known since the fall of Peel more than forty years ago, nor needs the addition of an element of personal rancor to a contest of principles and projects. The attacks of which he is the object have, however, done much to endear Mr. Balfour still further to his party. He is beyond doubt the most popular figure it contains, the person whose elevation to the leadership would excite most enthusiasm. He also seems marked out for it by a sort of hereditary right as the nephew of the present Prime Minister. Yet it would be difficult to put him over the head of Mr. Goschen, a far older as well as far more experienced man, whose fighting powers, though different, are certainly not inferior.

The usual British device in these cases is to remove the elder politician to the House of Lords. But the Tory party could not spare Mr. Goschen from the House of Commons. A calm-judging Tory, free from personal prepossession, and looking solely to the interests of the party, would, I think, advise that Mr. Goschen should succeed to the post of leader in the lower house. Whether this ought to carry with it the reversion to the office of First Minister is another question, and a more doubtful one. It is comparatively easy to induce a small body like the Conservative majority in Parliament, to rally around a leader who is himself a late recruit; it would be much harder to fill the party in the country with enthusiasm for one whom they have scarcely yet learned to think of as one of themselves, and who does not appeal to any of their favorite sentiments or prejudices.

It may be asked whether the choice is so limited as has been here represented. Are there not two other persons who might be elevated to the Tory leadership, both of them conspicuous politicians, both of approved parliamentary talents? One of these two would be glad enough to accept the post. Lord Randolph Churchill seems to have bitterly regretted the precipitancy with which he threw up his place in Lord Salisbury's Government in January, 1887. He would welcome any opportunity of recovering the position in his party which he then threw away. What the distant future may have in store for so restless and indeed irrepressible a spirit, no one will venture to predict, but for the present the path of ambition is closed to him. Lord Salisbury has no wish to bring him back into a Cabinet in which he was not a tranquillizing element. Mr. Balfour has got distinctly in front of him, and could not be expected to surrender an advantage gained by three sessions of severe and brilliant combats. Between Mr. Goschen and Lord R. Churchill, who claims to embody the programme of Tory democracy, there is so strong a reciprocal repulsion that it is hard to imagine them working harmoniously together. The only prospect at present open to the latter of retrieving his fortunes is that which would be offered by the return of Mr. Gladstone to power. Were the Tories again in opposition, Lord R. Churchill's talent for criticism and invective would find full employment, and his claim to share in the spoils when the Tory party was next victorious would be irresistible.

The other possible leader is of a different and far higher stamp. Lord Hartington would, but for the home-rule schism, be now the acknowledged second in command of the Liberal party, certain of the succession to Mr. Gladstone in its leadership and of the post of Prime Minister in any Liberal Government. To secure his services would be the best thing the Tory party could now aim at. Both Mr. Goschen and Mr. Balfour would willingly accept his leadership, while his social position and the influence of his character would make the Conservatives throughout the country glad to have him not only as a House of Commons

chief, but ultimately even as Prime Minister. He is, however, a Cavendish, the head of one of the oldest and greatest of the great Whig houses, and he shrinks from entering the ranks of his hereditary enemies, even though the differences of opinion which separate him from them have become comparatively slender. If circumstances compel a fusion between his forces and those of Lord Salisbury, he will endeavor to give the united party some new name rather than call himself a Tory. In the meantime he desires to maintain the position as an ally standing outside. He is quite right to do so as long as he can, but it may be doubted whether the approach of a general election will not force him, for the sake of his followers, to accept that closer union which he has hitherto resisted.

ÉMILE AUGIER.

PARIS, October 31, 1889.

THE death of Émile Augier has thrown a gloom over our literary world. He was liked as a man as much as he was admired as a dramatic writer. He was not often seen in society, and lived chiefly in his country house near Bougival; but he went from time to time to the Academy, to the French Theatre, which was, so to speak, his own house. One who has ever seen him there will not forget his tall stature, his frank look, his head which resembled the pictures of Francis I. Those who had the good fortune to speak to him will no more forget the original and clever turn of his mind, the good sense of his remarks—a good sense which never took a commonplace and trivial form, but which found amusing and witty expression.

Augier was essentially a Parisian, though he was born at Valence; he was sometimes called a *Gaulois*. He was the grandson of Pigault-Lebrun; his father was a bourgeois of Paris; all his family ties were in Paris. He was brought up in a Parisian college, and his father wished him to become a notary like himself. But young Augier preferred the muses to the law, and at the age of twenty-four he gave to the French Theatre a little piece in verse, called the "Ciguë," which immediately established his reputation. The "Ciguë" was a reaction against the Romantic movement. Romanticism had nearly gone out towards the latter part of the reign of Louis Philippe—a reign which has sometimes been called the reign of the bourgeoisie. The author of "Hernani," of "Ruy Blas," of the "Roi s'amuse" seemed asleep in his chair in the House of Peers. Romanticism in 1844 seemed a little out of fashion: the day of the unfortunate young Werther, of Chateaubriand's "René," of Alfred de Vigny's "Chatterton," of Alexandre Dumas's "Antony" ("Elle me résistait, je l'ai assassinée"), was past. "Antony" seemed almost comical. The heroes of the Romantic school were too diabolical; they constantly threatened society, they defied the law under a quiet, well-constituted government, which seemed in 1844 to be perfectly safe, at a moment when nobody could prophesy the Revolution of 1848 and all that followed it.

A new literary school was timidly founded by Ponsard, the author of "Lucrèce," and Augier became the first lieutenant of Ponsard. "Lucrèce" was the type of the new classic tragedy; the "Ciguë" was the type of the neo-Greek comedy. I confess to having but a moderate admiration for the now forgotten "Lucrèce." The versification of the "Ciguë" is pure and at times charming, but the play has no solidity. Young *Clinias*, the melancholic Athenian who is on the point of committing suicide, but who condescends to live for the young slave *Hippolyte*, finding a new reason for living in her beauty, is as false, in one sense, as the Greeks painted by Ingres in his "Stratonice." The "Ciguë" is a very clever imitation, but it is an imitation; it was written by Augier when he was still full of his college lessons. This return to antiquity was a protest against Romanticism. There was, fortunately, another way of protesting against it, a way better suited to the robust mind of Augier: the Romantics were always, so to speak, out of nature; the return to nature was the true method, which Augier finally adopted. He became an unconscious founder of the modern realistic school, which studies the true man and the true woman, which takes its dramas and its comedies from life itself.

I see the first symptoms of this change in the "Aventurière." Though this drama develops itself in a somewhat fantastic region and the costumes are antiquated, it is inspired by direct analysis; and, if you change the costumes and the names, the "Aventurière" might almost be called the "Demi-monde." It is a prophetic piece, realistic under a Romantic garb; and beneath the versification, which at times is splendid and almost Cornelian, you feel the movement of passion as rapid as if the play were entirely written in prose. I have, I admit, a great affection for the "Aventurière," perhaps because I have seen it so admirably played at the French Theatre by various actors and actresses.

Augier always liked to write in verse, though he adopted prose more and more frequently as he became more and more realistic. He had, however, not much of the poet in him; he was not lyrical. Let us compare, for instance, two passages from Augier and from Musset on the same subject, the development of feminine modesty—the transition, if you like, from the girl to the woman. In "Philiberte" *Julie* says to her sister:

"Tu n'étais qu'un enfant, ma sœur, jusqu'à ce jour;
Tu viens, en un instant, de faire un pas immense,
Car c'est à la pudeur que la femme commence,
Et la pudeur, au fond, n'est que le sentiment
Qu'un homme peut nous voir avec des yeux d'amant."

This is Augier; now, here is Musset:

"NINON.

"L'eau, la terre et les vents, tout s'emplit d'harmonies.
Un jeune rossignol chante au fond de mon cœur.
J'entends sous les roseaux murmures des génies.
Ai-je de nouveaux sens inconnus à ma sœur?

"NINETTE.

"Pourquoi ne puis-je voir sans plaisir et sans peine
Les baisers du zéphyr trembler sur la fontaine,
Et l'ombre des tilleuls passer sur mes bras nus?
Ma sœur est un enfant—et je ne le suis plus."

The moralist in Augier comes before the poet. He soon gave himself entirely to the study of modern society, "a society," he said in his reception speech at the French Academy, "quite new, without a past, without traditions, without a belief, and even without prejudices; a land of equality in which wealth has become the object of every ambition, since it is the only possible inequality." Augier struck a very happy vein when he dramatized the contrast between this new society and what remains of the old, in the "Gendre de M. Poirier." I think that the "Gendre de M. Poirier" and the "Demi-monde" of Alexandre Dumas, the son, are the most typical plays of our modern theatre. They will probably outlast any other in what the French Theatre calls the *répertoire*, that is to say, the collection of plays which can be played at all times, the substratum formed by Molière, Racine, Corneille, Marivaux, Beaumarchais, etc. It is no small glory to have added something to this *répertoire*.

If we had to write the history of what may be called the realistic theatre of our time, we should have to pay much attention to dates, and the dates would show that Émile Augier preceded Alexandre Dumas, the son. "Gabrielle" appeared in 1849, and the "Dame aux Camélias" in 1851, three years afterwards. And here it may be said that the "Dame aux Camélias" hardly belongs to realistic art: it is half romantic; it introduces on the stage the fallen woman, the venal woman, whom our ancestors always kept in the background, but she is poetized and surrounded by a halo—"Et l'amour m'a refait une virginité." She is even more poetical than the *Marion Delorme* of Hugo. The realistic work of Dumas only really begins in the "Demi-monde" in 1855. Here we see the guilty woman in her true aspect, and before the "Demi-monde" Augier had already written "Gabrielle," the "Gendre de M. Poirier," and "Ceinture dorée." But why should we make odious comparisons? Let us simply enjoy the happy rivalry which gave us at the same time, in the same years, the "Mariage d'Olympe" and the "Question d'argent," the "Lionnes pauvres," and the "Fils naturel," "Maître Guérin," and the "Ami des femmes." Augier and Dumas have both tried to bring moral lessons on the stage. Those of Dumas are perhaps the more original, those of Augier are on the whole sounder and better. Augier is less paradoxical, less sophistical; his morality, if the expression be allowable, is more moral.

The revolution which they wrought in the French stage was of some importance, as, ever since 1850, social questions have all been discussed under a dramatic form. The divorce law which was passed a few years ago, would perhaps never have been voted if the divorce question had not been many times treated by the modern dramatists. The social position of the natural son has been a favorite subject for Alexandre Dumas, and it is not impossible that the French legislation may some day be reformed on this very important question. I will return a moment to the "Gendre de M. Poirier," Augier's masterpiece. Nowhere has he shown more forcibly the contrast between the French bourgeois who has built up a great fortune by his work—full of ambition, also of envy—and the French nobleman, who does no work, and who thinks he is paying a great honor to the daughter of the bourgeois in marrying her: she brings him a fortune, he brings her a title. Got, who played so long the part of *M. Poirier*, resembled much, in that part, M. Dufaure, the great lawyer. He was truly inimitable. Every one in Paris knew whom M. Augier had in his eye when he painted the son-in-law of M. Poirier, so impudent to his father-in-law, so unjust and cruel to his wife. The drama which is represented in the "Gendre de M. Poirier" is seen constantly in our society. Though the French nobility lost its privileges a hundred years ago, there is still in its old names a prestige, a force of imagination, which has preserved all its power; the daughters of our rich, jealous, and proud middle class are often too ready to feel its influence. Augier was essentially a representative of the French bourgeoisie; he knew its virtues, he knew also its defects. He tried, in all his plays, to correct those defects and encourage those virtues. He was severe on the scandals of ill-acquired wealth, its vanities and follies.

During the Second Empire, at the time when the Italian war had endangered the temporal power of the Papacy, and when the struggle between clericalism and anti-clericalism was fierce in the press and in the Chambers, Augier took sides with the Liberals. He believed in the mysterious power of the Jesuits, and the true title of his piece "Le Fils de Giboyer"

might be "The Clericals." Augier never was a political partisan. He was, under the Empire, a friend of Prince Napoleon and Princess Mathilde, and would have been made a Senator if the Revolution of 1870 had not taken place. He was a Conservative, but his conservatism had not taken the form of any particular creed. He lived chiefly, one may say wholly, for his literary work.

Correspondence.

THE OHIO ELECTION.

To the Editor of The Nation:

Sir: Your readers in other States may not be aware of the full significance of the recent election in this State for the cause of tariff reform. For the first time in some years, the Democratic platform was squarely and unmistakably a tariff-reform document. Mr. Campbell, although he had been regarded heretofore as an adherent of Randall and his school, was wise enough to catch the trend of popular sentiment, and came out earnestly for the reform, expressly endorsing Cleveland's position again and again from the beginning to the end of the campaign. His election makes it safe to predict that the mythical high-tariff Democrat will never again serve as a bugbear to prevent an honest declaration of principles.

To any well-informed Ohio Democrat it is hard to conceive how the friends of Governor Hill can keep up the farce of treating him as a candidate for the Presidency. Whatever he might be able to do in New York, the Democracy of the West and South have no use for him. The general belief that his treachery defeated Cleveland, and the general lack of power to see anything worthy of respect in either his character or his ability, are certainly enough to convince any thinking person that his nomination would make defeat inevitable and overwhelming. The effort of the New York *Sun* to couple the interests of Hill and Campbell together, so far as it has any effect at all, will only result in injuring Campbell among the Democrats of his own State.

It may be safely asserted that Foraker's prestige as a leader is for ever gone; but there are rumors afloat which, if true, indicate that he will seek revenge upon certain prominent men of his party who are supposed to have been lukewarm in their support of him. As leader of a band of political "regulators," he would certainly make it interesting for his derelict party associates and profitable for the Democrats as well. The country is to be congratulated that his candidacy for the office of President is no longer a possibility.

The effect of our election on State affairs will not be so great as might be supposed. No doubt a hope that the Democrats would repeal the law against Sunday liquor-selling cost the Republicans a great many votes in Cincinnati, but the hope will hardly be realized. There are very few legislative constituencies outside of Cincinnati with which a vote for repeal would not injure a man's prospect for re-election. The registration law will probably remain about as it is, and a well-directed movement might result in the adoption of the Australian ballot system. W.

Ohio, November 8, 1889.

THE SUICIDE OF NEW ENGLAND.

To the Editor of The Nation:

Sir: The decline of prosperity in Vermont and New Hampshire is one of the most important and instructive financial phenomena of the time, and I refer to it because I believe there is a much more perfect explanation than that given by "G. W. A.," and one more consistent with remedy.

Ten years ago, more or less, Vermont passed a law requiring every inhabitant to make a sworn return of his personal property for taxation. In discussions of the subject I argued repeatedly and publicly that if they would enforce that law for twenty-five years, it would reduce Vermont to a desert—a prediction which there is certainly now no reason to withdraw. The reasoning is the simplest possible. All that gives land any value is the quick capital employed upon it. If land in Wall Street is worth $100 per square foot, and land within twenty miles of it is not worth one-tenth as many cents, it is simply because the former is the home of millions of quick capital, while the latter does not enjoy even the value of a man's labor. It follows that any process which brings quick capital to land adds to its value, while that which drives away quick capital decreases the value of land.

Now, land and buildings cannot be moved, but quick capital can be changed from one place to another with comparative ease. Great care must be taken, therefore, in the interest of the land, how quick capital is treated. Suppose, of two States or cities, one says: "Bring your quick capital here. We will never ask what you do with it, will never tax it, and never disturb you in any way." The other one says: "If you bring your capital here, you must make a sworn return of the amount every year for taxation, no matter in what form it may be invested." Is it not evident to which quick capital will go, and in which land will have the most, and most increasing, value, and be best able to pay its taxes?

All through New England the Puritan spirit of narrow but determined justice demands by law that quick capital shall pay its share of taxes, though the effect of bad law is in many parts tempered by bad administration. The climax is reached in Massachusetts, where the law itself faces both ways. It says that every person shall make a return of his personal property, or, failing to do so, shall be doomed by the assessors according to their best knowledge and belief, or, in other words, may pay just what the assessors choose to accept. As a result, there is a curious game of "puss in the corner" going on among the towns. In those where the assessors stand upon the letter of the law, quick capital winces and writhes and takes to flight as fast as it can. Where the assessors have even an instinctive idea of financial policy, quick capital nestles in comfort, and many a town gets nearly all its taxes paid by a few millionaires, whose gratitude for exemption from the inquisitorial methods of the city assessors finds further expression in gifts of town-halls, public libraries, etc.

"G. W. A." says that Vermont and New Hampshire are considering expedients for attracting population. One very simple and effective one lies ready at their hands. If they would guarantee personal property from taxation for the next twenty-five years, and raise all their revenue from land and buildings, they would find the farms taken up even more quickly than they are now abandoned, because the rush of quick capital into the State would create such a demand for farm produce at high prices.

G. B.

Boston, November 9, 1889.

THE JAPANESE CABINET AND LEGISLATURE.

To the Editor of The Nation:

Sir: Your Boston correspondent "G. B." is very ingenious in finding facts and illustrations in support of his contention that the members of the Cabinet should have seats in Congress, but he has missed one example. In the fifty-fourth article of the Japanese Constitution proper we read: "The Ministers of State and the Delegates of the Government may, at any time, take seats and speak in either house." Again, under the part relating to the law of the houses of Parliament, this privilege is more specifically explained in a separate chapter. To set forth the matter as clearly as possible, allow me to quote from those articles, as follows:

"The Ministers of State and the Delegates of the Government shall be allowed at any time to speak. But the speech of no member shall be interrupted that they may do so."

"When a bill has been referred in either house to a committee, the Ministers of State and the Delegates of the Government may attend the meetings of the committee and there express their opinions."

"A committee in meeting may, through the President, demand explanations from the Delegates of the Government."

"The Ministers of State and the Delegates of the Government, except such as are members of the House, shall have no vote in the House."

The two remaining articles of that chapter, as they have no special connection with this subject, need not be quoted. But in the next chapter we find the following articles concerning the manner of putting all questions to the Government:

"When a member in either house desires to put a question to the Government, he shall be required to obtain the support of not less than thirty members. In putting such a question, the member proposing it shall draw up a concise memorandum and present it to the President, after he shall have signed it conjointly with the supporters."

"The President shall transmit the memorandum on questions to the Government. A Minister of State shall then either immediately answer the questions or fix the date for making such answer, and when he does not do so, he shall explicitly state his reasons therefor."

The Japanese Constitution was written after a careful consideration and comparison of the Constitutions of the United States and of many of the European countries. I am, therefore, pretty certain that "G. B." will be glad to know that the Japanese statesmen agree with him on that question of public policy.

Clem.

Mito, October 5, 1889.

JAPAN AND WORDSWORTH.

To the Editor of The Nation:

Sir: A contribution has come from Japan to the always live controversy, What is art? Mr. Theodore Wores, who exhibited in New York two winters ago a delightful collection of his paintings of Japan and the Japanese, has written a paper for the *Century* (September, 1889), "An American Artist in Japan," in which he lets us into the nature of Japanese art, takes us to a point where we can descry the aim of the artist and watch his methods, as has not been done by Gonse in his 'L'Art Japonais,' nor by Christopher Dresser in his book on the arts of Japan, nor the writers in Bing's periodical, *Le Japon Artistique*.

It is interesting, in reading the Japanese artists' own statement of their aim and their methods, to find that it runs side by side with the statement of his aims and methods made by that other passionate worshipper of nature and reality, but artist in another medium, Wordsworth. Mr. Wores showed to a company of Japanese artists, who were putting eager questions to him about European art and artists, some photographs of pictures which he had with him.

"They seemed much pleased, but were astonished when I told them the amount of time which had been required in painting them. They argued that a painter should spend a great deal of time in observing nature, and, when he had thought out his picture perfectly in his mind, and was saturated with his subject, should seize his brush and dash off the picture in a few hours or minutes. It is the spirit more than the substance that the Japanese artist strives to produce. He does not attempt slavishly to reproduce the textures of the trees, rocks, and other objects in a landscape. A mere suggestion of one of nature's moods that serves to bring back to the mind the impression that it received, is, in his opinion, quite enough, even if expressed in half a dozen strokes of the brush. The graceful and lifelike action of a bird suggested in a few strokes is far more commendable in his eyes than the most clever and realistic rendering of its feathery texture. . . .

"One of these artists afterwards visited me in my studio. Although he seemed pleased with much that he saw, he expressed himself as follows: 'I hardly know what to say, this is all so strange and new to me. However, it seems to me,' he added rather reluctantly, 'that your chief aim is to produce a real effect; in fact, you strive to make your picture look so real as to deceive one into the belief that he is looking at nature. Now, do you think that this can be accomplished with paint? Do you think you can succeed well enough to warrant your making that your chief aim?' And, indeed, I found it to be a very general belief among Japanese artists that European painters strive to produce realistic effects only, and never attempt to express noble thoughts or poetic ideas in their works.

"The Japanese artist depends but little on direct sketches from nature, and his work is almost entirely the result of observation. His mind seems to retain to a wonderful degree the impressions it receives of color and form. Subordinate details, however, are not so firmly impressed on his mind as to cause him to lose sight of the general effects of line and color. It is hardly conceivable to the European artist, who is accustomed to make most careful studies from nature, that realism can be carried so far with mental studies only."

Mr. Wores met a sculptor of works which were masterly in modelling and action and daring in subject, which, in Mr. Wores's opinion, would take rank in any exhibition of European sculpture, and this artist he found, to his astonishment, "worked entirely without models, and knew nothing of anatomy beyond what his observation of living figures had taught him."

One might fancy a transmigration of the soul of Wordsworth into these Japanese artist critics. In the same language does he describe his method in his own art to his friend Aubrey de Vere (I quote from Myers's 'Life of Wordsworth').

"He [Scott] took pains, Wordsworth said; he went out with his pencil and note-book and jotted down whatever struck him most—a river rippling over the sands, a ruined tower on a rock above it, a promontory and a mountain-ash waving its red berries. He went home and wove the whole into a poetical description. But nature does not permit an inventory to be made of her charms. He should have left his pencil and note-book at home, fixed his eye as he walked with a reverent attention on all that surrounded him, and taken all into a heart that could understand and enjoy. Then, after several days had passed by, he should have interrogated his memory as to the scene. He would have discovered that while much of what he had admired was preserved to him, much was also most wisely obliterated; that which remained—the picture surviving in his mind—would have presented the ideal and essential truth of the scene, and done so in a large part by discarding much which, though in itself striking, was not characteristic. In every scene many of the most brilliant details are but accidental; a true eye for nature does not note them, or at least does not dwell on them."

If the Japanese artist, as Mr. Wores has expressed it, is content with "a mere suggestion of one of nature's moods," he is an impressionist. This singleness and isolation of effect converts a scene into a subject, evaporates a landscape into an impression, spiritualizes a figure into a feeling. Such Japanese treatment also lends an individuality, a specialness, a spiritual and personal charm. Such a glimpse of a picture sounds a note struck from the spirit of the artist. To return to Wordsworth. In that essay which brought down in floods the rage and scorn of the *Edinburgh Review*—the preface to the second edition of the 'Lyrical Ballads'—"the feeling therein developed gives importance to the action and situation, and not the action and situation to the feeling." This isolation of effect, by the way, shows itself in the limits and shape of the pictures of this class. A mere slice often will be taken from nature by the Japanese artist.

In Japanese paintings how delicate often is the form, and yet how distinct and arresting is the savor, the feeling, which they exhale. Again Wordsworth is their ally and spokesman: "One being is elevated above another in proportion as he possesses the capability of being excited without the application of gross and violent stimulants."

The same fondness for a mere impression, the same singleness and isolation of effect, has made the little *uta* the favorite form of verse with the Japanese. It is a sort of madrigal, sonnet, Greek epigram. Listen to this *uta* written on the eve of a great battle by a general four hundred years ago. Most *utas* are still shorter:

"The mist of night has filled my tent, liquid is the autumn air,
Across the moon the wild geese darkly draw their flying line.
On this side the mountains of Yetchigo, on that the plains of Noto.
Now the pain I felt at absence from the one I love
Has stiller grown in the beauty of this night."

A. D. SAVAGE.

NEW YORK.

JOHN ADAMS AND BENJAMIN FRANKLIN.

TO THE EDITOR OF THE NATION:

SIR: In connection with the reference to the feud between John Adams and Franklin in your review of Mr. Morse's life of the latter in your issue of October 24, the following extract from a letter in my possession may be of interest. G. H. N.

BOSTON, November 2, 1889.

QUINCY, May 5, 1817.

DEAR SIR: The volume of Dr. Franklin's Correspondence has seemed to make *me* live over again my Life at Passy. I rejoice that the Publick are to have a compleat Edition of his Works, for there is scarce a scratch of his Pen that is not worth preserving.

I am pleased to see you at length appearing on the Stage of human Affairs. . . . As I am within a year or two of the age of Dr. Franklin at his Decease, I cannot expect to see the Sequel of his Works; but if ever you visit your native Country, a visit from you will greatly oblige your old and sincere

Friend, JOHN ADAMS.

WILLIAM TEMPLE FRANKLIN, Esqr.,
London.

QUESTIONABLE STATISTICS.

TO THE EDITOR OF THE NATION:

SIR: The fifth annual report of the Commission of Labor is devoted to the condition of workingwomen in large cities. Three hundred and forty-three industries and twenty-two cities were selected. The subject is of the highest importance, and some of the tables in this report are valuable, but not all. On page 325 I find a table showing the conjugal condition of the women engaged in those industries, in those cities, to be as follows: Single, 15,387; married, 745; widowed, 1,038; divorced, 43; separated, 214.

Now, can any one believe that there are no more than forty-three divorced women engaged in those industries in those cities? Charleston may have none, but I do not believe that Brooklyn, Buffalo, Indianapolis, and Richmond have no divorced women engaged in those industries. Boston has more than two, and New York more than three, to my personal knowledge, and I feel confident that the other cities mentioned have more than the number returned, viz.: Atlanta 3, Baltimore 1, Chicago 4, Cincinnati 3, Cleveland 1, Louisville 5, Newark 1, New Orleans 1, Philadelphia 4, Providence 4, St. Louis 5, St. Paul 1, San Francisco 4, Savannah 1.

These figures are so utterly at variance with common knowledge as to call for explanation. Can Commissioner Wright inform us how it happens that he has reported the number of divorced workingwomen in these cities so low as forty-three? A DOUBTER.

NEW YORK, November 4, 1889.

A PLEA FOR OCCULTISM.

TO THE EDITOR OF THE NATION:

SIR: Reading your article about Mr. F. Legge's 'The Origin of Modern Occultism,' I feel compelled to protest against this offhand way of judging people whom to know one would have to study carefully in their writings. It would take me too long to try a refutation of what is stated in your paper, but I want to mention that I have had the advantage of a German college education, where our teachers of religion were exceedingly impartial and analyzed the Christian religion from the point of view of logic. I have found, when comparing the writings of certain Occultists with those of dogmatic Christians, that there is infinitely more logic in the claims of the Occultists than in those of dogmatic Christianity. If any of your readers likes to decide the question, I can only advise him to study profoundly the writings of both, and compare for himself; but people who would go to such trouble are already so far above the great mass of the people that I am afraid only a few are ready to undertake such a task. It is so much easier for the average money-maker to buy a corner lot in heaven by subsidizing some church than it would be to use his own judgment and tackle intricate questions concerning the destiny of man. W.

MORE LIGHT ON MYCENÆ.

TO THE EDITOR OF THE NATION:

SIR: Two new items in confirmation of the barbaric character of the interments at Mycenæ discovered by Schliemann have just come to me and are worth noting in the general connection. One is the relation of excavations made in the Ukraine by Dr. G. Ossowski of Cracow, in which excavations were found a vase with ornaments closely analogous to the animal decorations on some objects found by Schliemann at Mycenæ, but also in company with others of undoubted Greek provenance, and which Dr. Ossowski assigns to the art of Panticapæum and the interval from 650 to 480 B. C., the provenance being made most probable by coins of that town. I should have hardly put the Greek pottery so early as even 480, but it is possible. The gold buttons and ornaments for the robes of the dead also strikingly resemble the similar objects in the Mycenæ tombs, and the grave was that of a Scythian lady of rank, probably of a royal family. As in the Mycenæ tomb, the work is divided into two categories, one of Greek provenance, and the other, which is very nearly identical in the two interments, of barbaric authorship,

attributable only to the time and authors of the interment.

The other item is contained in a note which I transcribe fully, from an American dentist in Dresden:

DEAR SIR: In your interesting letter on the tomb of Pharis, published in the *Nation* of August 8, you speak of the skeleton which Schliemann supposed to be Agamemnon, as that of a woman, apparently a northern barbarian. Some years ago I saw the lower jaw of this skeleton, the only fragment of it which was at the time in the Schliemann collection in Athens, and at once declared it to be of Slavic type. As an American dentist, with a practice which has for many years extended over a great part of northern Europe, I have come to regard the race type as stamped upon the most enduring portion of the human frame, the jaws and teeth, as a record which, when we are able to read it aright, will have a considerable significance. Therefore I venture to send my recollection of the impression that lower jaw made upon my mind nine years ago. You are doubtless aware of the fact that abnormally large jaws are usually female. Believe me, etc., Yours very sincerely,

N. S. JENKINS.

Dr. Jenkins's communication loses none of its value from the mistake he is under, viz., that the jaw-bone he alludes to is that of the "Agamemnon," which skeleton is left at Mycenæ, and has never been in the Athens Museum that I know, and as I believe; for the determination of the Slavic type for either of the skeletons in the collective tomb has the same significance, as proving the barbaric origin of the race which made the interment. The proofs of this are now so many and so convergent that there can remain no doubt, in the mind of an unprejudiced archæologist, that the graves are those of invaders of the Morea in post-classic times, and of no Hellenic race.

Yours truly, W. J. STILLMAN.

ROME, October 23, 1889.

BE DONE AND *HAVE DONE.*

TO THE EDITOR OF THE NATION:

SIR: A London newspaper that I have just been reading contains a letter, attributed to Mr. J. R. Lowell, in which, taking a correspondent to task for the phrase "I *would* be very much obliged for your autograph," or the like, that gentleman writes: "If you *would* be obliged, be obliged and be done with it." While, however, the desirableness of discriminating aright between *would* and *should* is not to be questioned, it is also not to be questioned that one who uses "*be* done with" for "*have* done with" still requires a lesson in idiom. "When the wine *is* done with, the dice are produced," is a perfectly correct form of speech which I find in Southey; but I apprehend that Mr. Lowell's expression, though extremely common in America, has no countenance from any English author who could be appealed to as critical.—Your obedient servant, F. H.

MARLESFORD, ENGLAND, October 20, 1889.

Notes.

THE Appalachian Mountain Club of Boston will publish, with an eye to the holidays, 'Mountaineering in Colorado: the Peaks about Estes Park,' by Frederick H. Chapin. Mr. Chapin is a capital narrator of such experiences, and an agreeable text may be expected. The numerous illustrations will be from the author's own photographs, and will be partly in heliotype (full-page), and partly "process" of a high order. The volume, to judge from its sample sheets, will be very handsome. Orders should be sent to Mr. Albert S. Parsons, 9 Park Street, Boston.

Houghton, Mifflin & Co. publish at once 'Betty Leicester,' a story for girls, by Miss Sarah O. Jewett; 'A Summer in a Cañon,' by Mrs. Wiggin; and 'Wilbur Fisk,' by Prof. George Prentice, the second volume in the series of "American Religious Leaders."

The Paris 'Salon of 1889,' which Estes & Lauriat will put on the American market, will be supplied with critical and descriptive text by George Lafenestre, Conservator of the Louvre, translated by Henry Bacon. One hundred photogravures of the prize paintings will adorn this edition, the first specially prepared for the Anglo-American public.

Thos. Whitaker has in progress 'New Points to Old Texts,' by the Rev. J. M. Whiton.

Worthington Co. announce for immediate publication 'Henriette; or, A Corsican Mother,' by François Coppée, translated by Edward Wakefield, with photogravure illustrations.

We misread the recent announcement, by the Messrs. Putnam, of their newly projected biographical series, "Heroes of the Nation." The enterprise is, commercially, wholly American, and of this house. Mr. Evelyn Abbott of Balliol College, Oxford, will have the general editorial supervision, and publication will be simultaneous in London and New York.

Longmans, Green & Co. are about to publish an authorized Life of Cardinal Lavigerie, which will fully exhibit his plan for suppressing the slave trade. This house has just issued a new edition of the late Walter Bagehot's essay upon a universal money. Strictly speaking, it is a plan for assimilating the English and American money as a step towards the final goal. It was first published in 1869, but the situation has not materially changed since then, and, considering the enormous difficulties in the way of any change, the book may be said to be as timely at one period as at another. Like all Bagehot's writings, it is interesting and suggestive, but the argument is after all not very cogent.

Gustav Freytag will publish shortly his reminiscences of the late Emperor Frederick of Germany—'Der Kronprinz und die Deutsche Kaiser-Krone' (Leipzig: Hirzel; New York: Westermann). The demand for copies has delayed the issue of the book, as several editions were required to meet it. Freytag says in his preface: "These pages would have been printed soon after Frederick's death had not other publications, and what followed in their wake, so disgusted the author as to prevent his taking part in the disgraceful excitement over the person of the dear departed." His success might have been greater then, but his ambition never was to write for the day. He was Frederick's literary adlatus during the French war, in correspondence with him, and his intimate friend always. Freytag's sketch of the good Prince, his wife, family, and surroundings, will do much to shape the final opinion of posterity. The advance sheets of the book were submitted to Emperor William and Bismarck, and approved by them.

J. B. Lippincott Co. follow up their 'Half-Hour Readings with the best Authors' by a collection, in four volumes, of 'Half Hours with the Best Humorous Authors,' edited by Charles Morris. The fact that the earlier series included many of the best humorous productions available, and that it has been thought advisable not to reproduce them in the later one, limits the choice of the editor to a narrower range, but the material has been found abundant. Two volumes are devoted to American and two to English writers. It is a pleasure to find that the earlier humorists of our country have not been slighted, but that the selection has historical proportion. A noticeable effort has been made, too, to include eminent names—Washington, Longfellow, Everett, etc.—whose gift of humor was of the slightest; on the other hand, anonymous authors are represented by the waifs and strays of literature. The English section is somewhat too much confined to the great writers of literature, every age since Chaucer being put under contribution. In the last volume the assigned limits are exceeded, and specimens from Le Sage, La Fontaine, Voltaire, Bürger, Béranger, Cervantes, Richter, Molière, and Rutebeuf are given in translation. The entire collection is thus various in interest, and affords light and agreeable reading, of which the greater part is of good literary quality.

Mr. Eugene Field is one of the humorists of America whose "comic copy" is the flotsam and jetsam of journalism. His sole incursion into literature hitherto has been a volume of collected sketches, called 'Culture's Garland,' which was sporadically clever, but unfailingly journalistic. Now he has put his best foot foremost, both in prose and verse, and makes a great stride, as any critical reader will say who may chance to acquire one of the two hundred and fifty copies (to which the edition is limited) of 'A Little Book of Western Verse' and 'A Little Book of Profitable Tales,' beautifully printed at the University Press, and issued only to the subscribers. Of the score of "Profitable Tales," quaint, humorous, and pathetic as they are for the most part, and individual (although plainly indebted to Grimm and Hoffmann for not a little of their movement and color) we need say nothing now. But the lovers of humorous verse, which rises at times to the rare level of humorous poetry, will regret that the edition of 'A Little Book of Western Verse' is limited. That the verse is Western is obvious enough, and a doubter has only to read the irreverent paraphrases of Horace to be convinced, to say nothing of the series of ballads telling the tale of "Casey's Table d'Hô e," of "Our Lady of the Mine," and of the "Conversazzhyony," which suggests Bret Harte. The two or three ballads of books are as good as anything which has been written in this vein.

Very welcome to lovers of books whose purses are not sufficiently stocked to allow them to pay the present enormous prices for rare originals, is a beautifully executed reproduction of that truly epochal volume, 'The Shepheardes Calender,' by Edmund Spenser. This is a photographic facsimile of the original edition of 1579. The type comes out clear and bright, and all the accessories of paper, binding, etc., are of the best of the book-making art. An introduction is furnished by H. Oskar Sommer, Ph.D., and is principally devoted to showing that the unknown "E. K." who wrote "the Glosse" accompanying the poem, and professed to be the poet's friend, was Spenser himself. This suggestion was made by students, among whom Craik was most prominent, years ago, but was generally rejected, not without ridicule. In 1888, however, Dr. Uhlemann, a German scholar, revived the hypothesis and supported it with strong argument. Dr. Sommer professes only to make English readers acquainted with this latest study, to the results of which he gives his own unqualified support. If the theory be accepted—and it seems to us entirely reasonable and satisfactory—the comment of "E. K." acquires greater interest and authority. The publisher of this facsimile, which is limited to 520 copies, is John C. Nimmo, London.

Mr. A. H. Bullen adds to his numerous Elizabethan publications 'Lyrics from the Dramatists of the Elizabethan Age' (London: Nimmo),

a companion volume to his 'Lyrics from Elizabethan Song-books.' He includes within his limits the dramatists of James I. and Charles I. The collection is as full as the present taste of the public will permit of, and is in this respect better than Bell's similar work. One is struck by the peculiar common lyrical quality of the writers, who were less uneven in their song than in their dramatic genius, and by the marked difference between this quality and that of the present century. We miss Greene and Lodge from the chorus, but their lyrics are reserved for a promised collection from the Elizabethan Romances, which will round out the series. We observe one unfortunate misprint in the Bacchic song from "Antony and Cleopatra"—"fats" for "vats." The edition is limited to 520 copies.

Among books of travel for the holidays, 'A Handful of Monographs, Continental and English,' by Margaret J. Preston (A. D. F. Randolph & Co.), is pleasantly written, and takes the reader over familiar ground in Switzerland, Holland, and England. The literary tastes of the author give her journey somewhat the character of a pilgrimage, but the only special topic in her pages is a sympathetic account of the Paris Mission School. The chapters read like extracts from letters written for home reading, and we cannot characterize them better than by saying that they contain just such observations and familiarities as would usually be of interest to the traveller's own circle; and those of the public who join it in the reading, will find themselves quietly and agreeably entertained. A dozen or more photographic views, principally of Swiss and English scenes, interleave the pages, and the binding is bright and tasteful.

Mrs. Margaret Deland's 'Florida Days,' illustrated by Louis K. Harlow (Boston: Little, Brown & Co.), is a similar volume, but the text is confined very closely to "impressions," usually of an artistic or poetical character. The light and atmosphere, the gray or golden sea, the leaning palm, the romance of the old buildings and their history, Ponce de Leon, Drake, the river with lilies and turtles—these are the scenes and persons and things sentimentally reflected in the text; and they are illustrated by a large number of sketches and views of all shapes and sizes, some of them in colors, in such a way as to make the pictorial character of the book equal to its literary pretensions. It is printed and bound "luxuriously."

The Society for Instruction in First Aid to the Injured have determined to supply the public with their little 'Handbook,' at the nominal price of twenty-five cents, through the American News Company. Its wide circulation is much to be desired.

The volume of the *Century Magazine* which closed last month (May-October) is knit by closest bonds to its predecessors, yet has a general diversity of contents which it is hard to particularize. The making of the three books—on Siberia and the Exile System, by George Kennan; on the Italian Old Masters, by W. J. Stillman and T. Cole; and the Life of Lincoln, by Messrs. Hay and Nicolay—goes on; and there is the usual wealth of illustrations, including among the portraits a late one of Tennyson.

"The Queen's Navy," "Ancient and Modern Artillery," "Modern Harbor Defences," "Routine of the Republic"—these titles would not suggest a magazine for children, but we take them from the new volumes (one "volume" in two parts) of *St. Nicholas*. In style, as well as in substance, they hardly differ at all from articles on similar subjects for adults, and the same may be said of "Seeing the Real Mikado," "Ten Weeks in Japan," "The White Pasha," "A Youth of Ancient Rome," etc. This fact most impresses us as we turn over these handsome pages. The demand for writing at once edifying and truly adapted to the young must, we can hardly doubt, far outstrip the supply. Mr. Harris's "Daddy Jake" is one of the features of this volume, and there is a most exemplary little story, of a two-headed turtle, which well deserved to go on record in *Nature*.

Prof. William James gives an account, in *Mind* for October, of the proceedings of the Paris Congress of Physiological Psychology. The subjects discussed were the muscular sense, heredity, hypnotism, a project for an international census of hallucinations, and the abnormal association of sensations of different kinds. A permanent committee of organization was formed, the United States being represented by Prof. James.

Prof. Max Müller, on being invited to inaugurate the lectureship on Natural Religion established by Lord Gifford at the University of Glasgow (see the *Nation*, No. 1147), had no trouble in preparing a course of twenty lectures on the "Science of Religion," nor in giving them to his publisher immediately after their delivery. Undaunted by the circumstance that it would seem impossible for even Max Müller himself not to have been convinced by his reviewers of the flimsiness of his reasoning in the 'Science of Thought,' he proceeds to attack a still more difficult subject with perfect courage. "But," says his reviewer in *Mind*, "the lectures as a whole must have been good to hear. Profusion of personal reminiscence, dear always to mixed audience, swiftest kaleidoscopic turning of subject, not less dear—nobody has the art of these like Prof. Müller."

The New York *Independent* of November 7 contains a very remarkable communication from Prof. G. F. Wright, author of 'The Ice Age in North America,' relating the pumping up from an artesian well at Nampa, Idaho, of a small china-doll-like image of a girl, made of pumice, from a depth of 300 feet. The surface soil counted for one-fifth of this, some twenty feet of lava rock followed, then 200 feet of quicksand and clay, and finally vegetable soil and sand rock, representing an old lake-bed of the Snake River. The corresponding sub-lava deposits of California consist of the gold-bearing gravel in which the disputed Calaveras skull was found; and these in Idaho are pronounced by Mr. S. F. Emmons of the United States Geological Survey to be "probably of far greater antiquity than any deposits in which human implements have hitherto been discovered." The *Independent* gives a cut of the image at scale.

We cannot commend the projectors of "*Nature:* A Weekly Journal for the Gentleman Sportsman and Naturalist," for having chosen a name identified with the foremost scientific weekly in the world. The contributing editors of the American paper are Messrs. William C. Harris, Charles Hallock, Charles Barker Bradford, and J. Charles Davis; and these names perhaps say all that is needful in regard to the character of the enterprise. The size is quarto. A feature of the first number is some disinterested "Reports" from sportsmen who don't mind telling where game is plenty and they are bagging it.

The October number of the *Harvard University Bulletin* contains very careful "Notes" on the MS. volume of Shelley's poems in the Harvard Library, by Mr. George E. Woodberry, who thinks it possible that Mrs. Shelley used this volume for her edition of the 'Posthumous Poems,' 1824, and that it tends to establish her fidelity to Shelley's text. A facsimile of "To a Sky-Lark" is appended, from page 100. These Notes make also No. 35 of the *Bibliographical Contributions* edited by Mr. Justin Winsor.

We have received the reports of Treasurer and Secretary of the Society for the Collegiate Instruction of Women (Harvard Annex) for the tenth year. The number of students has grown in the decade from 25 to 115, the teachers from 23 to 41. Occupation in teaching may be said to be assured to graduates. The alumnæ have a fair prospect of success in endeavoring to found one or more scholarships. The increase of the endowment fund is most urgent, and the quarters of the Annex are far too contracted. English, Latin, History, Greek, German, Philosophy, French, Physics, Mathematics, and Elementary Botany have respectively attracted the greater number of students, in this order.

The American Economic Association, Baltimore, of which Prof. Richard T. Ely is Secretary, has received $500 for two prizes for the best essay on Women Wage-Earners. Any one is eligible to compete, but the American aspect of the subject should be chiefly regarded. The essay must not exceed 25,000 words, must be type-written, and be sent anonymously to the Secretary before November 1, 1890.

—Dr. Hiram Corson's 'Introduction to the Study of Shakespeare' (Boston: D. C. Heath & Co.) is a collection of brief studies upon the verse and prose and their distinctive use in the plays, chronology, the authority of the First Folio, etc., together with special commentaries upon seven or eight of the plays and some notes on the text. The volume is full of interest, and is marked by its individuality; but its great merit is that it exemplifies the spirit in which Shakspere should be studied, standing squarely against the metaphysical and moralizing perversion, the superfine intellectuality, and all the misconception of dramatic art and confusion of æsthetic standards which came upon us from Germany, and have been fostered by the transcendental and latter-day critics of this country. As an 'Introduction' this little book sets the student upon right lines at once, and frees him from many errors before he has time to entertain them; and the writer speaks with such spirit and decision that he cannot be misunderstood. Outside of this, the more interesting special pleas of the writer are in behalf of *Romeo* and *Juliet* as being other than the reckless fools of passion, ruined by their own haste in love, which many commentators represent them; in favor of *Beatrice* and *Lady Macbeth* as being more womanly than they are commonly conceived; and in support of the view that *Macbeth* was not incited by the witches to his crimes, but found his own ideas reflected back in their suggestions. It is to be noted also that Dr. Corson will not hear to the theory of Goethe and others that *Hamlet* perished by the weakness of action induced by an intellectual temperament. In all these cases the argument is very forcibly made, and, except in the case of *Lady Macbeth*, carries conviction on most of the points raised. His general conclusions and principles, however, are of more value than the outcome of a special inquiry in any play. The textual notes upon the Folio readings of "Hamlet" have already been incorporated in Furness's Variorum edition. Altogether, so excellent a volume of Shakspere criticism has not been put forth by an American scholar in many a day. Teachers and students both may profit by it as a model of how to learn in this particular subject.

—The October number of the *Law Quarterly Review* contains an article of especial American interest, "Chancery in Massachusetts," by Edwin H. Woodruff. In no other State was the opposition to the establishment of chancery so long and so stubborn as in Massachusetts. For many years the common law prevailed in unmitigated rigor throughout the commonwealth. The unfortunate suitor was sent out of court remediless, being told that equity and good conscience were on his side, but also that there was no provision of law whereby his wrongs could be redressed. Seventy-five years elapsed after the adoption of the State Constitution before chancery jurisdiction was extended to the three great causes of equitable relief, to fraud in 1855 and to accident and mistake in 1856. The evils resulting from this prolonged refusal to grant chancery jurisdiction arose continually before the common-law judges, who, while confining themselves strictly within the bounds of the powers granted to them, and turning away without relief suitors whose equitable rights were admitted, nevertheless took occasion in their opinions to protest against the prejudice of the Legislature—but for many years without avail.

—The reasons why equity was not administered by a specially constituted court in Massachusetts Mr. Woodruff finds to be three, corresponding to the three periods of Massachusetts's history as a colony, province, and State. Under the colony, none but church members in full communion were freemen. "The Government was an unlimited theocracy, where law was administered with all the sanction of ecclesiastical authority—an authority in which the conscience of equity must have been supposed to inhere." Little need was felt, therefore, to redress the wrongs wrought under a perfect theocratic law. Under the Provincial charter the Crown refused consent to the acts of the General Court (in 1692 and 1693) erecting a court of chancery, apparently on the ground that all equity jurisdiction should be established by virtue of the great seal. From that time to the adoption of the State Constitution in 1780, no further attempt was made by the Legislature of the Province to create a separate court of equity, but suitors for equitable relief turned to the Legislature itself, which supplied by its own judgments a substitute for the remedies of the forbidden court. Moreover, as the common-law courts of that period had few strict rules, and as the majority of the judges were laymen, the common law was often interpreted with considerable elasticity. As a State, Massachusetts began with no court of chancery, but with a constitutional authority in the Legislature to establish one. None, however, was immediately established. The terrors of the proposed court were the terrors of the unknown. Many evils might result from the maladministration of chancery powers, while, as Story argued, the lack of equitable relief operated to make the people of the commonwealth vigilant in avoiding mistake and fraud. But the friends of chancery became numerous and powerful. In 1846 a bill to establish a court of equity was defeated only by a theatrical trick of Mr. Crowninshield's, who exhibited to the House as a typical bill in chancery a stout volume the latter half of which was blank leaves. In 1877 complete equity jurisdiction was finally established. Such, in brief, is the history of chancery in Massachusetts, now traced for the first time by Mr. Woodruff. The article may well interest the lawyer as a contribution to American legal history, and not less the layman, on account of the light thrown on methods of thought and reform in thoughtful and reformatory Massachusetts.

—It is a perhaps curious fact that not on any pretext does man or woman born in the years 1829–1831 find a place in the 'Library of American Literature,' edited by Mr. Edmund Clarence Stedman and Miss Ellen Mackay Hutchinson (New York: Chas. L. Webster & Co.). The ninth volume opens with Theodore Winthrop, whose birth-year was 1828. All the rest of the long list of writers were born in the thirties, and such of these esteemed contemporaries as are now living are all fifty years of age or something more. Very few of them, therefore, had much to do with shaping the events which led up to the civil war. Moncure D. Conway and W. D. O'Connor are exceptions —the latter well represented by a stirring extract from his anti-slavery novel, 'Harrington'; the former commemorated only from his later and scholarly productions. This was essentially the fighting generation, and no small number took part in the war, as soldiers or as press correspondents in the field. The press, indeed, determines, more than all else, the complexion of this volume. For example, Albert D. Richardson, Junius Henri Browne, Whitelaw Reid, Geo. W. Smalley, William Swinton, T. W. Knox, E. H. House, J. J. Piatt, J. R. G. Hassard, I. H. Bromley, John Hay, William Winter, George Arnold, Chas. H. Webb, "Artemus Ward," "Mark Twain," "Orpheus C. Kerr," "Petroleum Nasby," are all associated with the daily journalism of the past thirty years. This fact, and the stormy time in which these writers began to produce, fully account for the literary inferiority of the present volume compared with those which have gone before. Not a few enduring works have emanated from this group of the thirties, like Mr. H. H. Bancroft's histories and Mr. H. H. Furness's Variorum edition of Shakspere; there is nothing better in its class to set over against Prof. T. R. Lounsbury's Life of Fenimore Cooper; Aldrich, and Howells, and John Burroughs all have admirers who predict for them a lasting fame. But these emerge from a rather low average of thought and style, and the most distinctive talent of the period is humorous, and the great lights already mentioned, to whom Mr. Frank Stockton must be added, were all newspaper men. There is a corresponding failure on the part of the women on the list to reach high-water mark. We are glad to learn that while the next volume of the series will dispose of the youngsters of the forties, an eleventh, supplementary, volume is contemplated, in the nature of a "compendium of brief but trustworthy biographical notices of all the authors quoted in the work." It will also include specimens of the most notable productions of the past seven years, especially in the West and South, and an index.

—It is discouraging to find that, in spite of the production within a few years of some splendid and elaborate illustrated books, the general level of holiday publications is not raised. Not to mention two or three atrocities, we have received a number of those thin little books with the finikin woodcuts and sprawling "decorations" that we know so well and have grown so tired of. The drawings are usually by several artists who agree in nothing —neither in the types of the figures nor in the features of the landscape—and the result is distressing when it is not burlesque. Of this general type are 'The Earl's Return' (Boston: Estes & Lauriat), and 'The Miller's Daughter' and 'Legend Laymone' (Philadelphia: J. B. Lippincott Co.), but they offer slight variations from it. Thus the first is illustrated by a single artist, while the last gives us photogravures instead of woodcuts. Some of the drawings in the latter are by good artists, but they have not been highly inspired by a text the inanity of which passes belief. Mr. Magrath's illustrations of Lover's 'Low Back'd Car' (Lippincott) are better, and present a certain harmony among themselves which is pleasant, but fail through monotony. There is too little matter in the poem for so much illustration, one would be tempted to say, if one did not remember Mr. Abbey's exhaustless invention. Dora Wheeler's illustrations of Mary Mathews Barnes's 'Epithalamium' will prove pleasing to many, and contain some pretty fancies; but her draughtsmanship is unfortunately too feeble for the seriousness of her themes.

—'A Century of Artists' (Glasgow: James MacLehose & Sons; New York: Macmillan & Co.) is "A Memorial of the Glasgow International Exhibition of 1888." It is in the form of an illustrated catalogue of the works in the Loan Collection of that Exhibition by a hundred-odd selected artists. One work by each artist is illustrated, and the others carefully catalogued and described, and of each deceased artist there is a short critical and biographical notice by W. E. Henley. Some of these notices are reprinted from the 'Memorial Catalogue of French and Dutch Pictures at the Edinburgh International Exhibition, 1886.' The illustrations range from slight pen drawings in the text to elaborate full-page photogravures and etchings, and are printed in a variety of tints. The subjects of illustration hardly seem well chosen in all instances, many of the greater names being inadequately represented, when, judging from the catalogue, better work was to be had. Mr. Henley's criticism is good and sound. He is a devotee of "paint," and the word recurs, perhaps, a little too often; but a critic of his sort, who firmly believes that the ultimate value of a work of art is in its intrinsic beauty of workmanship, and who scouts at the literary element in art, must be so lonely in England that he may be forgiven a certain aggressiveness in stating his case. His delicate and just appreciation of such men as Corot makes it sufficiently plain that "paint" does not mean "paintiness," but "painting." His criticisms of Turner and Rossetti are almost startling from an English source. The book is sumptuous in heavy paper and wide margins, and the printing of rubric and initial letters (from the Edinburgh University Press) is magnificent. What one likes least about it is the deep red, rough canvas cover, with its somewhat too staring gilt lettering.

—With the opening of Clark University at Worcester after a thirteen years' successful experiment in university work at Baltimore, every question pertaining to university instruction in America—using the term in the stricter sense—assumes a new importance. With Clark University devoted exclusively, and Johns Hopkins University in great part, to post-graduate instruction, and with all our stronger colleges and universities increasing their facilities for such instruction, it is evident that this country has distinctly entered upon the stage in which scholars in every department may expect before long to find at home the opportunity for prosecuting studies of the highest order. Until recently all discussions of questions pertaining to university policy in America were naturally regarded as having reference to undergraduate students only; this must soon cease to be the case. Among such questions the most prominent is that of

the admission of women to men's colleges, and in no question is the distinction between the two cases so sharp as in this. We do not recall a single argument that has ever been adduced against coeducation that has any weight whatever in support of the exclusion of women who have equipped themselves for special and arduous studies, from classes formed of men similarly equipped. If the new opportunities which our country is acquiring for the pursuit of the higher learning are to be for a generation placed beyond the reach of those few earnest and ardent and trained women who are hungering and thirsting for the means of gratifying their intellectual aspirations, let it be for some reason that can be distinctly stated, and not merely because our conservative colleges have thought it imprudent to have boys and girls recite in the same classes. When one reads the admirable address of President Hall at the opening of Clark University, one cannot but feel saddened by the knowledge that, almost at the same moment, a young woman of Massachusetts, educated in a Massachusetts college for women, was writing for advice as to what European university it would be best for her to go to for a course in advanced mathematics.

—The generous gift of $100,000 by Mrs. Caroline Donovan of Baltimore County to the Johns Hopkins University acquires exceptional importance on account of the time of financial trial through which the University has been passing. It is not too much to say that this gift, following as it does a series of contributions which have been made to the University's resources within a twelvemonth, may be regarded as putting an end to the fear that the University might be allowed to become crippled for want of means. It is notable that within this short period there should have been contributed by living persons in Baltimore and its neighborhood a quarter of a million dollars for the uses of the University. It is interesting to remark the variety of ways in which these contributions have come. One hundred thousand dollars was contributed anonymously, chiefly in sums of $5,000, for the immediate pecuniary needs of the institution; two sums of $20,000 each were given by individuals for special purposes; this last gift of $100,000 is for the endowment of a professorship in a department to be determined by the Trustees. In addition to all these sums, the University has fallen heir to the library, and has become residuary legatee of the estate, of the late Mr. John W. McCoy, one of Baltimore's best citizens; the value of the residuary legacy will exceed $100,000. All these things show conclusively that Baltimore is not unprovided with citizens who have a due esteem for learning, and who are proud of the work which her young University has done in its cause. She may, with these precedents, be counted on to do her full share in the future for the maintenance of her greatest public institution; and it is to be hoped that the liberality of her citizens, so far from forestalling assistance from outside, will encourage givers in all parts of the country, as assuring them that they will not be contributing to a declining institution, but to one which looks forward with confidence to a future of progressive achievement.

MARY HOWITT.

Mary Howitt: An Autobiography, edited by her daughter, Margaret Howitt. 2 vols. Boston: Houghton, Mifflin & Co. 1889.

It was for a generation that reached its term some twenty-five or thirty years ago that William and Mary Howitt wrote with much mutual satisfaction. They enjoyed their work, and their readers enjoyed their simple stories, poems, studies in natural history and rural life, journals of travel, and translations from the literature of Germany and Denmark and Sweden. Much of their work, especially the husband's, was of the book-making sort, but good after its kind—full of the love of nature and humanity, relying not on reading, but on personal observation for its accounts of poets' homes and haunts and places famous in the ecclesiastical and political history of Great Britain. The lowest deep to which we find Mary descending is the writing of a series of poems for pictures furnished her by the publisher of some periodical. The Howitts were in excellent repute on this side of the Atlantic, especially among anti-slavery people, liberal Quakers, and Unitarians, and the number of their American friends was always large. Some of their best work was the introduction of Hans Christian Andersen and Frederika Bremer to the English and American public, and with them a general knowledge of Scandinavian literature.

They were not, however, more remarkable for their literary activity than for their humanitarian sympathies and their philanthropic work. They engaged in more than one journalistic enterprise having for its object the amelioration of social or political conditions, in which William, like the father of Charles Lamb, evinced a "most incorrigible and losing honesty." One of the most agreeable encounters in the book is that of William Howitt and the reader with the son-in-law of Major Carmichael Smith, the active manager of the *Constitutional*, "a daily Liberal paper which should especially support the political, economical, and financial reforms advocated by Joseph Hume." The paper was in the worst imaginable financial straits when the Major informed Howitt that he had sent for his son-in-law to edit it. The narrative proceeds:

"Just as I was going out of the office, which was in Fleet Street, I met on the stairs a tall, thin young man, in a long dark-blue cloak, and with a nose that seemed some time to have had a blow that had flattened its bridge. I turned back and had some conversation with him, anxious to know how he, Thackeray, proposed to carry on a daily paper without any funds and already deeply in debt. He did not seem to know any more than I did. I thought to myself that his father-in-law had not done him much service in taking him from a profitable post for the vain business of endeavoring to buoy up a desperate speculation. How much longer the *Constitutional* struggled on I know not. That was the first time I ever heard of or ever saw William Makepeace Thackeray."

There are people who are greater than the sum of all their parts, whose personality engages us in a quite unaccountable manner. William and Mary Howitt were of this kind. The least mention of them always called up a cheerful image in the mind. Their readers liked and loved the man and woman, and not merely what they wrote. Their autobiography —for it is William's almost as much as Mary's —fully justifies that delightful personal affection which their books inspired. Their lives were blended not only in marriage, but in literature; and not only were they married lovers for more than half a century—they were also married friends.

The construction of these volumes is somewhat irregular and lacking in proportion, but what preponderates is the better part—the account of Mary Howitt's childhood and youth. This was written in 1868, and the remainder not till after William's death in 1879, when he was eighty-seven years old. Mary survived him until January 30, 1888, when her eighty-ninth birthday was near at hand. Letters are freely drawn upon in the latter part, which, if they bring us closer to reality, lack something of the charm of reminiscence. If the account of her ancestry is prolonged unduly, it contains many interesting incidents and personal traits. Her most famous ancestor was that William Wood, the Irish patentee, whose farthings and half-pence were the best copper coin ever made in Ireland, but on which Dean Swift wreaked his animosity to Sir Robert Walpole, greatly to Wood's undoing. Her paternal grandfather lingers long upon the stage, a collector of simples, an herb-doctor, a blundering speculator, and a "crank"; yet it may be questioned if Mary Howitt did not get from him her best inheritance—her love of nature and of flowers. The story of her childhood is compounded of the most meagre elements, but it is full of charm. Nothing more grimly Puritanical could be conceived. The wonder is that the bedevilment of nurses and the "waters tasted in secret," in self-defence against intolerable restraints, did not incurably injure Mary and the sister who was the companion of all her joys and sorrows. Their salvation was the little brother—Plutarch's best gift for a child; a good home teacher; and going away to school, though that had much of bitter with the sweet. For Mary Howitt's final alienation from Quakerism any explanation is imperfect that stops short of the utter dreariness with which it cursed her childhood and her early youth.

When Mary Botham has brought her story up to her marriage with William Howitt in 1821, she introduces a chapter from his hand bringing the story of his life up to the same point. The interest of the narration centres in the gravitation of his mind to literary pursuits. Thrift, economy, and sobriety only came into the race of Howitts with William's father. Before him, they were a roystering set, who had dissipated their property till they had hardly a roof above their heads; the younger sons "hunting, feasting parsons, rectors of Eastwood, persecutors of Quakers and other religious vermin." The father was the first Quaker in the family, marrying another, Phebe Tantum, of the *only* family of that name, says William, that he ever knew. The boy was a great admirer of Byron, and some familiarity with Newstead and a glimpse of Byron there did much to nurse the flame.

William and Mary were famous walkers; the year after their marriage walking five hundred miles on one excursion in Scotland without seeing a guide-post all the way. They were nomadic as well as peripatetic. The "moving accident" was certainly their trade. The reader who has thought of them as living a quiet, stable life will be astonished at the discovery of its shifting character: from Hanley to Nottingham, thence to Esher, then for three years to Germany, mainly at Heidelberg; next to Clapton; to St. John's Wood, near Hampstead; to the "Hermitage," near Andrew Marvell's cottage at Highgate; to West Hill Lodge near by; to "The Orchard"; once more to Esher, where the husband and wife convinced themselves that Bacon said truly that planting a garden is the sweetest of human pleasures; then for the remainder of their lives to Switzerland and Rome.

This migratory habit of their lives may have contributed to the change which gradually took place in their opinions. With William this did not proceed so far as with his wife, and, had he survived, it is most unlikely that she would have joined the Roman Catholic Church, as she did in 1882, three years after his death, when she was already eighty-three years old. But it would be difficult to fix a time

when they were not drawn to the Roman Catholic more strongly than to the Established Church of England, partly by the disabilities of the Irish Catholics, partly by their easy gravitation to the supernatural as a present reality, and not merely a matter of the distant past; much also by their sympathy with the devout and kindly temper of the Roman Catholics of the Tyrol. William was the first to give up "Friends' peculiarities," but, notwithstanding his own changes, continued to like a Friend's bonnet; so Mary did not give up hers, nor "the language," thinking that the bonnet and the language went together. In 1833 we find her apologizing for not attending Yearly Meeting with "so many hundreds of women, who really resembled a large flock of doves more than anything else." The sense of Quaker limitations grew. She writes in 1840:

"Nothing has given me a more unpleasant confirmation of my opinion of Friends' contracted and sectarian feeling than our experience in this neighborhood, including the town of Kingston. Some Friends came from that meeting to announce to us the receipt of our certificate, with the utmost solemnity and shut-up-ness. They never said they were glad to have an addition to their meeting, that they hoped our residence had proved so far agreeable, or that it might do so, or even that we might have our health. They had no congratulations, no good wishes. Perhaps they felt none. But if so, it was not according to my notions of Christian charity that wishes good to all men. They warned us against literature and politics, and when William inadvertently used the word Radical, the man Friend asked *if he thought that word a desirable one for a Friend to use.* Everything with these Kingston Friends was warning and prohibition. They would not read books. They would not go into society. They would not look at a newspaper—nay, even would not admit a newspaper into their houses. Now, is not this a miserable state to be in? Yet these are among the approved and most orthodox members."

Later in the same year she writes:

"We dined on Sunday with the women Friends who are delegates from America to the Anti-Slavery Convention, and with that noble American Abolititionist William Lloyd Garrison. The English Friends, whose women go up and down preaching, and who have their meetings of discipline, have, nevertheless, refused to receive these women delegates from America. I wish thou could see and hear Lucretia Mott. She is a glorious, noble-minded woman, and a plain Friend too. The English Friends will not receive her because she is a Hicksite."

It is evident from these and many other passages that it was the narrowness of her old associates that drove her, at length, from their assembly. In her case, there was none of the reaction from the meagreness of the Friends' worship to the splendors of a ritualistic church, which has carried so many Quakers into the English and the Roman churches. The simplicity of Roman Catholics attracted her, and she went to them at last in spite of their elaborate ceremonial. She and her husband went little to Friends' meetings after 1844. She writes: "I could go one Sunday to the Church of England, another to a Catholic chapel, a third to a Unitarian, and so on; and in each of them find my heart warmed with Christian love to my fellow-creatures and lifted up with gratitude and praise to God." She remained true to this spirit. Her connection with the Unitarians grew closer for a time, the saintly Dr. Sadler, who, later, was George Eliot's friend, and conducted the service at her funeral, being very dear to her; as also Dr. W. B. Carpenter, the scientist, who played the organ in Dr. Sadler's modest church. Soon, however, we find her wishing that she might be a Catholic. In 1862, reading John Henry Newman's 'Miracles of Ecclesiastical History of the Early Ages,' she is "sure these Roman Catholics are very near the truth." William writes in 1870: "What an extraordinary thing is Roman Catholicism! . . . At top all is rotten, but at bottom God, who overrules all things, has caused it to strike its roots into the soil of the common humanity, and send up shoots and crops of an active, holy, and indefatigable beneficence such as present Protestantism knows nothing of." The same year Mary takes a furtive dip of holy water in a little chapel in Brunnen, praying that God would give her the right faith. Ten years later she protests, "Now, don't think I am going over. There is no fear of that." She went over in May, 1882. That the tone of Father Ceslas, who baptized her, did not violently repel her, will seem strange to many readers of his words, the quintessential oil of that "priestcraft" whose history William Howitt had essayed to write. She says, "I told him I should never know what to say in my self-defence when a Catholic." Evidently her act was sentimental and emotional, without any intellectual seriousness. The Pope's Jubilee occurred shortly after her reaching Rome for the last time, in September, 1887. We are obliged to read the signs of a happy and pathetic second childhood in her enthusiasm over this, culminating in her presentation to the Pope. She was eager to kiss his foot, but he withdrew it and gave her his hand. Evidently the excitement was too much for her, for her last sickness began immediately after, and ended before many days had passed. The Cardinal-Vicar of Rome gave express permission for her burial by the side of her husband in the Protestant cemetery where Keats and Shelley lie, too far apart.

It would be easy to emphasize too much Mary Howitt's conversion to the Roman Catholic faith. Of much more importance is the fact that it cost her nothing of her sympathy with the genuinely earnest and religious of every church and sect, nothing of her gratitude for every spiritual help from her youth up. Through many theological changes her character remained the same, overflowing with sympathy for all human excellence, and kindliness for all oppressed and suffering folk. One of the most conspicuous enthusiasms of her life was for the American anti-slavery cause, "the real thorough abolitionist view, which would cut up this crying sin root and branch." Anti-slavery meetings and petitions found in the Howitts helpers of the most sterling quality. It is a pretty picture that we have of Mary's aged mother, in the last days of her life, knitting "such a quantity of nice things for the anti-slavery bazaar in Boston." That ardent abolitionist, Henry C. Wright, is seen at a garden-party delighting the children whom Hans Christian Andersen's stiffness and vanity repelled. Wordsworth is at his best, routing an American general who defended slavery at Rydal Mount: "To think of his coming, of all things, to this house with a defence of slavery! But he got nothing by it. Mr. Howitt and I gave it to him pretty well." The Mr. Beecher indexed as Henry Ward, vol. ii, pp. 100, 101, is certainly his brother Charles in the second instance and is probably one of his brothers in the first.

But the book is more a record of domestic peace and love and sorrow bravely borne than a history of the Howitts' literary life or an account of the distinguished people who were attracted to them by their admirable qualities of mind and heart. It is a high privilege to be admitted to such companionship.

MORE CHILDREN'S BOOKS.

'Captain Polly,' by Sophie Swett (Harpers), is a fine tale of a wise and courageous girl, who may serve as a good model for other girls to grow like, and also as a lesson in shame-facedness to boys for their silly airs of superiority over their sisters. Nothing shows more plainly the greater nearness of boys to their savage ancestry than the fiction which still holds among them that it is they who hold the reins of government. The Captain Polly of this book was the natural and actual ruler of her family, but that did not in the least shake the confidence of her brothers that both their organization and their stock of ideas were in every way superior to hers. The part of the book which concerns another sister, Del, is less to be commended as food for children. An overweening love of fashion should be treated very lightly and with ridicule, if it should be admitted at all for castigation. There are some vices that are best eradicated by being ignored, and that cannot be minutely described without causing contamination. The incident of the pocket-book, moreover, is overdrawn. Of the illustrations, the frontispiece, Captain Polly herself, is admirable; the rest are conventional, and have too little excuse for being.

Susan Coolidge's stories always exhibit an easy moral. Good girls do not mind a moral, and, in her books, the setting is so pleasing that doubtless the bad girls, too, can take it down. 'Just Sixteen' (Roberts Bros.) consists of sixteen stories, addressed to girls of different ages. "Snowy Peter" is easily the worst of them. "Ninety-three and Ninety-four," which concerns the furnishing of rooms, would do great good if it could sink into all girls' minds. "The Pink Sweetmeat" is very fresh and charming, and "Who Ate the Queen's Luncheon?" furnishes a beautiful picture.

'The Princess Liliwinkens,' by Henrietta Christian Wright (Harper & Bros.), is a very satisfactory fairy book. There is plenty of invention, plenty of fun, and a thoroughly good style—in fact, the contents are quite up to the beautiful cover. But there is one respect in which it falls short of a high standard. There is no reason why a nonsense-tale should not have a perfectly definite structure. The best stories that can be made are none too good for children of the tenderest years, if we wish them to have, when they grow up, intellectual powers as good as we can make them. Every child is able to see, in any story that it can understand, whether the beginning has any bearing upon the end, and whether all the parts work together to further or to retard a common result. The writer has known very young children who distinctly objected to Grimm's Tales on account of their deficiencies in this respect. They said, "What's that got to do with it?" and the best critic in the world could have said nothing better. That clear vision which can grasp a large series of events, with their connections and interdependences, is one of the best possessions that our children can have, and its growth is interfered with every time that they struggle to exercise it upon a picture that is itself hopelessly confused and turbid. It is a pity to make these remarks apropos of one of the best fairy-books of the day, but still it is only the writers of the best children's books who can be expected to profit by them.

'Feathers, Furs and Fins,' stories of animal life for children (Boston: Estes & Lauriat), has passed through four or five editions already, and is probably destined to pass through several more. It is illustrated in an artistic man-

ner, and the animals are true to nature. The stories are interesting, amusing, and in good taste. It is pleasant to be able to give hearty commendation to a book of this character and scope, since so many of them are objectionable on the ground of inaccuracy, poor literary form, or defective mechanical execution. In the present case none of these defects are notable, and the book is thoroughly adapted to its audience.

'Paddling in Florida' (G. W. Dillingham), by St. George Rathborne, is a bright and interesting account of a canoe cruise of two lads in Southern Florida. We should not advise any but the most expert canoeists to follow their example. But those who are at home in a canoe in all kinds of weather, and are willing to rough it, would find great enjoyment in a like trip. To such this book might prove an excellent guide, especially as to what it would be necessary to carry. Making Key West their starting-point, the lads penetrated to the heart of the Everglades, which do not appear very attractive from the description, sailed over the mysterious and dismal Lake Okeechobee, and from thence down the Caloosahatchee to the Gulf. Their adventures with wild-cats, bears, alligators, and outcasts are numerous and exciting, but the pleasant air of reality which the first part of the book wears is lost by the necessity under which the author is laid to make his narrative fit some old pictures which had better have been left out. In the course of his description of a bird-hatchery in the Everglades, Mr. Rathborne refers to the fact that birds, like the scarlet ibis, of the most beautiful plumage, are nearly extinct from their indiscriminate and wholesale slaughter, and he laments the lack of any legislation for their protection.

The unusual indulgence of the parents of two green boys, luxuriously brought up, in allowing them to start on a trapping expedition into the wildest part of Maine furnishes the text of 'City Boys in the Woods,' by Henry P. Wells (Harpers). From this text he gives a generally accurate and interesting description of life in the woods and of the modes of making one's self comfortable and happy on small means and by devices from the storehouse of nature. The two boys, ill provided with outfit, and utterly ignorant of what they are to do after leaving civilization, naturally come to grief, and, after a series of misfortunes, providentially find a trapper named Dant, who becomes their good genius at once, feeds and clothes them, teaches them the art of trapping and other arts of woodcraft, and finally restores them well and hearty to their unnatural parents. The only human weakness shown by Dant during the period the boys sat at his feet is described on p. 120, where he says he left a boat in the water of a Maine river tied by a rope to a stake. The boat had been taken there, a long distance from Dant's camp, the February previous, and thus secured. As the stream must have been frozen in February, the boat could not have been put in the water, but left on the ice. The risks it ran from the spring freshets, from passers-by, and from being exposed to the mercy of the elements for eight months, would amply account for its disappearance without imputing to a poor beaver the gnawing of the rope. A boat or canoe taken for use to a distant piece of water is always (by a man knowing his business) kept concealed near the shore, never in the water, is turned upside down, and covered with boughs or bark.

The visitor to the Adirondacks who makes the ascent of Mount Marcy or of its surrounding satellites at the cost of the tribute exacted by the company of sportsmen from Pennsylvania who own those parts and permit people to walk over them on certain onerous conditions, is sure to have his attention called to an occasional stump, or a few chips, which he is told is a "sable," or, as the natives call it, a "saple line." Why these infrequent vestiges of human labor should be called a line, the tourist never discovers from his guide. The general attitude of the latter towards his victim is as superior and inimical to all trifling as that of the average railway conductor or hotel clerk, and asking him to show the line (if this liberty is taken) brings forth such an ironically indefinite response that the traveller never dares to ask what a "saple" may be, and in all probability never would know but for Mr. Wells, who in chapter v. of the book under notice not only tells us what the "line" and the "saple" (or, as he calls it, "sable") are, but how the sable line is to be laid out, baited, and attended to. This alone is worth the price of the book. The chapter on beavers, xii., is most interesting, and its substance and capital illustrations were published some months since—in *Scribner's*, we think. The mingling of sound instruction in natural history, woodcraft, and sport which runs through the whole book, cannot fail to interest the grown reader as well as the young one. The illustrations, though generally good, are in some cases misleading, and have no reference to the text. Scenes in the Rocky Mountains, incidents of elk-hunting, and other pictures quite as much out of place in describing the Maine woods, injure greatly the unity which should exist between a book and its embellishment.

It was with some misgivings that we started on a European trip in 'Personally Conducted,' by Mr. Frank R. Stockton (Charles Scribner's Sons). Our apprehensions were soon dispelled, however, for we found that he had discarded the antiquated and creaking machinery common to works of this kind. He assumes at the start that he is accompanied by all his readers, and we wander from place to place with a dim consciousness of being one of a party of eager boys and girls who jostle each other good-humoredly in their efforts to keep close to their genial "conductor," as he describes this or that object of interest. We smile with them as he points out at Rome the den "in which the old wolf established her little orphan asylum," or gravely doubts whether the Pallavicinis invited the Empress Maria Theresa to sit down in one of their squirting swings, or pictures Giotto as buying one of Mr. Ruskin's books to find out what he meant by some of his groups and symbols on the Campanile at Florence, or refers to those schools in England with "classes where ignorance of America is taught to the pupils." Mr. Stockton's descriptions have just enough history to quicken the intelligence and not overtask the memory. The best chapters are possibly those in which he describes English country life and scenery. It should be added that the pictures, which are well chosen and excellent, illustrate the text.

'The Red Mountain of Alaska,' by Willis Boyd Allen (Boston: Estes & Lauriat), is a boys' book, as we infer from the advertisement. For those boys who like their adventures without any spice of probability, without any real thread of interest in the plot, without a good English literary style, without any genuine local color belonging to the region depicted, or any common sense among the dramatis personæ, and stuffed with inverted chronology and anachronisms like a pudding with suet and plums, this is just the sort of book which they will like. It would be time wasted to criticise it in detail.

Witch, Warlock, and Magician: Historical Sketches of Magic and Witchcraft in England and Scotland. By W. H. Davenport Adams. J. W. Bouton. 1889. 8vo.

THIS is one of the books which make the reader regret that the invention of printing has enabled any one who can wield a pen or a pair of scissors to exhibit his ignorance to a long-suffering public. Apparently Mr. Adams is a gentleman, with a taste for the marvellous, who has accumulated, in the course of somewhat miscellaneous reading, a lot of scraps which he now empties upon the world in heterogeneous fashion, with a little maundering talk to cement them together. His plan is exemplified in his account of Roger Bacon, occupying twenty-three pages, of which the major portion consists of extracts from the chapbook, 'The Famous Historie of Friar Bacon,' and from Greene's 'Friar Bacon and Friar Bungay.' He has been at no pains to consult the original sources, and he retails the traditional legends as though they were unquestioned facts. Albertus Magnus is "the first of the great European alchemists," and Raymond Lulli, who expressly declared the transmutation of metals to be impossible, is described as "the great Spanish alchemist and magician." Curiously enough, there is no mention of Michael Scot, which shows how imperfectly Mr. Adams has worked, even in his own unmethodical method.

That method is carried out to the end. The final chapter, of fifty pages, is entitled "The Literature of Witchcraft," and is announced in the preface as, "I hope, tolerably exhaustive." Great part of this is occupied with extracts from Gifford's 'Dialogue concerning Witches,' 'The History of the Black Art' attributed to Defoe, and other equally accessible works. The bibliography is absurdly meagre, and thrown together without arrangement. Scattering titles of books, many of them of no importance, are given, while others, absolutely essential to the history of Demonology, are conspicuous by their absence, such as Nider, Jaquerius, Silvester Prierias, Basin, Ponzinibius, Bernardo di Como, Grillandus, Gaffarel, Ciruelo, Binsfeld, Grosius, Rickius, Guaccio, Le Brun, Thiers, etc. Even so epoch-making a book as the Jesuit Spee's 'Cautio Criminalis' is not alluded to. If Mr. Adams had consulted a work which he names —Grässe's (not Graessel's, as he gives it) 'Bibliotheca Magica et Pneumatica'— he would hardly have included Horst's 'Zauberbibliothek' and omitted Hauber's 'Bibliotheca Magica.' The modern authorities fare no better. We have Soldan's 'Geschichte der Hexenprocesse,' 1843, and not the enlarged edition in two volumes by Heppe, 1880. Diefenbach is absent, and Rapp, Lilienthal, Längin, Carl Meyer, and the numerous other Germans who of late years have thrown so much light on the superstitions of our forefathers; while, to compensate for this, we are gravely referred to "the Encyclopædia Britannica *in locis*."

Worthless as the book is from all serious aspects, it might serve to amuse an idle hour but for its pervading vices of style and feeble efforts at jocularity. Objectionable as are the long extracts with which it is padded, they are a relief from the original matter connecting them together, of which this is a sample:

"It is satisfactory, therefore, to be able to state, on the weighty authority of Dr. Thomas Smith, that Dr. John Dee, the famous magician and 'philosopher,' was born at forty minutes past four o'clock on the morning of July 13, 1527. According to the picturesque practice of latter-day biographers, here I ought to describe a glorious summer sunrise, the golden light spreading over hill and pasture, the bland, warm

air stealing into the chamber where lay the mother and her infant; but I forbear, as, for all I know, this particular July morning may have been cloudy, cold, and wet; besides, John, the son of Rowland Dee, was born in London."

La Lettre de Christophe Colomb annonçant la découverte du Nouveau Monde, 15 Février -14 Mars 1493. Texte original espagnol, *édition princeps*, in-folio, différente des deux éditions in-4° connues jusqu'à ce jour. Reproduction en fac-similé d'après l'exemplaire récemment découvert en Espagne, actuellement en la possession de l'éditeur. Paris: J. Maisonneuve. 1889. Folio.

The Letter in Spanish of Christopher Columbus, written on his return from his first voyage, and addressed to Luis de Sant Angel, 15 Feb.–14 March, 1493, announcing the discovery of the New World. Reproduced in fac-simile from an unique copy in the possession of the publishers, with introductory and critical remarks, accompanied by a revised Spanish version, and a literal translation into English. London: Ellis & Elvey. 1889. 4to.

Lettera in Lingua Spagnuola diretta da Cristoforo Colombo a Luis de Santangel (15 Febbrajo–14 Marzo 1493.) Riprodotta a fac-simile ed illustrata per cura di Gerolamo D'Adda dall' unico esemplare a stampa sinora conosciuto che si conserva nella Biblioteca Ambrosiana. Milano. 1866. 4to.

THE discovery during the present year of two printed copies, unknown before, of the original letter written in Spanish by Columbus to Luis de Sant Angel on the discovery of the New World (or, as Columbus designated the newly found lands, *the islands found in the Indies*), leads a writer in a recent number of the London *Athenœum* to suggest that sooner or later there may be unearthed an edition of the Latin translation, or even an English version, from the press of Wynkyn de Worde or Pynson, or one of their contemporaries. There is certainly some encouragement to hope for such a discovery in view of the fact that, until the copy in the Ambrosian Library at Milan was identified, about twenty-five years ago, no printed copy of the original Spanish text was known to exist. Two more copies have been discovered or made known to us this year, so that now we know of three copies of the same Spanish text, but of different editions. Exact reproductions in facsimile have been made and published of the three copies, which are now before us, and their titles are given herewith.

It is well at the outset to remind the reader that the titles of all the rare early editions of the first letter of Columbus have been supplied by their respective editors or printers, and have only the authority of individual opinion. These titles, in the cases of the early Latin editions, have served an unforeseen use, the errors in them having assisted in efforts to identify the *editio princeps*. There are doubtless other copies somewhere of the letter of Columbus in Spanish to Sant Angel, and possibly also copies, printed in 1493, of his letter to Sanchez. Of the latter no copy in Spanish is now known, if any was ever printed. It is also highly probable, as has been suggested, that the tracts of Columbus and Vespucius were reprinted by the early English typographers, and that copies bound with other tracts, in volumes, may be lying unnoticed in some old library. Here, then, is a new field for bibliographical enterprise worthy of our mighty book-hunters and collectors of Americana—such, at least, as have good bank accounts.

Hitherto the chief bibliographical treasure among books relating to America has been the Latin translation, printed in 1493, of the letter of Columbus to Gabriel Sanchez. Of this translation there are six editions, all which have been candidates for the glory of *editio princeps*. R. H. Major has given good reasons for deciding in favor of the edition of four leaves, having thirty-three lines on a full page, printed at Rome, in 1493, by Stephen Plannck. Varnhagen gives the first place to the edition printed by Silber, while Brunet and Harrisse decide in favor of the Plannck edition which has thirty-four lines on a full page. Where such eminent authorities disagree, it will be justifiable for the owner of any of these three editions to claim the honor for his copy. Yet there are reasons for suspecting that the Latin *editio princeps* has not been discovered. A majority of all the copies known of the six editions above referred to are in this country. Of course, reprints or reproductions issued since 1493 or 1494 are not here considered.

The original manuscripts in Spanish of the letters of Columbus are lost, though what seem to be attested manuscript copies are in existence. Enclosed with the letter written to Sant Angel was a copy addressed to the sovereigns Ferdinand and Isabella. The letter to Sant Angel is not so full as that written to Sanchez, though it is more highly esteemed, as being probably the first written. But, of course, either of the printed Spanish texts is of greater value than any translation, for, next to the original manuscript of the navigator (could it be produced), will ever be prized the first printed copy of the actual words used by him. As we have seen, there are three editions now known of the most important Spanish text, but only one copy of each has been discovered. It is hardly likely that these are the only copies in existence, and possibly yet other editions will be found, so that ere long we may be discussing different editions of the printed Spanish text in our efforts to identify the *editio princeps*, while the early editions of the Latin translation will occupy a secondary rank in our estimation, being then chiefly valuable as incunabula, though, should any version from the press either of Wynkyn de Worde or of Pynson be discovered, English-speaking bibliomaniacs would hardly place that second to any other.

The titles prefixed to the reproductions of the three Spanish texts are given at the beginning of this article in the order of their importance. First on the list is that recently issued by Maisonneuve of Paris. It is a full-sized folio, of four pages, the form usual in the time of Ferdinand and Isabella for proclamations and similar documents, and—so far as we know now—is entitled to the designation *édition princeps* printed in the title. Both the others are in small quarto, with eight pages, thirty-two lines in a full page. The two are alike, page for page, and line for line, the edition published in facsimile by Ellis & Elvey being doubtless the earlier, since errors in that are corrected in the Ambrosian edition. The Ellis & Elvey edition, besides the reproduction and critical remarks, has a revised Spanish version, with marginal notes showing the variations from the Ambrosian text. It seems to be settled that the type of all three editions is Spanish, but the places where printed have yet to be determined. The extreme rarity of these printed copies is indicated by the fact that neither Navarrete nor Muñoz had seen them; their knowledge was derived from the attested later manuscript copy already referred to. The reproduction from the edition in the Ambrosian Library was published by the Marquis of Adda, and, since his beautiful volume was printed, the original letter has disappeared, probably stolen from the library.

All these editions suggest bibliographical questions which are of the nature of problems, and which we are not at present able to deal with. It is certainly an interesting circumstance that, while we are discussing plans for celebrating the discovery of America by Columbus, the two most important printed copies now known of the actual letter written to announce that discovery to his friend and helper, Luis de Sant Angel, should be brought to light. It is to be hoped that both these letters, each in its way unique, may be secured by some appreciative American and placed in the Metropolitan Museum.

Anonyms: A Dictionary of Revealed Authorship. By William Cushing. Part I. Cambridge: W. Cushing. 1889.

THIS work forms a companion volume to the same author's 'Initials and Pseudonyms,' and together they cover much the same ground as Halkett and Laing's 'Dictionary of the Anonymous and Pseudonymous Literature of Great Britain.' There is no doubt that Halkett and Laing's work is very unsatisfactory so far as American books are concerned, and a volume devoted to the anonymous and pseudonymous products of American presses would have formed a useful and welcome supplement to the Dictionary. Mr. Cushing, however, has attempted to do more than furnish merely a supplement to Halkett and Laing's work, the result being that he reproduces much, though not all, of what is to be found in their Dictionary, with considerable additions of his own, and has given us more than a supplement, yet not a work which can take the place of the Dictionary as a work of reference for bibliographers. Thus, for some unexplained reason, he takes no notice of books printed before the year 1700, and even of books of later date he omits many which are given by Halkett and Laing. On the other hand, he has enlarged the scope of his work, as compared with theirs, by including a great number of anonymous articles in periodicals, and, on a rough estimate, about 15 per cent. of the entries in 'Anonyms' belong to this class, the inclusion of which may be considered a measure of doubtful utility.

In separating, as he has done, the anonymous from the pseudonymous works, Mr. Cushing seems to have had no clear conception of the distinction between the two, and it is, perhaps, a matter of no great consequence whether he considers a book "by the author of Waverley," for instance, as anonymous or pseudonymous, provided only he is consistent in his treatment of such books. Consistent, however, he is not; for while some books of this class are given in 'Initials and Pseudonyms,' the majority are to be found in 'Anonyms,' and a few are given in both works. So, too, we find 'Chrysal, or the Adventures of a Guinea, by an Adept,' 'Aureæ Sententiæ, by T. S.,' etc., recorded in 'Anonyms' as well as in 'Initials and Pseudonyms.'

It is to be regretted that Mr. Cushing did not follow the good example set by Halkett and Laing, and give the authority for his statements as to the authorship of anonymous works. In consequence of his neglect to do this, we have no clue to his sources of information, and are by no means convinced that his ascriptions of authorship are always to be relied upon. Take as an example the 'Collection of Yearly Bills of Mortality,' which he ascribes to T. Birch; Halkett and Laing attribute it to W. Heberden, and in a note say it "has been generally ascribed to Dr. Birch, but is now, on the authority of the author's son, the younger Dr. Heberden, attributed as above." In this

case few will be inclined to accept Mr. Cushing's simple assertion, unsupported by any authority.

Not only is the plan of the work open to objection, but its execution leaves much to be desired, both in accuracy and uniformity. Thus the entries of biographical articles seem to have been arranged at hap-hazard, sometimes under the forename and sometimes under the surname of the subject. For example, we find "Carlyle, Thomas," and "Charles Dickens," "Christopher Martin Wieland," and "Coleridge, Samuel Taylor," "Crofton Croker," and "Croker, John Wilson," among the entries under the letter C, while Dickens appears again in several entries under D. A similar lack of uniformity is shown in the names of British noblemen; thus we have "Rokeby, Morris Robinson, 3rd lord," "Dalrymple, John, 5th Earl of Stair," and, worst of all, "Perceval, Sir John, 1st Earl of Egmont."

In the spelling of proper names we find frequent evidences of carelessness; thus we have Bunson for Bunsen, Reuben Golet Thwaites for Reuben Gold Thwaites, Manduit for Mauduit, Arcadie College for Acadia College, etc. By a curious blunder, the 'Description of the Genesee Country' is ascribed to Charles Williamson O'Callaghan. It is by Charles Williamson, was first published in 1796, and was reprinted by E. B. O'Callaghan, in the 'Documentary History of the State of New York,' Vol. II (1849).

Apparently no effort has been made to ascertain the date of first publication of anonymous works, for, to say nothing of obvious errors, of which there are not a few, in some cases the date given is that of the eighth or tenth edition, while the date of Evelyn's 'A Character of England,' first published in 1659, is given as 1812.

Space forbids the enumeration of many omissions which might be noted; it is enough to say that a hasty comparison with the Astor and British Museum catalogues, and Sabin's Dictionary, shows that Mr. Cushing has not consulted these sources as carefully as he should have done. Therefore, though his work contains many additions to Halkett and Laing's Dictionary, it by no means supersedes it, and its usefulness is so greatly impaired by the defects of plan and execution that we cannot help wishing the author had been content to cover somewhat less ground, and had done his work more thoroughly and carefully.

Summer Holidays: Travelling Notes in Europe. By Theodore Child. Harper & Bros. 1889.

MR. CHILD is a very agreeable travelling companion, and his choice of places for a summer ramble is excellent. He looks upon the scene usually with the eyes of an artist, and renders the impression made upon the senses with considerable literary skill. Holland under this method of treatment becomes almost a new country, and harmonizes with our pictorial ideas of it in a way quite unusual. Materially, the country and its people are as prosaic in these pages as the worst of travellers describe them, but atmospherically and picturesquely they are all that the artists represent them. Mr. Child evidently had commonplace and dreary moments in the jaunt, but he got the one thing which the country has to give, and he describes it sympathetically. The Danube and Constantinople are less fresh than such a picture of Holland, and one is tempted to think that in Italy the author is upon altogether too familiar ground; but it is not so, because—apart from the inexhaustible beauty and sentiment of the land—he had the good judgment to go to Naples in midsummer, and the luck to be quarantined on the island of Nisita; and from such prosperous beginnings he went on to make the acquaintance of the native cuisine and the human gayety of the city, all in the bright weather, and so had the pleasantest summer holiday he remembers. When one enjoys so much, he usually writes well. Verona was another good city for his temperament. Finally, the French chapters—on Limoges, Reims, Aix-les-Bains, and especially the voyage on French rivers—are abundant in novelty and odd bits of interest, as well as in beauty of scene and sympathy. The papers are reprinted from magazines, and gain by being massed.

JUDGE TOURGEE'S NEW NOVEL.

Just Published.

With Gauge & Swallow,

ATTORNEYS.

By Albion W. Tourgee, author of 'A Fool's Errand,' etc. 12mo, cloth, $1.00.

It is needless to say this work has the stamp of peculiar vigor and originality which has secured for Judge Tourgee's other novels such a wide popularity. It enters a somewhat new field, though one with which the author is most familiar, and gives free scope to his quaint humor, keen satire, and well-known fondness for socio-political questions. The book holds the reader to the end with a unique and varied fascination.

*** *For sale by all booksellers, or will be sent, postpaid, on receipt of the price.*

LOUISA M. ALCOTT:

Her Life, Letters, and Journals.

Edited by Ednah D. Cheney, with portrait and view of the Alcott Home in Concord. One vol., 16mo. Uniform with 'Little Women.' Price, $1.50.

Nobody can read of the struggles of the Alcott family, and of the tender yet resolute heroism with which Miss Alcott met and relieved them, without being touched to tears by the pathos and reality of the picture. Louisa Alcott was not a member of any church, but her belief in God, her loyalty to conscience, her fidelity to duty, her rescue of the Alcott family from its peculiar perils, place her among the women-saints of the century, and it will be hard to find any one of her sex who has more faithfully responded to the duties of the position in which God had placed her.—*Boston Herald.*

The page[s] from her journals are full of the shrewd obse[r]s, the kindly good sense, the overflowing h[u]that, recognized at last, won her her fame, a[n]reading world will rejoice in their possession[.] book is sure of permanent success, and o[f] idest and most affectionate of welcomes.—*Commonwealth.*

Sold everywhere. Mailed, postpaid, by the publishers on receipt of price.

ROBERTS BROS.,

BOSTON, MASS.

Most Successful Book of this Year.

LORNA DOONE.

With many drawings.

By Mr. R. D. BLACKMORE.

Entirely new edition, from new type, with SEVERAL HUNDRED ORIGINAL ILLUSTRATIONS entirely new in all respects, specially drawn and engraved for this edition. These are of the very highest artistic merit by the best artists in the country, including such as Henry Sandham, George Wharton Edwards, Harry Fenn, Wm. Hamilton Gibson, Irving R. Wiles, W. H. Drake, Geo. E. Graves, Charles Copeland, Margaret McDonald Pullman, Harriet Thayer Durgin, Harper Pennington, and others. Engraved by hand and by process by A. V. S. Anthony, Geo. T. Andrew, Goupil of Paris, Kurtz, Wright Gravure Co., Fillebrown, Wm. J. Dana, etc.

Containing also a Beautiful Map of Exmoor, the Scene of the Story, Engraved in several colors.

This attractive romance, the most fascinating in its touches of both nature and human nature ever written in English, and perhaps in any language, is here published in an edition so luxurious in quality as to merit the praise it has received of being

THE MOST BEAUTIFULLY ILLUSTRATED BOOK EVER PUBLISHED IN AMERICA.

Price, Cloth, $5.00; Half Morocco, $10.00; Full Morocco, $15.00.

COLLEGE NEWS

IN THE

NEW YORK EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Such subscription may date from the beginning of the present college year, in September, or may begin on receipt of the order. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

JUST PUBLISHED.

CINQ-MARS, or a Conspiracy under Louis XIII., by Alfred De Vigny, Translated by Wm. Hazlitt. A most beautiful edition of this celebrated romance, exquisitely illustrated with thirteen full-page etchings, by Gaujean from drawings by A. Dawant, and numerous smaller illustrations in the text. 2 vols. 8vo, cloth, extra, gilt top, $6.00 net.

This famous historical romance of the reign of Louis XIII., first published in English in 1842, has been for many years out of print, and now appears for the first time with every element of attractiveness that can be lent to it by large, clear type, choice paper, and beautiful illustrations.

In its new dress the story should find a place in every library. It is a classic in its own tongue, and the most famous work of Count Alfred de Vigny, member of the French Academy. It was from this romance that Bulwer gleaned considerable material for the celebrated play of "Richelieu."

LITTLE, BROWN & Co., Publishers,
254 Washington Street, Boston.

Important to Public Institutions, Libraries, Etc.

Now Offered at Greatly Reduced Price.

HALKETT & LAING'S DICTIONARY OF ANONYMOUS AND PSEUDONYMOUS LITERATURE OF GREAT BRITAIN, including the works of foreigners written in, or translated into, the English language. 4 vols., imperial 8vo, $25.00 (published at £8 8s.).

The completion of this highly important and exhaustive work, after the lapse of so many years after its inception, was made memorable by the death of both of its learned and accomplished editors during its passage through the press. It was finally finished last year by the daughter of one of them (Miss Catherine Laing), in a manner that leaves nothing to be desired. Having secured, under peculiarly favorable circumstances, a small edition, the undersigned is enabled to offer the work at the very low price above mentioned.

Those desirous of securing copies should immediately address

J. W. BOUTON, 706 & 1152 Broadway,
NEW YORK.

WINTER RESORT.—PERSONS wishing a mild, dry, piney-wood climate for the winter and desiring the comforts of a thoroughly well-appointed house, under Northern management, address THE HOBKIRK INN, Camden, S. C. 8th season. Illustrated circulars.

FOR ADVANCED STUDENTS. French European Magazine, bi-monthly, 24 numbers, 768 pages. Plays, stories, sketches, poetry, etc., by the best modern writers. Postpaid, $1.10 per annum. Specimen numbers mailed free to any address. E. ROTH, 237 South Broad St., Phila.

A. C. Armstrong & Son,

714 BROADWAY, NEW YORK,

Have now ready the New Cabinet Red Line Edition.

WORDSWORTH'S POETICAL WORKS.

With Life of the Poet, Portrait, and other illustrations. 8 vols. 16mo, from *new type*, beautifully printed, with red lines, by the Glasgow University Press. Handsomely bound in Cloth, red edges, in a cloth box, $5; also *French* Morocco, gilt edges, Morocco box, $9.

Wordsworth's value as a poet is particularly great at this present time. There is no poet who can be studied to better advantage. In these convenient volumes, songs, sonnets, and passages of familiar beauty will be, moreover, reread with new delight by those who have found in their acquaintance with Wordsworth one of the strongest and most undying consolations and most vivid influences of their intellectual life.

New Vol. of Book-Lovers' Library.

How to Catalogue a Library.

By H. B. WHEATLEY. 12mo, cloth, uncut edges, $1.25. *Being the 10th vol. of this Library*, including: I. 'How to form a Library'; II. 'Old Cookery Books'; III. The American Railway.

Its Construction, Development, Management, and Appliances. Written by the most eminent authorities in all branches of railway work. With 225 Illustrations, 13 maps, 19 charts, many being colored, and a full index. Bound in half leather. 8vo, $6.00 net.

CONTENTS:

INTRODUCTION. *By Judge Thomas M. Cooley,* Chairman of Inter-State Commerce Commission.
THE BUILDING OF A RAILWAY. *By Thomas Curtis Clarke.*
FEATS OF RAILWAY ENGINEERING. *By John Bogart.*
AMERICAN LOCOMOTIVES AND CARS. *By M. N. Forney.*
RAILWAY MANAGEMENT. *By Gen. E. P. Alexander.*
SAFETY IN RAILROAD TRAVEL. *By H. G. Prout.*
RAILWAY PASSENGER TRAVEL. *By Gen. Horace Porter.*
THE FREIGHT-CAR SERVICE. *By Theodore Voorhees.*
THE PREVENTION OF RAILWAY STRIKES. *By Charles Francis Adams.*
HOW TO FEED A RAILWAY. *By Benjamin Norton.*
THE RAILWAY MAIL SERVICE. *By Thomas L. James.*
THE RAILWAY IN ITS BUSINESS RELATIONS. *By Arthur T. Hadley.*
EVERY-DAY LIFE OF RAILROAD MEN. *By B. B. Adams, Jr.*
STATISTICAL RAILWAY STUDIES. *By Fletcher W. Hewes.*

"This is, beyond all compare, the greatest American work on railways. It contains admirable papers, written by specialists, but in popular style, and also hundreds of fine engravings. It is difficult to devise a question on railway construction or management for which the answer may not be found in this book. It is a great book and remarkably handsome besides."

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square, 12mo, illustrated, $2.00.

These tales are "strange true stories that truly happened, all partly, some wholly, in Louisiana." They are romantic in color, and delicate and tender in feeling.

Revised and enlarged edition.

The Silent South,

Together with the Freedman's Case in Equity, and The Convict Lease System. By GEORGE W. CABLE. 12mo, $1.00.

To his series of studies of social problems in the South Mr. Cable has added, in this new and revised edition of his noteworthy book, the "open letters" of ex-Senator John W. Johnston and Mr. E. A. Orr, of Atlanta, with the author's replies to them.

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU. With 1,400 Illustrations. 2 vols., 8vo, $7.50.

"The work is destined to heave up old traditions and to compel men to new views of the history of civilization in Europe."—*N. Y. Commercial Advertiser.*

"These luxuriously printed and profusely illustrated volumes embody the fullest account of our Norse ancestors extant. Mr. Du Chailiu has gone very fully and very carefully over the whole of his ground. This extensive and important work must be of high interest to all English-speaking people."—*N. Y. Tribune.*

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

Dr. Van Dyke's volume contains the completest study that has yet been made of the Poet Laureate's works and influence. The discussion carries the author naturally into the larger field suggested by the relation of poetry to life. The book is of special interest in its analysis of the part which the Bible plays in Tennyson's poems.

Sforza: A Story of Milan.

By WILLIAM WALDORF ASTOR, author of 'Valentino.' 12mo, $1.50.

Again Mr. Astor takes the Italy of the Early Sixteenth Century as the scene and period for an historical romance that has all the brilliant color and stirring action of his 'Valentino.'

"The movement throughout is spirited, and the reproduction of bygone times and people realistic."—*New York Tribune.*

Aspects of the Earth.

By Prof. N. S. Shaler. With 100 Illustrations. 8vo, $4.00.

The general reader unacquainted with natural science will find here an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanoes, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

"A very attractive volume, which is certain to be received with wide and popular interest. The style is carefully adapted for popular reading in its noticeable lack of unnecessary technicalities. Prof. Shaler's standing is sufficient guarantee for the unquestionable value of the work from a scientific point of view."

*** *Sold by all booksellers, or sent, postpaid, by*

The Nation.

NEW YORK, THURSDAY, NOVEMBER 21, 1889.

The Week.

THE dénouement of the Brazilian revolution is a new thing in history, and shows how commercial is the age in which we live. An emperor who abdicates for a large sum in cash and an annuity is an absolute novelty in politics. Leopold of Belgium made a speech in 1848, from his palace windows, giving notice that he took the throne to accommodate the Belgians, and was ready to leave whenever they were dissatisfied, but he gave no hint that he should expect compensation in money, either in a lump sum or a pension. Amadeo also abandoned the Spanish throne in disgust, but made no terms. In every other case that we can recall, monarchs who have quitted their thrones under duress have gone off without any settlement, if not after a fight. The arrangement with the Emperor of Brazil will, therefore, probably constitute a most useful precedent, which many monarchs will think of with secret satisfaction. King Humbert, we believe, makes no secret of his readiness to retire from his Government whenever the country gives unmistakable proof of a desire to try something else. After what has happened in Brazil, he would undoubtedly expect a retiring allowance of some kind. The Sultan, too, who lives in hourly dread of being driven out of Constantinople, will probably now hold out, when the crisis comes, for a few millions in the way of salve. Nothing could more completely extinguish the old mediæval idea of "divine right." A right which can be appraised and extinguished by dollars and cents cannot be divine.

Senator Frye has expounded the objects of the Pan-American Congress. It is in the first place to show the South Americans our size and resources, and in the next place to get them to adopt us as the arbitrator in their quarrels; they being always, as the Senator politely remarks, "bordering on the ragged edge of revolution." Free trade with them he would on no account permit, except in one or two articles—sugar, for instance, and "a coarse kind of wool grown in South America." He also thought they might be got to adopt "a common silver coin," so as "to facilitate exchange, raise the price of silver, and possibly open some of the closed Western mines." He did not go on to explain how the adoption of a common silver coin would bring more silver into use. People would not use any more silver coins because they were "common," and, if not, how would the Western mines be reopened? But he says the main object of the appropriation was to get a number of their leading men to travel in this country and impress them with our greatness. This process, however, to be effectual, must be frequently repeated. The delegates now here will get old and lazy and stop talking about our greatness, and their sons and nephews will have to be brought on at our expense, and made to go over the old ground. There must also be some provision made for compelling these travellers to give a favorable account of what they see when they get home. If they belittle us, or speak falsely about us, they ought to be punished in some way.

We have received from the British Treasury Department an explanation of the discrepancy between *our* statement of the sums paid by the Imperial Government for the East India and China mail service, and the statement sent by Mr. J. M. Lachlan to Mr. William Eleroy Curtis, and published in a quasi-official document at Washington entitled 'Trade and Transportation between the United States and Latin America,' etc., Mr. Lachlan's statement, it will be remembered, purported to be taken from "the Blue Book, 34th Report of the British Postmaster-General for 1888, presented to both houses of Parliament by command of her Majesty; appendix G, pages 28 and 29," and is vouched for by Mr. Lachlan as "*a literal and verbatim transcript.*" But it appears from the letter we have now received that his statement was *not* a literal and verbatim transcript, but consisted of extract and compilation put together in such a way as to amount to a falsification of the record, making the payment for the East India and China mail service £360,000 larger than it really is. We publish below Mr. Lachlan's "literal and verbatim transcript," and the copy sent to us by a responsible officer of the Government:

MR. LACHLAN'S STATEMENT.

East India and China	£360,000
East India and China—	
Parcel	265,000
Post	2,075

TRUE COPY.

	Contracts.		Payment
	Commencement.	Termination.	
East India and China	1 Feb., 1880	31 Jan., 1888	£360,000
	1 Feb., 1888	31 Jan., 1898	265,000
	1 July, 1885	On six months' notice for parcels post	2,075

It will be noticed that the payment of £360,000 was on an old contract already expired, which had been replaced by a new one at a reduction of nearly £100,000 per year. Mr. Lachlan represented that both sums were paid simultaneously and at the present time, for he carried both into his total.

The following editorial paragraph, appearing originally in the Hartford *Courant*, is doing service in the high-tariff army:

"When the old Connecticut Western Railroad was built, *iron* rails were laid, and they cost $90 a ton. To-day steel rails can be bought for $30 to $32 a ton. The iron rail lasts but a little time; the steel rail is almost imperishable, and it costs but one-third what the iron one used to cost. Let us proceed to anathematize the tariff under whose iniquitous burden this reduction has come about."

The evident intent here is to induce belief that the existing tariff policy has occasioned the recent great reductions in the prices of iron and steel, and strikingly illustrates the manner in which journals claiming to be respectable deceive their readers for party purposes on the tariff question. This may, perhaps, seem to some a harsh accusation, but it is fully warranted, for there is not the shadow of a foundation for the position of the *Courant;* and the author of the paragraph, if he knew anything whatever on the subject, knew it was wholly false at the time he wrote it. There has been a great reduction in the price of iron and steel all the world over during the last thirty or forty years; but this has been due to improved methods of production, and not in the least degree to legislation on the tariff or any other subject. These improvements have mainly originated in Great Britain. So far, moreover, from our tariff policy having encouraged improvements in the manufacture of iron and steel, there is specific evidence that it has retarded their invention or adoption; inasmuch as, by guaranteeing a certain wholly artificial price and profit, it has encouraged the building of furnaces in places where they never ought to have been located, and the continued use of antiquated and wasteful methods of production long after they have been discontinued in other countries. Mr. David A. Wells in his recent book, 'Economic Changes,' has presented indubitable evidence that the aggregate excess of cost of the iron and steel consumed in the United States from 1878 to 1887, above that paid in Great Britain during the same period for a like quantity, has, by reason of our tariff policy, been at least $560,000,000, or an average of $56,000,000 per annum.

Mr. A. B. Valentine, Vermont State Commissioner of Agricultural and Manufacturing Interests, is imitating the example of his fellow-Commissioner in New Hampshire, Mr. Bachelder, in making efforts to secure fuller statistics of agricultural depression in his State, with a view to encouraging immigration. He has just addressed to the "Listers" of every Vermont town a schedule of interrogatories to be filled out and returned to him "for the information of the Legislature, and perhaps for general distribution." These interrogatories relate to the number of abandoned farms in each town, their acreage, the nature of the soil, and the price for which they may be bought, with particulars regarding maple-sugar orchards and the number and condition of the farm buildings. The Commissioner desires like information of farms which are still occupied, but "which can be bought at about the same price as those unoccupied"—an expression very significant as showing that the extent of the agricultural depression is not exhibited by a list of abandoned farms. The questions "How many unoccupied school-houses now standing in your town?" and "How many school-houses once standing

have now gone to decay?" are full of further melancholy suggestion in a State which, Mr. Valentine says, "is entitled to be the leading Eastern State for the raising of horses, for the products of the dairy, and for general agricultural prosperity." The Commissioner thinks that "great benefit to the State must come from this movement," which he says is "to bring our waste places under cultivation, and refill our abandoned farm and school-houses." But supposing a new population to be brought in by immigration, is it to be expected, whencesoever it may come, that it will be shrewder, thriftier, more intelligent, more industrious, than the native New England population? No Vermonter will allow this. How, then, can the new people, under the same conditions, succeed, when the others failed?

There seems to be no doubt that the political overturning in Iowa will result in the repeal of the prohibitory law, and the substitution of a local-option and high-license system. The Democratic platform declared explicitly for such a system, with a minimum license fee of $500, and Gov.-elect Boies has taken occasion since the election to announce that he will approve no measure which falls short of this. The Legislature is so close that, if the Democrats vote solidly for the repeal of prohibition, less than half-a-dozen Republican votes will be needed, and a number of Republican politicians and editors have declared that they thought Republican members would be justified in bowing to the will of the people, which was so plainly expressed in the contest for Governor, and would have been manifested in the election of a Democratic Legislature also but for the Republican gerrymander of the State.

An amusing objection is made by the few opponents of the Australian ballot system who are now to be found that, in its recent trial in Massachusetts, more persons voted for the candidates for Governor than for other State officers. It is argued that they failed to vote for others either through ignorance or sheer laziness, contenting themselves with making a mark of approval opposite one name only. There is no evidence that there were more cases of this kind in the Massachusetts election than usual. In every election more votes are cast for the leading candidates on the ticket than for the others. Many persons do not vote for local candidates at all who vote invariably for candidates for the principal State and national offices. A ballot system which shall compel every voter to vote the entire ticket, or none at all, is yet to be devised. If it were to be put in operation, it would disfranchise thousands of voters in every election, especially in large cities, where it happens often that for a majority of the local offices not a candidate is named for whom an honest man can bring himself to vote.

There is a good deal of explaining and re-explaining on the part of Gov. Foraker and Mr. Halstead of the way they came to be so wofully deceived about that ballot-box paper that contained the forged signatures of Mr. Campbell, Senator Sherman, and Congressmen McKinley and Butterworth. It appears by the latest accounts that the paper was first put into the hands of Foraker, but that when he saw the signatures of his Republican friends, he was dumfounded. He saw that it was a petard and that somebody would be hoist by it. Not liking to be that person, he said: "I can't have anything to do with this, Halstead, but I will turn it over to you," which he forthwith did. Halstead took it and proceeded to experiment with it, with the results already known. The next time Gov. Foraker gets a queer-looking box which he suspects may contain dynamite, he will perhaps know enough to turn it over to the police instead of putting it in the hands of his next friend.

The Milwaukee *Sentinel* wishes to know our opinion of the following letter:

> My Dear Mr. Depew: I don't often ask for favors in the way of passes, but if I could get an annual pass, good until January 1, over the New York Central Railroad—and it would suit me better if I could get it from New York to Erie—in favor of Harry Butterfield, it would be a great advantage to me in my fight here in this district.
>
> Although you are a Republican and I am a Democrat, we do not differ much in regard to our views in connection with corporate property, and I may be able to serve these interests should I pull through again.
>
> I am sure the pass would not be used three times between now and January 1.
>
> Yours truly, W. L. Scott.
>
> Erie, Pa., September 25, 1886.

We have no hesitation in saying that it was a most improper letter for the Honble. William L. Scott to write. To its further question, "Is the Honble. William L. Scott a rascal?" we answer that the evidence before us is not sufficient to warrant a decided judgment on this point. This letter may have been the first offence, or it may have been the last such letter written by a man who is now deeply penitent. If we knew what the opinion of the *Sentinel* would be of a Republican who had written such a letter, it would help us greatly in making up our mind. But that the letter shows that there are elements of badness in Mr. Scott's nature is, we think, beyond question. Why a man should so debase himself for six railroad fares between New York and Erie we cannot conceive.

The Kentucky newspapers are preaching vigorously against street fighting on the text furnished by the Swope-Goodloe tragedy. The remedies proposed are various, the most futile being a more rigid enforcement of the law against carrying concealed weapons. The most promising is simply the improvement of Kentucky civilization, a task of considerable difficulty and not to be accomplished in one year or perhaps in ten. The honors paid to the two victims of the late butchery are undoubtedly having an effect on the rising generation, which will not soon wear itself out. The first step to be taken is some rearrangement of the virtues which will put physical courage lower down in the scale. In Kentucky, just now, it occupies the place assigned to it in all barbarous countries—that is, the very highest. There appears to be a presumption in the State against the possession of it by anybody, and this has to be overthrown by readiness to take offence and engage in street fights. It will only go down, as it has gone down in other countries, by the growth of habits of legality. If any one asks how these habits are to be cultivated, the answer is by every agency which multiplies laudable social interests, religion, literature, science and art, trade and commerce.

We have received from time to time copies of a map and diagram showing "why St. Louis is the place for the World's Fair of 1892." The map has three circles, each drawn upon a radius of 500 miles, having their centres at New York, Chicago, and St. Louis respectively, accompanied by tables showing the railroad mileage and the population embraced in each. Thus it appears that within the St. Louis circle there are 77,571 miles of railway and 30,584,905 inhabitants, in the Chicago circle 54,801 miles of railway and 27,430,779 inhabitants, while in the New York circle there are only 34,369 miles of railway and 24,385,707 inhabitants. This might be called "reasoning in a circle." But why, we venture to ask, should miles of railway count for more than miles of waterway? New York is so situated that one-half of her circle falls in the Atlantic Ocean, but the number of miles of highway there is sufficient to bring New York to the head of the list. Moreover, it is not mere population that ought to be counted, but population that is likely to attend a World's Fair. Who so likely to attend as those who are brought into its neighborhood in the course of their ordinary travel? Why not add to the New York list the people who go down to the sea in ships and do business in great waters—that is, all who embark here for Europe, the West Indies, Central America, and South America, and all who return hither? If these are reckoned at their true value for World's Fair purposes, New York will take the first place under the St. Louis schedule. If "reasoning in a circle" is applicable to the World's Fair, New York might draw one that would be very much to her advantage. By taking one with a radius of ten miles from the City Hall she could enclose three times the population that could be found within any ten-mile radius at Chicago or St. Louis. This kind of a circle would be very much to the purpose, because it is pretty certain that all the people within ten miles of the World's Fair, except children under four years of age, will visit it at least once, while the same cannot be said of all those within 500 miles.

It seems clear that things are growing better rather than worse in regard to the saloon evil in this city. The President of the Board of Excise is quoted as saying that New York now has fewer saloons, in proportion to the population, than any other city within seventy-five miles of Madison Square, and that this advantage is steadily increasing by reason of the rules regarding licenses now enforced. One of these rules is that no new license shall be granted until an old one has been revoked, and another that whenever an

application for renewal of license is not made within a certain time, the license becomes a dead letter, and it cannot be renewed, nor can another be issued in its place. By the adoption of these administrative methods the number of places where liquor is sold by the glass has been reduced from 8,219 on the 31st of December, 1887, to 7,310 on the 15th of July, 1889, and there has been a further reduction by 15 or 20 since the latter date. There has thus been a decided decrease in the number of saloons within the past two years, and a still more marked improvement in the ratio of saloons to population, inasmuch as the number of inhabitants has largely increased during this period.

The figures of the Manhattan Railway Company's annual report give ample explanation of the too obvious fact that its cars are uncomfortably crowded during the busy hours of morning and afternoon. The total number of passengers carried on the four lines during the year ending September 30 last was over 179,000,000, or, in round numbers, an average of 491,700 a day. This was about 8,000,000 more than the same lines carried during the preceding year. Of the 179,000,000, the Third Avenue Line carried nearly 70,000,000, or an average of about 192,000 a day; the Sixth Avenue Line carried over 58,000,000, or a daily average of about 160,000; the Second Avenue Line carried over 33,000,000, or a daily average of over 90,000; and the Ninth Avenue carried over 18,000,000, or a daily average of nearly 50,000. The increase has not been uniform on the four lines, the Third Avenue carrying 1,600,000 of it, or nearly 5,000 a day more than during the previous year; the Sixth Avenue carrying over 5,000,000 of it, or a daily increase of about 14,000; the Second Avenue carrying about 800,000 of it, or a daily increase of over 2,000; and the Ninth Avenue over 300,000, or a daily increase of about 850. It will be noticed that the Sixth Avenue Line has carried more of the increase than all the other lines combined, five of the eight millions of additional travellers going into the already crowded cars of that road. This is striking testimony to the really marvellous growth of the west side.

It is no slight feat in railroad management to "handle" nearly a half-million passengers a day without serious accident, but this is what the Manhattan Company has succeeded in doing. There have been from time to time slight accidents, but they are trivial when the enormous amount of the traffic is taken into account. That there is a vast amount of discomfort for thousands of people every morning and every evening is unquestioned, but this is due not to defects of management, but to the inadequacy of the system to meet the demands upon it. No management can accomplish the impossible, and it is the impossible which confronts the Manhattan Company every day of its existence. The overcrowding will be much worse this winter than it was last, and it was nearly intolerable then. There is no remedy but a new and comprehensive system of rapid transit, either above or below ground; and until the public gets that, it must make up its mind to find the work of getting from one end of the city to the other a steadily increasing hardship.

Tammany is throwing "Turner the Iceman" overboard as a candidate for the Sixth District in Congress, owing to the discovery that he was once a lieutenant in the Salvation Army. In what way this disqualifies him, from the Tammany point of view, is not very clear. But the fact that so little was known of the "Iceman's" antecedents, shows what pitfalls lie in Tammany's path in choosing candidates. The Convention is to meet to-morrow, and it is now said that the "Iceman" will be remorselessly set aside. His having once belonged to a religious organization of a somewhat uproarious character will more than counterbalance his poverty and his connection as a driver of a cart with the business of distributing ice, and, we may add, his unquestioned democracy of sentiment and opinion. In his contest with Mr. Lispenard Stewart in the Eighth District for the Senate, he pressed Stewart hard with the charge of keeping a man-servant and having white hands, displaying the horniness and discoloration of his own with much effect to the assembled multitude. Surely these things ought to wipe out the Salvation Army stain.

Sympathy is certainly due to Miss Caldwell, the American heiress who did not marry Prince Murat, if it be true that that pampered descendant of an innkeeper said, when taking leave of her: "Mademoiselle, the offer you make is too liberal for a butler, but not liberal enough for a husband." This was in reference to the sum of $10,000 per year for pocket money which Miss Caldwell proposed to allow him, in addition to the expenses of the household. Everybody must agree that $10,000 ought to suffice for a man whose board-bill, wines, opera-box, and horse-keeping are already provided for. He can hardly spend more than $2,000 on clothes in the present state of the fashions. He could not possibly smoke $500 worth of cigars in a year without undermining his health. The travelling expenses of an elderly married man ought not to exceed $1,500, in all conscience. This leaves $6,000 surplus, which would be a great temptation to gambling if the Prince were addicted to that vice, but we believe he is not. Probably Miss Caldwell, mindful of the inconveniences attending a surplus in her own country, thought she was doing the Prince a service in not exposing him to such embarrassments. However that may be, we must say that the young woman exhibited prudence beyond her years. The unfeeling remark attributed to the Prince about the butler and the husband deserves a rebuke from the American Minister at Paris.

Mr. J. E. C. Bodley, writing in the last *Nineteenth Century* an interesting and highly sympathetic article on "Roman Catholicism in America" and its great progress during the past century, says that if "the elder branches" of the Church are well advised, "they will look to America to provide the Church Universal with a ruler," or, in other words, will make a Pope out of one of the American Cardinals. This would be a break with the tradition of the last three centuries and a half, which prescribes that the Pope shall invariably be an Italian. It has been already weakened by the loss of Rome as the Papal Capital, but there is little doubt that if it were once broken, and all the Catholic nations admitted to competition for the tiara, the fixity of policy which now gives the Church so much of its dignity and authority would soon go. She would soon become as changeable as all other organizations, and, though change is a law of the universe, it is only the unchangeable which commands the highest reverence of the race. Every new Pope would have new views, and the College of Cardinals would became a "progressive institution."

Parnell has failed in his attempt to get his suit against the London *Times* pushed to trial now, the *Times* having early in the summer obtained a postponement on the ground that it would not be fair to try the case until the Parnell Commission had put in their report. This order, obtained from a judge in chambers, has been confirmed by the full bench, so that the case will now probably not be heard till March or April. Among the new things which it is said will appear on it, is Pigott's diary, which some of the Home-Rulers were shrewd enough to get hold of with some other papers as soon as the news of his suicide arrived. The Parnell Commission's report is said to be nearly ready, and if Sir Henry James's speech does not necessitate serious modifications in it, might now be sent in at almost any time. The interest in it will probably be greater than seemed likely after the Pigott exposure. It will undoubtedly furnish materials for a great many stump speeches on both sides. The impartiality and fulness with which the *Times* has reported the proceedings of the Commission is, under the circumstances, a remarkable example of "journalism" in the highest and widest sense of that much abused term. But it is not more remarkable than the fulness and impartiality with which the same paper reports the speeches of the leading English politicians on both sides all over the country. Not one word or phrase is omitted, no matter how hardly it may bear on the *Times* itself or on the cause with which it is associated. No ridicule or caricature or burlesque, and no attempt to belittle any meeting of its political opponents, are ever allowed to find its way into any report. Everything is described exactly as it occurs. The value of such a newspaper to a free and active political community can hardly be overestimated, in spite of the character of its editorial columns, in which one finds all the usual faults of partisan journalism. There its opponents are all the usual journalistic fools and knaves and humbugs and simpletons and demagogues and liars.

NEW SILVER PROJECTS.

SINCE the results of the November elections became known there have been outgivings at Washington from time to time that the Administration was about to astonish the country with a new silver policy. According to one set of authorities, the President was to recommend the calling of a new international conference to promote bimetallism. According to others, he was to recommend free coinage—*i. e.*, the silver standard in place of the gold standard. Still others believed that the suggestion would be made that Congress pass a declaratory resolution in favor of increasing the monthly coinage of silver dollars from $2,000,000 to $4,000,000 per month, although the discretion to do so is already lodged with the Secretary of the Treasury by law. Whatever the forthcoming proposal might be, it was suspected by the opposition that the main object would be to create a new issue in politics in order to divert public attention from the tariff, since upon the latter question the Republican party is somewhat divided against itself, and is manifestly losing ground.

The Washington correspondent of the *Evening Post* furnishes an explanation of the riddle which we think will prove to be the correct one. He tells us that Secretary Windom will ask Congress to authorize him to issue silver certificates in exchange for *bullion* deposited at any of the mints or assay offices, provided, however, that this bullion shall be the product of American mines exclusively, no Mexican stuff or German Treasury slops being allowed; that the coinage of bullion into dollars be left discretionary with the Secretary as to amount, so that it may be governed by the public demand for such dollars; that the certificates be issued on the basis of the *market value* of the bullion expressed in *dollars* at the time of issue, not in ounces, because the certificates are intended to be used as currency; and finally that the Secretary be authorized to sell silver as well as to buy, in order to give the Government some control over the market instead of being at the mercy of silver-producers and speculators.

This scheme, if correctly outlined, is the most fantastic of all the devices put forth for dealing with silver since the present Coinage Act went into effect. The objections to it are so numerous that they cannot be treated in a single article, but we may enumerate some of them. We now have six kinds of currency, not including the fractional currency or small change, viz., gold dollars, silver dollars, gold certificates, silver certificates, greenbacks, and national-bank notes. Three of these, the gold dollars, the silver dollars, and the greenbacks, are legal tender; the bank notes are legal tender when offered to national banks only; the certificates, being merely evidences of deposit like warehouse receipts, are not legal tender. No confusion has arisen from this multifariousness since the Government has kept all the different kinds of dollars at par with gold. It is now proposed to add a seventh to the list, and what is this seventh? It is another warehouse receipt, a receipt for bullion expressed in the form of dollars. Is it to be legal tender? Apparently not. It would hardly be thought proper to give a higher character to receipts for bullion than to receipts for coin. Is the Government to stand in the gap and protect the holders of these receipts in case silver declines in value after the receipts are issued? This would seem to be necessary, since otherwise the certificates would have no currency. They would not circulate. Nobody would accept them at par to-day unless he were assured that they would be at par to-morrow.

Other questions will suggest themselves to any instructed person who examines the project. What measures, for example, can be taken to insure that only American silver shall be taken on deposit? Silver is admitted, duty free, under our tariff. All silver is alike. The country is full of silver spoons and forks and household utensils, some of which are always going into the melting-pot. Is this kind of bullion to be taken on deposit? But the question of foremost importance relates to the legal-tender character of the certificates, and this looms up before the free-coinage party, whose Convention is to meet at St. Louis on the 26th inst. This party will not accept Mr. Windom's plan as a compromise. They are determined now to have all or nothing. But they cannot make an inch of progress unless they can have the character of legal tender impressed upon silver certificates, for if the American people are put to the necessity of lugging silver about in their clothes or in wagons, they will reject the silver standard with loathing just as soon as they have practical experience of it. What the legal difficulties are, and how great a transformation the "legal tendering" of certificates would produce in our system of Government, Mr. John Jay Knox gave us some idea of in his speech at the recent Bankers' Convention at Kansas City, which our readers will find reported in the *Independent* of last week.

MR. GIFFEN ON THE BIMETALLISTS.

MR. ROBERT GIFFEN, the English economist, has allowed himself for some years back—four or five certainly—to be quoted and vaunted by the bimetallists as a supporter of their theory. His patience or connivance, however, seems at last to be exhausted, and he has administered to them, in the last number of the *Nineteenth Century*, one of the severest rebuffs they have ever received. He says he has "been frequently claimed by the bimetallists as going a long way with them," "but in no respect," he says, "do I go any way with the bimetallists, not even the fraction of an inch; and apart from the interest of the present problem itself, I am the more ready to avail myself of the opportunity of discussing it because it enables me to explain how different is my own view of the relation between the quantity of money and prices from that quantitative theory of money which is the foundation of the bimetallic theory itself."

His difference with the bimetallists is briefly this: They assume that the monetary use of the precious metals is the preponderating use. He maintains that the non-monetary use is the preponderant use—that is, that the quantity of the precious metals used for other purposes than money, in the form of plate and ornaments and hoards, is greater than the amount used for coin; that the stock of gold in England alone used in plate, watches, and jewelry equals probably £50,000,000, while the stock of gold coin is about £60,000,000, and the stock of silver held in non-monetary uses is two or three times the amount held in money, which is about £20,000,000. He says the demand for gold for non-monetary uses is almost equal to the entire annual production, and the demand for silver for such uses about half the annual production. All such silver and gold is merchandise simply. Coin used for hoarding—that is, either as hidden treasure, or as the reserves of banks or the guarantee of paper money and checks—he treats as simple merchandise, or at all events as non-monetary metal. Token money, or quasi-token money, he also treats as non-monetary merchandise. He treats as money only that part of the precious metals which is actually in circulation for the daily buying and selling of the community, the demand for which is regulated by the habits and customs of the people, and in ordinary times varies very little, or is nearly a fixed quantity per head of population. He also treats as merchandise that portion of money used as a guarantee of wholesale payments between one country and another. The demands on this are demands for merchandise, and when more money is wanted they supply it in the ordinary way. In fact, the whole stock of gold is a reservoir from which the demand for money—always imperious—can at any time be satisfied.

His general conclusion is, therefore, that the ratio of exchange between gold and silver and other articles can only be fixed by the influences which affect those articles, and that, far from gold and silver fixing the price of other articles, it is the price of other articles which fixes the price of gold and silver. There is absolutely no difference in gold and silver from any other merchandise, and the theories which presuppose some special and peculiar difference, because the precious metals are used for money, are a "palpable delusion." He also denies that gold and silver are for monetary uses interchangeable, because they do not serve the same purpose. They perform different functions. One answers the needs of rich and advanced communities, the other that of poor and struggling ones; and on this point he turns against the bimetallists the experience of France—their great *cheval de bataille*.

He then goes on to examine how a "theory so baseless as the [bimetallic] theory came to be formed." "After so much bimetallic clamor as we have had, sober men," he says, "may be interested to see how overwhelming is the economic opinion against the bimetallist, and how little claim bimetallism has to be a competing monetary theory with monometallism." The origin of the

delusion he finds in Sismondi. No other economist of any standing has, until our time, given any countenance to it. Sismondi based it, he maintains, on a blunder as to the facts of French coinage, and "is no authority on this question, never having studied it at all." He winds up with the following very discouraging remarks on the labors of our bimetallist friends:

"Such as he is, however, Sismondi is not only the original but he is still the leading authority, as far as I know, for the bimetallic view, and I know of no fuller exposition of the theory of a fixed ratio, which appears simply to have grown like a fungus, assimilating any other theory which happened to be handy, as it has done with the quantitative theory of money. Not only are there no exponents of the bimetallic theory to set against the exponents of the monometallic theory, which has a greater array of economic authority on its side than almost any other conclusion which can be named, but there is no consistent exposition of principles and facts anywhere which can be appealed to at all by the bimetallic rank and file.

"There is nothing, therefore, in the genesis and development of the bimetallic theory of a pool of money and an interchange between gold and silver to entitle it to any respect. The theory is itself rotten throughout, as we have seen, and it is of bastard origin altogether. It is not in the line of economic tradition at all, paving the way for something better, as a first hypothesis to explain difficult facts, and useful, therefore, notwithstanding errors, in the historical study of the subject. It comes, on the contrary, after a true and sufficient theory had been expounded by the greatest authorities, on which the student must still fall back, passing over altogether the bimetallic theorists, who have only interrupted and obstructed the study."

A MORAL FROM LEXINGTON.

THE Lexington tragedy has attracted the attention of the whole country, and provoked earnest discussion from the entire press, North and South. This is natural and proper. When things have come to such a pass that the Kentucky member of the National Committee of one of the great parties slashes a fellow-partisan to death, and is killed himself, in a fight that grew out of an ordinary political difference, it is certainly time to stop and think.

The first idea that occurs to many people, especially if they belong to the school which believes in a paternal government, is that something ought to be done by law to stop such things. It is, of course, a shocking outrage that men of such standing in their community as Goodloe and Swope should go about day after day expecting to kill or be killed—or both, as actually happened. The State ought to prevent it, short-sighted people may naturally say; and, indeed, if they are extremely near-sighted, it would not be strange if they should say, that, if the State will not or cannot stop it, the Federal Government should interfere.

But a moment's reflection will show how absurd it is to think of putting a stop to such slaughters as the recent one at Lexington by passing a law. The State of Kentucky has long had a law designed to guard the sanctity of human life, which forbids the carrying of concealed weapons; but the existence of that law did not prevent Goodloe from carrying the knife which he expected to thrust into Swope's body, or Swope from carrying the pistol which he expected to discharge into Goodloe's body. Nor would the affixing of heavier penalties than now exist for the breaking of this law have deterred either Colonel from breaking it every day. The only thing which will prevent Col. Goodloe's successor as the Kentucky member of the Republican National Committee from carrying a knife and slashing a political rival to death, if what he considers to be the occasion arises, will be the development of a public sentiment which condemns a man for such conduct in Kentucky just as Senator Sherman would be condemned in Ohio, or Congressman Dingley in Maine, if either of them should kill a fellow-partisan for no better reason.

There is a moral in this Lexington incident for such men as Senator Sherman, Congressman Dingley, and the other Republicans who talk as though the troubles about elections in many Southern States could be removed by the simple device of passing a Federal election law. "Unless something can be done by Congress to secure fair elections," said Mr. Dingley's Lewiston *Journal* the other day, "we may as well make up our minds that, outside of Kentucky, Missouri, and Tennessee (where there was a large Union white element, and where the black vote is small), the South will be held solidly Democratic in all elections, even though the Republicans have large majorities of the votes." Many other Republican newspapers take the same view as the *Journal*, that the whole difficulty is only a matter of law—or, rather, of the absence of law—and that if Congress will only enact a statute, there will be no further trouble.

The difficulty about elections at the South grows out of the admission to the suffrage of a race only recently released from slavery and destitute of the qualifications required to participate in the Government. Of the many hundreds of thousands of negroes in the South suddenly invested with the ballot twenty years ago, there were probably not 5,000 who would have been entitled to vote under the educational qualification enforced in Massachusetts. Just before these ignorant Southern negroes were given the ballot by the legislation and constitutional amendments of the reconstruction era, Kansas—"bleeding Kansas"—voted (in 1867) nearly two to one against allowing the few stray colored men in that strongly Republican State to exercise the suffrage. It is the plain truth, which will be confessed by every candid man, that there is not a Republican State in the North which, if by some sudden transformation of its electorate it had suddenly come to have a majority of its voters composed of ignorant and often barbarous negroes, as occurred in South Carolina and Mississippi, would have allowed that majority to rule. What has happened in the South would have been inevitable under similar circumstances in the North.

Fair play for the negro will come in any State only when public sentiment demands and enforces it. Kansas again illustrates how slow is the growth of this sentiment under the most favorable circumstances. A good many negroes migrated from the lower Mississippi Valley into that State about ten years ago, and in 1882 the Republicans nominated a colored man for Auditor. There was no objection to him except his color, and yet his color alone cut down his vote in the State 13,122 below the white candidate for Secretary of State. Only two weeks ago, in the county which includes Topeka, the capital of the State, a colored candidate for County Clerk came within 314 votes of getting beaten simply because he was colored, while white candidates on the same ticket received majorities of 1,225 and more.

The situation in the South is only an aggravation of what still exists in Kansas. That State has advanced beyond the point it occupied twenty years ago, when its whites voted nearly two to one against allowing the few blacks to vote at all, but the black man, because of his color, still runs the risk of defeat when he is a candidate for office. Common sense should teach us to expect the prejudice against the negro to be infinitely stronger and far more lasting in the South than in Kansas. It is that prejudice which stands in the way of his having fair play in elections. He will enjoy equal rights only when the public sentiment of the South condemns that prejudice. Neither the legislative nor the executive department of the Federal Government, nor both combined, can remove that prejudice or prevent its effects at the polls, because any legislation which might be enacted would depend ultimately for its enforcement, as all laws everywhere depend, upon the public sentiment of the community, which is still governed by that prejudice.

Congressman Dingley might just as reasonably say that, unless Congress can do something to make men like Goodloe and Swope stop carrying concealed weapons, we must expect Lexington tragedies, as to say that, unless Congress can do something to secure fair elections at the South, we must expect intimidation and fraud. Lexington tragedies will cease when Kentucky sentiment condemns them—not before. Unfair elections at the South will cease when public sentiment in the South condemns them—not before. Kentucky must work out her own salvation in this matter of deadly encounters between "gentlemen"; and in like manner, as Mr. Dingley's Republican colleague, Mr. Butterworth, has well said of the election matter, "the South will have to work out its own salvation." In both cases there is likely to be great occasion for patience on the part of outsiders.

STREET CLEANING.

A MORNING contemporary, speculating on the reasons why the streets of New York are no better as regards cleanliness than those of Constantinople, says:

"Why is it that we are thus behind the capitals of Europe in our civic arrangements and our municipal administration? It is not that our people are less intelligent or energetic, less wealthy or less willing to contribute of their wealth for public purposes, than those of London, Paris, Berlin, and Vienna. In fact, they pay heavy taxes, and would certainly pay them ungrudgingly if they could see the results in solid public improvements. They would be willing to pay for fine docks, grand boulevards, good pavements, clean and well-lighted streets, handsome public buildings, and all the appointments of a first-class metropolitan city if they

had any assurance of getting them by a liberal and at the same time honest and economical expenditure of their money. There's the rub."

That is not "the rub" at all. The taxpayers of New York pay the bills that the tax-gatherer presents to them, because they must. They pay, not because they like to, but because their property will be levied on and sold if they do not pay. Whether these bills are for street cleaning, or for water supply, or for policemen's salaries, they do not particularly inquire. They know that the law possesses enginery to enforce payment, and therefore they pay. Some few make a practice of going before the Board of Estimate and Apportionment and giving their opinion on the subject of the specific needs of the city. Of this small number who show themselves once a year inside the rooms of the tax-levying authorities, not one in ten ever urges that more money should be spent for street cleaning. Nor are they at all concerned lest the street-cleaning money should not be honestly expended. Nine out of ten of them are large taxpayers, who are only concerned to keep the total appropriation down to the smallest aggregate sum. A few who are moved by public spirit ask for larger appropriations for school-buildings or charities or some specific purpose in which they feel an interest.

The real "rub" is that the people of New York do not appreciate clean streets until they have made a journey to Europe and seen the difference between clean streets and dirty ones. They go away from home thinking that New York is about as fine a thing in the way of a modern city as can be found anywhere. The average condition of its streets is a subject that is hardly ever in their minds, they are so used to filth under foot. After making a tour of Europe, longer or shorter, their first exclamation after landing at home is, "How confoundedly dirty the streets are!" Although they may not have noticed the streets of London, Paris, Berlin, or the lesser towns at all during their absence, yet the contrast comes upon them suddenly when they disembark at home, and they then perceive that they have been made acquainted in the Old World with one mark and achievement of civilization that they had never felt the want of, namely, clean streets. Then they feel ashamed of themselves, of their city, and of their country for a few weeks, and perhaps they write a letter to the newspapers. But soon they get immersed in their business or their pleasures, and gradually the fit passes off. They become again used to mud, torn newspapers, telegraph tape, horse droppings, ashes, and garbage. These things become part of their daily life, like the weather, and they think no more about them until they go abroad again. The one thing they never think of at all is what the *Times* calls "the rub." They never say to themselves, "We would go in for clean streets if we were not afraid that the politicians would steal the money." That idea applies to every kind of improvement and every kind of expenditure, but not to street cleaning more than to other things.

No, the real reason why we do not have clean streets is that, upon the whole, we do not care for them. We can have what we do care for, beyond a doubt. The politicians will give us anything that we really want. Tammany Hall would as soon spend money for street cleaning as for any other purpose, and would not steal or waste any larger percentage of it than on school-buildings, or armories, or other municipal undertakings. Whenever the citizens rise up and say, in thunder tones, "We demand better streets," all the politicians on the Island of Manhattan—all who are in office or expect soon to be—will join in the chorus. They will have the same fits of cleanliness that the majority have. Brooms, mops, shovels, buckets, sapolio, pearline will be the insignia of Tammany Hall, the County Democracy, and the Republican Machine whenever these things become popular. And the stealings and squanderings, we repeat, will not be more in proportion than in any other municipal expenditure.

Mr. Andrew D. White in his comparison between New York and Constantinople has exaggerated nothing. He might have gone further into the Orient to find a parallel to the habitual condition of our side streets. He might have taken Smyrna or Bagdad for example without doing any violence to the truth. Except Broadway and Fifth Avenue and the cross streets in the wealthy quarter where private enterprise supplements the efforts of the street-cleaning forces, the streets are grimy and unsightly in dry weather, inky and pasty in wet weather, and unwholesome in all weathers, just like the alleys of Turkey, Persia, and Morocco. It is certainly not more difficult to keep the east side of New York in good condition than the East End of London. Yet the streets of the East End of London are kept clean. Whatever may be said of the interiors of the houses, the thoroughfares are always fit for a civilized people to walk or drive in. And yet London has more dirt to contend with than we have, because she uses soft coal, and has a moist climate, and she uses less water per capita. The combination of soot and fog peculiar to that city adds much to the difficulty of keeping the streets clean, yet the difficulty is overcome not merely in the aristocratic quarters, but in all the quarters of that mighty metropolis. The cities of the continent are even better swept and garnished than London.

The vice of bad streets is an American vice. Some of our large cities are more tidy than New York, but some are worse. Boston is an example—by no means striking, however—of the former and Chicago of the latter. Taking the country as a whole, dirty streets are the rule and clean ones the exception. We had best acknowledge the truth that we are lacking or lagging in civilization. Our want of appreciation of street cleanliness is akin to our want of appreciation of the fine arts. As we discourage systematically the importation of pictures and statuary by onerous taxes, imposing, for example, a fine of $15,000 for the introduction of a portrait by Rembrandt and $40,000 for the "Angelus," not for any purpose of protection, but in sheer barbaric spite, it is no wonder that the same animus should make little account of muddy boots, and should look upon clean ones as a reproach to democracy.

A REMARKABLE JUDICIAL DECISION.

THE recent decision of Justice Williams, at Utica, in the case of Peters vs. Borst, concerning the ownership of a star-catalogue, is of as much interest to the public at large as to professional astronomers. It will surprise every one to learn that the results of more than three years' assiduous labor of a brother and two sisters, performed "for love" in the privacy of the home circle, may become the property of another party without any compensation whatever. Still more surprising must it be to learn that, in addition to supplying the results of their work gratuitously, they may be compelled to pay the claimant a round sum in cash as interest on its estimated value from the time that they refused to surrender it to him.

The circumstances under which this curious legal decision has been rendered are worth recounting. The plaintiff is an eminent astronomer, a professor in Hamilton College, and the director of its observatory. The defendant was an assistant in the observatory, whose salary was paid by a benefactor of the College. The plaintiff, like many other working astronomers, sorely felt the need that innumerable observations of stars scattered through astronomical publications of every kind should be collected and published in the form of a single convenient catalogue. He had for many years been in the habit of collecting the books necessary for this work, and from time to time had made calculations which might ultimately prove useful in forming such a catalogue. But he found the work so far beyond his power that he does not ever seem to have entertained the idea of bringing it to a conclusion. When the defendant became his assistant, he suggested to him that it would be a creditable thing for a young astronomer like himself to take up this work and carry it through. The defendant accepted the advice, took the papers which his chief had already prepared, and devoted to the work all the time he could spare from his regular duties in the observatory.

What had already been done was so desultory that he found it advantageous to begin the work all over from the beginning. He was aided in the early stages of the work by the counsel and suggestions of the plaintiff, but this aid became unnecessary after he fully understood the subject. At the end of some two or three years the labor of collating and reducing the great mass of observations was found to be so heavy that the chief astronomer, who had passed his seventieth year, might not live to see its completion. His assistant then informed him that his two sisters could render efficient help in carrying on the work and enable him to bring it to a more rapid completion. He took the papers home, and, by the combined labors of the three through some two years more, the work was nearly ready for publication about the beginning of 1888.

So far all had been done without any well-defined agreement as to the ownership or respective rights in it of the chief and his assistant; or, at least, the parties were not agreed as to what the understanding was. The defendant thought it now time to have the understanding placed beyond doubt, and handed his chief a copy of his proposed title-page, stating the respective shares of the two parties in the work. The plaintiff hastily read the paper, threw it into the fire, turned to the defendant, and said, "Bring me all that manuscript." The defendant refused. The plaintiff then brought a suit in replevin, claiming possession of the catalogue as his own personal property.

On the trial the plaintiff adduced no expert evidence except his own to show that the supervision which he claimed to have exercised over the work in its earlier stages was of any importance, or that he had done anything to entitle himself to the right of sole ownership under the custom of scientific men. What evidence he did bring forward was mainly intended to show that the defendant had, in letters and conversation, spoken of the work as belonging to the plaintiff, and that the latter had himself always so believed. He denied ever having agreed that the catalogue should be published as the work of the defendant, while the latter testified that he had so agreed, constructively at least, in desiring him to take up the work without any other compensation than the credit and reputation he would thereby secure. The defendant also called to the stand two of the eminent astronomers of the country, Profs. Asaph Hall of the Naval Observatory and Lewis Boss of the Dudley Observatory, who both testified to the great value of the service rendered by the sisters in computing the "precessions" of some 35,000 stars. It was also shown that, by the industry of the compilers, the catalogue had doubled in size without the plaintiff seeing it or asking to see it.

The Court finds for the plaintiff, and not only awards him the entire catalogue without conditions, but some $240 in money as damages for not receiving it at the time the suit was commenced. In reviewing the evidence, the Judge finds that the plaintiff conceived the idea of the catalogue and gave it the great benefit of his "nice discrimination." He construes evidence in a way which, we venture to say, has no parallel in a court of law. For example, it is known to most astronomers that Prof. Peters was for some time engaged in making researches in the older libraries of Europe upon the celebrated star-catalogue of Ptolemy, prepared 1,700 years ago, and found in the 'Almagest.' The Court quotes from a letter written by the Professor from Paris about his rummaging in the National Library for material for this work on Ptolemy's catalogue, to show how industriously he was engaged on the catalogue now in court. A conversation in which the defendant had spoken of a catalogue of stars as Prof. Peters's great life-work is quoted against him, in the face of his statement that he was referring to an entirely different work called a "zone-catalogue," on which Prof. Peters was well known to be engaged. The testimony of Prof. Hall is discredited, and that of Prof. Boss entirely ignored.

Great stress is laid by the Court upon the merit of the plaintiff in conceiving the idea of the catalogue, selecting the sources from which the stars were to be extracted, and exercising a "nice discrimination" in making the selection of stars to be catalogued. The fact that more than half the work was done without the plaintiff's knowledge, instead of leading the Judge to the common-sense conclusion that the plaintiff's help was unimportant, only gives him occasion to lecture the defendant on his bad faith in carefully concealing the magnitude of the work from his superior. To the reader who, from unfamiliarity with the subject, may not know how much credit should be given for the conception of such a catalogue, we may say that its merit is neither greater nor less than that of conceiving the idea of a railroad between two neighboring cities. We may carry the parallel yet further, and make an apt comparison with an imaginary case. X is a merchant who not only conceives the idea of the railroad, but takes active measures to interest capitalists in its construction. He tells them where they can find maps of the country, shows them statistics of manufactures and trade at each terminus, induces them to start the work, points out to the engineers the most eligible route. When the road is done, he claims the entire ownership, and sues for it. The court finds that the road would not have been built but for the plaintiff, quotes letters from the defendants to him in which they call it "your road" to show that they recognized it as his, and awards him the entire stock of the concern. Of course, the defendant has appealed from the decision.

THE COST OF A SMALL MUSEUM.

More than once we have endeavored to impress upon our readers the importance of collections of casts and other art reproductions as factors in popular education. It is only through these that the body of our people can ever hope to become familiar with the great masterpieces of European galleries, which have had so much effect upon the taste of the people among whom they exist, and might do a similar good work in this country were they only brought within reach. Doubtless there are many who join us in the wish that not only every large, but every small, city might have its gallery of reproductions as well as its public library—a gallery in which children could grow up familiar with the noblest productions of Greece and Italy, in which the laborer could pass some of his holiday hours, and in which the mechanic could find the stimulus to make his own work beautiful as well as good. But the principal reason why such collections are not more numerous is probably that people have an exaggerated idea of their cost, and, among those who might best afford this, there are doubts as to whether an undertaking of the kind would be appreciated in any but the large cities.

Thanks to the liberality of Mr. W. A. Slater, the experiment has been tried in Norwich, Conn., and the results of the first year of the Slater Memorial Museum in attracting and holding popular interest have far exceeded the anticipations of its founder and his advisers. As it has been Mr. Slater's desire that the museum established by him should serve not only to educate his townsmen, but also to stimulate others who had the means to follow his example in other parts of the country, he has given us permission to make public the cost of his collections, which we doubt not will be a revelation to many. In August of last year we gave a long description of the Slater Memorial Museum, not then quite completed, from which it was evident that within the lines laid down by Mr. Slater, by which it was determined that the collection should contain only reproductions and no original works, there were no restrictions as to expense. The works selected were to be the best of their kind, and were to be set up and arranged in the most effective manner possible. The number of objects was to be limited only by the size of the building.

The useful little catalogue of the casts in the Museum, prepared by Mr. H. W. Kent, the curator, to whom we are indebted for the figures we shall quote, shows 124 numbers in the Greek and Roman section, and 103 in that of the Renaissance. Among these are some of the largest casts made, such as the selection from the Pergamon reliefs, the Nike of Samothrace, and the Font of Siena. They were all made expressly for the Museum, and imported from London, Paris, Berlin, Munich, Florence, Rome, Naples, and Athens. In addition to these there is a complete collection of the British Museum electrotypes of Greek coins, handsomely mounted, and the nucleus of a collection of photographs, about 600, including the best plates of Braun, Naya, Brogi, and other celebrated photographers. Most of the statues are mounted on revolving pedestals; two hundred and fifty of the photographs are exhibited in individual frames, the backs of which are movable, that the exhibition may be varied as often as desired; and, owing to the lack of wall-space, draperies have been hung extensively throughout the hall, the material of which is heavy raw silk. We mention these facts only to show that economy was not a consideration in the execution of the Museum, and believe that our readers will be the more surprised to learn that its *gross* cost to Mr. Slater—excluding, of course, the building itself—was exactly $27,112.97. Is there any city or college in the Union in which this sum could not be raised for a similar purpose?

The cost of the building we do not give, because it would be useful as showing how much rather than how little could be put into such an edifice. It contains, besides the museum proper, the floor-space of which amounts to about 10,000 square feet, a lecture-hall with a seating capacity of about 1,200, a library, and four large class-rooms, which, if the intentions of the founder are fully carried out, will be used for practical instruction in the fine arts. Desirable as all these rooms are in a building of the kind, the only one which seems to us absolutely necessary is the lecture-hall. To open a gallery like this to the public, and then leave people to float about in it aimlessly, without a notion of its meaning or its purpose, is to do but half the work. Either regular courses of instruction or occasional lectures upon topics connected with the theory or history of art are necessary in order to make the museum anything more than a collection of curiosities to the uninitiated, and such lectures are given during the winter at the Slater Museum.

Of the amount just quoted the principal item was naturally for casts. The cost of these, including packing and transportation, but not setting up in the Museum, was $13,968.68, making an average of a trifle less than $62 for each number in the catalogue. We ought to say

here, however, that an average is a dangerous guide in a matter of this kind, owing to the enormous difference in the size and price of casts, as well as in the distance from which they come. Obviously, too, the cost of packing and importing a few casts would be proportionately much greater than in a large order.

The casts once received, they must be put together, sometimes repaired, and finally set up. Pedestals must be built for the statues, wall spaces prepared for the reliefs. Therefore a small force of skilled plaster-workers and carpenters is necessary. In Norwich most of the plaster-work was done by two men, a third being added occasionally, and the aggregate of this item in the expenses was $1,626.75. With regard to the carpentry, more work of this kind than would usually be necessary was required by the fact that a number of changes had to be made in order to adapt the hall to its use as a museum of art, its destination not having been determined when the building itself was completed. Consequently, some of the $4,690 paid for material and labor in this department would form a part of the building expenses in a structure designed especially for the purpose.

These were the principal expenses in the preparation of the Slater Museum. In photographs about $800 has been spent thus far, the electrotype coins cost something less than $750, and the balance of the total quoted was made up by such incidentals as the draperies and upholstering, photograph frames, the designer's commission, and petty expenses.

Turning now for a moment to the other side of the balance sheet, we shall try to answer the question, "Does it pay" to undertake a work of this kind, except in our large and central cities? If to the founder or founders of such an institution it be sufficient recompense for their liberality to see their gift used, appreciated, and enjoyed by people of all classes, the brief experience of the Slater Memorial Museum answers the question with a strong affirmative. The Museum was dedicated on November 22 of last year. Since then it has been open regularly ten hours a week, divided among three days, and at other times to students and visitors from a distance. It is always free. There being no automatic machine for registering the admissions, Mr. Kent has requested visitors to write their names in a book provided for the purpose. The number who do so is naturally considerably less than the total number of visitors, particularly when the Museum is crowded, yet up to date the books show more than 10,000 names. The average attendance per week thus recorded, from the time of opening to July 1, was 283, the best month being December, in which 2,163 names were entered, the poorest June, with a total of 483. Especially gratifying has been the attendance on holidays, which shows that the interest in the Museum is by no means confined to those who have plenty of leisure. On Thanksgiving Day 800 names were registered, Christmas 932, New Year's 732, Decoration Day 850. For the benefit of the mill-operatives and other laborers who form the largest portion of the population of Norwich and the adjoining towns, to whom the Museum might do a world of good, we sincerely hope the day is not far distant when the building may be open at least a couple of hours each Sunday. The experience of the Boston Museum of Fine Arts in Sunday opening has been an unqualified success, and we wish that Norwich as well as our own city might profit by it. In Boston, we are told, the average number of admissions during the Sunday hours has reached as high as 1,000 per hour, and of these probably four-fifths are common workmen with their families.

These facts and figures regarding the Slater Memorial Museum are valuable only so far as they go. They show that the first problem of a museum—to interest the public at large—has there been solved successfully. More than that is not to be looked for yet. The ultimate good which the institution will accomplish can be but imperfectly manifested in one generation. It is from the children now growing up, from their children and their children's children, that the deeper results are to be expected. As the beginning has been made, we can afford to wait for the rest, which will come in good time. The lesson to be learned from it now is, that such collections are needed, that they are appreciated not by a few but by many, and that, so far as the cost is concerned, they are within the reach of every well-settled community.

A GOOD FARM FOR NOTHING.

WASHINGTON, November 11, 1889.

IN a late number of the *Nation* (No. 1270) appears an advertisement of a Massachusetts farm, with the suggestive editorial comment that, as the building and fences are worth as much as the price asked for the farm, the land really "must have no salable value." Inasmuch as neither the editor nor readers of the *Nation* know anything about the farm in question, I will now supply a specific illustration of the market value of the better class of Massachusetts farms, giving names and places.

There is now a farm for sale—the Foster farm on the Cold Spring road, a mile distant from the most beautiful village in New England, Williamstown, Berkshire County, and within two miles of the station, at which twenty passenger trains a day stop. To the station runs one of the best of Berkshire gravel roads, and upon an almost continuous down grade. The farm has, I believe, twice taken a premium as the best managed farm in the town, and the owner for more than twenty years has been "putting on more than he has taken off"; that is to say, he has sold butter and bought grain. The price of all agricultural products in the neighboring villages of Williamstown and North Adams are about the same as in the towns of Albany and Troy, excepting hay, butter, and mutton. The farm contains 106 acres, and has upon it the well-known New England farmhouse (white with green blinds, and two large maple trees before the door), *and ten farm buildings.* All of these buildings have been kept painted, and are in good condition. The farm is well fenced, chiefly post and board.

This farmhouse, these ten farm buildings and the fences, probably could not be replaced for $10,000. In their present condition I call them fairly worth $6,500. Yet this farm, to which a good farmer has given a lifetime of intelligent care, has been offered to me, and can be bought by anybody, for that amount. In other words, if you will pay the owner what the buildings and fences are reasonably worth, or two-thirds of what they actually cost, he will give you 106 acres of good land, in high cultivation, *for nothing.*

If you ask my friend Mr. Foster why it is that he wishes to sell his farm at so low a price, he will tell you that it is because he can't work himself as he once did, and can't get "good help." If you ask a young man of the neighborhood why he does not buy the farm on mortgage, as Mr. Foster did, and pay the mortgage off by hard work and thrifty ways, and make for himself a comfortable home as his fathers did, he will tell you that he can do better. If you tell him that he should adapt his agriculture to the changed circumstances of the time; that he has all the advantages that his father had and a thousand more besides; that the soil is actually more fertile, the stones picked up, the stumps dug out, the roads built; that statistics show that certain products bring better prices than they did a hundred years ago, while clothing and farm implements cost less; that two men with a mower and tedder can harvest more hay in one day than four men with scythe and pitchfork could formerly do in two, he will blandly reiterate that "farming pays worst of all," and that he "can do better."

Yet, during this same period in which Mr. Foster has been trying to give away his agricultural land, there has been an "extraordinary boom in real estate" in Williamstown, and land within half a mile of the village, commanding fine views, has quadrupled in value. Tested by actual cash purchases, the encroaching cottager has paid $4,000 for ten acres without a building on them. Midway between Williamstown and Brattleboro', a few years ago, I saw on the summit of a hill against the evening sky what seemed a large cathedral. Driving thither, I found a huge, old-time two-story church, a large academy (which had blended in the distance with the church), a village with a broad street, perhaps 150 feet in width. I drove on and found that the church was abandoned, the academy dismantled, the village deserted. The farmer who owned the farm on the north of the village lived on one side of the broad street, and he who owned the farm on the south lived on the other, and they were the only inhabitants. All of the others had gone—to the manufacturing villages, to the great cities, to the West. Here had been industry, education, religion, comfort, and contentment, but there remained only a drear solitude of forsaken homes.

And here I have placed before you the three distinctive and essential facts of this New England problem—the farm of Mr. Foster, the boom in Williamstown, the deserted village in Vermont.

The deserted village was the old-fashioned "Centre" of the town; on a high hill, remote from railways and mill-streams, unknown to summer boarders—an agricultural village, dependent upon the agriculture around it and from which it sprang. The causes which operated upon Mr. Foster's farm and the surrounding agriculture struck it, and indeed seemed to strike it sooner, and a more effective blow.

The ruin of New England agriculture is due to a combination of causes, the chief of which are these:

I. For many years the Government has been paying the most extraordinary bounty that the world ever knew for agricultural products. It has not paid this bounty upon agriculture to farmers in general, but only to those who would live in the West, and largely, if not chiefly, to the peasants and peasant-farmers and younger sons of Europe. To them it has said in substance, "Come over here and undersell American farmers east of the Alleghanies, and we will give you for nothing citizenship and a farm. Land which in your own country is a monopoly, the property of the great, beyond the hope of the poor, shall be yours without price, without rent, in fee simple absolute."

At the same time the Government has likewise been giving another set of bounties in land and guaranteed bonds to such railroads as should carry the immigrant farmers to their free farms without their being subjected to the dangers and delays and hardships which beset

the "first settlers" of the olden time, and which should bring their agricultural products to the overstocked markets of the world for as nearly nothing as possible, and certainly at freight rates lower than the world ever dreamed of.

Accordingly, under this artificial bounty system, we have seen what was inevitable and what might have been expected, viz., that the most industrious and frugal class in the country, the farmers east of the Alleghanies, is the only class which has not shared in the general prosperity. Instead of letting our agriculture grow by natural causes — hard work, improved methods, better culture, and slowly extending area—we have seized the new land which properly belongs to the next century, and have squandered the riches which nature garnered for mankind with a waste and prodigality for which future generations, if they have any sense, may well curse their fathers.

It should also be noted that these causes have been so overwhelming that their effects have not stopped at the seaboard, and that the term "east of the Alleghanies" really extends to the English Channel. The ruin has not been as complete in England as in New England, and the chances of adaptation to the new order of things are there incomparably better; but, nevertheless, during the twenty years between our civil war, 1866, and the Queen's jubilee, 1886, one-seventh of the arable lands of the British Isles was abandoned to "permanent pasture."

Furthermore, it should be noted that no inconsiderable portion of the public lands given away under homestead and military bounty acts soon found their way to the possession of great landed proprietors, such as we have blamed the crowned heads of Europe for establishing or tolerating; and that the bounties given to Western railroads were speedily transmuted into bonds and mortgages and railroad stocks, which with inconceivable rapidity passed largely into the hands of a few men, and form the staple of the vast fortunes that alarm Mr. Shearman. If about the time the Homestead and Oregon Donation Acts were passed some one had asked, "What classes as classes will be directly and chiefly benefited by our public-land policy?" the true answer would have been: first, the peasants and peasant farmers and younger sons of Europe; second, the great landed proprietors and millionaires of America; third, one Brigham Young and the dignitaries and members of the Mormon Church.

It may be asked whether the sons of New England farmers have not as individuals shared in the benefits of the land system; whether they have not had easier times, worn better clothes, and smoked cigars instead of pipes. To this it must be answered that we are now considering New England and her agricultural conditions. What we do know is, first, that the old nursery of good and great and useful men is, under existing causes, being destroyed, or, to quote from the columns of the *Nation* (No. 1157, p. 176), "The forest, like a rising tide, encroaches upon the former fields; population in the mountain towns diminishes; taxes increase; civilization recedes; the Celtic immigrant succeeds the Pilgrim stock"; second, that there is no rural New England in the West rearing a posterity worthy of the old stock; that the youth who was starved out of his birthplace in consequence of the land policy of the Government, has not been replaced there by a wiser or a better man, and that, in his new habitat, material wealth has been the only gain. The admonition to his fathers was, "*Go forth for freedom and for conscience' sake*"; to him, "*Go West, young man, go West, to make money to buy land to grow corn to fat hogs to make more money to buy more land to grow more corn to fat more hogs.*"

II. The second cause which has operated upon the New England farmer is also of Governmental origin. During the greater part of the period in which the Government has been giving bounties in land to his rivals in agriculture, it has been giving bounties in duties to his competitors in the labor market. On the one hand, the tariff brought a market near to the farmer, which is an advantage not to be lightly estimated; and on the other, it has augmented the cost of everything he buys. Thirty years ago, when this lay before us an untried experiment in our political economy, it was a fair question for political discussion whether the augmented price of his crops would exceed the augmented cost of his purchases. But now there is nothing to discuss—the experiment has been tried, the result reached; and we have, as the residuum, the ruined New England farmer and the abandoned New England farm. In the discussion of the subject, both sides overlooked what has proved to be the most important factor of the case, viz., that the tariff brought to the farmer's very door a competitor, strong in capital, in credit, and in Government subsidies, who could and would outbid him until he should take away from him his best hands, his poorest hands, and ultimately in many cases his sons and daughters. It is a queer way to help a man, to take his hands away from him in harvest. The farmer fought bravely against the overpowering odds as long as health and strength lasted; but when old age or sickness came, he had to surrender and throw the "old place" upon a declining market in which there were many sellers and few buyers. Wherever you find an old man, there you find a farm for sale. Within doors the struggle and the agony took another form, and the residuum *there* is, that the largest proportion of insane women in New England is of farmers' wives. In a word, the Government has been giving the bounty to the wrong man —the stronger competitor.

It is a fine thing to tell to farmers that machinery is doing the work of men; that a manure-cart with a boy to drive it will spread more manure than four able-bodied men. But the cart does not load itself, and the manure must still be forked on to it by human toil. It is a fine thing to tell them that they should adapt their methods to the new order of things; that ensilage can be put away for fifty cents a ton, green, the equivalent of $1.50 a ton for cured hay. But to put ensilage away at fifty cents a ton requires a man at the engine, two or three men at the cutter, one or two in the pit, from three to five teams drawing the corn from the field—in short, ten or a dozen men. The truth is, that the new order of things often requires more hands than the old, and is better adapted to the rich than the poor.

III. The third cause which has operated upon Eastern agriculture is in one sense the converse of the preceding ones, for *they* sprang from the interference of the general Government, while this is attributable to the inaction of the State legislatures. The commercial rivalry of the great seaboard cities, and of the great "trunk lines" which run to them, demanded that as much Western produce as possible be brought into each. The railroads in Massachusetts, New York, Pennsylvania, and Maryland were chartered to promote the general welfare of the people of those States, but their legislatures have been so completely under the influence of Boston, New York, Philadelphia, and Baltimore, and of the railroad corporations, that their farmers have been practically taxed through discriminating freights to carry other people's grain to market at rates which have more than once been below cost. The commissioners charged with investigating this matter in Vermont and Massachusetts, I believe, intend to report at a future day on the causes of the decline. I will give them a couple of facts which may assist them in coming to one conclusion.

A few summers ago two car-loads of butter came into Boston on the same day. The one came from Vermont in a common car, was spoiled by the heat and sold as grease. The other came from Iowa in a refrigerator car, arrived in prime condition, and commanded the highest market price. *The freight on these two loads of butter was the same per pound.*

A few years ago six farmers in the rich butter region of Orange County, N. Y., established a dairy of about four hundred Jerseys near West Point, Nebraska, for the purpose of supplying some of the most fashionable hotels in the city of New York with table butter. The price paid for the butter is, or was, forty-five cents per pound; it came in a refrigerator car, and the cost of transportation, including cartage, from the dairy in Nebraska to the hotel in New York was *five cents a pound.*

IV., V. The fourth and fifth are natural causes which, unhappily, can never be averted. Nature has made the New England farm a small farm, and its owner is confronted by a winter seven months in length. That is to say, the hillsides, and narrow valleys, and broken table-lands are not adaptable to "wholesale farming," and the man who raises cattle must house and feed his stock through seven long months, or, if he changes to sheep, ordinarily for six. In all parts of the country some of these five causes are of course more or less operative; but there is no part of the country, save New England, where they form so complete and relentless a combination. It is the extraordinary combination which has produced the extraordinary and long to be regretted result.

What, then, shall the New England farmer do? He cannot compete in cereals with the West; in fruit and vegetables with Delaware and New Jersey; in cattle with men whose herds run summer and winter on the free ranches of the Government; in wool with the unhoused flocks of Texas and California, of New Zealand and Australia; in butter with Nebraska and Iowa; in dressed beef with Armour's syndicate; in the labor market with the local manufacturers. What, then, shall he do? The gentlemen who have kindly advised him have in the end come down to saying that he must work as early and late as his fathers did, and live on as little as the Irish or the French. He thanks them for their good advice, but answers that he can do better. And so he can. His industry, probity, intelligence, good sense, and general handiness are in demand everywhere. The loss is not his, but ours.

There are tracts, indeed, in New England, such as the "White Mountain Region" and the "Berkshire Hills," where almost every farm can be made to furnish a picturesque summer home for the city refugee, and there a healthy, natural, and profitable business can be done. It is also among the possibilities that new remedies now unthought of may supply the want. Our indigenous animals which can alone brave the New England winter may be turned to account, such as the half-bred buffalo, whose robe is now worth $50, or the deer of the Adirondacks. If fifty farms were

thrown into one ring-fence and hounds and hunters and wolves excluded, I see no reason why deer should not become semi-domesticated like those in English deer parks, and nearly as prolific as sheep. Subsisting partly in the woods where sheep will not go, and thus upon lands which are now entirely wasted, and helped through the winters with scattered stacks of mountain hay, they may yet be found a source of considerable wealth. But I make these suggestions not in an abounding faith so much as in the hope that some wealthy and patriotic New Englander may come forward and try the costly experiment.

It is very sad that the highest, purest, noblest agricultural population that this world has ever possessed, is being dissipated, and, as a race, merged and lost. As a race it has been rich beyond comparison in human products—in clergymen, soldiers, statesmen, scholars, poets, merchants, inventors, and men who believe in honesty and work. Such statesmen as Webster, such college presidents, past and present, as Mark Hopkins, Eliphalet Nott, and Stanley Hall, such poets as Whittier, such generals as Lyon, such merchants as Edwin D. Morgan, have been born and bred on these small farms, which to-day can hardly be given away. Worthless though they be, according to our material standard, they have done more for the elevation of American thought and character and intelligence and happiness than all the railroads and millionaires and stocks and securities and corn and hogs that the great cities and the great West contain.

Yet the last act of the New England farmer is not unworthy of his sturdy and upright lineage. He faces the situation, and closes his accounts and pays his debts like a man; it is the business which has become bankrupt, not he. When we remember how hard it is for any of us to give up an undertaking on which we have spent time and money, or to throw away a foolish purchase, instead of storing it in the attic; and when we consider how the poor of this world cling to their poverty, how the peasants and crofters of other races obstinately hold fast to their small holdings, and divide and subdivide their insufficient farms only to entail intenser misery on their descendants, we must acknowledge that there is something grand in the farmer of these mountain towns, who, rising to the heroic treatment of his case, turns away from the fields and fences upon which he has toiled through the better part of his life, and, by a decree as unalterable as the laws of the Medes and Persians, writes upon the closed door, ABANDONED.

CHARLES C. NOTT.

THE VULGARIZATION OF THE ALPS.

TOBLACH, September, 1889.

IT is now just four centuries since the voyages of the Portuguese in the South Atlantic and of Columbus in the North Atlantic Ocean began to lift the veil of darkness which had hung round the small civilized world of antiquity and the Middle Ages. Since then, and especially of late years, exploration has gone on so fast that now, excluding the uninhabitable ice tracts of the two Poles, there remain scarcely any spots on the surface of our planet unvisited and undescribed by travellers. It is, in fact, only in some few regions in Central Africa, and still fewer in Central Asia, that imagination finds any field in which to disport itself or the spirit of adventure any scope for the honors of discovery. Merv, for instance, which fifteen years ago was known only by faint reports, since no one could venture among its savage inhabitants, is now a station on a Russian railway; and a British company is preparing to colonize the cool uplands of Kilimanjaro and Kenia in tropical East Africa.

The same process of increasing the facilities of cheap access all over the world has in Europe gone so far as to make every part of that continent which is worth visiting, or at any rate which people know to be worth visiting, actually crowded. One who returns to the Alps or to northern Italy after an interval of some years is astonished to find the change so great. Yet the two causes which have brought this throng of visitors are obvious enough. One is the extraordinary growth of the habit of taking a regular summer holiday. If there were any statistics on the point, it would probably be found that fifty years ago the persons who left their business in Germany, France, or England for more than a week at a time were an infinitesimally small part of the business population. Nowadays it is, especially in Germany and England, a matter of course even for tradesmen and clerks and shopmen, and, still more of course, for the middle and higher strata of the commercial world, to go off from home for a longer or shorter pleasuring, almost always to the seaside or to the mountains. The other cause is the extension of steam communication, by railways and steamers, which makes journeys to the sea or the mountains incomparably cheaper as well as swifter and less fatiguing than was formerly the case. The consequence has been that every summer sees a veritable migration of tens of thousands of persons to spots which even thirty or forty years ago difficulty of access had left secluded and primitive.

Although this has happened all over Europe, it is most conspicuous in the Alps, which have now become the playground not merely of mountain-climbers and the upper classes of western Europe, but of all classes except the really poor. Every American knows how enormously the afflux of American and English, as well as German tourists, has increased in Switzerland. But it has been much less observed that the throng of pleasure-seekers is nearly as great in the eastern Alps, to which, except, of course, to a few choice spots, the English and Americans resort very little. These regions are filled by Germans, and along the southern slopes by Italians also. The accommodation they offer is far less luxurious than what Switzerland provides even off the great tracks. One finds no large and comfortable hotels except in big towns like Innsbruck, or Salzburg, or in such a district as the neighborhood of Ischl, rendered fashionable by the visits of the Austrian Court. Living is from a half to a third cheaper than in Switzerland, but the inns, though seldom dirty, are usually rough, and the food is indifferent.

Votaries of nature who had some years ago begun to retire from Switzerland before the ever-increasing crowd, were wont to enjoy the comparative peace and silence of Tyrol and Carinthia, and the romantic valleys to the north of Brescia, Verona, and Venice. Now, however, within the last decade these regions have begun to draw such hosts of German and Austrian tourists that seclusion is no longer obtainable anywhere, and the wanderer is lucky if he can find a room without bespeaking it several days beforehand. Cortina d'Ampezzo and the Fedaya pass, which in 1865 were as little known to English or German pedestrians as Manitou Springs and Pike's Peak were in that same year to New Yorkers, are now even as Chamouni or Zermatt. The finer parts of Carinthia and Styria are scarcely less overrun; it is not till one gets into the remoter corners of the Julian Alps that the old charm of primitive and unspoiled mountain solitudes can be enjoyed. Even from there it is daily disappearing. The change is passing on Norway and on the Pyrenees, the only other parts of Europe where grand mountain scenery is obtainable. No coming generation will be able to draw the same kind of pleasure from a ramble through mountain countries which the generation now growing too old to pedestrianize drew in the days of its youth.

Doubtless this is a result of cheap travel and holiday-making which every one must have expected; and if it disgusts the few, it seems to promise enjoyment to many. The tourist who traverses Switzerland in a crowded train, or even on foot, along crowded roads and footpaths, where hotel touts and sellers of curiosities pester him, enjoys far less keenly than did the solitary pedestrian of thirty years ago; but there are a hundred who have this inferior pleasure for every one who had that finer pleasure of the old days. We have all had to reconcile ourselves to life in a crowd, even in vacation time. Another change has, however, passed over the Alps which was not to have been expected, which need not have happened, and which has brought an injury not adequately compensated by any resulting gain. This is the injury which is being done to Nature herself in the process of making her most beautiful spots not merely accessible, but accessible in the cheapest and quickest way. Not content with running railroads to the edge of the mountain country and along one or two great international highways, such as the Brenner and the St. Gothard, lines have now been built up many of the minor valleys and along the shores of lakes where hitherto the traffic was carried on by carriage roads and steamers. Irreparable damage has in many cases been done to the scenery, for the cuttings and embankments destroy the original character of many a landscape; the heaps of stone thrown out from a tunnel, the bridges spanning a torrent, the lines scored along the face of a precipice, fatally mar the charms of form and color and native wildness which drew lovers of beauty to the spot. It is alleged that more tourists now come. But they do not see what once delighted us; and, indeed, hurried swiftly along, and craning their necks out of the car window to catch the views, which change faster than the eye can duly appreciate them, or plunged into the darkness of a tunnel when one of the finest points is reached, they are unable to derive anything approaching to the pleasure which the pedestrian or carriage-borne traveller formerly derived.

The last few years have brought a new curse to Switzerland, though happily not yet to the rest of the Alps, in the form of the so-called "mountain railways," worked by cog-wheels on toothed rails, and sometimes by a wire cable. The first of these was fixed on the Rigi about 1870. Now there are seven or eight, and several more are projected. The last six months have seen four such new lines: one at the Giessbach, on the Lake of Brienz; one at Beatenberg, on the Lake of Thun; one to the top of Pilatus from Alpnach, on the Lake of Lucerne; one to the top of the Bürgenstock, on the same lake. A fifth, from Lauterbrunnen to Mürren, is to be begun immediately, when the railroad from Interlaken to Mürren, intended to ruin the valley of the Lutschine, as the new railroad to Zermatt is now ruining the valley of St. Niklaus, has been finished. With the growing increase of visitors and the growing enterprise of hotel-keepers, such lines are likely to be much further multiplied. They inflict, it need hardly be said, an even greater injury on the scenery than do the railroads that traverse the

valleys, for they are even more conspicuous objects. The Rigi—which twenty-five years ago, when there was nothing on it but one moderately-sized inn at the top and a small one at the Kalt-Bad, was a romantic mountain in itself, delightful to roam over even when the weather did not permit the great panoramic view to be visible—is now so scored over by railways and thick set with huge hotels that even the view can scarcely be enjoyed, for there is always at least one hotel and one railway in the foreground.

When one passes east out of Switzerland into the Bavarian and Austrian Alps (Tyrol, Styria, Carinthia, Carniola), one leaves behind the bulk of the lazy pleasure-seekers who are glad to be carried to the top of a mountain in a railroad car, and finds that German pedestrians, frugal and simple, form five-sixths of the tourist crowd. They walk slow and climb still more slowly, but they are fond of walking, and do their fifteen or twenty miles a day conscientiously. They have organized a sort of huge Alpine Club or society, with branches in all the larger towns of Germany and Germanic Austria, which employs most of its funds in rendering the mountains more easy of access. It has erected a great number of "shelter huts" all over the higher Alps. Sometimes these are mere huts, sometimes they approach the accommodations of a mountain inn. They have certainly made the ascent of high peaks and passes a far more comfortable undertaking than it used to be, when the climber and his guides had to sleep in some hole among the rocks if they desired to avoid the fatigue of a long night ascent from the last house in the valley beneath. The German society, however, has not stopped here. It has furnished all the chief footpaths with finger-posts, and marked them with streaks of red, blue, or yellow paint upon the trees and rocks so that even the solitary pedestrian can hardly miss his way. There is, of course, an obvious convenience in being assured by the finger-post and the blotch of paint that you are on the right track; and sometimes, where the path might have been hard to find without a guide, the expense—after all a small expense—of a guide is saved. But to any one who remembers the pleasurable excitement of finding his own way up a mountain by the help of a map, a compass, and his own practised observation, there is something dull and flat, almost humiliating, in being made, whether one desires it or not, to rely on these artificial aids.

The sense of adventure and solitude is banished; the high Alps seem degraded in being treated like the neighborhood of a fashionable watering-place, where notice-boards direct the nursemaid which way to take her charges. And in the case of some few mountains the wish to remove all difficulties has gone even further. Iron posts or spikes have been driven into the rocks at points where the ascent becomes unusually steep or the foothold precarious; or wire ropes have been stretched along the path, or iron ladders erected. The Matterhorn and the Grossglockner are instances of peaks which have been thus treated, with the result not only of making them too easy to the really competent cragsman, but of inducing persons to attempt the ascent who are so incompetent that, when bad weather comes on, they may be unable to get down, and perish (as happened lately on the Matterhorn) of cold and exhaustion. The Terglou in Carniola, the loftiest summit of the Julian Alps, has been subjected to even more drastic treatment. It was famous for a very narrow *arête* or ridge of rock between two formidable precipices, along which the climber was obliged to pass for some thirty yards or more in order to reach the summit. This *arête* was found too difficult for the average tourist, and accordingly the Austrian Club, not content with putting up iron posts in some places along the ascent and stretching wire ropes along others, has actually broken down the top of the rock ridge, and made a comparatively broad and easy path along it. More tourists make the ascent, but the true lover of the Alps feels that this is not the Terglou as he knew it, and the ascent of a mutilated mountain loses half its charm for him. To accomplish it is no longer the test of a steady head and a firm foot.

It may be thought that complaints or regrets over this vulgarization of the Alps are mere sentimentalism, and that one ought rather to rejoice at the greater number of persons who now traverse the valleys, even in steam-cars, or climb the peaks, even by the help of wire ropes. The point is hardly one to be argued: it must be left to each man's feeling. But, after all, the pleasure we derive from grand or wild mountain scenery is largely a pleasure of sentiment. It is not merely the form and the color that delight us: it is the absence of man and his works; it is what may be called the pure naturalness of nature. The impression which the more striking aspects of nature produce upon imaginative minds, and especially upon poets and artists, is largely due to the contrast between ordinary life, especially that life of cities which most of us lead, and this unspoiled naturalness, this unsullied simplicity, this remoteness or insignificance of all that belongs to human effort. The number of places left in Europe which are capable of acting thus upon poets and artists is daily diminishing, and in this there is surely involved some loss for the European mind in the future. Whether the corresponding gain may not be greater is a question one need not discuss; but those who are jubilant over the opening up of the mountains and the comparative ease with which excursions once deemed difficult are now performed, ought to be reminded that the gain, whatever it may be, is assuredly accompanied by a loss.

Correspondence.

A GOLDEN SENATE.

To the Editor of The Nation:

Sir: Perhaps nothing better shows the ability of the framers of our Federal Constitution to give a predetermined complexion to a body instituted by that instrument than the Senate of the United States.

It is a matter of common knowledge that our Senators are not generally in need of parish relief, and that many of them have accumulated more than Mr. Bellamy would approve. Prof. Bryce, who has told us so much about ourselves, and all in such a marketable way, says: "The Senate now contains many men of great wealth. Some, an increasing number, are Senators because they are rich." In the political press this, our most dignified legislative body, is not unfrequently called "The American House of Lords," "The Millionaire Senate," and its action is criticised as that of a wealthy class, seeking to protect the interests of the rich and with but small regard for the rights of the poor.

Those who defend or apologize for its action have, so far, merely denied these rather hard impeachments, whereas they might well aver that such a body as its critics declare the Senate to be, the founders of our commonwealth sought to make it.

Thus, on Tuesday, June 20, 1787, Gen. Pinckney proposed in the Constitutional Convention at Philadelphia that no salary should be allowed Senators, saying: "As this [the Senatorial] branch was meant to represent the wealth of the country, it ought to be composed of persons of wealth, and if no allowance was to be made, the wealthy alone would undertake the service." He moved to strike out a clause for "fixed stipends" to them, and his motion was seconded by the venerable Dr. Franklin, who argued in its favor, and the motion was lost by but one vote.

Mr. Gouverneur Morris, who penned the final draft of the Constitution, and who, all must admit, was a man of fine powers and great influence (despite his conceit, which was more than extraordinary, and his obtrusive impromptu verses, which were less than ordinary), speaking of the Senate July 2, 1787, in the same convention, said: "The aristocratic body should be as firm and as independent as the democratic. If the members of it are to revert to a dependence on a democratic choice, the democratic scale will preponderate. All the guards contrived by America have not restrained the Senatorial branches of the legislatures from a servile complaisance to the democratic. If the second branch is to be dependent, we are better without it. To make it independent it should be for life. It will then do wrong, it will be said. He believed so. He hoped so. The rich will strive to establish their dominion and enslave the rest. They always did, they always will. The proper security against them is to form them into a separate interest. The two forces will then control each other. Let the rich mix with the poor, and in a commercial country they will establish an oligarchy." And again: "By thus combining and setting apart the aristocratic interest, the popular interest will be combined against it. There will be a mutual check and a mutual security."

When Mr. Dickinson, Thursday, June 7, 1787, moved the Convention that the members of the second branch of the Federal Congress "ought to be chosen by the individual Legislatures," a principal reason for his motion was, he said, "because he wished the Senate to consist of the most distinguished characters, distinguished for their rank in life, *and their weight in property, and bearing as strong a likeness to the British House of Lords as possible*, and he thought such characters more likely to be selected by the State Legislatures than by any other mode"; and after protracted debate, Mr. Dickinson's motion was agreed to by a unanimous vote.

Gen. Hamilton submitted to Mr. Madison, about the close of the Convention, a draft of a Constitution such as he had wished to propose, and in that the Senate was to be chosen by electors owning landed estates only, and the Senators were to hold their office during good behavior.

These extracts from the history of our Constitutional Convention might be supplemented by a hundred others as pertinent, all tending to show that the leading members of that Convention desired, and strove to institute, in the Senate, a plutocratic body, and to this end the Constitution was very considerably fashioned. That which is now the reproach of our Senate was, in its origin, its confessed purpose and its supposed merit.

Perhaps it is worth remembering that the creature ought not to be blamed for conformity to the designs of its creator. Then, too, all Americans, and the world and Prof. Bryce as

well, are quite well convinced that, despite "its pewter Senators from silver States," the Senate of the United States answers the uses of an upper house better than any yet devised by our fellow-mortals. It is, however, curious to recall the trenchant suggestions of Mr. Morris, when we consider that the doctrine of protection to American labor by a high tariff finds its stronghold in the Senate, and to inquire whether this illustrates or confutes his theory.

CHARLES NOBLE GREGORY.

NOVEMBER 14.

KENTUCKY AND THE SPOILS SYSTEM ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: The barbarous encounter in the Lexington Post-office, which a few days since resulted in the death of two of the most prominent Republicans in the State, has drawn attention anew to the state of public sentiment in Kentucky, which not only permits but almost compels every slight or insult to be wiped out with blood. That such a sentiment does really exist may indeed be deplored, but it cannot be honestly denied; and its existence is admitted even by those who feel most keenly its disgrace. Surely this last tragedy is of itself sufficient to establish the fact. The victims were men of high standing in their community, men of considerable ability and culture. I have been assured by a gentleman acquainted with both that they were in no respect violent or reckless men, provided only that the question of "honor" were kept carefully in the background. What, then, in a moment transformed them? The answer is but too evident: in the first place, a false, a barbarous conception of personal dignity; and in the second, an equally false and barbarous public sentiment which drove each to resent with violence a slight, real or fancied, and which would have branded for life as a coward the man who had the independence and genuine manliness to ignore an insult of such a kind, or to resent it as a civilized man should.

It is a mistake to suppose that there does not exist in this State a considerable body of intelligent men who are alive to the barbarity of this sentiment; but the sentiment itself is so strong, and, it must be confessed, yields so slowly to the educative influences that are unquestionably at work to destroy it, that many men who realize its enormity would hardly be strong enough to resist it. A man confronted with such a difficulty faces a painful dilemma. To rely on the traditional method of settling differences is to violate his own convictions, perhaps to carry with him through life the horrible sense that the blood of a fellow-man is on his hands; to stand true to his higher self is to incur a degree of obloquy which few men are able to bear. The fate of the late Judge Richard Reid is conclusive upon this point.

I have spoken thus candidly of the condition of public sentiment upon this subject in Kentucky because I would not have it appear that the aspect of the matter to which I wish now to call attention, and to present which was indeed my chief motive in writing the communication, is mentioned for the purpose of diverting attention from the main question; still it is a view of the incident which seems to me to teach with emphasis a lesson that is taught, indeed, wherever one looks. The Republican party in Kentucky, like the Republican party throughout the South, exists, it is well known, chiefly for the sake of office, and it was primarily a quarrel about office, or about political precedence, which nowadays amounts to the same thing, that led to this difficulty. As surely, therefore, as the spoils system is responsible for the assassination of President Garfield, so surely is it responsible for the death of these two men. Men kill each other in Kentucky, as they do elsewhere, it is but too true, without being driven to it by political or rather office-holding jealousy; but the argument is not weakened by this admission. In every State in the Union there are quarrels hardly less bitter than that just so fatally terminated, originating wholly in the mad pursuit of office and the distribution of a host of petty positions to "appease" and "harmonize" the "adherents" of this or that politician. The Platt-Miller warfare in New York is a prominent example of the disgusting rivalries existing wherever offices are to be doled out. Every community has its little wars of the same character; and the holy President of these United States, who poses as a living proof that strict attention to religious duties is not impossible in high public station, occupies the position of a man fomenting strife and quarrel by perpetuating a vicious and degrading practice which he had a golden opportunity to eradicate.

The writer is not one of those who seek to clear Kentucky of the blame which justly rests upon her; but he hopes that the incident in question may serve the further purpose of showing once more the barbarous nature and tendencies of the spoils system, and that it may make clear just what kind of responsibility rests upon those who tolerate and extend it.

A. F.

LOUISVILLE, KY., November 14, 1889.

MUGWUMPS AND PARTISANS.

TO THE EDITOR OF THE NATION:

SIR: I should like to suggest an hypothesis which, if true, would account for the apparent recklessness with which pledges as to civil-service reform are broken by both parties, and their indifference as to a possible day of reckoning. This is, that politics are not merely a game, but a game which politicians play almost exclusively for the sake of the stakes—principles, such as foreign policy, civil-service reform, silver, etc., being checkers without intrinsic value. The exclamation, "What are we here for except for the offices?" may have amused politicians by its frankness, but it was merely the utterance of a self-evident truth.

Now, the normal state of parties in countries where, practically, there are only two political organizations, is that of unstable equilibrium; the scales are perpetually tipping, but only slightly. Such an equilibrium is disturbed only by a cataclysm like the Civil War, which, in the North, abased the opponents of the Republican party to such an extent as to put off, for twenty years, the restoration of the equilibrium. A partial balance to this has been the equally strong Democratic feeling at the South, and the increasing proportion of voters who have no personal interest in buried issues has brought back parties to their usual relations. The two parties are, then, in a position like that of two railways fed from the same territory, and having equal facilities for supplying its wants. Railways so circumstanced sooner or later learn that pooling, in practice, if not by positive agreement, is more profitable than competition.

Leaving out of consideration those politicians who desire official position for the opportunities it affords of "striking," or of acquiring knowledge having a money value, it may be said that, for the others, office-brokerage far outweighs all other advantages not merely as a means of obtaining reëlection, but as an occupation and a pleasure in itself. Take it from them, and political life would have no more attractions than moderate success in ordinary business. It would, therefore, be no inducement to the leaders of either party to guarantee them eight, or twelve, or twenty years of uninterrupted power, if this was to be limited to action on public questions. On the other hand, it may be supposed that they believe that half the glory (which, as practical politicians, they would value only as an advertisement) of controlling the Government, combined with possession of the offices for half the time, is better than a larger share of the glory and fewer "spoils." The real or affected sympathy given to politicians in the position of Mr. Harrison or Mr. Blaine seems to me entirely uncalled for. Sympathy for the time and concentrated attention they may be forced to give to questions of law or economy, such as Bering Sea or silver, would be appreciated; but the exhaustion which comes from listening to office-seekers is, from their point of view, healthful, and they sleep the better for it.

If this statement of the case is correct, it is plain that the recent advice of President Eliot, coming as it did from a man so conspicuous both for ability and position, is to be regretted. Parties in a state of equilibrium can rarely be reformed from within, though they may be willing to make promises without number. Even a question so plainly appealing to the commonest feelings of humanity as the abolition of slavery was very slow in acquiring any political momentum: how much more so one which, to most persons, is only one of abstract justice, like civil-service reform. When the principle of tenure on non-political tests is finally established, it will owe as much (and as little) to one party as to the other. It will come about, really, in spite of all to whom politics is a trade or an amusement, and in consequence of a gradually growing sentiment in the community which will affect both parties, though unconsciously, in an equal degree. And this sentiment will influence politicians in proportion to the voting strength of those who hold it. Whoever identifies himself with either party is bound to take the fat with the lean, and to march no faster than the rest of the procession. If the way to effect a reform was to convince party leaders of its justice, such a course might be the best; but this reform will be accomplished not because of its justice, but because from year to year its expediency will be more apparent from the increasing number of independent voters.

BLOCKS OF FIVE IN ANTIQUITY.

TO THE EDITOR OF THE NATION:

SIR: A learned friend of the *Nation* has been heard to remark that there was "nothing new under the sun except rubber boots and sewing-machines." I had attributed at least originality to the promoter of "floaters in blocks of five," but it appears that, after all, we have here only a modification of an old scheme. Says Suidas, under the word δεκάζεσθαι: "This phrase originated from the practice of bribing men by tens. Candidates for office, or persons with a job to carry through, used to deal out their bribes to blocks of ten." Anytus, the accuser of Socrates, has the discredit of introducing this system into the courts, and, as a recent commentator remarks, "doubtless a juryman would feel greater confidence if he knew he had nine others sitting by him who had been bribed." Scholars have always been in the dark about the details of this scheme, and a monograph on the subject, dashed off by Colonel Dudley in his leisure

hours before the next election, would be very gratefully received.—Sincerely yours,

M. H. MORGAN.

CAMBRIDGE, November 16, 1889.

"FATS" OR "VATS."

TO THE EDITOR OF THE NATION:

SIR: In your last number (p. 392) you speak of *fats* as "an unfortunate misprint" for *vats* in the Bacchic song from "Antony and Cleopatra" (ii., 7, 122), as given in Bullen's 'Lyrics from the Dramatists of the Elizabethan Age'; but *fats* is the Shaksperian and old English form, following the Anglo-Saxon *fæt*, cask. The Folio of 1623 reads: "In thy Fattes our Cares be drown'd." The word occurs also in the Bible of 1611, in Joel, ii., 24; iii., 13. See also *pressfat* in Haggai, ii., 16, and *winefat* in the margin of Hosea, ix., 2, where the text has *winepress*.

According to Skeat ('Etymol. Dict.' s. v.), "the difference between the words *fat* and *vat* is one of dialect; *vat* is southern English, probably Kentish. The use of *v* for *f* is common in Devonshire, Somersetshire, and in old Kentish." W. J. R.

CAMBRIDGE, November 16, 1889.

Notes.

THE year promises to be famous for anti-slavery memoirs. 'James G. Birney, and the Genesis of the Republican Party,' by Gen. William Birney, is in the press of D. Appleton & Co. The authorized 'Life of Harriet Beecher Stowe,' by her son, the Rev. Charles E. Stowe, has just been published, by subscription, by Houghton, Mifflin & Co.

This firm, also, announces 'A New England Girlhood, Outlined from Memory,' autobiographic chapters by Lucy Larcom, and a retelling of the life of the Rev. William Augustus Muhlenberg, in the series of "American Religious Leaders," by the Rev. W. W. Newton.

Mr. Horatio Seymour of Marquette, Mich., will be glad to secure copies of letters written by Gov. Horatio Seymour not already in his possession, with a view to the publication of his correspondence.

'Viera; 'Twixt the Real and the Ideal,' a new novel by Count Roman I. Zubof, of which the scene is laid in England, is to be published immediately by T. Y. Crowell & Co.

Certainly, one of the most interesting and valuable gift-books of the season is 'The American Railway: Its Construction, Development, Management, and Appliances,' now brought out in a large volume by the Messrs. Scribner, after the several chapters have appeared in their magazine. The nearness of the theme, the authority of the writers, and the scope of the exposition, make this a work for almost every class of adult readers. Children, too, of a curious or mechanical turn of mind—or even, we might say, romantic—will quickly lose themselves in these pages, whose beautiful illustrations will lure them on. The whole production is eminently American, and the historic worth of such a conspectus, in the case of an art which undergoes as rapid changes as railroading, will be appreciated a decade or a quarter-century hence more than it is now.

About two months ago we spoke of the author of 'Froudacity: West Indian Fables, by James Anthony Froude, Explained by J. J. Thomas.' Mr. Thomas, as we then stated, was a pure African of Trinidad, and a pensioned schoolmaster of that colony, author of a valuable 'Creole Grammar' about to pass to a second edition. News has since come of his death. Meanwhile it has seemed as if a certain interest in the controversy with Mr. Froude should be felt in this country, and Gebbie & Co., Philadelphia, have put their imprint on an American edition of 'Froudacity.' It is a small book in large type, and can be quickly read, but it ought to be read slowly and thoughtfully—and indeed shamefully—in a land where color prejudice is still undiminished to any large extent either by the abolition of slavery, or by humane, religious, or political considerations. Mr. Thomas's contention that in the United States opportunities to rise "are really free and open to all," is still only nominally true of the black man, no matter what the shade of his complexion.

'Jane Eyre' is the latest addition to the "Camelot Series" (London: Walter Scott; New York: W. J. Gage & Co.). Mr. Clement K. Shorter furnishes an introductory sketch of the Brontë family which covers the ground sufficiently, but which inspires some distrust of the writer's critical capacity. "Like Carlyle, *Emerson*, and George Eliot," he says, "it was Charlotte Brontë's fate to fail as a poet while attaining success as a master of prose style." On this there is nothing to be said except that a few more such failures as Emerson's would, if they could be expected in this generation or the next, bring great joy to the American public. Mr. Shorter appends a Brontë chronology and bibliography that will be useful.

After M. Scherer and M. Taine, M. Ferdinand Brunetière is perhaps the foremost of contemporary French critics. He is a writer of "the old school" in more ways than one, with a solidity of learning and a breadth of judgment as unusual in conservatives as in radicals. From the *Revue des Deux Mondes* M. Brunetière has recently gathered together a dozen of his critical papers written during the past three years, making a volume called 'Questions de Critique' (Paris: Calmann Lévy; New York: F. W. Christern), which may be recommended to such as wish, for example, to see a vigorous statement of the real value of Gautier and Baudelaire—and it is not without interest to note that M. Brunetière's opinion of these greatly admired French writers is not at all unlike that expressed by Mr. Henry James in his 'French Poets and Novelists.' After an acute analysis of the character of Mme. de Maintenon, the articles most likely to interest an American reader are those on the "Influence of Women in French Literature," and on "La Littérature Personnelle," which latter is to be recommended especially to those who have received with open hands the journal of the Swiss Amiel, the diary of the Russian Marie Bashkirtseff, and the unspeakable self-revelation of the French Goncourts.

Among the new French annuals recently received here is the 'Almanach de l'*Illustration*' (New York: F. W. Christern), which contains the usual miscellany of wood-cuts and letterpress, this time chiefly about the Paris Exhibition. But among the portraits of new rulers, which are a specialty of this publication, there are two surprises for an American. The letterpress tells us that M. Cleveland and M. Turman have been succeeded by M. Harrison and M. Morton, and it appends the names of the present President and Vice-President to two wood-cuts—only the self-styled portrait of Mr. Harrison is really a portrait of Mr. Cleveland, and the self-styled portrait of Mr. Morton is a portrait of Mr. Thurman. This latter blunder is the more curious as Mr. Morton was for years our Minister in Paris.

The Christmas number of the *Art Journal* (International News Co.) is wholly occupied with "Rosa Bonheur, her Life and Work," by René Peyrol. Engravings from her principal paintings and facsimiles from her sketch-books are given—the latter somewhat cruelly, for they are even faultier than her finished work in catching the truth of animal locomotion. For a flagrantly impossible example, see the three horses on p. 21.

In the November number of the *New Review* there is an interesting elucidation of one of the minor mysteries of modern literature. "The Dead Heart," a play by the late Watts Phillips (now being acted in London at the Lyceum Theatre by Mr. Henry Irving and his company with a wealth of picturesque detail), was originally produced almost simultaneously with the publication of 'A Tale of Two Cities,' both works centring about the self-sacrifice of the hero on the guillotine during the French Revolution. Here was one of the coincidences of which the history of the drama is full, and not the least singular. Did Watts Phillips borrow from Dickens, as he afterwards borrowed the strong situation in the "Huguenot Captain" from Beaumont and Fletcher's "Custom of the Country"? Or did Dickens get a hint for his novel from the play of a literary inferior? The article in the *New Review* is by Mr. John Coleman, who shows not only that the "bone of contention" is also in the preceding "Chevalier de Maison-Rouge" of Dumas, of which there had been an English adaptation by Mr. Boucicault, but also that it is to be found in the still earlier 'Zanoni' of the late Lord Lytton. Then, by contemporary letters of Watts Phillips, he proves that "The Dead Heart" was written and accepted and paid for more than two years before Dickens had begun 'A Tale of Two Cities.' That Dickens knew of the unacted play is unlikely; most probably he borrowed unconsciously from Dumas or Lytton.

We have already noted that the little British trade monthly called the *Bookbinder* had a kindly but insular account of the bindings shown at the Paris Exhibition. This rather tradesmanlike correspondence drew forth from Mr. Cobden-Sanderson an admirable statement of the principles underlying the decoration of books, which may be found in the October number; and in the November number the writer of the original letter attempts a retort which only reveals his lack of understanding of the principles of art.

Gustav Freytag's 'Der Kronprinz und die deutsche Kaiserkrone' was printed in full in the *Belletristisches Journal* of this city of November 14.

By the will of the late John Crerar, a free public library to bear his name is provided for in Chicago by a bequest of some two and a half million of dollars—a sum which will make the new institution a respectable rival of the Newberry Library. A censorship in the interest of morality and "Christian sentiment" is stipulated, and "dirty French novels and all sceptical trash" will be excluded from the collection.

Through its President, Richard B. Westbrook, the American Secular Union (whose headquarters are at 1707 Oxford Street, Philadelphia), offers a prize of one thousand dollars for the best essay, treatise, or manual "adapted to aid and assist teachers in our *free public schools* and in the *Girard College* for orphans, and other public and charitable institutions professing to be unsectarian, to thoroughly instruct children and youth in the *purest principles of morality* without inculcating *religious doctrines*, thus recognizing the *legal right* under our *Federal Constitution* of all our citi-

zens, Jews and Gentiles, Catholics and Protestants, Liberals and Agnostics, and all other classes, whether believers or disbelievers, to have their children instructed in all the branches of a common secular education in our *State* schools, without having their tender minds *biased* for or against any sect or party whatever." Not more than 100,000 words nor less than 60,000 are desired on this subject. The (type-written) essays should be sent anonymously as above, before April 1, 1890. Competitors may be of any nationality and of either sex.

An attempt is being made at Vassar College to collect and tabulate certain data regarding domestic service. The work has apparently grown out of a belief that some knowledge of the actual condition of such service, as viewed by both employer and employee, is essential to an intelligent discussion of the question. Three blanks are sent out. The one for employers asks concerning the number of employees, the time employed, and wages paid each; also, in regard to the population and industries of the community in order to ascertain how far domestic service is affected by competing forms of labor. The blank for employees asks concerning place of birth, wages received, and experience in other occupations. The third schedule relates to the women's exchange, training-schools for servants, etc. These schedules, with return postage prepaid, will be sent to all who are willing to coöperate in the work on application to the Department of History, Vassar College, Poughkeepsie, N. Y.

—In advance of its approaching publication, we are enabled to give a few particulars regarding Part V. of Dr. Murray's 'New English Dictionary.' The forthcoming part extends from *cast* to the end of *cli-*, and therefore takes in the vocables in *ch-*, which constitute a noteworthy section of our vocabulary. It contains 8,371 words, of which 5,966 are main words, while 1,031 are combinations requiring separate explanations, and 1,374 are subordinate words. Of words in *ch-* there is an aggregate of 4,024. To the verb *cast* it has been found necessary to appropriate fifteen and a half columns, with five to the cognate substantive; to *Christ* and related words, nineteen columns; and to *church*, with its multitudinous compounds, twenty columns. Such facts as these indicate in a striking manner the enormous proportions of Dr. Murray's Dictionary, especially when it is taken into account that he consults economy of space to the utmost consistently with thoroughness of treatment; and they also furnish evidence of the prodigious labor which has been expended in providing him with materials. Distinguishing himself, as usual, in every department of his complicated undertaking, Dr. Murray, in Part V., signalizes, perhaps especially, his matchless ability as an etymologist. His discussion of the origin of *church* may be characterized as a very model of exhaustive induction, acute argument, and discreet conclusion. Those who are so ill-advised as to complain that his progress is not sufficiently rapid, must surely have failed to consider what would be the inevitable consequence if he consented to execute his Herculean task precipitately. It is to be hoped, and, indeed, it is confidently expected, that he will wisely resist all attempts to quicken his pace. *Festina lente*, it should be borne in mind, is the motto of every enlightened and conscientious workman.

— An exceedingly valuable piece of work, done with laborious and conscientious accuracy, is Whitney's 'Concise Dictionary of the Principal Roads, Chief Towns and Villages of Japan.' The volume is a handy, red-covered book of 400 pages, besides containing a folding map showing the post-roads, telegraph lines, railways, and other means of communication by land or water. The itineraries of each travel-route, and of each road connecting the chief towns of the Empire with their nearest neighbors of importance, are given, besides their geographical location and population. The compiler is the accomplished scholar, W. N. Whitney, M.D., interpreter of the United States Legation in Tokio. Besides this mass of geographical and other knowledge (for each name has its graphic equivalent in Chinese characters), there is an appendix containing the full text of the Constitution of Japan proclaimed February 11, 1889, the laws relating to the organization of cities, towns, and villages. There are also statistics respecting territory, population, agriculture, industry, commerce, navigation, banking, insurance, education, religion, hygiene, charities, police, prisons, army, navy, finance, and political administration. The whole work constitutes a very useful handbook of information, made possible only by the concurrence of governmental and private enterprise. Kelly & Walsh of Yokohama, and Trübner & Co. of London, are the publishers.

—Baron Haussmann is about to publish his 'Mémoires,' and has given the *Matin* some early information about their composition and character. When a well-preserved old gentleman sits down to such a task as this at the age of eighty, the world does not expect him to be concise. The Baron will, however, limit himself to the space of four volumes, the size of which he does not state. The first volume will recount his early life and studies in music and the law, and his earlier official years. The second and third will be devoted to the story of his work as Prefect of the Seine, when he supplied Paris with pure water and good sewers, besides "transforming" it by the new avenues and streets that have made his name famous. The whole cost of this transformation of Paris, he says, was five milliards, not a sou of which went into his own pockets. The last volume is as yet unwritten, and will be entirely political. If the Baron is frank, it is very likely to contain some interesting reading, for Haussmann was in a position to know a good many of the secrets of the Second Empire. At any rate there are sure to be in the book a satisfactory number of those indiscreet personalities which in these days (as before them) make the fortune of an autobiography. Baron Haussmann says plainly that he shall be personal in what he writes, and that he expects to be contradicted. He means to be *doux*, he says, and he gives a very pretty notion of his view of what constitutes *douceur* by quoting the following remark which he once made to the Empress: "If anybody gives me a blow, I always give him back four, just to keep him quiet for a while."

— The breath had hardly left M. Émile Augier's body when an active reporter of the *Petit Parisien* set out to interview M. Émile Zola as to his candidacy for the vacant chair at the Academy. Zola naturally protested against the indelicacy of such haste, but said that he was willing, speaking generally, to have it known that he expected at some time to become a candidate. Already for some years, he said, the small group of his friends in the Academy had been urging him to do this. The Academy, they pointed out, has shown by some of its later elections that its old-time prejudice against the new literary forms is weakened; and while Zola might not be successful on a first trial, still he was likely to repeat the experience of Victor Hugo, and be elected at a second. For a while Zola refused, but Daudet's letter of last year has led him to change his mind, and he is now "in the hands of his friends." When they shall say that the proper time is come, he is ready to write the customary letter and make the usual visits. He does not himself think that the time is yet come. Some people will hope that it has; among them those who hold Zola to be a better critic than romancer, and who would like to hear his eulogy on his predecessor.

— The Paris correspondent of the London *Standard* gives some account of a curious diplomatic difficulty which has arisen between the French authorities and the Turkish Ambassador. It seems that a French playwright, M. de Bornier, has written a five-act piece in verse called "Mahomet," which has been accepted at the Français, and has been announced for performance during the coming winter. Essad Pasha, the Turkish Ambassador, protests against this on the ground that it would be a gross insult to his nation and to all good Moslems if the Founder of Islam, whom they all love and reverence, should be put upon a Paris stage. To this M. Spuller is said to have answered that it was no uncommon thing for ministers of the Christian religion to be represented in this way, and Christian religious rites, and that even the Founder of the Christian religion himself had lately been brought into a play at the Théâtre Libre. Of course Essad Pasha made the obvious reply that this was perhaps a matter of taste; and while Christians might not be offended at such representations, good Moslems were, and on their behalf he called upon the French Government to prohibit the representation. The Government has not yet announced its decision, and the matter is still in suspense, though it is said to be most likely that the play will not be produced. There is something in the simplicity and directness of Essad Pasha's demands that recalls, though distantly, a story of Dr. von Döllinger's of a decision at Constantinople that manifested the same qualities. The Armenian clergy had a dispute with the Greek priests concerning the custom of mingling water with the sacramental wine. The dispute was finally brought before the Turkish reis-effendi for a judgment, who promptly ruled: "Wine is an impure drink, condemned by the Koran: pure water only, therefore, should be made use of."

— Mr. Wm. E. Coleman thinks we ought not to have said that Sanskritists have not exposed the nonsense of Occultism, in view of his critique of the 'Secret Doctrine' of Mme. Blavatsky in the Chicago *Religio-Philosophical Journal* for August 10, 17, 24, 31, and September 7, 1889. It is opportune to remark that in the way of being favored with out-of-the-way familiars, it falls to few to compete with Col. Olcott. Some weeks ago we had occasion to speak of certain Himalayan "Brothers," of whom the Colonel mysteriously hints that he knows more than he thinks fit to divulge, and whom he has rather unintelligibly cold-shouldered. And the hard hap of his aversion has been visited on them, notwithstanding that, as it is recorded, one of their number flitted through the air all the way from his frost-bitten habitation to New York, and, before he spread his wings to return home, left his turban with the Colonel as a keepsake. Fearless of their revenge—provided they are capable of such an infirmity—the Colonel has now, we learn, taken to patronizing a new set of supernaturals, infranaturals, or whatever they may be. Information has reached us from Dublin

suggestive of his having lately been cultivating the acquaintance of Fairies and Banshees. It is only the benighted ignorance of materialism, he has discovered, that blindly looks upon these shy and pretty creatures as moonshiny. Science, if it minds its proper business, will eschew the presumption of meddling or making with them. *Suum cuique.* As to the Banshees, who, for reasons of their own, have never thought fit to wander out of Ireland, the irreverent theory that they were bred between Hibernian piety and poteen must, it seems, be discarded. With reference to the Fairies, as they are not peculiar to any country, one may also allow that no similarly discrediting speculation touching their origin is, unless rigorously authenticated, permissible. Let us hope, in their honor, that, on further investigation, when the Colonel comes to know all about them, he will find that their story, unlike that of the Himalayan "Brothers," will bear telling to a profane world, and, moreover, that he will tell it. A London newspaper just received makes mention of Mr. Barnum and the Colonel in ominously close proximity. It would be a pity if the opportunity now offered to the Colonel were to go unutilized. Olympia, to which all Cockneydom is at present flocking, to see the "Biggest Show on Earth," would certainly possess a novel attraction in a troop of Fairies and Banshees with the gallant Colonel to put them through their paces.

—It would be ungracious to apply the strict standards of scholarship to efforts purely literary, especially when such efforts are palpably a labor of unselfish love. We have before us 'Gudrun, a Mediæval Epic,' translated from the Middle High German by Mary Pickering Nichols (Boston: Houghton, Mifflin & Co.). The volume is a credit to both publisher and translator, and we hope it may help to spread the knowledge of mediæval German poetry among those who are debarred the original. We have not examined all the seventeen hundred stanzas; we have, however, read the sixth tale, Horant's Singing, line by line with the German, both in Bartsch's edition and in Martin's. In general we can say that the rendering is correct and also smooth, with occasional pleonasms (*Flicksätze*) that seem to be inevitable in all translating. The cadence of the verse is as adequate as our modern English speech will suffer it to be; perhaps the concluding hemistich of each stanza is a trifle heavy. We have noted a few errors, but do not feel called upon to linger over them. The translation is a pleasing one; many little turns are extremely happy, and the tone of the original is well preserved. One has always the comfortable assurance that the translator is doing her work faithfully. It is gratifying to reflect that the first to render 'Gudrun' is a countrywoman of ours.

HENRY DE ROHAN.

Henry de Rohan: Son rôle politique et militaire sous Louis XIII. (1579-1638). Par Auguste Laugel. Paris: Firmin-Didot et Cie.

Henry de Rohan, the last of the great Huguenot leaders, came from an ancient Breton stock which had formed alliances with some of the noblest families in Europe. His paternal grandmother was Isabel d'Albret, the great-aunt of Henry IV., and in him were to reappear undiminished the unbending spirit and iron resolution of the D'Albret family. His mother was Catherine de Parthenay, the heiress of the Lusignans, a curious compound of sturdiness and oddity, with something of the heroic. She was a Greek scholar and a mathematician; she wrote poetry, and educated her own children. The characteristics of the mother are seen in the son, but he did not inherit all her tastes. Of mathematics he was fond, but he learned nothing of Greek, and Latin he esteemed superfluous. History was a passion, and history with him meant Plutarch, whose heroes, particularly Epaminondas, Scipio, and Cæsar, he took for models. He hardened himself after the Spartan manner, with its days of fasting and sleepless nights. In 1598 his education was rounded off, in the good old style, with "the grand tour," which occupied two years, and took him through Italy, Germany, the Low Countries, and England.

In 1605 he married Marguerite de Béthune, Sully's daughter, but on account of her youth the marriage was not consummated until four years later. This marriage had its trials for a man of Rohan's seriousness and purity of life. Tallemant de Réaux found in Mme. de Rohan a subject to his taste. Fra Paoli tells us that Leo X. would have made a perfect Pope if to his other accomplishments had been added some knowledge of religious affairs and an inclination to personal piety; and with equal philosophy Tallemant says of Mme. de Rohan: "Cette femme en un pays où l'adultère eust esté permis, eust esté une femme fort raisonnable." The marriage was of Henry the Fourth's making, and, with the King, Rohan seems always to have been on intimate and friendly terms. Henry's death changed everything, and the career of the Duke of Rohan as the last great leader of the Huguenots was begun. His position was fully recognized in 1611 at the Assembly of Saumur, and this is the point where M. Laugel's detailed narrative begins. Rohan was so identified with the political and religious movements of the Reformed, that the careful researches of his biographer have thrown new light on the long contest between the churches and the Crown. Although Rohan was arrayed against the Crown, he did not seek to depress the monarchy, like the leaders of the various earlier oppositions of the nobility.

As we look back upon the period, the Reformed seem to have misjudged the times, particularly after the accession of Richelieu to power. They underestimated the strength of the Crown, and their line of action was suited rather to the previous century. They dallied with the party of the Queen mother, a purely political factional opposition, which cared nothing for their cause and would drop them at any time. They decided upon war rashly, without weighing the cost, and in one or two instances against Rohan's advice. They feared the gradual loss of their strongholds by the steady aggression of the Crown, but in appealing to arms as they did, without soldiers enough to defend the strongholds, they invited the certain loss of some of them, and ran the risk of losing all. Their earlier leaders among the nobility gradually forsook the cause. Some had lost sympathy with their belligerent disposition, but more were enticed by offices and honors. Dazzling offers were made to Rohan, but he was a man of different stuff.

The mixture of political and religious elements thus produced intersecting party lines. The King's party contained some Protestants, the Opposition, as a whole, comprised two sections—the Reformed and the adherents of the Queen mother. The party cleavage was less direct and simple than it had been earlier. Had Henry IV. lived, the contest would probably have been avoided, but Louis XIII. inherited his father's taste for war, without his personal magnetism, his open-mindedness, or his tolerant spirit. Louis was serious, and came to think he had a mission to repress heresy. The churches realized this, and were in a state of vague but increasing apprehension. The restoration of the church property in Béarn prompted them to take decisive steps. Rohan would have been glad to mediate, but neither party seemed disposed to such a solution.

Writers in this age of democracy have often moralized upon the democratic tendencies of Calvinism. Without giving adherence to all that has been affirmed on this topic, we may yet find some interesting illustrations of the phenomena upon which the opinion is based in the proceedings of the important General Assembly of Rochelle in December, 1620. Called together in the face of the King's orders, it consisted of fifty-seven members, not counting absentees. Most of them were from the South. They were pure delegates, tied to instructions, with practically no representative power. This exhibits the element of disintegration in democracy. In spite of the warning experience of church councils, the Assembly decided to vote by individuals and not by districts, thus giving the preponderance to the South, which was at once more inflamed and less attached to the Crown. A more striking example of democracy was the levelling the three orders to perfect equality. The small size of the gathering prevented any tumultuous results from these radical methods. The Assembly divided France into eight military departments, and seven noblemen were appointed leaders, but only Rohan and his brother responded effectively. In its rôle of a "Continental Congress," the Assembly assumed sovereign powers and retained them for its own committees. No truce or peace could be concluded without its consent; it was to be represented by a committee of three in the council of the commander-in-chief; soldiers were recruited only in its name, and it appointed all the higher officers. Revenues were to be secured by appropriating the Crown's taxes, the incomes of benefices, ransoms of towns and individuals, a sixth of the spoil, the admiralty court fees, and passport fees. M. Laugel believes that the aim of this *ordre général* was not, as has been supposed by some, the establishment of a republic like the United Netherlands. It was merely a special organization to secure the triumph of their cause, and its seal bore the legend, *Pro Christo et rege.*

The details of the contest we cannot enter upon. It was a death struggle. In its religious aspect it was a struggle for guaranteed rights of religious life and worship against the encroachments of the Catholic reaction; politically it was almost the last phase of the ages-long conflict in France between the forces of consolidation and disintegration. Under the existing views consolidation meant the suppression of the Reformed. In the previous century the Protestants had their own candidates for the crown in case of victory, but now they had no one to set up against Louis. The struggle, as Richelieu clearly perceived, involved the authority of the King in his own realm; it was to determine whether the work of political unification should be completed or should fail. The end was not far when the Reformed were reduced to seek help from Spain, as they did in 1629. The movement of Louis XI. and of his great forerunners had gained too much momentum to fail now with the master hand of Richelieu behind it. The result of the war was the loss of everything the Reformed had contended for.

Rohan had no further interest in French politics, and went to Venice. There he formed the plan of purchasing from the Grand Seignior the island of Cyprus, which he de-

signed as a refuge for Protestant exiles. This novel plan was interrupted by the death of the Patriarch Cyril, who was the intermediary in the transaction. M. Laugel doubts whether this project seriously occupied him. But when we remember the historic position of his maternal ancestors, the Lusignans, as Kings of Cyprus, his devotion to the Protestant cause, and his adventurous spirit, recking little of mere expediency or practicability, it seems not unlikely that the idea may have possessed him for a time. It was while he was in Venice that most of his literary work was done. Later he entered the service of the King, and was intrusted with the occupation of the Grisons and the Valteline. Although he was highly successful for a time, lack of resources and the neglect of the home government so hampered him that his efforts failed at the end. At no time of his life is his fine conscientiousness better illustrated than in his efforts to secure to the Catholics of the Valteline their rights. We next find Rohan in the camp of Bernard of Saxe-Weimar. But the end was near. He was wounded in the foot at the battle of Rheinfelden, February 28, 1638, and died of an abscess on the brain April 13.

Although not an old man, his career was finished. Religiously, he was a thorough Protestant, but of the earlier, less factious type, and the wrangling of the Assemblies drew heavily upon his patience. Once he said he had rather preside over a pack of wolves than over an assembly of ministers. Ministerial manners have no doubt softened since that strenuous age. Rohan was as fine a specimen of the Puritan as it is possible to imagine a French nobleman becoming. Two or three passages in his well-known letter to Condé in 1628 have quite a Cromwellian flavor. Politically he belonged to the previous century; the times had grown away from him. His private life was dignified and beyond reproach in the midst of severe trials. We rise from M. Laugel's narrative feeling that in a happier con juncture of circumstances Rohan's character and abilities would have made him a far greater figure in history than he is. It is strange that he should have had to wait two centuries and a half for an adequate biography, but, doubtless, his own memoirs, which are among the very best of the time, have seemed to preempt the ground.

M. Laugel has given us a most painstaking and scholarly work, and every available printed and manuscript source has been utilized with admirable industry. An appendix contains a considerable amount of Rohan's correspondence on the political affairs of the time. One error may be noted. On p. 82 the maxim given as "Cujus religio, ejus princeps," should read, "Cujus regio, ejus religio."

A NEW EDITION OF BAGEHOT'S WRITINGS.

The Works of Walter Bagehot, M.A., and Fellow of University College, London, with Memoir by R. H. Hutton. Now first published in full by The Travelers' Insurance Company of Hartford, Connecticut. Edited by Forrest Morgan. In five volumes. Hartford. 1889.

We do not profess to understand what advantages the Travelers' Insurance Company anticipates from this publication, nor how it justifies its claim of copyright. There is no show of evidence that Mr. Bagehot's English publishers or his heirs have been consulted in the matter; nor, on the other hand, is there anything in the modest advertisement of the company's name—printed at the head of the alternate pages—that seems calculated to induce the reader to apply for a policy of insurance. As to the matter of copyright, it must be observed that Bagehot has now been gone from us some dozen years, and is beginning to loom up among the classical authors—the pets of posterity, whose reward is enduring fame, and not evanescent profit. Furthermore, his works, including many articles practically inaccessible, in magazines and elsewhere, have received an editing at the hands of Mr. Morgan that has greatly enhanced their value—an editing so careful, so appreciative, so lovingly severe, and withal so indispensably necessary, that Bagehot himself might well consider that he had come very well out of the hands of his captors—indeed, that he had got more from them than they from him.

For Mr. Morgan assures us, and he supports his assertion with abundant proofs, that the text of the previous editions of Bagehot's works is in a shockingly corrupt state. There is nothing, he says, even remotely approaching it in the case of any other English writer of high rank since Shakspere's time. In fact, Bagehot seems to have been about as indifferent and unscrupulous in matters of literary workmanship as Shakspere himself. He could not, living in these days, commit wild anachronisms and wholly disregard geography; but he invented quotations, he credited them to wrong authors, and he mangled them abominably. He wrote a rather illegible hand, and he would not even take the trouble to correct his proofs. What is more difficult for an editor to deal with is the "murdered grammar and impossible syntax" with which his works abound. His writings would have been unhesitatingly condemned by every school-teacher because they could not be parsed, and he even wrote ungrammatically in cold blood when he thought it would make his point more effective. Mr. Morgan, it appears, was quite unaware of the extent of the task that he had assumed until he began to verify Bagehot's quotations, and his groanings over the unforeseen labor are certainly excusable. But they are perhaps a little too loudly uttered; his work speaks for itself. It is in a sense its own reward, but its irksomeness will be appreciated by a considerable and increasing circle of readers whose gratitude is to be presumed.

The principles upon which Mr. Morgan has conducted his revision seem to be both scholarly and judicious. He has religiously abstained from altering what Bagehot really wrote or unquestionably meant to write. His method is best explained in his own language:

> "In no case have I meddled with the structure of a sentence in any way; in a few cases I have called attention to the entanglement of the syntax, but I have not even attempted to mend such atrocities as 'The period at which the likeness was attempted to be taken' (beginning of the English Constitution), or other like gems of English. But I do not think that even editorial fidelity or reverence for the memory of a great man . . . binds me to allow a plural noun to remain coupled with a singular verb (or vice versa), or a singular pronoun in one clause set off against a plural one in the following like clause, or a present and a past tense similarly yoked together in a most discordant union—merely because the great man did not read his proofs and a patent slip of the pen remained uncorrected. I do not believe even he, little as he cared for such things, would wish to have all the rags and tatters of his haste and slovenliness scrupulously saved up and exhibited to posterity, any more than a public speaker would care to have a phonograph record an accidental hiccough; nor do I believe that even the most devoted admirers of Bagehot, to whom every word is worth preserving as instinct with the flavor of that rich mind (among whom I count myself), care to have their senses jarred upon by such purely accidental slips."

However, to be upon the safe side, Mr. Morgan has conscientiously tabulated these changes, so that he who is so minded can reconstruct the text in its original impurity. He has also been so considerate of the needs of possible uncultivated readers as to translate all extracts from foreign languages, which has given him an opportunity to introduce from various sources some very passable renderings of Béranger. It is unnecessary to say that he has supplied a full index, which 2,700 pages of such matter as this most richly deserve, but have not hitherto had. Of the portrait which forms the frontispiece the less said the better; but the general appearance of the volumes is good, although they are a little too heavy to be comfortably held. Altogether, since, as we have shown, the sin of buying this edition of Bagehot is of an unusually venial character, we do not know how the sum of five dollars can be invested to greater advantage. Bagehot's writings upon politics and finance are pretty well known in this country, but his literary essays will probably reveal him in a new light to most of his readers.

It may be added that what the editor modestly calls his preface is in the main a critical introduction of a high order of merit. In Mr. Hutton's memoir flexibility of style becomes almost a vice; he writes charmingly and with the feeling of a personal friend, but he writes so easily that he becomes diffuse. Mr. Morgan keeps closer to the point. He too writes with affectionate reverence, but at the same time with a very concise plainness of utterance. With a good deal of his criticism we cannot altogether agree, but we are glad to have it, and should be glad to have it, under other circumstances, at greater length. We may go much further than this, and say that Bagehot himself would probably have been glad to have it, and that it would have been a great help to him. He ought to have visited this country, and, failing that, he ought to have had thoughtful Americans to talk with. So far as we know, he had none, and in consequence his views of our Constitution exhibit to some extent the weakness of those views of the English Constitution which it is one of his chief merits to have exposed. But, after all, we know much more about ourselves now than we did when he was writing about us.

That Bagehot should be generally read in this country is at the present time eminently desirable. There is more political thinking than there has been for a long time, but it is to a great extent bad thinking. It is loose and vague and highly uncritical. The insatiable craving for novelty leads people to read only the works of the latest writers, who in their turn content themselves with the suggestions of their contemporaries. One of the chief merits of Bagehot's writing is, that it always makes the reader feel that everything new is the development of something old; that one cannot understand the present or anticipate the future without knowing the past. It promotes a kind of modest and wholesome scepticism: Bagehot himself, at his best, was a modern Socrates. He never seems positive or dogmatic; he assumes an air of ignorance in order that his reader may feel on a level with him, and, having thus disarmed opposition, he states his theories in such a way that the reader feels that he might have discovered them for himself. Upon his originality it is unnecessary to dwell; as Mr. Birrell has said, he carried away with him into the next world more originality than is left in the Three Estates of the Realm. He was great because of this imaginative power; but he was persuasive because of his moderation. He understood the enormous complexity

of human institutions, the impossibility of changing the thing you mean to change without changing many things that you meant to let alone, the folly of dogmatizing upon the unknown futurity of evolution; and he induces a similar spirit of moderation in his readers. His style is admirable, because it reveals this mental attitude; he has left us in his essay on Hartley Coleridge a description of what was perhaps his own ideal as a writer:

"Many people give many theories of literary composition, and Dr. Blair (whom we will read) is sometimes said to have exhausted the subject; but unless he has proved to the contrary, we believe that the knack in style is to write like a human being. Some think they must be wise, some elaborate, some concise; Tacitus wrote like a pair of stays; some startle, as Thomas Carlyle or a comet inscribing with his tail: but legibility is given to those who neglect these notions, and are willing to be themselves—to write their own thoughts in their own words, in the simplest words, in the words wherein they were thought."

It is because men feel that it is not merely a human being, but a wise, genial, lovable, and inspiring human being, who speaks to them, that Bagehot's fame is secure.

CHILDREN'S BOOKS.—III.

Mr. Baring-Gould's 'Grettir the Outlaw' (Scribner & Welford) is one of the best and most famous of the old sagas of Iceland charmingly retold. The hero, Grettir the Strong, is undoubtedly a real person, and the saga has, accordingly, an historical background; but the narrative has been embellished by the saga-tellers with many marvellous episodes and incidents that manifestly did not originally belong to it at all, and have either been taken in from folk-tales, or have been united to it by that sort of accretion which we see in the stories of popular heroes elsewhere. The scene of action is the northwestern part of Iceland, and Norway, during the short life of Grettir, between 997 and 1031. The story is of surpassing interest, as it follows the career of the brave but unlucky Grettir in his fight with the fate that it seems impossible for him to avoid. Like a true champion of the heroic time in which he lived, his hand is always on his sword, and the fortunate possessor of the book will read with bated breath of the struggle with Karr the Old in the burial mound, the tussle with the bear and the fall over the cliff in Norway, and the brave defence, when an outlaw in Iceland, that he more than once made single-handed against the armed force that had come to slay him. In the awful fight with Glam, there is a curious echo of the Grendel episode of our own ancient English epic, the 'Beowulf.'

Grettir, like many another Icelander of his day, is also a scald, and leaves no proper occasion unused for delivering his impromptu strophes. Some of the scenes described are among the best and most characteristic, in their way, in the saga literature. When, for instance, the boat comes off to the ship, upon Grettir's return from Norway, and he hears, one after the other, of the death of his father, the slaying of his brother, and his own outlawry with a price upon his head, not a muscle quivers, but he hurls out his determination for vengeance in a verse. Grettir, finally, with many adventures, filled with hasty flights and vain pursuit, comes to the lonely island, Drangey, in the Skagafirth. Here, after twenty years of banishment, when already dying and unable to defend himself as of old, he is, at last, set upon and slain by his enemies. The story is admirably told. Mr. Baring-Gould has a keen appreciation of the spirit and meaning of the Icelandic original, and his own personal knowledge of the saga localities adds infinitely, in many places, to the interest and vividness of the narration. There is a number of spirited illustrations, and the book is, all in all, one of the very best of its kind.

That indefatigable story-teller, Mr. R. M. Ballantyne, in his latest book, 'Blown to Bits' (T. Nelson & Sons), uses the great eruption of the volcano on the island of Krakatoa, near Java, in August, 1883, for the main incidents of his tale. Naturally it reminds one somewhat of the 'Mysterious Island' of Jules Verne, and nearly equals that romance in its improbabilities. The descriptions of the phenomena connected with the eruptions, during which nearly forty thousand persons perished, are vivid and no doubt truthful, as they are derived from the recent report of a Committee of the Royal Society upon them. Mr. Ballantyne's attempts to write in dialect are very amusing. His negro talk especially is a pure creation of his own imagination.

There are five short stories in 'Tales of Daring and Danger' (Scribner & Welford), by G. A. Henty, the scenes of which are laid in India, China, the English Channel, and California. They are all well told and interesting, especially the first, an account of an adventure of an English officer with dacoits in India. The one entitled "A Pipe of Mystery" is a strange story of the manner in which two officers were rescued during the Indian mutiny by means of dreams induced by opium.

In some respects 'Jed,' by Warren L. Goss (Crowell & Co.), is the best boys' book about the Civil War that we ever read. The hero, a Massachusetts lad who, having been a drummer-boy in the regular army before the war, wins his shoulder-straps by faithful service and falls in one of the last skirmishes, is a manly fellow with a noble spirit, of whom no boy can read without being the better for it. There is an air of truthfulness about the book, also, which confirms the author's statement that the incidents narrated are real ones. The description of Andersonville Prison is an unusually powerful piece of writing, while the account of the escape of Jed and his companions possesses a thrilling interest. Notwithstanding the vivid picture of the sufferings of the Union prisoners, these are related without bitterness. The incident of help given to the fugitives by the crippled Confederate soldier, out of gratitude for kindness received in a Northern prison, is characteristic of the spirit in which the story is written.

'Redeeming the Republic' (Harper & Bros.), the third volume of Mr. C. C. Coffin's history of the Civil War, treats of the events of the first half of the year 1864. The principal topics are, of course, the Wilderness campaign of Gen. Grant, whom he leaves just beginning the siege of Petersburg, and Gen. Sherman's operations against Johnston and Hood, which resulted in the capture of Atlanta. It is hardly necessary to say that Mr. Coffin writes in a vigorous manner, and that his account of the scenes of which he was an eye-witness is particularly effective and interesting. He impresses his readers, also, with a sense of his trustworthiness. He shows clearly the bravery and heroic self-sacrifice which characterized multitudes on both sides, and never seeks to heighten the merits of the great Union leaders by belittling or abusing their opponents. He attempts, however, to relate too much, to give far too many details, and the result is very confusing. In a history of this kind, it is impossible to tell the part which each regiment or even each brigade played in a great battle, without making it exceedingly difficult to get a clear idea of what was attempted and accomplished by the army as a whole. Mr. Coffin by the way, while describing very fully other minor operations of this year, is rather reticent in regard to the remarkable campaign of Gen. Butler. The spirit which is displayed now and then is not quite so judicious as that of the previous volume, and there are signs of haste in preparation. With all its defects, however, this is, in our opinion, the best long history of the war yet written for young people. There are numerous sketch-maps and pictures, some of which are admirable specimens of the engraver's art.

If it were not stated upon the title-page that Mrs. Farmer's 'Short History of the French Revolution' (Crowell) was "for young people," we should never have classed it as a juvenile, for it is wholly unfitted, by style and treatment, for this class of readers. The history begins on page 86, with chap. iv., "Louis XVI. and the Direful Deficit." The three chapters which begin the book are taken up with an elaborate discussion of the causes of the Revolution, and—will it be believed?—a summary of the political changes of the period, down to the Consulate, and of its legislative work. Could anything be imagined better calculated to repel the young reader? When the author is fairly in her work, her aim is a correct one—a graphic picture of the successive phases of the Revolution, and much of the work is well done; but she makes the mistake, made by so many, of thinking that vigor and picturesqueness are attained by an abundant use of adjectives. She appears to have thought, also, that a great number of extracts from Carlyle, Thiers, Lamartine, Mignet, etc., would give to her work the excellences of these writers; hardly a page is without quotation marks. This method can result in nothing but scrappiness, and the total sacrifice of unity of treatment.

Mr. Edward Eggleston has given us, in his 'First Book in American History' (Appletons), a model of its kind. The history of a nation is very difficult to present intelligibly to the mind of a child, because the picturesque treatment which alone is suited to children is not easily maintained for long stretches of time, and because, moreover, children lack the capacity to follow a continuous narration, covering centuries, in which the only thread of connection is one adapted to adults—the continuity of national life and the sequence of cause and effect. For these reasons we have noticed that children do not as a rule care for national histories but only for stories of special events and personalities. Mr. Eggleston follows the right plan of associating history with biography. He selects seventeen or eighteen persons whose lives approximately cover the whole period of American history—Columbus, the Cabots, John Smith, Franklin, Washington, Jefferson, Lincoln, and others—and gives a remarkably lucid and interesting account of them. The knowledge of American history which the child will obtain from a book like this is, of course, incomplete, but so is any knowledge which he can obtain; and at any rate it is interesting, and will stay by him. The only criticism we have to make is an occasional reticence in drawing conclusions—even such as may fairly be presented to the child's mind. When it is said (p. 160) that Jackson "was the first President who put out of office those who had voted against him, and appointed his own friends to their places," a line or two to show the disastrous effects of this would start the child well on the way to civil-service reform. So (p. 185) the remark that "slavery was abolished in all the territory of the United States," might well

have been followed by some brief statement of the salutary results of this act, or at least accompanied by some definition of slavery. The illustrations are numerous, and in the finest style of wood engraving—sometimes too fine; we cannot bring ourselves to admire the "mushiness" of the cuts on pages 172 and 173, for example, even if this is the triumph of the American school.

The early history of Maryland is the main theme of 'A Colonial Boy' (Boston: D. Lothrop Co.), by Mrs. N. B. Eyster. An old house in Frederick, full of antiquities, is the scene of the story, and there are two heroes, a schoolboy of to-day and a lad the son of one of the first settlers. The former discovers a diary of the latter giving incidents in the history of the first few months of the colony. This diary, in which the author reproduces the spirit, though hardly the quaint style of those days, cannot fail to awaken an interest in a somewhat unfamiliar part of our early annals. The best chapter, however, is that which describes an unexpected visit to General and Mrs. Washington at Mt. Vernon, which is a charming piece of writing. The author, who, in the closing pages, makes an enthusiastic plea for justice to the Indians, errs, we think, in stating that Gen. Burgoyne paid "them a price for all the scalps and prisoners that they obtained." This old accusation rests on very doubtful authority.

'Kibboo Ganey' (Boston: Roberts Bros.), by Walter Wentworth, is the very improbable, though interesting, story of an expedition across the Sahara to the northern shore of Lake Tchad. The principal actors are two American boys, a negro, who has been a slave to a Southern planter and turns out to be a king, and a bulldog. Their adventures are numerous and exciting. The author promises a sequel "which will deal with the dangers and horrors of the slave-trade."

There are many charming pictures of Swedish life in the early part of the century in 'The Loss of John Humble' (Scribner & Welford), by G. Norway, which give this book an unusual interest and even value. The house of the Stockholm merchant is pleasantly pictured, while the little maiden Frida is a character of whom the reader becomes very fond. So is it with the hero, a sailor-boy, who is wrecked near the North Cape. He and his companions spend the winter on this desolate shore in a snow hut, amid privations and sufferings most graphically described. Finally they are rescued by a party of Lapps with dog-sledges, which gives the author, who appears to be a Norseman (though there is no intimation that the book is a translation), an opportunity to describe some of the customs of these rather uninteresting people. John gets safely back to his friends, but every reader of his adventures will grieve with him over the death of the gallant Capt. Erlingsen.

MISS ALCOTT.

Louisa May Alcott: Her Life, Letters, and Journals. Edited by Ednah D. Cheney. Boston: Roberts Brothers. 1889. Pp. 404.

THE life of Miss Alcott is one more instance—if any more were needed—of how difficult a task is the search for happiness. In spite of the great success of her books, the strongest impression that is left, after reading her letters and her journals and the additional matter supplied by Mrs. Cheney, is that her life, as a whole, was very far from successful, as regards any satisfaction that she got out of it for herself. At the time when she was making countless children, in other countries as well as in this, happy with her stories, she was herself broken down with ill-health, and not in a condition to enjoy her hard-won ease.

Her life consists of two parts: up to the age of thirty she was weighed down by poverty and by the hard work of supporting her family by writing sensational stories; at that time (1862) she went to the seat of war as a hospital nurse, and the 'Hospital Sketches' which her experience there gave rise to laid the foundation of her more solid reputation as a writer, but she never fully recovered from the effects of the typhoid-pneumonia with which she was sent home sick. She says: "I was never ill before this time, and never well afterward." As her earnings became more magnificent, the necessities of her family increased with equal pace. One sister became a widow with two boys to educate; one had to be sent to Europe to study art; she was unwilling that her father or her mother should lack for any comfort. There are people who are not made unhappy by ill-health and over-work, but Miss Alcott was not one of them. To sacrifice one's whole life to one's parents and sisters is so far above the ordinary level of human virtue that we have no right to demand in addition that the victim should go wreathed in smiles to the very end. There is a picture in 'Little Women' of a scene of passionate weeping on the part of Jo because her sister Amy and not herself is chosen by Aunt March to accompany her to Europe; and throughout this life there is an undercurrent of a feeling of injustice because one who is such an unremitting bestower of active happiness upon others receives so little for herself. It is one more instance of the uncertainty of virtue (any more than selfish pleasure-seeking) being its own reward, to a nature which is not yet sufficiently developed to feed upon such ethereal food.

This memoir cannot, as a whole, be pronounced interesting reading. As a faithful *précis* of one more experiment in the art of carrying on a life, it has a permanent value; but it is too largely made up of an account of the separate amounts received from publishers for the successive stories and books, not to be a little monotonous. Miss Alcott seems to have had no intimate friends outside of her own family, and of the interesting people that she met there is little record in that part of her diary which is preserved. On dining with the elder Henry James, she says of his son (who had just reviewed 'Moods' for the *North American Review*), "Being a literary youth, he gave me advice, as if he had been eighty and I a girl. My curly crop made me look young, though thirty-one." In 1868 she was still living in her sky-parlor in Boston and sewing her own nine-penny dresses (p. 198). In May of that year she writes: "Mr. N. wants a girl's story, and I begin 'Little Women.' . . . I don't enjoy this sort of thing. Never liked girls, or knew many, except my sisters; but our queer plays and experiences may prove interesting, though I doubt it." And in June: "Sent twelve chapters of 'Little Women' to Mr. N. He thought it dull; so do I. But work away and mean to try the experiment; for lively, simple books are very much needed for girls, and perhaps I can supply the need." In 1872 she received $3,000 from the *Christian Union* for 'Work,' and she was obliged to write it three sheets at once, on impression paper, because Roberts of Boston and Low of London were also eagerly waiting for copy.

Girls were everywhere very enthusiastic over her books, and eager to take her hand. At the Woman's Congress in Syracuse, one energetic woman grasped her hands and exclaimed: "If you ever come to Oshkosh, your feet will not be allowed to touch the ground. You will be borne in the arms of the people! Will you come?"

Of her methods of work, she says:

"I never had a study. Any pen and paper do, and an old atlas on my knee is all I want. Carry a dozen plots in my head and think them over when in the mood. Often lie awake and plan whole chapters word for word, then merely scribble them down as if copying. Used to sit fourteen hours a day at one time, eating little and unable to stir till a certain amount was done. Very few stories written in Concord; no inspiration in that dull place; go to Boston, hire a quiet room and shut myself up in it."

Miss Alcott was a strong advocate of the suffrage for women, and was the first woman to register her name as a voter in Concord. Throughout her life she was a constant playgoer, and a frequent actor in private theatricals; at one time she was upon the point of going upon the stage. She had little sympathy with her father's transcendental philosophy. She had too keen a sense of humor to take very seriously the Summer School of Philosophy at Concord, in which her father found the high-water mark of his serene and peaceful existence. Of a club-meeting in Boston, she writes:

"Had a very transcendental day yesterday, and at night my head was 'swelling wisibly' with the ideas cast into it. The Club was a funny mixture of rabbis and weedy old ladies, the 'oversoul' and oysters. Papa and B. flew clean out of sight, like a pair of Platonic balloons, and we tried to follow, but couldn't."

Mrs. Cheney has performed her task with great discretion and good taste—with warm sympathy for her subject, but without exaggeration of the claims which her books make for permanent recollection.

The atmosphere of Miss Alcott's story-books is not that in which the most careful mother wishes her children to be brought up. It is not that slang and occasional lapses from a strict grammar are in themselves so very objectionable, but that they are the natural accompaniments of a mental tone which is more or less destructive both of a delicate æsthetic feeling and of a careful scientific mode of thought. As an escape from the mechanical and the goody-goody kind of children's books, which was once almost the only kind that existed, they were books to be thankful for; and as a faithful record of one phase of New England life, they have a real value; but there are now (since all have got the seed) many books to be had for children which are equally real and vivid, and of a more delicate flavor. And there are still a few old-fashioned children in existence who eat porridge and bread and milk, and to whom Miss Edgeworth's stories are a natural and a palatable mental diet.

A Book of Vagrom Men and Vagrant Thoughts. By Alfred T. Story. London: Authors' Coöperative Publishing Co. 1889.

AUTOLYCUS is the patron saint of but a few gypsying books, and the freshness of spirit in this one makes it welcome for the hour which is all it claims. The tramp is so frequently set before us as a moral and philanthropic object that it is a relief to find him again with only picturesqueness for his attribute, and, so far from being a dangerous nuisance, the terror of housewives, once more represented as harmlessly entertaining or even humbly useful. But we fear Mr. Story's tramps belong to the past. For one thing, they all have a business: they are musicians, or peddlers, or ballad-singers, or even itinerant preachers; one of them is a tinker, and another a grave-digger, though why this last is included among "vagrom men" passes our guessing, since

surely none is more bound to his acre for his trade. Sparrows, too, are embraced in the list, and the ass (an encomium after Victor Hugo's poem). Strawberries, dolls, and bridges, which are other titles of these little essays, we take to be the subjects of Mr. Story's "Vagrant Thoughts."

The author's aim is modest and he succeeds in entertaining the reader. The sentiment is helped by reminiscences of the village whence he began his journey in life, with its mill-wheel and its weathercock, and by the friendliness for the poor and outcast which runs like a strand through the chapters. Anecdote is also used with effect—village tragedies that remind one of Guy de Maupassant's peasant stories; and a touch of the quietest humor occasionally lights the gossiping page. The whole is entirely English in landscape and character, and takes one back to the roadsides and cottages of minor English writers, who succeeded so much better in rendering the lot of the country creatures than Wordsworth did with all his fine theories and high morals, in which he forgot and lost "the primal sympathy" with simple man. The book is a slight work, but has individuality, and in an unpretending way makes us acquainted with its author's experiences. It winds up, unfortunately, with an extraordinarily bad copy of verses in the worst Peter Bell style.

Children of the State. By Florence Davenport-Hill. Edited by Fanny Fowke. 2d edition, revised and enlarged. Macmillan.

SELDOM can an author have the satisfaction of recording in the second edition of a work the extensive adoption of theories and methods advocated in the first, as can Miss Florence Davenport-Hill. As early as 1841 a Royal Commission had been appointed to inquire into the condition of pauper children, who, in England at least, were brought up in schools within the workhouses. The result of that inquiry was the removal of such schools from the workhouse enclosure to the country districts. These large schools, however, soon developed unexpected evils of their own, and their efficacy was questioned by certain enlightened observers, who set about discovering the source of these evils and the best way of getting rid of them. As early as 1846, Miss Mary Carpenter had begun her work "for the perishing and dangerous classes," and had written and spoken in behalf of home life for pauper children; in 1862 Mrs. Archer had placed a few such at board in her own parish, and Miss Boucheret had made a similar experiment.

Up to this period we find plenty of criticism of existing institutions and a few isolated experiments in more enlightened methods, but no general adoption of a different policy by the Government. In 1865 Miss Frances Power Cobbe had called attention to the forlorn condition of pauper girls, and to the plan pursued in Scotland for bringing up the "children of the State." Adopting Miss Cobbe's title for a treatise which was intended for publication in a magazine, Miss Florence Davenport-Hill collected so large an amount of information upon the subject as to fill the modest volume which appeared in January, 1868. From this book Col. Grant of the Bath Board of Guardians was led to examine into the condition of pauper children, and his zeal and persistence in promoting the boarding out greatly aided the cause. Miss Preusser of Windermere learned from it what was already being done in Ireland and Scotland as well as on the Continent, and in 1870 obtained the signatures of more than 3,000 Englishwomen to a memorial, which was followed in November of the same year by a very important order of Parliament, sanctioning the boarding out of orphan and deserted children beyond their own unions, under the care of certified committees. Thus we find the system recommended by Miss Hill in 1868 adopted in its essential features in 1870 as a part of the Government System of Poor Relief, while the Poor Law Guardians of each district were left free to decide to what extent boarding out should be substituted for institutions within walls for their beneficiaries.

In consequence of the discussions which arose between the advocates of the old and of the new systems, Mrs. Nassau Senior was appointed by the President of the Local Government Board to report "as to the effect on girls of the system of education at pauper schools." Her report of 1874 illustrated and confirmed the statements in Miss Hill's book. She found that these girls too often proved inefficient and incapable when placed at service, and, having no other home to turn to, came back sooner or later to the workhouse unions, or dropped out of sight. Mrs. Senior's conclusions were strongly in favor of boarding such children out at an early age in private families of the working class.

Her recommendations met with bitter opposition from many quarters, which were answered by able arguments in their favor. Prof. Henry Fawcett, with other political economists, had opposed the plan from a fear lest it should render pauperism more attractive to parents, and give children of paupers an unfair advantage over those of the self-supporting poor, whereas the usual effect of boarding out was found to be the withdrawal of children by their relatives, who found in that system none of the allurements of the big school. As time went on, proofs multiplied of the soundness of the system, and we learn that in May, 1882, Mr. Fawcett, with characteristic candor, declared that his apprehension of evil was removed, and that the plan (provided, of course, that it was wisely administered) had won his approval. He wished his changed convictions to be made known (p. 204).

On January 1, 1888, there were more than a quarter of a million pauper children in England and Wales alone, constituting over one-third of the paupers of the country. The fact that these apparently insignificant little creatures are incapable of maintaining their own rights should appeal to our readers, who will doubtless agree with Miss Hill that the worth of different methods of education is to be gauged by their success in attaining the following objects, viz.: "(1) of depauperizing the children by enabling them to take their place upon an equal footing among the well-conducted laboring classes; (2) of securing to them the friendly interest of persons able to afford the protection and advice needful amid the temptations and difficulties with which they will inevitably be beset after they go into the world; (3) of affording such conditions of happiness in childhood as are consonant with justifiable expenditure from the public purse" (p. 324).

No one can read without righteous indignation of the sufferings of orphans in other countries in the Middle Ages, and the shifts that were resorted to to obtain money for them—first, by authorized begging; afterwards by the cruelly hard work of the children, who had to maintain themselves and the institutions. "Their only recreation was singing, chiefly hymns and psalms, and even this was at one time turned to account, for the music of the orphans was believed to be an excellent cure for all kinds of bodily aches and pains, a faith revealed by entries of payments for singing songs to different persons that they might obtain relief from toothache, bad eyes, etc." (p. 292). These wicked practices have long been disused, but the readers of Miss Hill's book can hardly fail to perceive the injustice that has been tolerated in later days as well. Under the guise of charity, and with benevolent intention, we have simply caged our pauper children, instead of giving their feeble powers a chance to expand under the influence of decent family life, with its homely cares and interests. We learn that this has been done at an unnecessarily high cost to the taxpayer, often rendering him but poor returns for his investment. On the other hand, we learn from these pages that the children of the State, when boarded out at an early age, outgrow their dependent condition, and become in most instances self-supporting members of the community, each provided with a home to which to turn for sympathy; in many cases working at a trade, and paying their own board to their foster parents.

The simple headings of the chapters must make further comment unnecessary in order to induce our readers to study for themselves this interesting volume, while its admirable index will be of value to special students: "The Workhouse as Home and School"; "Separate and District Schools"; "State Aid and Individual Help"; "Boarding Out in Ireland and Scotland"; "Boarding Out in England"; "Children of the State in the United States"; "Experience of the Colonies"; "Children of the State in Foreign Lands": "Pauper Children," and "Ins and Outs."

Hints to Travellers. Edited by D. W. Freshfield and Capt. W. J. L. Wharton, R.N. London: Royal Geographical Society. 1889. xiv.-430 pp. 8vo. Maps and illustrations.

IN 1854, in consequence of the numerous questions addressed to them by intending travellers, the Council of the Royal Geographical Society requested the late Admiral Fitzroy and other gentlemen to consider what outfit might best be recommended to explorers. Their report was printed in the Journal of the Society, and separately circulated in pamphlet form under the title of 'Hints to Travellers.'

The exhaustion of the edition and its usefulness led, ten years later, to the preparation of an enlarged and revised work of the same nature by a Committee of the Council under the chairmanship of Sir George Back. Other editions followed in 1871 and 1878. The present edition has for its first object to furnish such help as may be possible within the compass of a convenient pocket book to the intelligent explorer who, in the hope of adding to geographical knowledge, has been at some pains to acquaint himself with the use of instruments. The hints on surveying, which form the principal portion of the work, have been contributed by Mr. Coles, the Society's map-curator and instructor in practical astronomy and surveying, formerly of the Royal Navy.

The high character of the work is indicated by the names of the contributors. Thus we find Mr. W. T. Blanford and Mr. E. B. Tylor, respectively, furnishing the chapters on Geology and Anthropology. Mr. H. F. Blanford has remodelled the chapter on Meteorology. The chapter on Photography in the last edition was the work of Mr. W. F. Donkin, who, in the High Alps, had had exceptional experience in taking photographs under circumstances of great difficulty both as to transport and exposure. This chapter has now been brought up to date by Capt. Abney. Surgeon-Major Dobson has contributed valuable notes on medical

treatment and precautions. These contributions have not only been prepared by experts, but have been, before printing, reviewed by competent independent authorities on the several topics, with the consent of the contributors. Thus has been prepared a really invaluable compact little handbook, with flexible covers, of pocket size, printed on strong thin paper, and provided with two stellar charts and one of the lines of equal magnetic variation for the year 1890.

The chapter on Surveying is an excellent little treatise, in which many modern improvements for reconnaissance work have been incorporated. We think the stress laid on the use of the plane-table and the full explanations of its methods in field work an advance over any handbook of this kind yet printed. More emphasis might advantageously be put on the usefulness of the telemeter, or stadia, here referred to under the name (less familiar to American surveyors) of the tacheometer. The British surveyors are far behind those of the Continent and of America in their applications of this device, which is really the most useful and rapid means of making reconnaissance surveys yet invented. It would be well, also, to point out that the explorer may do away entirely with the glass covers of his artificial horizon in sextant work. A light wooden frame covered with gauze is equally efficient as a windbreak, and introduces no aberrations into the observations. There is no good reason why glass covers should ever be needed.

Under Outfit, it will be observed that the British explorer has a general tendency to paraphernalia. Among other things, "Tuckett's Insect Puzzler" may be referred to as an ingenious device which many of our campers would find convenient in most parts of America, during "fly time."

This little manual will be found useful, not merely for travellers and explorers, but for those who may spend a summer month in camp, may visit the frontier on business, or seek the woods for fish or game. While making no pretension to exhaustiveness, it covers well a good deal of the field, its several parts are prepared by able hands, and its usefulness is obvious. With this and the Admiralty 'Manual of Scientific Enquiry' most explorers would be sufficiently equipped in the matter of text-books.

A Lenâpé-English Dictionary. From an anonymous MS. in the archives of the Moravian Church at Bethlehem, Pa. Edited, with additions, by Daniel G. Brinton and Rev. Alb. Seqaqkind Anthony. Philadelphia: Historical Society of Pennsylvania. 1889.

No individual of the Delaware or Lenape tribe is now living in their ancient domain along the Delaware River, in New Jersey and in the eastern hilly portions of Pennsylvania; they have retreated to the wilds of Canada, to Lake Ontario, and to the northeast of the Indian Territory, in which tract about one-half of the seven hundred Lenape living there in 1880 spoke the native language. The Delawares are better known, and hence are more popular with the American public than many other tribes equally gifted and of the same prowess in war, simply because they have found an historian and others not. Ethnologists of the present day are endeavoring to atone for this injustice by studying the manners and customs of the more obscure American tribes, and by showing the public why they are entitled to as much consideration as the more "celebrated" national bodies.

The Delaware language is transmitted to us mainly in translations of Scripture and devotional books; the only extensive dictionary of it, that of D. Zeisberger, has been published by the liberality of Prof. Eben N. Horsford at Cambridge, Mass. (1887). Heckewelder's volume upon the ethnography and language of the tribe contains the historic information referred to above. While these authors have acquainted us with the Minsi, or literary dialect, now spoken by the majority of the people, another dictionary is now for sale containing the Unami dialect, and embodying about 3,700 terms recorded by an anonymous author. It is a handsome little volume, forming the first fascicle of the "Pennsylvania Students' Series," now in course of publication by the Historical Society of Pennsylvania.

The manuscript is the property of the Moravian Church at Bethlehem, Pa.; it is in the handwriting of the Rev. Mr. Kampman, who was missionary among the Canadian Delawares from 1840 to 1842, and made his copy at that time. Kampman did not know whose manuscript he was copying, but the preface of the new volume suggests that possibly a former missionary to the Delawares of Canada and to the Ojibways, the Rev. Christian Frederick Dencke, who died in 1839, was the author. While copying the manuscript of Kampman, more words were added from Zeisberger, Heckewelder, and Ettwein, and these additions, few in number, were made distinct from the rest by the initials of the contributors' names. After this, the manuscript was submitted to a native missionary of the Lenape, the Rev. Albert Seqaqkind Anthony, residing at the Iroquois reservation near Brantford, Ontario, Canada. Anthony suggested a considerable number of additions and emendations, all of which were adopted and duly distinguished. By presenting to the students a dialect of Delaware new to them, the book fills a gap in our linguistic literature, and in recommending it to our readers we at the same time express the wish that the next dictionary of that language may be conceived and executed from an ethnological point of view, by which alone full justice can be done to the rich linguistic treasures of any of our Indian languages.

Military Miscellanies. By James B. Fry, Brevet Major-General, U. S. A., retired, etc. Brentano's. 8vo, pp. 528.

THIS is a collection of papers published by Gen. Fry from time to time in military periodicals, magazines, and reviews. The articles embrace a wide range of topic and discussion, solid and light, but always instructive and entertaining. Gen. Fry has done well to collect them into a permanent volume, where they can be easily found as part of the material which history will always prize. They will be acceptable to all who are interested in the discussions arising out of the history of the war, for the treatment of theoretic questions is always clear and strong, and the controversial matter is handled with a sharp and lively pen. The author's opportunities for knowledge of the "inside history" of affairs in the War Department at Washington were exceptionally good, and some of his reminiscences are unique as illustrations of the character of Lincoln, Stanton, Grant, and other great figures in the war period.

VOL. XLIX.—NO. 1274. THURSDAY, NOVEMBER 28, 1889. PRICE 10 CENTS.

BOSWELL'S JOHNSON. *Edition de Luxe.*

Boswell's Life of Johnson, including Boswell's Journal of a Tour to the Hebrides, and Johnson's Diary of a Journey into North Wales. Edited by George Birkbeck Hill, D.C.L., Pembroke College, Oxford. *Edition de Luxe*, 300 copies printed, each copy of which is numbered. In six volumes, large 8vo, half leather, gilt tops, and uncut edges. With many portraits, views, facsimiles, etc. (*In a handsome box.*) Price, $30.00.

EXTRACTS FROM AN ARTICLE BY GEORGE WILLIAM CURTIS.

This superb edition of Boswell is edited by Dr. George Birkbeck Hill, and is the most complete, comprehensive, and satisfactory ever issued. Boswell's book, and Johnson himself, have been together a passion with Dr. Hill. For many years he has studied the literature and history of Johnson's time with reference to him, and he has brought to the task of editing Boswell not only unrivalled knowledge, but a certain spirit of devotion akin to Boswell's, which has added largely, in Boswell's way, to the value of the work. Dr. Hill says of Johnson: "I have sought to follow him wherever a remark of his required illustration, and have read through many a book that I might trace to its source a reference or an allusion." The new edition, therefore, is Boswell richly illuminated and illustrated. . . . The feeling of the reader of this latest and magnificent edition of Boswell will be an affectionate regret that so true a lover of books as Johnson could not have seen this noble form of the book of which he is himself the subject. . . . But it must be many years before any lover of Johnson or student of his times and of general literature will be able to add materially to the value of this edition.

AMERICAN POLITICS IN THEORY AND PRACTICE.

Curtis on the Constitution.

Constitutional History of the United States from their Declaration of Independence to the Close of their Civil War. By GEORGE TICKNOR CURTIS. To be completed in Two Volumes. Vol. I. now ready. pp. xiv., 774. 8vo, Cloth, uncut edges and gilt top, $3.00.

The first volume of this important work contains the whole of Mr. Curtis's 'History of the Origin, Formation, and Adoption of the Constitution of the United States, with Notices of its Principal Framers,' which was first published more than thirty years ago, and has now been carefully revised.

It is a work which should be in the library of every citizen who desires to know the history of the Government under which he lives.—*Chicago Herald.*

Mr. Curtis is rarely qualified by ability, learning, and experience for the task he has here undertaken, and, as a result of his twenty years' labor, his work will constitute a most valuable addition to what has been already published regarding the history of our Government and jurisprudence.—*Washington Post.*

Thayer's Kansas Crusade.

A History of the Kansas Crusade: Its Friends and Its Foes. By ELI THAYER. With an Introduction by the Rev. EDWARD EVERETT HALE. pp. xxii, 286. 12mo, cloth, $1.50.

Eli Thayer was the originator and organizer of the Emigrant Aid Company. His zeal and labors in its behalf were great and unselfish, and the results he achieved were vast and far-reaching. . . . His account of the organization and methods of the company has its obvious value as a part of the history of the fall of slavery. It is an interesting story, and to many it will come as something like news.—*N. Y. Times.*

A highly interesting and spirited volume, and one which, while certain to provoke controversy, will contribute towards the settlement of more than one vexed question.—*N. Y. Tribune.*

Bancroft's Van Buren.

Martin Van Buren to the End of his Public Career. By GEORGE BANCROFT. pp. viii., 239. Crown 8vo, Cloth, Uncut Edges and Gilt Top, $1.50.

In our judgment none of Mr. Bancroft's writings is more certain to become a classic in American literature than his 'Life of Martin Van Buren.'—*Churchman, N. Y.*

It is [illegible] that a biography has been made under conditions so calculated to i[illegible] worthiness as regards statements of fact. The author is himself [illegible] competent surviving witness in regard to a large portion of Van B[illegible]blic life; the documentary materials of which he has availed himse[illegible] supplied by Silas Wright, who was the most able, intimate, and fa[illegible] Van Buren's co-workers in State and national politics; and finally [illegible]moir, when completed, was inspected and approved by Van Buren [illegible]. It would, therefore, seem impossible to exaggerate the value of [illegible]e data collected in this volume on the score of authenticity.—*N. Y. Sun.*

Public Library

Stickney's Political Problem.

The Political Problem. By ALBERT STICKNEY. pp. vi., 189. Post 8vo, Cloth, $1.00.

In the second chapter Mr. Stickney considers the practical results of the theory of democratic government, and points out the evils attending its practical working with striking force. . . . Each one of these conclusions is strongly fortified and put beyond the possibility of successful denial. This part of the work alone is worth the closest study of every American. . . . Mr. Stickney's proposed reforms will startle many, but they are worth attention. . . . Mr. Stickney writes simply and forcibly, and treats a matter about which something must be done if we would have enduring national life. *Chicago Times.*

The above works are for sale by all booksellers, or will be sent by HARPER & BROTHERS, *postage prepaid, to any part of the United States, Canada, or Mexico, on receipt of price.* HARPER'S NEW CATALOGUE, *a descriptive list of over 3,000 volumes, sent, post-paid, on receipt of Ten Cents.*

Published by HARPER & BROTHERS, New York.

PENNSYLVANIA, Bryn Mawr.

BRYN MAWR COLLEGE, TEN MILES from Philadelphia. A College for Women. The Program, stating the graduate and undergraduate courses of study for the academic year, will be sent on application.

PENNSYLVANIA, Philadelphia, Chestnut Hill.

MRS. COMEGYS AND MISS BELL'S English, French, and German Boarding School for young ladies reopens Sept. 30, 1889.
Students prepared for College. Ample grounds for outdoor exercise.

PENNSYLVANIA, Philadelphia, 1350 Pine St.

MISS ANABLE'S BOARDING AND Day School for Young Ladies will reopen Sept. 26.

Teachers, etc.

A YALE GRADUATE, WHO HAS had unusual success in fitting boys for college, desires to establish (or otherwise obtain the principalship of) a classical school in a favorable locality. A. M., care of the *Nation*.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut Street, Boston.

*HOLMES HINKLEY, A.M., 11 EVE-*rett St., Cambridge, Mass., will prepare boys for the fall examinations, and make tutoring engagements for the winter.

PARENTS GOING ABROAD, OR Guardians, may find a pleasant home for two little girls, with care for their health and welfare, and instruction in the English branches, drawing, and painting. Music and languages extra. The highest references given and required. For terms and particulars address "E.," office of *Nation*.

School Agencies.

THE BOSTON, NEW YORK, AND Chicago Teachers' Agencies. Circular free. EVERETT O. FISK & Co., 7 Tremont Place, Boston; 6 Clinton Place, New York; 106 and 108 Wabash Ave., Chicago.

SCHERMERHORN'S TEACHERS' Agency. Oldest and best known in U. S. Established 1855. 3 East 14th Street, N. Y.

Professional.

TO EDITORS—A YOUNG MAN, A graduate of Edinburgh University, is open for an engagement after January 1, to write a political or literary letter from Boston. Address, SCOTT, P. O. Box 291, Lexington, Mass.

THE DIVINITY SCHOOL OF

HARVARD UNIVERSITY

For the year 1890–91, two resident (Williams) Fellowships of $500 each are offered to graduates of Theological Schools who intend to devote themselves to the Christian Ministry. These Fellowships are designed to encourage advanced Theological work of a high order. Applications, accompanied by testimonials and specimens of work, must be made to the Dean before May 1, 1890.

C. C. EVERETT, Dean.

*FOR SALE.—THE GREYLOCK IN-*stitute School property at South Williamstown, Mass. Property consists of Institute building, gymnasium, and thirty-six acres of land. Location unsurpassed in healthfulness and beauty. The building was erected expressly for school purposes and will accommodate sixty pupils. Farm under high cultivation, well stocked with fruit trees, and all necessary buildings. For particulars address C. H. READ, North Adams, Mass.

GOLD MEDAL, PARIS, 1878.

W. BAKER & CO.'S

Breakfast Cocoa

Is absolutely pure and it is soluble.

No Chemicals

are used in its preparation. It has *more than three times the strength* of Cocoa mixed with Starch, Arrowroot or Sugar, and is therefore far more economical, *costing less than one cent a cup.* It is delicious, nourishing, strengthening, EASILY DIGESTED, and admirably adapted for invalids as well as persons in health.

Sold by Grocers everywhere.

W. BAKER & CO., Dorchester, Mass.

KNABE

PIANOFORTES.

UNEQUALLED IN

TONE, TOUCH, WORKMANSHIP, AND DURABILITY.

WILLIAM KNABE & CO.,

Baltimore, 22 and 24 E. Baltimore St. New York, 148 5th Ave., near 20th St. Washington, 817 Market Space.

ONEITA

The most agreeable Table Water with medicinal properties in the market. Superior to any other known mineral water for table use, and without an equal for Rheumatism, Gout, Dyspepsia, Kidney and Liver Troubles.
Send for pamphlet with analysis.

ONEITA SPRING COMPANY,

UTICA, N. Y.

J. M. BELL & CO., 31 Broadway, New York.

Letters of Credit. We buy and sell Bills of Exchange on and make cable transfers of money to Europe, Australia, and the West Indies, also make Collections and issue Commercial and Travelling credits, available in all parts of the world.

Brown Brothers & Co., Bankers.

NO. 59 WALL STREET, NEW YORK.

The Book of the Season.

GREAT SENATORS OF THE UNITED STATES Forty Years Ago (1848 and 1849). With Personal Recollections and Delineations of Calhoun, Benton, Clay, Webster, Gen. Houston, Jefferson Davis, etc. By Oliver Dyer. Robert Bonner's Sons, Publishers. Price, $1.

'Great Senators' is emphatically the book of the season. The critics and reviewers give it unstinted praise. The New York *Tribune* concludes a two-column review of it thus:

This book will be read with the keenest pleasure by all who are old enough to have been brought up in the traditions of half a century ago, while it can be commended to young men as a treasure-house of information concerning perhaps the most striking and able group of statesmen the Union has known.

The New York *Times* says:

Mr. Dyer's relation with the great Senators of forty years ago was one very fortunate for the acquiring of fresh impressions. It is impossible to read his reminiscences without being aware that the impressions he reports are genuine.

The New York *Sun* says:

Among the recent contributions to American history none is worthy of more serious attention than a volume entitled *Great Senators*, by Oliver Dyer.

It would be easy to fill columns with effective extracts from this volume, but we must confine ourselves to two or three examples of incisive and impartial delineation. Mr. Dyer's analysis of Webster's individuality is the most searching that we have seen—indeed, it is the only one which accounts at once for the triumphs and the shortcomings of the great parliamentary champion of the Union.

The New York *Press* says:

In the book, "Great Senators of the United States Forty Years Ago," are told, as Dyer only could tell, stories of Calhoun, Benton, Clay, Webster, Houston, and Jeff Davis, with personal recollections and delineations. The personal descriptions given by Dyer of these great men are photographic in precision and lifelike as touched up by the anecdotal stroke of a master.

"Great Senators" is supplied to the trade by Robert Bonner's Sons. Any one who does not find "Great Senators" at the bookstores can obtain a copy, postage paid, by sending a dollar to Robert Bonner's Sons, corner of Spruce and William Streets, New York.

*POSTAL DICTIONARY.—A HAND-*book of laws and regulations of the Post-Office Department, postage rates, etc., etc., comprising 150 titles in alphabetical order, besides detailed index. Sold by all booksellers, or mailed on receipt of price, 15 cents, by THE EVENING POST, New York.

THE CENTURY MAGAZINE

The December number of *The Century Magazine* is remarkably varied in its contents, and is especially interesting. Among the most important articles are:

Selections from Wellington's Letters: now published for the first time. This correspondence extends over a period of several years—to within a fortnight of his death—and it is noticeable as showing the gentler characteristics of the Iron Duke. (*Fully illustrated by many pictures and portraits.*)

The Autobiography of Joseph Jefferson, which began in the November *Century*, increases in interest. The present installment is full of delightful reminiscences of the Wallacks, John E. Owens, Burton, Burke, and others, besides containing some curious adventures of the author. Illustrated with portraits. New York *Commercial Advertiser* says: "It is as rattling good reading as his 'Bob Acres' is rattling good acting."

The New Croton Aqueduct. The first complete and fully illustrated paper on this great triumph of modern engineering appears in the December *Century*. A feature of the illustrations is the reproduction of photographs showing the caves which were filled by the contractors with air at the rate of $5.00 per cubic yard, to the tune of a million dollars.

The Paris Panorama of the Nineteenth Century was one of the features of the Paris Exposition. It is reproduced in miniature. The text is by Alfred Stevens and Henri Gervex, who conceived and executed the project.

Revelation and the Bible is the first paper of a timely and important series on the general subject of "The Nature and Method of Revelation," and is written by Professor Geo. P. Fisher of Yale.

The Fall of the Rebel Capital, —and Lincoln in Richmond, are striking chapters in the Lincoln history.

Two Serial Stories. "Friend Olivia," by Amelia E. Barr, and "The *Merry Chanter*," by Frank R. Stockton, are in the very best vein of two of the most popular writers of the day.

Two Complete Short Stories. In "Captain Joe," Mr. F. Hopkinson Smith tells in the form of a story one of the most heroic deeds of modern times, and "The Taming of Tarias" introduces a new writer to *The Century*. The scene is laid in the Platte Purchase.

There are Christmas Poems in the December *Century*, as well as many others, including one by E. C. Stedman of Fortuny's famous "Spanish Lady," accompanied by a full-page engraving of the picture. Among the contributions are articles on "Nature and People in Japan," by Wm. Elliot Griffis, with pictures by Wores; "Pundita Ramabai," by Elizabeth Porter Gould, etc., etc.

The Century for January will open with a remarkable paper, by Amelia B. Edwards, describing recent astonishing discoveries in Bubastis, Egypt. *Fully Illustrated.* The authors of Lincoln, in the same number, describe in a most graphic manner his assassination and death.

Future Numbers of the Century will contain "New Studies in Astronomy," "Lick Observatory," La Farge's "Letters from Japan," beautifully illustrated by the author; "Present-day Papers," by Bishop Potter, Hon. Seth Low, Prof. Ely, etc.; "The Women of the French Salons," *profusely illustrated*; "Prehistoric America"; "The Serpent Mound"; "Ancient Fire Worship," etc.; Pictures from the Old Masters, by T. Cole; the most notable series of its kind ever executed, etc., etc.

Subscribe Now. Yearly subscribers to *The Century* may count on receiving nearly 2,000 pages of the best and most entertaining reading, enriched with illustrations by the leading artists and engravers of the world. Terms, $4.00 a year, in advance; 35 cents a number. Buy of any bookseller or newsdealer, or subscribe through them or direct. Remit by check, draft, registered letter, money or express order.

The First of the Bourbons.

1589—1610.

By CATHERINE CHARLOTTE LADY JACKSON, author of 'Old Paris,' 'Court of the Tuileries,' etc., etc. 2 vols., crown octavo, with illustrations, $9.00.

Celebrated Race Horses, English and French.

Pedigree, Description, History.

An account of thoroughbred stallions and French mares which appeared on the turf from 1764 to 1887. By S. F. TOUCHSTONE. Translated from the French by C. P. Pitman. With 60 colored plates and 134 vignettes, oblong folio, $40.00 net.

The Home of a Naturalist (in the Shetland Isles).

By the Rev. BIOT EDMONSTON and his sister, JESSIE M. E. SAXBY. With portrait and illustrations. 12mo, cloth, $2.50.

Contents.—The Head of the House—The Doctor—Our Mother's Room—Our Pets—Seals and Seal Hunting—Yule Time—Folk Lore of Yule—A Cliff Adventure—My Dog Slop—Weird Sisters—Osla's Wedding—etc., etc.

The Book:

ITS PRINTERS, ILLUSTRATORS, AND BINDERS. From Gutenburg to the Present Time. By HENRI BOUCHOT of the National Library, Paris. With a Treatise on the Art of Collecting and Describing Early Printed Books, and a Latin-English and English-Latin Topographical Index of the Earliest Printing Places. Edited by H. GREVEL. Containing 172 facsimiles of Early Typography, Book-Illustrations, Printers' Marks, Bindings, etc., etc. *Limited edition.* Royal 8vo. Cloth, $7.50 *net.*

MADAME D'ARBLAY.

Fanny Burney and Her Friends.

Select Passages from her Diary and other Writings. Edited by L. B. SEELEY, author of 'Horace Walpole and His World.' With 9 copper-plates after Reynolds, Gainsborough, Copley, and West. Crown 8vo, cloth, $2.50.

New Volumes of Bohn's Library.

Arne and the Fisher Lassie.

By BJÖNSTJERNE BJÖRNSON. Translated from the Norse by WALTER LOW. 12mo, $1.40.

The Thoughts of Blaise Pascal.

Translated by C. KEGAN PAUL. New Edition. $1.40.

Flavius Josephus, Antiquities of the Jews.

Whiston's translation. New edition, revised by Rev. A. R. Shiletto. With topographical notes by Sir C. W. Wilson. 3 vols. 12mo, $4.20.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

The American Railway.

Its Construction, Development, Management, and Appliances. Written by the most eminent authorities in all branches of railway work. With 225 Illustrations, 13 Maps, 19 Charts, many being colored, and a full Index. Bound in half leather. 8vo. $6.00 net.

CONTENTS:

INTRODUCTION. *By Judge Thomas M. Cooley,* Chairman of Inter-State Commerce Commission.
THE BUILDING OF A RAILWAY. *By Thomas Curtis Clarke.*
FEATS OF RAILWAY ENGINEERING. *By John Bogart.*
AMERICAN LOCOMOTIVES AND CARS. *By M. N. Forney.*
RAILWAY MANAGEMENT. *By Gen. E. P. Alexander.*
SAFETY IN RAILROAD TRAVEL. *By H. G. Prout.*
RAILWAY PASSENGER TRAVEL. *By Gen. Horace Porter.*
THE FREIGHT-CAR SERVICE. *By Theodore Voorhees.*
THE PREVENTION OF RAILWAY STRIKES. *By Charles Francis Adams.*
HOW TO FEED A RAILWAY. *By Benjamin Norton.*
THE RAILWAY MAIL SERVICE. *By Thomas L. James.*
THE RAILWAY IN ITS BUSINESS RELATIONS. *By Arthur T. Hadley.*
EVERY-DAY LIFE OF RAILROAD MEN. *By B. B. Adams, Jr.*
STATISTICAL RAILWAY STUDIES. *By Fletcher W. Hewes.*

"This is, beyond all compare, the greatest American work on railways. It is difficult to devise a question on railway construction or management for which the answer may not be found in this book. It is a great book and remarkably handsome besides."—*N. Y. Herald.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU. With 1,400 Illustrations. 2 vols., 8vo, $7.50.

"For readers who wish to reach a comprehensive knowledge of the old Northmen, this is the book most needed and most useful. It is full of illustrations that are just what illustrations should be."—*N. Y. Independent.*

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—*N. Y. Observer.*

Aspects of the Earth.

A Popular Account of some Familiar Geological Phenomena. By Prof. N. S. Shaler. With 100 Illustrations. 8vo, $4.00.

The general reader unacquainted with the details of natural science is here given an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanoes, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

"A very attractive volume, which is certain to be received with wide and popular interest."—*N. Y. Sun.*

Among Cannibals.

An Account of Four Years' Travels in Australia, and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. Translated by RASMUS B. ANDERSON. With over 100 Illustrations. 8vo, $5.00.

The author lived alone in the camps of savages who had never before come in contact with white men, and describes for the first time in a thoroughly popular style the customs, habits of life, etc., of these Australian aborigines, who will soon become extinct.

Strange True Stories of Louisiana.

By GEORGE W. CABLE. With illustrations and fac-simile reproductions. 12mo, $2.00.

The charm of style and the delicate flavor of romance characteristic of Mr. Cable's short stories are seen at their best in this volume. The tales have a thread of common interest and reveal many delightful glimpses of the French Creole civilization of the last and early years of the present century. The illustrations are very curious—reproductions in fac-simile of the old manuscripts on which the stories are based, a quaint portrait of one of the heroines, etc.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 28, 1889.

The Week.

A LARGE amount of space is given in the report of the Secretary of War to the matter of desertions from the regular army, which has also been much discussed of late by military men in the magazines. Everybody who touches on the subject takes a somewhat different view of the causes of desertion. The Secretary says the principal ones are the restraints of discipline, disappointment with the details of the service, dissipation, ill treatment, and professional repeating. He thinks these can be overcome "to a considerable extent" by higher pay, by greater comfort, by more lenient punishments, and by giving the soldier opportunities of improving himself. It will be well to try these things, of course, and they may diminish the percentage of desertions somewhat, but they will probably never make it small. Desertions are nearly as numerous in the British Army as in ours. They are sure to be numerous in all armies recruited by voluntary enlistment. A good class of men cannot, in our day, be got to enter such armies in any great number in time of peace, if for no other reason, because they dislike their associates in the ranks. In armies filled by conscription, desertions are rare because all classes of the population are represented in the ranks, and every man finds congenial friends and associates, and most of them have homes in which they would be disgraced and caught if they ran away from the regiment. The men who enlist in our army and the British Army under present conditions are apt to be of the roving, restless kind, who object to steady occupation of any sort, have no great desire for "self-improvement," and, disliking restraints of every kind, naturally dislike those of military discipline. Life in Western posts, too, is dreary enough to inspire thoughts of desertion in the best constituted military mind. As long as we cannot get better material for the army, desertion will be a favorite pastime of the American soldier, especially out in the Plains. We may do something to diminish it, through such suggestions as the Secretary makes, but there will always be a great deal of it. Probably nothing disgusts a soldier more than such work as road-making and ditch-digging. The Roman soldier did a vast amount of it, but our soldiers are not Romans, and our world is not the Roman world, and probably many of the men enlist simply to avoid handling the spade and pickaxe.

The new Comptroller of the Currency (Mr. Lacey) makes a number of recommendations having in view the prolongation of the national-banking system. Most of these suggestions have been made by his predecessors, and reiterated until they have become tedious, without gaining the attention of Congress. The reason why they have fallen upon deaf ears is, that they look only to a brief extension of time for the bank-note circulation. They do not go beyond the year 1907, when the last outstanding bonds of the Government fall due. The integral and vital part of the present system is bond security. The system was called into existence by reason of the Government debt. Its philosophy, so far as note circulation is concerned, is interwoven with the debt, and when one goes out, the other must go out also. This is not saying that some other system may not be devised, national in character, but it will not be the present system. The other parts of the system—other than the circulating-note function—may be easily preserved, and ought to be. Upon this point the Comptroller recommends that the requirement that all banks keep a minimum of $50,000 of Government bonds be reduced to $30,000. Why not reform it altogether by simply providing that national banks which do not desire to issue circulating notes need not keep any bonds at all? The constitutional question which is sometimes raised, whether Congress can charter banks without the fiscal purpose of lending some portion of their capital to the Government, might then receive a solution through the courts, if anybody were minded to raise it. It would be interesting to know what would happen in case a national bank should continue to receive deposits and transact its ordinary business without having a petty deposit of bonds at Washington. This is something like the momentous question raised in the English Parliament: "What would happen if the Speaker should name a member?" We believe that the experiment was tried a few years ago in the case of an unruly Home-Ruler, and that the roof did not fall in. Probably neither the roof of the Treasury nor the heavens above our heads would fall if Congress should simply repeal that provision of law which Comptroller Lacey would like to have scaled down from $50,000 to $30,000.

If both the wool-growers and the silver men combine against Congressman Reed for the Speakership, it would seem to be the duty of all conservative Republicans to give him their support. We have never seen anything in Mr. Reed's course as regards the tariff question which entitles him to be classed as a reformer. He is as far from representing any views held by us as is Mr. McKinley or Mr. Burrows. But it may be fairly inferred from his surroundings that he would not favor the scale of increased duties on wool that was embodied in the Senate bill of the last Congress. In other words, he would probably follow the safe policy of letting the wool tariff stand as it is until more light can be obtained both as to its workings and as to the wishes of the majority of the people. If the Republican party can see its advantage in putting a prohibitory duty on carpet wool, the election of McKinley for Speaker of the House would be the right step to take. Then we shall probably hear from New England in no uncertain tones in the Congressional elections next year. If it is deemed best to make no dangerous experiments, Mr. Reed will be the better choice. The same ideas are applicable as regards the silver question. Here, too, Mr. Reed is a conservative, and we think that the Republican party as a whole are conservative. To change the standard of value, as is now proposed by the hot-heads, would bring consequences of a political sort that no one can now foretell. Probably Mr. Reed would use his influence as Speaker to prevent inconsiderate action, and to make sure what is on the other side of the hedge before jumping over it. One thing is certain: the Republican party has control of all the branches of the Government, and it will be held responsible for any detriment that the republic receives.

A reply which Mr. St. John has made to the criticisms of Mr. Knox on his silver proposals, strikingly illustrates the very imperfect acquaintance which many financiers of repute have as yet attained in respect to the silver question. For example, we find Mr. St. John saying that "the main feature to result from the enhancement of the price of silver is that we take away from Great Britain her inducement to depress silver, and we avoid free coinage of silver if this proposition be acceptable to those who defend free coinage; because free coinage would seem to put the United States where the Hindu now is, when Great Britain procures low-price bullion and coins it into the India legal-tender rupee with which to purchase India's products—India's mints being free for silver coinage, as some propose our mints shall be, except for her charge of seigniorage." And again: "When we enhance the price of silver, we tend to wrest from England her present advantage in importing India's wheat and cotton, and thereby we more abundantly supply her our product, until by and by the volume sent to England will be greater than her products returned to us will repay us for, whereupon at once we command her gold." How Great Britain could "depress silver" if she had a mind to do so, any more than she could depress wheat or cotton, must be left to conjecture. But so far is she from having any inducement to do so that the almost universal desire in that country is, that the former value of silver should be restored, provided that such a result can come about by natural agencies. There is not, furthermore, a particle of foundation for the assertion that "Great Britain procures low-price bullion, and coins it into the Indian legal-tender rupee with which to purchase India's products." Great Britain has never done any such thing; neither shall we, "by enhancing the price of silver, tend to wrest from England her present ad-

vantage in importing wheat and cotton," for England has no such advantage. Data recently published by the London *Economist*, and derived from official sources, tend to show that since 1884 the value of the rupee for exchange for wheat in India has fallen about 25 per cent.; and such a fall of itself invalidates pretty much all that has been written to prove that the fall in the price of silver has operated as a bounty upon the export of wheat from India. For if the silver rupee will not buy within 25 per cent. as much wheat as it once did, what becomes of the bounty?

It has turned out as we supposed it would: the high-tariff gentry are not willing to let go any part of the tax on pig-iron merely because we are shipping pig-iron to England. The *American Manufacturer and Iron World* holds that it would be very unphilosophical to throw off the duty, because such a step would be equivalent to an addition to our own producing capacity of all the producing capacity in the world. And what, it asks, would be the effect if our capacity of 6,000,000 tons were increased in one day to 25,000,000 tons, or even to 11,000,000? Would not stagnation and loss of employment and low wages be the result? We should say yes, if there were no market for pig-iron except the United States. But if there were a whole world to be supplied, and if the demand were such that all of the furnaces could not supply it without causing an advance in prices—such an advance as now exists, and which leads to the export of American pig to England—we should say that no stagnation or loss of employment or decline in wages would follow.

The tone of Gov. Hill's newspaper friends indicates that he is very anxious for a compromise upon the ballot-reform question. They are all advocating "mutual concessions," and are insisting that in passing the Saxton bill twice the Republicans of the Legislature had no other object than to put the Governor "in a hole." They say the time has come now to abandon this line and to meet the Governor half-way. That kind of talk would have more weight if the Saxton bill had not from the outset been almost entirely the work of ballot-reformers of both parties, who had no political or partisan designs upon the Governor or anybody else when they formulated the measure. Mr. Saxton and other Republicans took the bill mainly as it came from the hands of the reformers, and advocated it loyally, voting solidly for it at two sessions of the Legislature. Their bill was the inspiration and model of the Massachusetts law, and the complete success of that law vindicates them and leaves the Governor without a single valid excuse for his opposition and vetoes. It is preposterous to talk about concessions under such conditions, if by that term the abandonment of such vital principles as exclusive official ballots and nominations by petition are meant. It is not the duty of Republicans or reformers to make it any easier for the Governor to get himself out of the hole into which he was short-sighted enough to put himself.

Gov. Wilson of West Virginia has decided to call a special session of the Legislature in January, and among the business upon which he will recommend action will be the adoption of a ballot-reform bill. He has himself prepared a bill embodying the principles of the Australian system, which he will have introduced in the Legislature. There are few States more in need of this reform. West Virginia has for several years been a doubtful State, and the desire to carry it, especially in Presidential contests, has been calling forth steadily increasing outlays of money by both National Committees. The secret official-ballot system would go a long way towards breaking up this practice, if it did not completely put a stop to it.

Senator Blair of New Hampshire was so much surprised that the Virginians did not elect Mahone after he had been down and advised them to do so, that he went back to Washington saying that he was satisfied that there were enough Republican votes cast to give Mahone a good majority, and that the forty-odd thousand majority against him was due to fraud. The Republican newspapers of Virginia which refused to support Mahone, make short work of this ridiculous charge. The *Valley Virginian*, published at Staunton, in Augusta County, and the *Spirit of the Valley*, published at Harrisonburg, in Rockingham County, demonstrate that all through that region, where the negro vote is small, and everybody knows that the election was perfectly fair, there was a heavy falling-off in the Republican vote from last year—over one thousand in each of the counties mentioned, and several hundred in each of many other counties. "The result of the election," says the *Valley Virginian*, "was forecast long before the 5th of November. This was based upon known conditions and positive evidence of unappeasable dissatisfaction and opposition to the Norfolk ticket. So the cry of 'fraud,' as affecting the general vote, or as to the majority recorded, will not hold good."

The official returns in Virginia illustrate very clearly the extent of the revolt among Republicans against Mahone, and demonstrate the absurdity of the claim that the sweeping Democratic victory was due to fraud. The total vote proves to be nearly 291,000, or within about 12,000 of the unprecedentedly full poll in the last Presidential election. The vote for Governor will not be canvassed until the Legislature meets, but the returns for Attorney-General give the Mahone candidate only 122,681, against 166,978 for the Democratic, whereas last year Harrison had 150,438 to 151,977 for Cleveland. In other words, Mahone kept nearly 30,000 Republicans from supporting the Republican party this year, while about half of the number not only refused to support his ticket, but voted directly for the Democratic candidates. It is worth while to examine the figures from districts where not even the most blatant Mahonite has alleged any unfairness. The vote in four counties of the Shenandoah Valley and four in Southwest Virginia is nearly as large as last year, but the Republican total has sunk from 16,234 to 13,647, while the Democratic has increased from 15,634 to 17,206, transforming a Republican majority of 600 last year into a Democratic—or, rather, anti-Mahone—majority of 3,559 this year.

A Washington despatch reports that the Kentucky politicians in that city have been much moved by the appointment of Mrs. Goodloe, through her son-in-law, to the collectorship of internal revenue left vacant by her husband's death. One of them, Congressman Thomas, is reported to have "claimed" that the appointment would "thoroughly disorganize the Republican party in the State," and was therefore one not fit to be made, particularly as Mrs. Goodloe is reported to have been left in comfortable circumstances. How the party would be disorganized is not stated, but the assertion suggests curious reflections as to the kind of political party it must be which is disorganized by the appointment of a widow to a small office. What is it that keeps such a party together? What do its voters say to each other when they hear of the appointment which "disorganizes" them? Do they say that the news has completely changed their views about the tariff, or about negro suffrage, or steamer subsidies, or the fisheries question, or the silver question, or that they feel now that the party has no future, and that some newer and more vigorous organization, with clearer views about the Lexington Collectorship, must take its place? Nothing would be more interesting than an explanation in detail from a practical politician of the way in which a post-office or appraisership builds a party up, or brings it to defeat or ruin, as the case may be. It would be an absolutely new contribution to political science, and, in fact, would throw a side light on some of the more obscure workings of the human mind.

Another interesting question in connection with this appointment is what it indicates as to the President's view of the affair in which Col. Goodloe lost his life. If he lost it in simple defence against an unprovoked attack, his memory deserves honor and his family assistance from the Government. If he lost it, however, in a "collision" long expected, and for which he went prepared, and which he precipitated at the Post-office, he lost it when engaged in the perpetration of a crime. Even under these circumstances, his family deserve deep sympathy from his friends; but should a Government office be used to provide for them? Ought the President, as a professing Christian and the first officer of a great civilized community, therefore to have made the appointment without stating openly which of these two views of the manner of Col. Goodloe's death he took? This

must be important in the eyes of those who wish to see Kentucky delivered from this horrible barbarism which makes it disgraceful to settle quarrels otherwise than with the knife or pistol. The ordinary Kentucky boy's view of the Swope-Goodloe encounter undoubtedly is, that it was a noble, manly affair, in which the combatants lost their lives creditably, if not gloriously. Will not this impression be strengthened, to the boy's moral and perhaps social damnation, by a seeming confirmation of it from the highest officer of the Republic, himself a church-communicant and Sunday-school teacher? Come, Mr. President, let us know exactly what you meant to express by this appointment, and also what Mr. Halford thinks about it, for he too gives instruction in Christian morals.

Mr. John Field, the new Postmaster of Philadelphia, has written a letter to the local Civil-Service-Reform Association which deserves the heartiest praise. After returning thanks for the courteous and complimentary letter which he had received from the officers of the organization, and saying that "it is due to the Administration to say that my membership in your body and my views in relation to the public service were fully known and understood before the position of Postmaster was tendered to me, and that I have not been asked to modify those opinions in any particular," he proceeds:

> "The existing postal rules and regulations adopted by the Civil-Service Commission and approved by President Harrison are more comprehensive and far-reaching than those under his predecessor, and embrace nearly all the positions occupied by employees in the Post-office. These rules and regulations, and the full spirit and purpose of the law, as I understand the same, shall be strictly observed and maintained. So far, therefore, as applies to these places, there will, during my administration, be no removals except for just and legal cause, and no appointment save in strict accordance with the law. As to the few positions to which the said rules and regulations do not apply, it is sufficient for me to say that changes will be made therein when, in my judgment, the efficiency of the service will be thereby promoted."

If Mr. Field lives up to this platform, the civil-service reformers of Philadelphia will have no occasion to regret the congratulations in which they have indulged upon his appointment.

Gov. Hill has commuted Giblin's sentence to imprisonment for life, and Giblin is, of course, overjoyed and looks forward to a speedy pardon. He tried to buy some pastry with a counterfeit five-dollar bill in the store of a poor German baker. The baker discovered the fraud, retained the bill, and refused to part with his pastry until paid with good money. Giblin insisted on getting possession of the bill, and, on the baker's trying to expel him from the store, fired four shots with a pistol, one of which mortally wounded the baker's wife and another dangerously wounded the baker himself. They were a young married couple, of excellent character. Giblin was carefully tried and found guilty of wilful murder. He went up to the Court of Appeals, where all his exceptions were examined and passed upon and the judgment on him confirmed and the day of his execution fixed. Gov. Hill then, for some unknown reason, reprieved him, and ordered not a reëxamination of the evidence laid before the jury by a competent legal adviser, but a new trial of the case by an obscure young lawyer without experience, at which the witnesses were examined over again, and fresh ones produced; and on the finding of this extraordinary referee the verdict of the jury of wilful murder has been overruled. No such court of appeal in criminal cases has ever been known in this or any other country, and its creation, of course, suggests irresistibly to the uncharitable the possession of a political "pull" of some kind by Giblin to which our worthy Governor is sensitive. This may not be the true explanation, but it is the one to which the remarkable way in which the case has been reconsidered naturally gives countenance, for the Governor publishes no reasons for his decision.

The thronging dangers of modern civilized life have been increased by the discovery in England of what may be called a social analogue of subway explosions and "dead" electric-light wires. Pending the trial of a case there, the Divisional Court has determined on demurrer that the committee or members of a club may be entitled to damages if the club be generally libelled; so that, for example, a gentleman being blackballed, and relieving his not unnatural vexation in contemptuous remarks about the membership, may be called to answer for it not in one action at law merely, but in as many actions as there are members of the club. In that aspect of it, the English decision seems only to increase the power and prestige of clubs, but if it shall become law in this country, another result will follow of peculiar felicity. It will make hard the way of newspapers of the baser sort which get a good part of their living by publishing picked-up or invented tattle about just such cases of blackballing and the like. Few things make better "copy" for the use of the lower-class newspapers than talk of this sort. Their readers are eager for it, though few of them ever have seen the inside of a club, for the same reason that they like to read the "society" notes—for the reason that would make anybody like to read an authentic account of a day in Mars; and any club-servant who overhears a proper bit of talk among his masters can find a market for it at a good price in the offices of some of the morning journals. These thereupon proceed to enlarge and diversify it, after their manner. The English decision would put an end to this: fifteen hundred libel suits at once, on the same matter, would constrain the most "enterprising" of our contemporaries.

The Anti-Slave-Trade Convention at Brussels is due chiefly to the indefatigable labors of Cardinal Lavigerie, who has made the suppression of the African slave traffic his life-work. Whether any immediate practical results will be achieved is doubtful, but none the less ought the Convention to be held and the propaganda to be pushed and the agitation kept alive. The obstacles in the way are not so much the indifference of the governments of civilized States, for they are not indifferent. They share the views of Cardinal Lavigerie and his fellow-workers abundantly. The obstacles are those which nature itself opposes to all the undertakings of the white man in Central Africa, viz.: distance, climate, disease, want of communications, etc. A march of 1,000 miles across equatorial ranges of hill and plain, without roads, is not an uncommon one for a slave gang, and it is of little concern to the slave-traders if four-fifths of their victims perish on the way. No force of civilized men can take the risk of pursuing these villains to their headquarters. They can only make the attempt to intercept them at some point on the Nile, or at the coast, or on the sea. The slave dhow does not need any harbor to sail from. Any point along the coast will answer for its starting-point. But all points cannot be guarded. Moreover, the native officials along the upper Nile are sure to be in the pay of the slave-dealers, and to connive at their escape from the European officers appointed to intercept them. There seems to be no way of attacking the evil in the Sudan except by following Sir Samuel Baker's plan, with the difference, however, of employing Europeans instead of native officers and soldiers. But this involves enormous expense. It is really making war on a large scale at a great distance from one's base, and at great risk of the lives of men. It is not to be expected that England will take this burden upon herself merely because she holds lower Egypt. But she will be in the forefront, no doubt, as she always has been, in steps to suppress this traffic, than which nothing more execrable was ever known in the history of the human race.

The glimpses we get of Dr. Emin from Stanley's letters are not encouraging to those who had hoped that a lamp of civilization might be lighted in Central Africa which would replenish itself and continue to burn without the constant presence of the Doctor himself or other Europeans. So far is this result from being achieved that we learn now, and not for the first time, that Dr. Emin has been in constant danger of his life from his own militia, and it seems quite certain that, now he has departed, his meritorious plan of civilization will fall into ruin. The more information we gain from Central Africa, the more are we convinced that the lifting of the Dark Continent from barbarism can be accomplished only gradually, from the coast inwards, as the civilization of the American Continent was achieved. And perhaps it will only be gained by the slow extermination of the savages. A people addicted to devil worship and human sacrifice during uncounted centuries are not to be civilized by the use of the spelling-book alone.

REPUBLICAN DISCONTENT.

It requires no very close observation to convince any one that the Republican party as a whole is in a "state of mind" regarding President Harrison. Audible rumblings of dissatisfaction have been discernible in nearly all parts of the country for several months, and it is noticeable that they have been increasing in volume and distinctness since the November elections. For a time this general party unhappiness found its chief vent in accounts of personal experiences with the President at the White House concerning the distribution of offices, which were related for private information only. When these accounts get into print, as they are certain to do, sooner or later, they will furnish the country with some of the most edifying reading that it has had for many a day. The narrators will not be unsympathetic Mugwumps or malignant Democrats, but tried and true Republicans, and there will be little possibility of disputing the accuracy of their reports. Their time to speak will come when, with the rest of their party, they find themselves no longer too full for utterance, but too full for further silence.

We judge by the unusual step which has been taken by a loyal Republican newspaper of Pittsburgh, the *Chronicle-Telegraph*, that this time is near at hand. That journal has published a broadside in large type of Republican opinions, gathered from all parts of the country, expressing dissatisfaction with the President, asserting that he has not made good use of his opportunities, and declaring that there is a widespread discontent in the party with him because of his course. The opinions are gathered from seventeen States, and in every case the root of all evil is the same—trouble over the distribution of patronage. In New York it is shown that Warner Miller's tragic and neglected position outside the breastworks, combined with the daily spectacle of "Tom" Platt feasting on the inside, has filled the party with dissensions, and sent unhappiness and gloom into thousands of Republican breasts. In Pennsylvania it is shown that both Senators Cameron and Quay are dissatisfied because they have so little influence in the distribution of patronage and the pious Wanamaker has so much. In Missouri the party is "disgruntled" because the advice of the Republican Congressmen has been ignored in the patronage distribution, and Secretary Noble has had full control. In Indiana the trouble is especially personal and aggravated, because the President has insisted upon passing out the patronage for the State with his own hand, completely ignoring the campaign Chairman of the Republican State Committee, Mr. Huston, who, in addition to being rewarded with the office of United States Treasurer, expected to be appointed distributor of patronage for Indiana. "The climax came about six weeks ago, when Mr. Huston's recommendation in the matter of a fourth-class post-office in a Democratic district was disregarded. Mr. Huston is inclined to be extremely disgusted, as he claims that his work during the campaign entitles him to the distribution of this patronage during the term of President Harrison. What angers him more than anything else is the constant recognition of Attorney-General Miller, who contributed $1,000 to the campaign fund, while Mr. Huston stood responsible at one time for $30,000."

From other States the reports are similar in character. Kansas has been "in a ferment almost constantly since the day of inauguration," and the assurance is given that the "trouble over the appointment of a Massachusetts man to be Superintendent of the Haskell Indian School is still fresh in the minds of the public." In Illinois one of the "warmest fights yet made over the distribution of patronage is now being waged over the appointment of five local Federal officers in Chicago. Not only Senator Farwell and Senator Cullom, but all the members of Congress from that part of the State, are in arms against the President. It is argued that this cannot fail to do the party harm." In Michigan both Senators are "amazed and disgusted" because Senatorial requests have small influence at the White House, and "persistent effort alone is rewarded with political patronage." Senator McMillan is "out" with the Administration, and no longer visits the White House, being "disgusted with the political system that makes it necessary for a Senator of the United States to lay aside his dignity, take off his coat and vest, and rush into a fight for small patronage." The Colorado Senators are in "an ugly mood, and it will not take much to cause an open outbreak." The Nebraska Senators have not recovered from their displeasure over the appointment of Patrick Egan as Minister to Chili, against which they protested, but which they were prevailed upon to endorse "by request." Virginia is in complete demoralization over the disastrous defeat which followed the handing over to Mahone by the President of all its patronage. Ohio is not so vociferous in its complaints as other States, but its Republicans have grievances, the chief of which is that they have not received their proper share.

This is a sad condition of affairs, and in many respects an unprecedented one. We do not recall any President before Gen. Harrison who has been subjected to a journalistic attack of this kind within less than a year after his accession to office. That it should be made with so much encouragement and support from Republicans in so many States reveals a most remarkable condition of party feeling. Something unusual ought to be done under the circumstances, and we suggest the calling of a National Mass Republican Convention, "to give expression to party feeling upon the subject of President Harrison, and to transact such other business as may come before it." That would furnish opportunity for a free exchange of views, and would enable the party to formulate some system of office distribution which could be depended upon to make the entire party happy. Such a system is the crying need of the time. If the President had had it, all the present trouble would have been avoided. There must be some final and decisive test for all cases. Whether it shall be the amount of campaign contributions, or political usefulness, or general piety, or relationship to the President's family, or what not, it should be fixed and adhered to. It will be noticed in the opinions collected from Indiana, and cited by us above, that much of the discontent there has been caused because a man who contributed a beggarly $1,000 to the campaign fund has had more voice in the division of patronage than the man who at one time "stood responsible for $30,000" of campaign funds. A fixed scale of influence or appointment—so much influence and such a grade of office for every dollar of contribution—would put an end to this kind of trouble. General piety and family relationship could be rated in a similar way, and on such a fixed system as that a party with a patronage President would have some chance for happiness as well as for a career of glorious statesmanship.

"THE SCIENCE OF RETAIL TRADE."

The United States Statutes provide (sec. 243) that "No person appointed to the office of Secretary of the Treasury, or First Comptroller, or First Auditor, or Treasurer, or Register, shall be directly or indirectly concerned or interested in carrying on the business of trade or commerce," etc., etc., and make violation of this prohibition punishable by a fine of $3,000 and perpetual disqualification for office under the United States Government. This is the statute for the repeal of which President Grant asked, to the amazement of the country, in order that he might give the Secretaryship of the Treasury to Alexander T. Stewart, the great retail dry-goods man—our John Wanamaker of those days. It would have been an advertisement for the store such as no dry-goods man has ever received; but Congress dismissed the President's request with a somewhat disgusted smile.

The reason of the law is obvious. A person engaged in trade or commerce is of necessity either an importer of foreign goods or a competitor of importers in the home markets. It would be easy for him, therefore, if Secretary of the Treasury and in control of all the custom-houses in the country, to use his power to give himself advantages in his own business over his rivals and to the detriment of the Government, either in time, or cost, or information. Congress accordingly, and most properly, determined, as soon as the Government was organized in 1789, to remove all secretaries and leading officers of the Treasury from any such temptation. They might have assumed, considering what the standards of official propriety were at that time, that nobody to whom a Cabinet office was likely to be offered would be guilty of such an impropriety as using his official influence or authority to push his private business. But they did not trust to any such assumption. They said that no man, no matter who he was, no matter what his standing in the church or in the world, should be appointed to a high place in the

Treasury while engaged in trade or commerce.

It now appears to be pretty plain that the Congress of 1789 did not go far enough. They ought to have enacted that no head of a department should be engaged in trade or commerce. It is true that we have gone one hundred years without any scandalous results of their failure to do so, but one hundred years is a short time in the history of a great nation, and the longer a scandal of this sort is deferred the greater it is apt to be when it comes. It has come to us now in large proportions through the appointment to a Cabinet place of Mr. John Wanamaker, the great retail storekeeper and advertiser of Philadelphia. His appointment to any Cabinet place would have been a terrible mistake, even if he had had no connection with dry goods, for reasons we gave at the time. His pecuniary services in the canvass were of such a nature that if Gen. Harrison had had any fineness of political, to say nothing of moral, perception, he would have seen that they were a disqualification for high office. He ought to have shrunk with horror from the very suspicion that any one had bought a Cabinet appointment from him. Even his friends, therefore, were amazed when Wanamaker was made Postmaster-General, for the control of the post-office by the greatest advertiser in the country, a man whose "drummers" swarmed in every village, and who sold everything from pins and needles to India shawls by dint of puffery, was a scandal in itself, a *scandalum in se*, even if not a *scandalum prohibitum*. It was plainly possible for Mr. Wanamaker to make every country postmaster an agent for the sale of his wares, and it was no answer to this to say that a man who maintained a Sunday-school and prayed publicly would not do such a thing. The Congress of 1789 trusted to no such preventives. They did not say a trader or merchant might be Secretary of the Treasury if he was a praying man or Sunday-school teacher. They said, "No person"—no such person, no matter what guarantees of character or piety he may offer—shall hold this place.

Mr. Wanamaker has now been only eight months in office, and he is already using his official position *openly* to advertise his business. His place in the Cabinet of course put a certain compulsion on the Pan-American delegates, who are all well-bred gentlemen, to visit his store the other day, and enabled him to make the visit a great public function. It has, too, undoubtedly given him the brass necessary for imposing on each delegate and his wife a "souvenir," in the shape of a box containing two books which are thus described in a Washington despatch to the *Sun:*

"The largest, which is the exact size of the box, is bound in seal, and fastened together with heavy brown ribbon. On the outer cover is stamped in gilt the fanciful trade-mark of Mr. Wanamaker's store, and in the lower right-hand corner of the cover, also in letters of gilt, are the words: 'Compliments of John Wanamaker, Philadelphia, U. S. A., November 11, 1889.' The covers are lined with light brown silk, and the fly leaf is composed of a sheet of heavy white satin, to which is tied a card bearing the colors of the South American States held in the talons of a gilt eagle, which also clutches an American shield. The body of the book consists of a fourteen-page engraved address, setting forth the wonders of the great retail establishment, followed by three pages, each of which gives a diagram in minute detail of each of the first three floors of the store, showing exactly the use to which each compartment is put. A remarkable thing in connection with this illuminated address, which contains many remarkable things, is the dedication. Each souvenir is dedicated especially to the delegate to whom it is addressed, and opens with the following neat suggestion of how to connect the business of the Pan-American Congress with John Wanamaker's store:

"'DEAR SIR: Confident of our commanding position in the mercantile world as leaders in the retail commerce, and believing that we have reached the highest point yet attained in our country in the science of retail trading, we beg leave to ask your acceptance of this souvenir of your visit to our place of business, in the hope that it contains information of sufficient interest to warrant its submission to your Government as a portion of your report upon the honorable Congress to which you are accredited.'"

Of course if Wanamaker were not a member of the Cabinet, the delegates would treat this impudent little epistle with silent contempt, and dispose of the whole advertisement as such things are usually disposed of at this season of the year. We cannot recall a case in which any Government has been subjected to the particular kind of humiliation which Wanamaker has here inflicted on ours. It ought to be plain to President Harrison that he is just as ripe for prompt dismissal as Tanner was. He has not proved a particularly good Postmaster-General, as many people who were disgusted by his electioneering thought he might. The occupation of his life—enticing people to his store in search of bargains—doubtless makes the silent, unobtrusive, and faithful discharge of a public duty distasteful if not impossible to him.

THE "FARMERS' CONGRESS" AT MONTGOMERY.

THE Montgomery *Advertiser* brings us the text of the resolutions adopted by the so-called "National Farmers' Congress," recently held at that place, together with some account of the Congress—its genesis and its controlling purpose. The capital of Alabama is not exactly the place where we should look to see a representative body of American farmers assembled. It is rather out of the way for the great body of agriculturists, and we all know that farmers are averse to long journeys and large travelling expenses. The fact that the chief topic of debate was the tariff on wool, and that the person who made the most stir was the Hon. William Lawrence of the Ohio Wool-Growers' Association, suggested some doubts as to the representative character of the body.

The Montgomery *Advertiser* resolves these doubts in a satisfactory way. It says that this National Farmers' Congress consisted of delegates appointed by Governors of States—not all the States, but rather more than half of the number. The *Advertiser* thinks that the farmers of the country are quite capable of choosing their own representatives to such congresses, when they have the opportunity or the inclination, and that a Congress composed of members appointed by Governors will be more likely to represent the Governors than to represent the farmers. It thinks also that this was the actual state of the case at Montgomery.

The resolutions which engaged the largest share of attention related, as we have said, to the duty on wool, and here we have to note a decided alteration in the tone of the high-tariff party as represented by the Hon. William Lawrence of Ohio. The report submitted by this gentleman is not a declaration in favor of protection in the abstract. It does not even affirm that protection is a good thing for the country as a whole or for the farmers in particular, but merely that as long as Congress maintains that policy agriculture should be as fully protected as manufactures. Starting from this postulate, the resolutions read as follows:

"Resolved, That while as now a protective tariff is maintained which substantially prohibits the importation of foreign carpets and many other articles of manufactured goods, we demand that the duties on mutton sheep and wool of all kinds shall be so increased as to equally prohibit the importation of mutton sheep and of wool of every kind which can, under protection, be sufficiently produced at fairly remunerative prices in the United States, to supply all American wants, including the better class of carpet wools, especially as carpets are luxuries, entitled to less favor than farm and ranch products.

"Resolved, That the tariff on wool imported to make carpets should at least be as high as that imported to make coats. The same policy which will secure cheap cloths will secure cheap carpets.

"Resolved, That if protection to this extent be denied, we call upon the farmers of the United States to assert their power at the ballot-box and otherwise to right the wrong and injustice of discrimination against them. If they fail in this, the wool and mutton-producing industries will be so seriously crippled that they will be, in a large measure, destroyed, and farmers will no longer have any interest in protection for the manufacture of woollen goods, but will insist that it shall have no larger measure of protection than is accorded to the wool industry, including every kind of wool."

The report was adopted, not without considerable opposition, the vote being 170 ayes to 89 noes. All the Southern States voted no except Florida and Kentucky, whose votes were divided, there being twenty-one States and one Territory voting.

It is easy to see that the prime object of the alleged Congress was to manufacture public opinion regarding the tariff tax on carpet wool rather than on wool in general. This circumstance reminds us that the Senate bill of last year nearly doubled the tax on carpet wool, raising the duties from 2½ to 4 cents per pound on the coarser grades, to the great surprise of the public, even those of protectionist leanings, since these coarse carpet wools are not produced in this country, and cannot be under present conditions or under any conditions likely to prevail here. Probably the carpet-manufacturers were not so much surprised as other people, because they have been well informed all the time of the movements of the Wool-Growers' Association. The alleged Wool-Manufacturers' Association, whose pretensions to represent the woollen industry are almost as transparent as those of the Wool-Growers' Association to represent farming, but who do represent that portion of the woollen interest which is in subjection to the wool-growers, adopted a resolution at their last meeting deprecating any increase

of the duties on carpet wool. The resolution was in these words:

"Resolved, That the increase of the duties upon wools used exclusively in the manufacture of carpets, amounting to 60 per cent., proposed in the Senate bill, cannot stimulate the American growth of the coarse, low-grade wools now cultivated only in semi-barbarous countries, and commanding less prices than the better wools grown to better advantage by our farmers, and at no additional cost, everywhere in the United States. On the other hand, such duties must seriously cripple the one branch of the woollen manufacture which has been enabled to fully supply all the demands of the home market at greatly reduced prices to the consumer."

Undoubtedly we may look for the tug-of-war on this subject when the committees of the new House of Representatives are appointed.

SHIP CANALS.

In the world of trade it may be said that fashions prevail, as well as in other spheres where whim and caprice hold more legitimate empire. Means of expediting commerce by shortening routes, and by the introduction of mechanical devices for attaining greater speed on land and sea, are undoubtedly the offspring of a necessity arising from the urgent demands of these busy times, and still it is equally true that the example of one prominent achievement of recent years, the Suez Canal, has set many minds thinking upon problems of inland navigation in other quarters. The conception of a canal connecting the Atlantic and Pacific Oceans at Panama is three centuries old, to be sure, but it lingered as a dream until the success of Suez encouraged an attempt at its execution in fact. The failure at Panama has in no wise dampened the enthusiasm for ship canals. It is said that this ill-fated enterprise may not yet in reality be dead, and we are fain to believe that ships will soon be sailing from sea to sea at Nicaragua. Aside from these, a whole brood of other canals, great and small, have either been commenced or suggested. In brief, there are three in progress in foreign countries, and eighteen projected, while four are being carried toward completion in America, and the plans of twelve more are on paper, which, with the twelve existing foreign canals and the four at home, make a total of fifty-three. R. E. Peary, in a recent issue of the "Transactions of the American Society of Civil Engineers," presents a most interesting collection of statistical data respecting these enterprises, some of which will be new and surprising to those who have not been able to watch such matters closely.

If all the British projects now mooted are successfully executed, England, Scotland, and Ireland will be divided into a number of smaller islands. An Irish canal between Galway and Dublin would shorten by many hours the journey from New York to ports on the Irish Sea. The Newcastle-on-Tyne Canal, from the Tyne to Solway Firth, would open, in connection with the former, the shortest possible route from New York and Boston to the ports of Belgium, Holland, and Germany. The same advantages, with others of great local value, are claimed for the Scotch Canal from the Clyde to the Forth, which it is proposed to enlarge from its present depth of nine feet to a size suitable for the passage of the largest ships. A large force of men is engaged in constructing the canal from Manchester to the Mersey, which will be completed in 1891. This is one of the most important projects of its kind in the world, not alone because it seems destined to divert an immense portion of the trade of Liverpool, but because, if it proves as successful as its promoters anticipate, other inland cities will follow the example of Manchester, thus altering the currents of English internal traffic as they exist to-day.

In Europe projects are equally numerous. Brussels, Bruges, and Paris are zealous for communication with the sea. An Italian canal from the Adriatic to the Mediterranean is suggested, and it is claimed that a route can be opened at a cost of $37,000,000 through Moravia and the two Silesias, connecting the Oder and Danube, which could pass large vessels from the Baltic to the Black Sea. Navigation could then be extended from the Black Sea to the Caspian by a canal fifty-three miles in length from the Don to the Volga. These, and more besides, are in serious contemplation; but of more importance than any of the foregoing is the Holstein or North Sea-Baltic, which is being rapidly built, and which when completed will serve a shipping having a registered tonnage of 9,000,000 tons, almost double that now using the Suez Canal, in addition to offering military advantages of inestimable value to the German Empire. Not only will it effect an enormous saving in distance and time for vessels bound to and from the Baltic, but it will avert the annual disasters which result in a loss of some 200 sailing craft attempting the dangerous passage around the north of Denmark.

Suggestions have also been made for shortening the route to Mediterranean ports and to the East. One of these is to deepen the old Languedoc Canal from Bordeaux to Narbonne, while another project contemplates a new canal having nearly the same terminal points. By sailing thus direct from the Bay of Biscay into the Mediterranean a voyage of 700 miles around the Peninsula of Spain would be avoided. Then from the Mediterranean other shorter routes than Suez are indicated for reaching the Indian Ocean. A cut from Acre to the Jordan Valley and thence to the Red Sea has its advocates; and another from Antioch to the Euphrates, and thence to the Tigris, would open a direct passage to the Gulf of Arabia. But the engineering difficulties in these last two projects are so great that they may safely be considered as purely visionary.

It may not be known that M. de Lesseps has figured in other schemes than Suez and Panama. In 1881 a company was organized, with M. de Lesseps as honorary president, to build the long-talked of canal across the Isthmus of Corinth. This enterprise, whose necessity was foreseen by Periander, Cæsar, Caligula, and others, and which was at one time undertaken by Nero, will serve a commerce which estimates have placed at 4,500,000 tons. M. de Lesseps, in the interest of a French company, has also obtained a concession from the King of Siam to construct a canal across the Isthmus of Malacca, which would save a voyage of 500 miles between Europe and Chinese ports through the treacherous straits of the Malay Archipelago.

Coming to our own shores, it may be well to point out the enormous advantage which the St. Mary's Canal has been to our internal commerce. A small traffic in 1855 has risen to the extraordinary figure of 6,932,000 tons which passed through it in the year ending July, 1889. Its original dimensions, which had been increased in 1881, proved totally inadequate to accommodate the growing trade, so that a further deepening to twenty feet and an enlargement of the locks—now the largest in the world—has been undertaken, and when this is finished it is probable that St. Mary's will serve a larger traffic than any canal in the world until the facilities offered at Nicaragua have created new and more extensive commercial dealings with the countries of the South.

There is a series of canals which in time is certain to be constructed between the great cities of our Atlantic seaboard, and the present awakening of interest in such projects bids fair to hasten its consummation. This line of inland water-way would consist of the Cape Cod Canal, from Buzzard's Bay to Barnstable Bay, which would save from 70 to 140 miles from Boston to various southern ports; the Delaware-New York Bay Canal; and the Delaware-Chesapeake Canal. By such a system as this, not only would commerce have a direct and cheap route from Boston and New York to Philadelphia, Baltimore, Norfolk, and the ports in the Carolina sounds, but it would enable us to concentrate war-vessels with extreme rapidity at any of these important places, and would preclude the interception of communication by blockading fleets in the event of war. When the Nicaragua Canal has given an impetus to southern trade, the need of the canal for which a charter was granted in 1883, from the St. John's River, Florida, to the Suwanee, on the Gulf Coast, will become so imperative that it cannot long be delayed. Then the chain will be complete, and our merchants will enjoy advantages, in reaching speedily and cheaply the ports of Spanish America, which will throw the balance largely in their favor against competition from Europe. With such encouragements as these, it would seem that an American shipping ought to spring up which would give us that supremacy on the sea which it should be the effort of our law-makers to facilitate by every legitimate means within their power.

THE HEREDITARY PRINCIPLE.

The dismissal of the Emperor of Brazil—for dismissal seems to be the word—will not strengthen something which now needs a great deal of strengthening—the hereditary principle in government. It is weak in England and Italy, and certainly not strong in Austria, and is extinct in France. The Imperialists made a curious attempt to revive it in the last-named country by basing it on a plébiscite—that is, asking the people to elect a particular saviour of society, with the privi-

lege of transmitting his place to his son, who might not have any capacity whatever for saving society. In England the House of Lords has brought the principle into great discredit through the misconduct of some peers and the abdication of their legislative functions by others, and perhaps more than all by the gross mental and moral inferiority of the sons of some men raised to the peerage for distinguished service in the army or at the bar. It is these contrasts which most glaringly reduce the rule to absurdity.

In Germany it has been a good deal strengthened of late by the high character and great services both of the old Emperor and his son Frederick, and will probably not suffer by the career of the present occupant of the throne if he commits no striking indiscretion, such as plunging the country into a needless or unfortunate war. He works hard at his duties, as nearly all the sovereigns of his house have done, and the idea that the king is the servant as well as the ruler of the State, and must be a man fit for active service in the field, fortifies the royal authority. In England the incapacity of the sovereign ever since the accession of the house of Hanover, nearly two centuries ago, for all serious work, either of war or statesmanship, would probably before now have had a disastrous effect on the monarchy but for the timely appearance of the present Queen. She rendered it the inestimable service of presenting the nation with the spectacle of a pure and conscientious domestic and official life just as the rule of the old aristocracy was overthrown and the serious and puritanical middle class was coming into power by the passage of the first Reform Bill. What has been the effect on the hereditary régime of the career of her children and grandchildren cannot be known as long as she lives, but the general impression is that it will be found at her death that the throne no longer rests,

> —— "unshaken still,
> Broad based upon a people's will";

that there will come a period of sufferance instead of one of loyal and hearty support. The light that beats on the throne is now so fierce, owing to the newspapers and the spread of the suffrage, that no prince who is not moral and hard-working can be sure of his place. The old mediæval monarch, in fact, surrounded by semi-divine honors, and incapable of doing wrong, cannot exist without the mediæval feeling of "loyalty," and this has perished or is perishing in every modern State. The English Revolution of 1640 gave it its first shock. The French Revolution still further weakened it, and the continued success of the American Republic and the accompanying growth of that curious social and political solvent, "American humor," has almost extirpated it. It would be difficult to find in Europe to-day, outside the inner court circle, any one who would confess that he felt it in its purity, or confess that he felt it at all without a deprecating smile. And then the dethronement of so many minor Italian and German princes since 1866, and, above all, the dethronement of the Pope and the downfall of Louis Napoleon, have done a great deal to cheapen royalty as an institution.

The dismissal of the Emperor of Brazil without trouble or violence, and with a handsome pecuniary solatium, must give all heirs to thrones all over the world a considerable shock, but no intelligent person will draw from anything that has happened in Brazil, or is happening anywhere, the conclusion that the hereditary principle has never had any value. On the contrary, it has rendered the modern world incalculable service in securing the peaceful devolution of great powers and enormous masses of property in the days when law was feeble, and every man who had a claim of any kind was ready to assert it with his sword. In fact, it is difficult to see how modern Europe could ever have emerged from the dark ages if the idea that the king's eldest son had a moral right to the crown, and the lord's eldest son had a moral right to the estates, had not taken fast hold of men's minds. It prevented prodigious waste of life and property, and gave continuity to the government and to society in times when security seemed of all earthly blessings the hardest to attain. Hereditary monarchy filled a most useful place until the habit of government by discussion and of submission to a majority vote had obtained a firm place in political manners, and a change in the supreme executive had become a possible and safe legal process. As this habit grows in monarchical countries, there is little doubt the desire to get rid of the expense and display of monarchical institutions will bear fruit everywhere.

It is certainly very odd that the popular faith in "blood" should, for political and social purposes, be as strong as it is, in view of the extreme rarity with which parents transmit either great mental or moral qualities to their offspring. Able sons of able fathers are by no means unknown phenomena, but they are too scarce to warrant the respect with which all children of remarkable parents are still treated. The explanation of the anomaly probably is, that the popular mind is still so much affected by the transmission of physical qualities that it infers from it the transmission of the nobler ones also. The hereditary transmission of physical qualities is as common among men as among the animals. The large men and the strong men are apt to have large and strong sons, and *may* have sons with as much brains, or tenacity, or industry, or integrity; but the popular presumption is apt to convert the "may" into "must."

THE UNIVERSITIES AND THE PROFESSIONS.

THERE is more or less perturbation in the collegiate world over the decline in the number of students, in proportion to population, who now seek a university education. In Germany the supply is kept up by the fact that a university degree is necessary for a great many offices in the gift of the Government, and for the retention of a certain social position, and there the complaint is that the university men are a drug in the labor market, and that large numbers of them pass their lives on the verge of starvation. But in England and in this country, although the number of colleges and of students grows rapidly, it does not grow in anything like the same ratio as the population. This fact began to be noticeable half-a-century ago in the United States; it has been extremely noticeable during the last twenty years in England.

There are, of course, various reasons assigned for it, of which the most prominent is the great delay imposed by a university education on a young man's entrance on life. The competition in all callings is very fierce. The question which fathers and mothers are everywhere asking themselves with most earnestness is, "What shall we do with our boys" to enable them to earn a living? The answer which comes back from nearly every trade and occupation is, that any boy who wishes to succeed must begin early, and that the youth who starts on the work of his life at seventeen or eighteen is sure to have very great advantages over the youth who begins at twenty-three or twenty-four, even if the latter have obtained a college degree. A college graduate who wishes to enter one of the professions through the best channels—whether law, or medicine, or the ministry, engineering or architecture—as a rule is graduated at twenty-two and needs three years more to get his purely professional training, so that he can hardly take the field in good earnest before he is twenty-five or twenty-six. But by that time his friend who has refused to go to college is four or five years ahead of him, and has, unless a dunce or a drone, obtained a good footing on the lower steps of the ladder. This difference, of which the public becomes more sensible every year, of course keeps a great many young men, promising as well as unpromising, on whom the necessity for earning a living bears hard, from taking a college degree. They seek only that kind of training which will most speedily fit them to earn money. They appreciate the academic course, acknowledge its many advantages, and wish they had had it: but they set it down as a luxury, and can point to scores of eminent and successful men in every calling who have dispensed with it. In fact, there are a good many branches of business, both in England and here, in which a college graduate is not welcome at all, not only because he comes late, when he is no longer pliable, but because his degree has given him some self-importance, and possibly, in England, some of the contempt for "trade" which is common in the public schools as well as at the universities.

Most of the colleges have been debating a good deal of late the best mode of meeting this imperious and increasing demand for an early entrance on active life. President Adams of Cornell has taken up the subject in his recent report, but exaggerates in saying that the German graduate gets to work at twenty-two, the American only at twenty-six. The difference is about half as great as this. Moreover, he is not the first college president to raise the question. It has been under discussion at Harvard since 1883, and has considerable space given to it in President Eliot's report for

1883-'84. The Medical Faculty at Harvard took it up and presented a memorial to the Academic Council on it in 1886, and President Eliot's report for 1886-'87 said that the evil "affected American colleges quite as unfavorably as it did the professional schools." In consequence of all this, the Harvard Academic Council voted on November 15, 1887, "that with a view to lower the average age at which Bachelors of Arts can enter the professional schools and the Graduate Department, the College Faculty be requested to consider the expediency of a reduction of the college course."

The question is undoubtedly a very serious one, and one that increases in gravity every year. There are two ways of meeting it. One is the shortening of the academic course by a year or more. The other is the injection of technical or professional studies into the Senior year. All the leading colleges are trying to choose. There is one other device which might be a help if not a solution, and that is letting every man take his degree whenever he could pass the needed examination. This would enable the studious, hard-working student to shorten his course almost to any extent his capacity or industry permitted. It might also do something towards hastening that most desirable consummation, the reservation of all the great colleges to the really studious men who are eager to learn, and who value the place for its scholastic rather than its social advantages. There is at present a prodigious waste of collegiate money and time on young men who are not eager to enter on life's work, and in fact do not care how long their exit from college is postponed. No college owes this class anything whatever, and it is a question whether their appearance in the world as graduates does not do much to discredit university education in the eyes of the multitude. The motto "Disce aut decede," or, freely translated, "Study or clear out," ought to be engraved on every college gateway.

THE MORAL ASPECT OF THE FRENCH EXPOSITION.

THE *Revue des Deux Mondes* has been publishing a very interesting series of articles on the Paris Exposition by the Vicomte de Vogüé, the well-known member of the French Academy. The closing one of the series appears in the latest number of the review, in the shape of an attempt to point out the moral and intellectual significance of the Exposition as a commemoration of the Revolution of 1789. He asks the question at the outset whether the France which has organized this commemoration is really faithful to what are called "the principles of 1789"—that is, approaches social and political questions in the same spirit as the France which made the Revolution. He answers it by an emphatic negative. He says the spirit of the Revolution, meaning thereby the worship of equality, of "the rights of man," and the faith that these two doctrines would in some manner transform the world and produce general happiness, is dead. Liberty, Equality, Fraternity—the watchword of the Revolution—has been relegated to the garret. What has taken its place? Fatalism, Selection by heredity, and the right of Might. Science, or Realism, has slain all the old idols, and pulled down the geometrical temple created for their worship by the Revolution.

The transformation has taken place in literature and art as well as in politics. The realists, or naturalists, are all the rage in literature. In politics the civil engineers enjoy the popular admiration which used to be bestowed on the orators and lawyers. Europe has been transformed by Bismarck, because Bismarck represented the new social force, Louis Napoleon the old one. It was a state of mind, no less than a political régime, which was overthrown at Sedan. Gambetta endeavored to adapt himself to the new methods, but his education was too classic to enable him to succeed. He made his famous speech at Romans on the new France that he foresaw, a few days after the German Chancellor made his equally famous one in the Reichstag on Socialism. "Between the language of the German statesman and that of the French orator, there were the same differences," says M. de Vogüé, "as between a book or a picture of the realistic school and a work of art of forty years ago, between a bit of Schopenhauer and an oratorical exposition of M. Cousin."

The change in France, he says, has been long in preparation. The new ideas have been for years working to the surface, just as the philosophic ideas of the Revolution had been for years working to the surface before the Revolution came. But just as the old régime received its death-blow the day on which that terrible satire the "Mariage de Figaro" was produced on the stage in Paris, so also the régime set up by the Revolution received its death-blow, M. de Vogüé thinks, on the day on which Darwin first found French readers. He adds:

"On the eve of the meeting of the States-General a superficial observer might have deceived himself as to the approaching dislocation of French society. The old régime still existed apparently intact. Royalty commanded in the name of the old law, and was obeyed by its organs. The people adored their sovereign; contemporary testimony is positive on this point. Nevertheless, the majesty of etiquette did not conceal the void. Among all thinking men, among the leaders of society, the new philosophy had killed the roots of the old tree. The old formal homage was rendered to the King at Versailles. . . . But every one had a presentiment of a revolution which would put into social practice the ideas which had mastered people's understanding. It is the same to-day. The principles which then triumphed are in possession of the State. They are inscribed on all our walls. They control the drafting of our laws; they are celebrated in our public fêtes; they protect our interests; but their virtue is exhausted; their decline is discussed publicly by writers, secretly by politicians. Other principles, the product of the new philosophy, have replaced them in the controlling minds of the community. Every one is asking what will be the result of the expected evolution. Some think it near, others remote; but there is no doubt that the force which shapes the destinies of men and nations will do its work once more in France by bringing the institutions of the country into harmony with the reigning ideas."

All this is very interesting as the conclusions of a very penetrating philosophic observer, but it is really, even if all true, much less serious than it seems. What it foreshadows is really, in plain English, the return of France to the paths of experience, which she forsook at the Revolution, for what John Stuart Mill has somewhere called the "high priori road," on which she has during the past century had so many laughable as well as terrible adventures. If all that M. de Vogüé foresees should come to pass, it would simply mean the conduct of the French Government on those great principles of human nature which have presided over the growth of the American Union and the British Empire since 1789.

HIGHER EDUCATION FOR WOMEN IN GERMANY.—I.

AMONG the progressive nations of the western world, Germany has hitherto clung most tenaciously to what we will venture to call the sweet-and-simple theory of the destiny of women. In other lands the claim of women to a more independent position, at least in the matter of educational privileges, has been very generally recognized in practical ways, so that to-day women of intellectual ambition either have access to the existing universities, or else are provided for in schools of their own established for the express purpose of furnishing them the same sort of mental pabulum that is given to their brothers. The state of affairs in our own country, which may without vanity be called a leader in this respect, does not need to be described. In England, as is well known, the cause of higher education for women has lately been making advances that amount to little short of a revolution. France, which had previously conferred academic degrees somewhat freely upon women, set out, in 1880, upon the policy of building *lycées* for them, and dates a new era in its educational history from the passage of the Camille Say law. The Spanish universities are now open to women, and these are availing themselves, in small numbers, of the opportunity offered, especially for the study of medicine. At the recent educational conference in Paris the most eloquent advocate of first-rate educational facilities for women was a Spaniard. Italy opened its universities to women in 1876.

It may be said in general that in the "Latin" nations the cause of the women has been championed from the outset by men, while among the Germanic nations the women have taken up the matter themselves and been largely instrumental in winning over the men to their views. Sweden admitted women to its universities in 1870, and three years later opened its academic degrees to them, except in law and theology. The latest Upsala catalogue, which lies before us, shows a goodly sprinkling of feminine names. Denmark followed in 1875; women can now take degrees at Copenhagen in everything but theology. In 1880 Holland, Belgium, and Norway joined the procession. The Swiss universities have long admitted women, Zürich having led the way in 1868.

In marked contrast to all this stand Germany and Austria, where the influence of authority, both civil and academic, has seemed to set more and more against the innovation. Not that women are excluded from German lecture-rooms: they are sometimes, especially if from abroad, allowed to "hear," but the privilege does not carry with it the right to matriculate or to be examined for a degree. Of late even the blessed boon of "hearing" seems to be more and more grudgingly bestowed; the mass of German professors take no pains to conceal the fact that they do not want the women

about. Nor, speaking broadly, are there any separate schools for women which can compensate for their exclusion from the universities. Aside from the feeble beginnings to be mentioned below, it may be said that Germany has not taken the first step towards providing for the higher instruction of its daughters in any such spirit as it has long provided for that of its sons. Thus we have the curious state of affairs that the country whose universities have been for half a century the admiration and resort of the world, is now sending its ambitious and talented young women abroad (as yet in small numbers, to be sure), because the gates of knowledge are barred against them at home.

The attitude of the Germans, especially professors and bureaucrats, with regard to woman's sphere is well known. It comes to view in all its impressiveness in a last year's address of Geheimer Oberregierungsrath Dr. K. Schneider of Berlin. "Where now," sternly asks Dr. Schneider, "does woman best fulfil her appointed destiny? Again Holy Writ gives us the answer: 'And they said unto him, Where is Sarah thy wife? And he said, Behold, in the tent.'" It is this sort of patriarchal philosophy which is master of the situation in Germany. Colored more or less by modern poetry, masking oftentimes under chivalrous and deferential language, but thoroughly contemptuous of woman's claim to anything like an intellectual equality with man, it controls the class that governs and the class that teaches. And as for the women themselves, the great majority placidly accept the rôle assigned them, enjoy the homage they receive in print for being "good," and go on believing that what their profound men-folk say must of course be true. Under these circumstances it would seem as if the outlook for any agitation of the woman question in Germany must be somewhat dreary. Nevertheless, such an agitation is going on briskly. A small but clear-headed band of reformers, chiefly women, have long been working to bring about a change of affairs, and there are signs that they are gaining ground. Prominent among them is Helene Lange, author of an interesting pamphlet, "Frauenbildung," and other brochures. To Fräulein Lange's various writings the author of this article is largely indebted.

The reform movement began several years ago, in an attempt to secure for women a larger and more influential representation upon the teaching-force of the public high schools for girls. These schools have grown up in Germany as a sort of pendant to the gymnasia. They receive girls at about the age of seven and graduate them in eight or nine years. In the first year the pupils are given eighteen lessons a week, which number is gradually increased to thirty or thirty-two lessons in the last years of the course. The subject made most of is German, which, including "reading," occupies about 22 per cent. of the pupil's total time. Next to this in importance come French and arithmetic, taking together as much time as German. After these come religion, needlework, calisthenics, occupying another 22 per cent.; then drawing, English, singing, geography, history, together about 23 per cent. The remainder of the time goes to Italian, natural history, physics, chemistry, and writing. (These figures are computed from the Prussian "Normal Lehrplan.")

The organization of the schools is similar to that of the gymnasia, and the charge so often brought of late against the latter, that their pupils are stuffed rather than educated, applies with still greater force to the girls' schools. The large number of daily lessons, the great variety of subjects nibbled at in the course of a week, the extreme youthfulness of the girls at graduation, make it impossible that their school training should, in average cases, do much either in developing the mind or in deepening and ennobling the character. It is to such a furious cramming process as this that the brightest and most fortunate German girls are everywhere subjected; and from this they pass directly to—wedlock, or whatever other fate awaits them. They have no opportunity, as their brothers have, to correct their superficiality by a period of leisurely, independent, concentrated study at a university; hence it is, as a rule, not corrected at all. The great majority of the graduates simply forget what they have "learned," and that is the end of it. At nineteen their education is mainly a reminiscence, a feeling of "gehabt haben."

Such being the state of affairs, we can hardly wonder that the "höhere Mädchenschule" should have become a favorite target for satire, and the cause of much uneasiness; or that a movement has been started looking towards a somewhat radical change of its theory and organization. The theory against which the protest is directed was formulated as far back as 1872 by a convention of girls'-school teachers which had met at Weimar in that year. This body gave utterance to the proposition that the German girl must receive a good education, to the end that the German man may not be bored "at the domestic hearth" by the ignorance of his wife. In other words, the public instruction of girls was to be based in fact, if not in form, upon the Rousseau philosophy, "La femme est faite spécialement pour plaire à l'homme." Of this position it was an obvious corollary that the instruction of girls should be in the hands of men, since men might be supposed to know best what would prevent men from being bored at the domestic hearth. This wisdom naturally excited opposition from the first, but the protesters were so hopelessly in the minority as hardly to be noticed. Of late, however, they have organized for the campaign, as our politicians say, and the results of their work are already beginning to appear.

THE FORGED LETTERS OF WASHINGTON.

WASHINGTON, November 4, 1889.

THE use of forged letters and spurious newspaper extracts in a political campaign has become so barefaced and insolent as to create a feeling of wonder whether the moral sense of the people has become deadened, and public spirit callous to such impositions. During the Revolution an experiment of this kind was made that has passed into history, but in such a form that comparatively little of its interest has been developed and the story never told as it might be. The singularity of the experiment—for in that contest and for many years after I am unable to trace any similar trick—and the impotency in results, make it worthy of a more careful study than has been accorded to it.

In May or June, 1777, John Bew, a well-known bookseller and Ministerial publisher of London, sent out from his presses a pamphlet containing seven letters purporting to have been written by General Washington to his friends in 1776, and to have been captured at the taking of Fort Lee. The account of the capture was very circumstantial and apparently truthful. The body-servant of the General, a mulatto named Billy, had been left behind because of illness, and in a portmanteau in his possession the letters were found. Now, Washington did have a body-servant of that name, purchased in 1768 from Mary Lee for £61 15s., and so great a favorite that he was specially mentioned in Washington's will, where he is given his "immediate freedom" should he desire it, and an annuity of $30 a year, in recognition of "my sense of his attachment to me, and for his faithful services during the Revolutionary war." But none of Washington's immediate servants were taken by the British in the course of the war, his papers were never captured, and in August, 1776, fearing the issue of the campaign round New York, he had sent all his public and private papers to Philadelphia, not calling for them until late in December. How improbable, then, was it that his servant should in November be carrying in his portmanteau letters written in the previous June and July. These facts, however, could not have been known to the British public.

The letters purported to give a "fairer and fuller view of American politics than ever yet transpired," and were they genuine they were well calculated to create surprise, for they represented the General as longing for peace and reconciliation with the mother country; disheartened under the burdens and responsibilities of the war, discontented with the army and with Congress, complaining of the Virginia officers as well as those of New England, and expressing his disgust at some of the political leaders in Virginia. There is a strong local color in these letters, and the cleverness and skill with which they are constructed, copying even the punctuation generally used by the General, might easily have misled the reader. Moreover, the intimate knowledge shown of the General's habits and of his family gave an additional reason for their genuineness, and even in America they might have been accepted at first sight as true. The fabricator shows a lamentable ignorance of dates, and in some parts of his handiwork trips on facts, drawing too heavily on his memory, his imagination, or the newspapers. But surely a public that could swallow almost weekly a total defeat of Washington's army, mutiny in his troops, the capture and even death of the General, might well be excused for tasting of the feast laid before them in these letters.

That they were compiled for a purpose is evident on their face. They would strengthen the war party in England, give aid to the Ministry to push the issue, and uphold the idea that the contest would be speedily terminated by the complete overthrow of the rebellion in the colonies and the reëstablishment of the authority of King and Parliament in those dependencies. From that standpoint it is not strange to have them published by a Ministerial printer, and it would not be surprising to discover that the author was in close relations with the Ministry, even if private pique or revenge may not have contributed to the suggestion of manufacturing them. But the purposes of the writer were not confined to the English public; they reached over the Atlantic, and, could they be widely circulated there, they might discredit Washington with the Continental Army, with Congress, and with the people, and, by creating suspicions of his integrity, and of his honesty in dealing with the two great factions of North and South—even then existing—introduce dissensions into the councils of the "rebels." Surely such an end was worth the "good beefsteak" that Richard Henry Lee thought was due to the forger from his masters.

The letters, though creating no stir in England, where they were in cold blood set down as forgeries, were eagerly seized upon by the Tory printers in America. Rivington of New York, who would make a model leader-writer

on a party organ of to-day, so little did he care for truth, justice, or the feelings of others, was the first to obtain them, printing one as a broadside to be sent into the American camp, and the others in his *Gazette*, whence they were at once made up into a small pamphlet. His Tory colleagues in Philadelphia, James Robertson—formerly associated with the poet John Trumbull—and James Humphreys, jr., whose loyalist principles had led to his exile from Philadelphia while in Continental hands, also utilized these letters in the columns of their newspapers. The results were by no means commensurate to the end in view, and it is rare to meet with so much as a reference to these letters in contemporaneous correspondence. To Washington, sensitive as he was to that form of criticism, they caused a moment of anxiety, coming as they did immediately after the "Conway Cabal," in which members of Congress and leaders in the army had been involved. But the publication caused only a ripple of excitement, one more of curiosity than of indignation; and so little attention was paid to it that Washington did not think it necessary to make any public denial of their authorship. They failed at this time, but they were ready for the uses of unscrupulous libellers in later years.

Who was the writer of these letters? So far as I know, only one attempt was made to unravel the mystery of the authorship. The *Monthly Review* of London suggested the Rev. Mr. V——, probably the Rev. John Vardill of New York, who had gone to England in 1774 to take holy orders, and had written on the Ministerial side; some poetical satires on the Whigs being attributed to his pen. He is commemorated in 'McFingal':

> "In Vardill, that poetic zealot,
> I view a lawn-bedizened prelate;
> While mitres fall, as 'tis their duty,
> On heads of Chandler and Auchmuty."

It is impossible to conceive, however, that a total stranger to Washington and to Virginia could have compiled these letters, even when the facts might have been given him by others. There are too many personal touches, showing an intimate acquaintance with Washington, to allow of such a supposition. Fortunately, a letter from one of Washington's aids, Tench Tilghman, is in existence, that gives us a clue, based in all likelihood upon a statement of Washington himself, for it was his custom to talk very freely with his family. Tilghman wrote:

"He [the General] suspects Jack Randolph for the author, as the letters contain a knowledge of his family affairs that none but a Virginian could be acquainted with. The sentiments are noble, and such as the General himself often expresses. I have heard him declare a thousand times, and he does it every day in the most public company, that independence was furthest of anything from his thoughts, and that he never entertained the idea until he plainly saw that absolute conquest was the aim, and unconditional submission the terms which Great Britain meant to grant."

Apart from this bit of evidence, and the existence of one of the broadside issues of the letter in the Du Simitière collection, with a note, "wrote by a Mr. Randolph of Virginia," there is internal evidence that "Jack Randolph," the last royal Attorney-General of Virginia, and father of Edmund Randolph, was the fabricator. He approaches accuracy when detailing matters or impressions that occurred prior to November, 1775, when he sailed for England. He is most minute in facts that Washington might have written to Mrs. Washington or to Lund Washington, with both of whom Randolph was in close friendship. "Surely," wrote Lund in the fall of 1775, "her old acquaintance, the attorney, who, with his family, is on board his [Dunmore's] ship," would prevent any danger of harm to Mrs. Washington. He uses facts and illustrations that it is probable were communicated to him by his son, when the latter was one of Washington's aides before Boston, and, finally, he urges reconciliation in the strongest terms, an article of Randolph's belief so strong that Jefferson regarded his departure to England somewhat in the light of a mission. "Looking with fondness towards a reconciliation with Great Britain, I cannot help hoping you may be able to contribute towards expediting the good work." Such were Jefferson's parting words to the loyalist exile, who went to London, accepted a pension of the British Government, and may justly be suspected of having forged these letters of 1776.

Here the history of the letters might well have ended, for they have thus far proved harmless; but the bitterness of party strife was to play the "body-snatcher" with them, exhuming them in one of the most critical periods of our national history. The arrival and publication, through a breach of confidence, of the Jay treaty, had thrown the country into a ferment. The French party used it for all its worth against Washington, and charged him with betraying the interests of his country to the British. The press teemed with attacks upon him and his policy, so bitterly personal in tone and vituperative in language as to excite indignation when read at this late day. None, however, wielded such a bitter pen as a little clique of "French Democrats" in Philadelphia. Duane, an Irish-American, and Bache, a connection of Benjamin Franklin, formed a partnership, and their paper, the *Aurora*, has never been surpassed, if equalled, in its libellous spirit and neglect of all proprieties. Mr. Henry Adams, in his admirable history, asserts that this paper "was the nearest approach to a modern newspaper to be found in the country," and sets him down as a "scurrilous libeller."

This precious pair undertook to destroy the influence of Washington, for they feared he might be a Presidential candidate for the third time. In 1796 appeared two volumes of the official letters of Washington to the Continental Congress during the Revolution, a compilation made by one John Carey, under the eyes of Washington and Jefferson, and designed for the English market. Naturally these volumes were reprinted in this country, and gave Duane & Co. their cue. For they republished the forged letters from the "Federalist Press," and, not content with that, compiled a good-sized volume of Washington's letters taken from the newspapers, but so garbled as to mislead the reader, and place the writer in the wrong. This volume, entitled "Epistles, Domestic, Confidential, and Official," was issued by Rivington, who must have smiled to see his old work vamped at that late day, and, without a word of explanation, placed upon the market as a complement to the Carey compilation. The exquisite irony of such an issue, in which whatever truth it contained was relegated to the appendix, must have been highly appreciated by the compilers, and they succeeded in having the volume reprinted in England.

Washington, while he was in office, took no public notice of this volume, although he made an effort to discover the perpetrator—an effort that yielded no results. But, on the day before he left the Presidency, he placed on file his declaration of the forgery, and his denial was widely published in the newspapers. Did it stop the attempts of Duane? Not at all; but to protect himself from possible consequences, he printed Washington's denial as a leaflet, and, inserting it in the fore part of his volume, continued to sell it. I have met with so few copies of the epistles containing this leaflet that it is reasonable to suppose that the sale was not very brisk after the forgeries were denounced. There is something almost pathetic in Washington's taking his pen, on the day before he retired to private life, to protest against such methods, and leave his "testimony of the truth to the present generation and to posterity." He recognized the purpose of the publishers of these forgeries: "It was then [1778] supposed to be of some consequence to strike at the integrity of the motives of the American Commander-in-Chief, and to paint his inclinations as at variance with his professions and his duty. Another crisis in the affairs of America having occurred, the same weapon has been resorted to, to wound my character and deceive the people."

The attempt was as abortive in 1796 as it was in 1778, and although the ranks of the libellers were increased by such lights as Thomas Paine and James Thomas Callender, the reputation of Washington never suffered by their attacks. Not content with his retirement, they pursued him into private life, and the farewell to Washington on his leaving the Presidency, penned by Duane, has become a classic of unseemly libel. In one respect, it must be confessed, these writers were above their successors; for in the entire range of their writings I have been unable to trace a single attack upon Mrs. Washington. The Duanes, Baches, and Callenders of to-day would not only forge letters, and libel public characters, but pursue their wives and destroy all privacy with their impertinent interference. It would be well if these later writers would adopt the chivalry of their prototypes of the last century; and better still if they could learn, from the history of these letters, that such attempts generally end in failure and come back upon their originators.

WORTHINGTON C. FORD.

THE EDINBURGH ART CONGRESS.

LONDON, November 6, 1889.

THE second Art Congress has just been brought to a close in Edinburgh. It is not very long since, in the *Nation* (October 3), in writing of the speeches made at the first Congress, and pointing out the socialistic, moral, economic, and everything but artistic tendency of many of them, I ventured to predict that very few leading artists would take part in the proceedings this year. I should like now to show briefly how fully events have justified the conclusion at which I then arrived, especially as the *Saturday Review* has objected to my prediction, based, it thinks, on the usual inaccurate information of the American correspondent, and, to prove it groundless, has given a list of names of the most distinguished artists present. But it so happens that this list supports rather than contradicts me, and I cannot do better than use it in my turn.

The Royal Academy was represented—I am quoting the *Saturday*—by Briton Riviere, Watts, Hodgson, Horsley, Richmond, Yeames, and Onslow Ford. Of these seven only three are men of any fame as artists. Onslow Ford, though perhaps his work has not crossed the ocean, is one of the most promising of the younger school of English sculptors; Richmond probably is better known; and, of course, the reputation of Watts is still more widely spread, but to what extent his present painting is held to equal it, outside of the group of his admirers, no better illustration is needed than its criticism by Mr. Coffin in his ninth paper on "The Fine Arts at the Paris Exhibition" in

the *Nation* for October 10. I find that another of the seven, Briton Riviere, also contributed to the Paris Exhibition, but Mr. Coffin did not even consider his work worth mention. As for the others, two are absolutely unknown, save by Royal Academicians and the buyers of their pictures, whoever the latter may be; while if the seventh has attained notoriety, it is not by his work, but because of his fad about the nude in art—a fad which he aired at Edinburgh, where he was indignantly silenced by a respectable Quaker lady, who told him and the delighted audience that the study of medicine in her youth had knocked all such old-woman's nonsense out of her. If these men are really to be accepted as Great Britain's leading artists, one begins to understand better all the talk about the degeneracy of British art.

William Morris and Walter Crane were the representative decorative artists in attendance. But they go to Art Congresses to preach socialism and not to talk about art. They and their followers were again in full force, and, not content with the Congress as a field for action, in the evenings they lectured upon book-illustration, house-decoration, book-binding, and printing to workmen, with closed doors. Only those who revealed by their clothes the noble fact that they lived upon their own labor and not upon the labor of others, were admitted; artists and reporters were shut out in the cold. It is a doubtful question whether men who cannot stand criticism are best fitted to consider and settle affairs of national importance.

There were no architects of note present. Among the sculptors, in addition to Onslow Ford, Stirling Lee was the only one of prominence, but he was a conspicuous figure, as he deserved to be, owing to his late unfair treatment at the hands of the phenomenally prudish Liverpool corporation. Of the Royal Scottish Academicians who attended, I doubt if any are really known, with the exception of Mr. Hole, whose fine reproductive etchings have probably been seen in New York, as well as his illustrations to Stevenson's 'Master of Ballantrae.' Promoters of the Home Arts and Industries appeared among the speakers, but, however great they may be as philanthropists, they can scarcely be ranked as leading artists, even in Great Britain. The *Saturday Review* also brings forward triumphantly the presence of three art professors among the spectators, but I notice it does not mention their names, and I hear nothing of speeches from such men as the Slade Professors, Herkomer, Middleton, and Legros, or Dr. Waldstein, who, had they gone to Edinburgh, would hardly have been allowed to remain mere spectators. The *Saturday's* list closes with the art critics, "well represented" by Mr. Andrew Lang, who, however, assured his audience he knew nothing whatever about art, and then went on to talk very charmingly of savage art; and Mr. M. H. Spielmann, who gossips about artists in one of the London evening papers, and whose first, last, and only canon of art is, "Keep on the right side of everybody!"

At last year's Congress Sir Frederick Leighton, Alma-Tadema, Hamo Thornycroft, and Alfred Gilbert—to mention no others—delivered addresses, while the principal art critics on the London press went to Liverpool in a body. And yet even the Liverpool gathering, it was felt, was not altogether representative. Great etchers like Seymour Haden and Whistler, who would have drawn after them crowds of students from all over the country, eager to listen to their every word on their art, have had nothing to do with the Congress since the very first; neither has Sargent, who, though an American, is now so very prominent in the English art world, nor Parsons, nor Stanhope Forbes, nor in fact any of the most promising of the younger men. Book-illustration was absolutely ignored, and yet Abbey lives in England. And when it comes to the art critics, where was Ruskin, who still seems to have strength enough to travel as far as Venice, though he was not heard from in Liverpool or Edinburgh? And where was Philip Gilbert Hamerton, whose name both years has been unmentioned? From the beginning the Slade Professors have not shown active interest in the movement; and this year a man like Sidney Colvin, though expected, neither went to Edinburgh nor sent a paper, so that the national museums were not adequately represented. The *Saturday's* report but confirms my statement that the Congress is being given over to faddists, moralists, social reformers, and men who seize every opportunity to add to their own notoriety, and not, as it should be, to the leading artists of the country.

It is amusing to find the *Saturday's* righteous critic cheerfully contradicting himself. After parading his great names, he adds: "Names and numbers are, however, of little importance. The questions that have to be mainly considered are, what was said by the speakers, and was it worth saying?" Most emphatically, no. Save a strong, manly speech by Onslow Ford, suggesting the appointment of a Minister of Art, and one by Stirling Lee, nothing was said which might not just as well have been left unsaid. There was what promises to be the inevitable opening sermon proclaiming the holiness and divine mission of art; and there were weak platitudes from the Marquis of Lorne, fitted, I suppose, for the Presidential post by the artistic proclivities of the Princess Louise. Mr. Watts, who could not be present in person, sent a written appeal to save the workman from drink by allowing beauty to permeate his joyless life; and Mr. Yeames showed startling ignorance of the conditions of art and artists in the past. One speaker proposed the formation of a Court of Taste in every great city (!); another, the protection of architects from quacks by a sort of licensing system. But perhaps the most noteworthy incident of the week was the courage of Mr. Hole, who openly and without fear called Ruskin and his teachings absurd. This may point to the beginning of a healthy reaction against the Soulful School of Art in England. But the struggle will be, in all probability, a desperate one. Mr. Morris was quickly on his feet to take up arms for his prophet, and the London press, rushing into the fray, declared that art for art's sake will never go down with sturdy Britons. This settles it. As long as English artists are ruled by the English public, English art exhibitions will be what they are, and English art congresses but an excuse for preaching and sentimentalizing.

N. N.

Correspondence.

A TRACE OF JOHN WASHINGTON.

To the Editor of The Nation:

Sir: Mr. Henry F. Waters's recent pamphlet on the 'Ancestry of Washington,' reprinted from the *New England Historical and Genealogical Register* for October, is of great public interest. The author desires further confirmation of his statement regarding the affiliation of John Washington of Westmoreland County, Virginia, whose will is dated 1675, proved 1677, with the Sulgrave Washingtons. All that now exists, however, are some extracts taken many years since by Bishop Meade from the original will-book, which has disappeared.

It is in this connection that, acting on the advice of two of the most eminent genealogists in New England, I call public attention to the fact that the will or letters of administration of *a* John Washington about the same period is recorded in the index of the Surrogate's office in Charleston, South Carolina. This discovery the writer of this note made in 1874, and, showing the entry in the index to one of the officials, he confirmed the date of the will as about 1680 (?). It is quite possible for this member of the Washington family to have been the original emigrant John Washington, who may have owned land in South Carolina and had his will recorded in two places. Unfortunately, in 1874 the early Charleston wills were in such confusion that, without a long search, it would have been impossible to find the original; but it is to be hoped that some diligent antiquary like Mr. Waters may discover this important paper, for which reason I now call public attention to it.

William John Potts.

Camden, N. J., November 15, 1889.

LOCKRAM AND *LOCKRUM.*

To the Editor of The Nation:

Sir: A reference to the dictionaries of the English dialects should satisfy those who are in doubt about these words. Of the fabric called *lockram* there seems to have been a fine sort as well as a coarse. *Lockrum*, signifying "nonsense, gibberish, rigmarole," is common in the Midland counties, and thence, no doubt, was exported to the New World. Sometimes it is used attributively, as in Edward Ward's *Hudibras Redivivus* (1707), vol. i., canto ix.:

> "After he'd made a little Pause,
> Again he stretch'd his *Lockrum* Jaws.
> But now, says he, 'tis worth your Wonder
> T'observe how th' Lord brings Tyrants under,
> As Ahaz, Jeroboam, Saul,
> Jehoram, and the Dev'l and all,
> Who were so wicked, that they valu'd
> Religion only as a Ballad."

That Ward meant *lockram* is, however, a position which may find advocates. But, after all, until better informed, I am disposed to consider *lockram* and *lockrum* as one and the same word, with two senses, a primary and a figurative. In this case it may be compared with *bombast*, *buckram*, *fustian*, and *shoddy*.

—Your obedient servant, F. H.

Marlesford, England, November 8, 1889.

BE DONE AND *HAVE DONE.*

To the Editor of The Nation:

Sir: There is no higher authority for English usage than your correspondent "F. H." He is quite right in what he says about "have done." When I first saw in print the letter on which he comments, I made the same criticism on it that he has made. What I certainly meant to write, as it is what I should certainly say, was "be obliged and done with it." The awkward repetition of the "be" was, I am sure, unconscious. Had I chosen the pedagogic instead of the conversational form, I should have written "be obliged and have done with it."

I remain, your obedient servant,

J. R. Lowell.

INTERNATIONAL IGNORANCE AGAIN.

To the Editor of The Nation:

Sir: "H. G. H.'s" story in the *Nation* of November 7, of English ignorance of our geography, needs to be capped by a story of some American ignorance of foreign parts, in order to justify the adjective "international." Per-

haps most of us are fitted for the position of hero, even "H. G. H." himself.

Australia is an English-speaking continent second in importance only to the United States among the commonwealths making up Greater Britain. If we demand of an Englishman that he should know that the Rockies are not in sight from the Hudson, and are even more than 400 miles away, should we not expect of an American, "H. G. H.," for instance, that he should be able to tell:

(1.) Whether Australia is larger or smaller than the United States?

(2.) Whether Tasmania is in sight from its shores, or is 400 miles away or more?

(3.) Whether the distance between Australia and New Zealand is comparable to that between the Hudson and the Rockies, or whether it is 400 miles or less?

(4.) Whether Melbourne is in sight from the mountains about Sydney, or whether it is 400 miles away, or as far away as the Rockies are from the Hudson, etc.

Yet, can "H. G. H." answer these questions without putting down the *Nation* to take up an atlas? G.

COLORADO SPRINGS, November 12, 1889.

THE TARIFF ON AMERICAN SCHOLARSHIP.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for October 24 (p. 335), you furnish your readers with an instructive illustration of the peculiar kind of encouragement given to scholarship by our laws, in the account of the fine of $1.25 imposed upon Dr. Maurice Bloomfield for importing two proof copies of his text-edition of the 'Kāuçika Sūtra.' Certainly no parallel to this transaction could be discovered in the Treasury Department records of any other nation, civilized or uncivilized.

It may not be out of place to point out, in this connection, that if the Senate Act of May 9, 1888—the so-called International Copyright Act—had passed the House of Representatives as well, Dr. Bloomfield would not only have been made to pay into the Treasury of the United States one-fourth of the value of every copy of his work which he might import, but, in return for his temerity in having his book printed in the *only* country, perhaps, where Sanskrit printing could readily and cheaply be done, he would have been called upon to forfeit his entire copyright. That is to say, he would have lost the only legal property equivalent he could show for his five years or more of arduous labor, and, moreover, been forced to surrender the power to control the use—however fraudulent or abusive—made by other persons of the results of that labor. *

THE COPYRIGHT IN BAGEHOT'S WRITINGS.

TO THE EDITOR OF THE NATION:

SIR: Your reviewer is quite right in requiring visible evidence in the matter of Bagehot copyright, and I cannot charge him with my own negligence. I possess, however, cordially appreciative letters from Mr. Hutton and Mrs. Bagehot, and expect to publish the latter's permission on the next lot, to be printed shortly. The neglect of this was not due to any sharp practice, but to the fact that the overworked editor, like Virgil's Rhadamanthus, did his task wrong end first, and accomplished it before asking any questions.

"De gustibus non"—but with regard to the portrait, which I am very sorry does not do credit to our intention and expense (we *paid* for a first-rate one), it may be interesting to know that Mr. Hutton, surely a competent judge, pronounces it "admirable." It was engraved from the Woodburytype frontispiece to the 'Literary Studies'; well or ill engraved I must not debate.

May I add that a time when the highest and most sacred things—the chair of national Government and the pulpit of God—are being degraded to advertising purposes, is exactly the one when somebody ought to elevate advertising out of its mire of uncleanly associations? When grand viziers use their positions to sell "pants," and religious advisers to job stocks, a business company may justly feel some pride in a dignified and valuable service to the public, irrelevant to its business, for which it asks only respect and good-will. They pull their employments into the mud; we raise the least dignified part of ours out of it.

Truly yours, FORREST MORGAN.

WORDSWORTH VS. SCOTT.

TO THE EDITOR OF THE NATION:

SIR: Without seeking to impugn the general validity of Mr. Savage's remarks upon Wordsworth and Japanese art, in the *Nation* of November 14 (although they seem to me somewhat far-fetched), suffer me a word in defence of one whom Wordsworth unjustly attacks. I mean Scott.

It has been the fashion for half a century, ever since Carlyle's heinous review of Lockhart's 'Life,' to sneer at Scott, until one wonders whether our grandfathers might not have been out of their senses to find aught good in him. It is high time that an end should come to this pitiful delusion. As to Wordsworth, profoundly as we may admire the poet in him, we need not accept the man at his own valuation. In truth, Wordsworth could be at times insufferably narrow-minded and fault-finding towards his contemporaries. Mr. Savage quotes his strictures upon Scott's method:

"He [Scott] took pains; he went out with his pencil and note-book and jotted down whatever struck him. . . . He went home and wove the whole into a poetical description. But nature does not permit an inventory to be made of her charms. He should have left his pencil and note-book at home, . . . and taken all into a heart that could understand and enjoy," etc., etc.

Moral: Write from memory!

The curious feature of all this is that Wordsworth is belaboring a straw-man of his own creation. The real Scott did *not* do what he is represented as doing. If ever there was a writer who trusted to the stored-up treasures of his memory, gathered in Wordsworth's own ideal manner, it was Scott. In only one instance, to my knowledge, did he write otherwise. And even this instance would never have been known to Wordsworth had it not been recorded by Lockhart. The scene of 'Rokeby' is laid in England. Scott visited the place in the autumn of 1812, as the guest of his old friend, the owner, Mr. Morritt. From the latter's Memoirs Lockhart quotes:

"The morning after he [Scott] arrived, he said: 'You have often given me materials for romance; now I want a good robber's cave and an old church of the right sort.' We rode out, and he found what he wanted in the ancient slate-quarries of Brignal and the ruined Abbey of Egglestone. I observed him noting down even the peculiar little wild flowers and herbs that accidentally grew round and on the side of a bold crag near his intended cave of Guy Denzil; and could not help saying that, as he was not to be upon oath in his work, daisies, violets, and primroses would be as poetical as any of the humble plants he was examining. I laughed, in short, at his scrupulousness; but I understood him when he replied 'that in Nature herself no two scenes are exactly alike, and that whoever copied truly what was before his eyes would possess the same variety in his descriptions, and exhibit apparently an imagination as boundless as the range of nature in the scenes he recorded; whereas whoever trusted to imagination would soon find his own mind circumscribed and contracted to a few favorite images, and the repetition of these would sooner or later produce that very monotony and barrenness which had haunted descriptive poetry in the hands of any but the most patient worshipper of truth.'"

And from a letter of Scott's to Morritt, November 29, 1812, it appears that Scott cancelled in type and rewrote a page of 'Rokeby' in order to make his mention of the watercourses tally with the facts.

This 'Rokeby' passage is unique, I believe, in Scott's life. We must remember that Scott was undertaking to describe a scene with which he was not familiar. We may rest assured that when Scott's foot was on his native heath, he never had need of pencil and note-book, but trusted to a memory that seldom deceived.

Wordsworth, in the passage above noted, goes on to expatiate upon the *advantages* of trusting to memory, that useful faculty having the happy gift of eliminating the "accidental" and retaining only the "ideal and essential." It may be worth while for the Wordsworthians to apply this theory to the theorizer himself. In Wordsworth's exquisite "Yarrow Visited," the downright sincerity of the opening stanza is marred by the pious ejaculation:

> "O that some minstrel's harp were near,
> To utter notes of gladness,
> And chase this silence from the air
> That fills my heart with sadness."

Was not James Hogg, the Ettrick Shepherd, of the party, ready at a sign to break the oppressive silence with his piping? But Wordsworth needed the silence, and his memory supplied it, by eliminating the accidental Hogg. And twenty years later the same memory, in "Extempore Effusion," sang:

> "When first descending from the moorlands
> I saw the stream of Yarrow glide
> Along a bare and open valley,
> The Ettrick Shepherd was my guide."

Another sample of Wordsworth's peculiar memory may not be superfluous. Scott, in quoting from "Yarrow Unvisited," got the famous lines,

> "The swan on still St. Mary's Lake
> Floats double, swan and shadow,"

into

> "The *swans* on *sweet* St. Mary's Lake
> Float double, swan and shadow."

Wordsworth criticised the blunder twice—once rightly, once wrongly—rightly, when he laid the stress on the "sweet," pronouncing it commonplace and meaningless, whereas "still" was necessary for the perfect image in the water; wrongly, when he laid stress upon the plural "swans," saying: "Never could I have written 'swans' in the plural. The scene *when I saw it* . . . was one of utter loneliness; there was *one* swan, and one only, stemming the water. . . . Had there been many swans and many shadows, they would have implied nothing as regards the character of the place, and I should have said nothing about them." And he wound up with the memorable utterance: "I have hardly ever known any one but myself who had a true eye for Nature—one that thoroughly understood her meanings and her teachings."

Extraordinary indeed! I have ventured to italicize the clause "*when I saw it.*" Did Wordsworth actually forget that he was discussing lines from his poem upon Yarrow *unvisited*! And did he mean to insinuate that Scott and other ordinary mortals with fallible eyesight had never seen a flock of swans on St. Mary's Lake? Besides, in "Yarrow Unvisit-

ed," the poet is not describing a scene of desolation. He is rather alluding to the lake in a hasty summing-up and in a decidedly *humorous* tone. As for the "sweet," Scott's memory, doubtless, tripped over the lines immediately preceding:

"Let beeves and home-bred kine partake
The sweets of Burn-mill Meadow."

I am far from undervaluing Wordsworth's poetry. It has, indeed, an ineffable charm and glory all its own. But I must hold that we shall fare more safely if we trust less implicitly to his oracular didactic strictures upon other men. J. M. HART.

UNIVERSITY OF CINCINNATI, November 18, 1889.

DESOLATE FARM SITES IN NEW ENGLAND.

TO THE EDITOR OF THE NATION:

SIR: What has been said in the *Nation* about the decline of farming in New Hampshire and Vermont has attracted attention at home and abroad, and if the subject is of interest to readers in France, it must be doubly so to Yankees born and bred in the very localities you have mentioned. From the responses so awakened one might infer that the abandonment of New England farms was "a modern instance," and only recently worthy of comment, while the causes set forth seem to me equally misleading.

The period of my youth was spent upon a farm situated in a school district just north of Monadnock Mountain in New Hampshire. We attended school in a little brick school-house which the School Committee reported as "situated a mile from any human habitation and much secluded by hills and forests." The number of pupils during those years (1857 to 1865) ranged from five to fifteen, but we were accustomed to be told on "examination days" how this school-house had in times past held eighty or more pupils at a time. A curiosity to know where they could have come from led to the discovery, within one mile of this school-house, of nine "old cellar-holes," and, within a radius of one and a-half miles, of seventeen. Two years since, I took another inventory, and found that there are now not less than twenty-three old farm sites within the last-named radius. About these spots, where in most cases large, well-made houses stood, filled with strapping boys and buxom girls, still linger some vestiges of former days—a scraggy orchard, a lonely rose-bush, or a sentinel shade tree—to tell where the husbandman and housewife *ceased* to plant and tend fifteen, forty, and sixty years ago.

It should be borne in mind that this locality was always purely agricultural; a blacksmith's shop where farmers' wagons were ironed and their oxen shod, if an exception, being the only one. The soil, too, produced fair corn and other crops, and was, generally speaking, productive. Good crops of hay are still cut where the plough has not been used for twenty years, and cattle grow fat in pastures grazed for generations. The schools in town always had more than a local reputation; roads were generally good and taxes reasonable. Moreover, the condition of the farmers who remain disputes the statement of "G. W. A.," "that it is to-day an absolute impossibility for a healthy man, by average industry and prudence, to live with ordinary comfort and lay by enough to see him through his old age on a New England farm." They have money in the savings banks, Western mortgages and other investments, have good buildings, well-stocked farms, and a thousand comforts *unknown* to the average Western farmer.

I have lived in Windsor County, Vermont, and there are few localities in the New England States about which I do not know something from *actual observation;* and I say confidently that the above statement of facts (which any one can verify) about a single school district in the town of Dublin, County of Cheshire, and State of New Hampshire, presents a case typical (generally speaking) of the rural districts throughout New England.

We have heard cited as "among the main causes of this decline" the burdens of direct and indirect taxation; but how a farmer, by migrating and plying his vocation in some other State, could escape these burdens, is to me a mystery. The affliction of the tariff is a sore one to the farmer, but it falls as heavily upon him in Colorado and Illinois as in Vermont. Roads, schools, and public works are made and maintained by direct taxation in every part of the United States, and it is as easy to hide one's farm or personalty from the assessor in one place as in another.

Unquestionably that product of "refined and enlightened selfishness," the tariff, silenced the sound of industry in every ship-yard along our New England seaboard; and this, with the discovery of petroleum and the destruction of the sperm whale, let loose a band of half-lumbermen, half-whalemen, and half-farmers, who left their half-tilled acres for something more congenial to their uneasy spirits. But the main causes which we seek are broader and deeper. They inhere:

(1.) In the change of method and extension of agriculture, and its broadened relations to commerce.

(2.) In the opportunity for enterprise and speculation in other lines which was contemporaneously developed.

(3.) In an education which enabled the New England farmer boy to change his vocation, seize upon and possess this opportunity.

The economic conditions of trade and agriculture have been revolutionized by science within a hundred years. Improved machinery and methods have made it possible to farm more acres, or make a single acre more productive with the same labor. The art of canning, in its multifarious uses, preserves and makes transportable products otherwise perishable. The vast fields which formerly produced madder and other vegetable pigments and dyestuffs, have been converted into grain fields by the discovery of aniline dyes and mineral paints. But over and above all this and much more of the same tenor, the tremendous strides made in improved methods of communication, travel, and transportation have added an enormous and increasing annual increment of new farms—new farms in Australia, new farms in Africa, new farms in South America, and new farms in North America, all bidding for a rating in the same market—until to-day the merchant in Lombard Street may, in the morning, consult his factors in Minneapolis, Montevideo, and Melbourne about some farm product, and in the afternoon order his supply from Cape Town or Bombay.

The new opportunities for enterprise and activity, super-agricultural, so to speak, which were developed alongside, sometimes in advance, of this opening of new ploughed fields, were fitted to stir and satisfy the largest imagination and the greatest range of tastes and ability. The margin of profit for the mere farmer grew narrower, and his vocation more mechanical and less interesting, but the sphere of human activity in every other direction was immeasurably widened. A time came, therefore, when the New Englander asked himself not, Where is the fittest farm, but Where is a fitter vocation?

Such a race of readers, thinkers, and misers never before tilled the soil; and farmers' sons were never before so perfectly equipped by practical training and education to change their calling, to adapt themselves to new social and economic conditions, to see, to seize, and to possess an opportunity the grandest and most varied ever offered. These farmers' sons left the farms to establish newspapers, to build railroads, to open mines, to organize banks and trust companies, to build up manufactories and found cities; and in every undertaking throughout this broad land, and other lands, where energy, brains, coöperation, and capital have been called for, their history is written. The first to leave the old homestead did so somewhat regretfully, somewhat with formality. But when, laden with golden, official, and diplomatic honors, they came home to speak in the Sunday-schools, fresco churches, build free libraries, and tell their story, all ceremony in going was forgotten. Farmers burned their buildings for the insurance, so that companies in Vermont failed or closed down, and in New Hampshire refused to pay even honest losses, until a valued-policy law was enacted. A powerful and impelling motive, which should be studied in connection with the foregoing, was an intense, bred-in-the-bone desire to get rich. No class known to history ever possessed a keener appetite for accumulation than those who hoed corn and potatoes in New England.

To speak of legislative remedies is useless: time alone can make the adjustment. When the new and cheaper lands of the world have been occupied, the hills of New England may again be inhabited, but it must be by a home-loving, unambitious people, who are satisfied to live in accordance with the conditions fixed by the law of supply and demand for those who till the soil in other parts of the earth.

WALTER C. FROST.

COLORADO SPRINGS, COL., November 18, 1889.

DESERTED FARMS IN NEW YORK.

TO THE EDITOR OF THE NATION:

SIR: The following clipping is from the county news column of the Lyons *Republican* for November 22. It shows that agricultural depression is not confined to New England, but that even in the richest part of New York State something is the matter:

"In the rural districts in Wayne County there are no less than 400 empty houses. It is a lamentable fact that the rural population of Wayne County is slowly drifting into the larger towns and cities, while many are going West in search of cheaper homes or fortunes. The town of Sodus alone has over fifty deserted houses, and Huron has thirty or more. The next census will show a marked decrease in the rural population as compared with ten years ago."—Yours truly, M. A. VEEDER.

LYONS, N. Y., November 23, 1889.

THE FARMER AND HIS TAXES.

TO THE EDITOR OF THE NATION:

SIR: The ingenious and convincing arguments in favor of a closer connection between the legislative and executive departments of our Government, which "G. B." has deduced from events absolutely irrelevant (to the ordinary mind), have long been the object of my admiration. But his explanation of the decline of prosperity in New Hampshire and Vermont does not carry conviction to my mind; nor can I believe there is any remedy so easily applicable as a mere change in the tax laws. Every one admits the great difficulty of adjust-

ing taxes equitably. It is the recognition of this difficulty, rather than any clear understanding of the underlying theory of right of ownership in land, that is giving Henry George's single-tax scheme its popular success in many States. If we admit that land belongs rightfully, not to individuals but to mankind, we can then justify a tax which is properly the rent of the land. But putting all rights in property on the same basis, it is not easy to see how the State can justly tax one part and suffer another part to go free; nor is the expediency of such a scheme obvious on any other than protectionist principles, which assume that certain kinds of industries should be sacrificed for the sake of other kinds.

"G. B." states that "all that gives land any value is the quick capital employed on it." Possibly. But why is "quick capital" employed on some land and not on other? Chiefly because some land is adapted by the nature of the soil or by its location to serve the uses of mankind. The presence of quick capital is primarily an *effect*, not a cause, and an effect of causes in which taxation or non-taxation is a very insignificant element. "G. B.'s" argument for the non-taxation of personal property in order that "quick capital" may flow in, exactly reduces to the protectionist argument—*i. e.*, that by taxing agricultural industries and favoring manufacturing industries, the value of the land will be raised by the creation of a local market. There is a plausibility about this argument, and I confess I have been at times nonplussed to find the facts directly controverting it.

The most striking feature of the decline of the farming interests in New England is that this decline is *not* the greatest in districts remote from the cities and villages where "quick capital" is aggregated—rather the reverse. It is astonishing, in driving five miles out from Lowell, Lawrence, Manchester, or any other of our thriving manufacturing towns, to find deserted farm-houses, abandoned fields, and all the evidences of decay in even greater profusion than in the "back districts." But such is the fact. The causes are, I think, mainly two:

(1.) As I said in my former letter, there is no such thing to-day as a *local market*. The means of transportation are so efficient that we find the products of the whole world in every inland town; fruits and vegetables are sold at moderate prices in our villages before they are green in leaf on our New England farms. Even milk is carried a hundred miles, and whatever advantage might accrue to the former from having a *comparatively local* market for this product, is taken from him by the combination of the milk contractors. No manufacturing town can flourish without railroads, and railroads mean that farm products are to be raised where Nature has given the greatest advantages for raising them, which is not in New England.

(2.) The nearer the city is, the sooner the farmer finds out that he is not gaining the return for his labor that other men are. The farmer back from the towns knows little of the world's opportunities, and so struggles on, fighting against fate, the assessor, and the tariff (though of the last he seems deplorably unconscious). Thus it is that we find the back towns less decayed than those near the cities. I was not a little surprised to observe this, last summer, on driving from Lowell to Boston, through a country gridironed with railroads, with thriving towns only a few miles apart, but the country lying between them showing in many cases no accompanying prosperity.

Moreover, "G. B.'s" remedy is practically tried in many towns by exempting from taxation, for a series of years, the plants of manufacturing companies. It is generally agreed, I think, among careful observers, that this policy is not advantageous to the farmer. The intelligent owner of one of the best farms in a New Hampshire town which has fostered in this way a manufacturing village, lately told me that he found almost no advantage in the supposed local market; that the growth of the village required a large outlay for streets, sewers, etc., and that the farmer was taxed to pay for these, so that the last state of that town was much worse than the first.

I have no hesitation in saying that the removal of the tax on clothing and on iron would do more to arrest the decay of New England farming interests than any new adjustment of direct taxation—not to say a new adjustment that would throw a still heavier burden on the farming interests. G. W. A.

BOSTON, November 18, 1889.

DIVORCED WORKINGWOMEN.

TO THE EDITOR OF THE NATION:

SIR: Perhaps the "Doubter" of your last issue will find an answer to his question in relation to the statistics of divorced workingwomen if he will turn to the first page of the Introduction in the fifth annual report of the Commissioner of Labor, reading as follows:

"The investigation is representative so far as the number of women whose affairs enter into it is concerned. The total number of such is 17,427, being from *6 to 7 per cent. of the whole number of women* engaged in the class of work coming under observation in the cities named."

The "Doubter" should rather doubt his own eyes than another man's written words which he has not even seen, or, having seen, has failed to understand. E. P. A.

PITTSBURGH, November 19, 1889.

PEDAGOGY AT THE UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: May I make, in the columns of your paper, a brief protest against the indifference of our colleges to the study of pedagogy?

I shall speak principally of Harvard, not because she is more worthy of censure in this respect than other colleges, but because I know her better. Looking at the Harvard of to-day, we find, in addition to the college or undergraduate department, a Law School, a Medical School, a Divinity School, a Scientific School, a Dental School, a School of Agriculture and Horticulture, and a School of Veterinary Science. If we ask ourselves to what extent these schools fit graduates of the College for the professions actually chosen by them, we find our answer in the statistics of the class reports. These reports tell us that teaching is universally more popular than any other profession, excepting those of the law and medicine, and that it is more popular than medicine even, in six cases out of twelve. Any one interested in the profession of teaching naturally asks himself why it is that this subject—more popular than the ministry, science, dentistry, agriculture, or veterinary science, for the study of which special schools have been established at a large expense—receives absolutely no attention at the University.

The fact that teaching comes second or third on the list, although sufficient to show that some preparation for it should be provided, by no means shows the full importance of the subject. When we call to mind the very large number of college graduates who, though not teachers themselves, are serving on school committees as directors of teachers, and of the still larger number who as parents are directing the education of children, is it unreasonable for us to demand not only that a special course of instruction shall be provided for those who intend to become teachers, but also that a part of every man's college course shall consist of studies that will enable him to form a few general ideas at least of the proper way to develop a human mind? Can any one deny that a man will become a better teacher, a more valuable member of a school committee, or a more judicious parent, from studying such writers as Pestalozzi, Froebel, Richter, Spencer, and Joseph Payne? It appears to me that ignorance of what these men thought is as culpable in a teacher or professor as ignorance of Blackstone in a lawyer.

I do not see how a university can fail to recognize the importance of this subject even to its own life and self-preservation. Invidious comparisons are beginning to be made between the teaching ability of the school-teacher and of the college professor. A superintendent of schools, who is a graduate of Harvard, tells me that the instruction given by his primary teachers is vastly superior in quality to that received by him when he was an undergraduate. A recent graduate of Harvard says:

"It is a fact, I think, which will not be denied by any one who has suffered for four years at the hands of the average college instructor, that much, if not most, of the teaching done in our colleges is of an exceedingly low grade. It will not compare favorably with the teaching in our best preparatory schools, and is certainly far inferior to that performed by the best trained teachers in our elementary public schools. . . . One of the most important reasons for this state of things is to be found in an almost total lack of any preparatory instruction in the art and science of education on the part of those who are to fill our academic and college positions. The remedy is to be sought in the establishment of chairs of pedagogy in our colleges and universities."

A college man who led his class for the four years he was in college says that he learned more of a certain subject from teaching it three weeks to a sub-fresbman than he did from studying the same subject in college for a whole year. I would not set undergraduates at work teaching sub-freshmen; but if there is a method of studying a subject by which a college man can learn as much in three weeks as he now learns in a year, is not that a method of mental development worth studying and imitating by the professor?

The discouraging part of college teaching from a pedagogical standpoint is, that whenever a college professor does teach well, he is considered to do so rather on account of his individuality than because he teaches in accordance with the fundamental laws of pedagogy; his example is almost wholly lost on his fellow-teachers. In the same department we often see as many fundamentally different methods as there are teachers. In the public schools the outlook is more hopeful; there unmistakable progress in specific directions has been made. As a result of study, organization, and supervision, we no longer see the a-b-c method of teaching reading, for instance; even this step would not have been taken if every teacher were a free-lance, as appears to be the case with the college professor. Have our colleges in the same period of time taken any universally recognized progressive step in the science and art of teaching that will begin to compare in importance with this step taken by the public schools?

Is it not a common thing for a graduate of a college to find, a few years after graduation, that he remembers almost nothing of most of the subjects he has studied in college? Is it possible for a man to devote as much time to

any branch of manual training as is devoted to a year's study of any subject in college without retaining all his life some special power in the direction in which he has worked? Ought there not to be a lasting specific result in the one case as well as in the other? I have by no means lost sight of the great progress made in recent years at Harvard and other universities; but this progress is rather in the direction of the employment of high-priced specialists in subjects studied by only a few students, of a larger number of courses of instruction, and of expensive dormitories, which tend to increase the cost of college life, than of a better knowledge and application of the laws of mental development by the aid of which the greatest good may be done to the greatest number.

I was much surprised at an address recently made by President Eliot of Harvard, agreed to and commended by President Dwight of Yale, at a meeting of the New England Association of Colleges and Preparatory Schools, in which he is reported as saying: "I notice the methods of teaching the principal subjects have fundamentally changed at Harvard within twenty years, and I suppose it is the case in other colleges. If, therefore, we are right in our present methods, what good would it do to teach the old methods? . . . It is by developing new methods of teaching subjects that colleges make teachers best equipped for their work. . . . Is teaching a profession when the majority of teachers are elected once a year? . . . I say, therefore, that the institutions of higher education have some good reason for not attempting to teach the philosophy of education."

I beg leave to take exception to President Eliot's conclusions, and to the uninspiring, non-professional tone of his whole address, which is in marked contrast with the spirit of progress and untiring energy shown by him in other directions. One of his best professors, whom he must have had in mind when speaking of improved methods, tells me that he could have saved himself years of (to his pupils) unprofitable experiment in the classroom if, before beginning to teach, he had stopped to study even for a short time the philosophy of teaching.—Yours respectfully,

X. Y. A.

KENTUCKY CIVILIZATION.

To the Editor of The Nation:

Sir: I have read your strictures upon the Swope-Goodloe fight, and, while agreeing with you as to the deplorable character of such occurrences, I must take issue with those who intimate that they are proofs of a low order of civilization in the communities in which they take place. Civilization is a complex affair, and a good many elements enter into its composition. A regard for human life, or, if the phrase be preferred, a willingness to transfer to society the duty of rectifying the wrongs of the individual, may be one of them, though a contrary opinion is entertained not only in Kurdistan, but also by certain influential classes in France and Germany, who still look upon that modified form of street fight called the duel as the proper way of settling private quarrels. But even if this were not the case, and we admit that a due regard for the sacredness of human life is one of the lines over which a people must pass in the advance from barbarism to civilization, we must not forget that it is only one of such lines, and consequently that progress along it does not authorize a general conclusion as to the civilization, or want of civilization, of any given people. Unquestionably, their opinion upon this point may indicate the position which they have reached in this particular direction; but inasmuch as it does not imply a corresponding advance along any other line of development, it does not enable us to fix definitely their place in the scale of civilization.

That this view is not without a solid foundation of fact will be evident to any one who will take the trouble to consider the effect of the same line of argument applied to ourselves. Take, for instance, the recent foot-ball game between Harvard and Princeton, when the students of these two colleges accused each other of trying to smuggle professional players upon their respective teams. Such an act, if true, was dishonorable; and yet the charge was made in good faith, and what makes the matter worse is the fact that it was and still is believed. In other words, the students of two of the leading colleges of the North do not hesitate to characterize each other as scoundrels. Now, Mr. Editor, I am not squeamish in such matters; but what ought to be thought of a state of society in which some thousands of the first young men in the community are believed to have been guilty of a crime that would hardly be tolerated in a gambling hell? That there is such a thing as being "too handy with the pistol" is admitted, and that there are a good many Kentuckians who are thus "handy" is no doubt true; but, with all due deference, it seems to me that there are some things that are more precious than life, and, unless I have mistaken the teachings of the *Nation*, personal honor is one of them.

But while entertaining a decided opinion as to the unfairness of the method by which Kentucky's place in the scale of civilization is so often fixed, it must not be supposed that I am ignorant of the prevalence in all that region of the idea of personal accountability, or that I am oblivious of the causes that are believed to have contributed to its origin and development. Leaving out of consideration the "old Adam" inherent in most of us, and of which the Kentuckian has a full share, it is probable that not a little of this combative spirit has come down from the times when the ever-present danger of an Indian attack made it necessary for every man to be prepared to fight for his life at a moment's notice. This school in which the first Kentuckians took their lessons was hard and stern, but it engendered a feeling of self-reliance, a sense of the necessity of immediate personal action under any and all circumstances, from which has come the exaggerated idea of the importance of the individual, as distinguished from society, to which so many of these bloody encounters may be referred.

Were it necessary to pursue this subject further, it might be urged that this notion of personal importance has been intensified by the life which the people of that State have uniformly led. They have always been farmers, and as moralists tell us that criminal offences are, to some extent, the outgrowth of the physical conditions of the society in which they exist, it is perhaps safe to say that one reason why the crimes that prevail among the better classes south of the Ohio differ from those that characterize the same classes in the business centres of the North, is to be found in the difference in the occupations, mode of life, and worldly interests of the people of the two sections. Thus, for instance, in a commercial, manufacturing community, like many of those that exist in New England and the other Northern States, the crimes, as a rule, are against property; while in the South, where different interests prevail, as well as in the agricultural regions of the Northwest, the crimes are more often against the person.

But it is not my purpose to institute a comparison between the different sections; neither do I wish to be understood as advocating the reintroduction of the shotgun mode of settling disputes into those communities in which, owing to a change in conditions, it has fallen into disuse. What I do insist upon, though, is the injustice of measuring the progress of a people by the standard of those who live under different conditions; and I protest against the practice of visiting the sins of a few fierce and ungovernable natures upon an entire community. Such methods savor of provincialism, and generally do harm.—Yours, etc.,

Lucien Carr.

Cambridge, Mass., November 21, 1889.

[There is little to be said in answer to this letter except that it assails a position which the *Nation* has not taken. We have all along treated this readiness of prominent and educated men at the South to shed blood in quarrels as "puzzling" and "mysterious," in view of the fact that it does not fit into the civilization of the community as expressed in other ways. The men wear black broadcloth, get their meat at the butcher's, have churches, schools and colleges, and libraries, live under an organized government by discussion, are in close communication with the great centres of civilization, and yet quarrel after the fashion of Albanians or Kurds. How and why is this? we have a dozen times asked Southern sociologists, and we never get a satisfactory answer. We have never said that this readiness to shed blood argued general barbarism or want of civilization. On the contrary, we have frequently drawn attention to the fact that it did not do so as something extremely curious. Mr. Carr's comparison of the compulsion under which men live in Kentucky to be ready for street fights, to the compulsion under which men live in France and Germany to fight duels, does not contain much comfort for him. Only a very small class in either of these countries feel this compulsion, and in both countries the Swope-Goodloe affair would be considered a foul and brutal murder. The French duel, in fact, is a bit of social play for Parisian journalists and politicians which would be stopped in a month if it were really dangerous. The rule which treats the smallest wound as creating a condition of inequality making the fight unfair, in truth converts the ordinary French duel into a simple fencing bout.—Ed. Nation.]

Notes.

'Justice and Jurisprudence,' being "an enquiry concerning the Constitutional limitations of the Thirteenth, Fourteenth, and Fifteenth Amendments," is in the press of J. B. Lippincott Co.

A new guide-book to Florida, by Chas. Ledyard Norton, on the plan of Baedeker, will be published next month by Longmans, Green & Co.

D. Appleton & Co. have in press a work by Mr. Frank Vincent, entitled 'Around and about South America.' Mr. Vincent circumnavigated the entire continent, visiting every

place of interest in the different countries. A large and richly illustrated volume will embody his observations.

Recent announcements by B. G. Teubner, Leipzig (New York: Westermann), are a 'Lexicon Livianum,' based on Hillebrand's unpublished MS., by F. Fügner, and an 'Alt-Celtischer Sprachschatz,' by Alfred Holder. The latter will be five years in publishing. Another work to attract attention is Sybel's 'Die Begründung des Deutschen Reichs durch Wilhelm I.,' of which the first two volumes have just appeared, and three more are completed in manuscript. This will be well fortified by official documents, and the distinguished author promises a good many surprises.

We have received the reprint of the late Prof. Alexander Johnston's summary article in the 'Encyclopædia Britannica,' called, in its present book form, 'The United States: its History and Constitution' (Charles Scribner's Sons). It ended with the year 1887, but that may be considered quite to date. The bibliography is the portion which might have been enlarged to advantage and rearranged, since the need of compression no longer existed. An index has been provided, and on this, too, we should have been glad to see a little more pains bestowed.

Houghton, Mifflin & Co. have bound up in one pair of covers Emerson's First and Second Series of 'Essays.' The thinnish paper does not blur the page, and the purchaser gets in return a reduced price for an excellent edition from the best plates. The binding is in brown cloth and tasteful.

Blackmore's romance 'Lorna Doone' has been chosen as the subject of an experiment in fine book-making west of the Alleghanies (Cleveland: The Burrows Bros. Co.). The externals of this heavy volume, which demands a book-rest in reading, are very successful. The page is, to our eyes, too solid, and sacrifices too much to broad margins. The paper is open to the objection of being too glossy, and perhaps also of unpleasantness of tint. The illustrations imply pains and expense, and are often very good indeed, particularly the initial letters, and on the whole they will be adjudged the best part of the total achievement. The publishers have rightly thought that a map of the scene of the story would be a useful accompaniment, and have prefixed a good one. They can but be congratulated on the general result of their undertaking.

A charming edition of Alfred de Vigny's 'Cinq Mars,' in William Hazlitt's translation, has just been published by Little, Brown & Co., Boston. The two volumes are bound in wine-colored cloth, richly stamped in gilt, and are illustrated by a high order of designs by A. Dawant, etched by Gaujean, as well as by a portrait of the author, and numerous headpieces on wood. The University Press, Cambridge, has done its best for the beauty and perfection of the typography here as in the case of the Dumas series issued by the same house. De Vigny's notes and historical documents are reproduced with this edition of the novel.

A new translation of M. Ludovic Halévy's 'L'Abbé Constantin' is published by Dodd, Mead & Co. It is a handsome volume, though the paper is perhaps a little too thick and too much glazed. The abundant illustrations are by Mme. Madeleine Lemaire, and may fairly enough be called clever, even if they are of less than the highest originality and distinction. The good Abbé, in particular, is rather a lay-figure. The two sisters are better expressed, and the young soldier, Jean.

The 'Good Things from *Life*' make a sixth series (Frederick A. Stokes & Bro.). The massing of these "process" reproductions of pen-drawings reminds us once more of the destructive effect of facsimile on artistic individuality. The dead sameness in appearance of the minor illustrations of *Puck*, *Judge*, and *Life* would have been impossible under the old fashion of engraving everything on wood. Amid the flood of designs in this volume which appeal to one's sense of the ludicrous only by the legend beneath, one meets here and there, like antediluvian relics, droll vignettes which speak for themselves or illustrate a punning caption. The most of these are signed "Chip," and they would all have been the better for being cut instead of "processed."

'Wild Flowers of the Pacific Coast,' by Emma Homan Thayer (Cassell & Co.), might be classed among books for young folks, with reference to the character of the text which accompanies the twenty-four colored plates. The writer relates trifling incidents occurring at various noted places in Southern and Central California, and connects them with the finding of some particularly lovely flower which she proceeds to sketch on the spot in water colors. Some of these tales are rather naïve, but a boy or girl reading them all will get sufficient information about California to become eager to visit it, if for no other reason than to see its beautiful flora. Where there was such an *embarras de richesses*, the choice of two dozen representatives was not an easy one, but has been judiciously made. The execution of the sketches and the printing are less commendable. No one could from these plates get more than a faint idea of the wondrous beauty of the Mariposa lily and the so-called wild verbena, as regards either their graceful forms or delicate coloring. The blood-red Sierra snow-plant, perhaps the most curious of California's floral gems, is more successfully reproduced, but on looking for information regarding it the reader will find two pages about the Yosemite Falls and Glacier Point, but only half-a-dozen lines about the plant; and to appease the curiosity inevitably aroused by so strange a flower he will have to consult Hutchinson's 'Heart of the Sierras,' where its habits are fully described.

'A Reader in Botany,' by Miss Jane H. Newell (Ginn & Co.), traces, by means of selections from well-known authors, the life history of a plant from seed to leaf. Darwin, Sachs, Kerner von Marilaun, Cooke, and Shaler are represented in this little work by interesting chapters, which are supplemented by carefully prepared pages from the pen of the compiler; the whole leading the reader by the easiest conceivable steps to the more striking phases presented by living plants. It is to be hoped that the second volume, treating of the flower, will follow speedily.

'Timber and Some of its Diseases,' by Prof. H. Marshall Ward (Macmillan), is a praiseworthy work in every respect. It deals in a clear manner with the general characters and structure of timber, passing from these subjects to a consideration of their properties and varieties, going so far as to provide simple means for easy identification. Then follows a chapter which has little to do, except indirectly, with the subject of the treatise, but is of great use to a proper understanding of the most vexed question in vegetable physiology, namely, the relations of the wood to the ascent of sap. It is, by all odds, the clearest *précis* that has yet appeared in this part of the field. At page 142, after these preparatory considerations have been presented, the diseases themselves are taken up in a systematic manner, and each is well considered. The book will be of use in the hands of every one who is interested in the care of trees, and especially to the students in our agricultural schools, to whom must be largely intrusted the intelligent supervision of our forests.

Cooper's 'Leather-Stocking Tales' have been compressed into one volume, for boys and girls, by dint of abridgment in parts not vital to the narrative (Geo. Routledge & Sons). Each of the five stories has its own pagination. The colored and other illustrations, being of foreign make, will not harmonize with current American pictures of the Indian and the trapper, but that is a small matter. The print is large and clear.

Harper & Brothers have issued still another—the sixth—number of the Franklin Square Song Collection, containing "two hundred favorite songs and hymns," of all countries and various periods, selected by J. P. McCaskey. There are also special school songs, and songs for young children, and interspersed with the text are various extracts and clippings on musical matters, not very happily chosen, and quite out of place in a collection of printed music. The type is clear and free from error, so far as we have examined it.

Mr. P. V. N. Myers has reduced by about one-half the bulk of his two books, 'Outlines' of Ancient and of Mediæval and Modern History, and published the condensed work under the title of 'A General History' (Ginn & Co.). The new publication is not wholly an abridgment, as much of the matter has been entirely rewritten. It follows the old works, however, very closely in spirit, style, and substance. These books are so readable and interesting that we can hardly conceive of any person finding them too long, unless for the purpose of *memoriter* recitation; if there is any demand for their abridgment, this thick volume will satisfy it. It has the same maps and for the most part the same illustrations as the earlier works.

The reputation of Duruy's 'Histoire de France' is so well established that the publication of an abridged translation (Crowell) would call for nothing more than a passing mention but that we wish to give due credit to Professor Jameson's introductory note (embodying a life of M. Duruy), and continuation, which brings the work down to the present year. The book is well printed, in rather small but clear type, and makes a volume of 706 pages. There is an abundance of excellent maps (reproduced from the original, with French names, etc.); none, however, we believe—for there is no list of them—which gives the present boundaries of France. There are an index, a rather meagre table of contents, and a few genealogical tables.

As a contribution to the much-talked-of iconographic catalogue, Prof. H. Carrington Bolton furnishes the November *Library Journal* with an index to scientific portraits in the *Popular Science Monthly*, vols. i.–xxxv.

The twelfth meeting of the Library Association of the United Kingdom, held in London Oct. 2–4, is in part reported in the November number of the *Library*. The address of the President, Chancellor Christie, a calm and sensible review of the "Work and Aims of the Library Association," and that of Melvil Dewey, on "Library Progress in America," are given in full. The remainder of the number is occupied by a summary of the proceedings and discussions. The papers read cover a much greater variety of topics than is usually found at the meetings of the sister association in this country. They range from those of an antiquarian or historical character, like Dr. Garnett's on "Some Colophons of the Early Printers," or Mr. Blades's on "Chained Libra-

ries," to such practical subjects as "A New Size Notation," "Free Libraries and Technical Education," etc. A paper on "Fiction in Libraries" started a lively but one-sided discussion, for all who spoke bore testimony to the value and utility of good healthy fiction.

The frontispiece of the New York *Photographic Times* of November 15 is an exceptionally good photogravure representing Milton's cottage at Chalfonte-St. Giles, in which the poet composed his 'Paradise Lost.' The picturesqueness of this refuge from the London plague has been well seized by an amateur photographer, who adds a brief account of his visit to this "box" which the Quaker Ellwood selected for his teacher.

The last four numbers of *L'Art* (Macmillan) have still mainly been preoccupied with the Exposition, and we may call attention in No. 607 to the description of the Javanese, Algerian, Tunisian, and other Eastern dances and plays which were among the genuine novelties of the wonderful show. In the same number will be found a long list of Troyon's works, indicating the disposition and prices of them at sales, etc. In No. 608 an obituary notice of the late Maurice Sand, son of Mme. Dudevant, is accompanied by a portrait. In the *Courrier de l'Art* for September 20, M. Adolphe Jullien reports the performance at the Palais de l'Industrie of Mlle. Holmès's spectacular and musical "Ode triomphale." He can praise it but faintly. What was remarkable was, that at the furthest distance from the scene the ear was better served than the eye. The *Courrier* calculates how much might have been done in producing unpublished works of the great French composers with the $60,000 placed at Mlle. Holmès's disposal; and every one must agree with it in regretting that the scheme of the Exposition did not include a retrospective musical exhibition.

In the October *Portfolio* we select for mention Mr. Hamerton's brief essay "On a Tendency in Contemporary Painting," viz., towards the abolition of thought, as in the tendency in French landscape painting to take extremely simple subjects, "till there is hardly any subject left. It seems in many cases as if the artist had nothing to communicate." Figure-painters, too, represent "the most commonplace personages in the most ordinary attitudes and occupations, with vulgar though appropriate surroundings." The series of papers on the monuments of Westminster Abbey is continued, and in the November number Longfellow's bust is enumerated with several other "odious little busts . . . which seem, so are they arranged, to be playing at hide-and-seek behind the columns." In this number, too, Mr. Burne-Jones is considered as a decorative artist, and numerous examples of his work are given.

All who know by tradition the fame of Jeremiah Mason as the foremost of New England lawyers perhaps of any period, will be glad to see in the *Green Bag* (Boston Book Company) a copy of his portrait which will go far to confirm his reputation for weight and wisdom.

The fourth number of the *National Geographic Magazine* is rich in papers, beginning with one on irrigation in California, by the State Engineer, Wm. H. Hall. A fragment of the great Atlas of the United States in progress illustrates Mr. Bailey Willis's brief geologic sketch, "Round about Asheville, N. C." "A Trip to Panama and Darien," by Richard V. Goode, accompanied by map and profile, and R. E. Peary's "Across Nicaraugua with Transit and Meridian," with map and three colored views, are timely and readable.

Our readers will thank us for reminding them that the Atlas of New Jersey is obtainable in sheets at twenty-five cents each, carriage included, by addressing Mr. Irving S. Upson, New Brunswick, N. J., who will send a list of the twenty plates, showing the area covered by each.

The map of eastern equatorial Africa numbered 69 in the new 'Stieler's Hand-Atlas' (Westermann), is witness to the rapid march of African discovery, as the latest advices from Stanley show that both the original Nyanzas (the Albert lake being resolved into Albert and Albert Edward) must be redelineated. A southwestern extension of the Victoria Nyanza brings it much nearer to Lake Tanganyika.

In the little-known region which lies between the upper Nile and the Indian Ocean, occupied mainly by the Gallas on the north and the Masai on the south, is a chain of lakes, the largest of which is now known as Lake Rudolf, so named after the unfortunate Crown Prince of Austria. It has been conjectured that this lake, which has an area of about 3,000 square miles, was identical with Lake Samburu, and had an outlet belonging to the Nile system. This latter hypothesis, however, Ritter von Höhnel, who accompanied Count Teleki's expedition to this region, disproves in *Petermann's Mitteilungen* for October, while he throws grave doubts on the former. He states that none of the lakes, of which there are at least thirteen of considerable size, have outlets. They are further remarkable in that some contain fresh, others, not distant, salt water. This is followed by an account of the geology of the interesting valley of Orotava in Teneriffe, by Dr. A. Rothpletz. A supplemental number contains an account by Prof. J. Partsch of the Ionian Island of Leucadia, or Santa Maura.

The Geographical Society of Madrid has been publishing in its *Boletin* for this year a descriptive catalogue of the collection of maps and charts in the Royal Library. It contains also an account of the River Marañon and the Jesuit Mission in the Province of Quito, written in 1738 by one of the fathers, and hitherto unpublished.

The last *Bulletin* of the French Geographical Society contains the annual report on the progress of geography during the year 1888, by M. Ch. Maunoir. This is followed by an important paper, by Lieut.-Col. Gallieni, on the results of the campaign of 1887–88 in the western Sudan. From this we learn that the French possessions in that region, including Senegal and the protected countries, cover a little less than a hundred thousand square miles of territory having three millions of inhabitants. The paper is accompanied by an admirably clear map of the newly acquired "Soudan français."

The *Scottish Geographical Magazine* for November contains the conclusion of Dr. H. B. Guppy's investigations of the phenomena connected with the Keeling Atoll. From his observations and those of the proprietor of the island, Mr. Ross, he concludes that the atoll is filling up at about the average rate of a foot in a century, and that it has entered upon its final stage of existence, though it may still have 3,000 years of life before it. The whole existence of an atoll he estimates at from fifteen to twenty thousand years. In regard to Mr. Darwin's theory of its origin, he says: "Neither of upheaval nor of subsidence is there any evidence of an unequivocal character." The secretary, Mr. A. S. White, concludes his remarkable record of the geographical achievements of Scotchmen in the nineteenth century.

Mr. Arthur Gilman writes us from Cambridge: "There is a curious sentence in the *Popular Science Monthly* for October, 1889, on page 808. In an article on 'Industrial Family Names,' after remarks on the 'Butchers' and 'Slaughters,' it is said, 'But Fletcher and Flitcher need to be introduced as the lineal descendants of Flesher.' But doubtless the dictionaries are right, and Fletcher is *not* descended from 'Butchers' and 'Slaughters' at all, for it means a manufacturer of bows and arrows, as any one understanding French will easily see."

And Mr. Clarence Cook writes: "Another example of the use of the form 'fat' for 'vat' is found in Spenser in the 'Faerie Queene'—Book vii., Cantov ii.: the second of the Two Cantos of Mutabilitie. In stanza xxxix. we find:

> "'Then came October full of merry glee:
> For yet his noule was totty of the must,
> Which he was treading in the *wine-fats* see.'"

—The November issue of the *Magazine of American History* has a curious scrap from the New York *Gazette* of January 10, 1777. This ancient article is a narrative by a Tory, Dr. John Smith, of his being seized with Col. Connolly "in Frederick County, Maryland, over the Blue Ridge," and of their harsh treatment by Whig authorities. They were recruiting a regiment of Tories. The story leads one to inquire about Col. Connolly. Referring for information to Appletons' 'Dictionary of Biography,' one finds some statements which give him pause. It is said that "about 1798 Connolly conferred at Detroit with prominent citizens of the West with regard to the seizure of New Orleans, but that the attention of Washington was called to the subject, and measures were taken to prevent the execution of the plot." If the date 1798 is correct, there was no occasion for resort to Washington, for he was already a private citizen; Adams was in power. Again, in 1798, Detroit was utterly dissevered from New Orleans, and so could not have been a base of operations against it. It was beyond range altogether. If the writer in Appleton had looked into Craig's 'Olden Time,' he would have written 1790 instead of 1798, and substituted Kentucky for Detroit. He would also have learned that the ostensible object of Connolly's Kentucky visit was in regard to lands he had himself owned there, but which had been confiscated.

—The story of that confiscation is not told in 'Olden Time,' but it is worth telling. In 1780 it was decided by a jury, of whom Daniel Boone was one, at Lexington, Ky., that two thousand acres of which John Connolly was possessed on the Ohio at the Falls, were escheated for disloyalty to the State of Virginia. On this land most of the city of Louisville is now built, and it was the first land confiscated. But it had been before enacted that the first acres forfeited by Tories should be granted (eight thousand of them) to Transylvania University for its endowment. The connection of Connolly with southwestern lands has a further interest. In November, 1770, as Washington was returning from his voyage down the Ohio, though not so far as Kentucky, he notes in a pocket almanac, that in Pittsburgh he invited, among others, Dr. Connolly to dinner. He says he found him a very sensible, intelligent man, who had been up the Shawna (now the Cumberland) River nearly four hundred miles. From him he ascertained that its valley was an exceedingly desirable country, in respect of climate, streams, and level; fit for any kind of cultivation. Besides these natural advantages, game was so plenty as not only to render the importation of provisions (bread only excepted) altogether unnecessary, but to enrich adventurers with the peltry for which there was a

constant and good market. Nothing out West seems to have pleased Washington better than what he thus heard about Kentucky—a region no part of which he ever saw. Its praises he must have blazoned abroad among his comrades in arms for whom he had largely made his journey, and whom he met in a sort of Grand Army reunion on his return. As a starting-point of occupancy, Connolly had mentioned the Falls of the Ohio, the site of his confiscated land. That Connolly should thus have pointed the way to what proved a land of more than promise for many Revolutionaries, and have provided a university endowment that is still effective, yet have lost everything himself, is among the notable ironies of history.

— The twentieth volume of Leslie Stephen's monumental 'Dictionary of National Biography' (Macmillan) ends with Thomas Garner. The contents are extremely varied and furnish exceptionally good reading. Charles James Fox has the longest notice (17 pages), while the Quaker George Fox, whose life (it might be argued) was more to England than the great orator's, gets but five pages; John Foxe (of the 'Book of Martyrs') gets nine. The editor is seen at his best in his ten-page notice of Sir Philip Francis, for whom he weighs the evidence identifying him with Junius, and adheres to that view; and in that of Thomas Fuller, on whose behalf he deprecates—as Charles Lamb might in his own case—the tedious and somewhat nauseating familiarity with which writers speak of him as "dear Thomas," or "quaint old Tom Fuller," etc. "His quick sense of the ridiculous," says Mr. Stephen, in summing up his character, "combined with a calm and cheerful temperament, made fanaticism impossible. It tempered his zeal instead of edging his animosities." Other biographies to be remarked are those of Bishop Gardiner and Gainsborough (six pages each), Sir John Franklin, Henry Fuseli, and William E. Forster, who is very fairly treated (about five pages each), Elizabeth Fry, "Alfred Crowquill" (Alfred Henry Forrester), Lady Holland, etc. Sir Bartle Frere finds an apologist. Lesser lights who did something to help the world forward are H. Fourdrinier, the inventor of the paper-making machinery bearing his name; John Fowler, inventor of the steam plough; Alexander John Forsyth, who struck out the principle of the percussion cap; Edward Forster, who introduced the bearded wheat from Smyrna; Sir Charles Fox, who introduced the railway switch; William Fox, founder of the Sunday-School Society; and Robert Were Fox, who determined by experiment the increase in the earth's heat from surface to centre.

—The American aspect of this instalment of the Dictionary is considerable, and at least two natives are commemorated—the Maryland Loyalist Joseph Galloway, and William Gardner, of Ohio, who gave the benefit of his inventiveness in fire-arms to the British, and died as late as 1887. Gen. Thomas Gage, and his contemporaries, Commodore Arthur Forrest, who found he could not introduce the press-gang into Boston without resistance even if with ultimate impunity, and Gen. Henry E. Fox, who fought at Bunker's Hill while his greater brother (as is pointed out) was opposing the war in Parliament, come together in this volume. Gen. Fox's son, still more curiously, Henry Stephen Fox, became British Minister to Washington, and died there in 1846. Others who came on peaceful errands were George Fox and his co-sectary William Forster, father of the Irish Secretary; but we cannot agree with the father's biographer in thinking that his healing a breach on the slavery question among the Indiana Friends was an illustration of the "right method of dealing with brethren in reference to such differences." The result of his peace-making was, of course, to the disadvantage of the come-outer anti-slavery element. Mention should also be made of the philanthropic Dr. John Fothergill, friend of the revolted colonies, of whom Franklin said, "I can hardly conceive that a better man has ever existed." And we will quote Mr. Geo. Ticknor's repartee to Lady Holland (Elizabeth Vassall Fox), when "she told him that she understood that New England had originally been a convict settlement, to which Ticknor answered that he was aware of the fact, but that in the King's Chapel, Boston, was a monument to one of the Vassalls, some of whom had been among the early settlers of Massachusetts."

—Nearly two years ago we noticed the English version of M. Henri Bouchot's 'Le Livre—L'Illustration—La Reliure,' styled 'The Printed Book: Its History, Illustration, and Adornment.' The edition having been exhausted, Mr. H. Grevel has taken it in hand, overhauling the awkward translation (though he might have gone further), and adding many new illustrations and a treatise on the art of collecting and describing early printed books, with a convenient Latin-English and English-Latin index of the principal towns where early printing-presses were established. The work has thus been much enlarged and transformed, and perhaps a new title was warranted. It is now called 'The Book: Its Printers, Illustrators and Binders from Gutenberg to the Present Time' (Scribner & Welford). We can repeat our praise of it as a general view of the growth of the art of book-making, and all the more because of the practical and sensible instructions for collecting incunabula. The English working over sometimes confuses the mind of the reader who thinks of its French origin. On p. 236 "our *Illustrated London News*" is spoken of. On p. 314 the Paris National Library is placed next to the British Museum in importance; on p. 318 its collection of printed books is admitted to outnumber that of the British Museum; and on these two pages the volumes are variously said to amount to 1,300,000, and to exceed two millions. Photographic facsimiles of the printers' book-marks, early engravings, letters, etc., would advantageously have replaced some of those here given by recutting; and as hardly any of the illustrations would not accommodate themselves to a duodecimo page, we could wish a smaller and more popular edition might be made. We are of opinion that when serious instruction is contemplated, the worst way to convey it is in *éditions de luxe*. A sprawling page is with difficulty comprehended and retained in the memory.

—The second and third parts of the 'Handwörterbuch der Staatswissenschaften,' published by Gustav Fischer of Jena, extend from *Aktiengesellschaften* to *Arbeiterschutzgesetzgebung*, the length of these two words being in proportion to that of the articles which they designate, the former occupying ninety-two pages and the latter ninety-six; in fact, the article, or rather treatise, on legislation for the protection of workingmen is not quite completed, and will require a few more pages in Part 4. There are no other titles quite as long as these two, but even the shorter ones indicate that this work will far exceed in bulk and elaborateness of treatment any other existing publication on political economy. Thus, there is an article of thirty-three pages by Schäffle on Insurance against Old Age and Disability, with reference to another article, still to appear, on Compulsory Insurance for Workingmen; one of eighteen pages on Anarchism, in the bibliography of which it has an almost ludicrous effect to see Johann Most seriously cited as a writer; one of eighteen pages on Anthropology and Anthropometry, these two terms being both employed in a sense which, in English usage, belongs only to the latter; Schönberg writes ten pages on Labor, and the same number on Workingmen; eight pages are allowed to the Anti-Corn Law League; eleven to Apothecaries. Specifically American topics are Anti-renters, and a biographical paragraph on Prof. E. B. Andrews of Cornell (now President of Brown University). The closeness of the print, which was condemned as a fault in our notice of Part 1, has now been obviated, the page being greatly improved by being leaded. The publisher is entitled to double credit for this improvement: first, for paying heed to the remonstrances made to him, and secondly, for his liberality in doing it at his own cost, as he gives sixteen additional pages in each part without extra charge.

—In Stockholm has been issued, in a limited edition, a superb reproduction in photolithographic facsimile of the 'Vestgöta Lagbok,' at once the oldest Swedish provincial law and the oldest book in the Swedish language. The original MS., since 1780 in the Royal Library at Stockholm, dates, according to internal evidence, from the close of the thirteenth century. The codex originally consisted of forty-eight leaves, of which one, the second, has now been lost; it is written in two different hands. Twelve leaves in another (but apparently contemporaneous) hand were afterwards added; of these additional leaves the seventh has, however, been cut away down to a narrow strip, so that, as we have it here represented, the whole MS. consists of fifty-eight large octavo leaves. The facsimile gives the entire parchment page, with all its original imperfections and the subsequent discolorations and grime that are characteristic of the northern manuscripts. The margins, top, sides, and bottom contain frequent notes in various hands. In one place, on the wide margin of the bottom, are rude faces that have apparently been made by a child. The parchment has red and blue initials, which appear in the facsimile with the rest of the text in black, as it was impossible, say the editors, to reproduce them by photolithography in their original colors. Otherwise, we have an exact copy of the old Swedish MS. that to all intents and purposes will stand the student of Scandinavian palæography in quite as good stead as the prototype itself. This is by far the most successful attempt that has been made to reproduce in extended form the old Scandinavian vellums. The Arna Magnæan photolithographs—Valdemars Saellandske Lov, Elucidarius, and the Codex Runicus—are very far behind it in thoroughness and artistic excellence of workmanship. To complete the resemblance to a manuscript, the book is bound in parchment with thongs to tie the covers together.

CARTER ON CODIFICATION.

The Provinces of the Written and Unwritten Law. By James C. Carter, LL.D. Banks Brothers.

THE formal opposition to the Field Code in this State may be said to have been begun by Mr. Albert Mathews in an able essay on Codification which the Bar Association had printed in 1881. The Code had been suddenly sprung

on the community and on the bar in the winter of 1879, after lying unnoticed for fourteen years. It was then passed by the Legislature, and vetoed by Gov. Robinson. Since then the attempt to enact it has been renewed regularly every year until this year, and defeated only by extraordinary exertions on the part of a few lawyers who were deeply impressed by the prospect of confusion which it seemed to open up. Of these opponents of the Code, Mr. James C. Carter has been the most prominent. Indeed, it may be said that it is to him that we owe the defeat of the last two efforts to pass it. He began his operations against it by a paper prepared at the request of the Bar Association in 1884, and printed and circulated by them, on the "Proposed Codification of Our Common Law," which was a somewhat elaborate discussion not only of the Field Code, but of codification in general, and of the possibility of its application to the common law in this State.

Within the past year he has taken up the same subject in its more philosophical aspect in the pamphlet which lies before us, containing an address delivered to the Virginia Bar Association in July last. In this he goes into the general question whether it is possible in any civilized community to embody satisfactorily in a code what he calls Private Law, or the law which regulates the transactions of the members of the community with each other, as distinguished from Public Law, or the law which regulates the affairs of the community in its corporate character. The first, he maintains, must always remain, for the most part, unwritten—*i. e.*, uncodified. The latter must needs be written, and it may be codified. The community, that is to say, must always embody in statutes its will regarding the transaction of its own business as a community, but must leave the regulation of the transactions of individuals with each other to the judges, because with regard to these latter the community cannot have any will except that justice should be done in each case as it arises, within certain great lines traced by "public policy."

The codifiers practically maintain that they can provide beforehand a rule of decision which shall cover every dispute that can arise in the courts, or at all events can come sufficiently near covering it to enable any plain man to discover, with a fair approach to certainty, what are his rights under the law before he goes into court at all, and which shall remove the ordinary affairs of men from under what they consider a great social bane, the discretion of the judges. The defenders of "judge-made law" maintain, on the other hand, that all, or nearly all, controversies which come up for judicial settlement are due to novelty in the combination of facts which make up the case; that if the facts of every dispute were exactly similar, there would hardly be any need of courts at all, and the laws of a community might consist of a few rules which could be put into a duodecimo volume, like a civil-engineer's manual, containing formulæ for the solution of every possible difference between men, to be found by reference to the index.

But it is because the combination of facts in a controversy between individuals almost always differs in some degree from the combination in previous controversies in the same field, that men go to law at all. Parties to a law-suit almost always agree in seeking justice. The question between them on which courts are called on to pass is, What is justice in this particular instance? Men's dealings with their fellow-men display almost as much variety as men's faces. Most transactions have some distinguishing feature, however slight, and it is over this distinguishing feature they quarrel and appeal to the law. The codifiers say: "No matter what your distinguishing feature may be, we shall have a rule ready for it." The common lawyers say: "This is as absurd as it would be to pretend to foresee and put on paper in the beginning of a year all the bargains, in all their details, which men will make in real estate, in cotton, in corn, in iron, in wool, in shipping, in partnerships, in home and foreign exchange, in insurance, in railroads and navigation. No matter how bulky or minute you make your code, that old rule of human affairs which makes the unforeseen the thing most likely to happen, will defeat your precautions. Modern business in its jural aspect is a kaleidoscope. New combinations will arise which your code will not cover to the satisfaction of the parties, and you will have to appeal to the judge to interpret your code. This has been the history of all codes: it will be the history of codes to the end of the world. The more complex and multifarious the transactions of civilized men become, the more futile will appear the attempt to deal with them through a body of statute law."

The controversy is a very old one, and was first brought to an acute stage in England, and in Anglo-Saxon countries generally, by the attacks of Bentham on the common law, and has been stimulated in our own day by two agencies which have little or no connection with jurisprudence. One is the love of modern democracies for settling everything through representative legislatures; the other is the distrust of modern democracies for authority which they have had no hand in creating. The first of these has developed that excessive legislative activity which has become at once the burden and shame of nearly every free country in our day, and which nearly every free country is trying, by one expedient or another, to abate. The other has brought on the political stage that great bugbear of modern political philosophers, the elective judge, with his insecure tenure, his subservience to political managers, and deference for waves of popular feeling. His faults nobody denies, but he nevertheless figures in the programme of the Radicals in every country in the world. We have long had him here. It is with great difficulty he has been kept off the bench in France during the past twenty years. He would probably come soon in Ireland under Home Rule, and, though not a near or perhaps very conspicuous danger, he is one of the dangers of the political future in England. The awful character of the judge, as it has come down to us from the remote antiquity, who fears neither the tyrant's frown nor the clamors of the mob, does not any longer impress the popular imagination with the old reverence. Modern democracy is disposed to consider the judge simply as a man laying down the law without adequate authority or proper responsibility, who needs much supervision and constant reminders of his dependence. Consequently, schemes like codification for restricting his discretion, lowering his authority, and diminishing the importance of his integrity and learning, find a readier acceptance now than ever before.

No one can, we think, read Mr. Carter's pamphlet, however, without being deeply impressed with the fact that the judge is sure to play a greater part in the world hereafter than ever heretofore, and that the most important of the preparations which Democracy has to make for its millennium, is to magnify his authority, fortify his character, and increase the guarantees of his independence. For to him, and to no one else, as human affairs increase in complexity under the growth of our civilization, must we look for the discovery and expression of justice as the community sees and understands it.

But what is justice? Mr. Carter, unfortunately, as we think, for his purpose, gives some countenance to the notion that there is something called "abstract and absolute justice which human reason will never reach, but after which it for ever aspires," a "hidden reality," but still a "reality." There may be such an abstraction, but it is safe to call it inconceivable. Justice is a purely human creation. It can only be produced in human society and for the purposes of human society. There is for a solitary man no such thing as justice. Justice makes its appearance only when the community consists of two individuals at least. For Robinson Crusoe there was no such thing as justice until he was joined by his man Friday. It is the rule of action prescribed by social morality, in answer to the question raised by every state of facts which requires something to be done by somebody. This question is, What is to be done, and who is to do it? It is this question which is submitted to every judge who is called on to decide a case.

The true answer to this question always is, that justice is what the bulk of men comprising the community would think fair and right. The judge searches for the rule in the customs and social ideals of the people among whom he lives. Abstract or absolute justice is no more his concern than abstract or absolute beauty. The original source of justice was probably the passion for equality of rights and privileges which is the earliest social sentiment of all gregarious animals, man included. Society is not possible without equality as a fundamental assumption. That each is entitled to as much as any other of whatever good is going, and must submit to as much as any other of whatever evil is to be endured, is a postulate necessary to the permanent constitution of even a wild herd or pack. The idea of justice thus generated is of course profoundly modified in practice as time goes on by differences of force, of capacity, by accidents of birth, or by achievement, but it always and everywhere governs the judicial decisions of controversies. It makes it the aim of the judge to put the parties as far as possible in a position of equality of advantage or disadvantage. The just man remains always the man who keeps his contracts and satisfies reasonable expectations which his language and conduct have created, and abstains from depriving his neighbor of any share of the general good to which he is reasonably entitled.

It is in the search of the judge after this (it may be local) standard of justice or rule of right, to be applied to the particular facts before him, that private law, or the law regulating the transactions of individuals, is created. Mr. Carter's thesis is that it cannot be created in any other way; that private law must on the whole be "judge-made law"; that the modern world can no more escape from this mode of legislation than it can escape from the use of astronomy in navigation; that the office of judge, far from losing its importance, grows more important every day; that the art of man cannot devise a substitute for it, and that what most of all needs to be taught in our law schools is, that, in witnessing the decision of a case in court by a competent bench, we are witnessing the actual creation of the law by the extraction from the customs and morality of the community of the justice of this

particular case. His exposition of this point is a model of clear and forcible argumentation, and there is no lawyer or law student, legislator or politician, in the country who ought not to ponder it.

There is in the commercial history of our own time one bit of corroboration or illustration of his thesis which Mr. Carter does not mention, but which is both strong and illuminating. It is the fact—for fact we believe it to be—that the practice of referring disputes to the arbitration of men in the same business has greatly grown in all the leading trades, industries, and commercial bodies; so much, indeed, as to diminish seriously, as all lawyers admit, the volume of litigation coming before the courts. Now, what does this arbitration mean? It means resort to the exact process which goes on in all our courts when a case is submitted to a judge or jury—that is, the imposition on fair-minded men, familiar with the moralities and usages of the business in which the transaction in dispute has taken place, of the task of extracting from these moralities and usages the particular rule of justice applicable to the particular combination of facts which is laid before them. We venture to say that if the Chamber of Commerce, the Stock Exchange, or the Produce Exchange, or any other commercial or industrial corporation were asked whether they could not draft a code which would make arbitration unnecessary, by furnishing a rule of settlement for every possible dispute among their members, they would consider the question childish, and we say this while remembering that small branches of business, like bills of exchange, have been brought under the rule of a code in England.

A NEW YORKER OF THE TRANSITION PERIOD.

The Diary of Philip Hone. 1828–1851. Edited, with an introduction, by Bayard Tuckerman. 2 vols. Dodd, Mead & Co. 1889.

THE story of Mr. Hone's life is briefly told in Mr. Tuckerman's introduction. He was born in 1780 and died in 1851. With a common-school education, he became a clerk in his brother's business at the age of seventeen, and, two years later, was admitted to the firm. In 1820 he retired from business with a fortune ample for those days. After an extended tour in Europe, he came home and settled down to a life of domestic happiness, social pleasure, amateurish politics, and public usefulness. His politics were largely ornamental. He was Assistant Alderman from 1824 to 1826, and then Mayor for one term. Later, he attempted to secure a State Senatorial election, but was overwhelmingly defeated. In his old age he was made Naval Officer under Taylor's Administration, his necessities having become as eloquent as his services. As a Whig Mr. Hone was badly situated in New York for political advancement. He was in much request as a presiding officer and for the handsome entertainment of Webster and other statesmen, a business for which his predilection was immense. He was a trustee of the first savings-bank in New York, and as trustee and president served it for more than forty years. He was trustee or director or president of a whole page of different institutions, mercantile, charitable, educational, and social, and it would appear that he had a conscience for the responsibilities that he assumed. Board meetings found him always present, even though the social dinners that he dearly loved had to be given up.

He did the thing which Wendell Phillips thought added a new terror to death: he kept a diary. He began it in 1828, professedly for his own future satisfaction and his children's; but there is something which suggests anticipation of a wider reading. Though he does not mention Pepys or Evelyn, those famous diarists were probably before his eyes. He would fain do for nineteenth-century New York what they did for seventeenth-century London. But his field was much less various than theirs, and then he had not their literary touch, still less the ingenuous absurdity of the less important but more interesting of the ancient pair. He was a man of mediocre talents, thoroughly respectable, moving for the most part in a round of feeble personalities and small affairs, saying a good many flat and stupid things in an extremely solemn way, having much of that gravity which Rochefoucauld described as a mysterious carriage of the body invented to conceal the defects of the mind. His diary was ample, filling twenty-eight quarto volumes. On May 1, 1851, he questioned whether he should begin another which was ready to his hand, and three days afterwards he died.

Mr. Tuckerman has not given us more than a quarter of the original, and if his selection had been more severe, it would have been improved. The omissions are of comments on new books with extracts from them—means of self-improvement in which Mr. Hone had patient confidence—summaries of foreign news brought by the packet ships, political statistics, records of political meetings, extracts from the speeches of public men and articles of current interest, particulars of journeys made for business or for pleasure. The parts retained relate to industrial changes, to political and social life, to public men and other individuals of note, and to the history of the city of New York. The parts relating to industrial and local changes are the most interesting and valuable.

Beyond the statement of mere facts, Mr. Hone's ability went but a little way. He was no Boswell. From his conversation with distinguished men he brought away nothing but a vague impression of their brilliancy or pleasantness. He dined with Daniel Webster scores of times, and he was always charmed and satisfied with him, but of the good things that he said he does not tell us one. A single conversation is reported, bearing upon Webster's use of wine. Christopher Gore put him up to it, he said, to improve his health; the auxiliary had proved worse than the enemy. Whether Webster gave Dr. Johnson credit for this happy phrase we are not told. It would have been well if Mr. Tuckerman's editing had been more exact as well as more compressive. In that case we should not have had Marcey for Marcy (vol. i., p. 49), nor Buckley for Bulkeley—Emerson's first Concord ancestor (vol. i., p. 162), nor Garrett Smith for Gerrit (vol. i., p. 326, and in the index); nor Binney for Birney (vol. ii., p. 236); nor Rhynders for Rynders (vol. ii., p. 395). Nor should we have had Montgomery's beautiful hymn, "Prayer is the soul's sincere desire," printed at the end of the journal as if it were Mr. Hone's, with many words misquoted, the stanzas transposed, and four stanzas from another hymn tacked on, as if they were a part of it.

One of the most general impressions which the Diary makes is that of the provincialism of New York during the entire period which it covers, compared with the city of to-day. Another is that of its æsthetic poverty. Mr. Hone was a diligent recorder of Academy exhibitions, and he names the pictures that elicited his admiration. We are made present at the birth of Cole's "Voyage of Life," and listen with some incredulity to Mr. Hone's prophecy of its endless fame. His dinner parties must have been very pleasant, but we get little more from them than the names of those who sat down. Chancellor Kent was often one of these, and Mr. Hone's loyal and affectionate admiration for him reflects his genial character. Once Fanny Kemble came to dine, and a few years afterwards told all about the dinner in a book. It was done most cruelly, but it gives us an idea how different Mr. Hone's other dinners might have seemed to us if Fanny Kemble, or some other equally vivacious and malicious spirit, had reported them. Mr. Hone makes a running commentary on her comments, forgiving her much for her praise of his daughter Mary, "with a smile that was not to say a ray, but a whole focus of sun-rays—a perfect blaze of light," but rebutting much, with pathetic loyalty to his friends. He is, however, able to say that she herself made but a poor impression, and a previous entry witnesses the fact.

The domestic establishment of Mr. Hone must have been upon a generous scale. In 1835 he lays in his winter butter, four to five hundred pounds at $2.14 a pound! For this extravagant price, as for the hard times generally of this and the immediately succeeding years, Mr. Hone holds Andrew Jackson's meddling with the Bank responsible. His disrespect for Jackson was exceedingly pronounced; only for his nullification proclamation does he give him any praise. Personal friendship qualified his political hatred of his successor. The shiftiness of party lines while the Whig and Democratic parties were in process of formation comes out very strongly. As between Clay and Webster, Mr. Hone's admiration was divided, with a leaning to the Webster side: he knew the latter statesman so much better. He furnishes us with a good example of the Whig mind in its relation to the slavery question. The Southern protagonists of slavery and the Northern abolitionists are to him equally deplorable, and he often confounds with the latter both Liberty Party men and Free-Soilers. He liked to spice his diary with duels and with mobs, so that a great many pro-slavery mobbings of anti-slavery people are set down, sometimes in terms much more amusing than his deliberate humor. At the burning of Pennsylvania Hall in Philadelphia, the mob, it seems, was "instigated by the wanton outrage of public opinion in the exhibition in the public streets of white men and women walking arm-in-arm with blacks, and by their speeches the females were foremost in arousing the excited populace." We must give Mr. Hone credit for seeing as clearly as Calhoun or Garrison the disunion result of the conflict. He was also quick to apprehend the meaning of the Irish invasion of New York. It seems almost premature to find him writing in 1835, and in italics, "These Irishmen . . . *decide the elections in the city of New York.*" His irritation with the abolitionists makes him sometimes forget himself, as where he speaks of "that ass Lewis Tappan." For Bennett of the *Herald* he has never a good word, but some of his characterizations vary as events proceed. John Quincy Adams is "crazy" and "a fox" in 1841; a little later he is a "sturdy mastiff"; and still later he is that "glorious old man." That the conscience Whigs had some disunion sentiments between the first of these entries and the last may have softened his judgment. His impression of Adams's universal knowledge was profound. Once breakfasting with Mr. Hone and Webster, he plunged into a disquisition upon dancing girls

from Miriam to Fanny Elssler, who was then the rage and on whom Mr. Hone duly called.

Mr. Hone went into the Harrison campaign with great enthusiasm, and was correspondingly depressed by Harrison's untimely death. The pathetic realism with which he depicts the disastrous consequences of the raid of office-seekers on the poor old man has never been surpassed. "He told his friends that his time was so much occupied that he had been prevented from performing the necessary functions of nature." But Mr. Hone's own ideas of civil-service reform were not even (as the boot-maker said of his boots to a protesting customer) "almost about to be commenced." On April 23, 1849, he writes that he has been appointed Naval Officer: "I hope, by the blessing of God, to be enabled to perform my duties with fidelity, ability, and integrity." On April 25 he writes: "The painful part of the duties of my office, the removal of the officers and clerks, has commenced. I have removed the three deputies, Messrs. Spinner, Sandford, and Lee, and appointed my nephew, Isaac S. Hone, my son Robert, and Mr. Franklin, and the worst is yet to come."

There is plenty of local color in this Diary for those who like that sort of thing. We see the City Hall dial lighted for the first time in 1837; we see the Astor House "astonishing the natives" in 1834 by its magnificent proportions; we see the wooden palings of the City Hall Park give place to posts and chains—all this from Mr. Hone's residence, which, from 1821 to 1836, was at 235 Broadway, one of the finest houses in the city, bought for $25,000 and sold for $60,000. The beginnings of railroad and steamship navigation will flatter the pride of a fast-going generation. "Fast enough, in all conscience," says Mr. Hone of twenty miles an hour, and great is his wonder at the trip from New York to Philadelphia by the Camden and Amboy Railroad in eight hours. Sometimes by the packets London advices were seventy-five days old. The first steamships made about the same time as the fastest sailing vessels at their best. The great fire of 1835 is properly enlarged upon. One of the most interesting episodes in the book is that of the mutiny of Philip Spencer on board the United States brig *Somers*. His father was Secretary of War, but he was hung at the yard-arm. As one of Tyler's Cabinet it must have been easy for the Whigs to think ill of the father and prejudge his son.

HEILPRIN'S BERMUDA ISLANDS.

The Bermuda Islands: A Contribution to the Physical History and Zoölogy of the Somers Archipelago. With an Examination of the Structure of the Coral Reefs. By Angelo Heilprin. Philadelphia Academy of Natural Sciences: The Author. 1889. 231 pages, 18 plates.

Of the geological structure of that portion of our globe which is buried beneath oceanic waters, constituting about two-thirds of its area, little can be learned by direct observation. In the continental land masses, and in the larger islands more or less closely connected with them, erosion, by sculpturing the mountains and carving out the valleys, has disclosed a record in the rocks which has enabled the geological observer to trace with considerable certainty the history of successive elevations and depressions of the land as referred to the ocean level, during which oscillation sediments have accumulated beneath the water, become hardened into rock, and again been elevated above the water to furnish material from their abrasion for new series of sediments. In the oceanic areas, on the other hand, the only records available to the geologist are to be found in a few widely separated volcanic peaks which project above the water level, and in small groups of islets, reefs, and shoals built up by the industrious coral animals (or insects, as they are often improperly called). The manner of formation of the latter—the coral-reef problem, as it is called—having a far-reaching interest beyond that which attaches to curious natural phenomena, has long been and will probably long continue to be a fruitful subject of speculation among geologists. Its study was among the earliest work undertaken by the leading geologists of England and America respectively, and first brought each of them prominently into public notice.

In the summer of 1888, Prof. Angelo Heilprin of the Philadelphia Academy of Sciences, with a small party of students, made a visit to the Bermudas, the most northerly and accessible group of coral islands, for the purpose of studying its zoölogy and the geological structure of its reefs. Of the present volume, which gives the result of this investigation, the greater part, and that which presents the most interest to the general reader, is devoted to the physical and geological structure of the islands, and to a discussion of the coral-reef problem, to which Prof. Heilprin had already given considerable attention during his geological studies in the Peninsula of Florida.

The present land masses of the Bermudas, which rise to an elevation of about 250 feet above the ocean level, are, like the similarly elevated portions of the Bahamas, not directly formed by coral zoöphytes, but consist of sands resulting from the abrasion of coral growths by wave action, which have been drifted up by the winds and agglomerated into a coarse limestone rock, with an irregular stratification peculiar to this mode of formation. From his study of the structure of the Bermudas, Prof. Heilprin concludes that the height of the present land was formed during a period of elevation, when the entire archipelago was an oval island extending to what is now the boundary reef, and that the lagoons and sounds were formed during a period of subsidence which followed this elevation. These conclusions are, he considers, in absolute harmony with the views entertained by Mr. Darwin, and, while not proving the correctness of the Darwinian hypothesis, measurably sustain it, and are largely opposed to the requirements of the theory recently proposed as a substitute.

In his discussion of the coral-reef problem and his reviews of the opinions put forth by recent observers on coral islands in various parts of the world, Professor Heilprin strenuously defends the substantial correctness of the theories of Darwin and Dana. The main objection to them, which is based on the evidence of elevation and the association of fringing reefs with atolls, he considers to be not well taken, since a general movement of subsidence by no means precludes local movements of elevation, and geological observation on the continents of the world shows that oscillations or alternations of elevation and subsidence are the rule rather than the exception. On the other hand, in his review of the substitute theories, he argues that none of them are competent to account for the observed facts of nature.

The upward growth of corals from the talus slope of an island or a submerged bank is impossible at a greater depth than 150 feet, and the observed thickness of such a growth can only be accounted for by slow subsidence of the land to which they are attached. Murray's theory, of the formation of lagoons through the dissolving agency of sea water acting on coralline limestone, he regards as founded on a pure hypothesis and not on well demonstrated facts of experiment or observation.

The Bermudas, on account of their isolated position in the midst of the ocean, offer peculiar interest to the zoölogist, but it may be questioned whether the Bahamas would not have been a better field for testing the coral-reef theory. Darwin did not personally visit either, but obtained his knowledge of their structure from the observations of others who were not always trained geologists; consequently he does not express any very decided views with regard to the structure of either, but on his map he colors the Bahamas as belonging to the fringing-reef class, while he leaves the Bermudas uncolored, for the reason that, although fringed by living reefs, their form suggests the atoll structure. Reasoning from the evidence of elevation throughout the region of the West Indies since Tertiary times, he expresses somewhat hesitatingly the opinion that the Bahama Islands and the surrounding banks are the result of a slow elevatory movement, and that the banks have been worn down and kept at a nearly uniform level during their elevation by the action of ocean currents and waves. The Bahamas contain many large islands, one of which is over one hundred miles in length, and the area included by these islands and the surrounding reefs and submerged banks is greater than that of the Peninsula of Florida, with which, from its proximity, it must bear close geological relations. In the island of New Providence, which is the most frequently visited, there is unmistakable evidence of recent elevation of the land; and its higher portion, whose elevation is about that of the Bermudas, consists of the same Æolian limestone that occurs there. But while the Bermudas have been studied and reported upon by a number of competent geologists, the Bahamas present for the most part an untrodden field to the geological observer, and it would seem that their systematic study would throw valuable light not only upon the coral-reef problem, but upon the disputed questions with regard to the Florida reefs and the geological action of the intermediate Gulf Stream.

While Prof. Heilprin's book is well printed and illustrated with reproductions of photographic views as well as zoölogical plates, the former are interspersed entirely without reference to the text; and, what is still more to be deprecated in a scientific memoir, this one is not provided with an index.

BOOKS OF THE WEEK.

Arnold, Edwin. Poetical Works. 2 vols. Boston: Roberts Bros.
Backgammon and Draughts. Frederick A. Stokes & Bro. 50 cents.
Besant, W. The Lament of Dives. F. F. Lovell & Co. 30 cents.
Brooks, E. S. The Story of the American Soldier in War and Peace. Boston: D. Lothrop Co. $2.50.

THE HAVEMEYER LIBRARY.

Important to Collectors of Rare and Choice Books.

J. W. Bouton has the pleasure to announce that he has now on exhibition and sale, at 1152 Broadway, the Extensive and Valuable Library of a gentleman of well-known taste and culture, who has devoted many years and a large expenditure of money in its formation. The collection is one of unusual excellence and interest. It is seldom, indeed, that a library so perfect in the essentials requisite for a gentleman is placed at the disposal of the public. In the number and range of desirable books, in the choice of editions, in the careful selection of copies, the judicious and often costly bindings, and the perfect condition of the whole, it has seldom been equalled. The Library is particularly strong in Standard Authors and the various departments of the Fine Arts, and comprises all the most notable Art Publications, both old and new; Galleries and Collections of Prints, Etchings, Drawings, and Standard Treatises in English, French, and German—special extra illustrated copies with mounted plates—all being in the finest possible condition, a considerable number of which could not easily be duplicated, while others are *absolutely unique*. The prices at which the books are marked are very reasonable, in many cases from 25 to 50 per cent. below their original cost, with the object of inducing a speedy sale.

*** *A handsomely printed Catalogue, by De Vinne, is now ready, and will be sent to any address upon receipt of 25 cents, which amount will be refunded if any purchases are made.*

J. W. BOUTON, 1152 Broadway, New York.
Uptown Branch of 706 Broadway.

RECENT ECONOMIC CHANGES,

And their Effect on the Production and Distribution of Wealth and the Well-being of Society.

By DAVID A. WELLS,

President American Social Science Association.
12mo, 493-xii pages, cloth. Price, $2.00.

"The book is the best contribution Mr. Wells has ever made to economical and statistical and social science, and one of the best that is to be found in any country or language."—*N. Y. Evening Post.*

"It is the history by hundreds of examples of the changes in production and commerce which have been brought about in recent years by the contrivance of machinery, by the use of steamships, railroads, etc."—*New York Herald.*

"Treated with the calmness, the candor, and the perspicacity which distinguish all his work."—*The Times (Chicago).*

"No man, whatever his economic opinions, can pretend to be a competent judge of the great material and social problems now appearing in every direction, until he has acquainted himself with the facts and reasoning contained in Mr. Wells's book."—*New York Commercial Bulletin.*

"His discussion of the causes and effects of recent economic changes is more interesting than a novel. . . . Those who agree and those who disagree will be alike fascinated with his presentation of the subject."—*New York Herald.*

"Abounding in facts of the most comprehensive and convincing sort, but taken down from that endless scroll of industrial and commercial experiences which is unrolled daily and yearly for the whole world to see, but which only the enlightened few can read in its true meaning."—*Springfield Republican.*

*** *For sale by all booksellers; or sent by mail, postpaid, on receipt of price.*

ARTISTIC PRESENTS

of

PERMANENT VALUE.

High-class Etchings, tastefully framed, costing from $5 upward. Illustrated Descriptive Catalogue mailed on receipt of 10 cents in stamps. Frederick Keppel & Co., Paris, and 20 East 16th St. (Union Square), New York.

Important to Public Institutions, Libraries, Etc.

Now Offered at Greatly Reduced Price.

HALKETT & LAING'S DICTIONARY OF ANONYMOUS AND PSEUDONYMOUS LITERATURE OF GREAT BRITAIN, including the works of foreigners written in, or translated into, the English language. 4 vols., imperial 8vo, $25.00 (published at £8 8s.).

The completion of this highly important and exhaustive work, after the lapse of so many years after its inception, was made memorable by the death of both of its learned and accomplished editors during its passage through the press. It was finally finished last year by the daughter of one of them (Miss Catherine Laing), in a manner that leaves nothing to be desired. Having secured, under peculiarly favorable circumstances, a small edition, the undersigned is enabled to offer the work at the very low price above mentioned.

Those desirous of securing copies should immediately address

J. W. BOUTON, 706 & 1152 Broadway,
NEW YORK.

Most Successful Book of this Year.

LORNA DOONE.

With many drawings.

By Mr. R. D. BLACKMORE.

Entirely new edition, from new type, with SEVERAL HUNDRED ORIGINAL ILLUSTRATIONS entirely new in all respects, specially drawn and engraved for this edition. These are of the very highest artistic merit by the best artists in the country, including such as Henry Sandham, George Wharton Edwards, Harry Fenn, Wm. Hamilton Gibson, Irving R. Wiles, W. H. Drake, Geo. E. Graves, Charles Copeland, Margaret McDonald Pullman, Harriet Thayer Durgin, Harper Pennington, and others. Engraved by hand and by process by A. V. S. Anthony, Geo. T. Andrew, Goupil of Paris, Kurtz, Wright Gravure Co., Fillebrown, Wm. J. Dana, etc.

Containing also a Beautiful Map of Exmoor, the Scene of the Story, Engraved in several colors.

This attractive romance, the most fascinating in its touches of both nature and human nature ever written in English, and perhaps in any language, is here published in an edition so luxurious in quality as to merit the praise it has received of being

THE MOST BEAUTIFULLY ILLUSTRATED BOOK EVER PUBLISHED IN AMERICA.

Price, Cloth, $5.00; Half Morocco, $10.00; Full Morocco, $15.00.

THE BURROWS BROTHERS CO.,
23, 25, 27 Euclid Avenue, Cleveland, Ohio.

"A book to which no enthusiasm can be misapplied."—*Traveller.*

Dedicated to the Clergy and Workingmen of America.

Metzerott, Shoemaker

Read the *Boston Transcript*'s criticism of this remarkable book:

"A book which well deserves to be read widely, for it is thoroughly interesting, without being sensational. The author's breadth of vision is far-reaching and his spiritual insight great. His novel is not a work of art, but it is one of the best and most earnest novels with a purpose which this country has yet produced."

12mo, $1.50.

DARWIN.

Two Companion Portraits

of the great naturalist, engraved on wood, in the highest style of the art, by Gustav Kruell, member of the Society of American Wood Engravers, and printed on Japan paper, under the artist's supervision. Size of the printed block, 9x6½ inches.

I. CHARLES DARWIN in the year 1854, on the eve of his writing the 'Origin of Species'; *the face without a beard*, showing all the characteristic features in perfection. From a photograph by Messrs. Maull & Fox, London. (By permission.)

II. CHARLES DARWIN in 1881, the year before his death, with slouched hat and full silvery beard. From a photograph by Messrs. Elliott & Fry, London. (By permission.)

Mr. Francis Darwin writes, under date of June 29, 1889:

"Mr. Kruell's engravings from the photographs by Messrs. Elliott & Fry and Messrs. Maull & Fox seem to me most admirable portraits of my father. I hope they may have the success they unquestionably deserve."

Edition limited to 200 sets of proofs, signed and numbered.

Price per pair, in mounts to avoid wrinkling, $20.00, carriage prepaid. (Sent on approval by express, C. O. D., with privilege of returning in the same way.)

Orders should be addressed to

ROBERTS BROS.,
BOSTON.

LEE & SHEPARD'S
Illustrated Books.

Miss Jerome's New Volume,

In a Fair Country.

By IRENE E. JEROME.

With 55 full-page original illustrations, engraved on wood and printed under the direction of George T. Andrew, with nearly one hundred pages of text by Thomas Wentworth Higginson. Elegantly bound in gold cloth, full gilt, gilt edges, $6.00.

Over the clear-cut thoughts of a modern master of classic essay, one of the foremost of American artists draws the magic pencil which has achieved so many triumphs, and, "in verdure clad," starts into life the rural beauties of "April Days," "My Outdoor Studies," "Water Lilies," "The Life of Birds," "The Procession of the Flowers," and "Snow." It was a happy thought that selected these models of literary genius for illustration, a loving homage to Nature, which guided the artist in her wanderings "In a Fair Country." The fifty-five illustrations which ornament this volume are not surpassed even by the former triumphs of 'One Year's Sketch Book,' 'Nature's Hallelujah,' 'A Bunch of Violets,' and 'The Message of the Bluebird,' household treasures throughout the land. Whether floating in her boat on Concord River, in and about places made famous by Thoreau and Emerson, or amid the hills of "beautiful Camden," down by the sea, she has exhibited the same fidelity to Nature which has characterized her previous achievements. Without the illustrations the essays would be admirable; without the essays the illustrations would be charming; but the union of pen and pencil has produced a book in every way superb.

New Editions of the Jerome Art Books.

Nature's Hallelujah.
One Year's Sketch Book.

In same bindings and at same prices as 'In a Fair Country.'

A Bunch of Violets.

Quarto, cloth, $3.75; Palatine Style, tied with chenille, $2.00. Also in elegant bindings of Turkey morocco, tree calf, and English seal style.

The Message of the Bluebird.

TOLD TO ME TO TELL TO OTHERS.

Cloth, Blue and White, $2.00; Palatine Style, Ribbons, $1.00.

AN EXQUISITE BEAUTY.

Days Serene.

Original Illustrations of verses from the poets, by Margaret MacDonald Pullman. Engraved on wood by Andrew. Royal oblong quarto. Emblematic cover designs. Twenty-six full-page original illustrations, full gilt, size 10½x14½, cloth, $5.00.

Wooing of Grandmother Grey.

By Kate Tannatt Woods. Illustrated by Copeland. Engraved by Andrew. Cloth, oblong quarto, $2.00.

The poem is a picture of old days in New England, tender and truthful in tone, and redolent of the homely simplicity and rugged sincerity of former days. The narrative of the wooing is lifelike in the extreme, the quaint dialect emphasizing its charm and pathos. The poem is beautifully illustrated by Charles Copeland, and will make a charming holiday gift.

For sale by all booksellers, and sent free on receipt of price. Catalogues sent free.

WINTER RESORT.—PERSONS wishing a mild, dry, piney-wood climate for the winter and desiring the comforts of a thoroughly well-appointed house, under Northern management, address THE HOBKIRK INN, Camden, S. C. 8th season. Illustrated circulars.

Houghton, Mifflin & Co.'s

SATURDAY BOOKS.

Asolando: Facts and Fancies.

A new volume of Poems. By Robert Browning. Crown 8vo, gilt top, $1.25. *Ready Dec. 13.*

Browning's Poetical Works.

New Issue of the Riverside Edition. Including all the corrections and changes recently made by Mr. Browning, and the poem "Pauline," in its previous form, in an Appendix to the volume in the body of which the latest revised version appears. In 6 volumes, crown 8vo, green cloth, gilt top, $1.75 each; the set, in a box, $10.00; half calf, $18.00; half levant, $24.00.

Portraits of Friends.

By John Campbell Shairp, author of 'Aspects of Poetry,' etc. With a Sketch of Principal Shairp by Professor W. Y. Sellar, and an etched Portrait. 16mo, $1.25.

This volume contains papers on Thomas Erskine of Linlathen, Bishop Cotton of Calcutta, Arthur Hugh Clough, Norman Macleod, Dr. Macleod Campbell, and others.

American Religious Leaders.

Vol. II. WILBUR FISK. By Prof. George Prentice. 16mo, $1.25.

A book worthy to follow Dr. Allen's 'Jonathan Edwards,' and treating wisely the career and character of Wilbur Fisk, the eminent Methodist divine.

Three Dramas of Euripides.

The Medea, The Hippolytos, and the Alkestis. By William Cranston Lawton. Crown 8vo, gilt top, $1.50.

A clear and admirable aid to an intelligent conception of the Greek drama. To a fine metrical translation of the three dramas are added such explanatory remarks as serve to give an adequate impression of them as produced on the Athenian stage.

A New England Girlhood.

Outlined from Memory. By Lucy Larcom. Vol. VI. in the Riverside Library for Young People. 75 cents.

A book of curious interest, combining the charm of autobiography with pictures of a social condition not far removed in years, but now nearly obsolete.

The Mystery of the Locks.

By E. W. Howe, author of 'The Story of a Country Town,' 'A Moonlight Boy,' etc. *New Edition.* Price reduced to $1.25.

"A strong, vivid, strikingly original novel, . . . a production of remarkable merit."—*The Literary World.*

*** *For sale by all booksellers. Sent, by mail, postpaid, on receipt of price, by the publishers,*

254 Fifth Ave., between 28th and 29th Sts., New York.
Importer of Foreign Books, Agent for the leading Paris Publishers, Tauchnitz's British Authors, Teubner's Greek and Latin Classics. Catalogues of stock mailed on demand. A large assortment always on hand, and new books received from Paris and Leipzig as soon as issued.

THE FORUM.

"*I consider The Forum as furnishing the most intelligent and sympathetic audience that a thoughtful writer can find to address in any land.*"—Prof. Alexander Winchell of the University of Michigan.

"*The Forum is of great value to that part of my college work which deals with practical politics and current questions. Two sets are hardly enough for daily use by students.*"—Prof. Alfred Bushnell Hart of Harvard University.

THE FORUM IS INTENDED TO BE A NECESSITY TO EVERY EDUCATED AND THOUGHTFUL READER. WHATEVER SUBJECTS OF PRESENT CONCERN MOST INTEREST YOU WILL BE TREATED BY AUTHORITATIVE WRITERS IN THE COURSE OF A YEAR—WHETHER POLITICS, RELIGION, SOCIAL SCIENCE, LITERATURE, OR PRACTICAL AFFAIRS, FOR MORE THAN TWO HUNDRED OF THE FOREMOST WRITERS AND WORKERS IN THE UNITED STATES AND EUROPE ARE AMONG THE FORUM'S CONTRIBUTORS. THE FOLLOWING, FOR EXAMPLE, IS THE TABLE OF CONTENTS OF

The December Number (ready to-morrow).

SOCIAL.....DIVORCE IN THE UNITED STATES. EDWARD J. PHELPS, Ex-Minister to England. Alarming statistics; the remedy: a prohibition of marrying again.

POLITICAL....CAN THE RACE PROBLEM BE SOLVED? Prof. HENRY A. SCOMP of Emory College, Ga. Emigration the only solution.

EDUCATIONAL. RELIGIOUS TEACHING IN SCHOOLS. BISHOP B. J. McQUAID of Rochester. The injustice done to Catholics by the present public-school system.

SCIENTIFIC....THE POSSIBILITIES OF ELECTRICITY. PARK BENJAMIN. A statement of what has been achieved, and a forecast of probable early achievements in many directions.

INDUSTRIAL.DO WE WANT INDUSTRIAL PEACE? PROF. WILLIAM G. SUMNER of Yale. Vagueness of the "labor problem," and the necessity of industrial warfare.

MEDICAL. ..IS MEDICINE A SCIENCE? DR. GEORGE M. GOULD of Philadelphia. A statistical estimate of the value of recent medical discoveries in lessening the death rate; may not all infectious diseases be prevented?

POLITICAL....IMMIGRATION AND CRIME. WILLIAM M. F. ROUND. The relation of nationality to crime in the United States.

RELIGIOUS...THE NATURAL HISTORY OF DOGMA. PROF. C. C. EVERETT of Harvard. The course that dogmas run illustrated by the history of the doctrine of Redemption.

RELIGIOUS...EXPERIENCES WITH SPIRITUALISM. REV. M. J. SAVAGE of Boston. A request for an explanation of spiritualistic phenomena.

INDUSTRIAL..THE FARMERS' DEFENSIVE MOVEMENT. WILLIAM A. PEFFER of Topeka, Kan.—A movement to consolidate all agricultural organizations; their membership now 1,000,000; their purpose and methods.

ADVERTISING PAGES.—A list of new books; publishers' announcements; a directory of schools, etc.

SUPPLEMENT.—Sketches of writers, and lists of articles bearing on discussions in this number.

The Book of the Season.

GREAT SENATORS OF THE UNITED STATES Forty Years Ago (1848 and 1849). With Personal Recollections and Delineations of Calhoun, Benton, Clay, Webster, Gen. Houston, Jefferson Davis, etc. By Oliver Dyer. Robert Bonner's Sons, Publishers. Price, $1.

'Great Senators' is emphatically the book of the season. The critics and reviewers give it unstinted praise. The New York *Tribune* concludes a two-column review of it thus:

This book will be read with the keenest pleasure by all who are old enough to have been brought up in the traditions of half a century ago, while it can be commended to young men as a treasure-house of information concerning perhaps the most striking and able group of statesmen the Union has known.

The New York *Times* says:

Mr. Dyer's relation with the great Senators of forty years ago was one very fortunate for the acquiring of fresh impressions. It is impossible to read his reminiscences without being aware that the impressions he reports are genuine.

The New York *Sun* says:

Among the recent contributions to American history none is worthy of more serious attention than a volume entitled *Great Senators*, by Oliver Dyer.

It would be easy to fill columns with effective extracts from this volume, but we must confine ourselves to two or three examples of incisive and impartial delineation. Mr. Dyer's analysis of Webster's individuality is the most searching that we have seen—indeed, it is the only one which accounts at once for the triumphs and the shortcomings of the great parliamentary champion of the Union.

The New York *Press* says:

In the book, "Great Senators of the United States Forty Years Ago," are told, as Dyer only could tell, stories of Calhoun, Benton, Clay, Webster, Houston, and Jeff Davis, with personal recollections and delineations. The personal descriptions given by Dyer of these great men are photographic in precision and lifelike as touched up by the anecdotal stroke of a master.

"Great Senators" is supplied to the trade by Robert Bonner's Sons. Any one who does not find "Great Senators" at the bookstores can obtain a copy, postage paid, by sending a dollar to Robert Bonner's Sons, corner of Spruce and William Streets, New York.

Important to Public Institutions, Libraries, Etc.

Now Offered at Greatly Reduced Price.

HALKETT & LAING'S DICTIONARY OF ANONYMOUS AND PSEUDONYMOUS LITERATURE OF GREAT BRITAIN, including the works of foreigners written in, or translated into, the English language. 4 vols., imperial 8vo, $25.00 (published at £8 8s.).

The completion of this highly important and exhaustive work, after the lapse of so many years after its inception, was made memorable by the death of both of its learned and accomplished editors during its passage through the press. It was finally finished last year by the daughter of one of them (Miss Catherine Laing), in a manner that leaves nothing to be desired. Having secured, under peculiarly favorable circumstances, a small edition, the undersigned is enabled to offer the work at the very low price above mentioned.

Those desirous of securing copies should immediately address

J. W. BOUTON, 706 & 1152 Broadway,
NEW YORK.

Littell's Living Age.

In 1890 THE LIVING AGE enters upon its forty-seventh year. Approved in the outset by Judge Story Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE,

it gives more than THREE AND A QUARTER THOUSAND double-column octavo pages of reading matter yearly; and presents, with a combined freshness and completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political information, from the entire body of Foreign Periodical Literature, and from the pens of the

FOREMOST LIVING WRITERS.

THE ABLEST AND MOST CULTIVATED INTELLECTS, in every department of Literature, Science, Politics, and Art, find expression in the Periodical Literature of Europe, and especially of Great Britain.

THE LIVING AGE, *forming four large volumes a year*, furnishes from the great and generally inaccessible mass of this literature, the only compilation that, while within the reach of all, is satisfactory in the COMPLETENESS with which it embraces whatever is of immediate interest, or of solid, permanent value.

IT IS THEREFORE INDISPENSABLE to every one who wishes to keep pace with the events or intellectual progress of the time, or to cultivate in himself or his family general intelligence and literary taste.

OPINIONS.

"There is no other publication of its kind so general in its bearing and covering the entire field of literature, art, and science, and bringing between the same covers the ripest, richest thoughts and the latest results of the time in which we live. . . . No one who values an intelligent apprehension of the trend of the times can afford to do without it."—*Christian at Work, New York.*

"Certain it is that no other magazine can take its place in enabling the busy reader to keep up with current literature. . . . By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever-increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"It is one of the few periodicals which seem indispensable. . . . It contains nearly all the good literature of the time."—*The Churchman, New York.*

"Biography, fiction, science, criticism, history, poetry, travels, whatever men are interested in, all are found here."—*The Watchman, Boston.*

"The foremost writers of the time are represented on its pages. . . . It is in the quantity and value of its contents *facile princeps*."—*Presbyterian Banner, Pittsburgh.*

"For the man who tries to be truly conversant with the very best literature of this and other countries, it is indispensable."—*Central Baptist, St. Louis.*

"To have THE LIVING AGE is to hold the keys of the entire world of thought, of scientific investigation, psychological research, critical note, of poetry and romance."—*Boston Evening Traveller.*

"No better outlay of money can be made than in subscribing for THE LIVING AGE."—*Hartford Courant.*

"For the amount of reading-matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"Nearly the whole world of authors and writers appear in it in their best moods."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It maintains its leading position in spite of the multitude of aspirants for public favor."—*New York Observer.*

"It saves much labor for busy people who wish to keep themselves well informed upon the questions of the day."—*The Advance, Chicago.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature. . . . It is indispensable."—*Canada Presbyterian, Toronto.*

Published WEEKLY at $8.00 a year, *free of postage.*

☞ To NEW SUBSCRIBERS for the year 1890, remitting before Jan. 1st, the numbers of 1889 issued after the receipt of their subscriptions will be sent *gratis.*

Club Prices for the best Home and Foreign Literature.

["Possessed of THE LIVING AGE and one or other of our vivacious American monthlies, a subscriber will find himself *in command of the whole situation.*"—*Phila. Ev. Bulletin.*]

For $10.50, THE LIVING AGE and any one of the American $4 monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year *postpaid:* or for $9.50, THE LIVING AGE and *Scribner's Magazine* or the *St. Nicholas.*

Address. *LITTELL & CO., Boston.*

The Mother's Register.

*In any family, whether large or small, but es*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen. . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

If you are not convenient to a news stand, send two dollars to the address below and the Ledger will be sent to you FREE till the first of January, 1890, and then continued for a whole year from that date.

THE LEADING WRITERS. — CELEBRATED ARTISTS.

$2 a Year. — SIXTEEN PAGES EVERY WEEK.

SPECIAL FEATURES.

HERBERT WARD, Stanley's Companion.

Herbert Ward, the companion of Stanley in his explorations in Africa, is the only white man connected with Stanley's African explorations who has ever returned alive from the "Dark Continent." Mr. Ward's articles, running through eight numbers of the "Ledger," are of the most intensely interesting description, and cover five years of his adventures in Africa, and they will be illustrated by sketches made by Mr. Ward, and by the reproduction of photographs taken by him in Africa. These pictures will throw much light upon the manners and customs of the hitherto unknown cannibal tribes of Africa.

The Story of a Forsaken Inn, (A Serial Story) By ANNA KATHARINE GREEN.

Life in British America, By Rev. E. R. YOUNG.

Being the adventures and experiences of Rev. E. R. Young, the celebrated missionary, and his wife during their residence in the Polar Region twelve hundred miles north of St. Paul, in which Dr. Young narrates how he tamed and taught the native wild Indians of the Northwest; how he equipped himself for, and how he made his perilous sledging and hazardous canoe trips when visiting all the Indian settlements within five hundred miles of his home.

Honorable HENRY W. GRADY

Contributes a series of six articles on the "Wonderful Development of the Industrial Pursuits of the New South."

American Cookery, (A Series of Articles) By MISS PARLOA.

Giving the reasons why it is imperfect, and some ways by which it may be improved.

Nihilism in Russia, By LEO HARTMANN, Nihilist.

Leo Hartmann, a fugitive from Russian authorities, has been connected with the most daring feats of the Russian Nihilists. Mr. Hartmann shows how the intelligent people of Russia are becoming Nihilists in consequence of the despotism of the form of government. A participant in plots to kill the Czar, such as the blowing up of the Winter Palace, he is able to give true information as to how this and other great schemes were accomplished. The situation in Russia is sufficient to increase the love of every true American for our form of government.

EXTRA SOUVENIR SUPPLEMENTS.

Among these beautifully illustrated four-page souvenirs, which will be sent free to every subscriber, will be a poem by

JOHN GREENLEAF WHITTIER, Illustrated by HOWARD PYLE.

Written for the *Ledger* by Mr. Whittier in his 82d year. Another souvenir will be a beautifully illustrated poem written by

HONORABLE JAMES RUSSELL LOWELL.

The LEDGER will contain the best Serial and Short Stories, Historical and Biographical Sketches, Travels, Wit and Humor, and everything interesting to the Household.

OTHER CONTRIBUTORS FOR 1890 ARE:

MRS. FRANCES HODGSON BURNETT.
MRS. MARGARET DELAND.
MRS. FLORENCE HOWE HALL.
MRS. MADELEINE VINTON DAHLGREN.

The Nation.

NEW YORK, THURSDAY, DECEMBER 5, 1889.

The Week.

PRESIDENT HARRISON'S first message to Congress has not been anticipated with feverish anxiety in any quarter. The best that can be said of the message itself is that it will not cause any commotion. Partly because it is not a disturbing document—and this is much in its favor—partly because the President has visibly lost standing with his own party during the nine months that he has been in office, there is no intense eagerness anywhere to read the message. The Philadelphia *Inquirer*, a Republican paper of the orthodox school, says "it is not easy to recall the existence of a like indifference within a great many years, and yet we have no doubt the message will be a very interesting and probably noteworthy document." Interesting it is, as the annual presentment of the nation's affairs must always be, and noteworthy also, but not exactly notable. It is timorous in its dealing with both the tariff and the silver question, but in this it undoubtedly typifies the state of mind of the Republican party on the whole. Foreign affairs occupy, as usual, the first pages of the message. There is very little here to dwell upon and nothing to excite alarm. Our relations with Great Britain occupy only a few lines, and these are satisfactory as far as they go. There is no reference to the Bering Sea question except a statement that the President has sought to protect the fur-seal from extermination. A new treaty of extradition has been negotiated, and will soon be laid before the Senate. The Samoan treaty with Germany and Great Britain is recommended to the approval of the Senate. It is recommended also that our ministers to Paraguay, Uruguay, Bolivia, Hayti, and the Hawaiian Islands be raised to the dignity of envoys extraordinary and ministers plenipotentiary—a suggestion based upon Pan-Americanism rather than upon business considerations.

The Treasury surplus is shown to be $57,000,000 for the past year, and probably $43,000,000 for the current year, and as much for the next year. This the President would have reduced by repealing the tobacco tax and the tax on alcohol used in the arts, and by additions to the free list of imported articles "that do not offer injurious competition to such domestic products as our home labor can supply." The recommendations regarding tariff "revision" are almost colorless, defending protection in a general way "for the products of our *farms* as well as our shops"—meaning wool, undoubtedly, but not venturing otherwise upon particulars. The President says a good word for silver, as indicating a kindly disposition towards that down-trodden metal, but he is not in favor of free coinage or of any addition to the present monthly rate of coinage. Whether he would favor Secretary Windom's plan of issuing certificates on deposits of silver bullion at its market value, he has not had time to make up his mind, but will recur to the subject later. In the way of spending money the President is more definite. He is in favor of a Dependent Pension Bill of the kind that President Cleveland vetoed. He recommends subsidies to steamships to South America, China, Japan, and "the important islands in both of the great oceans." He also favors the Blair Educational Bill, with the limitation that no appropriation be made covering more than one year, so that no Congress may tie the hands of a succeeding Congress—a qualification that might well be applied to steamship subsidies also. The only other recommendation of importance is one recommending the establishment of an intermediate court, inferior to the Supreme Court, to dispose of cases of a certain class, in order to relieve the existing pressure on the highest tribunal. This will meet general approval, for although the difficulties are considerable, the necessity is growing to be imperative.

On Monday, for the first time since December, 1874, a President greeted a Congress having in each branch a clear majority of his own party. When President Grant sent in his message fifteen years ago, the "tidal wave" had already swept over the country and insured the Democrats the control of the succeeding House of Representatives, and Hayes confronted an opposition majority in the lower branch throughout his term, and a Democratic Senate during the last two years. In 1880 the Republicans elected a majority of the Representatives, but the Senate was equally divided when Mahone voted with the Republicans and David Davis with the Democrats. By 1883 the Senate had become Republican, but the House was Democratic during the last two years of Arthur's incumbency. Cleveland had a Republican Senate to deal with throughout his term. It is consequently nearly half the lifetime of a generation since the last occurrence of such conditions as exist to-day, when the Executive, the Senate, and the House of Representatives are all controlled by the same party. It is altogether unlikely, however, that the new Congress will be fruitful of legislation. The Republican majority in the House is so narrow that, even with any possible changes in the rules, it will not be able to ride rough-shod over the minority. Revolutionary legislation, like the Federal Election Law scheme, cannot be enacted because the resources of the minority will always be sufficient to defeat it. Indeed, the only effect of the agitation of such projects will be to strengthen the growing popular sentiment against a party ready to champion them—a sentiment which, unless something now unexpected happens to change the set of the tide, will be reflected in the election of a Democratic House next November.

The selection of Mr. Reed as the party candidate for Speaker by the Republican caucus was the best possible. Mr. Reed is a man of marked ability, with habits of thinking about public questions, and likely to take the conservative rather than the radical view of any such subject as the silver question, for example. His success is also a matter for congratulation as a proper rebuke to the new school of sectionalists who have been trying to beat him upon the ground that he represents the East, and that the West ought to have the place—not because it had a better man, but simply because it was the West, and had more votes than New England. The country has had so much trouble with the old sectional controversy between North and South that it is in no mood to have a new one started between the East and the West. Fortunately, there were enough Representatives from Western States who recognized the truth to put an effectual quietus upon the attempt.

The controversy between Mr. W. P. St. John and Mr. John Jay Knox, on the question whether the greenbacks are payable in gold alone, or in either gold or silver at the option of the Government, has attracted some attention in the press, although it is not the main point of difference raised at the Kansas City Bankers' Convention. The question is exactly the same as that raised a few years ago, whether Government bonds are payable in gold alone, or in gold and silver at the Government's option. Most commonly the word "coin" was used in the statutes passed during the war and the suspension of specie payments, when it was intended to distinguish metallic money from paper money; but since there was no full-weight legal-tender coin known to the commercial world except gold coin, the fair presumption is that gold coin was meant by Congress. This presumption is borne out by the fact that in one instance, when United States bonds were described, they were spoken of as gold-bearing bonds. This was the act of July 12, 1870, sec. 3, which provides

> "That upon deposit of any United States bonds bearing interest in *gold* with the Treasurer of the United States, . . . it shall be lawful for the Comptroller of the Currency to issue, to the association making the deposit, circulating notes, etc."

What were the United States bonds, payable in gold, existing in July, 1870? They were all the bonds outstanding. This legislative interpretation of the meaning of the word coin, which had been commonly employed in contradistinction to paper, shows that Congress was not acquainted with any other kind of coin, and did not have any other kind in its mind during the period under consideration. Of course, a lawyer's argument can be made showing that, since the silver dollar was a permissible coin under our statutes up to the Coinage Act of 1873, therefore it must be presumed that Congress always intended that bonds and greenbacks

should be payable in silver. But, as a matter of historical fact, Congress never had any such thought or intention, and this is proved, we think conclusively, by the fact that the only time it ever mentioned a metal it mentioned gold, and classed all of its bond obligations in that category.

The full official vote of the State of New York in the recent election is now at hand, and it makes many interesting disclosures. It shows that without a single exception the most fit candidates upon both party tickets ran ahead of their associates, and that if the election had been as close a one as that in which Mr. Cleveland was chosen to the Presidency, both parties would have had a share in the victory, each electing a part of its ticket. The total votes for candidates on the State ticket were as follows :

Democratic.			Republican.	
Rice	505,963	Sec. of State	Gilbert	485,587
Wemple.	500,242	Comptroller	Cook	489,050
Tabor...	499,377	..Att'y-Gen..	Varnum	489,666
Danforth	502,212	..Treasurer..	Hedges	488,296
Bogart ..	503,958	State Engin'r	Van Rensselaer	486,968
O'Brien..	503,404	Judge Ct. Ap.	Haight.....	487,592

The most desirable candidate upon either ticket was undoubtedly the Democratic nominee for Secretary of State, Mr. Frank Rice, and the most undesirable on either ticket were undoubtedly the Democratic nominees for Comptroller and Attorney-General, Messrs. Wemple and Tabor. The popular verdict upon these three nominees can be shown in two ways, first, by giving the plurality of each over his competitor, and, secondly, by showing how each ran, either ahead of or behind his ticket, and how his competitor ran. We give, in tabular form, the revelations which the official figures make upon these points :

Pluralities.		Dem. candidates behind their ticket.		Rep. candidates ahead of their ticket.	
Rice.....	20,376	Wemple ..	5,721	Cook.....	3,463
Wemple..	11,192	Tabor.....	6,586	Varnum.....	4,079
Tabor....	9,711	Danforth..	3,751	Hedges	2,701
Danforth .	13,916	Bogart	2,005	Van Renssel'r.	1,381
Bogart ...	16,990	O'Brien ...	2,559	Haight	2,005
O'Brien...	15,812				

It will be seen that Mr. Rice is in advance of all his associates, the one coming nearest to him in the size of both total vote and plurality being Mr. Bogart, the candidate for State Engineer, who was a nominee in every way deserving of the public confidence. The worst sufferer in public condemnation was Mr. Tabor, who ran so far behind Mr. Rice that he had less than half the latter's plurality. Mr. Wemple came next in the downward scale, and both men have reason to be thankful that they were running in an off-year. On the Republican ticket the candidate for Secretary of State had the poorest support, mainly because of the superior qualifications of his competitor, and partially because of his record as a prohibition advocate. The two of his associates who ran furthest ahead of him owed their large vote entirely to the unfitness of their competitors.

Judge D. M. Key, who was Postmaster-General under Hayes until appointed by him to the United States District Court, has written a letter to the *Times* of Chattanooga, Tenn., where he lives, discussing the subject of sectionalism, in the old sense of the word. He shows how the disappearance of slavery has removed the cause for it, and insists that the apparent sectionalism which still remains is in no sense a sectional difference when rightly understood, being due to the fact that in the North the negro is an unimportant factor in the population, while in some States of the South, and in many sections of other States, he is in a majority. Friction exists in the South, but does not in the North, simply because of the presence in one case and the absence in the other of the exciting cause. Judge Key shows that race prejudice is not at all a matter of politics, by pointing out that, although there were never many slaves in Eastern Tennessee, although its inhabitants were overwhelmingly in favor of the Union during the war, and although there are only two or three counties in that part of the State which give Democratic majorities, yet "if appeal be made to the rural Republicans to support the colored nominee of their party, they refuse, and will vote for a Confederate instead when they have no other choice."

If he had been familiar with the fact, Judge Key might have illustrated his argument that " race partialities and prejudices always have existed " where the conditions for them exist, by citing the recent election in Lawrence, Kansas, when seven out of eight white Republicans refused to vote for the excellent party candidate for county clerk simply because he was black. A similar illustration has even more recently been furnished in Springfield, Ohio. The regulations of the School Board provide that a normal class composed of the graduates of the high school who have attained an average of 85 per cent. or over, who desire to qualify themselves for teaching, may be formed each year under the direction of the Board, and that such normal students shall be assigned by the Superintendent or Board to the different schools as opportunities arise. A colored girl of Newark, O., went through this course, until she was properly qualified for appointment, but she was never assigned any place. Her father wrote the Superintendent, asking that she be given her rights. "I ask for her," he said, "no more privileges than what she has honestly earned, no more than what others who graduated in the same class with her are enjoying, and no more than some outside of that class have." The presentation of this letter caused a lively debate in the Board. One member said that the only question was that of color, and that the Board ought to assign the young woman to the Central Building, whereupon another said : " Miss Henderson, if her request is granted, will be entitled to and will be assigned to take a sick teacher's place, and this will cause an eruption in our schools. If she is so assigned, I'll withdraw my children, and so will the rest of you." After an acrimonious discussion, the motion to assign her to the Central Building was carried, but only by a vote of seven to five, and it is obvious that any attempt to carry it out may cause serious trouble.

The message of Gov. Richardson to the South Carolina Legislature, which met on Wednesday week, furnishes a fresh argument against the " Bill to Promote Mendicancy." The Governor devotes considerable space to the subject of the public schools, and what he says is full of encouragement, both for its matter and its spirit. He adopts unqualifiedly the traditional idea of New England, that " the public school is the principal training ground of the masses," that "the dictates of religion and philanthropy call for wise legislation in this field," and that " to these high motives is added the safety of the commonwealth." He urges upon the Legislature the most careful consideration of all measures bearing upon this subject, and commends the "salutary and progressive measure " passed by the House of Representatives at the last session, in " the appointment of a standing committee to guard and develop this supreme question." He declares his belief that the agents in the field, school officers and teachers, as a body, are more efficient and earnest in the discharge of duty than ever before, and he recommends the extension of the school year to a minimum of six months, which is the limit in the northern States of New England. From first to last the Governor's treatment of the subject is that of the executive of a self-reliant commonwealth, which spurns the humiliating idea of turning beggar and asking the authorities at Washington to educate her children for her.

A rather surprising proof of the growth of liberal ideas regarding Sunday among the clergy is afforded by a canvass of members of the profession in Portland in respect to a suggestion that the public library be opened on Sunday afternoons. The Rev. Dr. Asa Dalton and the Rev. Henry Blanchard favor the project; the Rev. Dr. A. K. P. Small thought somewhat favorably of it, though not prepared to give full assent to the idea; the Rev. N. T. Whitaker and the Rev. A. H. Wright opposed the plan, on the ground that it would lead to a demand for the opening of other places of public resort, and thus tend to secularize the day; but both Mr. Wright and the Rev. J. M. Lowden approved of a full and free discussion of the subject, to see what opinions would be developed thereby. It is not so very many years since every clergyman in Portland would have been horrified at the mere suggestion of opening the library on Sunday, and would have condemned even

discussion of the question as tending to unsettle the views of the people.

People who tried to travel upon the elevated railways on Thursday, during the hours in which the crowds were moving to and from the foot-ball match, were able to get a faint idea of what we should have to experience daily were we to have a World's Fair here with our present transit facilities. The entire attendance upon the foot-ball match was only 25,000, and not all of these went over the elevated lines. A World's Fair would bring into our city from three to four times this number of daily visitors. The attendance at the Centennial Exhibition in 1876 averaged over 63,000 a day for the 159 days during which it was open. The attendance in 1892 would be much larger, and would, in all probability, average 100,000 a day. If the Fair were to be held on the site at present contemplated, this great body of visitors would have to be transported to and from it over existing lines of elevated and street railways, and it requires very little imagination to picture the discomforts in which the journey would have to be taken. People who are talking about the necessity of having the site within the reach of existing lines of transportation, should meditate upon this outlook.

The presentment of the Grand Jury upon the questions of subways and electric-lighting wires is an admirable statement both of the extent of the evils which we are suffering, and of the causes which have given rise to them. What they say about the manner in which our present laws permit any and every corporation to tear up our streets as often as they please, the lack of system in the laying of underground pipes, and the indifference which is shown to public convenience by the excavating forces—all this is a familiar tale; it has been told over and over again in the newspapers, and every citizen is familiar with it from personal observation; yet it is none the less a reflection upon our methods of self-government because of its familiarity. Why is it allowed to go on year after year? Simply because the people of the city consent to its continuance. When they insist upon a change for the better, they will get it. The Grand Jury set forth with equal truth and force the dangers which threaten us from the electric-lighting wires. They enumerate the most recent and startling accidents from them, declare that they are "due to the practice of stringing electric-light wires upon the same poles with telephone and telegraph wires," that they "cannot too strongly condemn this practice," and that not only is it a constant menace to the linemen, but a broken wire may at any moment be the means of sending "into any house or office a deadly current over the telephone wire." This has been said also in the press, but it comes with additional force when put forth in a formal court presentment and as the result of careful investigation by legal processes.

More attention has been given in Boston to slow-burning construction and to protection against fire in general than in any other American city. Mr. Edward Atkinson has reduced the whole subject to a science, and he has lowered the cost of insurance to the factories associated together in his Manufacturers' Mutual Company to a figure which would have been deemed impossible and fabulous a few years ago. All the principles which he has elaborated are as easily applied to stores as to factories—indeed, rather more so, since factories are exposed to more risk than stores, by reason of their greater use of steam engines, oil, chemicals, and fluffy material easily ignited. Yet within a stone's throw of Mr. Atkinson's office we saw, on Thanksgiving Day last week, an almost uncontrollable conflagration raging through whole blocks of alleged fire-proof buildings in the teeth of a driving rain-storm, destroying five or six millions of property, and checked at last only by the aid of fire apparatus summoned from a dozen places without the city limits. But for that pouring rain, which kept the roofs of distant buildings wet and extinguished the brands falling upon them, where would Boston be to-day? Not unlikely just where Chicago was on the 9th of October, 1871. The fire would have swept onward in the direction of the impelling wind until there was no more fuel in its path. It would have stopped only when the last combustible thing in its range was burned.

Austria-Hungary is seriously considering a thorough reform in her monetary affairs. In spite of the difficulty which both halves of the Empire experience in steering clear of annual deficits, it is hoped that, with the possible aid of an increase in the spirits tax, the budgets of the next few years will warrant the resumption of specie payments, the details of which are to be settled by a commission of high officials and financial experts. This commission will also be charged with the task of fixing upon a monetary standard as well as upon a new unit of value. That the gold standard will be adopted is considered certain, but as to the unit of value which will best suit the needs of the Empire, there is considerable diversity of opinion. The advocates of the mark unit point to the close relations existing between Austria-Hungary and the German Empire, while the adoption of the franc as a unit is urged by those who lay stress on the equally close relations between the monarchy and the countries of the Latin Union, particularly the Balkan States; and, finally, there are those who favor the adoption of a specifically Austrian unit, based on the actual gold value of the Austrian paper florin. This, again, raises the question, what is to become of the Austrian silver florin, which is at present worth about eighty-three kreuzers, or considerably less than the paper florin. The answer is, that, with the gold florin as a unit, the silver florin and its fractions would be retained as subsidiary coin and legal tender in small amounts.

The withdrawal of the Government notes now current coincidently with the resumption of specie payments would involve the issuing of a loan of at least 300,000,000 florins, to which Cisleithania would contribute her usual quota of 70 per cent., while Hungary would furnish the rest. The likelihood that Cisleithania could negotiate her share of the loan at more favorable terms than Hungary—say, at 3½ to 4 per cent. interest against Hungary's 4½ to 5 per cent.—is contemplated with perfect equanimity by the Vienna financiers, who in 1878 gave a very reluctant assent to the establishment of the Austro-Hungarian Bank, which introduced the political dualism of the Empire into its finances, and subjected the Vienna money market to all the fluctuations of the market of Buda-Pesth. Some apprehension is expressed that, in the event of the adoption of a gold standard, the hoarding propensities of certain classes of the population, unused to the sight of gold as a circulating medium, might be stimulated to such a degree as to bring about a serious stringency of money. Of course, whatever plan may finally be determined upon will depend for its execution upon the maintenance of the European peace, the tenure of which is considered by no means secure by cautious Austrian financiers. It is ominously remembered that the outbreak of the wars of 1859 and 1866 found Austria engaged in similar plans for the reconstruction of her finances.

A recent despatch from London states, on the authority of the *Times* correspondent at Brussels, usually a well-informed man, that the Pope is disposed to abandon the attempt to pacify Ireland which the British Government has long been urging on him, in view of the resolute resistance of the Irish clergy. This falls in with the stories which have been current for some time, and have gained much strength since the late Catholic Congress in Baltimore and the foundation of the Catholic University at Washington, that the spirit of insubordination towards the Papacy, on the part of the non-Italian element in the clergy, has been growing rapidly of late, and may find expression in some overt action when the time comes to elect a new Pope. The Irish and Germans and Poles are said, in other words, to be becoming very impatient of the monopoly of ecclesiastical rule held by the Italians, and to be disposed to resent it openly whenever the Pope and his advisers try to magnify their authority by extending it to the secular concerns of other countries. Some attempt has been made of late years to keep down this feeling by a more liberal distribution of Cardinals' hats among the outside barbarians, but as these Cardinals live far from Rome, they exert but little influence on Papal councils. The American and English Catholics, if not the Germans, are said to be in favor of some sort of great liberalization of Catholic theology, so as to keep hold of the sheep who are demoralized by science and democracy; but the necessity of this is naturally not as clear in the Vatican as in Baltimore or Chicago.

MR. WINDOM AND THE BANKS.

At last the Secretary of the Treasury has taken a step which shows that he feels the importance of reducing the Treasury surplus by freer purchases of bonds. He has given six weeks' notice to the depositary banks, calling in 10 per cent. of their Government deposits where the Government account is an inactive one, and, in cases where the account is active, calling in 10 per cent. of the excess above the balance which the Treasury intends to keep. And he takes pains to make it plain to the banks that he is ready to buy from them, in whole or in part, the bonds which they have lodged with the Treasury as security for Government deposits. This 10 per cent. call is to be followed by other calls, with the expressed purpose of reducing the Government deposits in national banks from their present figure, some $47,000,000, to such a total as the Government business may really need, which will no doubt cut down the deposits at least one-half. All the money so withdrawn is to be used in the purchase of bonds. The working of Mr. Windom's circular will cause no disturbance in the money market, since the Treasury is ready to buy the bonds, and at prices considerably above the amount of the deposits for which they are held as security. In fact, the money market will gain stability from the change proposed, the Treasury buying and cancelling the bonds, in place of merely advancing money upon them.

It is represented in some quarters that this action of Mr. Windom, though delayed until he has been nine months in office, is taken in fulfilment of pledges given during the Presidential campaign of last year. If this view is held by the author of the circular just issued, he would probably be puzzled to explain why he did not issue the circular long since. It is, however, unnecessary to inquire into this question at present; it is of more importance to look into the general question of the Treasury deposits, viewed in their bearing on the very peculiar condition of the Treasury itself. The deposits were never anything but an expedient; they have been very useful to the business community at large, and they can be reduced in a manner to increase their usefulness further, which last may be taken as Mr. Windom's purpose in his present declaration of policy.

The Government of this country carries on its financial business as no other civilized Government does. Instead of depositing its revenues with one or more of the strongest banks in the country, and checking on the bank for its disbursements, it sweeps its receipts into its own vaults, making its disbursements afterwards through its own Sub-Treasuries. The system was calculated for a small business, and it has had to be worked on a gigantic scale; and what was easily borne when income and outgo differed little, became very burdensome when receipts largely exceeded expenditures. Congress saw this, even so far back as when the National-Bank Act was framed, and provided some relief by permitting a system of Treasury deposits secured by United States bonds. Such deposits could be made from any moneys in the Treasury, excepting the receipts from customs duties, a very large and important exception. Still, this section of the National-Bank Act gave to the Secretary of the Treasury a very useful power, and one which should have been used much earlier than it was, for it enabled him to relieve part of the stringency which was often caused by the absorption of money into the Treasury. It seems, however, that the Secretary was generally afraid to use this power, and deposits, as a rule, were made only in cases where they strictly facilitated the Treasury's own business. The matter was brought to the attention of Secretary Folger, in the month of October, 1882, and in his report of December of that year he discussed the question at some length, deciding to do nothing, and expressing the fear that deposits might not be returned when called for. The question then slumbered, so far as the public was concerned, until, under Mr. Cleveland's Administration, the Treasury in 1887 systematically increased its deposits in national banks, aiming to place what is called its "available balance," as far as possible, at the service of the trade of the country. The change was of great public utility: how great can only be surmised, but some idea can be formed by trying to imagine what the money-market would have been without this measure of relief.

The system of deposits has grown until the depositary banks are now reported as 266 in number. The deposits themselves are widely scattered, those in New York city being, we understand, a trifle less than six millions. Besides relieving borrowers of all legitimate descriptions, these deposits, being secured by pledge of United States bonds, have drawn together a large mass of the very securities for which the Treasury is the principal buyer. Some of the bonds are owned by the banks, and many of them are borrowed, belonging really to customers of the banks. In either case, their sale is only a question of practical judgment, and this practical judgment Mr. Windom evidently seeks to influence by his circular.

THE DECLINE OF NEW ENGLAND.

We printed last month an extremely interesting letter, from Judge Nott of Washington, throwing some light on the decline of the old stock of New England farmers. His explanation is, in brief, that farming has been ruined in New England, and the old New England society—something unique in its way—destroyed, by the offer of vast tracts of fertile land in the West by our Government for almost nothing to European peasants; and secondly, by the building up, by means of a high tariff, of a great manufacturing interest which has competed against the farmer in the labor market. The farmer was so fascinated by the picture which the high-tariff men drew for him of the benefits that would accrue to him from having "a factory at his door," to consume his produce, that he never thought of asking what the other effects would be. He has now found, after twenty years' experience, that "the factory at his door" does not consume his produce, while it does entice away from the land the laboring youth of both sexes, so that he can get nobody to help him in his fields, or his wife in her kitchen.

In one way or another not only has the New England farmer been ruined or driven from the soil, but the old New England society, in many ways one of the most interesting phenomena in history, has been completely broken up. No other such body of cultivators of the soil as the New England colonies were, down to our own day, has ever been seen. No other men who tilled the ground with their own hands have had such an acute and active intelligence, such intense preoccupation with religious and moral problems, such a keen sense of the superior importance of spiritual things, such reverence for learning, such familiarity with and appreciation of literature, and such capacity for government by discussion. Puritanism, as has often been said, missed its mark in England, but it came as near realizing its ideal as human nature would permit, on American soil. No student of politics or sociology will, in all probability, for ages to come, light on an experiment in all respects so interesting and so successful as Massachusetts and Connecticut were and continued to be down to the outbreak of the civil war. The war, working through the tariff and the railroads, has broken it up almost as thoroughly as it broke up its opposite, slave society, at the South.

The only important point in the catastrophe which Judge Nott does not attempt to explain, or even touch upon, is the equanimity, and even rejoicing, with which the New England farmers have witnessed the disappearance of the social edifice which they had passed two centuries in building up, and cemented with an enormous amount of prayer and self-abnegation. For more than a quarter of a century New Englanders have, through all their organs, in politics and in literature and oratory, eagerly supported the policy which was visibly and rapidly changing the character of their population and the structure of their society. The most ardent advocates and promoters of "the factory at your doors," with its swarm of foreign-born voters, have been New England men. They have seen it rapidly and surely converting Connecticut and Massachusetts into foreign and even Catholic States, ousting the natives of the Puritan stock from all real influence in the Government, and consigning to the lumber-room of history the old Puritan traditions of public spirit and public duty, and have seen it sending all their boys and girls flying into the cities and to the West, without a protest or even a word of complaint. In fact, at the dinners of the New England Society in this city, the favorite boast of the orators has been the rapidity with which New Englanders were leaving New England to leaven society, as they said, and carry on "improvements" in other places. The disappearance from the map of a community more remarkable, on the whole, for its civic virtues than any the world has seen since the days of ancient Greece, has wrung hardly a word of lamentation or re-

gret from any of the recognized organs of New England opinion. The received notion about the matter has apparently been that as long as New England men can be pointed to in New York or at the West in places of responsibility in railroads, mines, factories, or stockbrokers' offices, nothing more need be said by way of apology or regret.

This is all the more surprising because the New Englanders who have emigrated have not sought to reproduce under strange skies the social ideals which reigned in their old homes. They have nowhere tried to found an imitation of their mother States, unless perhaps in the Western Reserve, the original peculiarities of which have, however, already disappeared. New Englanders have made their mark in various fields all over the country, but it is in no way a different mark from that made by emigrants from other States which did not inherit the Puritan tradition. They "make their pile" in much the same way as Virginians or Pennsylvanians, and spend it on much the same objects; hold substantially the same views of the ends of life. If they differ at all from other "live men" or "solid men" of the day, it is in possessing a more consuming energy, not in any superior appreciation of things invisible.

All this forces one on the supposition, to which Judge Nott makes no allusion, that some part at least of the decadence of New England has been due to the operation of causes which are driving the farming population into the cities in all the more highly civilized countries. The better educated and more energetic portion of the agricultural population is abandoning the farms in France and England as well as here. In fact, it seems impossible to keep any longer on the land in a state of content any but the real old peasant class of farmers, with no book-learning and no interests but those of their own calling—men and women whose lives are passed contentedly between toil and sleep, and on whom the attractions of city life have no influence. A population with as much mental activity, and the social ambition which comes of mental activity, as the New England farmers, was sure to be roused into uncontrollable restlessness by the advent of the railroads, the daily newspaper, the monthly magazines, and the visits of the lyceum lecturer. The old people might escape it, but no one who has seen anything of the New England youth of the last forty years can help doubting whether even prosperous farming would have kept them from rushing to the stores and factories of the great towns in search of society, of the theatre, of the picture-gallery and the public library, and the thousand and one suggestions of pleasant variety which the streets even of a country town offer to boys and girls who have been bred in the silence and seclusion of an "old homestead."

THE AFRICAN PROBLEM.

It is quite evident that the expulsion of Emin Bey from the Sudan, combined with Stanley's success in rescuing him, is going to make the African question a great subject of European attention during the next twenty-five years. The death of Gordon and the British repulse in the Sudan have given Egypt more than ever the character of a British dependency, or, indeed, possession, and Egypt is not safe so long as the Sudan is held by a hostile Power. Consequently, the best mode of pacifying the Sudan is now a constant subject of British preoccupation. Besides this, the missionary enthusiasm which down to Livingstone's day looked on the civilization of Africa as possible through the spread of Christianity, has since Livingstone's day given way to the commercial and colonizing enthusiasm, which holds that Africa must be regenerated by railroads, factories, and European trading settlements, to which the missions must be a sort of supplement or adjunct.

Accordingly Germany, England, Italy, and Portugal have plunged eagerly into the work of exploring Africa, not so much because it is a country easy to colonize as because it is now the only part of the world unoccupied by civilized men which European nations find it easy to get at. Germany is pushing out reconnoitring parties from Zanzibar; Portugal is extending her possessions inland from the Western coast; Italy has got a foothold in Abyssinia, and England has chartered an "East African Company," on the model of the East India Company, with full fighting as well as trading powers. Its mission will be, apparently, to push its way into the interior along the line of least resistance, trade where it can, fight where it must, found colonies, build forts, make roads, and lend a hand to friendly native chiefs wherever they need it. It is now proposed, if his services can be secured, to put Stanley at the head of this corporation, and the Germans will very probably try to secure the services of Emin Bey for some similar organization of their own. In short, there is to be a sort of attack all round, on what may be called "the anaconda plan," on the dark continent. It is to be pierced from several directions at once, and, if possible, opened up to civilization.

It is safe to say the civilized world has never before entered on a task so difficult. All the other great tracts of the earth's surface which the European nations have sought to penetrate and subdue—North and South America, Australia, India, and Central Asia—have had climates which the white man found, if not enjoyable, at least endurable. All have either had populations so feeble and barbarous as to be readily exterminated or reduced to submission, or have had political organizations the overthrow of which secured peace and obedience for the conqueror. Central Africa offers none of these advantages. The population is large and savage, and dwells in pestilential forests, and has neither thrones, principalities, nor powers competent to make treaties, surrender territory, or preserve order. All is night and chaos. No conqueror who enters that portion of Africa can at present hold more than the ground he camps on.

It is not, however, the absence of civilization or of strong tribal organization which constitutes the great difficulty in the way of the missionary or the colonist. If the invaders had only the peaceful natives to deal with, the problem would probably be easily solved. The power in Africa which drove Egypt out of the Sudan, which slew Gordon, which keeps the British shut up in Suakim and every now and then threatens them in Egypt, which bars Capt. Wissmann's and Dr. Peters's progress, has driven Emin out of his province, and keeps Stanley, on all his wonderful marches, in constant danger of destruction, is what we used to call in this country "the slave power"—that is, what may be called a vast semi-military brotherhood, composed of the owners and dealers in slaves brought from the interior to the northern and eastern coasts of the continent. The slaves who were brought to the Americas in the seventeenth and eighteenth centuries were generally captives taken by local chiefs in their tribal wars on the western coast. The slaves who are now sold in northern Africa and in Persia are captured by bands of filibusters composed either of Arabs or half-breeds, who come down from the north and lay waste the country, burn the villages, and carry off the inhabitants wholesale. Their raids are, in ferocity and destructiveness and plan of operation, very like those which the Turkomans, before the Russian conquests in Central Asia, used to organize against the Persians, under the name of "alamans," but they are carried out on a far larger scale and over a much wider area.

The beginnings of this frightful system are said to have been found in the ivory trade. The armed traders got into the way, when short of carriers, of seizing natives for the work of transportation by force. Then came the great success of the Mohammedan missionaries in making negro converts who considered themselves the superiors of the heathen, and entitled to use the sword of the Koran against unbelievers, hold them in slavery, and make up harems of their women. Gradually, little by little, out of these things has grown up an immense traffic which takes, it is estimated, 500,000 men, women, and children annually from Central Africa to supply the labor markets of Timbuctoo, of Morocco, of Tripoli, of Arabia, of Persia, and now of Khartum and Gondokoro. Commander Cameron, who had long personal acquaintance with the traffic, puts down the number actually sold annually at 500,000, but the number who perish on the march to the market is estimated at 50 per cent. of the total, so that the draft on the Central African population may be called one million annually. On the road, the traders every morning inspect their caravan, and kill, with a bar of iron, in order to save ammunition, every slave who shows signs of exhaustion, so as to save the sorghum on which they feed them, and in the desert the water. On certain of the caravan routes in the desert, in fact, it is said, the skeletons or scattered bones make it very easy to follow their track. The passage across the Red Sea in the Arab dhows which have to evade the British cruisers is as full of horrors as the old "middle passage" of the Atlantic traders, but it is happily very short, and the proportion of

slaves landed in good condition is rather large.

The awful nature of the traffic and the difficulties it puts in the way of African civilization have often been exposed. Dr. Livingstone did it; so did Commander Cameron; so did Consul Johnson; so—though last, not least—did Cardinal Lavigerie and a score of others. The Conference sitting at Brussels has done it also. But no one has yet suggested a practicable remedy. The discouraging fact has indeed been brought to light that the traders actually follow in the track of the Christian missionaries, and choose the districts into which they have introduced some semblance of peace and industry as favorite theatres of their infernal operations. Several missionary stations have stood sieges from them or been destroyed by them. The line along which they operate, too, may be said to stretch across the continent, and they thrive in a climate where Europeans can barely keep alive.

Gordon said "there were but two serious means of putting a stop to the traffic. The first is to dry up the source of it by establishing tranquillity in the territories in which this chase after human game is carried on; the second is to close up the slave markets in Egypt, Turkey, and Persia." But how is either of these things to be accomplished? The English Parliamentary Blue Book published in 1888 shows that there is in Morocco a great market for Sudan negroes, and that at Messafoa in that country there is an immense establishment devoted to the preparation of black eunuchs for the harems. Consul Wood reports from Tripoli that he has seen come into the town of Bengazi alone 20,000 slaves in four years, or about 100,000 for the whole of Tripoli. The Governor of the province of Fezzan was said to receive about two dollars per head for every slave who entered his jurisdiction. They are also beyond question smuggled into Turkey. That more or less of the trade goes on in Egypt may be inferred from the existence at Cairo of a "Home for Freed Women Slaves," under the patronage of the Queen, which had very recently four hundred inmates. The truth is, that slavery is so deeply imbedded in Oriental traditions, manners, and religion, that the demand will never be extirpated as long as the supply exists; and to stop the supply we must either civilize Africa or rule it in some such rough-and-ready-fashion, from the Atlantic Ocean to the Red Sea, that every slave-dealer who crosses the line will have a well-founded fear that the gibbet or the firing party may await him.

HIGHER EDUCATION FOR WOMEN IN GERMANY.—II.

At the close of 1887 a number of Berlin women drew up a petition to the Prussian House of Representatives and Minister of Education, praying, first, that women be given a larger share in the teaching of girls in the public high schools, and especially that the "ethical" or character-building subjects, German and religion, be put into the hands of women teachers; second, that institutions be established by the State for the training of women teachers competent to do this work. The grounds of this petition are ably set forth in an accompanying memorial written by Fräulein Lange. The contention of the petitioners is that the girls' schools are at present organized upon a wrong principle; that women no less than men should be educated for their own sake, with reference to the fullest possible development of the faculties natural to them; that the ideal to be kept in view by the schools, therefore, should be *womanhood* of the highest and completest type. To the attainment of this end, the memorial argues, girls must receive a large part of their instruction from women. Instead of being confined, as now, to the instruction of the lower classes (years) in handiwork and calisthenics, women teachers should have charge of the most important part of the course, leaving to men at best those subjects which involve little more than the giving of information.

The memorial admits that women teachers of the kind desired are not now to be had in any considerable numbers in Germany, and argues thence the need of providing them. It does not ask for or favor the admission of women to the universities, but advocates rather the erection of public colleges more or less similar to Girton and Newnham in England; such colleges to offer a three years' course of the highest scientific character, having at the beginning a severe standard of admission, and at the end a State examination vouching for the same grade of attainment and carrying with it the same rights as the present State examination for men. The latter part of the memorial is devoted to showing that women are mentally and physically equal to the severe course of study planned for them, and that their womanliness will gain instead of losing under the strain.

The petition and the memorial are both ably written documents, and present a very cogent argument, but they fell short of convincing the Prussian authorities. After a lapse of eight months, Minister von Gossler replied that he saw no ground for proceeding in the direction suggested. The petitioners had exaggerated the evils of the existing system; women were already extensively employed as teachers, and the best positions were already open to those who would qualify themselves. The State was making generous provision for the training of teachers in the seminaries attached to the girls' schools. The idea that women should teach religion was preposterous, since such an idea would seem to deny the utility of the present confirmation-instruction, which everybody knows to be a blessed institution. The erection of colleges for women was to be looked on with disfavor, since, apart from the question of expense, the young women in such establishments would become estranged from family life. Their health would also be sure to suffer under the regimen proposed. Finally, many poor but respectable young women, such as now find employment suited to their abilities in the girls' schools, would be unable to pay the expense of the proposed course and would thus be driven out of the business of teaching.

Thus the petition accomplished nothing directly in the way of influencing legislation, for the Prussian House of Representatives shelved the whole subject upon learning the attitude of the Ministry. Indirectly, however, much has been effected, and the reformers have reason to look upon their cause as prosperous. For, in the first place, their views are now fairly before the public, and are being, or have lately been, much discussed. A few prominent journals and several influential men espoused the cause of the petitioners, at least to the extent of favoring the *idea* involved. Others, and these the majority, opposed the movement, but in so doing they were at least compelled to tell why; so that the whole question, in its three familiar stages—first, Have women the brain power? second, Will it not injure their health? and third, Who wants a blue-stocking for a wife?—is now seething in a multitude of minds, and slowly evolving a general feeling that something must be done. For of course the reformers have not failed to point out the vacuity of Von Gossler's argument, or to make skilful use of the stinging and inevasible retort that all the insurmountable difficulties foreseen in Government circles have of late been easily surmounted by other nations.

There is evidence that this particular shaft, after first making public opinion somewhat restless, is now pricking through the skin of Prussian officialism; for we observe that the Government has lately sent an envoy to England to inquire into the methods and workings of the English colleges for women. More important still, there has just been established, under the name of "Fortbildungskurse für Lehrerinnen," in connection with the Victoria Lyceum at Berlin, a line of instruction which, so far as it goes, is substantially what the reformers have been asking for. Hitherto the Victoria Lyceum—a brief account of the institution will be found in the *Nation* of January 14, 1886—has confined itself to providing lecture-courses in which the results of scientific research are presented in somewhat popular form and rather easy doses. The new courses aim higher. They are to be systematic and obligatory, to extend over three years, to combine lectures with seminary work, and to terminate in a State examination with a diploma for those who pass. The ideal and the methods of the instruction, which is supported in part by State subsidy, are to be essentially those of the universities. At present, to be sure, the new courses are confined to history and German; but we may doubtless assume that if experience shows a demand for the extension of the work, the extension will be made, and the Lyceum will develop into a university for women.

Finally, we have to chronicle another very recent movement in the same general direction, namely, the new "Realkurse für Frauen," just established under the auspices of the Wissenschaftlicher Centralverein at Berlin. These courses are to provide advanced instruction, open to graduates of the public high schools for girls, in mathematics, physics, chemistry, political economy, German, Latin, French, and English. Here the aim is less distinctly academic than in case of the Lyceum courses just spoken of. The "Realkurse" are intended to give women such knowledge as will make them more independent under the peculiar conditions of modern life. We have before us the excellent inaugural address delivered on the 10th of October last by Fräulein Lange, one of whose hearers was her Imperial Majesty the Empress Friedrich, long illustrious for her exertions on behalf of German women. The programme of the "Realkurse" is thus far a modest one, but with such support as it has no one can foresee what may come of the movement. A foot-note to the address just mentioned indicates that the number of students registered is small but rapidly increasing.

In short, it looks as if the question of higher education for women in Germany were entering upon the road to solution. The initial steps we have described have been taken, to be sure, only in Berlin, and are in themselves perhaps not very imposing. But the reform has now at

any rate a foothold. The principle that a woman no less than a man has a right to make the best of herself, and is entitled to at least as much help from the State, has been recognized, and the future is in the hands of the women themselves. If they avail themselves eagerly, in considerable numbers, of the slender opportunity now tentatively offered them, further provision will, of course, be made for their needs; and as Berlin and Prussia go, so the rest of Germany will go.

One shrinks from giving free rein to the imagination in a matter of this kind when there are mountains of inveterate prejudice to be removed and a mint of money to be expended. Still, it is not hard to defend the thesis that the education of girls is, in a sociological point of view, even more important than that of boys; and so one cannot help wondering what would happen if this principle were to be recognized in Germany, and put into practice with the energy and thoroughness which that country has long displayed the education of men, and is now in the habit of bringing to bear upon all matters vitally affecting the public welfare. We might then look forward to a race of German women essentially different from those of the present day. Will they be less vigorous of body? Science should take care of that. Will they be less attractive to men? Nature looks out for that. Will they be real competitors of German men in the pursuit of knowledge and the application of new knowledge to life? Probably not. Of one thing, however, we are very sure, and that is that they will be helped and not hindered by whatever accurate knowledge they may possess, in the carrying out of the pretty domestic programme which Schiller lays down for them in "Würde der Frauen":

"Nähren sie wachsam das ewige Feuer
Schöner Gefühle mit heiliger Hand."

No doubt whatever that this is a woman's noblest vocation. And the more intelligent she is, the better she can fulfil it.

THE "CULTURKAMPF" IN BAVARIA.

MUNICH, November 13, 1889.

PRUSSIA has made its peace with Rome. If Bismarck has not precisely been to Canossa, he has at least got as far on the way as Venice, and has managed as cleverly as did his predecessors in the days of Barbarossa to patch up a *modus vivendi* with Rome, without coming to extremities either way. This apparent settlement of the religious question by the highest powers in Germany has perhaps diverted attention from another field of religious-political controversy where the same question has never been suffered to rest, and where it has just risen to the surface of affairs with sudden and unusual distinctness. Bavaria is mainly a Roman Catholic country. It is governed by a family which has throughout its history distinguished itself by its fidelity to Rome. In the great religious war of the seventeenth century, the house of Wittelsbach stood at the very head of the Catholic party, and stamped upon Bavaria the character of a truly Catholic land, which it has never lost to this day. But on the other hand this same house of Wittelsbach has always been, especially since it gained the royal title by the grace of Napoleon I., very jealous of its rights as against all comers. The spirit of the old Emperor Ludwig of Bavaria has never, in spite of the weaknesses and sins of his descendants, quite died out, and it is coming to the fore in these days. It was largely under the impulse of that spirit that the electors of Germany, assembled in 1338 at the ancient Königsstuhl at Rense, declared that whoever should be lawfully chosen by themselves should, *without reference to Rome*, be the true and lawful Roman King and Emperor.

It was a great lesson in historic continuity to listen to the debates in the Bavarian Landtag on the 6th, 7th, and 8th of this month, and to see how, with only a change of words, precisely the same problem is before the German people to-day which faced them, under Ludwig the Bavarian in the fourteenth, and even under Henry the Salian in the eleventh century. The present form of the problem in Bavaria, divested of its complications, is something like this. The present Prime Minister, Von Lutz, the Bavarian Bismarck, is a Protestant, and probably the best-hated man in the land. He holds his place by virtue of his great ability, his devotion to the interests of the Government, and the sincere admiration of the liberal elements of the population. The late King Louis II. cared little for the details of administration —was, in fact, during the last years of his reign, undoubtedly incapable of that kind of activity. His brother, the present King, has been for many years a hopeless lunatic. Their uncle, the present Prince Regent Luitpold, is an old man, a worthy person, so far as any one knows, devoted to hunting, and apparently guided very much by the good monarchical feeling that he is, after all, only a regent, and therefore in a sense excluded from original action in fundamental questions. His eldest son, Ludwig, a man in the prime of life, with a great family of children, will succeed his father as regent, and, if he outlives the mad King (which, according to published accounts of his Majesty's excellent physical condition, seems doubtful), will succeed to the throne.

Under all these circumstances, the policy of the Government is distinctly to keep things as they are, to take no decided original action, but to maintain steadily the rights of the throne as it interprets them, and to hand them over undiminished to a new king, whenever, according to the Bavarian Constitution, such a one shall come into power. On the other hand, the Roman party, keen as it ever was to seize upon the weak points in its enemy's position, is using these circumstances of uncertainty in the Government to insist upon certain concessions which it could expect with less confidence from a king strong in an undoubted right, and looking forward to a long period of personal influence upon affairs.

The immediate subject of the recent debates was a proposition presented by seventy-nine members of the party of the Centre, asking the Landtag to declare that the royal approval, the "Placetum Regium" of the Bavarian Constitution, did not apply to questions of faith. This proposition has at first hearing a very harmless sound. To American ears it seems almost like a declaration of religious liberty: "The King shall have nothing to say as to what his subjects may believe"; and, in fact, the Roman party even went to the length of declaring itself the champion of religious freedom as against State oppression. But the real pith of the matter lies deeper. The idea of State support for religion is still deeply rooted in the minds of European peoples of all parties. But State support and State recognition go together. The State must define *what* religions it will support; it must have some principle by which to reach such a definition. In other words, it must, necessarily, sit as judge over purely doctrinal questions, whenever, in the course of events, it is called upon to recognize a new religious body. Such a crisis has been impending in Bavaria ever since the Vatican council of 1870. The doctrine of Papal infallibility has never been accepted by a considerable fraction of the Catholic Church. The disaffected portion began the organization known as the "Old-Catholics," and, ever since, the chief anxiety of the Ultramontane party has been lest this new organization should gain in Bavaria, as it did in Prussia, State recognition, therewith State support, and thereby cease to be a "sect" and become a "church" in the same sense in which the Roman Catholic, the Protestant, and the Greek churches now exist side by side, "recognized" and "supported" by the State.

The danger of such recognition has not increased of late years. The Old-Catholic party has not shown itself capable of supplying the rallying-point for moderate reform which was expected of it. But the Ultramontane party has not been satisfied. It has wanted a formal declaration that the Government shall have nothing to say in questions of faith. It has emphasized in every way the distinction between questions of religious administration and those which involve purely matters of belief, and it has brought forward its present proposition in the hope of getting a formula which shall be capable of indefinite extension in the future.

But the Old-Catholic question is not the real one involved. As Minister Lutz very sharply said, "The Government is not going to give privileges to the Old-Catholics until they ask for them." The real question is the great fundamental one of the relation between Church and State in Bavaria. The debates of last week, and still more the comments of papers throughout Germany, show this beyond all doubt. In his reply to the proposition of the Centre, Minister Lutz went, with Bismarckian directness, straight to the point. He passed in review the action of the Government in related matters during the past centuries of Bavarian history, and maintained, on the basis of Constitution and Concordat alike, that the whole record pointed to the right of the State to control its own affairs, religious as well as secular. He finally charged the movers of the proposition with infidelity to their oaths of office as representatives of the Bavarian people. This accusation naturally called forth a storm of opposition. Members threw off all disguise, and fell into the trap which the Minister had laid for them. His own directness brought similar directness in reply. A stormy scene, quite unusual in German legislative bodies, took place, and culminated in a declaration by the Ultramontane representative, Daller, for himself and his partisans, that they did not feel themselves bound by their oaths of office *in the sense in which the Ministry had interpreted them*. This declaration has since been going the rounds of the German Liberal press as the evident expression of the jesuitical reasoning which underlies the whole matter of the relation of the Roman Catholic subject to *any* State: he takes his oath of allegiance *with a reservation*.

It is a fortunate thing for the Liberal party everywhere that the Ultramontanes of Bavaria have been forced to such a distinct utterance. It must open the eyes of thoughtful men to the fact that the Roman Church has not changed its views since the time of Hildebrand as to the superior claims of the only saving Church over all other human relations. The American citizen may gain the same warning, and will profit by it. He has the same problem to meet, only on different lines.

I was especially interested in one remark of Minister Lutz on the fundamental question of State support. He said in substance:

"There are different ways in which to meet this difficulty. One way would be to withdraw

the support of the State from all religious bodies, and then the matter might be left to them. This way, however, is in Bavaria out of the question. The Government stands on the basis of the Bavarian Constitution, and accordingly must provide for religious support."

The American observer learns by such a declaration that this State control, which in America would be tyranny, is here the present condition of what passes in Europe for liberty. If the nations of Europe are to advance constitutionally from their present level of religious toleration to the higher level of religious liberty, it will have to be through this intermediate action of the State. To one, however, who sees how this State control works to lame and cripple all activity in other directions, the outlook is not cheering. In Bavaria, at all events, the Government has nothing to fear from overliberal tendencies. The proposition of the Centre passed the lower house of the Landtag by a majority of three. Its defeat in the upper house is believed to be certain, but it remains as documentary evidence of what the only true representatives of the Bavarian people think about their relation to Church and State, and it is hailed with the utmost jubilation by the Roman press everywhere as a sign of that ultimate victory which is to reward those who patiently wait until the world comes round to them.

There can be little doubt that the move of the Ultramontane party at this time is a direct personal attack upon the Prime Minister. He himself felt it, and replied to it as such. Under a different system of parliamentary government, the passage of this vote would have brought with it the immediate resignation of the Ministry. Foreseeing the outcome of the discussion, Herr von Lutz emphasized, with great distinctness, the difference between the Bavarian and, for instance, the English system. He reminded his opponents that so far as he, personally, was concerned, he was not responsible to Parliament or to the people, but to the King, and that, so long as it should please the King or his representative to approve his action, so long he proposed to keep on as he had been doing.

The question in Bavaria is thus frankly stated and put before the people in such a form that it cannot be misunderstood. The chances are that the Ultramontane party will be satisfied for the present with its majority of three, and will let the matter slide until another year. Meanwhile, there are enough other points of controversy, as, for example, the still pending question of the approval by the Pope of the new Archbishop of Munich, Freysing, to keep the Ministry in a constant attitude of opposition to the extreme claims of the Vatican. Never, since the days of the Falk laws in Prussia in 1873–'75, has this question of Roman control over the religious affairs of Europe been so clearly before the people. The ultimate solution in Europe, as in America, must be the separation of Church and State, but that can never come until, by some great awakening, the whole theory of the paternal government is abandoned, and no one who watches the direction of affairs either from above or from below can deceive himself with the idea that Germany is advancing along this line. On the contrary, both in the struggle of Socialism and in the resistance of the monarchy, it is strengthening the theory of the "strong hand" which shall, if it only be strong enough, make all things well. E. E.

FRENCH DIPLOMACY FROM THE ARCHIVES.

PARIS, November 15, 1889.

THERE is no branch of literature which has undergone in our time a greater change than history. Historical studies have assumed almost a scientific character; we no longer put up with vague and sententious generalities, we will have facts, texts, documents. This reform was first introduced in Germany, but the modern French school is as severe, and more severe, than the most difficult German professors in Berlin. There is much to be said about the great change which has been made in the direction and in the method of historical studies; even texts, letters, and written documents may deceive us and conceal the truth. Human life is too short to allow us too close a study of the past; and it will soon be almost impossible to study history, as the documents published every day are so numerous that it would take several lives to go through them. At the same time, we must confess that when we have once adopted the modern method, we cannot be content with the vague accounts of the older writers. We have become so critical that we hardly dare to pass any judgments on the past, as we feel that there is always something hidden from us; we must be satisfied with a part of a truth, but we cannot bear what is not the exact truth.

I have before me several large volumes of historical documents, which are published under the general title of "Collection of the Instructions given to the Ambassadors and Ministers of France from the Treaty of Westphalia to the French Revolution." This publication is made under the direction of the Diplomatic Archives Committee of the Ministry of Foreign Affairs. These archives have been for twenty years more accessible than in the past: any person who wishes to consult them has only to write a letter to the Minister and to say what subject he intends to study. The Minister consults the Archives Committee on the subject, and gives his permission if the report of the Committee is favorable. As the archives, however, are now so completely open, the Commission has thought it its duty not to leave to the first comer the initiative in publications which, from their dimensions and their object, seem to depend chiefly on the initiative of the Government. On the other hand, the Foreign Office does not think it opportune or necessary to take the entire charge or responsibility of these vast compilations of instructions and despatches. The work has, therefore, been confided to persons known by their capacity, and to responsible editors, who consent to do their work only under the auspices and the superintendence of the Commission.

In accordance with this programme, the Minister has authorized the publication of the instructions given to our representatives abroad from the Treaty of Westphalia to the French Revolution, and has given a subvention to this publication. The habit of our Government has always been, when a new Minister was sent to a foreign court, to give him an extensive account of the anterior relations of France with this court, of the questions which were at the time in discussion, and to draw up for him a plan of diplomatic operations. These instructions may be compared to a proof before the letter: they represent all the effort of our diplomacy in its stage of preparation; they cast their shadow on coming events; they are the invisible thread which unites a number of political events; they are a sort of perpetual commentary on our national history, and show at the same time both what we have done and what we have wished to do.

The diplomatic archives have only been very regularly kept since Cardinal Richelieu, and our diplomatic relations have only kept a perfectly regular course since the Treaty of Westphalia. It is for this reason that the new publication only begins at that date; there are obvious reasons why it should end with the year 1789. Before this date there were instructions of two sorts—those which were given in view of some particular negotiation, such as a treaty of peace, and those which had a general character, and gave a résumé of the regular relations between France and all the States of Europe. The collection made under the direction of the Archives comprises only this second class of general instructions.

The old clerks of our Ministry of Foreign Affairs were obscure but noteworthy men. They spent all their lifetime in the shade; they were never changed, and knew all the intricacies of our negotiations. Many of their memoirs are to be ranked among the best models of historical study. Their names are forgotten, but they played as important a part as the negotiators who received their lessons from them. It is chiefly to them that we owe the continuity of our foreign policy before the great Revolution.

The first volume of the collection gives the history of the relations between France and Austria. The rivalry between these two States fills our history, and the struggle against the powerful house of Austria became a necessary condition of the territorial formation of France. Charles V. aspired to universal monarchy, his possessions surrounded France on all sides. France had to look everywhere for allies, and she found some in Germany itself. The Treaty of Westphalia gave to France the three bishoprics of Metz, Toul, Verdun, the landgraviates of Upper and Lower Alsace, the prefecture of Haguenau in Lower Alsace; it conferred more rights on the German princes, and gave them the right of free alliances. France became the guarantor of these rights, and this guarantee became the foundation of her policy.

"These German alliances of France," says M. Sorel, who has written an introduction to this first volume, "are a very subtle and delicate matter"—so subtle that in the instructions given in 1815 to the Duke of Richelieu we read:

"The Duc de Richelieu must not forget that, with regard to the Princes of the Empire in general, it would be dangerous to show too much haste in defence of their interests. Still imbued as they are with the prejudices with which the Court of Vienna has known how to inspire them at all times, they would be inclined to consider such a hasty disposition a result of the King's desire to take a principal part in the interior affairs of the Empire, and to foment division in order to promote his own interests."

After the death of Charles VI., France entered into the coalition against Maria Theresa, with results not foreseen by her, the creation of a new Power as dangerous to France as Austria ever had been. Prussia took and kept Silesia, and the genius of her king soon gave her a place in Europe which she had never had before. The instructions given to Stainville in 1756 say:

"His Majesty used, in 1733, the King of Sardinia, and in 1741 the King of Prussia, as Cardinal Richelieu had previously used the crown of Sweden and several Princes of the Empire; with this difference, however, that the Swedes, ill-paid by France, nevertheless remained faithful to her, while by making the Kings of Sardinia and of Prussia too powerful, we have only made of these two Princes ungrateful rivals—a great and important lesson, which we ought to take to heart, so as to govern each of these

monarchs by fear and hope, rather than by augmentations of territory."

Prussia left the French alliance and signed a treaty with England, which was at war with us; France turned towards Maria Theresa and made peace with her. "If ever an event took place which could justly astonish the world," say the instructions to the Comte de Choiseul (1759), "it was the union of the King with the Empress-Queen. The result was not fortunate for France; she received no support from Austria against England on the Continent; she neglected her maritime struggle with England in order to help Austria against Prussia," and in the end Frederick II. kept his Silesian conquest, France lost Canada, Louisiana, and India. After prodigious efforts made by France, she found herself much diminished. The Austrian alliance had become, however, the new basis of our foreign policy, and it remained so, with some alterations, till the French Revolution.

The mere chronological list of our envoys to Vienna from 1660 to 1790 will be interesting: President Colbert, Chevalier de Grémonville, Marquis de Vitry, Marquis de Sedeville, Comte de Cheverny, Comte de la Vauguyon, Comte de Lusignan, Marquis de Villars, Comte du Luc, M. Mandat (chargé d'affaires), M. du Bourg (chargé d'affaires), Duc de Richelieu, M. de Bussy (chargé d'affaires), Marquis de Mirepoix, M. Blondel (chargé d'affaires), Marquis d'Hautefort, Marquis d'Aubeterre, Comte d'Estrées, Comte de Stainville, Comte de Choiseul, Comte de Châtelet, Marquis de Durfort, M. Durand (minister plenipotentiary), Prince de Rohan, Baron de Breteuil, Marquis de Noailles.

The second volume of the collection relates to Sweden, and its publication has been confided to M. Jeffroy, who has written a good introduction to the volume. He shows in it how laborious French diplomacy was during the last century. By his close alliance with Sweden, Louis XIV. had, so to speak, surrounded the Baltic and northern Germany, balanced in the north England and Holland, restrained Russia and Prussia. Louis XV. and Louis XVI. continued the same work. More than once France had recommended a Scandinavian union, a union which might have had very happy results. But this union of Denmark, Sweden, and Norway was hindered by national jealousies, as well as by the violent temper of such kings as Charles X., Gustavus, and Charles XII.

Portugal forms the subject of volume iii., a somewhat distant field for our diplomacy, but still an interesting one to us, as, by a singular fortune, France was directly mixed up with the events which prepared the political independence of Portugal in the seventeenth century, as well as with those which ended in the revival of this independence in the nineteenth century. M. de Cain de Saint-Aymour has edited this volume, and written its introduction.

Then come, in the order of their publication, Poland, in two volumes, with an introduction and notes by M. Farges; Rome (the first part, extending to 1687), with an introduction by M. Hanotaux; Bavaria, Palatinate, Deux-Ponts, with an introduction and notes by M. André Lebon.

Correspondence.

THE ANCESTRY OF WASHINGTON.

To the Editor of The Nation:

Sir: The following very important contribution towards the history of the Washington family has just been received from a well-known English antiquary, in friendly response to the suggestion made by Mr. Whitmore, that the aid of our English friends might confidently be looked for.

Mr. F. A. Blaydes, the editor of the *Bedfordshire Notes and Queries*, writes under date of November 8:

"Some fifteen years ago, when I was first bitten with the mania for searching registers, I have a faint recollection of finding the name Washington of frequent occurrence on some register that I went through. It was somewhere not far from Luton, but whether Toddington, Chalgrove, or Hockliffe, I cannot now say for certain. However, I forward you a few data, bearing on your work, one being a Washington marriage, which I hope will be of use.

NOTES FROM LUTON, CO. BEDS. REGISTER.

1663 Dec. 22. WASHINGTON, Mary, d. of Mr. Lawrence and Mary, bapt. [Bishop's Transcripts.]

1668 Nov. 20. FREEMAN, Mrs. Mary, d. of Mr. *Thomas* [*sic*] and Mistress Hester, bapt. [Parish Register.]

1675 Jan. 14. FREEMAN, John, son of Mr. *John* [*sic*] and Esther, bapt. [Bishop's Transcripts.]

1660 Jan. 26. WASHINGTON — JONES. Lawrence, *gen.* and Mrs. Mary, married. [Bishop's Transcripts.]

"The will of Edmund Jones of Luton, gent., dated 8 Mar., 1682 (buried in the parish church of Luton, 19 May, 1683), mentions grand-child Mary Washington, to whom he bequeaths 40 shillings. Proved at Bedford 24 June, 1689."

[It will be noted that three of these entries are from the Bishop's Transcripts of the parish records. Mr. Freeman is termed *Thomas* in the first—an undoubted error, whether made in the "Transcript" or by Mr. Blaydes in copying.]

Here we have made known to us the maiden name and parentage of the first wife of Lawrence Washington of Virginia, the dates of their marriage and of the baptism of their daughter Mary, to whom, it will be remembered, her father gave all his property in England by his last will and testament. And it should not be forgotten that it was to Edmund Jones that letters of administration on Lawrence Washington's goods in England were granted.

Two or three years ago I myself went to Luton to examine the parish registers, but, though I reached the place early in the forenoon, it was not until afternoon that I was able to get access to them. I looked rapidly over the entries down to the year 1658, inclusive, and, finding nothing, hurried back to London. At that time, I suppose, everybody believed that Lawrence Washington was married and in Virginia in 1658 and onward. It now seems doubtful when he actually settled there. I have made no thorough examination of the Feet of Fines later than those of the year 1657. They should be searched for ten years further at least. Now that we know the Christian name of his wife, any conveyance of land in or about Tring, made by Lawrence and Mary Washington, would be good evidence to prove that Lawrence of Tring and Lawrence of Luton and Virginia were one and the same. Knowing, too, the place and date of the marriage, it might be worth the while to hunt for the marriage license, with the hope to learn thence his place of nativity. If there are extant in Luton any borough or guild records, we might get help from them. If young Lawrence Washington was apprenticed to any tradesman in Luton, the book of apprenticeships in which his indenture was enrolled would undoubtedly settle the question of his parentage and place of nativity.

I would call attention to the fact that Lawrence Washington of Virginia is now shown to have married his first wife in 1660, which helps us form an opinion as to his age. Lawrence of Tring must then have been twenty-five years old, which answers very well. Let me also call renewed attention to the interesting and important part played in my story by Mr. John Freeman of Luton, whom we find having children baptized, borne by his wife Hester. It was this John Freeman of Luton whom Mrs. Elizabeth Fitzherbert, aunt of Lawrence Washington of Tring, appointed executor of her will and trustee of her real estate in Tring and Middleton Stony. His wife Hester, we have found, was a daughter of William Roades of Middle Claydon, and so a cousin of Lawrence Washington of Tring. Hither to this parish of Luton, from somewhere in England, came a young Lawrence Washington to marry his first wife, in 1660. Can any one doubt that it was from Tring that he came? If this is granted, my whole case must be allowed; for Lawrence of Luton and Lawrence of Virginia were surely one and the same, while Lawrence of Tring was clearly the son of a clergyman of the same names, and that clergyman can have been no other than the Fellow of Brasenose, whose pedigree was known. HENRY F. WATERS.

[At the risk of seeming superfluous, I venture to point out that these extracts prove the identity of Lawrence Washington of Luton, whose first wife was Mary Jones, with the emigrant to Virginia. (1.) Because Lawrence died in Virginia and his will was proved January 6, 1677. Administration was granted in May, 1677, to Edmund Jones, principal creditor, on estate of Lawrence Washington formerly of Luton, County Beds., deceased in Virginia. No one can doubt that these entries refer to the only known emigrant.

(2.) Edmund Jones is clearly the father-in-law of Lawrence, and mentions his grandchild Mary Washington. Lawrence Washington of Virginia, in his will, gives all his property in England to his daughter Mary and the heirs of her body, and, failing them, to her half-brother and sister, children of his second wife. This devise, moreover, makes it a moral certainty that Mary was an only child by the first wife, agreeing exactly with what the Luton records show.

(3.) It has been *supposed* that Lawrence came to Virginia with his brother John, about the year 1657. But this rests solely upon Gen. George Washington's statement that such was the family tradition. But George was descended from John, the brother of Lawrence, and, even at that time, a century after the emigration, the two families seem to have drifted apart. There are many Washingtons in Virginia not descended from John, who were not clearly traced even to Lawrence.

Now, Mr. Brock's citations from the Virginia Land Registry show grants to John Washington as early as 1661, in connection with Thomas Pope, but the earliest entry to Lawrence is September 27, 1667, jointly with Robert Richards. *Is there any evidence that Lawrence was here before 1667?*

If Lawrence married Mary Jones at Luton in 1660, and had a daughter Mary in December, 1663, and no other child, is it not a fair inference that the mother died soon after, and that Lawrence then turned his steps towards his brother John, already well established in Virginia, and became resident there about the date of his purchase of land in Stafford county as above cited? W. H. W.]

UNSCIENTIFIC POLITICAL THINKING.

To the Editor of The Nation:

Sir: An incidental remark of the reviewer of Bagehot's writings, in your issue of Novem-

ber 21, touches what is to my mind a matter of so fundamental importance as to entitle it to attention on independent grounds. There is in this country, your reviewer suggests, "more political thinking than there has been for a long time, but it is to a great extent bad thinking. It is loose and vague and highly uncritical." There are probably few thinking men who have not had this fact forced upon their attention. It is perhaps at present an opportune time to bring the matter to the consideration of the public, from the fact that no Presidential election is very imminent; for it is undeniable that the heat of a political conflict has proved anything but a favorable atmosphere for sanity and lucidity of thinking.

The vice of much current political thought—and this is a characteristic belonging to no one party as a peculiar possession—is that it takes no account of anything but the present moment, present conditions, present aspects or tendencies. Certainly the historic sense would admonish a trained student that conditions and tendencies in the past have shown constant development rather than rigidity and fixity. It would consequently seem to be only a natural inference that any hypothesis or theory should look well into the past and into the future as well as the present.

Another vice of the thinking which is so prevalent is an almost grotesquely uncritical spirit shown in the weight of authority accorded to the varying would-be expounders of political and economic principles. It is not so much that the uninstructed popular voice classes all authorities as on an equal basis and appealing with equal weight to the choice of the citizen. It is rather that when the citizen exercises a choice, it is in many cases made on so childishly irrational a basis. The loudest voices, the claims oftenest reiterated, standing "headlines" by which "vain repetitions" are made to do the duty of argument, and even the claims accompanied with loudest abuse of the opposite side—such as these are, in too many cases, treated by those who use them as if assured of their effectiveness as political weapons. Moreover, in this those who use them are probably in most instances not deceived as to their effect.

Perhaps if there is any one field in which the average citizen has thus far been more than elsewhere at the mercy of those who have counted on his failure to exercise his critical judgment and logical processes, it is that of statistics. It is certainly an encouraging fact that in all the economic and political disputation of the past decade, appeal has been so much more generally made to statistical tables and figures. It is at least an evidence that mere assertion, unaccompanied by shadow of proof, has not quite the force which it once had, and, to this extent, it may be regarded as indicating one stage at least of progress. It is, after all, however, only an intermediate stage so long as so great lack of intelligence prevails in the use of the statistics. This, however, is not strange. The science of statistics is thus far in its infancy, and this even among the class of men who have most widely explored the field of statistics. It is coming to be understood that for avoiding the perils possible to an unconsidered use of statistics, rigidly logical methods and carefully disciplined mental processes are indispensable. The diffusion of these conditions will come in time.

Yet all other faulty methods in statistical discussion have perhaps not been so productive of misleading political doctrine as the constant tendency on the part of a great multitude of men to approach the statistics with a specific preconceived theory to prove from them, rather than simply to interrogate them as to what they may be found to prove. They deliberately interpose that "subjective element" between themselves and the clear perception of the scientific truth, the separation of which Dr. von Sybel, in his admirable words on the method of historical criticism, has declared to be indispensable, "to secure the true picture of the thing as it is."

The writer is no pessimist, and has no fear for the ultimate fate of all such questions at the hands of the people, believing as he does that complete enlightenment in this matter is only a question of time. Mr. Lincoln's words are worthy of being kept constantly in mind, that even if "it is possible to fool a part of the people all the time, and all the people a part of the time," that at least is the limit. We may, I think, take a lesson from the growth of public enlightenment in this country, in another field, that of æsthetic development. To quote from a recent writer, a quarter of a century ago "the only object of a book or periodical, in America at least, was to serve as a medium for the distribution of ideas. The artistic side was ignored. Illustrations were considered good enough unless they were so bad as to startle the beholder"; but, little by little, the average American, he shows us, has "arrived at that state in which the contemplation of an ugly object" is no longer tolerable.

So, we can hardly doubt, in its slow and gradual, but steady development, will be the progressive advance of the average American to the appreciation of sound theories of government, and the result must, no doubt, in the one case as in the other, be reached by steadily familiarizing the public with sound methods.

CIVIS.

PROVIDENCE, R. I.

PROF. JOHNSTON'S WRITINGS.

TO THE EDITOR OF THE NATION:

SIR: The appearance of Prof. Johnston's article in the 'Encyclopædia Britannica' on the History of the United States as a separate book, tempts me to raise a question which I have often had in mind. It is, whether some arrangement would not be possible by which the articles contributed by him to Lalor's 'Cyclopædia,' on the same subject, could be combined and condensed into a connected account and published as a Constitutional History of the United States?

The work of making such a connected account from the articles would not be, I think, a difficult one, and could be performed by any well furnished and careful graduate student, perhaps under some responsible supervision. The result would be a book, in its sound and level-headed opinions and criticisms, far above the plane of Von Holst or anything else that we have on the whole constitutional period. As it is, these articles of Prof. Johnston's have by no means their legitimate influence. A very large proportion of the people who would gladly use them do not know of their existence, and (by no means least of all) there is sad need of such a book in the college work of the country.

PRESTON.

THE EAST IN THE WEST.

TO THE EDITOR OF THE NATION:

SIR: From time to time the columns of the *Nation* have been open to correspondents upon the topic of foreign (usually English) ignorance of America. It is all very amusing and strange, but not quite so amusing and strange as the frequent exhibition of ignorance by enlightened people of the social conditions that obtain in the "West." It may be premised that the "West" is a rather large place. In what follows I shall not attempt to embrace under that name more than the Mississippi Valley. Somewhat as a foreigner uses "America," when he really means a half-dozen large cities in the United States, so Eastern people use the word "West" when they really mean a half-dozen cities on the further side of the Alleghenies.

A case in point is contained in a recent issue of the *Nation* under the caption, "A Good Farm for Nothing." The writer takes occasion to institute a comparison between the rural New England of fifty or a hundred years ago and the rural West of to-day. If the opinion there expressed were confined to one individual, or to one community, it could afford to be overlooked; but there is reason for believing that it is the opinion of a majority of the intelligent and reminiscent East. Contempt for Western civilization is so frequently expressed in Eastern magazines and newspapers that it is a matter of surprise to find that an appreciative writer, like Charles Dudley Warner, can tell the truth at all. It is to mildly protest against this false conception—and, incidentally, to defend the Western hog—that this is written.

Let Judge Nott's words be recalled:

> "What we do know is, first, that the old nursery of good and great and useful men is, under existing causes, being destroyed. . . . Second, that there is no rural New England in the West rearing a posterity worthy of the old stock; that the youth who was starved out of his birthplace . . . has not been replaced there by a wiser or a better man, and that in his new habitat material wealth has been his only gain."

This would be sad if it were entirely true. It is quite in the vein of Matthew Arnold's characterization of all "Americans" as "too beastly prosperous." The climax is reached in the assertion that the Western-bound youth departs with this (in italics) sounding in his ears: "Go West, young man, go West, to make money to buy land to grow corn to fat hogs to make more money to buy more land to grow more corn to fat more hogs." This would be desperately sad if it were not one of those rhetorical half-truths which have all the attributes of ubiquity and immortality peculiar to fallen angels. This, too, reminds one of Arnold, and one expects something about the materialism and vulgarity of a civilization which submits to such names as Kankakee, Kalamazoo, and Oshkosh. The reviewer of Miss Alcott's life, in the same number of the *Nation* with the article under discussion, could not forbear quoting a passage in which the latter city appears to disadvantage.

It needs to be stated that these towns are not the centres of civilization in the West, but that they will compare favorably with manufacturing New England towns of 10,000 to 25,000 people. For 500 miles westward from Kankakee and 300 south and 300 east, however, do we find somewhat of the rural West. In this immense domain luxuriates the hog-raising farmer. It is doubtful if in all this region there is a farm without its hogs. Many of the farmers have grown rich in the process by repeating it again and again. If so, do they differ from any other successful class? Food and raiment are the primal wants of the race. The New Englander for several generations has been meeting the second want. Shall he gibe at the man who provides the first and go unrebuked? The American hog, as Western breeding has perfected it, is quite as much a blessing to humanity as the great inventions—the steam engine, the cotton gin, the telegraph. He is the most economical machine yet produced for

making cheap and nutritious food. A Western Poland-China makes the most possible hog on the least possible food in the shortest possible space of time. Making clothes, or literature, or interpreting laws may be cleaner undertakings than making hogs, but it may be questioned if the latter is not just as honorable and just as necessary for the welfare of society as the former; and by as much as food is more than raiment, by so much is the Western farmer to be esteemed above the Eastern manufacturer.

If we take three of the foremost hog-growing States, Ohio, Illinois, and Iowa, the statistics of the last census indicate that the traits that were most admirable in New England rural life—intelligence and piety, plain living and high thinking—are as characteristic of their inhabitants as they were of those of New England fifty years ago. The indications are that for every abandoned church and school back yonder, two at least have sprung up out here. Actual life in one of these States leads me to believe that *in a multitude of ways the old life is lived over again under slightly altered conditions.* Are these people lacking in intelligence? What, in addition to a public-school system that puts a school-house every two miles along the highways, mean the 35 colleges and universities in Ohio, with 350 instructors and 6,000 students; 15 in Illinois, with 300 instructors and 5,000 students; 17 in Iowa, with 200 instructors and 3,000 students? It is readily conceded that the name is sometimes too large for the institutions, and that they are petty affairs compared with the magnificent schools of the New England of to-day. Ah! but we are talking now of the rural New England of the past. The same divine fire that planted Harvard and Yale and Dartmouth was present at the founding of these—it was New England's "starved-out" youth, who had gone West to "grow hogs," who founded them. And even the least of them offer facilities quite equal to those which produced a Webster. I apprehend that Oberlin, and Wabash, and Beloit, and Iowa Colleges are to-day better equipped, exercise a wider influence, and graduate quite as intelligent classes as did Williams in the days of Dr. Hopkins's Presidency.

These institutions are types of the New England colleges of our fathers' and grandfathers' time. In them do we find the same fervid piety, the same number of earnest young men studying for the ministry (often as high as 50 per cent.), and the same simplicity of life. As yet, college dissipation and extravagance have not been made a fine art. It is in the States I have named that is found the transplanted New England race with its fire unabated. Here it is that white houses with green blinds, maple trees before the door, red barns, and churches everywhere (6,700 in Illinois, 3,300 in Iowa), proclaim the presence of the old race and the old stock. Here it is that a posterity is being reared worthy of their ancestors. If the youth was "starved out" of his birthplace, it was a kindly fate, for here, indeed, he is "doing better," and gaining much in addition to his material success. "He makes money to buy land to grow corn to fat hogs," in order that he may surround himself and family with the comforts of a home which the scanty soil and bleak hillsides we wot of too often denied to his forefather—a home in which books and pictures and music are not strangers. He builds railroads to help him market his product, to bring himself and his within reach of the quickening influences of the daily mail and the telegraph, and to facilitate intercourse with his fellowmen. Isolation, the curse of farm life, is to be banished as far as may be.

The "West" needs not to hide her head because of any lack of richness in human products. Let Ohio's long and great list of foremost actors in the late civil war attest their patriotism. The social conditions which produced a Lincoln need to yield nothing to a people who can think of Webster as the statesman ideal. Webster? An orator indeed, but whose manhood was not high, not pure, not noble.

I have a belief that the race that has left the New England hills still lives, is still as great as in its old home, and that the Mississippi Valley is to-day a nursery of good and useful men, many of them destined to be great. I have a fancy that comfort and peace and plenty for all—the dreams of every idealist from Plato to Bellamy, the things for which humanity through many weary centuries has toiled with but indifferent results—has been attained in no land, no clime, with greater success than in the "great West."

THEODORE JESSUP.

BALDWIN, WIS., November 27, 1889.

Notes.

A NEW volume of poems by Robert Browning, no fewer than thirty, will be published this month by Houghton, Mifflin & Co., under the title, 'Asolando: Fancies and Facts.' They will shortly issue also 'Portraits of Friends,' by Principal Shairp.

Mr. John Bigelow's edition of Franklin's Autobiography has been put into the form of the Knickerbocker Nuggets series of the Messrs. Putnam. This pocket size is, on the whole, the most becoming to it, and its pretty dress likewise; and that an index much above the average has been provided is a still further recommendation.

The bound volume of *Harper's Young People* for 1889 does not obviously differ from its predecessors in any respect. Several of the continued stories in it have already been republished as books. One observes the customary number of articles which seem not calculated for youthful readers, but for their elders, like the paper on the vocal training of children, as well as many which imply a pretty mature understanding and age; so that we think the editor might well try the experiment of insinuating some advice about the cultivation of the mind through reading and study—but this field is quite neglected. On the other hand, we think that with articles on "Boys Who Became Famous," and portraits of living heroines, champions, prodigies, and even of correspondents, quite enough is done to foster a precocious love of notoriety.

The monthly magazine *Babyhood* (New York: Babyhood Publishing Company) concluded last month its fifth volume and year, and remains a solid comfort for young mothers—a sort of mothers' exchange—under capable medical and literary direction. Not a few of the contributed papers, like "Botany for the Little Ones," or "Children of the Bush," "The Musical Education," or even "The Dressing of Simple Wounds," might have appeared in *Harper's Young People* or *St. Nicholas.*

Mr. Philip G. Hubert, jr., has compiled a rather sumptuous 'Nursery Lesson Book: A Guide for Mothers in Teaching Young Children' (Putnams). It is designed to stimulate curiosity and attention, and to facilitate learning to read, draw, and cipher. The suggestions are sensible if not original. A number of nursery songs, with music, from a well-known English collection, are inserted.

Josephine Pollard's 'Plays and Games for Little Folks' (McLoughlin Bros.) is in the main an excellent collection, very prettily printed and adorned, and falls into three divisions of "Sports of all Sorts," "Fireside Fun," and "Singing Games" (with the music, of course). "To place wine under a hat and to drink it without touching the hat," is no doubt practicable, as shown, but it is a dangerous experiment for children. A glass of water would serve the purpose. And in a book of games for children, "men and women sit alternately in a circle" where we should look for boys and girls.

More elegant as a book, and both like and different in its contents, is 'Kate Greenaway's Book of Games,' illustrated in colors in her usual dainty fashion. Tops, hoops, ball, marbles, kites, and dolls, battledore and shuttlecock, swings, soap-bubbles, are lightly touched upon.

Raphael Tuck & Sons send us a number of their holiday publications in color, of which we can only specify two delicate little calendars, one "from Pekin" with Chinese *motifs*, by J. Pauline Sunter, and one, not inferior, by Harriett M. Bennett; two books of verse, 'Tiny Toddlers,' and 'Golden Days and Silver Eves,' in which good designs and mediocre mingle on an even footing; and 'Character Sketches from Charles Dickens,' without subtlety or elevation.

Mr. Ruskin has, we believe, decided objections to any American reprint of his works. So far as this wish is disregarded, we presume he would be less annoyed by a fine than by a shabby presentation, and Messrs. A. C. McClurg & Co., Chicago, have gone far by way of propitiation in their well-proportioned and well-printed edition of the 'Sesame and Lilies.'

The second volume or series of the *Bookworm* (London: Elliot Stock; New York: A. C. Armstrong & Son) continues to be a scrap-book in which hardly anything exceeds half-a-dozen pages in length, and the unexpected may be looked for at every turn of the leaf. Superficialities about Thomas Bewick, Albert Dürer, Rowlandson, Bernard Quaritch, the Elzevirs, Swiftiana, French bookbinding, Goldsmith's 'Citizen of the World,' John Newbery, hornbooks, Drayton's 'Polyolbion,' Bailey's 'Dictionary,' the Greek chorus and Parthenon, literary anachronisms, etc., mingle with all sorts of paragraphs relating to books or literature. Cuts old and new abound, and the typography leaves nothing to be desired.

The critical apparatus for the study of the Japanese language receives an important addition in the publication, by Messrs. Trübner & Co. of London, and Kelly & Walsh of Yokohama, of Mr. J. H. Gubbins's 'Dictionary of Chinese-Japanese Words,' Part I., pp. 325, A.–J. It is so clearly arranged and so well printed that even the beginner can use it easily. The work is especially strong in the vocabulary that has come into vogue since the introduction of Occidental ideas.

In 'Les Artistes littéraires: Études sur le XIXe siècle' (Paris: C. Lévy; New York: F. W. Christern), M. Maurice Spronck considers the writings of a group of recent French authors whom he declares to be not popular, and preëminently artistic in their effort after perfection of form. Those of us who have read what M. Brunetière, M. Jules Lemaitre, and M. Émile Faguet, one or another, have said about Gautier, Baudelaire, the Goncourts, Flaubert, Banville, and Leconte de Lisle, may be interested in what can be adduced in their behalf by an admirer. But although M. Spronck comes to praise, his eulogy is never very hearty. Apparently he likes these literary artists more in his heart than in his head he approves of them. His book is not without interest.

It has always been a matter of wonder to those Americans who studied French literature, and who were curious as to the attitude of French critics, that so little was known in France about Hawthorne, while Poe was so widely praised. Poe's position was due chiefly to the praise of his disciple Baudelaire, while Hawthorne has lacked even a good translator. M. Paul Masson now announces that he proposes to publish, in the *Revue Bleue*, translations of all Hawthorne's short stories, the 'Twice-Told Tales,' and the 'Mosses from an Old Manse'; and in the number for November 16 he begins the series with "La Fiancée du Shaker."

In one of the most manly letters we have ever seen, M. Francisque Sarcey announces his final decision not to apply for admission to the French Academy. Certain of his friends among the immortal forty had urged him to come forward as a candidate for the chair now made vacant by the death of Émile Augier. One of the first duties of a new Academician being to pronounce the eulogy of his predecessor, no more fit choice could be made than that of the foremost dramatic critic of France and of our time. M. Sarcey's reason for declining an honor he highly appreciates is that even a candidature would possibly, indeed probably, give grounds for doubting the absolute disinterestedness of his dramatic criticisms. There are a dozen dramatic authors in the Academy. M. Sarcey declares that his influence is due wholly to the belief that he always speaks his mind freely, and he is unwilling to do anything which might cast a doubt on his perfect independence. He is proud of his profession, and his letter, which is not without its pathos, declares that he hopes to have on his tomb only this inscription: "SARCEY: Professeur et Journaliste."

Volume xliii of section 2 of Ersch and Gruber's 'Encyklopädie' begins with "Leibeigenschaft" and ends with "Ligatur." The longest articles are on Leibnitz (10 pp.), Lessing (10), Leipzig (11), battles of Leipzig (14). The Byzantine Emperors and the Popes named Leo require 18 pages, while 42 are needed for the German emperors and other kings and princes Leopold. Leopardi, Leicester, Leroux, Lesage, and many other biographical notices are treated more briefly. There are some omissions to be noted, mostly in English and American subjects, which are a weak spot in the most learned German books; such as Jacob Leisler, John Leland, all the Leslies, Sir Roger L'Estrange, John Leyden, etc. Although most of these are not very important, one expects to find them at least mentioned in what is undoubtedly the most extensive encyclopædia ever published outside of China.

If he receive sufficient support, Mr. R. H. Tilley, Newport, R. I., will issue in January a quarterly *New England Notes and Queries*, a medium of intercommunication for historical and genealogical students.

The first volume of a serial bearing the title of *Harvard Studies in Classical Philology*, edited by a committee of the classical instructors of Harvard University, will be published early this month. It is the expectation that one volume, containing about 200 octavo pages, will be issued each year. The contributors will be, for the most part, instructors in the University or graduates from it, but contributions of other scholars will not be absolutely excluded. Any correspondence respecting contributions should be addressed to Prof. J. B. Greenough, Prof. J. W. White, or Prof. F. D. Allen, Cambridge, Mass. Subscriptions—one dollar, four marks, or five francs a volume—may be sent to Otto Harrassowitz, Leipzig, Germany, or to Ginn & Co., 57 and 59 Ludgate Hill, London, E. C., and Boston, New York, and Chicago.

The *Arena* is a new monthly magazine begun in Boston with the current month. Poverty is, to judge from the first number, to form a large part of the burden of its discussions; but the theologians, too, are not going to have an easy time of it. The number of Unitarian clergymen in the present table of contents is significant.

The Rev. Dr. Edward D. Neill leads off the *Macalester College Contributions* (Department of History, Literature, and Political Science) with a paper on the Virginia Governors under the London Company (St. Paul, Minn.).

A very interesting drawing is now on view at the rooms of the Royal Astronomical Society, London. It is a large and detailed delineation of the Milky Way, upon which Dr. Otto Baeddicker of Lord Rosse's Observatory has been at work for five years.

The report of the Bureau of Education for 1886-7 (the last published) gives the statistics of bequests and gifts to institutions of learning for that year. The entire sum given amounts to nearly five millions of dollars, and of that amount Harvard receives an even fifth. The whole amount given to institutions for the education of women alone is a paltry $53,000—for Mills Seminary, California. But this is not the worst of it. Four hundred thousand dollars, roughly, were contributed by women, and even of this sum a whole half was devoted to the education of men alone, the rest being given to schools for both sexes, chiefly to schools for secondary instruction. The amount of money which women can call their own is very small, and of the pittance which they can give away, it does seem deplorable that they should feel called upon to lavish a whole half, not upon men and women jointly but upon men to the exclusion of women. That they have not yet changed their plan of campaign is shown by the fact that it is a woman, Mrs. Caroline Donovan, who has just given a hundred thousand dollars to the Johns Hopkins University. Is there never to be a limit to the amount of self-forgetfulness which the Selfish Sex is willing to accept from the Unselfish Sex?

The Association of Collegiate Alumnæ is desirous of establishing a European fellowship, to be held each year by that woman college graduate who shows herself to be most deserving of receiving it, the award to be made by a committee appointed by the Association. Nearly enough annual subscriptions have already been received from the alumnæ themselves to start the project, but they desire to collect a fund of $10,000 in order to put it on a permanent basis. Contributions may be sent to Mrs. C. L. Franklin, 1400 Linden Avenue, Baltimore.

—The *Atlantic* for December opens with an Old Boston paper upon the colonial hostelry under the sign of the Bunch of Grapes, from Mr. Bynner's faithful and sympathetic pen; and, the scantiness of his materials being considered, he has certainly made the most of his story. The tavern had a hundred years of prosperity, and counts among its figures many of the famous men of the old Province and the rising nation, from Sam Sewall to Lafayette. The leaf of local history was well worth preserving, and it is prettily illuminated by Mr. Bynner's knowledge of colonial details. A specially timely article is furnished by Mr. Lawton, in connection with the awakened interest in Delphi occasioned by the project for the excavation of the site by the American School at Athens. He deals with the religious traditions of the locality, and in a general way with the political influence of the oracle, and will follow up this preliminary essay with one of more definite and greater historical interest. The Congress of All-America now sitting suggests the subject of Mr. Albert G. Browne's reminder of the important differences between the Latin and Saxon communities in this hemisphere, from which he argues very unfavorably for the hopes of close amity and intimacy between them, and reinforces his warning from the never-aging Farewell Address of Washington. Mr. Van Brunt writes a very interesting article on the prospects and practice of the art of architecture in the West, with a very hopeful feeling that the outcome will be good when the time of experiment and research is over. The remainder of the papers are all excellent, and touch upon a variety of subjects.

—*Harper's* Christmas number is, as usual, very richly illustrated with many full-page cuts. The distinctive Christmas art-subject is the Flight into Egypt, and is variously set forth with an admirable selection of the great works upon this motive in both Northern and Southern and mediæval and modern art. Mr. Child contributes a second art-paper upon the modern work of Russia, which he illustrates plentifully; but there remains something alien in its form which makes it seem distinctly foreign, and one misses in it any great imaginative or intellectual force. The designs by Abbey in illustration of the "Merry Wives of Windsor" easily hold the first place in interest, and they are excellent even beyond this artist's usual work, several of them being remarkable—though perhaps, when at their best, too much refined. The text by Mr. Lang, made prominent by a displeasing largeness of type, seems to us exceedingly poor work. The rest of the number is occupied with stories, not especially written for the holidays, and none the worse for that; but none of them represent their authors at their best. Mr. Hardy's "First Countess of Wessex," notwithstanding one or two powerful situations and a strong handling of the Squire's character, is unpleasant throughout, and in its conclusion is not without a certain worldly cynicism. Miss Wilkins contributes a Christmas tale in the traditional manner. Mr. Millet's production depends for its interest on a peculiar incident. Miss Jewett easily leads the rest in a portrait of an old sea-captain with the attendant village gossips; but the vein is not her happiest.

—*Scribner's* observes the season by an interesting and, we may hope, a useful paper upon the poor of this city, with illustrations that recall the aspects of European poverty. The text is excellent, both in matter and in tone, and is not so discouraging as it might naturally have been made. The great necessity of encouraging and developing all charitable enterprises, in order to meet the enormous evils bred under the conditions of the growth of the city, is emphasized in a dozen different ways, and brought before the public most effectively by a speaking survey of facts without any weakening touch of moralizing philanthropy. The interior views of the lodging-houses and some street scenes are the most striking, but the writer has succeeded in giving an impression rather of the social conditions of these nests than of the actual physical suffering and moral degradation of the individuals. The second notable article is Mr. Mitchell's account of the growth and present condition of the art of caricature in America, the illustrations of which are admirably selected. The two stories are both in

the worst sensational taste, disagreeable in subject and unprofitable examples of vulgarity; neither is there anything in the tone of the writers or their art to extenuate the offence against good taste. Some illustrations of Breton life adorn the number, and Mr. Frederic's serial maintains its interest, though the story is too long delayed in deploying the figures on the Dutch background.

—The portraits of Wellington in the *Century* distinguish the number, and those of his young friends are interesting in themselves and in connection with his brief notes, which illustrate the child-loving side of the old General's nature. Mr. Joseph Jefferson's autobiography goes on in that peculiar style which seems to belong to theatrical memoirs, and makes them appear as if written by one old-fashioned hand, and the illustrations have the same traditional air. A third curious set of illustrations is given in connection with the description of the Panorama of the Nineteenth Century exhibited at the Paris Exposition, but the portraits are ineffective in consequence of their diminutive size. The solid article is upon the New Croton Aqueduct; the scale of the work and the immense physical labor involved in it are well given by the cuts, and the text is sufficient for its purpose. The scenery and properties of Japan are used to vary the style of the illustrations, and the paper accompanying these designs is instructive upon more serious topics than are suggested by them. The Lincoln biography takes up the episode of the President's entry into Richmond and his negotiations with regard to the meeting of the Virginia Legislature. Prof. Fisher discusses the position of the Bible in the Protestant religion as modified by the criticism and scholarship of this century, and advances his view that it is to be regarded as a result rather than the primary source of the religious life. The diminution of its authority allowed by him is of the slightest, but the change of perspective which he would make can hardly be adopted without loss on the supernatural side.

— The popular furor for Millet's "Angelus" naturally excites interest in its name. The first occurrence of the word thus far discovered in an English book is in Chambers's Cyclopædia of 1727. But no literary man used it before Longfellow, a hundred and twenty years after, in "Evangeline." These facts could not be known but for researches the results of which are shown under the word Angelus in the dictionary of the Philological Society now in the course of publication by Dr. Murray, who says that Angelus is "incorrectly explained" by Chambers. One at least of Dr. Murray's own illustrative citations, which asserts that "the Angelus did not come into use before the beginning of the sixteenth century," is also clearly incorrect. More than a century and a half before the year 1500, Popes and councils had combined by appeals to both hope and fear to enforce the ringing of the Angelus bell and the offering of the Angelus prayer. Thus, in 1347 a church council (*Concilum Senonense* [Sens]) ordained that an ordinance before made by Pope John XXII. (1316–1334) concerning saying the Ave Maria three times at the hour of curfew (*ignitegii*), should be inviolably observed. It ordered that the church bells should sound at the hour of curfew, and that parishioners should be charged, at this bell-stroke, on bended knees, to repeat the angels' salutation to the glorious Virgin Mary, thus gaining ten days' indulgence (*Et ex hoc lucrantur decem dies indulgentiæ*). In 1369 it was ordained that at dawn (*in aurora diei*) there should be three bell-strokes, and that whoever hearing said three aves and as many paternosters should obtain twenty days' indulgence (*in remissionem suorum peccaminum*). In 1472 Louis XI. ordered the Angelus to be repeated three times a day, and obtained a papal decree that whoever obeyed the order should thereby acquire three hundred additional days of indulgence. This threefold daily Angelus had also been recommended as early as 1423 in Mainz and Cologne; in Breslau in 1416, etc. These facts, condensed from an article on the Angelus, written more than two centuries ago by the accurate DuCange, prove the usage much more ancient than Dr. Murray would lead us to suppose. That the name was derived from the first words of the prayer, namely, *Angelus Domini nuntiavit Mariæ*, must be clear to every one at first sight of this salutatory service.

—The shocking murder of Mr. Edward Cunningham of Milton, Mass., on his own grounds by armed poachers, on November 21, removes a man of rare grace and strength of character, whose fearlessness, indeed, was the immediate cause of his death. An old China merchant, some forty years ago, who had faced at the risk of his life a furious Chinese mob, he knew how to esteem this despised people for their true worth. In California he publicly came out in their defence against shameful persecution which had the open or secret approval of the class in which he moved. With a like independence, as some of our readers will remember, he exposed in these columns the discreditable treaty of 1881 with China. "Our memory of him," says one who knew him most intimately, "will cling to the characteristics of the man—his unswerving kindness to all around him, high or low, whether of his own kin or not, especially the weak and suffering who needed his sympathy; and the unfailing cheerfulness with which he carried the burdens which a keen sense of duty led him to take up." "Without the slightest pretension of general philanthropy," he had "that very uncommon weakness which always led him to restrict himself in his own tastes in order to supply the necessities of others who came within his rather far-reaching circle." Mr. Cunningham was an infrequent but highly valued contributor to the literary department of the *Nation*.

—Vendôme was originally a Gallic oppidum, replaced later by a feudal castle, around which the modern town has arisen. It gave the name in the tenth century to an independent county, which, in 1515, was raised to a duchy. It is now in the Department of Loir-et-Cher, and the canton and commune still perpetuate the name. For Americans perhaps its greatest interest lies in the fact that it was the birthplace, home, and burial-place of the Rochambeau who led the French troops sent to help us in the war of the Revolution, as it had been of his ancestors and as it still is of his successors. The present representative of the family, owner of the Château de Rochambeau, is well known in this country, as he paid us two visits—one as a representative of the French Government to the Philadelphia Exhibition of 1876, and again in 1881 as one of the delegation of the descendants and representatives of French officers of our Revolutionary War, invited to the Yorktown Centennial. His archæological studies, pursued for twenty years, have just resulted in the first volume of a work, 'Le Vendomois: Épigraphie et Iconographie' (Paris: Champion), which is a very complete local history, canton by canton, commune by commune, and throws a curious light on many points of interest to students of history and of art. The present volume has many interesting drawings of churches and other ecclesiastical works, and some good examples of well-preserved domestic buildings, for châteaux have fared better in France than churches, and restoration has dealt more kindly with the lay than with the church properties. Few old families remain in possession of their ancestral homes, but there are still many of the old names referred to in this volume which have lineages going back to the crusades, while not a few historic names are borne by peasants and small farmers, still mindful of their old rights and privileges. Glatigny, the ancestral home of the family of Du Bellay, Princes d'Yvetot, still well preserved by its present owner, and an admirable example of the domestic architecture of the sixteenth century, is fully described.

— The Royal Astronomical Society has issued stringent instructions for observing the coming total solar eclipse to two astronomers some thousands of miles away. Eclipse observers are apt to be novices, as it is difficult to secure the same person for more than two or three occasions at most. Those who stay at home know well what should be done at the rare and swiftly passing moments of totality; it is the unpractised observer who forgets so much when the wonderful spectacle of the outflashing corona thrills his pulses. Accordingly, the programme for each individual should be simple and strictly adhered to. In the present instance, the Royal Astronomical Society hopes, if the weather is favorable, to clear up one or two doubtful questions: (1) whether the photographed corona changes perceptibly in two hours and a half; (2) whether the supposed "extension" of the corona is a solar appendage, or diffused light from the sky; (3) what is the photometric intensity of the corona at different points. Rev. S. J. Perry, F.R.S., has been detailed for a station at the Salut Isles, and Mr. Albert Taylor will soon land at Loanda in West Africa, establishing himself about sixty miles south of Professor Todd's party. By a comparison of the two sets of plates taken by Father Perry and those made by Mr. Taylor, questions 1 and 2 may be settled, while question 3 merely involves placing beforehand on each plate a set of standard photographic squares. These were described by Captain Abney to the Photographic Society in 1885, and have been used since by Mr. Pickering in Grenada in 1887, and also in California on January first of the present year. The coming eclipse will be followed by an interval of four years in which none will occur. It is the last of a tolerably rapid succession of important total eclipses.

WELLS'S RECENT ECONOMIC CHANGES.

Recent Economic Changes and their Effect on the Production and Distribution of Wealth and the Well-Being of Society. By David A. Wells, LL.D., D.C.L. D. Appleton & Co. 1889.

No one deserves to be called a statistician unless he can make figures interesting; and if Mr. Wells were to be judged by this criterion alone, he would be assigned a place among the highest. It might almost be said that under his hands figures themselves lose half their evil in losing all their dryness; yet, however indispensable this power may be, it constitutes but a small part of his qualifications. Many persons who deal with figures are imperfectly acquainted with political economy, and many economists have little experience in business. Mr. Wells, however, is not only an economist, but also a man of affairs; he has the necessary

data for economic deductions at his command, the wisdom requisite to perceive their significance, and the ability to make the most effective use of all his materials. His previous works have secured him distinction, but the subjects discussed in them have been in the main of a character to interest special classes rather than the general public. This volume, on the other hand, appeals to all mankind. No one, however well informed, can fail to add much to his knowledge by reading it, and the most impassive must be thrilled by accounts of human achievements that surpass the wonders accomplished by the genii of the Arabian Nights.

It is, indeed, quite possible that many readers will be content to follow Mr. Wells's narrative of the facts of the industrial progress of modern times, without concerning themselves much with his argument. Most people know in a general way that great changes have taken place within a generation, that there have been important inventions and discoveries, that many run to and fro, and knowledge is increased. Very few know definitely what the nature of these changes has been, how completely the new order has displaced the old, how swiftly and how extensively the results of inventive progress have become manifest. For information of this kind, accurately stated and systematically displayed, we know of nothing to compare with this book. It is as full of facts as an encyclopædia and as fascinating as a romance. It presents a capital instance of the use of the imagination in science, not glorifying "all-inventive man" after the fashion of the chorus in the "Alcestis" of Euripides, but showing how rationally we may consider "that which he has done but earnest of the things which he shall do."

If the aim of the author were only to astound his readers by revealing to them the prodigious advances of the present age, and the boundless possibilities of the future, he must be held to have amply succeeded. It would be easy to fill our space with illustrations of his skill in marshalling facts in the most telling way, as when he mentions, in speaking of the cheapening of ocean freights, that it has been computed that "half a sheet of note-paper will develop sufficient power, when burned in connection with the triple-expansion engine, to carry a ton a mile in an Atlantic steamer." Equally effective in the discussion of the future supply of food is the use made of Mr. Atkinson's calculation that the present wheat crop of the United States could be grown upon wheat land of the best quality selected from that part of the area of the State of Texas by which that single State exceeds the present area of the German Empire. But it is the cumulative effect of multiplied instances of this kind that gives its overwhelming force to Mr. Wells's argument, and of this effect quotations can give no idea.

The outline of the argument is as follows: For the last twenty years trade has been universally depressed or disturbed, which implies the existence of a cause universal in its influence. This cause is overproduction, in the sense of production in excess of demand at remunerative prices to the producer. It is owing to this cause, and not to a scarcity of gold, that prices have declined, that laborers are displaced by machines, and the profits of capital have diminished. The value of things, as Henry C. Carey used to maintain, is not determined by the cost of production, but by the cost of reproduction; and, measured in this way, vast quantities of fixed capital have been made worthless by improved processes. No one can engage in a manufacture without running the risk of finding himself suddenly working at a loss, owing to the application of labor-saving inventions. Consumers, however, have been benefited—the laboring class, considering its increase in numbers, as much as any; the capitalists, considering the fall in the rate of interest, the least of all. It is the incessant readjustment to new conditions that causes the present discontent, and not any deterioration in the welfare of mankind. The social troubles that arise are necessarily connected with our unparalleled progress, and are not due to any defect in our institutions. As society becomes accustomed to its rapid pace, these troubles will settle themselves; nor is it impossible to foresee how a readjustment of industrial relations in the line of greater freedom for individual enterprise may take place.

We have said enough of the splendid array of illustrations which Mr. Wells brings to his subject, and his argument in the main amounts to a demonstration. In our opinion it would have been improved, however, had he used throughout, as he does occasionally, the terms "disturbance" in place of "depression," and "cheaper production" in place of "overproduction." As he shows by manifold proofs, there has been no depression, but a vast increase, of trade in the period of which he treats, and he recognizes the truth that universal overproduction is an absurd idea. There is some reason to think that the author himself has been unconsciously affected by this confusion of terms if we compare the statement on p. 175, that there has been an almost universal complaint of the absence of all profit in producing wheat, with the note to p. 177; and the figures showing the cost of producing wheat in California, p. 172, and those on the preceding pages relating to the increase of production. Why, if there was no profit in it, did the product of Dakota rise from nothing in 1881 to 62,000,000 bushels in 1887? A minor inconsistency as to the wages of farm-hands in England is to be noted in comparing p. 88 with pp. 85, 353, and 407.

It would be an agreeable task, did our space permit, to give some account of Mr. Wells's exposition of the distinguished success in discouraging trade which has attended the protective policy of various European governments, and especially of his brilliant and entertaining narrative of their dealings with the sugar industry—the result being in the case of Germany, as Prof. Sumner puts it, that "the Germans have the industry and the English have the sugar." But it is impossible to call attention to all that is meritorious in so many-sided a book as this, and we must content ourselves with advising every one who wishes to understand our modern world of trade to buy it and study it. We have noted errors, probably due to careless proof-reading, on pp. 44, 144, 146, 189, 201, 391, 398, and 412. As it is probable that several editions of the book will be called for, these defects should be removed.

BERING.

Vitus Bering, the Discoverer of Bering Strait. By Peter Lauridsen. Revised by the author and translated from the Danish by Julius E. Olson. Chicago: S. C. Griggs & Co. 1889. 8vo, pp. xvi., 223. Illustrated.

THIS book is a misnomer, since Bering Strait was discovered by Simeon Deshneff, nearly sixty years before it was entered by Bering, and its author is of the opinion that Bering himself was well aware of the discoveries of Deshneff, and even directed the attention of Müller, the geographer, to the records of the expedition in the archives of Yakutsk. Why he should claim the discovery for Bering is incomprehensible, but perhaps not more so than several other features of the book, as will shortly appear.

A good life of Bering has always been a desideratum. As the first educated officer to take command of explorations in those seas, his figure can but be conspicuous. That such a life has not been attempted in the country which he served, is probably accounted for by the fact that, after having toiled and suffered untold privations in the preparation for each of his expeditions, when the tide was at the flood and the fateful hour arrived, the hard-sought opportunity invariably slipped from his fingers. His voyages offer a spectacle of Herculean endeavor on the one hand and of pitiable anti-climax on the other. "Parturiunt montes" might have been his motto. Nobody likes such a subject for literary art, at least in biography, however otherwise amiable, honest, and pious, or hard-working; though very human, it is wretchedly inartistic in one's hero to do little when he might have done much, to turn his back on doors hospitably open, to shut his eyes to the apples of the Hesperides after he has slain the dragon—all without any perceptible motive or reason except the incapacity for striking when the iron was hot.

Some of the author's hypercritical comments in the Danish edition on the first Arctic explorer of our time have been very temperately answered by Baron Nordenskiöld in the Journal of the American Geographical Society (vol. xvii., New York, 1885, p. 267). In this reply the Baron, with that kindness which should always be accorded the unfortunate, suggests that the incapacity shown by Bering during his last expedition was due to the fact that he was ill of scurvy. Doubtless this did aggravate his natural defects, but it is sufficiently evident from Mr. Lauridsen's account of him, without going further, that the Russians, who knew him best, are practically unanimous in the opinion that there was a streak of indecision and feebleness in Bering's otherwise admirable character which was exhibited in all his undertakings. It certainly was as obvious in his first voyage as in his last. It is very true, nevertheless, that the dislike which such weakness engenders in the observer may have operated, and probably did operate, to render the estimate of Bering by his contemporaries unjustly low, and that it is but equitable to review the case before their judgment becomes irrevocable by lapse of time.

Herr Lauridsen, through the patronage of a Danish institution of learning, was enabled to visit St. Petersburg to prepare himself for writing the present work. He seems to have been a good deal surprised to find that the books and manuscript records relating to the explorer were in the Russian language (p. xv); but, by the kind intervention of the Director of the Hydrographic Department, translations were made for him. So far as the book itself indicates, his material has been obtained from printed sources; its chief value is in presenting in English some important data hitherto veiled under the obscurity of the Russian tongue. Of original research the work offers little, unless the correlation of matter as above obtained can be so named.

If Herr Lauridsen's preparation for original work in the Russian archives was not of a serious character, he at least was well adapted for polemics. Though an ordinary person making no pretensions to historical research, in compiling a synopsis of the progress of Russian discovery, might consider himself justified in depending on the official maps of the Imperial Academy of Sciences and the officially

published records of surviving members of the expeditions concerned, he would receive no mercy from this gentleman, who cannot understand how a bay could exist between points as far apart as "Copenhagen and Bremen." It is even forbidden to say that Bering "took to his bed," since this indicates (p. 152) that that necessary action is considered as "a kind of crime." As Gerhard Friedrich Staatsrath von Müller was the historian of the expeditions, he comes in for much upbraiding and dark insinuation, though perhaps less than is dispensed to those who have innocently quoted him as an authority. An amusing instance of this occurs in the matter of the maps of the first expedition to Bering Strait, of which Herr Lauridsen gives reproductions, taken from D'Anville and Müller. He has denounced (pp. 45-49) the map of Müller with great vehemence while praising the work of Bering upon which it was chiefly based. Now, the only essential difference between the two maps in the delineation of the shores of the Tchuktchi Peninsula is this: On Bering's map the northern coast, which he had not visited, is represented as projecting in a great cape which has four islands off the end of it. On Müller's map this cape is expanded with broken lines in a circular manner (after an old fashion of cartographers when a coast was unknown), and bears the legend, "Extent unknown." As no such cape or islands exist, and the shore does not project in this vicinity, it is evident that Müller has the best of it, in spite of our author. Again, he accuses Müller of misplacing on his chart the name of the Tchukotskoi Cape with a desire to injure Bering (p. 44), while on page 32 he admits that Bering did not mention the name in his journal, and on the other hand we know that the word merely means the Cape of the Tchuktchis, and was variously applied by the adventurers in that part of the world.

To do the work of a biographer in this case it is needed that one should be able to read Russian, should have a knowledge of old-fashioned nautical methods and terms, and be familiar with the best modern charts of the region. In none of these particulars was Herr Lauridsen properly qualified for his task. We even find him attempting to prove Bering's landfall on Kayak Island at great length, a decision which has been the common property of cartographers since Sokoloff, the distinguished naval historian of Russia, first published a facsimile of Khitroff's chart in 1851 (Zapiski, Hydr. Dept. ix, p. 191, pl. ix) down to the Alaska Coast Pilot of 1883 (p. 205). The same conclusion had even been reached, without the aid of Khitroff's chart, by Martin Sauer (Billings's Voyage, p. 194) as early as 1802. We have called attention to the defects of our author's methods somewhat at length, because, since we are now the owners of Alaska, the name of Bering will belong to our annals, and the record of his services deserves a consideration which in this case it has not received. His ghost might well implore to be delivered from his friends.

In the whirl of indiscriminate eulogy and denunciation which seem to form the staple of this book, some things the author has made less foggy than before. He has shown better than has been done in English the itinerary of Bering's first voyage. He has called attention to the truly stupendous difficulties under which the preparations for the third voyage were made. That his own character was to blame for part of the difficulty did not make it less of an obstruction to Bering. Lastly, Lauridsen has thrown a stronger light on the patience, persistency, honesty, and lovableness which Steller eulogized in the unfortunate commander.

It is very deplorable that some years ago the ancient records of early exploration gathered at Yakutsk were destroyed by fire. Nothing was saved. Few had been copied, and an interesting field of historical research has disappeared. How much there may be in St. Petersburg is a matter of doubt. Lauridsen says "cartloads," but specifies nothing in particular. It is to be hoped that the Russia of the future will supply her own historians, who will at least be free from petty racial jealousies, such as nullified the efforts, sometimes, even of the Great Peter, in the hot rivalry of foreign candidates for office and promotion. In a scientific biography such factors must of course be noticed, but that, as seems to be the case here and there in this work, they should furnish a motive and a color to a modern writer, is much to be deplored. It is a false patriotism which engages in such ignoble strife.

Vitus Jonassen Svendsen was born in Horsens, a small seaport of Jutland, in the summer of 1681. In after life he took the surname of his mother, Anna Bering, whose family was presumably better than that of his father, and has furnished a very respectable number of men of note in literature, law, and theology to Danish annals. His parents were poor and had a large family. The boy went to sea, and about 1703 joined the Russian naval service, where Peter was offering unusual opportunities to foreigners. His name in Russian is always given as Ivan Ivanovitch Bering, but, if we understand Sokoloff's account, it was necessary for him to join the Russian Church, and to take a new baptismal name was required of all such recruits. In this way he received the name of John or Ivan. As has been shown by several authors, the Germanized form "Behring," which has obtained such a hold in popular literature and cartography, was never used by Bering, and has no present claims to consideration.

Those who are interested in the closing scenes of this remarkable life will find important data in the *Deutsche Geographische Blätter* for 1885, and in the Proceedings of the United States National Museum for 1884, contributed by Dr. Leonhard Stejneger, who, within the last ten years, has made a special exploration and study of Bering Island and its fauna, under the patronage of the Smithsonian Institution.

TEN BRINK'S HISTORY OF ENGLISH LITERATURE.

Geschichte der englischen Literatur. Von Bernhard ten Brink. Zweiter Band, bis zur Thronbesteigung Elisabeths. Erste Hälfte. Berlin: Oppenheim; New York: B. Westermann & Co. Pp. 352.

It is now *eleven* years since we had the pleasure of reviewing Ten Brink's first volume in these columns. Although various causes have conspired to bring about this delay, it will be enough to specify one—the author's extreme conscientiousness. Those who are familiar with his method know that he is one of the most painstaking literary scholars living. And the merest glance at the present volume (even in its incomplete state) should satisfy any one that it is the concentrated result of years of research. The eleven years of which we have spoken have been memorable in English philology. On the purely linguistic side, they have witnessed the placing of Anglo-Saxon grammar on a permanent basis through the labors of Paul, Sievers, Sweet, and their associates. On the literary side, or mixed linguistic and literary, they have witnessed the success of such periodicals as the *Anglia* and the *Englische Studien*, and the enormous expansion of the Early English Text, Chaucer, Shakspere, and other societies. Here in America the impetus given to the study of both language and literature by our newly established undergraduate and post-graduate courses is almost incalculable. This journal, in particular, feels that it is addressing a different generation from that of 1878. And indubitably Ten Brink himself realizes all this, and knows that he is now looked up to by hundreds and thousands who can imagine no greater pleasure than that of being really taught by him. Mindful of the maxim *Noblesse oblige*, he has striven nobly to make his teaching worthy of himself, of his readers, of his subject. If ever there was a literary history that evinced microscopic erudition, artistic sense of proportion, clearness and grace of expression, and an abiding good sense that appeals to the purely human in us all, assuredly this is the one. It is worth the waiting for.

Of the present instalment of 352 pp. we shall discuss only 322 pp. The remainder, which treats of the beginnings of the revival of letters in England, must be deferred until the completion of the volume. These 322 pages, then, have two main subjects, viz., Chaucer and the miracle-morality plays. What does not fall under these heads may be summed up as follows: Wiclif, pp. 1–33; Gower, pp. 39–40, 101–106, 137–143, 211; Trevisa, 83–85; Richard de Bury 100, 101; a recurrence to 'Piers Plowman,' 208–210; and the so-called school of Chaucer (Occleve, Lydgate, etc.), 217-243. Our tabulation is not so otiose as might seem, this instalment being printed without table of contents. In round numbers, Wiclif gets 33 pp., Chaucer an almost unbroken stretch of 180 pp., the religious drama 80 pp. From these data the reader can make his own deductions concerning the author's sense of proportion.

Ten Brink's survey and estimate of Wiclif's life and writings are in every respect admirable. It would scarcely be possible to improve upon his treatment, or indeed to make any serious addition, without writing a separate Wiclif biography. We venture to criticise only one point, namely, his strictures upon Wiclif as a translator, pp. 27, 28, 32. Are participial and relative clauses such a fault after all? And are they exclusively Latinisms, or may not some of them be due to French influence?

Before taking up Chaucer, let us interpose a word or two in praise of Ten Brink's treatment of Chaucer's contemporary and would-be rival, Gower. All that he says of Gower is so apt, so convincing, as to fill one with wondering envy. It is easy nowadays to understand and appreciate Chaucer, for it is quite the correct thing. But it is and will ever be hard to do justice to a pedant and *poète manqué* like Gower. In particular Ten Brink's critique of the 'Confessio Amantis,' pp. 137-143, is a memorable specimen of sober justice tempered with mercy that is not strained. Yet we question his representation of the stimulus of the 'Confessio' upon Chaucer, p. 143; to say that Gower's laurels *liessen ihm keine Ruhe*, is a trifle hazardous even for one of Ten Brink's powers of divination.

What shall we say of Chaucer himself in this novel illumination? When we reflect upon the innumerable beauties and equally innumerable problems of language, thought, allusion that the fourteenth century has bequeathed to us with the name of Chaucer, we are tempted to assume *à priori* that to dispose of them in considerably less than two hundred pages is an

impossibility. Or shall we denominate Ten Brink's critique, like the first Basque grammar, a solution of the impossible? If Ten Brink has not squared the Chaucerian circle, he has come so near it that we and our successors for many a generation shall be content to work by his formulæ.

This is the author's portrait of his poet, p. 34: pleasing in appearance, striking and attractive by virtue of a certain serious, dreamy expression; inclined to embonpoint (at least late in life); amorous (*sehr verliebter Natur*); a jovial companion, affable, modest, cheerful, although at times too taciturn; when opportunity offered, capable of playing the rogue (*Schalk*) and surprising you with his transcendent humor. It would not be safe to challenge any one of these assertions. At least we are persuaded that the biographer, if challenged, would promptly produce chapter and verse for each. Yet in general we look with some mistrust upon the tendency in Ten Brink (and, indeed, in most of the modern Chaucer students) to interpret a decided personal element into writings of a very conventional cast. It does not matter much whether the writing be a Complaint, or a book of the "Duchess," a Sonnet, or an Eclogue. Were Spenser interpreted as rigidly, for instance, as Chaucer has been, what should we have? The conventional writer of the 'Shepherd's Calendar' is bent with grief, wrinkled with the crow's-feet of care, looking back upon the four ages of his life. The real Spenser is under thirty, writing cheerily to his friends, making real love to a woman in London while sighing for the half-mythical Rosalind of the glen. The 'House of Fame' is evidently full of autobiographical touches. These were well brought out twenty years ago by the author, in his 'Chaucer-Studien.' Yet we cannot go to the same length in estimating the relation between Dante and the 'House of Fame.' On this point we sympathize somewhat with Palgrave in his recent letters to the London *Academy*.

Ten Brink has displayed his utmost ingenuity in classifying and grouping the 'Canterbury Tales.' Whether his arrangement will remain wholly unmodified, is a question for time to decide. It is one that will require repeated practical testing. In justice to the author it should be stated that the data upon which he bases his conclusions are not cited in this instalment, but reserved for the concluding part, where they will appear as appendices. Usually Ten Brink is nothing if not clear. But in one instance at least his language is unfortunate. The "ordinary reader," not on his guard, will be misled, we fear, by the wording of page 134 into taking January and May to be the story actually told by the Wife of Bath. And in other passages the style is vague because too stylistic and not sufficiently dogmatic. The "ordinary reader" needs to be told more positively what is before him, and ordered more peremptorily to believe and to disbelieve. The grouping of the 'Canterbury Tales,' for instance, is not brought out typographically in a way to strike the eye.

It would be superfluous to do more than state that Ten Brink has abandoned his former belief (in the 'Chaucer-Studien') that the 'Romance of the Rose,' as we have it, is by Chaucer, although we are by no means satisfied that the final word has been spoken on this vexed question. And it would be equally superfluous to dwell at length upon the rare excellence of the various literary judgments to be found in these pages. Ten Brink's parallel between Petrarch and Voltaire, p. 53, is as bold as it is novel to us, but we are not at all disposed to cavil at it. The analogies pointed out, p. 97, between Pandarus and Polonius, Mercutio, and Sancho Panza, are both shrewd and diverting. In treating Troilus and Cressida, our author has fairly let himself go. As for such *loci classici* as the Prologue, the Knight's Tale, and Reynard and Chanticleer, one scarcely needs to be a Ten Brink to write of them pleasantly and profitably. But here again the graceful illumination, p. 156, of the Prologue with regard to Lessing's canon of description warns us not to take too much for granted.

Like master like servant: the adage might be applied—with a modification—to Ten Brink's treatment of Chaucer's pupils and imitators. His estimate of Occleve is good; even better is that of Lydgate. Neither could be improved without writing a monograph, as we said above concerning Wiclif.

The author's treatment of the religious drama in England is even more original than his Chaucer lucubrations. In this field he has had less help from the pioneer work of others. Two novel features are especially prominent—the ascendancy of the northern districts (Yorkshire), and the destructive analysis of the so-called Coventry plays. Although it has long been suspected or assumed that the beginnings of the English drama were Anglian rather than Saxon, it remained for Ten Brink to raise the guess, or hypothesis, to the dignity of a working theory. With regard to the Coventry collection, Ten Brink rejects all identification of it with the Franciscan Order in Coventry, and looks upon it as the "property," so to speak, of a wandering troupe, carelessly put together. His remarks upon isolated religious plays or small groups of such are equally to the point. In his treatment of the Moralities there is one position, or assumption, that we are disposed to combat. It is to be found, somewhat disguised, at p. 318, where we read that comedy deals rather with types of character, and that the greatest comic dramatists aim at reforming mankind. This may answer for the Latin-French comedy, but scarcely for English, unless we are prepared to admit that Ben Jonson is superior to Shakspere. We doubt, too, whether the allegorical drama developed (*sich gestaltete*) into the real. Of course we admit unhesitatingly that it helped, by training actors and the public. But to our eye there is an unbridged gulf between the best allegorical play and the poorest comedy.

We have two strictures to pass upon Ten Brink's method. One is that he rates the literary value of our religious drama too high. Yet this was perhaps inevitable. It is in human nature that a man who by dint of uncommon energy has worked himself into a difficult subject should overprize it. Obstacles overcome seem beauties. This human trait is a wise dispensation of Providence, for without it scholarship might not rise to its sunniest heights. Of Ten Brink in particular we hold that unless nature had fortunately endowed him with the gift of seeing in these old plays more beauties than we can, he would never have become the quick-witted interpreter that he is.

Our other stricture is, that he has not given an adequate account of the origin and early steps of the religious drama in general, *i. e.*, in Europe outside of England. Two pages and a half, pp. 244-246, are all that we get upon a subject which at once attracts and repels by its exceeding difficulty. Their character of vagueness, meagreness (aridity is scarcely too harsh a term) is not redeemed by the author himself labelling them *eine typisch gehaltene Skizze*. Ten Brink's book is for the "ordinary reader." What scholar of adequate attainments, then, has familiarized the ordinary reader with the nascent liturgical drama? How much, rather how little, has Ten Brink the right to take for granted? True, if one has struggled through Ward, Aubertin, Klein, Mone, Lange, Wirth, and a few other writers of varying excellence, one may have a glimmering insight into the process by which cult grew into dramatic action. But such a reader is no ordinary reader. Had Ten Brink taken twenty pages instead of two, he could have made at least the main points clear. As it is, his "sketch" will only mystify the ordinary reader. The specialist alone will accept it as a useful epitome.

May we hope that the conclusion of the volume will not keep us too long in suspense?

BRAZIL IN 1889.

Le Brésil en 1889. Paris: Charles Delagrave. 1889. Pp. 699.

THIS work comes with a certain timeliness at the present moment, when the attention of the world is drawn to Brazil by the remarkable revolution in government which has lately taken place in that country. The publication of the book is, in a sense, a result of the Paris Exposition. Nearly two years ago the idea was conceived by certain Brazilian merchants in Paris that that country should be represented in the Exposition. To this end an appeal was made to Brazilians in Paris and to French merchants engaged in trade with Brazil, the result of which was the formation in that city in March, 1888, of a Franco-Brazilian committee, composed of citizens of both countries. Through the exertions of this committee, the patronage of the late Emperor, Dom Pedro II., was secured for the project, and in July, 1888, an appropriation was obtained from the Brazilian Parliament. Having succeeded in their efforts to have Brazil officially represented in the Exposition, the committee subsequently, in response to a desire for information in regard to that country, intrusted to one of their number, Mr. de Santa Anna Nery, the task of editing and publishing a book which should contain full and comprehensive information in regard to the social, political, commercial, and physical condition of the country up to the present time. The result is the present work, which is remarkably complete, as may be seen by a reference to the subjects which it contains.

In the beginning a general review of the geographical features of the country is given by the editor. Following this is an article on the hydrography of the country, by the Baron de Teffé, Director of the Bureau of Hydrography at Rio de Janeiro; on the climate, by Henri Morize, astronomer at the Imperial Observatory; on mineralogy, by Henri Gorceix, Director of the School of Mines at Ouro Preto; on the history of Brazil (nearly a hundred pages), by the Baron de Rio Branco, a member of the Historical and Geographical Institute of Brazil; on population, territory, and the electorate, by J. P. Favilla Nunes, a Brazilian publicist; on the labor of the country, by the editor; on the agricultural zones, by André Rebouças, professor at the Polytechnic School at Rio de Janeiro; on agricultural institutions, by J. M. Leitão da Cunha, a deputy of the General Assembly from the province of Pará; on finances, by A. Cavalcanti, a Brazilian economic writer; on banks and institutions of credit, by Luiz Rodriguez D'Oliveira, an eminent Brazilian merchant in Paris; on railways, by Fernandes Pinheiro, Chief of the Commission of the Brazilian Ministry of Public Works in Europe and to the United States; on commerce and navigation, by the editor; on the postal system, telegraphs, and telephones, by the same; on immigration, by E. da Silva Prado; on the

press, by Ferreira de Araujo, editor of the *Gazeta de Noticias* of Rio de Janeiro; on art, by E. da Silva Prado; on public instruction, by the editor and others; on literature, by the editor; on science and the National Museum, by Ladislau Netto, director of that institution; on literary and industrial property, by the editor; on the protection of infancy, by the Baron d'Itajubá, formerly Minister to the United States and now Minister to Italy; on the organization of the judiciary, by S. N. MacDowell, a deputy in the General Assembly; on the navy, by M. J. Alves Barboza, a captain in the Imperial Navy. From this outline of the contents of the book, it is seen that there is information to be found in it on almost any subject which the student of Brazilian questions may desire to examine.

A fact not generally appreciated in the case of Brazil is its great territorial extent. It contains, roughly speaking, nearly 3,300,000 square miles, or about 250,000 more than the United States, if we exclude Alaska. If we include Alaska, the territory of the United States exceeds that of Brazil by only about 320,000 square miles, which is little more than the area of the State of Texas. According to the imperfect census of 1872, Brazil then had a population of 9,930,478 inhabitants, of whom 1,510,806 were slaves. Of the total population 3,801,782 were mulattoes and mongrels, 3,787,289 were of the Caucasian race, 1,959,452 of the African, and 386,955 were Indian-Americans. The census, however, did not include several parishes of the empire, nor 10,993 Indians living in villages in the province of Maranham, nor 4,059 inhabitants of the province of Rio de Janeiro. Of persons included in the census, 5,123,869 were males, of whom 4,318,699 were free and 805,170 slaves; 4,806,609 were females, of whom 4,100,973 were free and 705,636 slaves. Of the total number of inhabitants 9,902,715 were classed as Catholics, and 27,766 as non-Catholics, the latter all being free. In respect to nationality, of the free population 8,176,191 were ranged as Brazilians and 243,481 as foreigners.

Since 1872 no census of the population of Brazil has been taken, and it is consequently impossible to determine what the present number of inhabitants actually is. Mr. Favilla Nunes, basing his calculations upon the rate of increase by birth and immigration, estimates the present population of Brazil at about 14,000,000, or an average of less than five inhabitants to the square mile. Into the apportionment of this population as between the pure and mongrel races he does not enter, and reference on this subject must be had to the statistics of 1872, bearing in mind, however, that since 1872 the ratio of increase by immigration has constantly grown. In the fourteen years from 1873 to 1886, there were 304,796 immigrants, of whom 110,891 were Portuguese, 112,279 Italians, 23,469 Germans, 15,684 Spaniards, and 9,022 Austrians; the rest being divided between various nationalities. The statistics above recited convey a vivid notion of the mixed character of the Brazilian population. It is stated that the Republic has proclaimed universal suffrage, or manhood suffrage conditioned upon the ability to read and write. In this relation it is pertinent to observe two facts. By a law approved May 13, 1888, by the Princess Imperial, then regent, slavery was entirely abolished. Prior to that time efforts had been made to the same end, and a system of gradual emancipation was established. But by the official report of the Government of March 30, 1887, there still remained at that date 723,419 slaves. The law of 1888 simply said: "From the date of this law slavery is declared abolished in Brazil." The other fact is, that out of the whole population in Brazil there were in 1887, according to the revised lists of that year, which are probably the last made, only about 220,000 electors, or 1.5 for every hundred of the whole population, capable of voting for members of the provincial and national legislative assemblies. This fact may in part account for the circumstance which has recently caused so many expressions of surprise, that the acceptance of the revolution has apparently been so general, notwithstanding that at the late elections for the National Assembly only two Republican members were returned.

One of the problems necessarily to be dealt with is that of finance. The public debt of the country, including emissions of paper currency, is about $375,000,000. To supply the expenses of Government and to maintain the public credit, recourse has been had to imposts on lands, industries, and professions, circulation and transportation, consumption, and to duties both upon imports and upon exports. The sudden emancipation of the slaves in 1888 has necessarily had a disturbing effect upon production.

For electoral purposes the Empire of Brazil was recently divided into 125 districts, which together elected 125 temporary representatives (deputies) for four years, 60 representatives for life (senators), to the national Parliament, and 641 members to the provincial assemblies, chosen for two years. These 125 electoral districts comprised 20 provinces and 892 municipalities, with 330 cities, 526 towns, and 1,866 parishes. In 1881 the system of voting directly for representatives to the national Parliament was first established, and at the same time the *scrutin d'arrondissement* was substituted for the *scrutin de liste* in the election of deputies.

To attempt to give an account of the reign of Dom Pedro II., the lately deposed Emperor, would be to review the progress which Brazil has made in the last half century in the development of liberal institutions. As a ruler, he was characterized by remarkable breadth of view and by great humanity of conduct. In nothing is his reign more remarkable than in the development of the system of public instruction. Primary instruction, however, was wisely left to the regulation of the provincial assemblies by the Constitution of 1824 and the additional act of 1834, before he ascended the throne. The result has been a sure and healthy development of an extensive system of primary schools. In 1869 the number of public schools of that character was 3,516; they were attended by 115,735 pupils of both sexes between the ages of six and fifteen years, which are the years of eligibility to such schools. At that time there was one school for every 541 children of the requisite age. It is estimated that at the present time there are not less than 7,500 primary schools, mostly public, and about 300,000 pupils. In some of the provinces the increase in the number of schools has been remarkably rapid. For example, in the Province of San Paulo there were in 1882 774 primary schools; in 1886 there were 1,034, or an increase of 260 in four years. In these statistics private schools are not included. Only the higher instruction has been under the control of the central Government. Under such control are the two faculties of law at San Paulo and Recife, the two faculties of medicine of Rio de Janeiro and Bahia, the Polytechnic School at Rio de Janeiro, and the School of Mines at Ouro Preto.

HOGUE'S ATTIC VERB.

The Irregular Verbs of Attic Prose: their Forms, Prominent Meanings, and Important Compounds; together with Lists of related Words and English Derivatives. By Addison Hogue, Professor of Greek in the University of Mississippi. Boston: Ginn & Co.

Prof. Hogue seems to have discovered a genuine deficiency in our apparatus for classical study, and to have filled it very successfully. He has produced a work which will be an instructive companion not only to college students in their reading, but to teachers of preparatory schools. A slight expansion of the plan would make a complete record of Attic prose usage in the verbal forms, within certain limits, and a convenient book of reference for scholars of advanced attainments. The author's object is more modest, however. He has written

"not for scholars, but for students, with the hope that they will find much that they need, and find it in a form more accessible and intelligible to them than it can possibly be in the lexicons, seeing that these have to cover a vast territory not touched upon here, and have to present their results in such compact space and in such abbreviated form that many a student loses himself in trying to pick out what is good Attic from what is not."

He aims chiefly at facilitating a mastery of the forms and the acquisition of a vocabulary. He does this, in the first place, by treating the formation of the regular verbs more fully and with more numerous examples than the grammars in ordinary use. He next presents the irregular verbs in Part II. (which occupies nearly 200 pages), and gives with great care and minuteness the forms in actual use in Attic prose down to the period of Aristotle, together with their principal compounds and their more direct English derivatives. He makes each verb, in fact, the subject of a short dissertation, in which he sets forth clearly and accurately its chief meanings, the peculiarities of its forms and tenses, the more usual constructions and idioms, and illustrates these various points with well-chosen examples, mostly from Attic authors. It may be said that such particulars can be extracted from the grammars, the lexicons, and from Veitch's 'Catalogue of Irregular Verbs.' As a matter of fact, however, a single article, such as those on ἀκούω, γιγνώσκω, δέω, δέομαι, παίω, or πιπράσκω, condenses the results of extensive reading and observation, and presents certain groups of facts which the learner could collect for himself only after many wanderings and misapprehensions.

We are not sure that the list of derivatives is so valuable a feature as the author fancies, or deserves as much space as it occupies. They are sometimes explained with a digressiveness which, though quite proper in the familiar talk of the class-room, simply trenches on the province of the English dictionary or encyclopædia, and appeals, we believe, to a different plane of intelligence from that contemplated in the general plan of the work. Any intelligent student will easily trace out most of them for himself, and will enjoy the process of discovery, and hold fast to his Greek all the more for his own researches. Whether *Anatolic* and *Kalorama* and *Chrematistics* will help either his Greek or his English to any useful extent, may be doubted, though these are, of course, extreme instances. On the other hand, discussions like the note on the aorists of πέτομαι and the compounds of λέγω are a praiseworthy departure from the unavoidable limits and methods of the ordinary school grammar. They introduce the student to the uncertainties and the conflicts of authorities; they show him

that, in certain questions of language, there is no Vatican to render infallible decisions, and that his grammars and lexicons are founded on processes of observation and discrimination which he himself can imitate, and the results of which he may possibly improve.

We notice a few slips in facts or expression, and some apparent inconsistencies. The statement (page 204) that Thucydides has "only φθῆναι," is an oversight, as φθάσαι is found several times. *Paschal* is, rather strangely, referred to πάσχω. The remark on ἵστημι (page 108 g) is misleading: "In the compounds the intransitive tenses are occasionally found as transitive." The meaning is not that the intransitive tenses change their force, but that a transitive force is introduced by the preposition. Under καλέω (page 118) the rendering of the perfect passive, "by what name have you been called," neglects the peculiar meaning of the verb in that tense. Would it not be well to indicate that, as a matter of strict Attic diction, the authority is expressly in favor of ἐδέδισαν instead of ἐδεδίεσαν, and of the shorter contracted forms in certain parts of λούω? Is δέω, *to bind*, contracted throughout simply "by way of distinction" from δέω, *to lack, need?* The analogous case of κλάω, *to break*, and κλάω, *to weep*, points to the influence of a digamma in the forms which do not contract. To say that εἶπον is a "more usual" form than ἔλεξα (page 132) hardly expresses the comparative rareness of the latter aorist, which is used oftener, we believe, by Xenophon than by any other writer. Yet, in the 'Anabasis,' we find only one form of ἔλεξα to about five of εἶπον; in the 'Hellenica' (Books II and III), one to thirty; in half-a-dozen orations of Lysias, a solitary stranded optative, λέξαιμι, to thirty-one forms of εἶπον. In Plato, the disproportion is still more striking. We cannot tell whether βλαστάνω, θιγγάνω, and ἔτλην are omitted accidentally or because they so rarely occur in Attic prose. In this matter Prof. Hogue has gone so far that he might well have gone a little further, and made his record complete. He mentions, for instance, such singularities as ἀμφιλεξάντων and ἔβησα in Xenophon, and ἀντιλέξειν in Lysias, and those interesting fossil forms of the first aorist active of ἄγω which crop out once in Antiphon and Thucydides. Why not mention also περιέπω, used a few times by Xenophon, and the rare aorist active of ἀπαγορεύω? Why not, since defectiveness is an irregularity, include other defective verbs as well as μειδιάω, and thus make a special catalogue which, by reason of its completeness, would have its permanent value for scholars as well as for learners? The list, we believe, would not be much extended, and would call attention to the differences of usage that exist between classic writers within the brief period of about a century.

The illustrative quotations are, as we have said, well chosen, and are rendered into vigorous and idiomatic English. The un-Attic expression "to boss the job" would seem to require at least quotation marks to fence it from the trespass of American youth. We are strongly of the opinion that it would be a great gain to refer to their sources all citations from the Greek except ordinary phrases and formulæ. The sort of student for whom the book is designed will certainly profit by an accuracy that leads him to consult authors for himself and to note the peculiarities of their diction. The indexes are prepared with great care and ingenuity; the quantity of doubtful vowels is everywhere marked, and substantives and adjectives are conveniently classified according to their gender and accent.

There are some points in the history of a dead language about which one would like to consult an intelligent ghost, and which can never be settled except by a message from the dead; in spite of this, men of real learning and ability will affect a sort of inspiration in such matters and deliver their oracles, undismayed by the refutation of their conclusions on questions of legitimate research. Prof. Hogue apologizes in his preface for "the constant recurrence of 'seems' and 'perhaps' in stating the facts in regard to usage." To our mind his candid suspense contrasts favorably with the "cock-sureness" which is a grace and a virtue only when joined with omniscience, and of which he exposes one or two examples. Our own criticisms and suggestions are offered with reference to future editions, and chiefly from the point of view of the teacher. They are, indeed, mostly based on the fact that the work is more complete than it professes to be, and performs decidedly more than the modest promise of its author. It is not merely an aid to the student in acquiring forms and a vocabulary, but an excellent handbook in the practice of prose composition, and an accurate guide to some of the niceties and elegant economies of Attic style.

RECENT MUSICAL LITERATURE.

The Story of Music. By W. J. Henderson. Longmans, Green & Co. Pp. 212.

Review of the New York Musical Season, 1888-1889. By H. E. Krehbiel. Novello, Ewer & Co. Pp. 221.

System of Harmony for Teacher and Pupil. By John A. Broekhoven. Novello, Ewer & Co. Pp. 118.

It is a somewhat remarkable fact that there are to-day four musical critics of the New York daily press who have written books. Mr. Henderson of the *Times* has just entered the list by writing a brief sketch of musical history. The *Times* for many years was eminently unfortunate in its choice of musical critics, but since the accession of Mr. Henderson it has become a helpful influence in the advancement of what is best and noblest in music. The same qualities of a clear and fluent literary style, fearless frankness, and incisive sarcasm which distinguish Mr. Henderson's criticisms are apparent in his 'Story of Music,' which is an attempt to describe the evolution of the art itself, omitting most of the biographic details and dates which usually take up so much space in histories of music without throwing any light on the subject.

The plan is an excellent one and has been well carried out. Of course in the case of some of the greatest composers a few biographic data were called for, but as a whole it is a history of music and not of musicians that Mr. Henderson has written. Even with these omissions, an attempt to compress the principal facts of his subject into 212 pages compelled him to ignore some important lines of development, but the highway of musical evolution is clearly pointed out. For obtaining a bird's-eye view of musical history in a few hours, and without great mental effort, we know of no work equal to the present, which is also enlivened by frequent references, in the early chapters, to modern events and questions. The author looks at his subject from the modern "advanced" point of view, with certain reservations. It is refreshing to read his remarks on Bach and Händel, so different from what one usually finds in English books: "Bach has been frequently compared with Händel, but this is folly. Händel was great in one department of his art. Bach was master in all. Händel has left us the 'Messiah' and 'Israel in Egypt,' together with a few other masterpieces, and thousands of pages for which the present age has no use. Bach wrote scarcely a measure that we can spare." No love is lost on the Italian opera composers, Verdi excepted. On p. 160 the famous mad scene in "Lucia" is analyzed to show "how far removed is the work of a charlatan like Donizetti from that of a true poet." For Verdi's last two operas great admiration is expressed, and the belief that they point to a new school of Italian opera, absorbing much of Wagner, but differing by giving more importance to vocal melody. The following is a just criticism: "There are passages in 'Faust,' unhappily too few, such as the death of *Valentine* and *Marguerite's* scene with *Mephistopheles* in the cathedral, which seem to me to come nearer to the ideal music-drama than anything outside of the best scenes in Wagner's works."

Wagner Mr. Henderson considers "the greatest musical genius who ever lived"; yet, oddly enough, he objects to what will some day be recognized as his chief claim to greatness—his constant and novel use of "harsh" dissonances and chromatic progressions, which do not "please the ear." Precisely the same objection was urged by Artusi at the beginning of the seventeenth century against the great reformer, Monteverde, for using unprepared sevenths and other "harsh" discords, and has been raised at every step subsequently made to enlarge the harmonic boundaries and the dramatic expressiveness of music. Besides, Mr. Henderson should remember that ears differ. Those of the full-blooded Wagnerite are highly delighted by the chromatic dissonant progressions in the *Norn* scene in the "Götterdämmerung" or the *Klingsor* episodes in "Parsifal." It is a question of accustico-æsthetic evolution, and we recommend Mr. Henderson to read an essay by Prof. Haeckel on the development of the sense-organs, in which this matter is discussed in a playful and sarcastic, yet suggestive manner.

Throughout the greater part of this volume the lecture tone prevails, which, however, does not seem out of place even when it modulates into exhortation, as on p. 68. There are some happy expressions scattered through the text, like this: "Music cannot definitely express emotion; but it can produce it." In view of the recent enormous successes of Wagner and Verdi, Mr. Henderson believes that the most important developments of music in the future will be in the domain of opera, and he consequently advises young composers, as a matter of business, to devote themselves to the opera rather than the symphony or the quartet.

Mr. Krehbiel's volume is the fourth of a series which, if continued on the same plan, will some day prove very useful to an historian of music in America. It is printed and bound in a manner which is a credit to the publishers; it gives the programme of every concert worth mentioning, with critical discussions of all novelties and other important productions; and its index, as usual, is very complete. An appendix gives a survey of the choral work done in the principal American cities during the past season, and another chapter contains a twenty-page summary of operatic history in New York, in which one cannot but be impressed by the remarkable list of great singers whom New Yorkers have heard again and again, which helps to account for the undeniable fact that operatic audiences in New York are more critical, or at least less easily pleased, than in any European city. The best articles in this volume are those on "Rheingold," the "Yeo-

men of the Guards," a history of church music in New York, and the general retrospect, containing, among other things, the usual official statistics of the German opera season.

The three operas which brought the most money into the treasury were Wagner's "Rheingold," "Siegfried," and "Tannhäuser," followed by "Il Trovatore," "L'Africaine," and "Die Meistersinger"; and the highest average receipts were for Wagner's "Götterdämmerung," "Tannhäuser," and "Rheingold." "In the season, the seven works of Wagner brought into the exchequer of the Metropolitan Opera-house an average of $16,540.64 each, while the nine operas not composed by Wagner yielded an average of $10,421.84." These figures, better than all arguments, prove that Wagner continues to be the favorite of New York opera-goers. Some curious details may be spelled out from these tables. Thus, although the average attendance on "Trovatore" was greater than on "Rheingold" nights, the average receipts were greater on "Rheingold" nights — thus proving that Wagner's opera appeals more to the well-to-do classes than Verdi's. The wisdom of reducing the price of seats is shown by the fact that $24,000 more were paid in than during the preceding season. Those of the stockholders and others who would like to put Italian in place of German opera can see the utter futility of such a plan made obvious on p. 165.

The Von Bülow recitals and concerts do not get quite as much notice as their importance seems to warrant, nor would the reader suspect from anything he can find in this 'Review' that Von Bülow's reading of a certain Beethoven symphony, in essential agreement with Herr Seidl's reading and Wagner's elucidations in his pamphlet "On Conducting," was a blow to Mr. Krehbiel, who had stoutly opposed these innovations; for Von Bülow is universally acknowledged to be the greatest living authority in the interpretation of Beethoven. But we have little doubt that Mr. Krehbiel will finally acquiesce in the new method.

Mr. Broekhoven is a teacher of Harmony and Composition at the Cincinnati College of Music, and his little treatise gives evidence, on every page, of the practical knowledge gained by the necessity of frequently explaining abstruse rules to young students. It is a misfortune that most manuals of harmony offer great impediments to students by their obscure definitions; Richter's, the most famous of all, sinning most in this respect. Mr. Broekhoven's definitions are not open to this objection, and pupils whose memories are weak will find their work facilitated by frequent references to preceding paragraphs. The exercises are abundant and useful. The use of the word septchords and other novel terms to avoid confusion is commendable. The theoretical side of Harmony, as developed in the works of Fétis, Hauptmann, Helmholtz, and Riemann, is ignored in this work; but as a practical guide to composition, and an elementary treatise on musical logic, it will be found very useful.

MEDIÆVAL HERESIES.

Beiträge zur Sektengeschichte des Mittelalters. Von Ign. v. Döllinger. Erster Theil: Geschichte der gnostisch-manichäischen Sekten. Zweiter Theil: Dokumente vornehmlich zur Geschichte der Valdesier und Katharer. 2 vols. 8vo. Munich. 1890.

It is pleasant to greet the veteran Dr. Döllinger again in the fields of research which he has made so completely his own. A life prolonged beyond the usual span allotted to man seems to find him as vigorous as ever, with undiminished ardor for his favorite studies, and undiminished zeal in conveying their results to other students. If these two portly volumes seem to tread closely upon the heels of the two which, in conjunction with Dr. Reusch, he issued a year ago on the 'Moralstreitigkeiten in der römisch-katholischen Kirche,' it is not to be inferred that they have been hastily composed, or that they indicate a fecundity too great for the due elaboration of their subject. The author informs us that the printing was commenced more than ten years ago, and has been carried on slowly. Indeed, one would imagine that the delay had been even greater, since documents extracted from the Bibliothèque Nationale are credited to the "*kaiserliche* Bibliothek in Paris," as though they might have been printed before the fall of the Second Empire.

The book consists of two portions essentially distinct. The first volume, of about 250 pages, presents a sketch of the sects which handed down the early Manichean doctrines in Europe nearly to the commencement of the Renaissance. Beginning with the Paulicians, the author traces the spread of their dualistic principles to Europe, where, under the names of Cathari, Albigenses, Patarins, etc., they formed the most formidable body of heretics with which the Church had to deal during the twelfth and thirteenth centuries. Interesting as is their external history—their sufferings so heroically endured, and the ruthless persecution which finally exterminated them—Dr. Döllinger pays little attention to it, and concerns himself almost exclusively with an examination into the beliefs of the various subdivisions of the sect. It is needless to say that this is based wholly upon a critical examination of the sources, and although there are occasionally points upon which opinions may differ, no one will call in question the fulness of learning of the author, his impartiality, his insight, or the admirable clearness which is so characteristic of all his productions.

The second volume reaches to nearly 750 pages, and is a contribution for which all students of mediæval thought may well be thankful. For many years Dr. Döllinger has employed his annual vacation in searching among the MSS. of the great collections not only of Munich, but of Paris, Vienna, Florence, Rome, and other places, for all documents that bore upon the heretical developments of the middle ages, and these he has now freely rendered accessible to all, in place of doling them out, one by one, as most scholars would have done, and rendering each the basis of a voluminous essay.

The subjects are not confined, as in the first volume, to the Cathari, but embrace all the sectaries—the Waldenses, the Spiritual Franciscans and Fraticelli, the Beghards, or Brethren of the Free Spirit, the Hussites, and some minor heresies and individual heretics. It is true that, in consequence of the prolonged delay in the press, a portion of the matter has meanwhile seen the light through the labors of other scholars, and Dr. Döllinger prefixes to his volume a table of the seventy-two documents of which it is composed, with indications of the places in which can be found those in the publication of which he has been anticipated; but as these are mostly printed in special periodicals or the transactions of learned societies, they are not easily accessible to the ordinary student. One, indeed, we have observed, of which the prior publication has escaped Dr. Döllinger—the heresy of Thomas Scot of Lisbon (p. 615), which has already appeared in Menendez y Pelayo's 'Heterodoxos Españoles,' i., 782, from a Venetian MS., while Dr. Döllinger's is from Paris.

Many of these documents shed new light on obscure points of the history of heresy and persecution, or on the manners and institutions of their periods. Thus a Penitential of the fourteenth century (pp. 621-624), from the Munich library, deplores the delivery of heretics by the Church to the secular arm to be burned. Apparently it was the custom after conviction to give them another chance of escape by the ordeal of red-hot iron; if they failed in this and refused to repent, then they could be put to death; but, on the whole, the writer thinks that if they did not attack the Church, it would be better to let them alone. He alludes to a curious custom in a certain place by which no one could receive Christian burial unless a friend would undergo the cold-water ordeal to prove that he died properly repentant, and he mentions the case of a knight who was slain in a tournament, at a time when all who took part in such encounters were excommunicated, and who was accordingly buried in unconsecrated ground. His friends appealed to the Pope, and proved that the hand of the corpse was raised to the face for the purpose of making the sign of the cross, thus showing that he had died repentant, and on this evidence the Pope permitted the transfer of the body to the cemetery. Still more quaint are the instructions to the confessor to inquire into the vocation of all penitents, for there are some pursuits which are wholly sinful, such as those of strumpets and players, and some, such as trade, which can scarce be followed without sin. There are, the writer tells us, three kinds of players. Some debase their bodies by filthy dances and gestures, or by nakedness, or by wearing horrible disguises, and these are infallibly damned unless they abandon the profession. Others wander around as jesters to the courts of magnates, telling foul stories and ridiculing the absent, and these likewise are damned. The third class are minstrels with musical instruments to please the people. Of these there are two varieties, for some of them frequent public dances and debauches and provoke licentiousness, and these too are to be damned.

No student of the mediæval period can afford to be without this rich and varied collection of material which Dr. Döllinger has thus placed within the reach of all. We hazard nothing in saying that no such contribution to its special department of history has been made since the labors of the Benedictines, a century and a-half ago.

FORD'S FRANKLIN BIBLIOGRAPHY.

Franklin Bibliography. A List of Books Written by or Relating to Benjamin Franklin. By Paul Leicester Ford. Brooklyn, N. Y. 1889. 8vo, pp. lxxiii, 467, printed on one side only.

Franklin, in his 'Autobiography,' forcibly shows how a man who "forms a good plan," and "makes the execution of that same plan his sole study and business," may powerfully benefit his fellow-men. One might almost believe that a purpose of following out this suggestion of Franklin's had been Mr. Ford's spur and inspiration in the very exceptional service he has been able to render, by supplying bibliographical helps such as the present one. This, we believe, is the seventh of his separately published bibliographies issued within as many years; and it is in many respects of ampler and more comprehensive scope than any of its predecessors—a fact which the title-page does not fully convey. Not even biblio-

graphers have hitherto established any uniform usage in narrowly distinguishing between "a bibliography" and "the literature of a subject." Mr. Ford, in his 'Bibliotheca Hamiltoniana,' published three years ago, perhaps included all that each of these terms implies; but in this volume he by no means stops with what is comprised, first, under the head of works "written by," and second, "relating to" Franklin, but gives us also "Pseudonyms used by Franklin," "Writings wrongfully or doubtfully ascribed to Franklin," and several successive indexes, constructed with great ingenuity. If to these we add his very instructive introduction to the work, the whole constitutes what might perhaps be described as a bibliographical cyclopædia. Exclusive of the indexes, the entries, which are numbered consecutively, considerably exceed 1,000, 600 of these coming strictly under the heading "Books and pamphlets wholly or partly written by Franklin," but counting, of course, the successive editions of a given work. Thus, Mr. Ford gives 145 editions of the 'Way to Wealth,' perhaps the most conspicuous instance of an English work which has attained the polyglot form, unless we except some of Cooper's tales and 'Uncle Tom's Cabin.'

Mr. Ford very properly devotes a portion of his "Introduction" to showing where the most considerable collections of Franklin literature are now to be found, citing in this connection Mr. Winsor's claim, in justifying the beginning of the invaluable collection now in the Boston Public Library, "'that Franklin is to Boston' as Shakspere is to England." He also enumerates the efforts of his own predecessors in the work of constructing Franklin catalogues or bibliographies, including Sabin' Stevens, Swift, and others. Of Mr. Lindsay Swift's 'Catalogue of Works relating to Benjamin Franklin in the Boston Public Library,' etc., published by that library in 1883, he remarks: "Had I been aware of its existence before I began my work, the present list would never have been started." Nevertheless, it is decidedly worth while that he should have carried his own list through, since, from the necessary limitations of Mr. Swift's catalogue, it falls far short of that degree of completeness possible to Mr. Ford's work. To take a specific instance, Swift enumerates only thirty-two editions of the 'Way to Wealth,' as compared with Ford's one hundred and forty-five. "Completeness," however, it is gratifying to find Mr. Ford recognizing as at the best but a question of comparative degree. Indeed, he expressly picks this flaw in the title-page of Mr. Bigelow's recently published edition of Franklin's Works, namely, that he has styled it "The *Complete* Works." "The writings of Franklin," Mr. Ford maintains, "will never be complete," and he plainly looks forward to the gathering in the future of still other of "his known or recognizable pamphlets and contributions to periodicals."

No portion of this volume, perhaps, has a greater interest, and certainly few portions have more value, than the department devoted to "Writings wrongfully or doubtfully ascribed to Franklin." The eighteen titles here noted include some about which the general agreement of bibliographers has long settled itself, while in other cases our author renders noteworthy service by unravelling errors of authorship which have been perpetuated by so careful writers as Sparks, Sabin, Stevens, Swift, and others. Mr. Ford enters as "erroneous" the attributing to Franklin of the volume, 'Philosophical Essays,' Edinburgh, 1768, but does not suggest the true author. This work, though anonymous, was doubtless written by James Balfour of Edinburgh. Mr. Ford's division devoted to "Works relating to, written to, or dedicated to Franklin," comprises two hundred and twelve entries. While he nowhere claims absolute completeness for this enumeration, there are a few omissions which are somewhat surprising, among them the paper on "Benjamin Franklin" in Sainte-Beuve's 'English Portraits'; Part II. of the Messrs. Hale's 'Franklin in France' (Part I. is entered in full), and Mr. G. M. Towle's very interesting chapter on "Franklin, the Boston Boy," in the 'Memorial History of Boston,' vol. ii. An omission less to be missed is that of the various "lives of the signers" of the Declaration of Independence, by Lossing, C. A. Goodrich, N. Dwight, and others; Sanderson being the only one of this class cited. Twice Mr. Ford uses the word "classical" in a sense which will to most readers be an unexpected and unfamiliar one, namely, in his table of "contents," where he speaks of the "Reference list and *classical* index," and again at page 279. In both instances it means based on subject *classification*, rather than as almost invariably elsewhere. We find that Mr. Ford is not absolutely the first to make this innovation, Sir Henry Maine having used the word in this sense in 1883, in his 'Dissertations on Early Law and Custom'; yet this precedent, we must think, had better have been left unfollowed.

Westminster Abbey. By W. J. Loftie. With many illustrations by Herbert Railton. London: Seeley & Co.; New York: Macmillan & Co.

Mr. Loftie's 'Westminster Abbey' is one of those interesting and useful books which the pages of the *Portfolio* have yielded to the art-loving world. A picturesque and entertaining account of Westminster Abbey itself and its relations to London in early days is followed by an account of the Abbey as a long-established "show place" of great repute—a monument famous since long ago, though of course more for its sepulchral memorials and its historical associations than for its architecture, which, in the sixteenth century and later, was in little repute. The coronations which have been held beneath its vaults are next treated of, and finally, with the fifth chapter, the work settles down to an account of the interior of the building. It seems that there is here the accuracy of a guide-book and more than a guide-book's fulness of detail, combined with a certain freshness of style with which guide-books are not commonly supplied. If in the course of the whole work there is too little said about the rank of the building as a piece of Gothic architecture, we have not, perhaps, to complain of that, in view of the fact that the attempt to discriminate between the architecture of this building and that of other edifices of the same general character would be dry for the ordinary readers of the *Portfolio*, while the detailed account of the tombs, their effigies, inscriptions, decoration, heraldic bearings, and traditions, is something which all visitors, and all those persons who wish they were visitors, to Westminster Abbey, may unite in enjoying. The work is concluded with a chapter entitled "Walks in the Precincts," and this is really quite novel and worthy of minute attention.

As regards the illustrations, the case is not so clear. There are reproductions from Hollar which are, of course, of great interest. There are small, vignette-like drawings in the text, which are good in their way, and as expressive of the subject as a sketchy, so-called artistic rendering of architecture can be made. There are also photographic engravings printed with the text, which, although not of the first excellence, have in their trustworthiness a charm which the above-mentioned sketches have not. The unsatisfactory illustrations are the large etchings, the full-page prints with margins, pretentious in chiaro-oscuro and elaborate in detail, which contrive to give so false an impression of the interior that the book would be better without their presence. The main fault is that the scale is greatly exaggerated. The plate opposite page 28 would be tolerably truthful in this respect if it represented, not the narrow and far from lofty nave of Westminster Abbey, but the colossal span and reach of Milan or Cologne. A still more noticeable bit of falsification is in the plate opposite page 34, the Confessor's Chapel, where there is shown a very considerable walk from the tomb to the piers that support the roof, instead of the few steps that all persons familiar with the church know it to be. The chapter-house is expanded and spread away in the same fashion, and, in short, we have here a set of plates which would be somewhat overstrained in character if they represented a great cathedral like Bruges or Rheims instead of a church of the much smaller English dimensions. One large plate, and only one, seems to us a desirable possession, and that is the reproduction of Hollar's plate of Henry VII.'s shrine. Here there is something else than architectural interest: a square inch of Hollar is worth a great deal of Railton.

Illustrations of the Spires and Towers of the Mediæval Churches of England, preceded by Some Observations on the Architecture of the Middle Ages and its Spire Growth. By Charles Wickes, Architect. 3 vols. in one. Boston: Ticknor & Co. 1889.

American Mansions and Cottages. Carl Pfeiffer, Architect. Parts I–V, folio. Boston: Ticknor & Co. 1889.

The publishers and booksellers who supply the constantly increasing demand for books necessary in the offices of architects and decorative designers have, during the past few years, introduced a plan which, at little cost to themselves and little cost to the buyer, puts into the hands of this latter much that is desirable; nor does it always involve a breach of that simple law which forbids you to appropriate your neighbor's goods, for there are many of these books which, in their original form, are so old that copyright has no longer to do with them. Thus, in the case before us, the outline drawings of English church towers, which fill three thin folio volumes, and cost £5 or £6, have been reproduced in facsimile by the heliotype process, and published in one volume at a lower price. The book is well known, and hardly needs any remark to introduce it to the student. The general accuracy of the drawings is admitted, and it must be said of them that they are unusually intelligible—that is, that the details are expressed in such way as to make them clearly understood. The projection and character of mouldings, the nature of carved string-courses, drip-mouldings, and the like, the amount of projection or of reveal, and all such essential points, which modern drawings of architecture are very apt to ignore or to slight, are unusually well expressed in these lithographs. A comparison of this reproduction with the original is certainly favorable to the former. The plates lend themselves to heliotype reproduction, and the result is satisfactory.

The five parts of Mr. Pfeiffer's book consist entirely of plates; and a small leaf, serving the

purpose of a prospectus, is all the information obtainable concerning the plan and scope of the work. In this it is stated that Mr. Pfeiffer, a New York architect whose early death a short time ago caused general regret, had been employed in preparing a work on American domestic architecture, and that the executor of his estate has issued, through Messrs. Ticknor & Co., this selection from the drawings which had been prepared. It appears that all the designs offered are Mr. Pfeiffer's own, so that it is not so much a work on American house architecture as a résumé of this architect's practice, or at most of his ideas on this most important subject; that is, it is a book of material rather than of criticism, and of suggestion rather than of analysis. This, however, is equally true of the numerous books on house architecture which have appeared in this country. So far, we lack the book on house architecture in general, offering designs from many sources and the solution of the problem which would be furnished by many minds. The work before us consists of a number of separate schemes for houses, which are worked out in considerable detail. Thus, to take one of the houses at a venture, Design B fills thirteen plates, four giving the four elevations or geometrical projections of the four faces of the house, one giving plans and sections, and the rest being occupied with details of dormer-windows, chimney-tops, staircases, and the like. There is enough in these thirteen plates to allow of a house being built from these lithographs complete without the interposition of an architect or draughtsman, and no doubt some persons will put them to this use. The difficulty of proceeding in that way is, of course, that the moment a change, even a very slight one, is required, there is no longer any certainty in the use of the plates. No one can tell how much alteration throughout the large structure his single change of plan may involve; and with a more considerable change, the drawings become practically useless. As for the designs, they are generally of that somewhat too forcible character which marks so much recent American work; they have the somewhat exaggerated picturesqueness which has certainly served to give some novelty to our recent country houses, but which is very hard to keep within bounds, and leads too often to an oddity which reaches positive ugliness. There is no doubt, however, that young architects will find these convenient for suggestion, and would-be builders of country houses may study them to advantage without necessarily following them exactly, in building.

Martin Van Buren to the End of His Public Career. By George Bancroft. Harper & Bros. 1889.

It is a question for casuists whether contemporaneous obloquy can be outweighed by any amount of posthumous praise. Martin Van Buren was certainly despised and detested in his day, not only by his political enemies, but also by the general public. Could he have foreseen the judgment which some recent writers have passed upon him, the thought of a triumphant vindication in the eyes of posterity might well have glorified the tranquillity of his later years. Mr. John Fiske has paid him a respectful tribute; Mr. Shepard has constructed a most persuasive and elaborate apology for his public life; and now Mr. Bancroft comes forward with this enthusiastic and unqualified eulogy. We would not stir up strife, but we cannot help feeling that here is an exceptional opportunity for the presentation of some neglected aspects of the truth. It seems incredible that so pure a patriot and so eminent a statesman as our modern historians reveal to us, should have inspired the men of his own generation with complete lack of confidence, to speak mildly; and, before accepting this recent verdict, we would gladly hear counsel on the other side.

In one sense, it is true, Van Buren may be said to have anticipated his vindication, for the manuscript of this volume was submitted to him by Mr. Bancroft, and was pronounced by him to be, "as a record of facts relating to himself, authentic and true." It appears that Silas Wright suggested the writing of this sketch, and supplied very complete data for the purpose, but that, the public mind being "grievously agitated by party divisions on public affairs and on public men," its publication was postponed to a time more favorable to fairness of judgment. It seems strange that some part of the interval should not have been spent in completing the work, for that most interesting episode, Van Buren's candidacy on the Free-Soil ticket, is not so much as alluded to; indeed, the history closes with his term as President.

Compared with Mr. Shepard's Life of Van Buren in the "American Statesmen Series," this book is in almost every respect inferior. It has more quotations from Van Buren's writings and speeches, and contains a more detailed account of the earlier portion of his career; but the masterly comprehension of political history which distinguished Mr. Shepard's essay, is lacking. There is, in fact, little attempt at criticism; we have not noticed a judgment that was not favorable, and the general level of the book is not above that of a campaign biography. On this account its effect is weak. We listen with indifference to the statement that the vast progress in numberless directions made by the State of New York is due to the extension of the suffrage promoted by Van Buren, and with disgust to the information that, "by his especial direction, a public ordinance secured to the laborers on public works opportunity for due domestic enjoyment and repose." Such indiscriminate and even fulsome laudation defeats its own purpose, and we find ourselves wondering whether it may not be possible that the astute subject of this biography contrived its suppression until some period should have arrived "more favorable to a fairness of judgment on his character and career" than the lifetime of his contemporaries. Still, the book is worthy of an index—which it does not possess.

BOOKS OF THE WEEK.

Abbott, Mary. Alexia. Chicago: A. C. McClurg & Co. 75 cents.
Alphabetic Catalogue of the English Books in the Circulating Department of the Cleveland Public Library. Cleveland, Ohio.
Anderson, E. L. Modern Horsemanship. New ed. G. P. Putnam's Sons.
Bamford, Mary E. Second Year of the Look-About Club. Boston: D. Lothrop Co. $1.50.
Bell, Henry G. Mary Queen of Scots. Raphael Tuck & Sons.
Bigelow, J. Autobiography of Benjamin Franklin. G. P. Putnam's Sons.
Björnson, B. Arne, and the Fisher Lassie. Scribner & Welford. $1.40.
Black, R. Death No Bane: A New Translation of Cicero's First Tusculan Disputation. Scribner & Welford. $1.50.
Brine, Mary D. The Boys and Girls of Marble Dale. Cassell & Co. $1.50.
Burnside, Helen M. Christmas Lights.—The Lord's Prayer. Raphael Tuck & Sons.
Cable, G. W. Strange True Stories of Louisiana. Chas. Scribner's Sons. $2.
Cable, G. W. The Silent South. New ed. Chas. Scribner's Sons.
Chettle, E. M. Tiny Toddlers. Raphael Tuck & Sons.
Crane, Walter. Flora's Feast: A Masque of Flowers. Cassell & Co. $1.50.
Davies, T. A. Am I Jew or Gentile? E. H. Coffin. 25 cents.
Dr. E. G. F. Grisanowski. Mittellungen aus seinem Leben und seinen Briefen. Hanover: Schmorl & Von Seefeld.
Garnett, E. The Paradox Club. 2d ed. London: T. Fisher Unwin.
Gilbert, Rev. G. H. The Poetry of Job. Chicago: A. C. McClurg & Co. $1.
Gilbert, W. S. Foggerty's Fairy, and Other Tales. Geo. Routledge & Sons. $1.50.
Golden Days and Silver Eves. Raphael Tuck & Sons.
Haggard, R. Allan's Wife. Chicago: Rand, McNally & Co.
Haigh, A. E. The Attic Theatre. Oxford: Clarendon Press; New York: Macmillan.
Harper's Young People for 1889. Harper & Bros.
Harrison, C. H. A Race with the Sun: A Sixteen Months' Tour. G. P. Putnam's Sons.
Hauff, W. The Wine Ghosts of Bremen. White & Allen. $1.50.

Fine Arts.

THE BARYE EXHIBITION.

THE Committee of the Barye Monument Association which has had in charge the organization of the exhibition now open at the American Art Galleries, rightly thought that, along with the works of Barye himself, should be shown some of those of his contemporaries and friends; and in choosing among these the names of Géricault, Delacroix, Corot, Dupré, Decamps, Diaz, Troyon, Rousseau, Millet, and Daubigny, they have presented a group of great artists who stand for a complete, definite movement in modern art. This movement, begun by Géricault and Delacroix, the leaders in the famous revolt against classicism, has extended to every part of the western world where art flourishes, and in France has produced, in the painters of Barbizon and their immediate contemporaries, the most admirable school of painting of our times. The idea in this movement, the thing that gave it its impulse and carried it through to the splendid results we find in the works in the present exhibition, is Life, the essence of things as they are in nature; and the expression of it involved the complete release of art from the formulas of the Academy to which David adhered with such obstinacy, and which M. Ingres never quite lost sight of, though the traditions to which he most fondly clung proceeded from the pure source of the Renaissance. Courbet should be included in this movement for many reasons, and, indeed, no painter among the contemporaries of Barye has had more influence on the art of to-day; but Courbet's place is at the head of the Impressionists, with whom the poet-painters of the forest of Fontainebleau have little in common. Rude certainly belongs in it, and as a sculptor he stands with Houdon and Barye, if not above them, as the leaders in the wonderful school of sculpture in France to-day, the only school of sculpture that exists that is worthy of the name, and in which all that is best is the outcome of the same principle that formed the guiding-star of the Romanticists and their followers in painting. It has not been possible here, however, to do what was done in the great Retrospective Exhibition just closed in Paris—that is, to show the development of French art during the present century in its entirety; nor has that been the aim of the Committee. What it has attempted to do is to show what was achieved in one direction by a group of painters, more than a hundred of whose works have been brought together at this exhibition, and who without question have produced the most perfect art the century has yet seen. The fact that in this comparatively small collection all of these great artists are adequately represented, and that many of the works are among the finest and most celebrated they ever produced, makes the exhibition one of the greatest importance, while it surpasses in interest any similar exhibition ever held in New York.

Antoine Louis Barye, born at Paris on September 24, 1796, was two months younger than Corot, who was born on the 20th of July, while both died in the same year, 1875, in which year, too, Millet and Rousseau passed away. Troyon had then been dead ten years, and Decamps fifteen; Diaz died the next year, and Daubigny in 1878; Jules Dupré, the last survivor, died only a few weeks ago. Appreciation of Barye's works has grown side by side with that of the great painters he lived with, and in whatever private gallery we find a Millet or a Corot we are almost sure to find some of the wonderful bronzes of the great sculptor. Beyond such genuine appreciation, however, has grown up a sort of exaggerated Barye "cult," and the ordinary Barbedienne bronzes which are cherished by their owners as "originals" are numerous and to be found almost everywhere. At this exhibition, where the splendid collections of Mr. W. T. Walters and of the Corcoran Gallery, among others, are shown, it is possible to see some of the finest specimens in existence, and some pieces that are unique examples. Not even in Paris would it be possible to bring together a finer collection than this. Yet it must be said that they cannot be seen to the best advantage, for, owing to the considerable number of duplicate casts in the exhibition and the small amount of space given to the placing of the pieces, the gallery is far too crowded, and many of the best things can only be seen from one point of view. The dignity of the work suffers from such a jumble, and it would have been better to have had more room or fewer pieces; but this was, no doubt, a matter that the Committee could not control without a lack of graciousness which is always expected of committees for loan exhibitions. If only the large plaster cast of the "Lion and Serpent" had been placed in another room, it would have been an improvement, and this magnificent group could have been seen, too, better than it can be in its present place. One wants clear space to walk around it, to approach, and draw away. For it is truly magnificent, this wonderful lion with his mane erect and his terrible paw holding the great serpent pinned to the earth. It is magnificent in its mighty grandeur, and all the dignity of the lion is expressed in it, along with all his force, his graceful strength, and that marvellous beauty of bone and sinew of the cat. It is in his figures of the cat tribe, moreover, that Bayre is at his best. His human figures are rugged and powerful in their way—at least some of them are—but more are commonplace and clumsy; his horses are almost without exception artificial in the exaggerated curves of the neck and over-lightness of limb; the deer and the birds are truthful enough and beautiful enough, and the dogs are thoroughly characteristic—good sagacious creatures like the beagles, or elegant and graceful like the beautiful "Greyhound Reclining," No. 83. The bears are the very heavy, shaggy fellows they are in life, with rolling movement of the body and clumsy paw. The bulls are, if anything, even better than any of these, and there is in the "Elephant of Cochin China," No. 21 (seen again in larger form and a unique example in "Elephant Walking," No. 423), such a master work as would alone make a sculptor of animals famous.

The closest observation of movement, the most exact truth to nature in structural detail, the most extraordinary sympathy with animal life, and a wonderful sort of intuition are shown in these works. Yet in those where he has to do with the tigers, the lions, the panthers, and the jaguars Barye's work reveals a still greater quality, a tragic sort of quality that amazes and terrifies and charms. Look at the "Jaguar Devouring a Hare." Could powerful, subtle strength be better expressed than in the nervous body of the beast, firm as steel and yet undulating like a serpent, as he crouches with his jaws fixed in the vitals of his prey? In the "Lion Walking" and "Tiger Walking" what strength and grace are expressed, and with what grand simplicity! In the "Lioness of Algiers," No. 140, what an intense feeling for the beautiful forms of the most graceful animals is shown in this animal standing still with head raised intently looking at something! The "Panther Seizing a Stag," No. 24; the "Tiger Devouring a Gavial," No. 29; the "Ocelot Carrying a Heron," No. 292; the "Tiger Surprising an Antelope," No. 275; the "Lion Sitting," No. 138, and "Two Young Lions Wrestling," No. 135, are all of them full of this splendid suppleness of the cats that makes them the most beautiful and at the same time the most terrible of animals. It is in these works far more than in any of the others that Barye's wonderful talent is shown, and in the whole range of sculpture there is nothing to equal them and only one thing to be compared to them. Frémiet, in his famous group of a gorilla carrying off a woman, has concentrated in the rigid strength of the animal's right arm and the iron grip of the hand, a sort of force that is found in the greatest works of Barye. It is almost as powerful as that marvellous paw of the lion that holds the serpent.

The collection of Barye's works, which numbers 453 pieces in metal, wax, and plaster, includes also a number of water-color drawings and a few studies in oil. What is true of the sculpture is equally true of the pictures—those depicting the animals of the feline race are the best. "Tiger," No. 478, a study in oil, is one of the finest of these, and among the water-colors, "Tiger Playing," No. 504; "Tiger Rolling," No. 502; "Walking Lion," No. 493; "Tiger Asleep," No. 469, and "Serpent Crushing an Antelope," No. 466, are especially to be noted. Of interest also are three or four little landscape studies, one of which, "Study of Trees, Fontainebleau," No. 514, is a sober bit of brown and dull yellows, suggesting the tawny coats of the animals the great sculptor so wonderfully portrayed. In this gallery also is hung a portrait of Barye by Bonnat, whose admiration of Barye's work amounts to a passion. It stands as the accepted portrait of the sculptor, and shows the figure in three-quarter length, the head inclined slightly forward, with a broad brow, deep-set eyes with a penetrating gaze, and a mouth and chin of great firmness.

No name is so intimately connected with the Barbizon School as that of Jean François Millet. Passing over his early period when he painted semi-classical subjects, Millet's life-work was done at Barbizon, in the fields about that little village on the borders of the noble forest. There he lived his humble, quiet life,

and there he painted those pictures of peasants' toil that have made his name the most famous one in the art of the century. It is especially interesting at this time, just after the undisputed triumph of his pictures "The Gleaners" and the "Peasant Leaning on His Hoe," at the Retrospective Exhibition in Paris, to find in the exhibition at the American Art Galleries what is without doubt the most complete collection of his works that has been brought together since the exhibition held in Paris after his death in 1875. Here are no less than twenty-two canvases, among which are some of his most important works and one that has been called his masterpiece. It is unnecessary to make comparisons between this exhibition and the one that has just closed in Paris, further than to say that there is here no single work by Millet that equals "The Gleaners." In that picture all that is best and greatest of his qualities is gathered. It is the one work of the great poet painter that leaves nothing unsaid he has said in other works, and yet says more. The most perfect of all his works technically, it is among the purest and most unaffected in sentiment. Nor is there here any picture that so admirably expresses what Millet strove to make us feel when he painted the "Peasant Leaning on his Hoe," a picture wherein all the homely poetry of the peasant's plodding labor is resumed, and we are impressed in looking at it with the true sentiment of the toiler's life, alone on the broad plain, with the freshly turned earth sinking beneath his feet, and only the birds for companions. There is such another picture as this, "The Sower," in Mr. Vanderbilt's gallery, and it is a pity that it could not have been brought here and placed among these other beautiful works of the master.

Of course, in the present exhibition, "The Angelus" first demands our notice. Much has been said and written about this noted work, and it has been rated, justly enough on some accounts, as one of the finest of Millet's pictures. The question to be settled before we can decide where it is to stand among his works, is one that depends on whether sentiment that is extraneous to the actual truth of the subject has any place in a picture; and if it has not, how much the presence of such extraneous sentiment in a work of art may interfere with our enjoyment of it. In this single picture of Millet's we find, instead of the true sentiment of peasant life as it is expressed in "The Gleaners," "The Peasant Leaning on His Hoe," "The Sower," "The Buckwheat - Threshers," "The Churner," "The Grafter," and "The Planters," a religious sentiment that is artificial and forced, because it does not exist in the peasant; and the fact that it is only in this one picture that there is a trace of this sort of extraneous sentiment makes us wish that Millet had depended in this instance on the simple poetry of the hour, as he has in other pictures, for the true sentiment of the subject, and that his sympathetic brush had interpreted nothing but the real feeling of the peasant workers at the close of day. Technically considered, the picture is an admirable one, and ranks very high. The only fault to be found with it, perhaps, is that in general aspect the canvas is somewhat prettified, notably in the sky, where, on the left side, where it grows lighter as the place where the sun is setting is approached, the tone is too clean and a little too high in value to harmonize with the rest of the picture. The figures are marvellously enveloped in atmosphere, and as fine in character, apart from their unusual attitudes, as any of the peasants Millet has painted, with one or two exceptions; and there is nothing in any of his pictures more tenderly and beautifully painted than the field in the foreground and the plain stretching away to the distant village, with its church-tower in silhouette against the evening sky.

To see the "Buckwheat-Threshers," No. 555, is to see one of Millet's very finest compositions. As such there is no one of his pictures that surpasses it, unless it be that great masterpiece "The Gleaners," and the "Buckwheat-Threshers" has many points in common with that picture. Like it, it is a scene in a harvest-field, and the women in the foreground in each picture have the same sinewy strength that is only not grace because it is not meant to be. The "Buckwheat-Threshers" is not carried to the same point of finish in execution, but it is much like the other picture in the suggestion of the color scheme. "The Churner," No. 601, is one of the finest single figures Millet has painted, and the picture is notable for the beautiful painting of the interior of the cottage, where the churner is seen at her work. "The Sower," No. 620, again, is another excellent single figure. It is a different composition from the one in the Vanderbilt collection, the figure, for one thing, being smaller in the landscape and differently placed on the canvas. "Breaking Flax," No. 527, though a small picture, contains one of the very finest of Millet's female figures. Indeed, there is nothing more admirable in the galleries than this woman in her blue and gray gown of coarse stuffs, with every line of her body expressing the action in her work. Here, too, is found that wonderful humanity that Millet put in his pictures. It is only a picture of a woman working with her back turned to us, yet how full of real beauty it is, and what a delightful little piece of quiet color! "After the Bath," No. 587, is to be noted as the only study of the nude by Millet in the exhibition, belonging as it does to the period of his work that precedes the life of Barbizon. It is an admirable little figure, robustly modelled, and fine in tone. The other smaller pictures, each of which has distinctive characteristics and particular merits, are "Sheep-Shearing," No. 551; "The Shepherd," No. 602; "Woman Making Lye," No. 564; "Sea View off Cherbourg," No. 552 (a curious little canvas, one of the rare ones in which Millet has attempted to depict a purely marine view); and "The Gleaners," No. 588. This last picture is that fine little piece of blonde color which formerly belonged in the Spencer collection. The figures are almost identical in pose with those in "The Gleaners" in Paris, and they are grouped in about the same relative positions, except that in the larger picture the woman on the right is placed further away from the two others.

There is no more beautiful, no more poetical picture by Millet than "The Sheepfold—Moonlight," No. 545. Even in this collection, where the landscapes form such an important part, and where some of the finest of all that these great artists have painted may be seen, it impresses by its purity and truth. Two other pictures which belong in the domain of pure landscape show that Millet was a master of art in this field. They are "Landscape in Auvergne," No. 619, and "November," No. 608. The first is a splendid technical achievement, a great piece of pure painting from a simple motive, and especially remarkable for fine color quality; the second is equally simple, and from its subject—a ploughed hillside under a gray November sky, with a flock of birds rising at the high horizon—has a peculiar charm in its very nakedness. A fine landscape effect, though a trifle forced, is found also in the "Potato Harvest," No. 534, and the figures in this picture belong in the same category as those in the "Buckwheat-Threshers." They are hardy peasants painted in their true character at their work in the fields, without affectation or the attribution of a sentiment that does not belong to them. "The Turkey Keeper," No. 614, an important work notable for its landscape again, and with a telling figure wrapped in a cloak, is a canvas with a fine color-scheme very frankly and hardily suggested. The "Sheep-Shearing," No. 563, with its shepherd in blue blouse at the gate in the barn-yard, the gray walls of the farm buildings, and the grayish-white and brown of the sheep in the pens forming the principal notes of the color-scheme, is another beautiful picture of the farmer's life, and it is distinguished by a fine general tone of quiet gray that is especially delightful. In the "End of the Village—Gréville," No. 553, we find a remarkable Millet that is rather odd in composition and seems to be without interest at first glance, but which is nevertheless one of the best of the pictures here. Nothing could be more truthful than the effect of the gentle sunlight falling on the road and the wall at its edge where the cliff descends to the sea; and in the broad expanse of sea and sky beyond there is infinite charm.

Lastly, to complete this list of works wherein every side of Millet's temperament may be seen and studied, there are three pictures: "Waiting—Blind Tobit and his Wife," No. 573; "The Grafter," No. 628; and "The Planters," No. 554. "The Planters" closely resembles "The Angelus" in technical treatment, and though the time of day is different, there is a striking similarity in the color-schemes of the two pictures. In "The Planters," also, as in "The Angelus," there are two figures—a man and a woman—at work in the fields. "Waiting" is one of the most widely known of Millet's works, and it has been very highly ranked, but it cannot be said that it is one of the very best of his works, especially when it is seen in its present company. In so far as the sentiment of the subject is concerned, that is well suggested in the attitude of the blind man groping his way over the threshold of the cottage, and in the figure of his wife holding her hand above her eyes while she scans the horizon whither the road leads over the hilly ground to the west. But there is too much indifferent execution in the picture to give it a place among the best work of a man who at other times painted so perfectly, unless we are to throw everything aside when a canvas by Millet is in question, and say that everything he has done is well done. Still, there is a great deal of beauty in the picture, and it is not hard to explain how it has come by its high reputation. The things that are most easily appreciated in Millet's art are not always those which are of most value, and in this composition there was a story to tell, and its meaning is plain without the tablet on the frame that tells us the blind man and his wife are awaiting the arrival of their son. "The Grafters" is one of the best of Millet's works. Here is simplicity in subject and in painting. Here the figures of the man and of his wife, holding her child in her arms, are plain human beings seen in the garden of their humble homes and thinking of nothing beyond the life that surrounds them and the tasks they have to do. There is no more than that to say in the picture, but that is enough. Millet has said it quietly, soberly, and with his great art that dignifies the smallest and the humblest things, and this is the sort of pictures that have made of Millet the poet-painter his contemporaries knew and loved.

THOMAS NELSON & SONS'

Christmas Gift-Books

PEN AND PENCIL VOLUME FOR 1889.

RUSSIAN PICTURES DRAWN WITH PEN AND PENCIL. By Thomas Michell, C.B., author of 'Murray's Handbooks for Russia, Poland, and Finland,' etc., etc. With three maps and 124 illustrations. Imperial 8vo, cloth, gilt edges. $3.50.

"Mr. Thomas Michell has accomplished very well the task of stretching his text over so vast a territory. The cuts of Russian cathedrals, churches, and decorative work found in religious manuscripts of the Middle Ages are singularly interesting, while some effort has been made to depict the various types of people embraced under the Russian rule."—*New York Times.*

R. M. BALLANTYNE'S NEW BOOK.

BLOWN TO BITS; or, The Lonely Man of Rakata. A Tale of the Malay Archipelago. 12mo, cloth, covers in colors and gold, illustrated. $1.50.

The extremely violent nature of the volcanic eruption in Krakotoa in 1883, the peculiar beauty of those parts of the Eastern seas where the event occurred, the widespread influences of the accompanying phenomena, and the tremendous devastation which resulted, are all presented in a thrilling narrative for the juvenile world

ACHIEVEMENTS OF YOUTH (The). By the Rev. Robt. Steel, D.D. 12mo, cloth extra. $1.25.

A series of examples selected from various spheres of thought and life, to illustrate what has been accomplished by youths who diligently cultivate their powers and opportunities.

ACHILLES DAUNT'S NEW BOOK.

CRAG, GLACIER, AND AVALANCHE. Narratives of Daring and Disaster. By Achilles Daunt, author of 'With Pack and Rifle,' etc. With 13 illustrations. 12mo, cloth extra. $1.

"The stories, helped by the thirteen illustrations, will stir the most sluggish blood into a quicker and perhaps a more healthy flow, will find a host of readers among both the young and old."—*Journal of Commerce.*

NEW BOOK BY VERNEY LOVETT CAMERON.

AMONG THE TURKS. By Verney Lovett Cameron, C.B., D.C.L., Commander Royal Navy, author of 'Jack Hooper,' etc. 12mo, cloth extra, With 27 illustrations. 80 cents.

"It is a good book for boys, and will while away an hour or two for boys of larger growth, not without profit and pleasure."—*New York Times.*

THE FOOTSTEPS OF ST. PAUL IN ROME. An Historical Memoir, from the Apostle's landing at Puteoli to his death, A.D. 62-64. By S. Russell Forbes. 12mo, cloth extra. Illustrated. 80 cents.

"The work is a true historical study, and contains a wealth of material. The book is needed to supplement and correct the larger lives of St. Paul whose authors have never studied accurately some of the archæological questions involved."—*Public Opinion.*

FAVORITE BIBLE STORIES FOR THE YOUNG. With numerous illustrations. 16mo, handsomely illuminated board covers. 50 cents. Cloth extra, 75 cents.

HANDSOME EDITIONS OF

Robinson Crusoe and Swiss Family.

ROBINSON CRUSOE. The Life and Strange Adventures of Robinson Crusoe of York, Mariner. Written by himself. *Carefully reprinted from the original edition.* With Memoir of Defoe, a Memoir of Alexander Selkirk, and other interesting additions. Illustrated with upwards of 70 engravings by Keeley Halswelle. 12mo, cloth extra. Illuminated cover. $1.25.

SWISS FAMILY ROBINSON (The); or, Adventures of a Shipwrecked Family on a Desolate Island. *A New and Unabridged Edition.* With upwards of 300 engravings. 12mo, cloth extra. Illuminated cover. $1.25.

TWO CHARMING COLOR BOOKS.

THOMAS NELSON & SONS,
Publishers and Importers,
42 Bleecker Street, New York.

The American Railway.

Its Construction, Development, Management, and Appliances. Written by the most eminent authorities in all branches of railway work. With 225 Illustrations, 13 Maps, 19 Charts, many being colored, and a full Index. Bound in half leather. 8vo, $6.00 net.

LIST OF AUTHORS:

Thomas Curtis Clarke,	*Thomas L. James,*	*John Bogart,*	*Theodore Voorhees,*
Charles Francis Adams,	*Arthur T. Hadley,*	*M. N. Forney,*	*Benjamin Martin,*
Gen. Horace Porter,	*E. P. Alexander,*	*H. G. Prout,*	*B. B. Adams, Jr.*

With Statistical Studies by Fletcher W. Hughes, and an Introduction by Judge Thomas M. Cooley.

"One of the most interesting and valuable gift books of the season. The nearness of the theme, the authority of the writers, and the scope of the exposition, make this a work for almost every class of adult readers."—*N. Y. Nation.*

Aspects of the Earth.

A Popular Account of some Familiar Geological Phenomena. By N. S. Shaler, Professor of Geology at Harvard. With 100 Illustrations. 8vo, $4.00.

The general reader will find here an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanoes, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

"The curiously close inter-relation between natural science and the progress and development of man is impressively shown in this great work."—*Boston Traveller.*

Among Cannibals.

An Account of Four Years' Travels in Australia and of Camp Life with the Aborigines of Queensland. By CARL LUMHOLTZ. With over 100 Illustrations. 8vo, $5.00.

"Mr. Lumholtz selected for his study what proves to be the lowest race of *homo sapiens* known to exist—a race only just entering upon the Stone Age, that is, without even a tolerable supply of stone implements, without agriculture, without clothing of any kind, without religion, a miserable wandering race, living always from hand to mouth. His book is made up of an extraordinary narrative and a series of brilliant pictures."—*Boston Evening Transcript.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. Illustrated from the Antiquities Discovered in Mounds, Cairns, and Bogs, as well as from the Ancient Sagas and Eddas. By PAUL B. DU CHAILLU. With 1,400 Illustrations. 2 vols. 8vo, $7.50.

"In these two volumes we see the ancient Norseman in his habit as he lived—in peace and war, at home and in his incursions into far distant lands. We follow him from the cradle to the grave. The work is certain to attract great attention."—*Philadelphia Times.*

"These luxuriously printed and profusely illustrated volumes undoubtedly embody the fullest and most detailed account of our Norse ancestors extant. It is an extensive and important work."—*N. Y. Tribune.*

Strange True Stories of Louisiana.

By GEORGE W. CABLE. In an original and artistic binding. Square 12mo, illustrated, $2.00.

Mr. Cable's tales have a thread of common interest, and reveal many delightful glimpses of the French Creole civilization of the last and the present century. They are romantic in color and tender in feeling. The illustrations are very curious.

The Poetry of Tennyson.

By HENRY VAN DYKE, D.D. 12mo, $1.50.

Dr. Van Dyke's volume contains the completest study that has yet been made of the Poet Laureate's works and influence. The discussion carries the author naturally into the larger field suggested by the relation of poetry to life. The book is of special interest in its analysis of the part which the Bible plays in Tennyson's poems.

English Lands, Letters, and Kings.

By DONALD G. MITCHELL. 12mo, $1.50.

"A most charming book for lovers of the purest and best literature."—*Hartford Post.*

"The whole book is characterized by a graceful daintiness that removes the study of English literature from drudgery, and makes it a charming recreation."—*Boston Journal.*

A COLLECTION OF

Letters of Dickens.

Uniform with "Letters of Thackeray." 16mo, $1.25.

"A fascinating collection, one which should be cherished by every lover of Dickens. To have this author's works and not his letters should be nominated a literary sin."—*Boston Times.*

DELIGHTFUL BOOKS FOR THE YOUNG.

Personally Conducted.

By Frank R. Stockton. With 46 Illustrations by Joseph Pennell, Alfred Parsons, and others. Square 8vo, $2.00.

A fascinating volume of travel by the famous story-teller, the chapters being a series of pleasant, informal talks with an imaginary party of young people to whom the author is showing the curious and interesting sights of the Old World.

"As humorous and delightful as have been his previous stories."—*Boston Traveller.*

Children's Stories in English Literature.

From Talesin to Shakespeare. By Henrietta Christian Wright. 12mo, $1.25.

"Miss Wright sets forth in simple, attractive language the lives and works of the great men in English literature. Miss Wright has never produced a book so thoroughly fascinating in every way as this."—*Boston Beacon.*

By the same author: 'Children's Stories of the Great Scientists,' 'Children's Stories of American Progress,' 'Children's Stories in American History.' 12mo, illustrated, $1.25 each.

A new translation with copious Illustrative Notes of Cicero's First Tusculan Disputation, by ROBERT BLACK. 16mo, white parchment cover, $1.50.

SCRIBNER & WELFORD,

743-745 Broadway, New York.

TWO IDEAL LIVES.

The Story of William and Lucy Smith.

By George S. Merriam, author of 'Life of Samuel Bowles,' 'A Living Faith,' etc. With a Heliotype (bust) of William Smith. Crown 8vo, gilt top. $2.00.

The charm of this biography no doubt consists in the singular beauty of nature, and fineness of character and talent, possessed by those who are the subjects of it. . . . A vivid picture of Lucy Smith, on every side of her varied and most fascinating character.—*The Spectator* (London).

One of the most delightful literary memoirs, ranking with the life of Charles Kingsley in the beauty of the wedded life portrayed, the earnest search for truth, and the intellectual power with which the reader is brought in contact.—*The Advance* (Chicago).

A story with few incidents, but of an exquisite value, for it records the experiences of two richly endowed natures, whose love of truth seemed so nearly absolute that, at the very outset of the reader's acquaintance with them, they inspire a singular confidence and affection.—*The Providence Journal.*

It is the story of two lives which became one, perhaps the most perfect record of wedded life which the world has ever been permitted to see . . . The book is full of the most lofty spiritual conception of life, although it voices bravely all the doubts of the nineteenth century. . . . It will bring comfort, peace, joy, and stimulus into many a thoughtful mind.—*The Boston Evening Transcript.*

A true love-story and a prose "In Memoriam." . . . Whoever loves, and all who sorrow, will find their joy in reading it, and then rereading, lending, praising it.—*William C. Gannett.*

OPENING THE OYSTER. A Story of Adventure. By Charles L. Marsh. Profusely illustrated. 12mo. $1.75.

"It is such a tale of travel and adventure as will interest both young and old. . . . One does not often come across so fascinating a book."—*The Chicago Evening Journal.*

A. THIERS. By Paul de Remusat, Senator. Translated by Prof. M. B. Anderson. *The Great French Writers.* 12mo. $1.00.

"An admirable portrayal of the great French writer and statesman. . . . He was undoubtedly one of the greatest of French statesmen, and the story of his life as presented in this volume is remarkably interesting."—*The Chicago Herald.*

ALEXIA. By Mrs. Mary Abbott. 16mo. 75 cents.

"The plot is very simple; indeed, the story is a mere sketch, but one well, even artistically, executed."—*The Gazette, Salem, Mass.*

IN AND AROUND BERLIN. By Minerva B. Norton. 12mo. $1.00.

"It discusses education, the churches, museums, and palaces, giving descriptions of the streets, parks, cemeteries, and public buildings, with many glimpses of social and family life. It is a very suggestive and successful little book."—*The Universalist, Chicago.*

THE POETRY OF JOB. By George H. Gilbert, Ph. D 12mo. $1.00.

"This celebrated poem has never before had such a clear analysis, nor had its beauties so finely brought out. . . . It is a patient, painstaking, scholarly work of a scholarly man."—*The Inter-Ocean, Chicago.*

MUSICAL MOMENTS. Short Selections (Poetry and Prose) in Praise of Music. Collected by J. E. P. 16mo. $1.00.

Some of the finest passages in poetry have been inspired by its twin sister, music. A collection of choice quotations on this subject is here embodied in a very dainty and tasteful volume.

FAMILIAR TALKS ON ASTRONOMY, WITH CHAPTERS ON GEOGRAPHY AND NAVIGATION. By William H. Parker. 12mo, 264 pages. $1.00.

"It is written in a style concise and easy to understand, interesting as a personal talk. It will give to the schoolboy a clear idea of scores of facts he ought to know, and will tend to foster a desire for still further knowledge. . . . It is a book well worth the reading of old as well as young."—*The Chicago Times.*

SESAME AND LILIES. By John Ruskin. Finely printed and bound. 16mo. 237 pages, gilt top. $1.00.

A beautiful new reprint of Mr. Ruskin's noble little book—a reprint in which it is believed the paper, print, binding, and general tastefulness of the dress are somewhat harmonious with the author's exquisite language and elevated thought.

MOTIVES OF LIFE. By Prof. David Swing. *New and enlarged edition.* 16mo, 239 pages. $1.00.

"Here, as everywhere, Prof. Swing writes with the simplicity, the earnestness, and the honesty which come of a sincere devotion to all that is best and noblest and purest in life and character."—*The Evening Post, New York.*

CLUB ESSAYS. By Prof. David Swing. *New and enlarged edition.* 16mo, 266 pages. $1.00.

"As an essayist Prof. Swing has few equals and hardly a superior in the entire range of men of letters. . . . There is a mint of solid gold in these 'Club Essays.'"—*Home Journal, Boston.*

THERESA AT SAN DOMINGO. From the French of Mme. Fresneau. Illustrated. 12mo, 209 pages. $1.00.

Mme. Fresneau has commemorated in this capital story for children the evils of slavery and incidents of the negro insurrection at San Domingo in 1789. In addition to the vivid historic background she gives some excellent descriptions of life in the West Indies.

SEVEN DAYS AFTER THE HONEYMOON. By S. A. B. Small. 4to. Gilt edges. 75 cents.

"A dainty little booklet, appropriately gotten up, containing bills of fare for each meal of the seven days, with full directions for the preparation of each dish named. It is a pretty gift for a young bride."—*The Living Church, Chicago.*

For sale by Booksellers generally, or will be sent, postpaid, on receipt of price by the Publishers,

A. C. McCLURG & CO., Chicago.

ESTES & LAURIAT,

PUBLISHERS, BOSTON

NEW BOOKS FOR HOLIDAY GIFTS.

THE TWO BROTHERS

(PIERRE ET JEAN).

By Guy de Maupassant. Illustrated by Ernest Duez and Albert Lynch. Translated by Albert Smith. Bound in paper, enclosed in cloth portfolio, $12.50; 4to, extra cloth, gilt top, $13.50; three-quarters levant morocco, gilt top, $18.00.

"The knowledge of human nature, the study of complexity of motive, the fine mosaic-work of detail, cannot be conveyed to the mind that has not absorbed this intense tale. It is one of the richest publications of the year, and it will certainly inspire a wish to read more of Maupassant, and to study his genius in the light he himself demands for it. Of the few longer romances this remarkable writer has published thus far, 'Pierre et Jean' is considered by competent critics to be the most representative."—*N. Y. Literary News.*

The Low-Back'd Car.

By Samuel Lover. With Twelve Illustrations by William Magrath, printed by photogravure from Copper Plates, with Plate-mark; also Twelve Initial Vignettes, engraved on wood by C. H. Reed. Size of volume, 9½x11 inches. Handsomely bound in cloth. $5.

"There is little in this volume that does not deserve praise."—*N. Y. Epoch.*

Half-Hours with the Best Humorous Authors.

Selected and arranged by Charles Morris, embracing some of the choicest writings of the best American, English, and foreign humorists. In four volumes. Crown, 8vo. Cloth, gilt top, $6.00. Half morocco, $10.00. Three-quarters calf, $13,00.

"The entire collection is thus various in interest, and affords light and agreeable reading, of which the greater part is of good literary quality."—*N. Y. Nation.*

The Miller's Daughter.

By Alfred Tennyson. Illustrated with Original Designs by H. Winthrop Pierce, Edmund H. Garrett, Harry Fenn, J. Appleton Brown, and J. D. Woodward. Engraved on Wood. One volume 8vo. Cloth, $3. Ivory surface covers, $3.50. New style leather, $3.50.

"The sweet verse of the poem, which moves with a gentle rhythm like the murmur of the stream that turns the old mill-wheel, has taken on new beauty from the charming pictures that deck the pages."—*Philadelphia Record.*

Life of Benjamin Franklin.

The most complete life of Franklin ever published. Edited from original manuscripts, and from his printed correspondence and other writings. By Hon. John Bigelow. 3 vols., crown 8vo, cloth, $4.50.

"We know of no work in the whole range of our biographical literature that will be read with so much interest by our people."—*Boston Advertiser.*

Rab and His Friends.

By John Brown, M.D. With Eight Illustrations by Hermann Simon and Edmund H. Garrett, and a Portrait of the Author engraved on Wood. Small 4to. Neatly bound in two-color cloths, $1.40. New-style leather, $1.75.

"Dear old Rab! His touching history is given us in a beautiful dress. It is a worthy embodiment of a priceless gem of literature."—*Public Opinion, Washington.*

Prescott's Works.

"In point of style Prescott ranks with the ablest English historians, and paragraphs may be found in his volumes in which the grace and elegance of Addison are combined with Robertson's majestic cadence and Gibbon's brilliancy."—*London Athenæum.*

Sold by all booksellers, or sent postpaid on receipt of price, by

J. B. LIPPINCOTT COMPANY, Publishers,

715–717 Market Street, Philadelphia.

All who intend to hear the lectures of

MISS AMELIA B. EDWARDS

should read in connection with them her two charming books:

UP THE NILE.

By Amelia B. Edwards, Ph.D., LL.D., L.H.D., etc. With upwards of seventy Illustrations engraved on wood by G. Pearson, after drawings by the author. Revised edition, with fresh notes, 8vo, cloth, $2.50.

"*Miss Edwards's 'A Thousand Miles up the Nile' is one of the classics of the literature of Egypt. Her work as an Egyptologist, and deserved reputation as such, began with the expedition of which it is the narrative. Fifteen years ago that expedition was made, and more than ten years ago this narrative was first published. For some time since out of print, it is now reissued, in compacted but not abridged form, revised, retouched here and there with some points of latest research, but remaining in all essentials as it originalig was, one of the brilliant, fascinating books of travel for all time.*"—Literary World.

BY THE SAME AUTHOR, AND UNIFORM WITH THE ABOVE:

UNTRODDEN PEAKS AND UNFREQUENTED VALLEYS.

A Midsummer Ramble in the Dolomites. Revised edition, with Illustrations and Maps. 8vo, cloth, $2.50.

"*It is quite a treat to fall in with this bright, breezy record, in every line of which we seem to hear the ring of that cheery laughter wherewith its author greets every new mishap of the road, meeting scanty food, hard quarters, noise, dirt, rain, bad roads, the buffeting of mountain storms, and the stupidity of mountain peasants, not as a direct personal injury to be avenged by persistent ill humor, but as a kind of rough practical joke, rather exhilarating than otherwise.*"—New York Times.

*** For sale by all booksellers, or sent, postpaid, on receipt of the advertised price, by the publishers.*

GEORGE ROUTLEDGE & SONS, Limited,

9 Lafayette Place, New York.

Most Successful Book of this Year.

LORNA DOONE.

With many drawings.

By Mr. R. D. BLACKMORE.

Entirely new edition, from new type, with SEVERAL HUNDRED ORIGINAL ILLUSTRATIONS entirely new in all respects, specially drawn and engraved for this edition. These are of the very highest artistic merit by the best artists in the country, including such as Henry Sandham, George Wharton Edwards, Harry Fenn, Wm. Hamilton Gibson, Irving R. Wiles, W. H. Drake, Geo. E. Graves, Charles Copeland, Margaret McDonald Pullman, Harriet Thayer Durgin, Harper Pennington, and others. Engraved by hand and by process by A. V. S. Anthony, Geo. T. Andrew, Goupil of Paris, Kurtz, Wright Gravure Co., Fillebrown, Wm. J. Dana, etc.

Containing also a Beautiful Map of Exmoor, the Scene of the Story, Engraved in several colors.

This attractive romance, the most fascinating in its touches of both nature and human nature ever written in English, and perhaps in any language, is here published in an edition so luxurious in quality as to merit the praise it has received of being

THE MOST BEAUTIFULLY ILLUSTRATED BOOK EVER PUBLISHED IN AMERICA.

THOMAS DE QUINCEY. Edited by David Masson, M.A., LL.D. Vol. I. Autobiography from 1785–1803.

12mo, $1.25. Now ready.

*** The work will be completed in 14 volumes, published monthly, $1.25 each.

Walter Pater's New Book.

APPRECIATIONS. With an Essay on Style. By Walter Pater, Fellow of Brasenose College.

Globe, 8vo, $1.75.

Francis T. Palgrave's New Work.

THE TREASURY OF SACRED SONG. Selected from the English Lyrical Poetry of Four Centuries.

With Notes Explanatory and Biographical. By Francis T. Palgrave, editor of "The Golden Treasury of Songs and Lyrics." Limited edition, choicely printed on hand-made paper. Small 4to, half vellum, uncut edges, $7.00.

*** Small-paper edition now ready, price $2.00.

"To offer poetry for poetry's sake has been the editor's first aim in compiling this selection, which is intended to be representative of the entire range of English sacred poetry. The brief biographies inserted will, it is hoped, satisfy the natural desire for some acquaintance with the main facts in the lives of those whose best and deepest thoughts are here presented."—*From the Preface.*

Now Ready, with Illustrations and Plans.

TRAVELS IN INDIA OF JEAN BAPTISTE TAVERNIER, BARON OF AUBONNE.

Translated from the original French edition of 1676, with a biographical sketch of the author, notes, appendices, &c., by V. Ball, LL.D., F.R.S., F.G.S. With illustrations and maps. Two vols., medium 8vo, $12.

A HISTORY OF THE LATER ROMAN EMPIRE FROM ARCADIUS TO IRENE. A. D. 395–800.

By John B. Bury, M.A., Fellow of Trinity College, Dublin. 2 vols., 8vo, $8.

Prof. Edward Caird's New Book.

THE CRITICAL PHILOSOPHY OF IMMANUEL KANT.

By Edward Caird, LL.D., Professor of Moral Philosophy in the University of Glasgow. Two volumes, 8vo, $7.50.

"The object of this book is to give a connected view of the Critical Philosophy, showing the relations of the three Critiques to each other, and to the other works of Kant which may be regarded as illustrations or developments of his main argument. The first part on the Critique of Pure Reason deals with the same subject as my former work, entitled, 'The Philosophy of Kant,' but, except in a few passages, it is not a reproduction of it."—*From the Preface.*

INDIVIDUALISM: A SYSTEM OF POLITICS.

By Wordsworth Donisthorpe, Barrister-at-Law, author of 'Principles of Plutology,' etc. 8vo, $4.

Mrs. Molesworth's New Book for Children.

THE RECTORY CHILDREN. By Mrs. Molesworth. With illustrations by Walter Crane. 16mo, $1.25.

A New Book of Colored Pictures, with Music.

FLOWERS OF PARADISE. MUSIC—VERSE—DESIGN—ILLUSTRATION. By Reginald F. Hallward.

Printed in colors by Edmund Evans. Royal 4to, $2.

Twelve English Statesmen Series.

New volume. 12mo, cloth, limp, 60 cents; edges uncut, 75 cents.

WALPOLE. By John Morley.

"The book is one which none who take it up will willingly put down. In style it is, perhaps, the best of Mr. Morley's writings."—*Daily News.*

"Mr. Morley's long expected life of Sir Robert Walpole has at length made its appearance, and deserves to be read not only as the work of one of the most prominent politicians of the day, but for its intrinsic merits. It is a clever, thoughtful, and interesting biography."—*St. James's Gazette.*

EXTRACT FROM THE PREFACE.

This a[illegible]ent has been undertaken in compliance with wishes expressed by s[illegible]xperienced schoolmasters. It is an entirely new work, and it is hope[illegible] will meet their requirements. It differs from the old abridgmen[illegible]hat—1st. It is made from the last edition of the large Lexico[illegible] The matter contained in it is greatly increased. This increase has [illegible]aused by giving fuller explanations of the words, by inserting t[illegible]ular forms of Moods and Tenses more fully, by citing the leading [illegible]ties for the different usages, and adding characteristic phrases.

11 EAST SEVENTEENTH STREET, NEW YORK.

THE HAVEMEYER LIBRARY.

Important to Collectors of Rare and Choice Books.

J. W. Bouton has the pleasure to announce that he has now on exhibition and sale, at 1152 Broadway, the Extensive and Valuable Library of a gentleman of well-known taste and culture, who has devoted many years and a large expenditure of money in its formation. The collection is one of unusual excellence and interest. It is seldom, indeed, that a library so perfect in the essentials requisite for a gentleman is placed at the disposal of the public. In the number and range of desirable books, in the choice of editions, in the careful selection of copies, the judicious and often costly bindings, and the perfect condition of the whole, it has seldom been equalled. The Library is particularly strong in Standard Authors and the various departments of the Fine Arts, and comprises all the most notable Art Publications, both old and new; Galleries and Collections of Prints, Etchings, Drawings, and Standard Treatises in English, French, and German—specially illustrated copies with inserted plates—all being in the finest possible condition, a considerable number of which could not easily be duplicated, while others are *absolutely unique*. The prices at which the books are marked are very reasonable, in many cases from 25 to 50 per cent. below their original cost, with the object of inducing a speedy sale.

*** *A handsomely printed Catalogue, by DeVinne, is now ready, and will be sent to any address upon receipt of 25 cents, which amount will be refunded if any purchases are made.*

J. W. BOUTON, 1152 Broadway, New York.
Uptown Branch of 706 Broadway.

MANN'S REFERENCE INDEXES.—References to and transcripts or translations of the literature of *any subject* furnished by B. PICKMAN MANN, Washington, D. C. Correspondence fee, 50 cents. Explanatory circulars free.

The Book of the Season.

GREAT SENATORS OF THE UNITED STATES Forty Years Ago (1848 and 1849). With Personal Recollections and Delineations of Calhoun, Benton, Clay, Webster, Gen. Houston, Jefferson Davis, etc. By Oliver Dyer. Robert Bonner's Sons, Publishers. Price, $1.

'Great Senators' is emphatically the book of the season. The critics and reviewers give it unstinted praise. The New York *Tribune* concludes a two-column review of it thus:

This book will be read with the keenest pleasure by all who are old enough to have been brought up in the traditions of half a century ago, while it can be commended to young men as a treasure-house of information concerning perhaps the most striking and able group of statesmen the Union has known.

The New York *Times* says:

Mr. Dyer's relation with the great Senators of forty years ago was one very fortunate for the acquiring of fresh impressions. It is impossible to read his reminiscences without being aware that the impressions he reports are genuine.

The New York *Sun* says:

Among the recent contributions to American history none is worthy of more serious attention than a volume entitled *Great Senators*, by Oliver Dyer.

It would be easy to fill columns with effective extracts from this volume, but we must confine ourselves to two or three examples of incisive and impartial delineation. Mr. Dyer's analysis of Webster's individuality is the most searching that we have seen—indeed, it is the only one which accounts at once for the triumphs and the shortcomings of the great parliamentary champion of the Union.

The New York *Press* says:

In the book, "Great Senators of the United States Forty Years Ago," are told, as Dyer only could tell, stories of Calhoun, Benton, Clay, Webster, Houston, and Jeff Davis, with personal recollections and delineations. The personal descriptions given by Dyer of these great men are photographic in precision and lifelike as touched up by the anecdotal stroke of a master.

"Great Senators" is supplied to the trade by Robert Bonner's Sons. Any one who does not find "Great Senators" at the bookstores can obtain a copy, postage paid, by sending a dollar to Robert Bonner's Sons, corner of Spruce and William Streets, New York.

CATALOGUES ISSUED of Books in good condition. Books purchased.
E. W. JOHNSON, 1336 Broadway.

A. C. McClurg & Co.'s

NEW BOOKS NOW READY.

ABDALLAH;

Or, the Four-leaved Clover. By Edouard Laboulaye. Translated by Mary L. Booth, 16mo, gilt top, $1.00.

The high favor in which this beautiful French classic is held by American readers has led to the preparation of this new and tasteful edition. 'Abdallah' is one of those exquisite tales that must ever delight young and old alike by their purity of style, brightness of wit and fancy, and elevated moral sentiment.

RASSELAS,

Prince of Abyssinia. By Samuel Johnson. 16mo, gilt top, $1.00.

Samuel Johnson's 'Rasselas' has been almost a world-famous tale ever since 1759, when it was first published. Its popularity was instantaneous, and has been continuous ever since. In this new edition the publishers have sought to combine unpretentious elegance with inexpensiveness.

AN ICELAND FISHERMAN.

By Pierre Loti. Translated by Anna Farwell De Koven. 16mo. $1.00.

This is a peculiarly beautiful and fascinating book —a noble piece of imaginative literature.

STANDARD SETS.

UPTON'S HANDBOOKS ON MUSIC.

Comprising: The Standard Operas, the Standard Oratorios, The Standard Cantatas, The Standard Symphonies. 12mo; per vol., $1.50; four volumes in box, $6.00.

"An invaluable little library to the lovers of music." —*School Journal (New York).*

"Like the valuable art hand-books of Mrs. Jameson, these volumes contain a world of interesting information indispensable to critics and art amateurs." —*Public Opinion (Washington).*

THE GREAT FRENCH WRITERS.

Comprising: Mme. De Sévigné, by G. Boissier. George Sand, by E. Caro; Montesquieu, by A. Sorel; Victor Cousin, by Jules Simon; Turgot, by L. Simon; Thiers, by Paul de Remusat (*Others to follow.*) Translated by Prof. M. B. Anderson. 12mo; per vol , $1.00.

"The French writers' series are written as only Frenchmen write short books; with a clarity and sense of form which leave on the mind a definite and complete impression."—*Book News (Philadelphia).*

TALES FROM FOREIGN TONGUES.

Comprising: Memories, by Max Muller; Graziella, by Lamartine; Marie, by Pushkin; Madeleine, by Sandeau. 16mo; per vol., $1.00; four volumes in box, $4.00.

The series of four volumes contains perhaps the best pieces of classic fiction which have been added by translation to the English language in recent years.

THE SURGEON'S STORIES.

Comprising: Times of Gustaf Adolf, Times of Battle and of Rest, Times of Charles XII., Times of Frederick I., Times of Linnæus, and Times of Alchemy, from the Swedish of Prof. Z. Topelius, 12mo; per vol., 75 cents; six volumes in box, $4.50.

"No such stories can be found in the language, unless we except Scott's Novels and Wilson's tales of the Border."—*Press (Philadelphia).*

BIOGRAPHIES OF MUSICIANS.

Comprising: Life of Mozart, Life of Beethoven, Life of Haydn, Life of Wagner, and Life of Liszt, from the German of Dr. Louis Nohl. Per vol., $1.00; five volumes in box, $5.00.

"A series of biographies which ought to be on the shelves of all intelligent musical amateurs."—*Musical World.*

For sale by Booksellers generally, or will be sent, postpaid, on receipt of price by the Publishers,

A. C. McCLURG & CO., Chicago.

Choicely Printed Books

RECENTLY ISSUED BY

Little, Brown & Co.

Florida Days.

By Margaret Deland, Author of "John Ward, Preacher." Illustrated by Louis K. Harlow, with 4 colored plates, 2 etchings, 11 full-page plates, and 48 illustrations in the text. 8vo. Cloth, extra, gilt top, $4.00.

No more exquisite volume has ever been offered at any season to those who value all that goes to the making of a perfect book.—Boston Transcript.

De Vigne's Cinq-Mars.

Cinq-Mars; or, A Conspiracy under Louis XIII. By Count Alfred de Vigny. Translated by William Hazlitt. With thirteen exquisite full-page etchings by Gaujean, and numerous smaller illustrations (head and tail pieces) in the text. Two vols., 8vo, cloth, gilt top, $6.00 net.

This celebrated romance of the reign of Louis XIII., first published in English in 1842, has been for many years out of print, and now appears for the first time with every element of attractiveness that can be lent to it by large, clear type, choice paper, and beautiful illustrations.

It is one of the masterpieces of French romantic fiction . . . and a book to be always read and remembered.—New York Mail and Express.

Alexandre Dumas's Romances.

Ten new volumes have just been added to the very successful choice Library edition of these famous and fascinating works in course of publication. The type is large and clear, the binding choicely decorated, and the stories are translated into English, unabridged. The following have thus far been issued in the series:

THE COUNT OF MONTE CHRISTO. *With 8 plates by E. H. Garrett.* 4 vols., 12mo. Cloth. Gilt top..... $6.00

THE VALOIS ROMANCES. (Period of Charles IX. and Henri III.) *With 6 historical portraits.* 6 vols., 12mo. Cloth, gilt top..... $9.00

1. Marguerite de Valois. 2 vols. $3.00.
2. La Dame de Monsoreau. 2 vols. $3.00.
3. The Forty-Five. 2 vols. $3.00.

THE D'ARTAGNAN ROMANCES. (Period of Louis XIII. and Louis XIV.) *With an etched portrait of Dumas and 10 historical portraits.* 10 vols., 12mo. Cloth, gilt top..... $15.00

1. The Three Musketeers. 2 vols. $3.00.
2. Twenty Years After. 2 vols. $3.00.
3. The Vicomte de Bragelonne. 6 vols. $9.00.

Those who have found entertainment of the most varied and delightful sort in the pages of Alexandre Dumas have long been confident of a renaissance of his fame in this country. Dumas is, by common consent, the prince of story-tellers. He deserves the title which Mr. Lang has recently conferred upon him of Alexandre the Great.—Christian Union.

Watson's Swedish Revolution.

The Swedish Revolution under Gustavus Vasa. By Paul Barron Watson, author of 'Marcus Aurelius Antoninus,' and member of American Historical Association. 8vo, cloth, gilt top, $2.50.

Unless we misjudge him greatly, he will ultimately take rank with Prescott, Irving, Ticknor, Motley, and others who have sought in foreign lands subjects for their pens.—Philadelphia Bulletin.

Ten Thousand a Year.

A new and choicely printed edition of Samuel Warren's famous English novel. With a portrait of the author, beautifully etched by F. T. Stuart. 3 vols., 12mo, cloth, extra gilt top, $4.50; half-calf, extra, gilt top, $9.00; half morocco, gilt top, $9.00.

The only good Library Edition of the famous novel.—The Critic.

Marcus Aurelius Antoninus.

The Thoughts of Marcus Aurelius Antoninus. Translated, with Memoir, etc., by George Long. A Beautiful Library Edition. With engraved Roman coin on title. 12mo, cloth, extra, gilt top, $1.50. Half calf, extra, or half morocco, gilt top, $3.25.

It is doubtful if we shall ever have a more perfect version of these famous "Thoughts" than the one under notice; and certainly in point of paper, typography, and printing, no more desirable edition could be desired for the library.—Boston Advertiser.

Walton's Angler.

The Complete Angler. By Izaak Walton and Charles Cotton. With an introduction by James Russell Lowell. *Illustrated with 17 plates (including 6 etchings), also 74 exquisite wood engravings of fish, persons, and places mentioned in the work.* 2 vols., small 8vo, cloth, uncut, $10.00 net. (Only 500 copies printed.)

The special feature is an introduction by James Russell Lowell, written especially for this edition; but it is also worthy of the attention of book lovers from its beautiful, clear, open type, and superfine paper of heavy body and rich finish, especially adapted to produce the most perfect combined effect of handsome text and choice wood-cut printing.

Little, Brown & Co., Publishers,

254 Washington Street, Boston.

Houghton, Mifflin & Co.'s

By Nathaniel Hawthorne. Beautifully illustrated with fifty photogravures. 2 vols., 8vo, gilt top. With slip covers in the Italian style, in cloth box, $6.00; full polished calf, $12,00; full white vellum, gilt top, $12.00.

The Autocrat of the Breakfast Table.

By Oliver Wendell Holmes. Birthday Edition. With engraved title-pages. 2 vols., 16mo, gilt top, $2.50; full polished calf, $8.00.

Wyndham Towers.

A Narrative Poem of the time of Elizabeth, by Thomas Bailey Aldrich. Artistically bound. Second edition. $1.25.

The Hermitage and Later Poems.

By Edward Rowland Sill. 16mo, tastefully bound in parchment paper cover or cloth. $1.00.

Poems.

By Edward Rowland Sill. 16mo, tastefully bound in parchment-paper cover or cloth. $1.00.

Three Dramas of Euripides.

The Medea, the Hippolytos, and the Alkestis. By William Cranston Lawton. Crown 8vo, gilt top, $1.50.

To a fine metrical translation of the three dramas are added such explanatory remarks as serve to give an adequate impression of them as produced on the Athenian stage.

Standish of Standish.

An Historical Novel of the Plymouth Colony and its famous Captain, by Jane G. Austin, author of 'A Nameless Nobleman,' etc. $1.25.

Memoirs of a Millionaire.

A Story. By Lucia True Ames. $1.25.

"The book is strong and sweet and wholesome as a mountain wind."—*Rev. J. W. Chadwick, in Christian Register.*

A Rambler's Lease.

A delightful out-door book by Bradford Torrey, author of 'Birds in the Bush," 16mo, $1.25.

*** For sale by all booksellers. Sent, by mail, postpaid, on receipt of price, by the publishers,*

HOUGHTON, MIFFLIN & CO.,

BOSTON.

11 East Seventeenth St., New York.

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 Illustrations. Bound in half leather. 8vo, $6.00 net.

"This sumptuously made and illustrated volume consists of essays by specialists upon every branch of the American railway system. While the work is one for permanent instruction, its artistic side gives it all the attraction of a special Christmas publication. It should find a large circulation, for its matter is most valuable while the manner of presenting the matter is attractive and interesting."—*N. Y. Tribune.*

"This is, beyond all compare, the greatest American work on railways. It is difficult to devise a question on railway construction or management for which the answer may not be found in this book. It is a great book and remarkably handsome besides."—*N. Y. Herald.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. By Paul B. Du Chaillu. With 1,400 Illustrations. 2 vols. 8vo, $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations will make them a mine of instructive pleasure."—*N. Y. Observer.*

"For readers who wish to reach a comprehensive knowledge of the old Northmen, this is the book most needed and most useful. It is full of illustrations that are just what illustrations should be."—*N. Y. Independent*

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By Prof. N. S. Shaler. With 100 illustrations. 8vo, $4.00.

The general reader, unacquainted with the details of natural science, is here given an interesting and graphic account of those phenomena of the earth's surface—earthquakes, cyclones, volcanos, rivers, forests, caverns, etc.—which most directly affect human life. The illustrations are many and artistic.

"A very attractive volume which is certain to be received with wide and popular interest."—*N. Y. Sun.*

Among Cannibals.

An Account of Four Years' Travels in Australia and of Camp Life with the Aborigines of Queensland. By Carl Lumholtz. With over 100 illustrations. 8vo, $5.00.

"Mr. Lumholtz selected for his study the lowest race known to exist—a race only just entering upon the Stone Age. Here, in an unvisited corner of northern Australia, was an indubitably veracious picture of man's life in the infancy of the race. His book is made up of an extraordinary narrative and a series of brilliant pictures."—*Boston Transcript.*

English Lands, Letters, and Kings.

By Donald G. Mitchell. 12mo, $1.50.

"A bright, pleasant, chatty record, true to history and full of useful hints and suggestions."—*Boston Sat. Eve. Gazette.*

"A most charming book for lovers of the purest and best literature."—*Hartford Post.*

The Poetry of Tennyson.

By Henry Van Dyke, D.D. 12mo, $1.50.

Dr. Van Dyke's volume contains the completest study that has yet been made of the Poet Laureate's works and influence. The book is of special interest in its analysis of the part which the Bible plays in Tennyson's poems.

"Dr. Van Dyke writes about Tennyson in a thoroughly appreciative way."—*Philadelphia Times.*

Strange True Stories of Louisiana.

By George W. Cable. With illustrations and fac-simile reproductions. 12mo, $2.00.

The charm of style and the delicate flavor of romance characteristic of Mr. Cable's short stories are seen at their best in this volume. The tales have a thread of common interest and reveal many delightful glimpses of the French Creole civilization of the last and early years of the present century.

"A charming book, charmingly bound, printed, and pictured."—*Wash. Capitol.*

Said in Fun.

By Philip H. Welch, author of 'The Tailor-Made Girl.' With a Preface by Robert Gordon Butler. Square 8vo, $1.25. Illustrated with full-page drawings by W. A. Rogers, E. W. Kemble, O. Herford, C. G. Bush, Albert E. Sterner, C. D. Gibson, W. T. Smedley, F. G. Atwood, W. P. Snyder, C. Jay Taylor, J. A. Mitchell, W. L. Sheppard, W. S. Van Schaick, A. B. Frost, F. Opper, "Chip," M. Woolf.

The brightest of Mr. Welch's witty paragraphs and sketches have been gathered from all quarters and some unpublished matter has been added, the whole making, with the illustrations, a book full of the rarest fun in picture and text.

A COLLECTION OF

Letters of Dickens.

Uniform with 'Letters of Thackeray.' 16mo, $1.25.

"A fascinating collection, one which should be cherished by every lover of Dickens. To have this author's works and not his letters should be nominated a literary sin."—*Boston Times.*

"They are unaffected, humorous, and the expression of the whole man."—*Boston Herald.*

DELIGHTFUL BOOKS FOR THE YOUNG.

Personally Conducted.

By Frank R. Stockton. With 46 Illustrations by Joseph Pennell, Alfred Parsons, and others. Square 8vo, $2.00.

A series of pleasant, informal talks with an imaginary party of young people to whom the author is showing the curious and interesting sights of the Old World.

"As humorous and delightful as have been his previous stories.—*Boston Traveller.*

Children's Stories in English Literature.

From Talesin to Shakespeare. By Henrietta Christian Wright. 12mo, $1.25.

"Miss Wright sets forth in simple, attractive language the lives and works of the great men in English literature. Miss Wright has never produced a book so thoroughly fascinating in every way as this."—*Boston Beacon.*

IMPORTANT HOLIDAY PUBLICATIONS

At Prices Ranging from Fifty Cents to Thirty-Five Dollars Each.

Venice.

Eight fac-similes of colored Venetian photographs executed in the most careful manner, and accompanied by selections from the valuable work by CHARLES YRIARTE.

List of fac-similes of colored photographs.

St. Mark's Cathedral, The Doge's Palace, The Piazza and Campanile, The Arsenal, The Grand Canal, The Bridge of Sighs, The Riva dei Schiavoni, The Rialto Bridge.

The text is fully illustrated by half-tone engravings, after new drawings, and the whole is beautifully printed.

Large folio, cloth, stamped with appropriate designs in gold on wide band in the centre of front cover.

At the top and bottom of this central band are illuminated strips in gray and gold. In a box, $7.50.

Fac-similes of Aquarelles.

BY AMERICAN ARTISTS.

Water-color paintings by various prominent artists have been reproduced in almost perfect fac-simile.

Each one of the reproductions is well worthy of framing, and when framed could hardly be distinguished from a water color.

Text, including an important essay on "*Water-color Painting in America*," by RIPLEY HITCHCOCK, author of "*Madonnas by Old Masters*," etc.

Size of page, 20x15 inches.

Names of Artists:

PERCY MORAN, W. HAMILTON GIBSON, MAUD HUMPHREY, J. L. GEROME FERRIS, H. W. MCVICKAR, JAMES M. BARNSLEY, JAMES SYMINGTON, and PAUL NIMMO MORAN.

The text accompanying each fac-simile is beautifully printed in connection with a new portrait of the artist, and a reproduction of a black-and-white sketch by the artist, in each case.

EDITION DE LUXE.

I. First impressions from the original stones, with *remargue* in colors, and the signature of the artist in each case, forming an *artist-proof edition*.

These proofs, and the accompanying text, are inclosed in a portfolio of a rich embossed gray-and-gold material, with wide back of embossed leather.

In a panel on the front cover is a part of one of the fac-similes in colors.

The portfolio is tied with silk floss, and is in a box.

This edition is strictly limited to 250 copies, each of which is signed and numbered. Price $35.00.

REGULAR EDITIONS.

II. Regular impressions without *remargue* or artist's signature, bound in cover of gray-and-gold embossed material, and having wide white vellum-cloth strip at side entirely covered with tracery in gold.

In a panel on the side is a part of one of the fac-similes.

Each, in a box, $12.50.

III. The same as II., but placed loosely in portfolio, of the same materials and design, tied with ribbons.

Each in a box, $15.00.

43 New Volumes in the delightful

Handy-Volume Standards.

Kingsley's Select Works, 4 vols.; *Select Dramatic Works*, 4 vols.; *Life of Charlotte Bronte, Gaskell*, 2 vols.; *Manual of English Literature, Craik*, 2 vols.; *Poems of Robert Browning*, 4 vols.; *History of Our Own Times, McCarthy*, 5 vols.; *Works of George Eliot, complete*, 24 vols.

2. THE SEASONS. THOMSON.
3. THE VICAR OF WAKEFIELD.

I. *Small-paper edition.*

Limited to 1,500 copies of each book (part of which will be used in Great Britain and part in the United States).

Each is printed from type on hand-made paper.

Each volume is illustrated by the original steel engravings of the early part of this century, after the famous designs by Westall.

Each, 1 vol., 16mo, half cloth, gilt top, $2.00; half polished "seal," gilt top, $3.50; full polished "seal," gilt top, $4.50.

II. *Large-paper edition.*

Limited to 60 copies for the United States.

Printed from type on hand-made paper of large size.

Each volume is illustrated by the Westall plates, printed on India Paper.

Each, 1 vol., 8vo, paper wrappers, $5.00; half-crushed levant, gilt top, $10.00; full crushed levant, gilt edges, in a box, $12.50.

N. B. After printing these editions the type has been distributed.]

An Important New Volume of Verse.

Between Times.

By WALTER LEARNED.

A new volume in the series of "American Verse."

The greater part of Mr. Learned's work has appeared in the *Century*, and other prominent periodicals, and this collection of his delightful work will doubtless receive a warm welcome. $1.00.

The "Gondola" Series.

Collections of fac-similes of celebrated colored Venetian photographs. Accompanied by selections from the text by CHARLES YRIARTE. With half-tone engravings.

I. GONDOLA AND PALACE.

Contains: "*The Doge's Palace*," "*The Bridge of Sighs*," "*The Arsenal*," and "*The Piazza and Campanile*."

II. THE QUEEN OF THE ADRIATIC.

Contains: "*St. Mark's Cathedral*," "*The Grand Canal*," "*The Riva dei Schiavoni*," and "*The Rialto Bridge*."

Each large folio (size 12x13 inches). In elaborate cover, which contains in the centre a fac-simile of a colored photograph. This is surrounded by a border, representing a Florentine frame of white and gold, with background of Nile green. Tied with very heavy silk cord. Each copy in a box. Price, each, $2.00.

Volume X. and a new binding in the "Etching and Photogravure Series."

Etchings, Places.

Four etchings on Japan paper, neatly matted, comprising:

Gloucester, Mass. By KRUSEMAN VAN ELTEN.—*Madison Square, New York*, By FRANK M. GREGORY.—*Near Newport, R. I.* By C. F. W. MIELATZ.—*In Central Park, New York.* By OTTO H. BACHER.

The etchings are accompanied by title-page, and are bound in leatherette cover, tied with ribbons. In a box. Price.....$5.00

The Patriotic Songs Series.

A new series of national songs. Each song is illustrated by six leaves in full COLORS, each leaf containing three vignettes of American scenery. These are accompanied by leaves in monotints, with illustrations and the words of the song, as well as two leaves giving the MUSIC of the song. Size 8x9 inches, in double covers of illuminated metals and colors, showing the title of each song, as well as four vignettes of scenery different from those contained within the covers in each case.

1. *America! My Country, 'tis of Thee.* By SAMUEL SMITH.
2. *Columbia, the Gem of the Ocean.* By DAVID T. SHAW.
3. *The Star-Spangled Banner.* By FRANCIS SCOT KEY.

Gilt edges, rounded corners, tied with gilt cord. Each in a box. Price, each, $1.50.

A brilliant combination of the best witty conceits of America.

Publishers, Importers, Booksellers, Stationers, and Dealers in Works of Art,

182 FIFTH AVENUE, NEW YORK CITY.

MACMILLAN & Co.'s NEW BOOKS,

SUITABLE FOR HOLIDAY AND CHRISTMAS PRESENTS.

ILLUSTRATED BOOKS.

A Magnificent Volume.

PEN DRAWING AND PEN DRAUGHTSMEN. Their Work and Their Methods. A Study of the Art To-day, with Technical Suggestions. By Joseph Pennell. With nearly 200 illustrations. Small 4to. $20.00.

*** A Special Edition has been printed of twenty-five copies only, each containing an original Pen Drawing by the Author, no two copies being alike. Price, $50.00.

"Among the noteworthy books of the season none is likely to attract so much attention from the world of art and letters as the magnificent treatise on 'Pen Drawing and Pen Draughtsmen,' by Joseph Pennell."—*Boston Beacon.*

"A study of modern illustrative work which will be found timely, suggestive, and useful. . . . His discussion of the methods of these artists is more elaborate than any which we have had, and it will be extremely valuable to students who have founded themselves securely in drawing, and who are strong enough not to be led away to mere imitation. . . . The illustrations are usually well selected, and they are valuable as examples of different methods of reproduction, as well as for the original designer's work. The book will furnish some instruction which should be welcomed by the lay readers of our magazines and illustrated books."—*New York Tribune.*

Profusely Illustrated.

A CENTURY OF ARTISTS. With Historical and Biographical Notes by W. E. Henley, and Descriptions of the Pictures by Robert Walker. With 9 full-page plates and 94 illustrations. Super-royal 8vo, $16.00. Also an Edition on large paper, limited to 215 copies, with the plates on Japanese paper. Super-royal 4to, $35.00.

Scottish art is fully represented from the time (1600) of George Jameson down till to-day; English art from the Gainsborough and Reynolds period onward to painters of to-day—such as Messrs. Alma-Tadema, Albert Moore, Rossetti, Burne Jones, Wyllie, and others; French art from Delacroix and Corot to MM. Billet and Harpignies. Living Spanish art also finds a place; likewise the schools of Italy, Scandinavia, Germany, and Belgium. Holland is fully represented by many noble masterpieces. Brief biographical and historical notes of each artist are given; there is a descriptive note on each picture, and a reproduction of one of each artist's most important works. The book has been choicely printed on hand-made paper by Messrs. T. & A. Constable.

Profusely Illustrated by Herbert Railton and Hugh Thomson.

COACHING DAYS AND COACHING WAYS. By W. Outram Tristram. With numerous illustrations by Herbert Railton and Hugh Thomson. Small 4to, cloth, elegant, $6.00.

WESTMINSTER ABBEY. By the Rev. W. J. Loftie, author of "Memorials of the Savoy," "Windsor Castle," etc. With twelve plates and many minor illustrations. Imperial 4to, cloth, $7.50.

"Every American who has been in London loves Westminster Abbey, and all of them who can procure this beautifully illustrated history of it will prize it as one of their dearest treasures. Mr. Loftie writes of it with the devotion of a lover and the fidelity of an antiquarian student."—*Philadelphia Bulletin.*

THE EARLIER ENGLISH WATER-COLOR PAINTERS. By Cosmo Monkhouse. With thirteen plates after Turner, Girtin, Bonington, Cotman, De Wint, Sandby, Hearne, Barret, Prout, Cozens, Copley Fielding, Cattermole, and David Cox. Super-royal 8vo, cloth, $7.50.

"These reminders bring us to Mr. Monkhouse's starting point, which is the beginning of the modern art. As to the place, there is no dispute. Modern water-color painting began in England, and the history of the great English water-color school forms the brightest chapter in the history of English art . . . An intelligent acquaintance with the school is aided materially by the excellent illustrations. There are fourteen photographic copper-plate reproductions of etchings, mezzotints, and drawings, and many minor illustrations."—*New York Tribune.*

THE SHORTER POEMS OF JOHN MILTON. With twelve illustrations by Samuel Palmer, painter and etcher. Royal 4to, $7.50. Also a large-paper Edition, bound in vellum, $37.50.

"One of the choicest publications of our time, and honorable to all concerned—to the printer, binder, and engraver—embodies Palmer's crowning work as an etcher."—*Athenæum.*

OXFORD. Brief Historical and Descriptive Notes. By Andrew Lang, M.A. With numerous illustrations. 12mo, $2.00.

The volume contains no less than 40 full-page illustrations reproduced from drawings and etchings of well-known artists. Amongst them being Magdalen Tower, Merton College, New College, The Muniment Room at Merton College, etc., from etchings by R. Kent Thomas. View of Oxford: Oxford Castle, Magdalen Tower from Christchurch Meadows, Castle Street, Porch of St. Mary's, etc., by A. Brunet-Debaines. Brasenose College, High Street, etc., by H. Toussant. Iffley, by Alfred Dawson. The Garden Front of St. John's College, by J. Pennell, etc., etc.

JAPAN AND ITS ART. By Marcus B. Huish, LL.B. Editor of "The Art Journal." 8vo, $3.00.

A New Book of Colored Pictures, with Music.

FLOWERS OF PARADISE. Music—Verse—Design—Illustration. By Reginald F. Hallward. Printed in Colors by Edmund Evans. Royal 4to, $2.00.

"One of the prettiest, if not the prettiest, of this year's picture-books."—*Pall Mall Gazette.*

A New Book by the Rev. J. P. Mahaffy. With Illustrations by J. E. Rogers.

A TOUR IN HOLLAND AND GERMANY. By the Rev. J. P. Mahaffy, D.D. Author of 'Social Life in Greece,' 'Rambles and Studies in Greece,' etc. With illustrations by J. E. Rogers. Extra crown 8vo, cloth extra, $3.00.

Mrs. Molesworth's New Book for Children.

THE RECTORY CHILDREN. By Mrs. Molesworth. With illustrations by Walter Crane. 16mo, $1.25.

STANDARD BOOKS

Published in sets.

ARNOLD. The Collected Works of Matthew Arnold. (Including the Poems, 3 volumes.) 12 volumes, Globe 8vo, in box, $18.00. Bound in half calf, in box, $30.00.

BROWNING. Poetical Works of Robert Browning. Complete in 16 volumes. 16mo, cloth, gilt top or uncut edges, in box, $22 50. Half levant morocco, in box, $40.00.

"This is the official edition now coming out in England and in this country under the poet's personal direction and supervision. It is understood to embody his final corrections and to give his poems in the form in which he wishes them to survive. The edition is well made and well printed in 16mo."—*Independent.*

NEW AND ENLARGED EDITION OF THE COLLECTED WORKS OF DE QUINCEY. Edited by David Masson, M.A., LL.D., Professor of Rhetoric and English Literature in the University of Edinburgh.

Vol. I. Autobiography from 1785 to 1803. Prefaced by a general Editorial Introduction to the New Edition. 12mo, $1.25.

Vol. II. Autobiography *continued*—(two chapters being additional) with Literary and Lake Reminiscences. 12mo, $1.25.

*** The work will be completed in 14 volumes, published monthly, price, $1.25 each.

"Prof. Masson's general preface, most agreeably written, ushers in the first volume, which begins with the autobiography, and it promises the kind of editing which one could wish to see. Logical arrangements and exact chronology, careful references to the sources (as in the worked-over matter), with a completeness as to contents not heretofore attained, and an 'index to the whole edition,' leave nothing to be desired in the way of programme, while Prof. Masson's competence is not to be disputed. We commend it to all admirers of the 'Opium Eater.'"—*Evening Post.*

GROVE. A Dictionary of Music and Musicians. (A.D. 1450-1889.) By eminent writers, English and Foreign. Edited by Sir George Grove, D.C.L. With illustrations. 8vo, 4 vols., cloth, in box. $24.00. Half morocco, $30.00.

MORLEY. The Miscellaneous Writings of John Morley. 10 volumes, Globe 8vo, in box, $15.00.

VOLTAIRE. DIDEROT. 2 vols. MISCELLANIES. 3 vols. ROUSSEAU. 2 vols. ON COMPROMISE. EDMUND BURKE.

TENNYSON. The Works of Alfred, Lord Tennyson. Library edition. A new and complete edition in eight volumes. Globe 8vo. $1.50 each volume.

The New Library Wordsworth.

WORDSWORTH. The Poetical Works of William Wordsworth. Chronologically arranged with the author's various readings, and many new MSS. hitherto unpublished. Edited by WILLIAM KNIGHT, LL.D. Illustrated with etchings by C. O. MURRAY, from original drawings. 8 volumes, 8vo, $25.00.

Also, uniform with the above.

WORDSWORTH. The Life of William Wordsworth. By WILLIAM KNIGHT, LL.D., Professor of Moral Philosophy, St. Andrew's. With which is incorporated the Solitary Canto of the Projected "Recluse," the Fragments of "Michael," the Poem of Nab Well (originally designed as a portion of "The Recluse"), the Alfoxden and Grasmere Journal of Dorothy Wordsworth, Records of Tours, Letters, etc., etc. Illustrated with an Etched Portrait from the picture by Haydon. 3 vols., 8vo, $10.00.

*** The eleven volumes, in box, $35.00.

Macmillan & Co.'s New Illustrated Holiday Catalogue will be sent free, by mail, to any address on application.

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 12, 1889.

The Week.

THE following extraordinary confession about the silver question is made by President Harrison in his message:

"To the plan which will be presented by the Secretary of the Treasury for the issuance of notes or certificates upon the deposit of silver bullion at its market value, I have been able to give only a hasty examination. . . . At a later day I may communicate further with Congress upon this subject."

It must be remembered that the silver question has been for ten years the most important question—after the tariff—before the country, and that it has entered on an acute stage since President Harrison came into office, owing to the determination of the mine-owners to discover some method of making the Government buy more of their products. One of the first things Gen. Harrison ought to have done when he came into office was to study it thoroughly, so as to have a manly opinion about it when Congress met. He now confesses, after he has been nine months in office, that he knows nothing about it, and has only given his Secretary's remarkable scheme "a hasty examination." "What has he been doing to prevent his giving it attention?" the public may well ask. The answer is, that he has been all these nine months dividing small offices among a parcel of paltry schemers and political adventurers, and this in the teeth of a solemn promise, made before election, that he would do nothing of the kind. In other words, he has in nine months rendered no proper service for his salary, besides bitterly disappointing the good folks who believed that he was an honest and faithful, as well as a pious, man.

We have received letters asking us to explain Secretary Windom's plan for dealing with the silver question, the writers saying that although they have read it, they do not understand it. Perhaps the best explanation may be given by an illustration. The Secretary states his plan in these words:

"Issue Treasury notes against deposits of silver bullion at the market price of silver when deposited, payable on demand in such quantities of silver bullion as will equal in value, at the date of presentation, the number of dollars expressed on the face of the notes at the market price of silver; or in gold, at the option of the Government; or in silver dollars, at the option of the holder. Repeal the compulsory feature of the present coinage act."

Under this plan a depositor of 1,000 ounces of silver bullion, when the market price is 94 cents per ounce, would receive Treasury notes (not legal tender) to the amount of $940. These Treasury notes the depositor could pay to anybody who should be willing to receive them. The Government would be obliged to redeem the certificates either in gold at par, or by giving a quantity of silver bullion equal in market value to the face of the notes at the time when redemption was called for. In other words, the Government would redeem the notes either by paying $940 gold, or by turning over to the holder as much silver bullion as would sell for $940 gold in the market, at its own option. But the holder would have the option of taking $940 in standard silver dollars in lieu of either of these modes of payment, and his option would be paramount. In the event that silver has fallen in price meanwhile, the Government will lose the difference. If it has risen in price, the Government will make a profit. The Government under this plan becomes an insurer of silver, but, in order to guard against speculation and combination, the Secretary asks for power to sell silver bullion in the market. The plan is not easily understood except by experts and economists, and this is one of the arguments against its adoption. It is of the first importance that all laws regulating the currency of the country should be simple and free from mystery.

Mr. Windom mentions in his report "one cause which, probably more than any other except hostile legislation, has depressed the market value of silver, namely, the sale of Indian Council bills." He adds:

"About 1867 a diminution in the flow of silver to the East was clearly marked. This was due to the use of bills of exchange, called 'Council bills,' sold by the India Council of the Government of India residing in London. These bills of exchange, which are claims for certain sums of silver, are bought by merchants wishing to make payments in India, silver being the standard and only legal tender in that empire; so that just as the expenses of the Indian Government rose, and, in consequence, the number of Council bills offered for sale in London increased, the exportation of silver to India was saved. . . .

"These $50,000,000 to $90,000,000 of Council bills, payable in silver, annually thrown upon the market, affect the price of silver as would the sale of so much bullion. That these Council bills hang like an incubus upon the price of silver cannot be doubted, and they must enter largely into any inquiry as to the causes of depreciation, and into any estimate of the probable advance of that metal."

All this is very dark and needs much elucidation. "Council bills" are simply bills of exchange drawn on the Indian Treasury by the home Government. They are payable in India in silver, and they are therefore bought, like all other bills of exchange in London, by merchants who owe silver in India, to save themselves the cost and trouble of sending silver to India. The Government draws and sells them to save the Indian Treasury the trouble and expense of sending silver to London. The use of them doubtless occasionally prevents a slight temporary rise of silver in London, and a slight temporary rise of silver in Calcutta and Bombay. They do not, of course, either increase or diminish by one ounce the quantity of silver in the market. They simply save cost of transportation. How, then, they "hang like an incubus on the silver market," passes comprehension. All that the Secretary offers in support of his view is figures showing that, as the amount of Council bills increases, the imports of silver into India from England decrease. But he might also show that for the very same reason the exports of silver from India decrease. They do not affect the general and permanent demand for silver, except in so far as they prevent a certain quantity of it being boxed up for four weeks at a time in steamers between London and Bombay. Great quantities of bills of exchange payable in gold pass every week between London and New York. Are they an "incubus" on gold?

Under the head of "Deposits of Public Money," Secretary Windom makes an elaborate attack on his predecessor in office. He thinks that the deposit of public money in the banks is contrary to the spirit of the subtreasury act, and that it "necessarily involves the temptation to favoritism of the most objectionable character"; also, that "it is grossly unjust to the Government to grant the free use of its money while it pays to the very parties thus favored 4 and 4½ per cent. interest on its own bonds, which are pledged as security for the money thus received." He calls these deposits "one of the gravest inherited misfortunes of the Administration," and in fact lectures Mr. Fairchild through two full pages of his report, thus putting on record a reprimand by one Secretary of another. It would have been better manners (and in this we think that the whole business community will agree) if Mr. Windom had said that these deposits had been placed in the banks by his predecessor in the first instance under a doubt as to his legal authority to buy bonds at a premium beyond the amount required for the annual sinking fund, and that they had been continued down to the 4th of March, 1889, in order to avoid the payment of what were considered excessive premiums, but that he (the present Secretary) thought that better dispositions could be made. Then if he could give any reasons for continuing the deposits nearly a year after Mr. Fairchild went out of office and he came in, it would have been quite in order to state them. It is easy to see that these two pages in Mr. Windom's report are a late conception, and are in the nature of a stump speech, the effectiveness of which is much impaired by the lapse of time.

Secretary Windom says of a "horizontal" reduction of duties:

"It would diminish the demand for American labor and capital by the amount of labor and capital expended in foreign countries upon the production of such increased importations."

Well, if this be so, how would the importations be paid for? Does he mean to say that foreigners would furnish them gratis? If they send them here for sale, whose labor and capital would supply the means of settling the bills? If not American labor and capital, whose would they be? Importations are nearly all made to order, and are drawn against by the consignors of the goods abroad, and none are delivered unless the ex-

porters feel sure of their pay. One of the crazes of the high-tariff men is that people go on importing foreign goods after the demand for their own products has ceased, or, in other words, when they are no longer able to pay for them. But every man, or nearly every man, who finds the demand for his own goods declining, cuts down his supply of other people's goods. This is "elementary," as the French say, and that Mr. Windom does not know it well we refuse to believe.

A nation which has escaped the threatened disgrace of having a commonplace Indianapolis lawyer receive the highest judicial honor, simply because he has been the President's law-partner, has especial reason for rejoicing that the vacant place on the Supreme bench has finally been awarded to so good a man as Judge Brewer of the United States Circuit Court—even if it be true, as the well-informed Washington correspondent of the Philadelphia *Inquirer* intimates, that the discreditable appointment of Attorney-General Miller is only postponed until the occurrence of another vacancy, which is soon expected through the resignation of one of the judges who have long been able to retire upon pensions. Judge Brewer has already served upon the bench more than a quarter of a century, having been steadily promoted from the Probate Court of his county in Kansas, through a District Court, and then the Supreme Court of that State, until, five years ago, he was appointed by President Arthur United States Circuit Judge for the Eighth Circuit. He has demonstrated, in this long judicial service, his entire fitness for a place on the highest bench ; he is a man of the highest personal character, and, as he is only fifty-two years old, has every prospect of long service in his new office; and altogether his selection appears to merit unqualified praise.

The committee assignments made by Speaker Reed, so far as they have been announced, are satisfactory. It was quite proper that Mr. McKinley should be Chairman of the Ways and Means. He represents the dominant feeling of his party on the tariff question, whether it be the dominant feeling of the country or not. The chief interest attaches to the question whether the Committee as constituted will vote for the Senate Tariff Bill of the last Congress, with its increased duties on wool. It looks to us as though there might be two Republican members of the Committee who would not support such an increase. If so, the extremists will not be able to carry their point, for of course all the Democratic members will vote against such increase. Mr. Gear of Iowa, one of the new Ways and Means Committee, is quoted as saying since the November election in that State: "I am satisfied that the Republican party must either cut loose from its high-protection theories, and at once set about a radical reform of the present revenue system, or give up all hopes of a return of power." Whether he has said this or not, it is very likely that he has thought it. If Mr. Cannon is to be the master of his own Committee and remains of the same mind as formerly, the steamship subsidists will have a hard road to travel. He has been the most pronounced anti-subsidy man in the House of either party. On one notable occasion he defeated a subsidy bill after it had passed the Senate. That is, he took the leadership of the opposition and carried the House with him by sheer will-power and force of argument. This bill was known at the time as the John Roach Brazil mail subsidy. Its scalp hangs in Mr. Cannon's wigwam at this hour.

Senator Edmunds's plan for the foundation of a national university in Washington has been expected ever since the scheme of a Catholic University in the same city began to take shape. Senator Ingalls introduced a bill embodying the same idea four years ago, which was never acted on. Senator Edmunds's bill is intended to be, as Senator Ingalls's was, but more directly, a sort of Protestant offset to the Catholic institution, and expresses the dislike of the various evangelical denominations, especially of the West, to seeing the national capital made a great centre of Catholic influence. It is said to follow the lines of Senator Ingalls's as to organization. Senator Ingalls's bill provided for a Board of Regents, composed of members appointed by the Governor of each State, with five members-at-large to be appointed by the President, and a number of ex-officio members, to be furnished by various learned and scientific societies. Unless Senator Edmunds can improve on this, the scheme is doomed to failure as a University from the outset, although it might be in some ways a beneficial outlet for Government money. The governing body would be controlled by politicians, and be constantly subject to their criticisms and attacks in Congress, which would make it difficult for self-respecting scholars to keep their places in the University. There would probably soon arise in it Republican history and Democratic history, Republican political economy and Democratic political economy, and perhaps also party geology and chemistry. Fancy Mr. George Hoar or Senator Farwell or Rising-Sun-Stove-Polish Morse having a voice in directing the teaching in a great college, and we shall have an idea of the difficulties which might arise. All this was foreseen some time ago by some of the presidents of existing universities, and a movement was made, we do not know with what result—though it may be that Senator Edmunds's scheme is the result—to get the Government to endow a university in Washington to be controlled by some sort of joint Board furnished by the present colleges. It may be laid down as a rule that no real university can exist which is not governed by the Faculty. A university at Washington, so governed, might be the glory of the country, for the riches of Washington in libraries and scientific collections are now extraordinarily great. But a political college in whose doings every Son of Thunder whom the President or the Governor of a State wished to "recognize," would have a finger, would be simply, in the long run, a national shame.

A careful examination of the Republican press has not yet discovered any commendation of the endorsement which the President gives to the "Bill to Promote Mendicancy." The scheme was already so thoroughly discredited by public sentiment that a canvass of Republican editors would have shown a general agreement with the opinion recently expressed by the St. Paul *Pioneer-Press*, that "nobody believes in it but a few sentimentalists and surplus-killers." Now that Mr. Harrison has arrayed himself with this little band, the muzzled editors feel bound to suppress their honest convictions and keep silence about his folly; but the unmuzzled ones continue to speak their minds with entire freedom. Thus, the Buffalo *Express* says: "We are sorry to see the President flirting with that dangerous fad, national aid to education." After noting the qualification of his endorsement of the scheme, the *Express* adds: "But it is the entrance upon such a policy of pauperization that is to be dreaded. Better leave it alone. It is not needed." So, too, the Indianapolis *News*, an independent journal which supported Harrison for President, in the faith that he would have the courage to resist the Blair school of cranks, says: "Though he does not go the full length of a definite and colossal appropriation for years, as the Blair bill provided, he accepts it by espousing its principle and suggesting that it be tried for one year. This is most unsatisfactory ; for while it is a full surrender to and embracing of the idea and action, it is done in a way that suggests timidity; the same in kind, but greater in degree, perhaps, than the attitude on tariff revision." The only result of the President's course in endorsing this demoralizing scheme, at a time when it has come to be almost universally condemned, will be to weaken himself; for it is obvious that nothing can now put strength into the bill itself.

Mr. Theodore Roosevelt has been denouncing, with praiseworthy vigor, the following story set afloat by the Indianapolis *Journal*, the President's family paper, on the authority of Senator Gorman of Maryland:

> "A very bright young man, of splendid physique, and perfectly familiar with every street and number in the city, submitted himself for examination for a position as letter-carrier. He could read and write, and had been attending night school, and was in every way fitted for a letter-carrier, but failed when asked the most direct route from Baltimore to China. He said he had never been in China, nor did he expect to go there, and he only wanted to be a letter-carrier."

Mr. Roosevelt pronounces this "absolutely false and foolish," and challenges the production of proof that any such question was ever asked. The proof will not be forthcoming. The story is simply a sample of hundreds which politicians circulate among their constituents. But it ought to be said, in excuse for Mr. Gorman and his kind, that we believe they rarely invent such stories themselves. They are in nine cases out of ten the production of candidates who have failed to pass the examination, or have only secured a low standing on the eligible list, and wish to

account for their failure to their friends in some creditable way.

The *Civil-Service Reformer* publishes two letters—one from Charles J. Bonaparte and the other from Lucius B. Swift—to an unnamed correspondent who had asked them certain questions "in behalf of a Cabinet officer." The *Reformer* intimates that the questioner was the private secretary of Mr. Wanamaker. These questions were three in number, viz.: (1) whether civil-service reform does not logically require pensions for superannuated clerks; (2) whether there is not already an excess of certified candidates for clerkships; and (3) whether there is not serious danger that "in ten or fifteen years some of the departments will be seriously crippled by the inefficiency of old clerks who cannot be discharged." Mr. Bonaparte gives a stinging reply to the ignoramus who wrote or inspired the questions. "Civil-service reform has no more to do," he says, "with a system of superannuation pensions than it has with a system of compulsory vaccination." There is no more reason, and no less, why the Government should pension its clerks than why Mr. Wanamaker should pension his salesmen and shop-walkers. As to the excess of qualified applicants, a similar excess exists in the offices of merchants without harm. But it must be a great relief to a Cabinet officer having public duties to perform that he can refer Congressmen and politicians who are pushing him for places, to the law and the list, and show them that he has no power to answer their importunities. Finally, the Civil-Service Law does not prevent the discharging of anybody. It only prevents the filling of the discharged man's place by "pressure." Mr. Swift answers this interrogatory neatly thus:

> "The merit system puts no limits upon the power of removal for cause. It is cause for removal that a clerk has got too old to perform his duties. He takes his chances when he enters the service. It is a strange objection to urge that a man ought to be removed at the end of four years for no cause, and not at the end of twenty for cause."

Let Mr. Wanamaker try again, and ask a harder one.

In Birmingham (Alabama) on Tuesday week, Dr. J. D. S. Davis and Dr. W. Locke Chew had a dispute over the proper treatment of kidney diseases at a meeting of the local Medical Society. After the adjournment it was renewed in the street, and Dr. Davis found it necessary to kill Dr. Chew, which he did with his pistol. Now, this is one of the puzzling cases which we so often have to ask Southern Sociologists to explain. Here are two members of a learned profession, both, we are told, "highly successful practitioners," who dispute as medical men over a professional question—a thing which happens in all countries; but when they lose their tempers—also a common occurrence among doctors—they settle the dispute after the fashion of "medicine men." Why is this? One would expect a pair of doctors who try to murder each other about the way to treat "kidney troubles," to treat them as a medicine man or magician would treat them—by giving the patients a draught made by stewing a fillet of snake, a newt's eye, a frog's toe, a bat's wool, a dog's tongue, and a lizard's leg all together in sow's milk, to be taken hot at bedtime, in the moon's last quarter. But we have not the slightest doubt that every member of the Birmingham Medical Society treats kidney disease after the most approved modern methods, and is, in all respects, except this homicidal tendency, a civilized modern man. What does it mean? Nor is this the only case of the kind. We can recall a most desperate medical fight, in the hospital at New Orleans, some years ago, between the resident surgeons and an outside practitioner over a man afflicted with an aneurism of the subclavian artery. The case was a very interesting one, and the hospital surgeons wanted to keep it, but the outside practitioner induced the patient to leave the hospital and come to him (the outsider) for treatment. When the wagon came to remove him, the resident surgeons determined not to surrender him without a struggle, and opened a sharp pistol fire on the interloper, who returned it vigorously, the balls whistling round the aneurism in a way that nearly frightened the poor invalid to death. One if not more of the belligerents was killed, and the horse ran away, frightened by the firing; but the outsider finally, as we remember the affair, got his aneurism. The scene was worthy of Morocco or Zululand, but the combatants were doubtless all well-educated doctors. Why do such men at the South keep murder in their minds as a possible or conceivable mode of settling small quarrels? We do not know of a more interesting sociological inquiry.

Mr. Gladstone's speech before the Liberal Federation at Manchester on December 3 was mainly important as producing the Liberal programme in full for the coming session of Parliament. Home Rule, the disestablishment of the Church in Wales, free education, are the three leading points in it. About Home Rule he did not enter into details, and says he will not do so as long as he is out of power, unless the Tories accept the principle. As long as they declare they will never agree to Home Rule at all, it would be useless, he says, to furnish them with a plan of Home Rule, as they would simply tear it to pieces. In this reticence all the other party leaders support him. John Morley goes beyond all the others in advocating a very large treatment of social questions. English politics during the next year promise to be increasingly lively, owing to the fact that the dissolution of Parliament is getting very near. Usage prescribes it in 1891, and the law will compel it a year later. The probabilities are that the Ministry will not defer it longer than 1891, so that 1890 will be a year of preparation and fearful looking for judgment.

A very curious illustration of the troubles arising out of the connection between Church and State in England has just occurred in the diocese of Rochester. A Mrs. Swayne presented herself for the Communion in the parish of a minister named Benson, who refused to admit her to it, on the ground that she was guilty of schism in having taken a sitting in a Methodist church. Being asked whether he considered schism to be the equivalent of "open and notorious evil living," he said he did. Mrs. Swayne appealed to the Bishop, who followed the legal course of procedure by appointing a commission to report the facts. The commission heard both sides and found there was no dispute about the facts. All attempts at compromise failed, Mrs. Swayne's offence all the while growing more hideous in Mr. Benson's eyes. The case was then sent in due course to the Court of Arches, where he was ordered to admit Mrs. Swayne to the Communion. Still refusing, he was suspended from his parish for one year, and a curate sent to take his place. He locked the church door against the curate and continued his ministrations. He will now go to jail for contumacy. In spite of Mr. Benson's violence, he has, however, a great many apologists among those who think it foul scorn that a civil judge should have power to mandamus a clergyman into administering the Communion. But he is also disobeying his bishop, who likewise ordered him to admit Mrs. Swayne to the Communion, and he has repudiated the bishop.

If Emin Pasha were to die now before leaving African soil, at the termination of his long labors and privations, it would be one of the most tragic incidents in the history of exploration. It would be the more tragic because Stanley's last letter, describing his final start for the coast, intimates with but little reservation that Emin embarrassed him greatly by his vacillation and by his blind confidence in a lot of very rascally followers. They joined him on the Lake Nyanza, with a great quantity of household "rubbish" which his men were nearly worn out with carrying up to the plateau from the steamer, and then began to conspire and mutiny, and had to be cowed into good order by flogging and threats of execution. In dealing with all these troubles, Emin appears to have given Stanley very little support, owing to his difficulty in making up his mind to come away. He was probably a good deal broken by sickness and prolonged anxiety, so that it is for the sake of his own fame, if for no other reason, extremely desirable that he should reach home, and recover his health, and tell his story in his right mind. The expedition by which he has been rescued is perhaps the most extraordinary one of its kind on record, and puts Stanley in the foremost rank of leaders of men—a born commander. It must always be a great feather in the cap of the proprietor of the *Herald* that he should have been the first to recognize the man's qualities and give him the opportunity to show the stuff that was in him. But for him Stanley might have remained a chronicler of "Papal banks" and other blatherskite sensations, which constitute so much of the home "news."

SIGNS OF PROGRESS.

SECRETARY WINDOM makes at the close of his annual report a notable and valuable tribute to the efficacy of the civil-service-reform regulations as applied in the Treasury Department. Having, as he says, been at the head of the Department both before and since the adoption of the Civil-Service Law, he is able to judge by comparison of the two systems, and he leaves no chance for doubt as to his opinion. "I have no hesitation," he says, "in pronouncing the present condition of affairs as preferable in all respects," adding:

"Under the old plan, appointments were usually made to please some one under political or other obligations to the appointee, and the question of fitness was not always the controlling one. The temptation to make removals only to provide places for others was always present and constantly being urged by strong influences, and this restless and feverish condition of departmental life did much to distract and disturb the even current of routine work. Under instrumentalities which are now used to secure selections for clerical places, the Department has some assurance of mental capacity, and also of moral worth: the character of the candidates is ascertained before examination. The manifold duties of the Department require the closest application on the part of the Secretary and his assistants; and the freedom from importunity now enjoyed for appointments to places that are within the classified service, and the saving of valuable time heretofore devoted to the distribution of minor patronage, are of very great advantage, and enable these officers to devote more thought to the important questions of administration constantly arising. The clerks received from the Civil-Service Commission usually adapt themselves readily to the duties they are called upon to perform, and rank among the most efficient in the Department."

Not the least striking part of that testimony is the direct statement, near the close, that it is through the "saving of valuable time heretofore devoted to the distribution of minor patronage" that the Civil-Service Law "enables the Secretary and his assistants to devote more thought to the important questions of administration which are constantly arising." In other words, were it not for the law, the officers of the most important branch of the Government would be able to devote only a part of their time and thought to the public business. In the same manner the Secretary's testimony to the superior moral and clerical capacities of appointees under the civil-service rules over those secured through political influence, is confession that the routine business of the Department could be carried on only in a most unsatisfactory manner were the old condition of affairs to be restored. Why should it be necessary to point out in an official report, and to call attention to them as noteworthy, such obvious facts as these? Simply because professional politicians whose position in politics depends entirely upon the number of offices whose distribution they are able to control, go about constantly deriding the Civil-Service Law as a humbug, and declaring on every occasion that its examinations are, in the language of Senator Farwell, confined to questions about "geometry, the history of ancient Rome, and the principles of evolution." Mr. Windom's testimony is of incalculable value in refuting these tiresome falsehoods, especially when it is addressed to Congress and is printed in all the newspapers of the country, including those which have for years been uttering the stale inventions of the Farwell style of statesmen.

It is an instructive and encouraging fact that many of the most earnest advocates of civil-service reform to-day are converts who have been convinced of its efficacy by being called upon to administer offices in one way or another under its jurisdiction. A notable convert of this kind was Gen. Sickles, appointed by Gov. Hill to the Chairmanship of the Civil-Service Commission of this State. A very short acquaintance with the details of the law which he was called upon to execute, convinced him of both its wisdom and desirability, and, within a few months after his entrance upon office, we were treated to the extremely edifying spectacle of seeing him threatening to hit over the head with his crutch a mayor of one of our smaller interior cities, who in the General's presence denounced the law as a humbug, and expressed his determination to evade it in all possible ways.

A scarcely less notable convert has been made in Milwaukee within the past few weeks. Mr. Newell, who had served in the campaign of last year as Secretary of the Wisconsin Republican State Committee, was appointed Postmaster as a reward for his political services. Soon after entering upon his duties, he was asked to appoint a certain man to one of the unclassified positions in the Post-office. The applicant was endorsed by several prominent Republicans, and strong party pressure was exerted in his favor. When Mr. Newell looked into the man's record, he found, to quote his own words, that "he had been hanging about town for a number of years doing nothing, and had even spent some of his time in the penitentiary." He went to the applicant's Republican backers and asked them why they did not employ the man in their private business. Their indignation at this was unbounded, and no wonder. They had been used to that kind of question from reformers and Mugwumps, and had laughed at it as "theoretical," and as of no importance save as a revelation that its propounders had no knowledge of "practical politics"; but when it came to them from the Secretary of their own Campaign Committee, that was quite another matter, especially as it could not be answered in any except the most unsatisfactory manner. As for the Postmaster, this and other similar incidents made him a civil-service reformer on the spot, and he caused public announcement of the fact to be made as follows:

"I am getting tired of hearing people talk to me about political influence in order to induce me to retain an employee or to have some one else appointed. The Government has seen fit to appoint me Postmaster, and in return the Government is justified in expecting from me the very best service. For this purpose I expect and intend to have only the very best quality of help. Capability and fitness, nothing else, are to determine the tenure and the appointment of every employee as long as I am here. All other considerations are out of place. This or that person may be needy or may have the backing of public men. I shall not be guided by any consideration of that kind."

This is certain to be the result in every case in which an intelligent and conscientious man is put into an administrative office. Even if he have the double conscience necessary to enable him to apply one kind of morality to his private business and another kind to his public office, his comfort as a business man, his desire for the orderly and intelligent conduct of the service under his control, will lead him to revolt against the old system of appointment by "influence" and "pulls." Sentiment in this direction is growing all the time, and growing much more rapidly than most observers suspect. Even Senator Farwell shows signs of being conscious of this fact, for his determination to take the field against the Civil-Service Law is weakened. He remarked with much humor recently that he had not read the annual report of the Civil-Service Commission, but expected to "have a good time" when he did read it, for really "this civil-service system is a fraud of the worst kind, a cheat, a delusion, a humbug; in fact, you cannot say anything too mean of it." And then as evidence that so far as he was personally concerned there was nothing to be done against it which was too mean for him to undertake, Mr. Farwell said that he did not know that he should introduce a bill to repeal the law, as he had at first proposed, because "we can do just as well by refusing to appropriate the funds on which it depends. It was beaten that way before, and we are going to do our best to beat it that way once more again." It was done that way once in Gen. Grant's time, but it did not kill the reform. We venture to predict that the experiment will not be repeated this year, and that the only result of Mr. Farwell's crusade will be the revelation which he has made of his preference for sneaking over open methods of warfare. He has shown that there is sentiment enough in favor of the law to make an open attempt to repeal it futile.

DEPOSITS OF PUBLIC MONEY IN BANKS.

THE statute under which the Treasury makes deposits in national banks received such curious treatment in last week's official documents that it is worth while to reprint the text of the law. It is to be found in section 45 of the National Currency Act, approved June 3, 1864, (section 5133, U. S. Revised Statutes), and reads as follows:

"All associations under this act, when designated for that purpose by the Secretary of the Treasury, shall be depositaries of public money, except receipts from customs, under such regulations as may be prescribed by the Secretary; and they may also be employed as financial agents of the Government; and they shall perform all such reasonable duties, as depositaries of public moneys and financial agents of the Government, as may be required of them.

"And the Secretary of the Treasury shall require of the associations thus designated satisfactory security, by the deposit of United States bonds and otherwise, for the safe-keeping and prompt payment of the public money deposited with them, and for the faithful performance of their duties as financial agents of the Government."

Here are plain powers given to the Secretary, and for twenty-five years these powers have been used, sometimes less and sometimes more freely, but always on the judg-

ment and responsibility of the Secretary of the day. It is of deposits of public money made under this law that President Harrison says: "The loaning of public funds to the banks without interest, upon the security of Government bonds, I regard as an unauthorized and dangerous expedient." In what sense can these deposits, or, as the President calls them, loans, be said to be unauthorized, since the law has for twenty-five years expressly permitted them, and has not been a dead letter? As for their being dangerous, we believe there has never been any loss caused by them. From the first until now, while some people may have felt or expressed fears about them, there has been no danger.

The remarks of the President may perhaps be passed over lightly, as the business belongs more particularly to the Secretary of the Treasury. What Mr. Windom says on the subject must be taken very strictly; it is his business to be both right and accurate. His utterances, so far as their reflections upon his predecessor in office are concerned, have already received our attention; but they also merit notice for the manner in which they treat the law. The statute expressly authorizes the Secretary to deposit public money, except receipts from customs, in national banks; and the Secretary is left to decide for himself how large such deposits shall be. What is the sense of saying, as Mr. Windom does, that the policy of making deposits larger than he approves is "contrary to the spirit of the act of August 6, 1846, which contemplates a Sub-Treasury independent of the banks"? A criticism of this kind ignores the act of June 3, 1864, ignores the financial history of twenty-five years, and recalls the sleep of Rip Van Winkle. From a man who has been United States Senator, and is now Secretary of the Treasury for the second time, it is simply astonishing.

Further, Mr. Windom finds that the law (for it is the law which must bear his criticisms) "involves temptation to favoritism of the most objectionable character." All power involves temptation; power conferred by statute involves temptation to wrong-doing in the field covered by the statute. But this is familiar to every one, and yet under our system the powers of an office are conferred by statute, and those powers must be pretty large in the case of a Secretary of the Treasury. If Mr. Windom were now as severe with himself as he is with the Congress of 1864, or if he were as scrupulous about the collection of public money, from customs let us say, as he professes to be about its custody, his strictures would have greater weight; he might even make us forget the exaggeration and violence of tone which characterize them.

Mr. Windom further blames the law for giving the "free use" of the Government's money to people who already draw interest on Government bonds. But the law leaves the Secretary to decide whether he shall or shall not exact interest on his deposits in national banks; the deposits are to be made "under such regulations as may be prescribed by the Secretary." It has always been open to Mr. Windom to demand interest on Treasury deposits, but he has not seen fit to do so, though he has been nine months in office. Surely such a policy must have been suggested to him, if it did not occur to his own mind; it was so obvious a step for him to take, particularly as he was buying bonds for cancellation, and wished to buy in larger amounts. Moreover, the great ease of money which lasted until the middle of August, gave him ample and appropriate opportunity to demand interest.

The statute which so strangely excites Mr. Windom is likely, we imagine, to remain in force. It has been the means of saving the business of the country from absolute confusion, and will, very likely, be called upon to perform the same function again, if not in Mr. Windom's time, then in the time of some future Secretary of the Treasury. The deposits made under the statute are, of course, only an expedient; at the present moment, Mr. Windom's policy of calling them in by small instalments on ample notice is bringing large amounts of bonds to him for sale, and we rejoice that this success follows his recent circular, because, when he has a surplus to dispose of, it is better to buy bonds with it than to keep it on deposit with or without interest. But this is not the whole of the matter. Mr. Windom, we will suppose, wished a week ago to reduce his bank deposits from $47,000,000, at which they then stood, by easy stages to the amount which he considers really useful in the conduct of public business. For convenience we will call this amount $20,000,000. If, therefore, instead of $3,407,000 of bonds sold to him this past week by banks holding Treasury deposits, the whole mass of what he considers redundant deposits, say $27,000,000, had been settled by sale to him of the bonds deposited as security, his circular would have met with unexampled success, and he would now once more be called upon to face the standing difficulty of our financial system, the hoarding of lawful money by the Treasury of the United States. And to meet this difficulty, he will find no certain resource but this law of 1864 which so exasperates him.

MR. WANAMAKER ON SUBSIDIES.

On October 21, 1884, Mr. John Wanamaker, merchant, of Philadelphia, appeared before the Commission appointed to promote trade with South America, and testified: "My business is not such as would make me intelligent on this subject." That part of the annual report of the Hon. John Wanamaker, Postmaster-General of the United States, which deals with "this subject" shows that the Philadelphia merchant told the truth. It is full of misstatements, and, while aiming to set forth the views of the subsidy-seekers, is not "intelligent" enough to do even that without muddling.

"There exists," says the Postmaster-General, "a widespread demand for prompt, regular, efficient, and speedy mail service . . . especially to our Central American, Mexican, and South American neighbors, and to the trans-Pacific countries." Where does it exist, and what is the evidence that it exists at all? Mr. Wanamaker does not say, because he cannot; he has taken the word of the subsidy-men for it. He has not read the testimony of the merchants engaged in the South American trade; they ask for lower freights, in some cases, but are satisfied with the mail facilities. For example, Mr. M. L. Bandel of Baltimore, a South American shipper, told the Commission that "the means for mail communication were ample, and communication was now established by telegraph. They could cable by way of Galveston or Europe." The view of this merchant was strikingly confirmed within a year. The steamship lines tried to boycott Postmaster-General Vilas into submission, the next summer, by refusing to take the mails on the Government's terms. He was able to get the work done by tramp steamers and sailing vessels, with, as he reported, very slight delays. Then the steamer-owners were glad to eat humble pie and take the mails again. If Mr. Wanamaker maintains that more frequent mails are a necessity, there are steamers in plenty engaged in the South American trade that would gladly take mails, and at less rates than the complaining American lines. What he really means is, of course, that there is a "widespread demand" for a subsidy.

The Postmaster-General speaks enthusiastically of "the tremendous increase of trade with foreign nations that follows the establishment of American steamship lines between this and other countries." The only fact he refers to in support of this statement is not a fact: there is no contract, as he supposes, between Australia and an American steamship line. Of course, he, in common with all the other short-memoried subsidy advocates, knows nothing about past experiments. He never heard of the $4,583,333 paid by the United States into the treasury of the Pacific Mail Steamship Company between 1867 and 1877. Who ever heard of any "tremendous increase of trade" resulting from that—except the trade of lobbyists and dishonest Congressmen? He knows nothing of the Garrison subsidy of $150,000 a year for ten years, on the Brazil line, and the positive injury to trade caused by that monopoly. Mr. E. A. Hopkins of Buenos Ayres, himself a believer in subsidies, says about this line: "It was a monopoly. . . . The prices of freight and passage were almost prohibitory to outsiders, and the whole management was an outrage on the public." Of the Roach subsidized line Mr. Eugene Levering, the prominent coffee-merchant of Baltimore, said, "It was a failure. Subsidy led to extravagance. . . . Subsidized steamers would not care whether they obtained freight or not." Mr. Wanamaker and the subsidy-men forget all these facts. Neither they nor any honest man will dare to defend the past of subsidies in this country; it is always the coming subsidy that is going to be pure and of good report.

When the Postmaster-General comes to name actual amounts for subsidies, he blunders badly, so the subsidy-hunters will say. The idea of thinking it may be "advisable" to have the subsidies "limited at least to the profits accruing" from the foreign mails! Those profits, according to the report, even

when a point is stretched and "no allowance for inland carriage" is made, would not be enough to double the present rates of pay to our wronged ship-owners. Did you not understand, Mr. Wanamaker, that they want ten or twenty times the present rates? One of them once presented "certain figures," as he called them, to Congress, calling for "not over $2,500,000 a year for ten years." The only doubt was about the period of time: "We differed upon that point, and the period was variously fixed at ten, fifteen, and twenty years." And now comes this Philadelphia shop-keeper, with his retail-trade ideas, and talks about limiting the subsidies to "the profits"!

LAW VERSUS MORAL SUASION.

THREE States of the Union have attempted to eradicate drunkenness by passing laws prohibiting the sale of intoxicating liquor, and have tried the experiment in such a way as to challenge the attention of the whole country—Maine, Kansas, and Iowa. Each of the three States confesses the failure of the experiment, and admits that in the chief centres of population liquor is sold and drunkenness is as prevalent as ever.

Maine was the first commonwealth to make the trial, having had a prohibitory law for a generation. Neal Dow, "the father of prohibition," a resident of Portland, the chief city of the State, recently confessed that "the grog-shops keep on pretty much as they did twenty years ago." In Bangor, another of the large cities, it is admitted by the *Whig*, a newspaper which believes in prohibition, that "the saloon runs right along in bold defiance of the laws of the State." The shocking prevalence of drunkenness in these Maine cities is shown by the following account in the Portland *Advertiser* of a recent Fourth of July: "Enough liquor was on sale to make several hundred men drunk. In some parts of the city the scenes were disgraceful. Drunken men were laid up on the sidewalks and doorsteps in all directions. In Deering's Oaks many of the benches were occupied by sleeping sots. Around the Custom-house it is estimated that fifty men were seen drunk during the night and day. It was even worse about Gorham's Corner and the adjacent parts of the city. The police made arrests until the station was full and could accommodate no more."

Kansas adopted a prohibition amendment to the Constitution in 1880. Cassius G. Foster settled in Kansas thirty years ago as a young lawyer, and for fifteen years past has been United States District Judge for the State, holding a commission signed by President Grant. He has recently written an open letter declaring himself in favor of a resubmission to the people of the amendment, for the reason that it has been a failure as a temperance measure. For awhile, he says, the open saloon disappeared, giving way to the "joint" and the "restaurant." But "of late, the law falling into disrepute, the disguise has grown thinner and thinner. In many places the saloons are permitted to run on payment of a monthly stipend, denominated fines or forfeiture." As for the claim that crime has been diminished, Judge Foster declares that "the criminal courts and jails are still open and full of business, and there is no decrease in the demand for police service." He institutes a comparison between Kansas with prohibition and Nebraska with high license, which shows that the proportion of criminals to population is far less in the latter State, and that the disparity is increasing.

Iowa gave a large majority for a constitutional amendment in 1882, and, upon the annulment of that action by the Supreme Court on technical grounds, elected in 1884 a Legislature which enacted a prohibitory law. For five years, therefore, Iowa has had prohibition on the statute-book, and yet "for five years," confesses the *State Register*, the leading newspaper of the commonwealth, "prohibition has proved a failure in a dozen or more counties of Iowa," these dozen or more counties being those which contain the chief cities, where temperance measures are most needed. The Burlington *Hawkeye*, published in one of these cities, recently declared that "Burlington has its one hundred or more saloons running in defiance of the law." Davenport, another of these cities, has three breweries, three malt-houses, several wholesale liquor-stores, and a host of saloons. Of course, in all of these cities there is a great amount of drunkenness.

Why is it that drunkenness is so prevalent in States which have laws forbidding the sale of liquors? It is largely because the foes of intemperance have depended upon law to cure the evil, and have abandoned efforts to prevent men from becoming drunkards by moral suasion. Valuable testimony upon this point is furnished by a recent address of Capt. I. H. McDonald, President of the Portland Temperance Reform Club. He began by confessing the failure of the attempt to abolish drunkenness by law. "For more than thirty years," he said, "we have heard the booming of guns of every calibre in the war against the rum traffic, and to what purpose? It still exists and thrives in a State where it is prohibited. Why?" he asked, and thus answered his own question: "Simply because law is not a reformatory method to be used in a work of moral reform." In the same line he said:

> "We wish that the state of things as to the temperance cause in our city and State was different, that it could be said of our city that drunkenness was a thing of the past, and that the banner of temperance could be seen floating from every mansion and from every cot. But before such a state of things exists (if it ever does) there must be a mighty revolution in the minds of men, even in this prohibitory State. I believe that every good citizen today condemns drunkenness, but every good citizen does not make an effort to use his influence against this great evil to which so many of our people are addicted. The people of Maine have relied too much upon 'law' to do this great work of reform, which it will never accomplish, and the sooner they come to that conclusion, and turn their minds and their efforts in the right direction, the sooner the great work will be accomplished. It would seem that after more than thirty years of experience most men must be convinced that law neither reforms the drunkard, restrains intemperance, nor diminishes the rum traffic to any great extent in our cities."

A similar confession comes from Iowa. "It is idle to deny," says the *Register*, "that a great many boys are learning to drink, that a great many men are drinking who would be far better off, and their families would be far happier, if they would let liquor entirely alone. These are facts and stubborn ones, too. It will not do to ignore them, for they have a very disagreeable and painful way of forcing attention to themselves." Why is there such a state of things in a State where the law says that there shall be no opportunity for a man to drink? The reason, according to the *Register*, is that "our good friends, the preachers, have looked to the law to make and keep men sober, and have expected that would do the work which to a greater or less extent must be done in every community by personal effort." It proceeds to show how the work of moral suasion has been almost entirely neglected:

> "When was there a temperance meeting held in Des Moines to plead with men to sign the pledge and leave their drinking ways? When have our honored clergy held Gospel temperance meetings, to bring all the power of Christian influences to bear upon the drink habit? When did a blue-ribbon club or any other organization start out its members to find the old soaks and induce them to sign the pledge and become men again? Was any such personal work done in the last year or the year before that? All of these good people, headed by the ministers, have been relying upon the law to do the work which the law never can do. They have preached sermons and held public meetings to demand that the law be enforced, but all this time there were poor fellows sinking lower and lower, and there were young men fastening the chains of appetite about their necks, and hardly a word of public protest or private entreaty has been heard."

Francis Murphy, who comes as near as anybody to being the John B. Gough of his generation, and who has a great contempt for the idea of legislating soberness into men, once happily said that it has looked of late years as though the people of Iowa were trying to change the Lord's Prayer so as to make it read, "Our Father which art in the Legislature." The people of Maine and Kansas have shared the same delusion that omnipotence rested with a body of law-makers, and that, after the human race had suffered from intemperance for thousands of years, the evil could be cured summarily by a majority vote in the State capitol. Experience was the only schoolmaster who could convince them of their error. Happily there are now abundant signs that the lesson has been pretty generally mastered, and that, in Judge Foster's words, "morality by act of the Legislature, backed up by a Draconian code, will not be accepted by a free people as the sincere, pure article." We may now hope to see moral suasion regain its proper authority as an agency of temperance reform.

JEFFERSON DAVIS.

MR. JEFFERSON DAVIS'S death may properly be said to close the epoch of the Civil War. Not that there are no other prominent survivors of the Confederacy, for they are found everywhere, in public and in private stations. But these have put themselves more or less completely in harmony with the new order of things. They have applied for and received the benefit of the amnesty laws, have renewed their allegiance to the national Government, and are conspicuous in its Legislature and Administration. They see and frankly recognize the fact that the New South is richer, more vigorous, more hopeful, than the Old South ever could have been. They have a regenerated national patriotism, and, in their

growing satisfaction in the almost unrivalled power of the United States among the nations of the earth, their feeling towards the Confederacy has passed into a sentiment, like the lost illusions of immature youth, poetic and tinged with regret, but which their ripened judgment pronounces well exchanged for an actual result full of present dignity and of future hope, abreast with all that marks the true progress of Christendom and of civilization.

Mr. Davis, partly from the peculiarity of his official station, and partly from his personal traits of character, could not share these changes with his old associates. The subtle tendency of the human mind to personify a cause, and to carry vicarious rewards and punishments to an extreme, forced upon him a representative position quite apart from that of any other civil or military officer of the Confederacy. In this view they were its prominent advocates or supporters; he, in a sense, was the Lost Cause itself. He could not turn from the past and find active occupation in the newly developed energies of the present. The preëminent position he had held condemned him to an inaction in which there was room only for brooding over the past, and which separated him from the influences of an active environment that insensibly moulded other men into new forms of thought and energy. Thus chained to a dead past, the separation between him and his own time grew wider and wider. His antagonism to the victorious cause grew more intense, if possible, because personal failure and the ruin of all his hopes and aspirations were inseparably connected with the overthrow of the Confederacy. His pride made him think it a sacred duty to maintain an inflexible assertion of the righteousness of the Rebellion and of the unjustifiable tyranny of suppressing it. He could not ask for amnesty, he could not accept a pardon, he could not acknowledge the lawfulness of the national Government.

In the nature of the case much of this was the logical outcome of his representative position, and will account for the more unhappy parts of his later experience. What can be more wretched to an active and able mind than to be condemned to remain, like a stranded vessel, a mark only of the height to which the mad surges of the storm had swept, and of the distance to which the peaceful tide has retreated from the hopeless wreck? Yet Mr. Davis's bitterness and irreconcilability were in part the result of temperament and education. His surroundings had, from his youth, tended to develop the self-confidence and dictatorial disposition which were natural to him. His elegant and finely cut features bespoke a highly nervous organization, and when an acknowledged intellectual leadership had fully developed his habit of command, it became a great hardship for him to brook opposition or to yield his will. His faith in his own mental processes was supreme, and it was almost impossible for him to see either reason or good moral purpose in those who opposed him. His cherished ideas became a sort of cult to him when the defeat of the Rebellion had removed them from the sphere of practical action; and in his enforced idleness he lived in retrospect, revolving his theories over and over, demonstrating to his own bitter satisfaction that the world had all gone wrong and illogically in the events which had followed the Confederate surrender.

His domicile was Mississippi, for his family had migrated from Kentucky early in the Southwestward movement of population which followed the Louisiana purchase, and when he was a mere infant. After a fair academic preparation he was appointed to a West Point cadetship, and was graduated from the Military Academy in 1828 at the age of twenty. He served seven years in the army; long enough to fix his habits and character, and to give a tinge of military peremptoriness to his whole career. He constantly recurred with pride to the fact that he was educated as a soldier, and was not unwilling to have it understood that he cherished military habits of thought and kept himself abreast with the progress of military theories.

About the time of his marriage to a daughter of Zachary Taylor, he left the army to assume the mixed career of cotton-planter and public man, which his tastes and his connections opened to him. In 1845 he entered Congress and soon acquired a national reputation. He threw himself ardently into the advocacy of the extremest views of the slaveholding class. He saw that slavery was doomed from the moment its spread was forbidden, and earnestly advocated the annexation of Texas as a means of obtaining room for its growth. The Mexican war, which resulted, called him to arms, for his education as a soldier and his actual eminence as an advocate of annexation made this the only consistent or logical course for him. As Colonel of the First Mississippi Volunteers he served with credit at Monterey and Buena Vista, and the wound which he received in the latter engagement quickened the attachment of the Southern people to him, and made easy his advance to political leadership in his own State. The radical character of the theories of State rights he had already adopted was shown by his refusal of President Polk's promotion to the rank of Brigadier-General of Volunteers, on the avowed ground that the States alone had the right to give such honors to the volunteers in the national service. It needs no argument to prove that this apparent self-sacrifice to a principle would endear him to Southern radicals, and pave the way to higher civic honors.

From his return from Mexico to the outbreak of the civil war he was in the Senate of the United States except during the Administration of Franklin Pierce (1853-1857), when he was Secretary of War. For this position he was well fitted, and his administration of the office was signalized by important improvements in the regulations, the discipline, the drill, and the organization of the army. But it was also signalized by so marked a policy of favoritism towards Southern officers that what at the time was regarded as his personal friendships and prejudices must now be interpreted as a deliberate purpose to make a Southern sectional devotion predominant in the army over devotion to the national flag. He undoubtedly meant that the army should be an honor to the country so long as Southern statesmen controlled the country's destinies, but that the dominant sentiment in its posts and mess-rooms should be such that it would be useless if called upon to put down nullification or secession. His policy was continued by Buchanan's Administration, and the immediate result was seen in 1861, when Gen. Twiggs's surrender of the troops in Texas was followed in quick succession by the transfer of the forts, arsenals, and posts in the Southern States to the Confederate civil authorities, and the commissioning of the officers in charge in the Confederate Army. That Sumter was not surrendered in like manner was not for lack of a Southern officer in command, but because the loyalty of Maj. Anderson was of a different temper from that of the rest, and postponed the Southern occupation till the cannon of Beauregard's attacking batteries had awakened a resistless outburst of Northern patriotism.

It is not necessary to assume that the Southern Democrats of whom Mr. Davis became the leader, had no attachment to the Union. Our increasing knowledge of their motives and purposes points to a different conclusion. Their temperament and mental habits made them, even more than Northern men, susceptible to the glory of a great and mighty nation and to the pride of taking high rank among the Powers of the earth. Their theories of States' rights had never stood in the way of national aggrandizement when it did not threaten Southern supremacy at home. The Florida annexation, the Louisiana purchase, and the absorption of Texas and part of Mexico are proof enough of this. We believe the truth to be that the truckling of Northern politicians had blinded them to the depth of national feeling in the Northern States, and had produced a settled conviction that with a manufacturing and trading people pecuniary profit and loss would outweigh all patriotic sentiment. They had schooled themselves to believe that a palpable and imminent danger of disunion would secure constitutional guarantees for the unrestricted spread of slavery. They had convinced themselves of the logical soundness of the Democratic platforms of 1856 and 1860, and thought the force of their arguments would surely be admitted by the North when the alternative would seem to be a quick dissolution of the Union. The very use of such arguments must have weakened the patriotism of those who used them; but it is not necessary to assume that they had destroyed it. The programme was a revolutionary demonstration to force constitutional changes, and they underestimated the danger that, like a military demonstration, it might end in a general engagement. It is now notorious that the leaders of the secession movement succeeded in forcing the passage of secession ordinances only by the most passionate asseverations of their faith that quick submission of the North and reconstruction on the basis of the constitutional guarantees for slavery would promptly follow united action in the South. To the suggestions that it might fail, their hot answer was the old one:

> "But screw your courage to the sticking place,
> And we'll not fail."

The plan was shrewdly arranged. The army officers in important commands were Southern men. The little navy was mostly at the other side of the globe. President Buchanan had committed himself to their doctrine that he had no right to attempt the coercion of a State. Secession was to be in form accomplished, and every Southern fort and arsenal was to be in the hands of the insurrectionists before Mr. Lincoln could be inaugurated. Northern Democratic conventions had adopted strong resolutions about resisting attempts at coercion. By every possible mode of reckoning but one, the game was in their own hands and their bloodless revolution assured. The one thing not taken into account was the passionate uprising of a whole Northern people, scorning their doughface leaders, trampling commercial theories under foot, and throwing lives and fortunes enthusiastically into their country's cause. It was the one unexpected thing that happened, and the bloodless revolutionary reconstruction of a slaveholding nation failed.

It would be going too far to say that in all this preparatory work Mr. Davis had been the guiding spirit. It is, however, quite within bounds to say that he was one of a small knot of men who controlled the policy of the Southern Democrats. Some of more sanguine temperament may have had fewer doubts of a peaceful success of the plot; but there is no room for question that he was heartily in the scheme, and was gradually coming more and more to the front as a leader likely to be intrusted with the execution of the plan when the time should come. He was the man who was summoned to Washington from a distance when the Southern members of Buchanan's Cabinet saw symptoms of failing nerve in the President. He was the man to whom Buchanan submitted the draft of his message, and whose approval was treated as the official endorsement of the revolutionists. He was the Chairman of the Committee of the Southern Senators who sat as a provisional junto in Washington, dictating the steps successively taken by the seceding States.

It has been supposed to be entirely inconsistent with this for him to assert, as he has done, that he retained a love for the Union. We think the view we have taken reconciles such a claim with his sincerity. The success of the plan seemed so assured by the expected help of the President and of the organized power of the Democratic party North, that he looked beyond the insurrectionary demonstration to the resulting amendment of the Constitution as to slavery. Thinking he could ignore the risk of war which seemed to be sufficiently provided against, the rest had a certain resemblance to a Revolution of the Palace, which would not disturb the unity or the general progress of the nation. He put away the thought of real or permanent division as unnecessary, and the show of it which was so dramatically made was only a device of party politics, serious enough to call forth the expected Union-saving panic at the North, but which would leave the whole country united at last under a slaveholding régime that would

make it more than ever glorious in the eyes of the cotton-planting class.

His first very troublesome doubts seem to have been born when he found Buchanan faltering in the rôle appointed for him. Then, when such Democrats as Black, Holt, and Stanton entered the Cabinet, he saw in their spirit the reflection of a different purpose in the Northern Democracy from that which he had expected. But it was too late to go back, and, with the other revolutionists, he thought it necessary to take a higher tone and affect a courage and a confidence which might still carry their purpose. It was at this time that he began to warn Southern men that they might have a real and fearful struggle on their hands. It is the misfortune and the fate of revolutionary leaders that the passions of their followers outrun them. To smaller intellects the vision of independence was made to appear an unmixed good, and the disunionism which had been preached as a means to a more satisfactory union, became a good in itself to the mobs of thoughtless enthusiasts who tossed their hats and shouted for secession.

We find it impossible to believe that the secession leaders in Congress would have continued their intrigue at Washington during that winter of 1860–'61, had it not seemed to them within the limits of party manipulation which was not to result in actual rebellion and war. They were in confidential relations with the Administration; they did not disguise from the President their plans; even the Republican leaders were so uncertain of popular support that they did not venture to unmask the whole nature of what was passing under their eyes. A President not in sympathy with their ultimate purpose would have arrested and placed accusations of treason against every man of them; but when the rebellion was to be Pickwickian, and the result the embodiment of the Democratic platform in the Constitution, Buchanan and Davis drifted together till the former found that it was "shooting Niagara," when he left the Southern leader to the torrent which no longer could be breasted.

We have no doubt that the discovery by the secession leaders that the Democratic party would not perform its appointed part in the drama was an unwelcome surprise to Davis and his associates, and marked the period when first they seriously faced the question of real rebellion with all its terrible consequences. But they were courageous men, and the die was cast. Their anger at Buchanan's pusillanimity, as they viewed it, helped to reconcile them to desperate measures. The Confederacy was organized, Davis was made its President, war became necessary to consolidate the elements of Southern society, and the bombardment of Sumter was ordered for the purpose of precipitating the conflict. In this final act, Davis's intellect made him hesitate, for he saw now more clearly than most about him the appalling results which must follow. But the revolution was begun, and he must either lead it or let it roll over him.

His administration of the Confederate Government was vigorous, and it is more than doubtful if any of his Southern critics could have done so well with the means at command. There was an outward unanimity in the Southern people, but the fact remained that it was only a minority that had been real secessionists, and an undercurrent of dissatisfaction soon became manifest. No one dared to advocate submission. The pride even of the original Union men shrank from this humiliation. But the hatred of those who had been the authors of the unspeakable evils the country was suffering found other forms of expression, and from first to last the Davis Administration found itself crippled by opposition which professed to keep within constitutional lines.

At the beginning it is probable that Mr. Davis meant to make the office of Commander-in-Chief something more than the nominal one. Had he reached the field of Manassas a few hours earlier, it is likely that he would have assumed the authority of General. He saw no reason why a President of a republic, any more than a Napoleon or a William of Orange, should not unite the active military functions with the executive. But the irritation which immediately followed from his visit to that field showed him the imprudence of a step which he did not repeat. Sidney Johnston never said anything more flattering to his friend than when, after the loss of Fort Donelson, he declared his desire to serve under the President of the Confederacy commanding in person in the field.

The strain upon Mr. Davis's nerves, and the character of the opposition to his Government which developed itself, intensified his less amiable personal traits. He grew more arrogant, made more of his personal likes and dislikes, regarded personal attachment to himself as a stronger reason for appointments, both civil and military. The necessity for using the whole power of the South as a unit hastened the progress towards centralization. The States'-rights doctrine was the most available weapon to fight the anti-slavery movement with, and was used accordingly. But when the success of their arms demanded it and it promised the dazzling glory of success, Southern men were willing to make as firm a consolidation as the circumstances required. The inconsistency of the acts of the Administration with the original doctrines of secession was strongly used against Mr. Davis by such opponents as Gov. Brown of Georgia; but the convenience of the weapon, in this case as in the former, accounts for its use without assuming any belief in its essential truth.

To Mr. Davis must be given the credit for a high, invincible courage that never faltered after he had chosen his part. Even when the resources of the Confederacy were exhausted and its armies destroyed, he would have sought some remote region where the struggle might still be carried on. His responsibilities as a ruler were no more criminal than those of the people he represented, though the world has always recognized the propriety of representation in punishment as in honor. It was as the political leader in the Senate of the United States that his deplorable work was done, far more than in the Executive Mansion at Richmond after the convulsion had begun. In the first, he was educating his people to do what must prove ruinous to a whole generation; in the second, he was executing their will when they were involved in a common catastrophe. This has been instinctively recognized by them, and it is rather an honor to them that they have refused to make him their scapegoat.

It is beyond the scope of a notice such as this to discuss the details of his policy as a ruler. Indeed, the world hardly has the means of doing so, even yet, though time is gradually accumulating the material for it. His conduct, when final ruin came, was not undignified. The history of the world gave him no encouragement to hope that his life would be spared, and that he would become the most signal example of the lenity of popular governments. His natural expectation was that the failure of his cause must involve his execution if captured. Yet every one must admit that his self-command and courage did not fail him. His imprisonment at Fortress Monroe had some irritating incidents—the result more of the ignorant zeal of guards than of the intention of the Government. He showed at times a disposition to exaggerate these things to excite the world's sympathy, but his physical exhaustion was such that fair men will regard those complaints as the results of illness rather than of a petty spirit. As Americans we may all be glad that the magnanimity of the people sanctioned his full release, and that he was himself no discreditable example of American manhood in both the extremes of fortune.

Could he have put the past as completely behind him as the soldiers and statesmen of the Confederacy generally did, and could he have engaged in the physical regeneration of the South as they have done, his advancing age would have been happier, and he would not have been likely to make some of those unlucky utterances which have occasionally renewed the anger of our people. But we are bound to remember that his position was peculiar, and that for reasons we have already given he could not follow the lines other men could easily mark out for themselves. It is matter for satisfaction that the devotion of personal friends secured for him a quiet retreat at Beauvoir in the congenial climate of the Gulf shore, and that in his old age and declining strength no physical want oppressed a mind sufficiently burdened with the consciousness of having been the chief figure in an epoch which proved so tragic to his followers.

THE NEW HARVARD GATEWAY.

CAMBRIDGE, December 5, 1889.

WHEN the procession of alumni and invited guests at the 250th anniversary of Harvard College, one of the greatest gatherings of American notables of modern years, entered the yard, it saw on either side of the road a small post of Quincy granite terminating the plain rail fence which surrounds the yard, and an insignificant cast-iron gate swung back out of the way. This was the western entrance to Harvard College, through which for years the Commencement Day processions, headed by the Boston Lancers, had passed, and it was but little more distinguished than the first rail fence that marked the early clearing in which stood Harvard and Massachusetts Halls. Regret for the poverty of such an approach to the first of American universities may often have been felt by alumni; but no one is known to have remarked upon it till, on the day in question, Mr. Samuel Johnston, of the Class of 1855, was overheard to express himself very emphatically on this point. The event proved that a resolution was taken then and there, for when Mr. Johnston died, a few months later, his will was found to contain a bequest of $10,000 for the erection of a gateway to Harvard College.

It is perfectly safe to say that the news of this bequest was a source of pain rather than pleasure to nearly every Harvard man who heard of it. The University's modern architecture was so largely bad, so out of keeping with the quiet character and good proportion of the Colonial Halls, that the erection of another monstrosity seemed worse than a waste of $10,000, which might have gone towards lighting the Library or some other practical need, especially when the site dedicated to the new structure lay between the two best of the Provincial buildings, with a vista of old church and graveyard beyond, dear to every Harvard memory. The idea of a marble Arc de Triomphe—of bronze lions—of Gothic buttresses—insulting the repose of that spot, seemed very like desecration.

The success of the experiment, which is now so near completion as to make a description of it possible, seems nearly triumphant, in view of the not inconsiderable difficulties confronting the designers; for, leaving out of the question what might have been, the new gateway is a great artistic addition to the College, and a permanent one. That it is so is due to the sound æsthetic judgment of the architects, Messrs. McKim, Mead & White, who looked for their inspiration to the adjoining elder buildings, and aimed from the first to erect a monument which should emphasize their ancient beauty, and not assert its own individuality.

The result can best be described by the passing traveller's impressions. As he comes down North Avenue, he sees opposite the old Unitarian Church two great brick gate-posts, the centre of the design, rising solidly to the dignified height of some twenty feet, and connected by a heavy crossbar of iron, with graceful, curving lines, surmounted by a delicate wrought-iron canopy, adding much to the loftiness of effect. Beneath this crossbar are swung open the great gates of the new era. The gate-posts are about five feet square. Ris-

ing from a course of warm Conway granite, they are made up of brick carefully selected for the purpose from various Boston brickyards, laid in a symmetrical, though apparently unstudied, pattern, and varying from the over-baked black to the under-baked buff brick; the courses being the alternate "headers" and "stretchers" of the Flemish bond used in the older buildings. The bricks are a trifle irregular in shape; and their blended color, the slight irregularity of their surfaces, and the broad mortar setting give an effect of freedom and distinction quite remarkable. A sunk panel of brick relieves the lower half of the post from stiffness, while the upper half takes a different color from a corresponding panel of Yorkshire sandstone set upon the post, and separated from the lower panel by several courses of brick and a plain piece of sandstone to mark the change in the color-motive. There are four of these panels, and carved upon them are the shields of the State, College, City, and an emblem to the donor and the nation. Of these, the first and the last are the best, the fine old Indian of the Massachusetts shield and the national eagle being carved with great vigor. I pass over the appropriate inscriptions, which are cut in bold Roman capitals. The gate-posts, in which some have detected a resemblance to the famous ones at St. Augustine, are surmounted with caps of Yorkshire stone, terminating each in an acorn-shaped finial, which gives a surprising effect of lightness to such weighty erections.

The gates themselves are magnificent pieces of iron work, probably the finest ever made in this country. They are seven feet broad each, and sixteen feet high, making a most imposing appearance whether open or closed. They are made of hand-forged iron, which, like their brick setting, has a freedom of outline which machine-wrought material would lack; and their slender vertical bars, lifting the eye to the crowning point above them, are relieved from monotony by two central panels of more elaborate work, two converging horizontal panels above, and two massive locks with handles of heavy wrought iron, which are firmly screwed on at about three feet from the ground. All the iron work is painted black, save the gilded dates 1636 and 1889 in the canopy. The initials (A. A. M.), barely discernible, are said to stand for a munificent anonymous donor to the gate fund.

The gate-posts are set back some twenty-five feet from the main street, the entrance to the yard curving gently in between granite curbs, and leaving a large space on the sidewalk. At each side of the gate-posts a brick wall, about ten feet in height, and capped with Yorkshire stone, runs some fifteen feet north and south, terminating in a smaller brick post, three feet square and twelve feet in height, surmounted by a square cap and a huge sphere of the soft yellow stone; the abruptness of the wall's departure being taken away by a scroll-shaped *console* springing from the larger posts. From these smaller posts two other walls project at right angles some fifteen feet westward towards the street, ending in two more of the smaller posts, panelled in relief with brick, like the larger ones. This brings the design out to the old fence-line; the central part of the scheme forming three sides of a rectangle, some fifteen feet by fifty. On the street side of the first wall, close against the string-course of Conway granite, is a low, heavy bench of the same stone, resting on two carved claws; at the opposite side of the way a great elm rises from the corner to droop its limbs over the whole, and furnishes a natural relief to the severity of the wall. The space about it and in front of the seat is to be well turfed. On the rear of the two walls are two niches, sunk in the brick, surmounted by a shell cut in stone. One has a shallow basin of the sandstone, beneath which is a larger basin of granite; into this a small bronze mask will soon emit a fine jet of water. The other niche will have no fountain, but in front of it, set at a little distance from the wall, is another granite bench like the first, making a beautiful resting-place in the summer.

The walls on the left and right as one enters the gates are unbroken, except for two large panels of sandstone, on which are inscribed the first history of the College, number one containing the succinct votes of the old Colonial Court: "By the General Court of Massachusetts Bay: 28 October, 1636, agreed to give 400£ towards a schoale or colledge, whearof 200£ to bee paid the next yeare, & 200£ when the worke is finished, & the next Court to appoint wheare & w^t^ building: 15 November, 1637, The Colledg is ordered to bee at Newetowne: 2 May, 1638, It is ordered, that Newetowne shall henceforward be called Cambrige: 13 March, 1638-9, It is ordered, that the Colledge agreed upon formerly to bee built at Cambridg shalbee called Harvard Colledge." All those early years of endeavor and self-sacrifice are thus summarized in the quaint memoranda of the fathers; but the purpose of the first "schoale" is more clearly gathered from the delightful little quotation from 'New England's First Fruits' on the opposite panel: "After God had carried us safe to New-England, and wee had builded our houses, provided necessaries for our liveli-hood, rear'd convenient places for God's worship, and setled the Civill Government: One of the next things we longed for, and looked after, was to advance Learning and perpetuate it to Posterity; dreading to leave an illiterate Ministery to the Churches, when our present Ministers shall lie in the Dust."

The rest of the design is of the same refinement and simplicity. Two smaller iron gates flank the main one, and lead to paths within; they too are crowned with elaborate canopies and with arabesque glass lanterns. Continuing north or south from these gates, and rising from the string-course of Conway granite, is an iron fence, of the same beautiful detail as the other iron-work, and having its centre strengthened by a very heavy filigreed panel, much higher than the rest. From the end posts on the street there is a return of iron work, terminating in a post, which leaves an open space between it and the opposite hall. These gaps will probably ultimately be filled. The whole construction is now thrown into perspective by six granite posts (or fenders, in the Italian fashion), set across the sidewalk, one opposite each of the smaller brick posts.

This is the new gate of Harvard College. From the day its first bricks were laid it seemed a fitting part of the place—so much so that one barbarian remarked mournfully, "Now, I suppose, we shall never have any decent buildings to take the place of these old ones"; and several Freshmen were convinced that an old building was coming down, not a new one going up. In remarks like these the architects must have found a reward for their striving.

THE EXPEDITION TO AFRICA.

U. S. S. "Pensacola," Nov. 1, 1889.

"All of which I saw, and part of which I was"—a small part, that is, a very small part. For, while the public prints have been very generous in giving me largely the credit of the expedition, it really belongs elsewhere. In the first place, such an expedition would never have been possible but for the enlightened policy of our navy, in particular of Admiral Walker and Commander Dewey. The latter was charged by the Secretary with the management of all official matters pertaining to the organization and welfare of the expedition, and such success as may be attained must be his. It is thus peculiarly a naval affair, and even the few days so far passed at sea have sufficed to show that the officers of the *Pensacola* are not only glad to interest themselves in the work of the expedition, but also are able, by their willing exertion, to add very materially to its chances of success. Her Commander, Capt. Yates, and his Executive Officer, Commander Hanford, are pure gold, and the expedition is not looking for any traces of base metal in her junior officers.

Thank Heaven, we got off without ostentation. By sailing at an early hour (which we did on the 16th of October), the customary ceremonies attending the departure of a man-of-war were escaped, and our navy saved some expenditure of powder. The little party of scientists aboard, bound for the distant and (to all of the members but one) the untried coast of West Africa, have primarily in view, as is already well known, the observation of the total eclipse of the sun occurring on the 22d of December next. The time of the year was unfavorable for the organization of the expedition in all respects just to my notion; but if there are hostile critics, I have only to remind them that it may be prudent to delay all attacks until the expedition has had the opportunity to do its work. The present organization of the expedition is as follows: In terrestrial physics, Mr. Preston of the Coast and Geodetic Survey; in meteorology, Professor Abbe of the Army Signal Office; in anthropology, Mr. Orr of Clark University; in languages, Mr Chatelain, who already knows Loanda pretty thoroughly from a three years' residence there; in natural history, Mr. Harvey Brown and Mr. Arthur Brown of the U. S. National Museum; in photography, Mr. Carbutt and Mr. Wright; in astronomy, Mr. Davis of Princeton, Mr. Jacoby of Columbia, and Mr. Loomis and Professor Bigelow of the Nautical Almanac Office. The instrumental equipment I may write about later, after it has had an opportunity to accomplish something; enough for now if I say that it is in the main photographic; that all important partial phases of the eclipse are to be registered on large-scale plates, and that I hope to have the opportunity of collecting, in the brief duration of the total eclipse, a great amount of material for the pictorial, spectroscopic, photometric, and polariscopic study of the solar corona.

A northeast gale had been blowing for several days, and even in the harbor of New York a quite respectable sea was running, but it grew much more respectable—and grew to be much more respected—as we got further out. In a few hours the coast faded into a pale, cloud-like horizon line, and then disappeared. Our next sight of mother earth bids fair to be some coaling isle off the sunny coasts of northwest Africa.

Life on board a man-of-war is nothing if not systematic. Every hour has its duty, and that duty is done in its allotted time. This is very advantageous generally; and now and then results in great economy to the navy appropriations, for the routine which must be gone through to obtain any article from the ship's stores consumes so much time that the need for it has not infrequently disappeared long before the thing itself is forthcoming. Among the 450 souls constituting at present the sole population of our world, and which is perhaps

the most numerous company ever sent out on an American man-of-war, rumors and little excitements spread as rapidly as they do on land, and are even more welcome. One evening, an hour or two after dark, a sudden alarm penetrated the ward-room, "Man overboard!" By the time we reached the deck the startling order from the officer on the bridge, "Man the life-boat!" confirmed the rumor. Rushing to the lee side, I saw a dark body, like the overturned hull of some great craft, rising and falling on the long swell. As the boat lowered, the creaking of the falls was the only audible sound, save the low rush of the black water, as the slow waves lifted the great hull of the *Pensacola*, and fell back in a soft rush of phosphorescent foam. Will the life-boat *never* get ready? The man will drown a dozen times before the little crew can reach him. At last, after what seemed a small eternity, the boat, manned and lighted, dropped into the black, merciless water. No cry had been heard; if the man was drowning, he was silent, he did not call upon his fellows for help. Perhaps in the ship's company some one out of whose life all the sweetness had gone, intentionally dropped overboard to end an existence he valued no longer. Hurry up that boat! Why does not the cockswain shout "Way enough"—he has surely reached the spot where the man went down? Why does he slowly steer his craft around that dark mass? Perhaps the man, too exhausted to shout, is yet clinging to its keel. But the life-boat is returning. The lantern it carries lights up the oarsmen and the whole interior, but no insensible form is seen extended on the thwarts. Silently the boat is brought under the davits and hoisted to its place, and to the question of the officer of the deck, "What is it?" comes the answer, "Weed, sir!" Alas! all of this sympathy has been wasted on a lenticular patch of Gulf-weed, magnified by the dim light into a capsized boat with a man clinging to the keel. "Most lame and impotent conclusion" to a most promising and exciting rumor. We who "go down to the sea in ships and do business on the mighty waters," see things strange and wonderful—not always pathetic.

Perhaps the most industrious member of our party thus far is Prof. Abbe, who began his meteorological observations on board the *Pensacola* promptly at six P. M., October 15, twelve hours before we set sail. A comparison of his instruments with those of the ship's officers has shown a close agreement of the latter with the Signal-Service standards. On the morning of October 22, after a short period of southeasterly winds, with frequent showers and squalls, it was our good fortune to be favored with a remarkable and perhaps unique display of waterspouts. There were low scudding clouds moving towards the northwest, and the waterspouts seemed to form and develop in these clouds. In the morning, from about half-past nine and onward for nearly an hour, there was a succession of well-developed waterspouts forming and reforming to the southwest of us. No less than seven were simultaneously visible, while the total number throughout the entire display was probably between twenty and thirty. At one time, it looked as if our good ship might be overwhelmed by the rapid approach of these angry monsters of the air, the first ones forming at a distance of about four miles from the ship, and coming nearer and nearer until within less than half that distance. Fine drawings of these remarkable air columns are among the records of the expedition, but attempts to photograph them were in the main unsuccessful, owing to the lack of sufficient contrast.

In his report to the Director of the Expedition, on this wonderful display of waterspouts, Prof. Abbe says:

"It has frequently been supposed that the discharge of a cannon will break up a waterspout. On the present occasion it so happened that a six-pounder was ordered to be discharged, so as to clean it out, and this took place in the midst of the display of waterspouts, which were then three or four miles distant. The discharge of the cannon was followed within a few seconds by the breaking up of one of the spouts, but several others remained and others were again formed a few minutes afterwards, so that the breaking up of the one can only be considered as an accidental coincidence; nor is there, to my mind, any conceivable reason why the discharge of a cannon at a long distance from a spout, or even the firing of a cannon ball into a spout, should be considered as likely to have any appreciable influence on the great mass of revolving air. The general discussion of the mechanism of waterspouts has been so well given by Ferrel in his newest work, 'A Popular Treatise on the Winds,' that I need only say that everything observed by us from the deck of the *Pensacola*, on the 22d of October, fully confirmed the views set forth by him."

Prof. Abbe's report, although a provisional one, contains many points, of great and absorbing interest to the student of marine meteorology, upon which I may touch in a subsequent letter. They relate chiefly to the determination of the movements of the air with greater accuracy than is usually attempted at sea, to the anemometer observations taken with great regularity by three instruments of this sort, one of which is lashed to the mizzen royal mast-head, some feet above its lightning-rod, and to his work with a new form of reflecting nephoscope, in performing all of which Prof. Abbe is most indefatigable.

The expedition is just nearing Fayal in the Azores, where we shall be at anchor for a day or two in the little harbor of Horta for coal, after which the course will lie direct towards the Cape de Verdes. St. Paul de Loanda will be reached by the 1st–5th December, in abundant season for the total eclipse on the 22d. DAVID P. TODD.

Correspondence.

JEFFERSON ON SINECURES.

TO THE EDITOR OF THE NATION:

SIR: I was recently shown a letter from Thomas Jefferson, written when he was President, that gave such a curious insight into his conception of public office that I asked permission to copy and publish it. The letter needs little comment to add to its interest, nor does it require any extended comparison with modern methods of filling public appointments to show how little or how much public opinion has crowded out the practice of "looking after one's friends"—and relations.

TO JOHN PAGE, ESQ.

WASHINGTON, 3 July, 1806.

MY DEAR FRIEND,

By a letter from Mr. Walker to Mr. Madison I learn that he had visited you lately at Rosewell, and thought that some occupation in the public concerns would not be refused by you. I wish there was anything to offer which might give you amusement, profit and little labor; but our's you know is not a government of any great choice of office. We have reason to consider as very near at hand a vacancy in an office, which indeed could offer you no amusement, little emolument, but also no labor. The death of the present worthy loan officer (Mr. Jones) is considered as inevitably close at hand. This opinion I have from the best medical judge, and the proposing it to you occurs from the information of Mr. Walker's letter. The salary is 1500 D a year, and 150 or 200 D more as commission on paiment of pensions. Stationery is allowed, but neither office hire nor fuel. 1000 D additional are permitted to be divided between two clerks as the principal pleases. Mr. Gallatin says that a residence so near to Richmond as that you could ride there once or twice a week, would be sufficient, and that the office books being deposited with the Richmond bank a little before quarter day, they would make all the paiments without charge, considering as a sufficient emolument the deposit of the public money with them, which would at the same time save you from trouble and risk. The business can be done by one clerk, but there must still be two. However, nearly all the salary is given to the efficient clerk, and a minimum to the one who is merely nominal, or at least, this may be the arrangement, if it is not so at present. There is probably a clerk in the office well skilled in the business, and whom it might be necessary to keep some time. In the meanwhile if one of your sons could come in as secondary, in proportion as he advances in his knolege of the business, he might divide in the salary more and more largely, and finally take the principal place and salary, to the Commissioner of loans himself. The office is a perfect sinecure.

The introduction of one of your sons into the office, besides adding the benefit of the additional thousand dollars to the family, would, by placing him as it were in possession of the office, secure his succeeding to it in that event which you and I ought now to consider as not very remote. I pray that this letter may be considered as strictly confidential to Mrs. Page and yourself, and as soon as you have made up your mind, to be so good as to apprise me of it, because, to the solicitations already received, a flood of others will be added on the death of the incumbent. I confess I look to your decision with the more hope, as it would once more place you within reach of Monticello. I understand from Mr. Gallatin that the circumstance which renders necessary the residence of the officer in the vicinity of Richmond is the occasional transfer of stock, to which his signature is indispensable, and that these transfers being suspended some time before and after quarter day, admits an absence of 3 or 4 weeks at each of these periods. . . .

TH. JEFFERSON.

Having taken the office, Page enjoyed his sinecure undisturbed until June, 1807, when, the Postmaster at Richmond being about to die and the loan-office to be abolished on the payment of the public debt, Jefferson, looking round for something "equally as good" for Page, informed him of the "moribund" situation of the Postmaster and offered him the probable vacancy, in an "entirely confidential letter." On looking into the emoluments of the place, Jefferson found they were "not so much as I had expected, and possibly is not as good as the place you now hold." Whether Page accepted this legacy also, history saith not; but imagine a President consulting the family physician of an office-holder on the prospect of a "perfect sinecure" becoming vacant on the death of the incumbent! This buzzard-like eagerness need not be practised today: the office-holder is kicked out. What an advance in methods!

WORTHINGTON C. FORD.

BROOKLYN, December 2, 1889.

POPE AND PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: I have not seen any special notice taken of the facts that at the banquet on occasion of opening the Roman Catholic University at Washington, the President of the United States sat on the *left* of Cardinal Gibbons (who presided), and Cardinal Taschereau on his *right;* and that the health of Leo XIII. was the *first* toast given, and the Government and President of the United States the *second*.

Why the President and the Secretary of State allowed themselves and the Government to be placed in this position is a matter for them to settle. Why their hosts so placed them is another question. If it was through ignorance or inadvertence, it exhibits a great lack of

savoir faire. If it was done intentionally, it can only mean, first the Papacy and then the country. NATUS.

THE UNIVERSITIES AND THE PROFESSIONS.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of November 28 you suggest the propriety of allowing a student to take his degree whenever he can pass the needed examination. It is certainly time that all good colleges should adopt some method to protect genuine students against the loss which they now suffer from idle classmates. The evil is, perhaps, greater in academies than in colleges, but it is too great to be calmly endured in both. A rigid division of classes on the basis of merit would enable the brighter and more studious to accomplish the work of an ordinary college course in from one to two years' less time, without any injurious strain whatever. If it should not be deemed advisable to grant degrees for less than four years of college work, then the time gained by such students could be devoted to more work in the branches now pursued, or to the anticipation of professional work.

There are, of course, many preparatory schools where such a division of classes is now made, but there are many more where the best student in the class has no opportunity to cover any more ground than the poorest. The writer has under his care a preparatory class in Greek, which cannot be divided for lack of time. It is his firm belief that about one-third of the class, if taken by themselves from the end of the first month, could accomplish at least one-half more work than the class as a whole will be able to do. It is easy to see that the impetus thus gained would be of immense advantage throughout the college course.

There would be one great disadvantage in allowing the student to shorten the time required for taking his degree. It would furnish a great temptation to do the work superficially in order to gain time; and the brighter the student, the greater would the temptation become. This might be counteracted in a measure by requiring a very high standard of work as a condition of shortening the time.

Whatever it may be, some way should be devised to place an adequate premium upon the qualities which should characterize a real student. Of course it is impossible that the college should adapt itself *perfectly* to the needs of each student as an individual, but the tendency should be in that direction. TEACHER.

TO THE EDITOR OF THE NATION:

SIR: The article entitled "The Universities and the Professions," which appeared in the last number of the *Nation*, seems to me faulty in this, that it infers that the earlier a boy enters upon his business career, the more likely he is to succeed; or, in other words, that the college graduate is a poor competitor in the race for making money with the man who started in business when he entered college.

As the article referred to seems to discuss the matter from a purely business standpoint, we should put aside comparisons with strictly professional men, such as physicians, lawyers, and clergymen, who are obliged to devote three or four years to the study of their profession in addition to the usual college course, and confine ourselves to men who take the ordinary college course of four years; and in this event it is respectfully contended that it is only a question of time when the alumnus shall outstrip the man who has not gone to college. That is to say, given two boys, eighteen years old and of equal ability, put one at business and send the other to college, and when those boys become men, of say twenty-seven years, the college graduate will be earning more than the other.

When a boy of eighteen enters business, his duties for the first two years of his career consist of running errands, indexing books, and copying letters, after which he may be intrusted with more important matters, and, by the time he has reached the age of twenty-two, he may be earning from nine to twelve hundred dollars a year. The college graduate, starting in business at the age of twenty-two, will master in a year what it has taken the other man four to learn, not only because he is older and determined to work now that his days of pleasure are ended, but also because his mind is trained to study and observation; and hence he can arrive, by short cuts, at conclusions which his less fortunate rival can obtain only by much labor of time and thought. True, the college graduate's salary may not yet be equal to the salary of his competitor, but if this last statement be true, will it be many years before his income will be equal to, and finally greater, than the other's, having, as he has, an intimate knowledge of men and their ways gained in the class-room, a wide circle of friends, and, more important than all, a knowledge of finance, of political economy, of government, of languages, of electricity, and the numerous other sciences which are taught, and well taught, in our great universities of to-day?

Of course there are men who go through college without learning much of anything, but, these being indifferent to any sort of work, would make no better headway at business. Looking back over the list of my acquaintances, and comparing those who went into business directly after leaving school with those who first took a college course, I fail to find a single case in which, other things being equal, the college graduate is not in as good a financial condition to day as the man who went from the school-room to the counting-house.

Yours respectfully,

CHAS. FRANCIS GUMMEY, JR.

PHILADELPHIA, December 3, 1889.

TO THE EDITOR OF THE NATION:

SIR: In your last week's editorial, under the above title, you speak of the "perturbation in the collegiate world over the decline in the number of students, in proportion to population," and attribute this decline chiefly to "the great delay imposed by a university education on a young man's entrance on life." The "wild race for the dollar"—which, according to Heinrich von Treitschke, is the chief feature of American life—is so hotly contested that great numbers of our young men had rather give up the intellectual culture and the warm friendships of college life than run the least risk of lagging behind in the mad chase. The colleges, you say, have been debating of late the best mode of meeting this demand for an early entrance upon the money-getting arena; and you suggest, as one device for partly solving the difficulty, "letting every man take his degree whenever he could pass the needed examination."

My object in writing this note is to point out to your readers the fact that exactly this plan has always been a marked, perhaps the most marked, feature of the University of Virginia. In fact, the great bulk of the academic students here never take any degree at all, but study for one, two, three, four, or more years just what subjects in just what order they prefer. There being no prescribed curriculum, a student who, for instance, is poorly prepared in Greek, well prepared in mathematics, and excellently prepared in Latin, may enter the junior class in Greek, the intermediate in mathematics, and the senior in Latin. If so minded, a student may even combine academic studies with professional, taking simultaneously, for example, history and medicine, or chemistry and law. Degrees, both professional and academic, may be obtained at the end of any year, whether it be the first or the tenth of the student's course, in which the necessary examinations are passed; and, as mentioned above, many students never attempt to take a degree, but are satisfied with the diplomas of graduation in any particular subjects on which they pass the examinations.

Now, while objections may doubtless be raised to this system, it has the immense merit of flexibility and adaptability both to the various mental capacity and preparation of various individuals, and to the equally various contents of their pocket-books. The University of Virginia, alone among the leading institutions of learning in America, holds out great inducements to that large class of young men who, being unable or unwilling, for pecuniary or other reasons, to go through with the ordinary prescribed curriculum of four years, would nevertheless be delighted at the opportunity of spending a year or two at college in the prosecution of a few favorite branches of study. The importance of even one year of college life to a young man can hardly be estimated. Not only does he have the opportunity to pursue his favorite studies for that period, but he has the immense advantage of coming into contact and forming friendships with more of those young men who are destined to be leading lawyers, physicians, preachers, teachers, and statesmen in the future than he could meet with in any other way.

R. H. DABNEY.

UNIVERSITY OF VIRGINIA, December 1, 1889.

PEDAGOGY IN THE UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: The letter in the last *Nation*, headed "Pedagogy in the Universities," meets a most sympathetic response in my heart. I know something from personal experience of the methods both of larger and smaller American colleges, and although my connection with them has been on the whole beneficial, it has not by any means been what it would if some of the professors in these same institutions had known how to teach.

In college, as in the university, the only question which seems to be asked in regard to the fitness of any person for a particular chair is, Does he know his subject? not, Does he know men and how to make them interested in his subject? If he stands in the first rank as a scholar, no further questions seem to be asked. Note the way that high-stand men in all our colleges are asked to come back and accept tutorships, sometimes immediately after graduation, sometimes after additional preparation, but always with the understanding that their qualification is knowledge of their subject, never a knowledge of the ways and means of imparting it. And the average tutor's conception of his position is one which will correspond with this principle of selection. He is not called a teacher, but a tutor—as if any word could possibly describe so anomalous a position. He sits before the class, hears them recite, flunks them, or lets them through easy—it makes no difference to him; makes a record of his judgment of their excellence, and then

lets them out to give place to another class who are to be similarly treated. A patent, automatic, self-registering marking machine would be just as good, and better; it would not pretend to be a man.

This same vice runs through higher university grades, but it is not so widespread; not because there is any test of teaching ability required, but because a man who is old enough and knows enough to become a professor in theology, law, or medicine, generally (but not always) knows more about the human mind and its operations than the mathematical genius just graduated from college. But here scholarship is the one and only test. The ability to teach, or even the character of the man as indicating his ability to teach, seems wholly overlooked; and the man regards himself, like his more humble comrade, not as a teacher, but as a lecturer or professor. He sits before the class, rolls out information over the desk, rapidly or slowly, in ounce packages or at wholesale, just as it may suit his individual convenience or his own processes of thought. He creates an atmosphere which everybody in the room can feel, and which no one can be in doubt about, and which gives just as plain an impression as so many words: "This is *my* lecture-room. I shall do here just as I please. I am going to talk about such and such a subject. Whether you are interested or not, it makes no difference. Whether you are able to get into your brains any conception of it, is wholly a matter of indifference; and, as for asking a question for repetition or explanation, that is a hideous offence against my rights in my domain which I cannot tolerate an instant."

It is a matter of great wonder to large classes of students how persons who are known around the world for scholarship can be such poor teachers, and why educational institutions should ever ask such persons, without requiring the teaching gift, to take the time and provoke the patience of persons who are offering their time and money in the desire of being taught. Very respectfully,

A Student.

INTERCOLLEGIATE ATHLETICS.

To the Editor of The Nation:

Sir: The foot-ball season has closed. The dignified faculties may now cease making affidavits that they have not falsified their college records for the sake of strengthening "the team"; the broken bones may heal, the blackened eyes may bleach, and the undergraduates may now spend their time in watching the development of the candidates for the base-ball 'team" as they train in the gymnasium.

Are these intercollegiate contests wise? Do they promote the real, legitimate purposes of a college, so pungently expressed in your editorial on "Colleges Without Temptation" in the *Nation* of September 19, 1889? It hardly seems so to me.

What advantages result from these contests between the colleges? (1.) Provincialism is perhaps prevented by association thus brought about between the representatives of the different colleges; a little more unity (not harmony) is created in the college world. (2.) College patriotism is increased: none of us like to see our college beaten; all of us feel a pride in victory. As to whether this "patriotism" is of a lofty or even desirable order, I do not now inquire. I am unable to state other advantages. Now, what are the evils connected with and resultant from these contests?

(1.) Gambling. The amount of betting on the results of these games is something enormous. The gambling spirit becomes so strong and so widespread that he is a rare undergraduate who believes, and lives up to the belief, that obtaining money from another without rendering an equivalent, is but a form of robbery. When one observes the results of this gambling spirit, in the numerous defalcations of cashiers and trustees, caused by stock speculation; in the cases of "nervous prostration" among business men, caused more often by illegitimate side-shows in the stock market than by legitimate business; and in the wrecked fortunes and homes of the victims of some successful "deal"—the cultivation of this spirit among the young men who should occupy places of leadership in the business and professional world is not to be considered lightly.

(2.) Drinking. The pride the young alumnus feels in learning that his Alma Mater has defeated some rival college on the campus is somewhat alloyed when he also learns that the victors celebrated by looting all convenient bar-rooms, smashed car windows, and terrified the populace at all the stations along the route home, and that several of the young heroes were carted to their rooms helplessly drunk. Yet this is no overdrawn picture. From personal observation, I know that the habit of intemperate drinking has been greatly increased in at least one college by these mob visits to other institutions. It is considered "the thing" to drink then, if at no other time.

(3.) A spirit of brutality and unfairness is produced, the brutality more especially by foot-ball. The desire to win becomes so rampant that *any* means—"slugging," even maiming, tricks of all kinds—are resorted to. I remember that one stalwart but verdant Freshman became so thoroughly imbued with foot-ball spirit that he apologized to his captain, after the game, because his opponent in the rush-line had been able to endure his attack for fifteen minutes, when the Freshman had been strictly charged to "knock him out in five minutes." The newspaper reports for the past few weeks are sufficient evidence that no spirit of courteous fairness characterizes these contests.

(4.) The expense. The average expenses of a student in a New England college are now just about double the average yearly wages of a workingman. This great disproportion is a striking illustration of the fact that the gulf between the rich and the poor is constantly widening in America. If the present tendency continues, it soon will be impossible for the poor man's son to gain a college education in any other character than that of a "subsidized embryo preacher." It is much more difficult for a high-spirited young man to refuse to share in a college interest than it is for him to wear cheap clothes or occupy a poorly furnished room.

(5.) These intercollegiate contests *prevent* a general physical culture among the students. The moment there is a "'varsity team" in training, the whole athletic interest centres in it; the time that should be given to vigorous exercise is given to a hump-backed watching of the practising team from the fence or stand. There is actually less ball-playing in college when a nine is put in training than before; the tennis-courts are less frequented; the college populace takes its exercise like the Roman populace—by proxy. This is no small evil—this making a *concentrated extract of athlete*; it is bad for the extract and bad for the residuum.

(6.) These contests and their results attract a class of fellows to college that have no proper place there. The consequences are that a bad tone, morally and intellectually, is given to the college, interest in scholarly pursuits is decreased, degrees are given to many without the slightest real claim. In your editorial above referred to, you say: "The next great step in collegiate education in this country will, we believe, be the resolute shutting of the doors on all boys who are not eager to learn, and who are not willing, while at college, to lead scholastic lives." Yet the plea is made that these contests advertise the colleges, and make them attractive to rich men's sons who do not care for such stupid pursuits as science and literature. The inducements held out to men of not the slightest taste or capacity for scholarship to enter certain colleges, are a disgrace to American education. The degree of A.B. is just as likely to mean that a young man is a good ball-player as that he has a trained mind. Instead of an atmosphere of scholarship, the tendency is towards an atmosphere of professional sporting. The professors find little responsiveness in their class-rooms, become disgusted, and do not give out the best that is in them. The best teacher in the world will not long teach well unless his students show some appreciation of his work.

American college graduates are no longer boys: the average age is now very nearly twenty-three. If non-professional studies are to be pursued to this age, the college degree ought to mean a broad and thorough culture; but this can be acquired only by earnest labor in serious and manly pursuits. I submit that these intercollegiate contests are an evil to be abolished. G. W. A.

Boston, December 2, 1889.

SOMETHING NEW IN CONSTITUTIONAL LAW.

To the Editor of The Nation:

Sir: An interesting bit of development in constitutional law is going on just now in Colorado. It may be remembered that the Constitution of Colorado, admitted as a State in 1876—the latest State, until our recent four—was a pronounced specimen of what seems to some of us, not to say it disrespectfully, that degraded modern form of constitution in which the Legislature is restrained by many detailed prohibitions. It was this instrument, probably, to which Mr. Bryce alluded ('American Commonwealth,' i, 427) when he said, in describing the kind: "We even find the method prescribed in which stationery and coals for the use of the Legislature shall be contracted for." Constitution of Colorado, art. v, sec. 29.

After eight or nine years' experience with this instrument, the people of Colorado, in 1886, adopted an amendment to it which at first sight looks merely like what several other constitutions have—a provision for enabling the Legislature and the Executive to get an advisory opinion from the judges. It was this:

"The Supreme Court shall give its opinion upon important questions upon solemn occasions, when required by the Governor, the Senate, or the House of Representatives; and all such opinions shall be published in connection with the reported decisions of the Court."

It is well known that a clause very similar to this has long existed in four New England constitutions, and that it was afterwards introduced into the Constitution of Missouri (and subsequently left out) and into that of Florida. So, also, is it lately introduced into that of our new State of South Dakota.

But Colorado has a peculiarity. Everywhere else, the provision calls for the opinion of "the justices" of the court, and the construction given to it (with a single exception) is, that the

opinions are merely advisory. This construction seems clearly right: these clauses simply introduce a piece of English constitutional procedure, and nothing is more certain than that such opinions in England are only advisory. The exception above referred to is found in an opinion in 70 Maine at p. 583. But that opinion has various marks of being ill-considered; among others is the circumstance that it omits to recognize that the contrary doctrine had been repeatedly laid down by judges in Maine, and that it was established elsewhere, wherever the question had been raised. Now, in Colorado, the Supreme Court, in an opinion of last spring, lately printed, in 21 Pacif. Rep. 478, takes notice of this distinction, and, after declaring that "it is the court and not the justices that must answer," goes on to say that "our responses must be reported as are other opinions, and *they have all the force and effect of judicial precedents.*" This is a very remarkable result, that of giving to such informal answers a judicial quality, the quality of authority and precedent; and one may well doubt whether the Court is not over-emphasizing the effect of using the word "court" instead of "justices of the court." For the history of this sort of thing must be remembered, and its interpretation elsewhere. The reporting of these answers is common everywhere. And it seems worthy of remark that the Colorado amendment seems to contrast these "opinions" with the "decisions of the Court."

But I am postponing too long the main point of my letter. It lies in the following interesting passage from the opinion of Helm, C. J., speaking for "the court," in the case above named:

"The history of this constitutional amendment may be consulted with advantage in the endeavor to discover its purpose. The successive legislatures meeting after the admission of Colorado to Statehood *encountered great difficulty in the enactment of laws*, on account of numerous wise but troublesome limitations contained in the Constitution. Perplexity and confusion arose in consequence of legislation which this court was ultimately compelled to hold invalid. It was deemed expedient that each house should have the privilege of submitting questions, so that the injurious consequences arising from unconstitutional legislation might be avoided by having the validity of proposed legislative acts thus determined in advance. . . . All the questions propounded by the General Assembly of 1887, which was the first to meet after the adoption of the amendment [the Court gave seventeen of these opinions that term], . . . rested upon legislative doubts as to the constitutionality of certain proposed acts or parts of acts."

The Court draws the conclusion that "executive questions must be purely *juris publici*, and that legislative questions must be connected with pending legislation, and relate either to the constitutionality thereof or to matters connected therewith of purely public right."

Here, then (if we assume the Court's construction to be sound), we have a State getting into trouble by tying up its Legislature with many petty restrictions, and then trying to get out of its trouble by giving its judges the portentous power of settling by an authoritative manifesto, unaided by argument, the question of whether the Legislature has conformed to these requirements. And the consequences of this construction are so serious that the Court restricts the natural meaning of the language of the new amendment so as to limit it to particular classes of questions.

It would be interesting to know whether the Court has stated the full strength of the arguments for saying that these opinions in Colorado should "have all the force and effect of judicial precedents." If it has, the question may, perhaps, be regarded as not yet finally settled. JAMES B. THAYER.

CAMBRIDGE, MASS., December 7, 1889.

SYSTEMS OF TAXATION.

TO THE EDITOR OF THE NATION:

SIR: I am very much obliged to "G. W. A." for his recognition of my efforts in behalf of executive leadership in our legislatures. My attention has of late been diverted from the importance of this in the national legislatures to the still greater and more pressing need in the States—greater because our State governments are still more demoralized and chaotic than at Washington. Taxation is one, and perhaps the most important, branch of administration, and if our Governor had some real and positive power, and had, together with a staff of leading officials of his own choosing, a seat in the Legislature, the unjust, impolitic, and wholly abominable system of taxation which prevails in Massachusetts would not remain long without vigorous attack.

Though regarding it as a side issue, I will try to meet "G. W. A.'s" fair and candid argument. In the first place, it is not proposed to tax one kind of property at the expense of another, but simply to collect the tax from quick capital *through* the land and buildings. Thus, if I own land with a building on it, it would make no difference to me if the tax was doubled, provided my tenant would increase his rent by the same amount. A farmer would be perfectly willing to double the tax on his farm, provided he could make up the difference in the price of his produce. The fact is, quick capital will still pay its share of taxes, only it will do what men like so much better—pay indirectly instead of directly.

Mr. George's single-tax theory, if I understand it, is that land alone shall be taxed; so that a lot of land which is not occupied and has no income, shall pay the same tax as land immediately adjoining which is covered with buildings and gets a large income. Mr. George, in fact, regards private ownership in land as the source of all human woe, and desires to tax it out of existence. I respectfully protest against being connected with any such doctrine.

Of course the great difficulty in transferring all taxes to land and buildings would be the transition, as at first the change would doubtless bear heavily on real estate. I think, however, that even this might be overcome by an expedient which it would take too much space to state here; but the condition of Vermont and New Hampshire is so desperate as to call for desperate remedies.

"G. W. A." says that the presence of quick capital on land is owing to the nature of the soil, or its suitableness for the purposes of men. No doubt; but what I maintain is, that taxation can greatly increase this attractiveness, or cancel it altogether. There is a buiding going up on State Street ten stories high, and covering an acre of land, to be used for offices. The owners of that building would gladly pay three times, perhaps five times, as much in taxes as any equal amount of land and buildings if they could secure the condition that their tenants should be free from personal taxation, while all other citizens were forced to make returns of all their personal property for taxation. If the case were reversed, the owners could not pay any taxes at all, as they could not let a room. What is true of this building is just as true of the whole city or State.

"G. W. A." says that my plan is like taxing agricultural industries and favoring manufacturing. Not at all. The farmer loses more by the increased tax on his quick capital, as "G. W. A." shows later on, than he gains from the factory, especially as he is thus still more overweighted as against Western produce. The other plan merely changes the incidence of taxation, placing it on all land and buildings alike, leaving quick capital to do what and go where it likes.

"G. W. A." says that the farms near the cities have declined more than those more remote. That only proves that the farmer near the cities finds out quicker what is killing him. Moreover, I think it could be shown that the cities and towns themselves, in those States, have lost ground quite as much as the farms, *relatively* to the rest of the country. I doubt if there are many cities in the country with less manufacturing, in proportion to size, than Boston. The system of taxation destroys, or seriously hampers, all kinds of industry and enterprise. As to the tariff on clothing and iron, that is no special disadvantage to New England, and affects equally the whole country.

There is some special cause in New England, and I believe the one assigned is more potent than all others put together. Few persons have any idea of the tremendous power of taxation in affecting social conditions. Somebody has said, "Give me the imposition of taxes, and I can make grass grow on Broadway in New York." The statement is not in the least exaggerated, and he could hardly employ a better instrument than the present tax law of Vermont.

I return to the original point: We have no machinery for reforming the tax system or anything else. The Legislatures and their committees are in a condition of perfect chaos—without guidance, without coherence, and without policy. Executive leadership is the one imperative need. The Cabinet should have seats in Congress, the State officials in the Legislatures, and the city heads of departments in the Councils. The only way to keep executive and legislative powers separate is to bring the two branches into contact, and let each fight for its own rights. G. B.

BOSTON, November 30, 1889.

SPEECH SURVIVALS.

TO THE EDITOR OF THE NATION:

SIR: In regard to the vocable "Vat" written of by your correspondent, "W. I. R.," I would say that, in my childhood fifty years ago in Georgia, I have heard old people, speaking of the staple of Georgia before cotton, viz., indigo, which was prepared in a *vat*, invariably pronouncing it *fat*. Among these were two old lawyers, who, as was then not uncommon, had graduated at Oxford—and one had read law in the Temple. I remember it because the anomalous pronunciation puzzled me.

Your correspondent, Mr. Morgan, neglected to mention that there was a *Latin* word for bribery in "blocks," not an equivalent of δεκάζεσθαι, videlicet, *decuriare*. There is no question but the *thing* was in existence long before Col. Dudley, and there is a lack of information as to the method. It could not have been more familiar than with us.

Your obedient servant,
KENNON, A.M.

SILVER CITY, NEW MEXICO, November 29, 1889.

THE KENTUCKIAN AND HIS HONOR.

TO THE EDITOR OF THE NATION:

SIR: A serious difficulty in accounting for Kentucky feuds on the ground that the Ken-

tuckian regards his honor as more precious than his life, lies in the fact that commonly the man with wounded honor is found seeking the life of somebody else instead of committing *hara-kiri*. In one Kentucky town recently, a man who thought he had been falsely accused went dramatically into the principal street, declared the charge unfounded, and then and there cut his own throat in proof of his innocence and honor. Instead of making a hero of him, the neighbors generally voted him weak-minded.

Is there not something the matter with an honor that must be constantly guarded with pistol and knife? A robust honor should take care of itself without such defences.

Yours respectfully, W. E. C. WRIGHT.

BEREA, KY., December 3, 1889.

NATIONAL IGNORANCE.

TO THE EDITOR OF THE NATION:

SIR: What about *national* ignorance? Some fifty Americans were asked quite recently to name the year of Washington's birth and the year of his death. Two only were able to answer.

To the question of how many States and Territories there are at present in the Union, no answer could be given.

How many Americans can answer either of the above questions without reference to books? X.

NOVEMBER 30, 1889.

THE HEREDITARY PRINCIPLE.

TO THE EDITOR OF THE NATION:

SIR: In the closing paragraph of an article on "The Hereditary Principle" in the *Nation* of November 28, surprise is expressed that "popular faith in 'blood' should . . . be as strong as it is, in view of the extreme rarity with which parents transmit either great mental or moral qualities to their offspring." Now, the fact is that popular faith, if it really exist, is probably well founded, as the investigations of Francis Galton, published under the title 'Hereditary Genius,' go a long way towards proving. To every one will occur, on reflection, cases of families in which peculiar gifts of mind and character have been transmitted from parent to child, for generations. The well-known hereditary nature of the tendency to insanity, as well as the existence of "criminal families," in which the tendency to wards criminality is inherited, are evidence in the same direction.

It must be borne in mind that the influence of the nature of both parents in the hereditary character of the offspring is about equal; hence, where only one of the parents is markedly above the average, the tendency would be for the influence of the other to weaken that of the gifted parent; and, furthermore, as Galton seems to have proved in his last work, 'Natural Inheritance,' the influence of both parents together on the character of the child is about equal to that of the long line of previous ancestors.—Your obedient servant, A. M.

NEW YORK, November 30, 1889.

A HIMYARITIC COLLECTION IN THE MARKET.

TO THE EDITOR OF THE NATION:

SIR: Permit me to call the attention of scholars and others to the fact that the collection of monuments and squeezes of Himyaritic inscriptions which Edward Glaser brought with him from his last trip to Arabia is now for sale. The Himyaritic stones number thirty-six, some of them containing inscriptions of unusual length, while the squeezes taken by Glaser run up to so high a figure as seven hundred, among them inscriptions numbering several hundred lines. The price demanded for the collection is 70,000 marks, or about $17,500, which seems very high, but is not exorbitant when we have the assurance of Glaser himself that his trip alone cost him 40,000 marks. The inscriptions, it must further be borne in mind, represent unpublished material; and from the glimpses which Glaser shows us in his recent pamphlet, it is evident that their contents are of vast importance, furnishing us with the names of new rulers in southern Arabia, throwing unhoped-for light upon the beginnings of the powers that once flourished in Yemen, and otherwise adding directly to our stock of knowledge.

Mr. Glaser, in a letter recently received by me, states that he would be particularly pleased to have his collection go to the United States. The opportunity is now offered us to secure for some one of our museums or universities one of the rarest prizes that have been put on the market in this age of great archæological discoveries. If we let the opportunity slip by, the European museums will be grateful to us; if we desire to arouse their envy, let some wealthy individual who believes in the encouragement of scholarship in this country step forward and guarantee the sum. If our country is ever to be as productive in original research as European countries are, it can only be through filling our museums and providing our universities with *original* material. What a great step in advance the acquisition of the Glaser collection would be! And what a sad thing it would be if we allowed other museums to obtain what is now as a first choice offered to us.

Mr. Glaser awaits a reply from this country, but he will not wait very long. I shall be glad to answer any questions with regard to the collection that may be put to me, and also to put prospective buyers into direct connection with the distinguished traveller.

Very respectfully, MORRIS JASTROW, JR.

UNIVERSITY OF PENNSYLVANIA, PHILADELPHIA, Dec. 2, 1889.

Notes.

THE J. G. Cupples Publishing Co., Boston, have in press 'Vigilante Days and Ways; or, The Pioneers of the Rockies,' being side-lights on the makers and making of Montana, Idaho, Oregon, Washington, and Wyoming, by Nathaniel Pitt Langford. It will be in two volumes, elaborately illustrated.

Two volumes will also be given to the lectures on Systematic Theology delivered by Prof. Buel at the General Theological Seminary, of which Thomas Whittaker will be the publisher.

Houghton, Mifflin & Co., Boston, have in press or in preparation 'The North Shore Watch,' a volume of verse by Mr. George E. Woodberry; a Life of Charles G. Finney, the once-famous revivalist, by Prof. G. Frederick Wright of Oberlin; a Life of Bryant, by Mr. John Bigelow; and 'Conversations in a Studio,' by W. W. Story.

Charles Scribner's Sons will shortly publish 'Said in Fun,' a collection of the wittiest sayings of the late Philip H. Welch, with much unpublished matter and numerous full-page drawings by our humorous artists.

Under the probable title of 'National Needs and Remedies,' the Baker & Taylor Co. will soon have ready the Proceedings of the Boston Conference of the Evangelical Alliance.

A correspondent admonishes us that we fell into a trap laid for us by the editors of the "Library of American Literature" in their latest (ninth) volume. Commenting on this, we noticed, what appeared to be the fact, that no littérateur born between 1829 and 1831, inclusive, was admitted to the collection. The eighth volume proves the contrary; but the reason for our not turning back to it was our faith in the chronological strictness of the arrangement, whereas Theodore Winthrop (first in vol. ix, born in 1828) was out of place, and was followed immediately by the men of 1832. Our correspondent further remarks an error on p. 471 of vol. ix, in the date of John Esten Cooke's death, which did not take place in 1863, but on September 27, 1886.

The "Bedford Edition" of Shakspere's Works, in the Chandos Classics series (Frederick Warne & Co.), consists of twelve pocket volumes neatly bound in a dull-red cloth, each page surrounded with a red border, and the typography very clear and sufficiently large. The sonnets and other poems are relegated to the last volume, together with the glossary—the text being devoid of footnotes. The editing is original, but we cannot examine it critically. This little library in its jewel-box is sold at a remarkably low price, and makes one of the most welcome of gifts.

The story of Mr. Fields's Boston edition of De Quincey's complete works, anticipating one by this author himself, and a very welcome aid towards the preparation of the latter, is told by Prof. David Masson in his general preface to a new fourteen-volume edition of 'The Collected Writings of Thomas De Quincey' (Edinburgh: Adam & Charles Black; New York: Macmillan). This preface, most agreeably written, ushers in the first volume, which begins with the autobiography; and it promises the kind of editing which one could wish to see. Logical arrangement and exact chronology, careful references to the sources (as in the worked-over matter), with a completeness as to contents not heretofore attained, and an "index to the whole edition," leave nothing to be desired in the way of programme, while Prof. Masson's competence is not to be disputed. The typographic conception of the work is admirable—the size duodecimo; the largest, surely, which should ever be thought of for De Quincey. Letter and press-work have the Scotch excellence, and the binding is a scarlet cloth. The initial volume has portraits and views of De Quincey's homes and lodgings. The enterprise will go forward at the rate of one issue monthly till the series is finished. We commend it to all admirers of the "Opium Eater."

Mr. Frank Stockton's story for children, 'What Might Have Been Expected,' is some fifteen years old, but there is plenty of life in it, and the publishers (Dodd, Mead & Co.) make, and need to make, no apology for reviving it. The theme is one which we can imagine being treated by the author of 'Daddy Jake,' though Mr. Stockton habitually develops his stories more at length than Mr. Harris.

Mrs. Valentine has collected, from Mme. d'Aulnoy, Charles Perrault, and others, 'The Old Old Fairy Tales,' and gently edited in the interest of refinement the versions found ready to hand. The volume is a thick one, of more than 500 pages (F. Warne & Co.), and may well find a place beside many briefer and less stilted renderings. The woodcuts in the text are of great variety and of various degrees of pertinence, yet harmonize among themselves; but the full colored plates are garish and out of key.

William Harwar Parker's 'Familiar Talks

on Astronomy' (Chicago: A. C. McClurg & Co.) are so easy and pleasant that they may well attract readers who would be repelled by a volume of greater pretensions and more formal style. Even the little mathematical explanations on which he now and then enters become quite readable under his facile pen. It is, however, rather surprising that a naval officer who must have had easy access to good authorities, should have entertained so many exploded or unverified ideas, historic and scientific, as we find in his book. He seems to think the work of Thales as well known as that of Ptolemy, and Lockyer is his great modern authority.

Mr. C. A. M. Taber, an experienced sea captain, now resident at Wakefield, Mass., has sent us a pamphlet on 'Winds, Ocean Currents, and Ice Periods,' in the study of which he has found entertainment during his leisure for some ten years past. His citations show familiarity with a good number of well-known writers, but original sources are seldom referred to, and his work therefore necessarily loses much of freshness and strength. He seeks to explain great climatic changes by alternate blocking of the northern and southern oceans by ice barriers, whereby the winds and currents are seriously modified. It might be admitted that his consequences would follow if his postulates were accepted, but the acceptance of the latter is, unfortunately, quite out of the question.

Doty's 'Prompt Aid to the Injured' (Appleton) devotes considerable space to anatomy and hygiene, unwisely, as we think, in view of the character of the book. The illustrations in the chapters on bandages, the control of hæmorrhage, and resuscitation from drowning, are good, but the text contains too many words for the ideas. As it stands, it is insufficient to replace professional skill, and is scarcely dogmatic enough for the arbitrary direction of untrained men. The chapter on military transportation of wounded will probably have to be rewritten for the next edition, to bring it in accord with that of the regular army, which is now in a provisional state.

Pathology, as one of the foundations of practical medicine, daily grows in importance as it does in accuracy. 'A Text-Book of Pathology,' by Prof. Hamilton of Aberdeen, the first volume of which has just appeared (Macmillan), is the latest systematic contribution to this subject, and is an admirable example of what such a book should be for the working student, whether pupil or master. It not only describes the morbid conditions as found, but how to find them, beginning with detailed directions for making an autopsy, and including the technique of bacteriology and histology, with clear descriptions of the normal and diseased states, and with comments upon the causes of disease. The special qualities of this work are its completeness, its simplicity of style, its copiousness and beauty of illustration, and its bibliography. Although written for the medical student, the student of histology in our collegiate scientific departments would find much of it valuable for reference.

Dr. Postgate has given us, in the words of the poet himself, a *lepidum novum libellum* in his critical edition of Catullus (London: G. Bell & Sons). The dainty little volume might almost be *pumice expolitus*, so spotless and fresh-looking is its dress. Within, the editor has collected the emendations which he has offered the learned world at various times in German and English periodicals. They are always thoughtful, and often supply useful suggestions, even when one may not be disposed to accept entirely the editor's conclusions. In the MS. readings he follows Schwabe's collation, but has taken especial care to restore the contemporary spelling, and, rightly we think, departs in many instances from even the best manuscripts. We recommend the book to all lovers of the poet.

The long-established idea that women's minds are made of some soft and flabby material, totally unlike the tough masculine fibre, must apparently be definitively given up, for even the women of Texas are beginning to feel the irksomeness of a mollusc-like state of existence. Prof. Halsted, in his report to the President of the Board of Regents of the University of Texas, says: "Several young ladies have shown *marked ability* in the acquirement of the newer and more abstruse developments of the science, for example, quaternions."

From Utica, N. Y., there reaches us the first number of *College and School*, "a monthly magazine for teachers, students, and parents," and edited in the spirit of its motto—from Pope:

"—— half our knowledge we must snatch, not take."

It offers several brief original papers on educational topics, literary notes and reviews, and college news—this last in desperately fine type.

Mr. G. R. Carpenter contributes to the last two numbers of the *Harvard Monthly* a translation (through the German) of Ibsen's "Lady of the Sea," in five acts. A four-act play, "Rosmersholm," by the same masterful dramatist, is also appearing in English in the new Boston eclectic, the *Transatlantic*. This very handsomely printed journal, by the way, "a mirror of European life and letters," succeeds well in carrying out a novel design. A portrait of some celebrity, by photographic process, adorns the cover of each issue—Ibsen's leading off in No. 1, if our memory serves us. The adoption of a French face for its letterpress does not approve itself to our judgment.

The November number of *Sun and Shade* (New York: The Photogravure Co.) consists of eight plates of the usual variety and good quality; a bit from Meissonier's "Friedland" at the fore. There is a view of the noble archway of the Cemetery of Columbus at Havana, and several interesting nature studies.

The half-century of photographic achievement since Daguerre was lately commemorated in Berlin by the Deutsche Gesellschaft der Photographie, and some interesting examples drawn from this exhibition are given by Prof. H. W. Vogel in connection with an article in *Vom Fels zum Meer* in its third issue for 1889-'90 (New York: F. W. Christern). Instantaneous dry-plate performances are mingled with numerous portraits of the imperial family, Berlin artists, etc. Some American scenic and character views are included.

The annual and occasional publications of the Arundel Society for the current year are all executed by W. Greve, Berlin. We have received from the American agents, E. & J. B. Young & Co., the "Christ Bound to the Column," from the fresco by Bazzi now in the Accademia of Siena, after a water-color drawing by Herr Kaiser. It is an admirable reproduction, well adapted for framing by the symmetry of the design, the near column dividing a distant arch through which sky and lake are visible. The picture is pleasing also from its good drawing of the figure of Christ, and from the absence of the extreme painfulness of the crucifixion.

A compilation from the joint State and United States survey of Massachusetts during the years 1884-'87 has just been issued by the U. S. Geological Survey at Washington. It shows the whole of the State in four sheets, on a scale of four miles to the inch, with a delineation of the contours at intervals of a hundred feet. The main object of this beautiful map is so far topographical that the insertion of town names is almost arbitrary; thus, to take a well-known instance, the town of Old Hadley is not set down.

The American Folk-Lore Society held its first annual meeting in Philadelphia, November 29 and 30. Officers were elected as follows: President, Dr. D. G. Brinton of Philadelphia; Secretary, Mr. W. W. Newell of Cambridge, Mass.; Treasurer, Mr. Henry Phillips, jr., of Philadelphia; and a council composed of fourteen members. Provision was made for life-membership. It was brought to the attention of the Society that no adequate means existed for printing investigations in American mythology and folk-lore. Authority was accordingly given to the Council to print monographs, in addition to the journal of the Society (the *Journal of American Folk-Lore*), so far as the funds at their disposal should prove to permit. Among papers read was one by Mr. James Mooney of the Bureau of Ethnology, giving an account of the recent discovery by him of manuscripts of the Cherokee medicine-men, containing their medicinal formulas and spells, and revealing in detail their theory of the cause and cure of disease. About eighty members have recently been added to the Society in Philadelphia, where, as well as in Boston, it is proposed to form a local branch.

—We record with the deepest regret the death, at Cannes, on December 5, of Gen. Francis Winthrop Palfrey of Boston, son of the late John G. Palfrey, one of the noblest and purest of the political abolitionists, and the standard historian of early New England. Gen. Palfrey was a graduate of Harvard College and its Law School (classes of 1851 and 1853). Like so many of his fellow-alumni, he threw himself with all his soul into the war of the rebellion, where, as an officer in the Twentieth Massachusetts, he won great distinction for gallantry, and, though wounded, served from beginning to end. Resuming the practice of the law, he married a daughter of the late Sidney Bartlett. He continued to be a student of the war, wrote an admirable memoir of his eminent companion in arms, Gen. W. F. Bartlett, a no less praiseworthy account of Antietam and Fredericksburg for the "Campaigns of the Civil War," was a contributor to the Military Papers of the Historical Society of Massachusetts, and, down to the year 1882, a frequent reviewer of military works for the *Nation*. By that date, perhaps conscious of the disease which has caused his death in his fifty-ninth year, he resolved, as he wrote us on May 12, "to decline all literary labor outside of completing my father's history." General Palfrey was a man of singular sweetness, justness, and probity of character, and as fine an example of patriot and Puritan stock as this generation has seen. He will be greatly missed.

— A still earlier contributor to the *Nation*, and perhaps the most constant if not the most voluminous in the quarter century of this journal's existence, passed away very suddenly at Madison, Wis., on Monday morning, December 9. Prof. William Francis Allen began writing for the *Nation* with its fourth issue, and it might be said with more truth than exaggeration that hardly a number had since appeared without something from his pen. His first essays were political, connected with his recent visit, in 1865, to South Carolina, and the prospects of reconstruction at the South; and it is characteristic of his versatile talent that on that journey he noted down the songs

(words and music) of the late bondmen, which presently, in 1867, led to the publication of the 'Slave Songs of the United States,' the first and the best work of its kind. To this invaluable collection Prof. Allen, as senior editor, furnished also the Introduction, on the negro dialect, which had already been treated by him in No. 24 of the *Nation*. His interest in the betterment of our political system and customs ever remained very strong, and he wrote much for these columns on minority, personal, or proportional representation; on civil-service reform; on city government, etc. His occasional letters to the editor on these and some other topics were uniformly signed "Marcel." His range as a reviewer was very wide, embracing ornithology, political economy, history (ancient and modern, European, Oriental, and American), English literature, and the classical languages and literature. His scholarship was extremely solid, and his accuracy remarkable in a high degree. His first chair (in Greek and Latin) was at Antioch College, from which he passed in 1867 to the University of Wisconsin, becoming Professor of Ancient Languages, and afterwards of the Latin Language and Literature, and latterly of History, for which he had, by direct inheritance from his father, the Rev. Joseph Allen, the strongest inclination. In this domain he never had the leisure to produce a work commensurate with his knowledge and powers, and this will always be cause for regret, though it is typical of the necessity under which American professors labor. We trust, however, that the text-book on the history of Rome on which he had been engaged was left in a shape fit for publication, if it be not already passing through the press. He had made a special study, since 1871, of the subject of village communities. Prof. Allen was born in Northborough, Mass., September 5, 1830, of a family distinguished in the educational annals of New England and in the Unitarian denomination. He was a classmate at Harvard of General Palfrey, Prof. W. W. Goodwin, Prof. Langdell, Prof. Dunbar, and other eminent men. His singleness and elevation of mind, his modesty, conscientiousness, and amiable and disinterested traits endeared him to all who knew him. The *Nation* in particular feels that in his departure it has lost a part of itself.

—Kent's edition of 'Elene' (Boston: Ginn & Co.) will be serviceable to our teachers and students of Anglo-Saxon. It is based in the main upon the editorial labors of Wülker and Zupitza. We regret the use of the circumflex to mark vowel-length, especially of diphthongs. The printing of the Latin 'Vita Quiriaci' under the Anglo-Saxon text is a happy idea. Less happy are some of the editor's views and statements. The description of the Vercelli MS. will have to be modified according to Napier's paper (*Zeitschrift für deutsches Altertum*, xxxiii, 67), published, it is true, after the editor had written his introduction. The discussion of the metrical features of the poem errs both in what it gives and what it withholds. It gives a quasi-tabulation of the so-called rhymes in 'Elene.' To our mind, or rather to our ear, these are in most instances no rhymes at all. We are not prepared to accept as rhyme a mere coincidence of sound in *unstressed* syllables. On the other hand, the editor has not said a word about Sievers's metrical system, one of the most important discoveries since the formulation of Verner's law. In general we suspect that Kent has given insufficient heed to Sievers, else he would scarcely have ventured to assert, p. 4, that "there is no linguistic testimony to a Northumbrian origin." Not a few of the notes would be better placed, we judge, in the glossary, under the respective words that they explain. What warrant there is for asserting, note to v. 766, that the Saxon conception of hell was of a huge monster whose mouth was the entrance, we fail to discover. To swell the list of corrigenda would serve no purpose, and would do the editor injustice. His work is in the main thoroughly scholarly and practical, and worthy of its place in the series.

—Mention of Kent's edition of 'Elene' leads us naturally to speak of Garnett's translation (Ginn & Co). Together with the 'Elene,' Garnett has rendered in this volume 'Judith,' the 'Fight at Brunanburh,' and the 'Fight at Maldon.' Bearing in mind his previous translation of 'Beowulf,' we are led to hope that Prof. Garnett will in time give us Grein's entire 'Corpus' in modern verse. Those who wish to indulge in comparisons will examine Garnett's metrical rendering of the 'Elene' with Weymouth's prose. His rendering of 'Judith' may also be examined with that in Cook's edition. Without venturing to enter into the minutiæ of single passages, we wish to say a general word or two concerning what seems to us the proper vehicle for rendering Anglo-Saxon verse. Ever since the promulgation of Sievers's theory, with its *a*, *b*, *c*, *d*, *e*-feet, two points are clear: first, that previous conceptions, or misconceptions, will have to be discarded; second, that the Anglo-Saxon (or rather primitive Teutonic) system cannot be made to fit into any other system, classic or modern. We must content ourselves with an approximation, and it seems to us that the modern translator of Anglo-Saxon verse can scarcely do better than adopt the easy-going rhythmical four-beat measure common in popular poetry of the sixteenth and seventeenth centuries, and sanctioned even by Spenser in the 'Shepherd's Calendar.' "These wisards welter in welth's waves" (*July*, 197) may serve as a model. We should have a line with a strongly marked cæsura, two strongly marked syllables in each hemistich, and at least one alliterative syllable in each. We believe that these requirements can be satisfied, and at the same time the sense rendered closely. Garnett's lines do not satisfy our ear. Verse without terminal rhyme should have either an unmistakable metrical flow (like that of blank verse, for instance), or an equally unmistakable alliterative flow. It would be supererogation on our part to discuss Garnett's translation as translation. It is clear and scholarly. We have not the space for details, much less for fault-finding. The book will be a help to teacher and pupil.

—Eleven years ago the gentleman who calls himself "Professor Hoffmann" published 'Modern Magic,' by far the best book then existing in our language on the fascinating mysteries of the conjurer's art; and since then he has translated adroitly, and edited with abundant notes, three invaluable works on the same subject by the late Robert Houdin, the great modern master of the art of magic. In these eleven years more mysteries have been evolved, and these "Professor Hoffmann" now sets forth with his wonted skill in a stout volume which he calls 'More Magic' (George Routledge & Sons). This is really a supplement to the earlier work, with which it is uniform in size and in its illustrations. As in 'Modern Magic,' the author begins at the beginning, with the conjurer's table, the *servante* and the *pochette*, and with the substitutes for these, with his wand and with his dress—all of which may be efficient aids in the performance of one trick or another. Then in turn he considers card-tricks, with and without apparatus; tricks with coins; with watches and rings, with handkerchiefs, and with balls; tricks of divination (including, it may be well to note, a true explanation of "second sight," so called); tricks with hats; tricks with eggs; and, last of all, more elaborate stage tricks (including here the "Vanishing Lady" of M. Buatier de Kolta, one of the foremost of Robert Houdin's followers, and like him in his most artistic neatness of combination). A comparison of 'More Magic' with the books on conjuring written in the first half of this century will reveal at once the constant effort of all conjurers towards the apparent elimination of apparatus. The magician of today uses quite as many mechanical contrivances as his predecessor of fifty years ago, but he seems to use few or none. The tone of Professor Hoffmann's book is manly and pleasant, and his hearty praise for his contemporaries is not to be overlooked.

ADAMS'S ADMINISTRATION OF JEFFERSON.—I.

History of the United States of America during the First Administration of Thomas Jefferson. By Henry Adams. 2 vols. Charles Scribner's Sons. 1889.

Mr. Adams enters at once upon the historical task set before him in these volumes without a word of formal preface or of formal introduction. Nor was it needful that he should make any such sign, by way either of indicating his historical point of view or of proving his special competency to deal with this period in our political annals. To those who are familiar with his former writings it is enough to say that prefatory hints of the most significant kind as to the author's *manière de voir* may be found in his excellent biography of Albert Gallatin, in his careful edition of Gallatin's works, in his vivid sketch of John Randolph, and in his study of 'New England Federalism.' And he could well dispense with the words of a formal introduction when in six whole chapters, crowded with descriptive facts and illumined with philosophical comment, he has constructed a fitting portal through which the reader may approach the Jeffersonian epoch. In these most suggestive chapters Mr. Adams discusses the physical and the economical conditions of the problem which nature had placed before the founders of our Government at the beginning of the Federal Union; the salient characteristics of the American people in point of their social and moral evolution at the period of Jefferson's accession to the Presidency; the peculiarities of intellect manifested respectively by the inhabitants of New England, of the Middle States, and of the Southern States; and, finally, the ideals (ideals working all the more surely to a predestined end because working without a clear collective consciousness) which even at that early day were forcing their subtile influence through the apparently hard and repulsive elements of a raw social order.

These introductory chapters are so striking and so philosophical that we could have wished for still another chapter, which should have been devoted to a descriptive analysis of the elements of party formation in the United States, that the real nature and the true proportions of the antithesis between the old Federalists who framed the Constitution and the Republicans who effected "the revolution of 1800" might have been set before the reader in a clearer light. Without some such analysis the reader is left to pick his way in the dark

through the nexus of events and logic of ideas which led to the election of Jefferson. The services of the Federalist party were so immense, the roll of its heroes, confessors, and martyrs —Washington, John Adams, Marshall, Jay, Hamilton—is so splendid with great names, and yet its fall from power was so deep, and the popular obloquy which subsequently overwhelmed it was so universal and permanent under the long ascendancy of the Jeffersonian democracy, that some theory of political causation should have been formally propounded in explanation of so startling a result. It would seem to have been a natural prologue to the swelling scenes so dramatically exhibited by Mr. Adams. We venture this suggestion the more confidently because, in another place—in his Life of Gallatin—Mr. Adams has expressed the conviction that the dissidence of opinions and passions between the Federalist and the Republican parties was so wide, at least in the day of their sharp cleavage, that any attempt of the historian "to imagine a possible middle ground" for the conciliation of their acts and motives, as alike patriotic and wise, can only have for its effect to "make both parties ridiculous." Especially would it seem that the stirring epoch of transition between the old political order and the new might have been unfolded to us by lifting the curtain on the political combinations which threatened for a time not only the defeat of Jefferson in the House of Representatives, but the very existence of the Government. The Federalist decadence and the damaging coquetry of the Federalists with Burr—facts which fill so large a place in these pages—might there have been seen in the first hot ferment of a soured and despondent patriotism.

Bidding a truce to all such preliminary discussions, Mr. Adams begins his narrative with the day when Jefferson ascended the steps of the Capitol to take the oath of office as President of the United States. If upon most of the political questions comprised within the first term of Jefferson's Administration, the author, as already intimated, has shown his hand in the works we have named, this fact does not suffice at all to bate the interest which the intelligent reader will take in the present history. The historic point of view differs in scope, in scheme, and in critical method from that of the biographer. And, besides, a great mass of new materials has been put in requisition for the preparation of this treatise. The unpublished archives of the French and English State Departments as well as of our own have been laid under contribution. The springs of many a movement which were before obscure are here brought to sight, and thus the reader is helped to follow the logic of events with an order which has gained lucidity from new discoveries, and, we may add, with a philosophy which has gained new insight from a widened historical perspective.

In his portraiture of Jefferson's character, it is plain that Mr. Adams has tried to practise the strictest impartiality. Indeed, this virtue is sometimes so strenuous, not to say constrained, in its forms of manifestation as to suggest that the writer finds no little difficulty in letting the grace have its perfect work—so intractable and so complicated does he find the character under his hand. It has been pleasantly said of Cousin that he fell desperately in love with Mme. de Longueville by force of long writing and thinking about her, although that yellow-haired and blue-eyed beauty, half a *mondaine* heroine and half a Jansenist saint, had been dead and buried nearly two hundred years. The Tory critics never cease complaining that Macaulay always brings his "rage of advocacy" into the grand assize of history whenever Whig King William is arraigned at the bar of judgment. Motley takes no pains to conceal the glow of fine enthusiasm with which he is inspired by the contemplation of William the Silent. Mr. Adams is determined to keep his mind clear from all such illusions of hero worship, simply because he cannot absolutely make up his mind concerning Jefferson's real character, so mixed and various are the elements which compose it. Conceding that the sage of Monticello, according to all the received standards of greatness, must be pronounced "a great man"; that on his accession to the Presidency he claimed the place of an equal between Pitt and Bonaparte in the sphere of European politics, and in the sphere of home politics made himself such an idol of the people that for eight long years he appeared to be "the Government itself"; that he ruled in Washington with the power of a King while practising, as all typical Virginians did, "the austerity of Cato and the simplicity of Ancus Marcius"; that he was the representative of an "ideal purity" in American politics—conceding all this, Mr. Adams never allows the reader to lose from his view the "seamy side" in Jefferson's mental and moral temperament—at least as that seamy side appeared to hostile critics as candid as John Marshall, and to venomous enemies as rancorous as James Thompson Callender.

An "aristocrat" by birth, and, for the times in which he lived, "excessively refined" in his tastes, yet theoretically the most thorough-paced of democrats; delighting in the intellectual life of science and art, yet "superficial in his knowledge and a martyr to the disease of omniscience"; with a subtile feeling for artistic and literary form betraying itself in his writings ("the sure mark of intellectual sensuousness," whispers Mr. Adams), yet "seldom writing a page without exposing himself to attack"; a man of affairs who ventured boldly on the stormy ocean of politics, and yet so "feminine" in his mental constitution that he "yearned for love and praise," and such a theorist that he was prepared to "risk the fate of mankind on the chances of a reasoning process which was far from certain in its details"; with instincts which led him to "widen the bounds of every intellectual exercise," yet narrowing the theoretical scope of the Federal Government in which he was the chief actor; unswervingly "true to the faith of his life," yet ("if his enemies are to be believed") indulging occasionally in "misstatements of fact," in "exaggerations or equivocations" of speech, and in the "kindly prevarications" of political complaisance; exhibiting a rare "consistency in his career," yet making that consistency the more remarkable because of the "inconsistencies of the moment" with which his career was attended; with a "gentle optimism" in his theory of political conduct, yet liable to "outbursts of temper" in both his official and his private discourse; "pure in both his private and public life," yet called again and again to defend himself against "large numbers of his worthiest fellow-citizens, who . . . despised him as they did the vermin they trod upon"—Thomas Jefferson seems to Mr. Adams a bundle of "contradictions." Yet it is these very "contradictions," he says, which have always made the character of Jefferson "a fascinating study," because "in any other man such contradictions would have argued dishonesty." "Almost every other American statesman," adds the writer, "might be described in a parenthesis. A few broad strokes of the brush would paint the portraits of all the early Presidents, with this exception, and a few more strokes would answer for any member of their many Cabinets; but Jefferson could be painted only touch by touch with a fine pencil, and the perfection of the likeness depends upon the shifting and uncertain flicker of its semi-transparent shadows." Yet this man, whom Mr. Adams finds it so hard to understand, was able in some way to impress his personality on the great mass of the American common people with a power and universality which proved him level to the popular sense. It was under the Administration of Jefferson that the American people became democratic in their habits, beliefs, and ideas. Mr. Adams admits that it was largely through the influence of this enigmatical man that a radical change was made in the national mind and temper. "As a democrat," he says, "Jefferson's social success was sweeping and final."

It seems to us that much useful light may be shed on this mystery if we grope for it in the living elements of party formation at that period, instead of hunting for "contradictions" in Jefferson's character. Talleyrand thought it a supreme proof of Alexander Hamilton's perspicacity in politics that, even from his remote point of view, he had been able to "divine Europe"—that is, to form an intuitive presage of the political forces required for the repression of European democracy, after the example set and the lesson taught by the French Revolution. In like manner it may be said of Jefferson that, more than other statesmen of his time, he "divined America"—that is, formed an intuitive presage of those evolutionary forces in the American mind which soon left the position of the old Federalists completely out of sight, like "a half-way house between the European past and the American future," to use the striking phrase of Mr. Adams. Mr. Adams chronicles the fact that Jefferson—"this most active-minded and sanguine of Virginians"—was the inventor of the first scientific plough in the United States, and we know that he loved to disport with scientific discussions, as if he had already some dim forecast of the truth, so impressively expounded by Mr. Adams, that the future of the United States was bound up with the achievements of science and invention. Certain it is that he had a clear forecast of the democratic tendencies which were destined to unfold themselves among us in larger and larger measures of trust in the capacity of the people for self-government.

Mr. Adams explains to us that as modern science developed more and more the capacity of man to control the forces of nature, the old-fashioned conservatism of the Federalist epoch vanished from American society, and if it still reappeared occasionally in a few venerable men who wore black coats, silk stockings, silver buckles, and powdered hair, it was, he says, only as the "stripes which sometimes reappear in the mule," to show the antiquity of its animal type. "Every foreigner and Federalist," says Mr. Adams, "agreed that Jefferson was a man of illusions, dangerous to society, and unbounded in power of evil," but, as he suggestively adds, "if this view of his character was right, it only proved that there was a vein of idealism in the national character of the American people; for it is very certain that Jefferson's opinions, in one form or another, were shared by a majority of the American people." Recognized in his day as the chosen representative of what Mr. Adams calls "the elusive spirit of American democracy," and incurring on this ground much severe opprobrium from the clergy of New England, he was so full of

this spirit, and so greatly dreaded his own reputation as a "visionary," that he seldom or never, says the author, "uttered his whole thought." He had, more than anybody, the democratic spirit of everybody who cherished high hopes and large aspirations for the elevation of humanity. While the Federalists were hard to shock by excesses of Government, but were easily shocked by excesses of the people, Jefferson was hard to shock by excesses of the people, but was easily shocked by excesses of Government. His faith in the people was simple. It is true there was much shrewd political worldliness in all this simplicity of doctrine, and it is true, as Mr. Adams says, that all of Jefferson's hopes for the political future of man were based on the processes of a natural evolution; but this only shows that his intuitive presage of the coming age was even more "scientific" than he knew.

Mr. Adams cites again and again the saying of Hamilton, in a moment of political petulance, "Your *people*, sir—your *people* is a great beast!" What Hamilton said in his haste, men like Fisher Ames, and George Cabot, and John Adams were saying at their leisure. "Democracy cannot last," cried Ames. "I hold democracy in its natural operation to be the government of the worst," cried Cabot. "I doubt whether the love of liberty in the soul of man is much more rational, generous, or social, than it is in the soul of a wolf," exclaimed John Adams, "except in so far as it is enlightened in man by the experience, reflection, education, and civil and social institutions which are at first produced, and constantly supported and improved, by a few—that is, *by the nobility.*" Such atrabilious expressions as these prove nothing against the patriotism of the Federalist leaders, except that their patriotism had soured on their stomachs. The leaders of the Federalist party seemed to themselves like so many Catos *in Romuli fœce*, to use the phrase of Cicero in one of his letters, or, as Gouverneur Morris expressed it with his characteristic humor, the Federalist of the later period "was in the awkward position of a man who continues sober after all the company are under the table." The Federalist leaders who blurted out harsh commonplaces against "democracy" were only showing how sober they kept in the revelry of the democratic debauch.

But such expressions as these, accompanied as they often were with the theoretical defence of "monarchy," seemed to Jefferson quite sufficient to justify his statement that "the political revolution of 1800 was as real a revolution in the principles of our Government as that of 1776 was in its forms." Mr. Adams seeks to minimize this pretension, and argues acutely, in the light of Jefferson's administrative measures, that it is "hard to see how any President could have been more Federalist than Jefferson himself"; that he reached out his hand to grasp the Executive powers he had once denounced; that by the Louisiana treaty he gave a fatal wound to "strict construction," and converted the Constitution into a piece of "blank paper"; that by subsequent proceedings under that act he identified himself with "the despotic acts of consolidated European governments"; and, finally, that "he who nearly dissolved the bonds of society rather than allow his predecessor to order a dangerous alien out of the country in a time of threatened war, made himself monarch of the new [Louisiana] territory, and wielded over it, against its protests, the powers of its old kings." But even after Mr. Adams has sped all these sharp arrows at his quarry, he will still find it difficult to argue against the truth of his own saying, that, "as a democrat, Jefferson's social success was sweeping and final." Whatever may have been the direct or the indirect effect of any of Jefferson's administrative measures in *federalizing* the Government, we believe it will be impossible to point to any measure which was originated by him *for the purpose* of giving "energy" to the Government against the States or the people. A policy like that, for instance, of the Federalist Oliver Wolcott, when, as Auditor of the Treasury under Alexander Hamilton, he argued in favor of taxing the people simply to make the people feel the power of the Government, even if the money raised by such taxation had to be buried, is inconceivable under the Administration of Jefferson; and a simple fact like this measures the wide interval there was between the old Federalist régime, even before it had run to seed, and the nascent Republicanism which opened its new era in our annals. Whatever else may be said in just praise or dispraise of the latter, the American people were certainly *republicanized* under Jefferson. It has been common to complain that he did his work under this head only too well.

Mr. Adams, however, complains that the energy of Jefferson's reforming zeal was soon exhausted, and that in the ever-increasing momentum impressed on the machine of government by the drift and pressure of events, the point of his departure was soon lost from sight. And one event there was which, above all others, operated, the writer thinks, a change in the character of the Government by killing the doctrine of "strict construction" in the house of its friends, and by changing the old-established balances of the Constitution. We refer to the purchase of Louisiana.

The history of the Louisiana purchase is told in these volumes for the first time with a fulness of detail which supplies missing links in that great transaction. Mr. Adams takes us behind the scenes in his explorations. The figures who here act the foremost part—Napoleon and Talleyrand, Jefferson and Madison, Chancellor Livingston and Monroe, Don Carlos IV. of Spain and Toussaint L'Ouverture of St. Domingo, Queen Doña Maria Luisa and Godoy, Pichon and Bernadotte, Leclerc and Rochambeau, Edward Stevens and Tobias Lear, Morales and Laussat—are put on the stage with all the vividness of personal character and with all the involutions which belong to this dramatic episode in our annals; and not in our annals alone, but also in those of Europe as well.

The rumor that Spain had retroceded Louisiana to France was bruited in Europe in the early part of the year 1801. The motives which inclined Napoleon to extort this transfer are to be found in certain colonizing schemes which, as devised by Talleyrand, had become "a darling object" in the mind of the First Consul. It was supposed that he saw in Louisiana "a new Egypt," a vast colonial dependency which would serve as a counterpoise to British India, a theatre for fresh military adventures, a new world for the modern Alexander to conquer, a place of exile for intractable revolutionists, and a Botany Bay for state criminals. With the prestige of Spain behind him in the New World, and with the mines of Mexico at his command, Louisiana offered him a coigne of vantage for the expansion of French power up the valley of the Mississippi, where, by cultivating alliances with warlike Indian tribes, he might hold the balance of power between the "Anglican" and the "Gallican" politics of the United States, and might even threaten the British possessions in Canada. The disastrous essay of Maximilian under Napoleon III. finds its prelude in this great project of Napoleon I. It was easy enough for Great Britain, as well as the United States, to see the embroilments to which the French occupation of Louisiana would inevitably lead. It virtually nullified the results of the Seven Years' War as ended by the Treaty of 1763. The Western States trembled for the safety of their commerce if a strong Power like France were entrenched at New Orleans. The Southern States trembled for the safety of their slave property, already put in danger by French propagandism in the West Indies. New England was disturbed because, with her Federalist proclivities, she hated the vision of "infidel France" at our doors.

Readers familiar with the state papers of that time are aware that St. Domingo was the pivot of the whole Napoleonic movement for the occupation of Louisiana. "St. Domingo was the only centre," says Mr. Adams, "from which the measures needed for rebuilding the French colonial system could radiate." Hence it came to pass that Toussaint L'Ouverture had to be crushed before Bonaparte could reach Louisiana. Mr. Adams tells the tragic story of Toussaint with a pathos inspired by the fact that, for a time, "he exercised on our history an influence as decisive as that of any European ruler." The reader is here indebted to the learned historian for much new research—a statement which we make with only the more cordiality because there are a few points, in the subsequent stages of the narrative, where we find it difficult to accept Mr. Adams's point of view. For instance, he tells us that the instructions of Madison to Livingston on the subject of the rumored retrocession of Louisiana to France "are remarkable for their mildness." We are aware that Madison has generally been commended for the "mild wisdom" which Horace praises in the Roman statesman Lælius, but we should not look to Madison's despatch on this topic for a typical specimen of that characteristic quality. On September 28, 1801, in a despatch which seems tame to Mr. Adams, Madison writes to Livingston that, in view of the rumored transfer, such a change of neighbors in Louisiana was a matter of "momentous concern," which had engaged "the most serious attention of the Executive"; that if the transfer had really been made, it was liable to lead to "collisions" which would jeopard the "harmony and confidence" then existing between the United States and France; that in case of war between France and England the Western States would come in danger of being "embroiled by military expeditions between Louisiana and Canada," while "inquietudes would be excited in the Southern States, whose numerous slaves had been taught to regard the French as the patrons of their cause"; and, finally, that a French neighborhood in Louisiana, by the "jealousies and apprehensions" it tended to inspire, might turn the thoughts of the American people towards "a closer connection" with England, and produce a "crisis" in which a very valuable part of the French dominions would be "exposed to the joint occupation of a naval and territorial Power"—that is, of England and the United States combined against France. It seems to us that a despatch of this kind is not wanting in either pith or purpose, even if it does end with a recommendation that nothing should be said or done "unnecessarily to irritate our future neighbors," and that if France could be induced to concede the free navigation of the Mississippi, and to cede the Floridas to the United States, it might "contribute to reconcile the United States to an arrangement in itself much disrelished by them." We find in

this despatch the germ of every argument used by the United States in the subsequent stages of the negotiation, even to the extreme menace of a British alliance.

The treaty of cession was signed on the 30th of April, 1803, and covered the whole of Louisiana as Spain had possessed it. Mr. Adams thinks it difficult to penetrate the motives of Napoleon in making the great surrender of what had been "a darling object." It is, indeed, difficult to pronounce on the secret motives of an arbitrary ruler. Livingston tells us that there never was a government with which less could be done by negotiation than with France at this epoch, because "one man was everything." He adds that the "sense of every reflecting man in Paris was against the First Consul's colonizing schemes, though nobody had the courage to tell him so." But it was for this very reason that Livingston believed the drift of events, in case of war between England and France, would prove too strong for Bonaparte. Months before the cession was made, he wrote to Madison that, but for the uneasiness the matter excited at home, it would give him none, because he was persuaded that the whole business would end in the relinquishment of the country to the United States. When the outbreak of war between France and England was imminent, Lord Whitworth, the British Ambassador at Paris, wrote that the United States were likely to reap "the first fruits" of England's disagreement with Napoleon. Mr. Addington had told Rufus King that one of the first steps of the British Government, on the outbreak of war with France, would be to seize Louisiana —a well-known eventuality, which kindled the eagerness of the United States to buy and of France to sell. It would seem, therefore, as if the overpowering pressure of political events had dominated the whole situation, and that we are dispensed from the necessity of groping for an explanation in the secret recesses of Bonaparte's mind. This fact explains, too, why Bonaparte felt compelled to sell the whole of Louisiana, instead of ceding only New Orleans and the Floridas, for which Livingston had been chaffering.

CHILDREN'S BOOKS.—IV.

THERE is a novelty in a story of our civil war told from a Confederate standpoint which of itself lends a peculiar interest to Mr. G. A. Henty's 'With Lee in Virginia' (Scribner & Welford). The author has succeeded fairly well, not merely in making an entertaining tale full of exciting incident, but also in giving some local color to it. As his hero only takes part in the battles in which the Confederates were victors, as Bull Run, Fredericksburg, and Chancellorsville, we fear that his English readers will be at some loss to know why the Confederacy did not succeed in the end. His account of slavery, also, is far too favorable, ignoring, for example, the fact of the breeding of slaves for sale, the greatest dishonor which slavery brought upon Virginia in those days. Mistakes are comparatively few, the most important being the statements that the Constitution was formed in 1778, that Kansas seceded and joined the South, and that the *Monitor* had two turrets. Northern boys, moreover, would dispute the assertion that the *Monitor* withdrew first from the contest with the *Merrimac*, and they would indignantly deny the truth of the allegation that by Sherman's troops "the town of Columbia was occupied, sacked, and burned, the white men and women and even the negroes being horribly ill treated."

Mr. Willis J. Abbot's 'Battle-Fields of '61' (Dodd, Mead & Co.) is the first volume of a history of the army operations during the civil war. The title is somewhat misleading, as all the important events of the first half of 1862 are narrated, the book ending with the close of McClellan's Peninsular campaign. It is well written and entirely free from any partisan spirit. The author is at his best in his descriptions of the battles, just enough detail being given to make them thoroughly interesting, and occasionally exciting, but not so much as to confuse the reader. We have noticed several slight errors; for instance, the troops on the *Star of the West* are given as 2,000 instead of 250, and the Confederate force on Roanoke Island was 2,500, not 25,000. It was Gen. Parke (not Parker) who commanded one of the brigades on this expedition, while Gen. T. L. Crittenden played such a valiant part at the battle of Shiloh that it is a pity he is disguised under the name Cullenden. The book is handsomely got up, with some twenty-eight full-page illustrations and a few maps, but we regret the lack of an index.

Few callings excel that of our deep-sea fishermen in its varied dangers and hardships. These are most graphically described in Mr. Kirk Munroe's 'Dorymates' (Harper & Bros.). "Breeze" McCloud, a very winning lad, courageous and unselfish, is picked up at sea by a Gloucester fishing schooner when an infant, and adopted by the captain. As soon as he is old enough, he ships for a cruise for early mackerel off Cape Hatteras. During the next few months one adventure follows another in rapid succession, bringing in almost all the misfortunes which could befall a fisherman. Several times he goes adrift in a dory, is lost in the fog, caught by the ice, imprisoned in an iceberg, seized by an octopus, as well as kidnapped and shipwrecked.

For one thing we can heartily commend Mr. J. T. Trowbridge's new story, 'The Adventures of David Vane and David Crane' (Boston: D. Lothrop Co.), namely, its warm advocacy of the pleasures and advantages of a country life. At this day, when the set of the current is all towards the town, it is refreshing to read of a city boy who prefers work on a farm to being a clerk in a store. The story is interesting and, at times, amusing, the two Davids being mistaken for each other with a resulting "comedy of errors." The little country girl Huldah is an original and very attractive character, as is also David Vane, who, we are glad to say, makes a great success as a farmer.

'Lotus Bay: A Summer on Cape Cod,' by Laura D. Nichols (Boston: D. Lothrop Co.), is a pleasant book for young people, which reminds us of those culinary combinations of custard, jelly, cake, and almonds, ingredients which seem to have no necessary relation to one another, yet which in mingling do not suggest incongruity. There is no climax or plot, no story properly speaking, but an agreeable mixture of bits of life by the seashore, useful information, moral teaching by example rather than precept, and occasional quaint or pretty poetical quotations. The author's style is good, the book shows unvarying good taste, and is embellished by attractive if not always new illustrations.

'The Achievements of Youth' (T. Nelson & Sons), by Rev. Robert Steel, D.D., is one of those well-meaning books which, as a Christmas present, do *not* waken any very profound feelings of gratitude in the ordinary boy. The author's design is excellent, and if he had taken more pains in carrying it out, he would have made a useful and stimulating work. He has chosen, however, simply to throw together a large mass of biographical notes with very little attempt at any order or arrangement beyond that of the professions, prefacing and closing the chapters with a few conventional comments or quotations. It is difficult to see why some of these notes have found their way into his pages, as this, for instance: "Turenne (1611–1675) studied the art of war under Prince Maurice, who was his uncle, and rose rapidly to high command, and got a marshal's baton in the camp for the achievements of his youth." His omissions are quite as remarkable. He says nothing, for example, of that precocious genius Baratière, who at the age of five could speak French, Latin, and Dutch with ease and read Greek fluently, and, when about eleven, translated from the Hebrew Tudela's 'Itinerarium.' On the other hand, we have read with much interest his account of Mr. Whitelaw Reid, who appears in the chapter headed "Young Prose Writers." Among other things Dr. Steel says: "At twenty-three he was acknowledged to be the ablest advocate of the claims of Lincoln to the Presidency." Mr. Greeley's life-work is briefly summed up as stamping "the character of the *Tribune;* but Mr. Reid, who succeeded him at the age of thirty, improved the paper beyond the dream of its founder." As we should here read thirty-five for thirty, we find the statement too rhetorical that "the organization of the complete corps in and out of the office was the work of Mr. Reid while yet the dew of youth lay on his brow."

Girls will greatly enjoy 'Queen Hildegarde,' a story addressed to them by Laura E. Richards (Boston: Estes & Lauriat). It is sweet and wholesome, with a distinct purpose, yet without the appearance of "preaching." Hildegardis Graham, the petted only daughter of wealthy parents, finds to her dismay that they are for the first time to leave her behind when they take a journey. Her sensible mamma, fearing that Hilda is getting frivolous and shallow in her artificial city life, decides to leave her in the country for three months with her own old nurse, now the wife of a well-to-do farmer. The girl, called the queen of her fastidious set at home, goes to the farm, and finds all her high breeding severely strained not to express openly her disdain at her homely surroundings. Preparing herself to be thoroughly wretched, she overhears a conversation between the farmer and his wife, in which Dame Lucy tries to explain the dear mother's plan; and the girl's wish to be some time what her mother wishes, grows into a resolve. The change comes almost too suddenly to be artistic, but it is very welcome, and the book goes on with interesting accounts of her life and occupations at the farm. An agreeable humor pervades the book without in the least jarring upon the sense of fitness. The finding of the buried jewels is perhaps a trifle improbable.

'Swanhilde, and Other Fairy Tales,' adapted from the German by Carrie N. Horwitz (D. Lothrop Co.), is somewhat in the vein of the 'Arabian Nights,' minus the objectionable features. They are all full of interest, and the English is particularly good: it has not the appearance of being a stiff and foreign imitation of our mother tongue which more literal translations from the German are too apt to have. The little illustrations, marginal and otherwise, scattered throughout, are very expressive and often exceedingly humorous.

It would be hard to say whether 'Lil' (Boston: Roberts Bros.) is more ill adapted to children or to grown people. The opening chapters are by far the best, and these, if any, are what the children will care for. But too

soon comes the "Five Years After" chapter, when everybody is grown up and the complications begin. If this book appeared in a paper cover at twenty cents, it would be quite what was to be expected. It is merely a mild repetition of dozens of English stories, in which the supposably rightful heir is shown to be not such, since an unknown daughter of an elder son duly appears from India, that convenient habitation for mysteries. After falling properly in love with her and refusing to acknowledge it through fear of being called a fortune-hunter, the hero discovers at last that she is after all not the heiress, because she was substituted in infancy for the real cousin, who died. Thereupon he joyfully marries her, resolving never to let her know the facts. The language, if bright, is loose and careless to a degree.

Amy Walton's 'White Lilac' (Scribner & Welford) is a rather unusually pretty story of humble English life. There is a touch of real pathos where the poor, gentle little girl's mother dies suddenly in her chair, just as the child is being crowned May Queen, and is expecting to see her mother's face every moment at the merry-making as the particular delight of that exciting day. Her quiet, helpful life afterwards with her relatives at Orchards Farm shows a Cinderella-like unselfishness. Many of the characters are good, Mrs. Wishing especially, with her helpless, hopeless "but *I* dunno," as a final modification of her limp remarks. As a whole, the story is entertaining and helpful.

English children may be contented with so tame a story as Mrs. Molesworth's 'The Rectory Children' (Macmillan). It is certainly inoffensive and unexceptionably moral, but is utterly lacking in sparkling attractiveness. It opens prettily and somewhat tenderly with a lonely little girl waiting in a small back parlor behind the shop for her mother to be through the business and come in to see her and her two little new dolls; but it is prosy throughout.

Miss Jewett's 'Betty Leicester' (Boston: Houghton, Mifflin & Co.) contains no more incident than the foregoing volume—indeed, it is without even so exciting an adventure as the narrow escape from drowning which, while forming the only relief from the otherwise dead level of Mrs. Molesworth's story, accents Biddy's wilfulness in the most approved fashion; yet it possesses the vital touch without which no incident can impress itself; with which the simplest details are imbued with a real life of their own. The descriptions of country life and scenes are exquisite. There are good suggestions to those whose lives have become so fixed in a narrow and unchanging routine that even the simplest form of entertaining seems momentous and overpowering. "Wherever you may put two persons, one is always hostess and the other always guest," says Betty's cosmopolitan friend Mrs. Duncan. Everything is invested with a simple and healthful but constant interest, from the beginning, where Betty starts alone, with some misgiving, for Tideshead, to the very last page, when she and her father are leaving the quaint little village with real regret, albeit to take up their wider life once more.

Winters in Algeria. Written and illustrated by Frederick Arthur Bridgman. Harper & Bros. 1890. Pp. viii-262. Sq. 8vo.

'AN Artist's Impressions of Algeria' would better describe this attractive book than the title which Mr. Bridgman has chosen for it. Everything in it has some connection with his art, generally growing out of his excursions in search of subjects for pictures, or of his more extended sketching-tours. These latter are narrated much after the fashion of an ordinary book of travels, but all that part relating to the city of Algiers consists of a series of detached descriptions, principally of street scenes and the life of the humbler classes of the natives. These are very well done, and, with the aid of the numerous excellent illustrations, enable the reader to form a clear idea of certain phases of Algerian life and character. We regret, however, that the author, the first of whose winter visits to the province was paid in 1872, and who is evidently a close and interested observer, has not attempted, at least, to show what influence French rule has had, during the time which he has known the country, upon its resources, the habits of the people, their modes of thought, and the way in which they regard foreigners. It is somewhat remarkable that, considering his numerous opportunities, he has thrown so little light upon these interesting points.

The majority of the people, it is evident, still object strongly to being painted, and have an especial hatred, mixed with fear, of the photographer, though they are not displeased if their neighbors' faces appear upon the canvas, or even they themselves, provided it is done without their knowledge. The curious way in which a Moslem will satisfy his conscience in matters of religion is well illustrated by an Arab artist's method of evading the command of the Koran not to make an image of anything that has life. One of the mosques in Algiers has a "lovely little minaret covered with ancient tiles, many of which represent birds flying." The birds are full of life, but the artist has traced a line around the neck of each. "Their throats are cut, therefore they must be dead! Thus his conscience is saved." Mr. Bridgman established very friendly relations with many of the Algerians, and was admitted freely to their houses. But these were apparently all of the poorer class, and we are left in ignorance as to whether the houses of the rich were equally open to the visits of Christians. The poor, however, were not necessarily of a low rank in life. "Descendants of the best blood, in fact, are often found among merchants in a small way, who sell a few yards of calico, eggs and butter, orange-flower water, and, for one sou apiece, strings of orange-blossoms, with an occasional red geranium attached."

The author's sketching tours, made at different visits, carried him as far as Tunis in the east and Tlemçen (not far from the frontier of Morocco) in the west. But the most interesting of these tours was to Biskra, in an oasis on the confines of the Sahara. The starting point was the wonderfully picturesque town of Constantine, perched on the summit of a rock which rises perpendicularly nearly a thousand feet above the level of the plain. Its curious houses and streets, which made the place attractive to the artist, are fast disappearing before "the encroaching French buildings, which threaten soon to replace the picturesque element and wipe it out for ever by new broad boulevards and squares, gravel-walks, trees, and hideous barracks." Biskra is a twenty-four hours' ride by diligence from Constantine, and to one who imagines Algeria to be a land of perpetual summer, it will be a somewhat disagreeable surprise to read of snow and ice by the roadside, and of the traveller's joy at finding a blazing fire at an inn where a stop was made for coffee. For hours the road lay amid "black bushes, among gray rocks, pine-trees and cedars," a veritable Norway landscape and swept by an icy wind. Then, within a short distance of Biskra, there was "a sudden turn at the bottom of the hill," and Mr. Bridgman was "in a paradise of warmth and beauty," surrounded by groves of almond, orange, and lime trees, and a perfect forest of date-palms. The principal point of attraction in this place was the great café, whose "ceiling and walls were entirely hidden by immense hand-woven blankets ornamented with every conceivable combination of stripe, lozenge, and square, and by other draperies used by the women as part of their costume. The palm-trunk pillars, surrounded by a circular bench and supporting the roof, were wound round and festooned with printed calicoes; and colored-paper lanterns gave a charming soft light over the assembly."

Excursions were made from this point into the desert, during one of which the author was overtaken by a sand-storm, which he describes in a very vivid manner. He is at his best, however, in his descriptions of interiors, and we will close our notice of his very entertaining volume with this account of a house in a desert village:

"They sat in a circle, young and old, grandfather, grandmother, father, wife, and several children, all dipping into the wooden dish which stood on its own pedestal in their midst. Kids and young dogs were also poking their noses under the children's arms, looking with longing eyes of expectancy. Their horse, a fine gray Arab, was eating his grass near them, his feet fettered to the ground, close by the black hole, just big enough to accommodate him, which was on one side of the humble dwelling, and in which he could be kept by a rope across the entrance. Streaks of sunlight, making solid beams of the blue smoke, fell on a multitude of utensils of all sorts. There was a handmill made of two flat and round granite stones, the top stone turning on a pivot by a handle on one side, and placed on a sheepskin, which caught the yellow flour."

HENRY HOLT & CO., Publishers, New York.

Important to Public Institutions, Libraries, Etc.

Now Offered at Greatly Reduced Price.

HALKETT & LAING'S DICTIONARY OF ANONYMOUS AND PSEUDONYMOUS LITERATURE OF GREAT BRITAIN, including the works of foreigners written in, or translated into, the English language. 4 vols., imperial 8vo, $25.00 (published at £8 8s.).

The completion of this highly important and exhaustive work, after the lapse of so many years after its inception, was made memorable by the death of both of its learned and accomplished editors during its passage through the press. It was finally finished last year by the daughter of one of them (Miss Catherine Laing), in a manner that leaves nothing to be desired. Having secured, under peculiarly favorable circumstances, a small edition, the undersigned is enabled to offer the work at the very low price above mentioned.

Those desirous of securing copies should immediately address

J. W. BOUTON, 706 & 1152 Broadway, NEW YORK.

ARTISTIC PRESENTS of PERMANENT VALUE.

High-class Etchings, tastefully framed, costing from $5 upward. Illustrated Descriptive Catalogue mailed on receipt of 10 cents in stamps. Frederick Keppel & Co., Paris, and 20 East 16th St. (Union Square), New York.

DAVID G. FRANCIS,

17 ASTOR PLACE, NEW YORK,

DEALER IN VALUABLE OLD AND NEW

BOOKS.

Priced Catalogues issued from time to time, sent gratis to any address.

A WEEKLY, FAMILY PAPER, SOON to be established, desires all kinds of high-class literary matter. All MSS. submitted will receive scrupulous attention, and will be returned if unavailable, or if satisfactory terms of publication cannot be arranged. Address, "MANAGING EDITOR," Malden, Mass.

I SHOULD LIKE TO CONFER WITH officers of reading clubs, literary societies, and improvement associations of all kinds, in all the towns of our country, and shall be obliged to those who will write to me. J. B. HARRISON, Franklin Falls, New Hampshire.

FOR ADVANCED STUDENTS. French European Magazine, bi-monthly, 24 numbers, 768 pages. Plays, stories, sketches, poetry, etc., by the best modern writers. Postpaid, $1.10 per annum. Specimen numbers mailed free to any address. E. ROTH, 237 South Broad St., Phila.

WINTER RESORT.—PERSONS wishing a mild, dry, piney-wood climate for the winter and desiring the comforts of a thoroughly well-appointed house, under Northern management, address THE HOBKIRK INN, Camden, S. C. 8th season. Illustrated circulars.

CATALOGUE NO 29, NEARLY ready, will contain a great deal out of the common, in a variety of lines. Box-office now open. A. S. CLARK, Bookseller, 34 Park Row, New York City.

"LIVES of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time."

NOW COMPLETE.

APPLETONS' CYCLOPÆDIA OF AMERICAN BIOGRAPHY.

THE LATEST, MOST INTERESTING AND VALUABLE ADDITION TO THE BOOKS OF THE CENTURY.

A COMPLETE RECORD of the Literature, Laws, Theology, Inventions, Art, Music, Discovery, Wars, and Governments of the

AMERICAN CONTINENT,

and its progress from barbarism to civilization, as shown in the lives of all those eminent men and women who, by their works, have made the "New World" what it is to-day.

EDITED BY

General JAMES GRANT WILSON

and Professor JOHN FISKE,

Assisted by over Two Hundred Special Contributors.

Richly illustrated. Sixty full-page portraits on steel; 2,000 vignette portraits and views in the text. Complete in six volumes octavo.

A noble selection for a Christmas gift.

SOLD ONLY BY SUBSCRIPTION. For descriptive circular, with specimen pages, prices, terms of sale, etc., address

D. APPLETON & CO., Publishers,

1, 3, and 5 Bond Street, New York.

92 Franklin St., Boston, 1000 Arch St., Philadelphia, 200 Main St., Cincinnati, 152 and 154 Wabash Ave., Chicago.

"Greatest Art Book of the Age."

"Sumptuous—Exquisite—Matchless."

RECENT IDEALS OF AMERICAN ART.

ONE HUNDRED AND SEVENTY-FIVE OIL PAINTINGS AND WATER COLORS IN THE GALLERIES OF PRIVATE COLLECTORS, REPRODUCED IN PARIS ON COPPER PLATES BY THE GOUPIL PHOTOGRAVURE AND TYPOGRAVURE PROCESSES.

Published in twenty-five handsome folios, each containing three large photogravures, size about 11x13 inches, and an average of four typogravures in the text. Edited by Geo. W. Sheldon, author of 'American Painters,' etc.

The price of each folio is ONE DOLLAR, but subscriptions received for not less than the entire work.

This work represents the freshest work in American art at home and abroad by a method that preserves the beauty, the tone, the tenderness, every quality, in fact, of the originals.

The subjects illustrate the latest and best ideas in the recent very noticeable development of our national art.

It is not too much to say that no such sumptuous and brilliant exposition of an epoch of a nation's art has ever before been attempted.

Nothing more truly beautiful and fascinating could be selected for a Christmas gift. The last parts, completing the work, are just coming in. A very elegant folio is provided at small charge, which holds the parts in a convenient manner.

This great national work is sold only by subscription. It may be seen at the establishments of the undersigned, or an agent with specimen-parts will wait upon any lady or gentleman within reach upon a request to that effect. Descriptive circulars by mail.

D. APPLETON & CO., Publishers,

1, 3, and 5 Bond Street, New York.

NEW BOOKS.

JUST READY: PART V.—$3.25

OF

THE OXFORD

English Dictionary:

A New English Dictionary on Historical Principles; founded mainly on the materials collected by the Philological Society.

Edited by

James A. H. Murray, B.A., LL.D., D.C.L.

With the assistance of

Many Scholars and Men of Science.

ALREADY PUBLISHED:

PART I.	A—Ant	Price	$3 25
" II.	Ant—Batten	"	3 25
" III.	Batter—Boz	"	3 25
" IV.	Bra—Cass	"	3 25
" V.	Caste—Clive	"	3 25

"Ought to be not only in every gentleman's library, but in every intelligent household."—*New York Nation.*

"Greatest work in English philology yet undertaken. . . . The special student of the English language will find the Oxford Dictionary indispensable, standing as it does, in relation to all other dictionaries, as the Britannica to all other cyclopædias."—*Atlantic Monthly.*

SIR JOHN HAWKWOOD (l'Acuto). Story of a Condottiere. Translated from the Italian of John Temple, Leader and Giuseppe Marcotti, by Leader Scott. Illustrated. Royal 8vo, bound in buckram, gilt tops, $9.00.

"One of the most celebrated condottieri was the Englishman John Hawkwood, or, as the contemporary Italian chroniclists put it, 'Giovanni Acuto.' . . . He was for more than thirty years one of the most effective dominators of Italian affairs, and in her history—military, political, and social—he figures as a personage whose character and actions have an importance more than sufficient to justify the simple curiosity of biographical erudition."—*Extract from Preface.*

Part II. now ready.

AN ELEMENTARY TEXT-BOOK OF ALGEBRA. For the higher classes of Secondary Schools and for Colleges. Part II. 12mo, $4.00.

Recently Published.

Part I., 12mo, $3.75; the set, two volumes, $7.50.

THE HISTORY OF PHILOSOPHY. By Dr. Erdmann. Translated by several English and American Scholars and Edited by Prof. W. S. Hough. I. Ancient and Mediæval Philosophy. II. Modern Philosophy. III. Philosophy since Hegel. The three volumes, $10.50.

THE CRITICAL PHILOSOPHY OF IMMANUEL KANT. By Edward Caird, LL.D., Professor of Moral Philosophy in the University of Glasgow. Two volumes, 8vo, $7.50.

"The object of this book is to give a connected view of the Critical Philosophy, showing the relations of the three Critiques to each other, and to the other works of Kant which may be regarded as illustrations or developments of his main argument. The first part on the Critique of Pure Reason deals with the same subject as my former work, entitled, 'The Philosophy of Kant,' but, except in a few passages, it is not a reproduction of it."—*From the Preface.*

MACMILLAN & CO.,

112 Fourth Ave., New York.

HOLIDAY BOOKS.

Adventure and History.

The Red Mountain of Alaska.

By Willis Boyd Allen. An exciting narrative of a trip through this most interesting but little known country with accurate description of the same. Full of adventures vividly portrayed by original illustrations by F. T. Merrill and others. 1 vol., cloth, gilt, $2.50.

The Boys of 1812.

By Prof. J. R. Soley. Traces the development of the American Navy from Revolutionary times down to and through the war of 1812. As all boys know, or should know, the great battles of that war were fought on the water. Fully illustrated. 1 vol., illuminated covers, $1.75, cloth, $2.50.

Uniform with this volume in style and price and by the same author is the *SAILOR BOYS OF '61*, which treats of the Civil War.

Hunting in the Jungle

With Gun and Guide. By Warren F. Kellogg. An exciting and amusing series of adventures in search of large game—gorillas, elephants, tigers, and lions. 100 illustrations. 1 vol., cloth, gilt, $2.50.

The Boys of '61,

Or Four Years of Fighting. A record of personal observation with the Army and Navy from the battle of Bull Run to the fall of Richmond. By C. Carleton Coffin, author of the 'Boys of '76.' Fully illustrated. 1 vol., illuminated covers, $1.75, cloth, $2.50.

Self-made Men.

By Harriet Beecher Stowe, author of 'Uncle Tom's Cabin,' etc. Condensed biographies of men famous in American history, such as Lincoln, Grant, Sumner, Garrison, Wilson, Eli Whitney, Blaine, etc. Illustrated with steel portraits. 1 vol., 8vo, cloth, gilt, $2.50.

Zigzag Journeys in British Isles.

By H. Butterworth. With excursions among the lakes of Ireland and the hills of Scotland. Full of stories of history and romance. Over 100 illustrations. Illuminated covers, $1.75, cloth, $2.25. *Over 300,000 volumes* of this *series have been already sold.* The other volumes are Zigzag Journeys in the Antipodes, India, Sunny South, Levant, Acadia and New France, Northern Lands, Occident, Orient, in Classic Lands, and in Europe.

The Knockabout Club in Spain.

By Fred A. Ober. A panorama of Seville, the Gaudalquivir, the Palaces of the Moors, the Alhambra, Madrid, bull fights, etc. Illuminated covers, $1.50, cloth, $2.00. Other volumes of the series are The Knockabout Club in the Antilles, Everglades, Tropics, Woods, and Alongshore.

The Young Moose Hunters.

By C. A. Stephens, author of the "Knockabout Club" series. With numerous full-page original illustrations. An exciting account of a hunting trip through the Maine woods. Illuminated covers, $1.50.

The Boys of the Sierras.

An exciting story of the adventures of three young men who go to California in '49, in search of gold. Fully illustrated. Illuminated covers, $1.25.

MY DAYS AND NIGHTS ON THE BATTLEFIELD, FOLLOWING THE FLAG and WINNING HIS WAY. By Charles Carleton Coffin, author of 'The Boys of '61,' etc. Illuminated covers, $1.25 each.

Feathers, Furs, and Fins.

By Emma Cheney, Kate Tannatt Woods, Mrs. D. P. Sanford, and others. A collection of most fascinating stories about birds, fishes and animals, both wild and domestic, with illustrations drawn by the best artists and engraved in the finest possible style by Andrew. 1 vol., cloth, gilt, $2.50.

For sale by all booksellers, or sent prepaid.

ESTES & LAURIAT,

PUBLISHERS, BOSTON.

THE HOLIDAY SEASON.

LOUISA M. ALCOTT: Her Life, Letters, and Journal.

Edited by Ednah D. Cheney. With portraits and views of the Alcott Home in Concord. One volume, 16mo. Uniform with 'Little Women.' Price, $1.50.

"Even those most familiar with Miss Alcott's later life will find this fascinating new biography of her a revelation. She was more than a clever, brilliant writer—she was one of the noblest women of her time. Her life is one long story of self-sacrifice, of unswerving devotion to her family. Young readers will rejoice in this opportunity of becoming acquainted with the real doings of their favorite authoress, while to older readers this record of a noble, unselfish woman's life will be read with wonder and cherished with reverence."—*Transcript.*

A New Book by Mr. Philip Gilbert Hamerton.

FRENCH AND ENGLISH. A COMPARISON.

By Philip Gilbert Hamerton, author of 'Etching and Etchers,' 'Thoughts about Art,' 'Human Intercourse,' etc. 12mo, cloth. Price, $2.00.

Of course, those people of both nations who cannot bear the slightest censure will say that this book is only, after all, the expression of one man's opinion, but fair minded and intelligent people will always attach the greatest importance to the opinion of a man of such broad culture, such kindly feelings, and such a thoroughly sterling nature as Philip Gilbert Hamerton.

CHATA AND CHINITA. A Novel. By Mrs. Louise Palmer Heaven. Uniform in style with 'Ramona.' 1 vol., 12mo. Cloth. Price, $1.50.

Is one of the strongest novels of the day. The author has handled a highly dramatic episode with much skill, drawn several striking characters with a life-like effect, and caught cleverly the color of Mexico.—*Philadelphia Press.*

JANE AUSTEN. By Mrs. Malden. (Famous Women Series.) 16mo. Cloth. Price, $1.00.

A FEW MORE VERSES. By Susan Coolidge. 1 vol., 16mo. Cloth. Price, $1.00. An entirely new collection, and companion to the first volume, 'Verses by S. C.'

IN THE GARDEN OF DREAMS. Lyrics and Sonnets. By Louise Chandler Moulton. 16mo. Cloth. Illustrated. Price, $1.50.

LIL. A Story. By the author of 'Miss Toosey's Mission,' 'Pen,' 'Tip Cat.' 16mo. Cloth. Price, $1.00.

IN HIS NAME. Illustrated. By Rev. E. E. Hale. A new and cheaper edition of this beautiful story, including all of the illustrations contained in the larger edition. 1 vol., 16mo. Cloth. Uniform with 'Ten Times One,' 'The Man Without a Country,' etc. Price, $1.25.

THE NEW PRIEST IN CONCEPTION BAY. A Novel. By Robert Lowell. A new revised edition. 1 vol., 12mo. Cloth. Price, $1.50.

NEW JUVENILES.

LULU'S LIBRARY. By Louisa M. Alcott. Volume 3. 16mo. Cloth. Price, $1.00. Contains 'Recollections of My Childhood,' written by Miss Alcott shortly before her death.

THE KINGDOM OF COINS. A Tale for Children of All Ages. By John Bradley Gilman. Illustrated by F. T. Merrill. Small 4to. Illuminated board covers. Price, 60 cents.

A quaint fancy charmingly handled.—*Sat. Ev. Gazette.*

JUST SIXTEEN. A New Volume of Stories. By Susan Coolidge. Square 16mo. Cloth. Uniform with 'What Katy Did,' 'A Little Country Girl,' etc. Price, $1.25.

The atmosphere is so cultured, the thoughts and instincts of the merry young people are so correct, that, without knowing or realizing it, their influence for good is as potent as it is considerable.—*Palladium.*

FLIPWING THE SPY. A Story for Children. By Lily F. Wesselhoeft, author of "Sparrow the Tramp." With illustrations by Miss A. L. Plympton. 16mo. Cloth. Price $1.25.

Every child who enjoyed "Sparrow" will want this new volume.

KIBBOO GANEY; or, The Lost Chief of the Copper Mountain. A Story of Travel and Adventure in the heart of Africa. With illustrations. 16mo. Cloth. Price, $1.25.

A book for the boys who enjoy exciting adventures.

THEIR CANOE TRIP. A Boys' Book. By Mary P. W. Smith, author of "Jolly Good Times," "The Browns," etc. 16mo. Cloth. Price, $1.25.

What two boys did with a canoe on some of the New England rivers.

AUTHOR'S EDITION OF GEORGE MEREDITH'S NOVELS.

A New and Popular Edition of George Meredith's Novels. Uniformly bound in Library Style, complete in 10 vols., 16mo. Cloth. Price $1.50 per vol. Crown 8vo edition, $2.00. Half calf extra, $25.00 per set.

ALWAYS * * * * * *

"The brightest of the Children's Magazines!"—Springfield Republican.

The Christmas Number of

Wide Awake,

Now ready, 20 cents, is

than ever before — BRIGHTER BETTER LARGER

In addition to the usual array of unusual attractions, the Christmas WIDE AWAKE is *enlarged sixteen pages* to admit Grant Allen's serial of adventure, "Wednesday the Tenth," a tale of the South Pacific. The same number opens serials by Hjalmar Hjorth Boyesen and William O. Stoddard, the former a story of modern Norse boys, the latter an American farm story.

Howard Pyle, the artist, contributes a "Lady-and-Tiger" sort of story called "Lambkin; Was he a Hero or a Prig?" Postal-card votes are invited from all readers, and cash prizes are offered for the most telling hundred-word arguments on each side.

Now that photography has been domesticated as a universal art, "The Confessions of an Amateur Photographer," by Alexander Black (opening a series of six laughable and practical pictorial papers) is sure of an enthusiastic reception.

Susan Coolidge's story, "Dolly Phone," might fittingly have emanated from Edison's laboratory at Menlo Park, since his perfected phonograph plays a prominent part in the plot.

The thrilling Greek story of "Cleon," with its dramatic pictures by Garrett, will stir the heroic in boys. "Children's Portraits in the Louvre" is the beautiful art paper, and "The Red Velvet Pig" the nonsense story. Then there are the Christmas short stories and poems, the "Military Snow Fort" for boys, the remarkable "Men and Things" for all the family, and the Funny "Mary at Our Entertainment," which will set the country laughing from the Atlantic to the Pacific. * * * And a lot more.

Cassell & Company's

NEW PUBLICATIONS.

Hon. W. E. Gladstone says in the *Nineteenth Century*: "It may even be pronounced a book without a parallel."

Marie Bashkirtseff.

THE JOURNAL OF A YOUNG ARTIST FROM CHILDHOOD TO DEATH.

Translated by Mary J. Serrano, with appendix describing a visit to Mlle. Bashkirtseff, by François Coppée. One octavo volume, with Portrait and Illustrations, new style of binding, gilt top, etc. Price $2.00.

Helen Zimmern says in *Blackwood's Magazine*: "No one can lay down without emotion the pages of this diary, in which a human soul has voluntarily laid its very inmost fibres bare before us."

"For once I do not marvel at Mr. Gladstone's enthusiasm. Surely this cry out of the grave will make itself heard above most of the other voices of this century," says Louise Chandler, Moulton in the Boston *Herald*, of 'The Journal of Marie Bashkirtseff.'

Josephine Lazarus says, in *Scribner's Monthly*: "The journal of Marie Bashkirtseff is in many ways a unique book—something never before attempted, and never to be attempted again. . . . The whole book is a monument."

"No interpretation or criticism can do the faintest justice to this book. It must be read," says the *Boston Traveller* of 'The Journal of Marie Bashkirtseff.'

The Song of the Brook.

By Alfred Tennyson. After illustrations by Wedsworth Wadsworth, beautifully reproduced in monotones in the highest style of the lithographic art. New and elegant binding, $2.50.

The popularity of Tennyson's 'Song of the Brook' is as lasting as the brook itself—it "goes on forever." From the design on the front cover, which is as graceful as it is novel, to the little picture on the back, it is all in keeping with the graceful flowing of the lines. The effect of the lithographic work is such as to make the reproductions appear like original drawings.

Wild Flowers of the Pacific Coast.

From original water-color sketches drawn from nature by Emma Homan Thayer, author of 'Wild Flowers of the Rocky Mountains,' etc. The plates lithographed in the highest style of the art. Bound in extra silk finished cloth, full gilt and colors, beveled boards, etc. New style. Price $7.50.

A book of unusual beauty. Each plate is handsome enough to be framed by itself. It is worthy of a place upon any drawing-room table, and especially of a careful study from those who cultivate flower painting.

The Magazine of Art.

Bound volume for 1889, with 12 exquisite etchings, photogravures, etc., and several hundred choice engravings. Cloth, gilt, $5.00; full morocco extra, $10.00.

One of the handsomest gift-books of the season.

Mother Goose.

SET TO MUSIC.

The handsomest juvenile of the year. New edition. Elegantly done in lithographic colors. Music by Effie I. Lane. Illustrations by J. Louis Webb. New and unique binding, $2.50.

Complete Catalogue free to any address on application.

CASSELL & COMPANY,
LIMITED,
104 and 106 Fourth Ave., New York.

To All Who May Be Interested

IN THE

REFORM

OF

THE TARIFF.

The best time to arouse the people to an understanding of the fallacies of protection is the present. During a political campaign politicians appeal to party prejudice, and few men's minds are then open to conviction. THE WEEKLY POST, therefore, is engaged in the campaign for revenue reform now.

THE WEEKLY POST holds that any law which seeks to divert one man's earnings to another man's benefit, under whatever guise or plea, temporarily or permanently, is an act of spoliation and an infringement of human liberty. In principle it makes no difference whether such spoliation is at a high or at a low rate, whether it is 47 per cent., or 40 per cent., or 1 per cent. We are opposed to it altogether, for the same reason that we are opposed to forced loans, confiscation, slavery, and robbery. We intend to fight against it wherever we find it.

The experience of men who have been working for this reform contains the best lessons for others. THE WEEKLY POST, therefore, invites reformers in every part of the country to report the progress of popular opinion and to describe the best methods of work. Our wish is to make the paper the mouthpiece of the people who are oppressed by taxation. As soon as the people themselves become aroused they will make short work of the present tariff, and we believe that the best service a paper can render is to put its columns, as far as practicable, at their command.

We are preparing a directory of organizations of every kind that are doing, or preparing to do, work, and that will not wait for the approach of another political campaign; and the facts about every such organization are desired for this purpose.

We are preparing also a directory of the work that is in progress for the reform, which will show, by charts and maps and statistics, the results of the discussion of the subjects in the last campaign; the work that reformers are now doing; the industries of particular communities that in especial ways are affected by the tariff; the subjects that could most profitably be discussed in particular communities; and the growth of tariff-reform sentiment in every Congressional district.

The tables and maps and diagrams by which this information will be set forth, will be a chart for reformers during next year's Congressional campaign, and will do much also, it is hoped, to enable them to anticipate the usual effects of a party campaign by educational work in the meantime.

Every reader of the *Nation* who is disposed to aid in this work is requested to send for a blank form for filling in the desired information.

A special correspondent and agent is desired in every community, and correspondence with reference to such an engagement is invited. Subscription price, $1.00 per year, with liberal discounts for clubs and agencies.

THE WEEKLY POST,

NEW YORK.

THOMAS NELSON & SONS'

Christmas Gift-Books

PEN AND PENCIL VOLUME FOR 1889.

RUSSIAN PICTURES DRAWN WITH PEN AND PENCIL. By Thomas Michell, C.B., author of 'Murray's Handbooks for Russia, Poland, and Finland,' etc., etc. With three maps and 124 illustrations. Imperial 8vo, cloth, gilt edges, $3.50.

"Mr. Thomas Michell has accomplished very well the task of stretching his text over so vast a territory. The cuts of Russian cathedrals, churches, and decorative work found in religious manuscripts of the Middle Ages are singularly interesting, while some effort has been made to depict the various types of people embraced under the Russian rule."—*New York Times.*

R. M. BALLANTYNE'S NEW BOOK.

BLOWN TO BITS; or, The Lonely Man of Rakata. A Tale of the Malay Archipelago. 12mo, cloth, covers in colors and gold, illustrated. $1.50.

The extremely violent nature of the volcanic eruption in Krakatoa in 1883, the peculiar beauty of those parts of the Eastern seas where the event occurred, the widespread influences of the accompanying phenomena, and the tremendous devastation which resulted, are all presented in a thrilling narrative for the juvenile world.

ACHIEVEMENTS OF YOUTH (The). By the Rev. Robt. Steel, D.D. 12mo, cloth extra. $1.25.

A series of examples selected from various spheres of thought and life, to illustrate what has been accomplished by youths who diligently cultivate their powers and opportunities.

ACHILLES DAUNT'S NEW BOOK.

CRAG, GLACIER, AND AVALANCHE. Narratives of Daring and Disaster. By Achilles Daunt, author of 'With Pack and Rifle,' etc. With 13 illustrations. 12mo, cloth extra. $1.

"The stories, helped by the thirteen illustrations, will stir the most sluggish blood into a quicker and perhaps a more healthy flow. Will find a host of readers among both the young and old."—*Journal of Commerce.*

NEW BOOK BY VERNEY LOVETT CAMERON.

AMONG THE TURKS. By Verney Lovett Cameron, C.B., D.C.L., Commander Royal Navy, author of 'Jack Hooper,' etc. 12mo, cloth extra, With 27 illustrations. 80 cents.

"It is a good book for boys, and will while away an hour or two for boys of larger growth, not without profit and pleasure."—*New York Times.*

THE FOOTSTEPS OF ST. PAUL IN ROME. An Historical Memoir, from the Apostle's landing at Puteoli to his death, A.D. 62-64. By S. Russell Forbes. 12mo, cloth extra. Illustrated. 80 cents.

"The work is a true historical study, and contains a wealth of material. The book is needed to supplement and correct the larger lives of St. Paul whose authors have never studied accurately some of the archæological questions involved."—*Public Opinion.*

FAVORITE BIBLE STORIES FOR THE YOUNG. With numerous illustrations. 16mo, handsomely illuminated board covers. 50 cents. Cloth extra, 75 cents.

HANDSOME EDITIONS OF

Robinson Crusoe and Swiss Family.

LONGMANS, GREEN & CO.'S NEW BOOKS.

THE MELBOURNE PAPERS:

Being a Selection from Documents in the possession of Earl Cowper, K. G. Edited by Lloyd C. Sanders, B.A. With Preface by Earl Cowper. 8vo, $6.00.

"Readers of this volume will find in it much that is new and more that is interesting."—*Daily Telegraph.*

"Throws considerable light on the character of a man who, as a statesman and politician, is still something of an enigma, and has possibly been much misunderstood. The book is all the more readable for its relative brevity. The specimens of his letters, and of those that were written to him, are sufficient, for they happen to touch on the subjects in which we are naturally most interested."—*Times.*

EAST AFRICA AND ITS BIG GAME:

The Narrative of a Sporting Trip from Zanzibar to the Borders of the Masai. By Captain Sir John C. Willoughby, Bart., Royal Horse Guards. With Postscript by Sir Robert G. Harvey, Bart. With 14 full-page illustrations in monotone by G. D. Giles and Mrs. Gordon Hake—those of the latter from photographs taken by the author; four plates containing 22 lithographic illustrations of game, and a colored map of the game country. Pages xii.–303. Royal 8vo, cloth, ornamental cover, $7.00.

RUSSIA IN CENTRAL ASIA IN 1889:

And the Anglo-Russian Question. By the Hon. George N. Curzon, M.P., Fellow of All Souls' College, Oxford. With sixteen full-page illustrations, thirty-seven illustrations in the text, maps, Appendices, and an index. 8vo, cloth, $6.00.

"This is a volume of great and varied interest. . . . The book will, of course, be read by every one desirous of keeping himself abreast of a topic which is repeatedly undergoing change, and which attracts daily increasing attention."—*The Times.*

THE LIFE OF LORD JOHN RUSSELL.

By Spencer Walpole, Author of 'A History of England from 1815.' With two portraits. 2 vols., 8vo, $12.00.

"A great career, a character of marked eminence and individuality, an abundance of novel and authentic material, all treated with sound judgment and approved literary skill by a writer singularly well qualified to handle so congenial a theme."—*The Times.*

CARDINAL LAVIGERIE AND THE AFRICAN SLAVE TRADE.

Edited by Richard F. Clarke, S.J., Trinity College, Oxford. 8vo, $4.50.

***This book appears under the authority of the Cardinal, and contains the latest details of his work and of the crusade he is organizing for the abolition of the African slave trade.

NATURAL RELIGION.

The Gifford Lectures delivered before the University of Glasgow in 1888. By F. Max Müller, K.M., Foreign Member of the French Institute. Crown 8vo, $3.00.

". . . He is solicitously fair in his statements, keen in his criticisms, and thoughtful in his conclusions."—*Nonconformist.*

HISTORY OF PHŒNICIA.

By George Rawlinson, M.A., Camden Professor of Ancient History in the University of Oxford, Canon of Canterbury, etc. With 2 Maps, 10 Plates, 128 Woodcuts in the Text, and full Index. 8vo, pages xxii.-583, cloth, $5.00.

THE INNS OF OLD SOUTHWARK,

And Their Associations. By William Rendle, F.R.C.S., Author of 'Old Southwark and Its People,' and Philip Norman, F.S.A. With 15 full-page Photo-gravure Intaglio Plates and 65 Illustrations in the Text. Royal 8vo, $8.00.

VISITS TO REMARKABLE PLACES,

Old Halls, Battlefields, Scenes Illustrative of Striking Passages in English History and Poetry. By William Howitt. With 80 Illustrations engraved on Wood. Crown 8vo, cloth, gilt edges, $1.75.

THE STORY OF MUSIC.

By William J. Henderson. 12mo, ornamental cloth cover, gilt top, $1.25.

"Unique in its comprehensiveness and remarkable for the clear and concise way in which a great mass of material is treated in its pages. No one who is interested in the study of music will fail to read every chapter of 'The Story of Music' after beginning it."—*New York Times.*

"Admirable for its succinctness, clearness, and gracefulness of statement."—*N. Y. Tribune.*

"Deserves the earnest attention of every musician."—*Boston Times.*

FIELD AND HEDGEROW:

Being the Last Essays of Richard Jefferies. Collected by his Widow. Crown 8vo, $1.75.

"The volume contains some of the very loveliest articles which ever came from this gifted pen. . . . The book altogether is one of the most completely delightful that Jefferies has ever given to the world."—*Mrs. Louise Chandler Moulton, in the Boston Herald.*

THE EULOGY OF RICHARD JEFFERIES.

Author of 'The Gamekeeper at Home.' A Memoir by Walter Besant. With Photographic Portrait. Crown 8vo, $2.00.

"The oddest and most eloquent bit of biography we have ever read."—*Philadelphia Press.*

"As interesting as Mr. Besant's most interesting novels."—*Daily News.*

RECENT FICTION.

A FAMILY TREE,

And Other Stories. By Brander Matthews. 12mo, ornamental cloth cover, $1.25.

"Apart from the originality of his conceptions, his style is in itself a charm, recalling the masters of French prose in its conciseness, grace, and crisp epigram."—*Boston Transcript.*

GERALD FFRENCH'S FRIENDS.

By George H. Jessop. 12mo, ornamental cloth cover, $1.25.

"Mr. George H. Jessop is a keen observer and a sure-handed delineator; his forcible outline sketches always fix and fascinate attention. The book as a whole is delightfully entertaining, and many of its character studies are faithful enough to deserve long life."—*Boston Times.*

"SUCH IS LIFE."

A Novel. By May Kendall, author of 'From a Garret,' 'That Very Mab,' 'Dreams to Sell,' etc. 12mo, cloth, $1.25.

"It is unusual; it has the constant charm of the unexpected and has in it both pathos and humor. The style is so choice, so refined, so full of all-pervading beauty, that it is a special delight to fall upon such a book."—*Boston Traveller.*

GOBI OR SHAMO:

A Story of Three Songs. ("*The Great Desert of Gobi or Shamo.*"—Cornwall's Geography.) By G. G. A. Murray, Professor of Greek in the University of Glasgow. Crown 8vo, cloth, 376 pages, $1.25.

MICAH CLARKE:

HIS STATEMENT. By A. Conan Doyle. Crown 8vo, 421 pages. Extra cloth, $1.50.

"Easily the best example of the class of fiction to which it belongs of the year. It is not merely two or three incidents, but the maintained interest of the entire tale, that leads us to give it such high praise."—*Christian Union.*

BOYS AND MASTERS:

A Story of School Life. By A. H. Gilkes, M.A., Head-master of Dulwich College. 12mo, $1.25.

THE BLUE FAIRY BOOK.

Edited by Andrew Lang. With 136 illustration. by H. J. Ford and G. P. Jacomb Hood. Crown 8vo, gilt edges, ornamental blue and gold covers. 390 pages, $2.00. (*Just ready.*)

"No matter what else the children may find in their stocking Christmas morning they should surely find a copy of 'The Blue Fairy Book.'"—*Chicago Daily News.*

"The loveliest collection of fairy stories that any Christmas holiday ever brought. With its exquisite charm of the stories rendered still more attractive by the pretty blue and gold fancy in binding."—*Boston Traveller.*

"The most captivating thing of its kind which has appeared in a long time. Nothing in the impending holiday publication race will be likely to surpass this substantial, handsome little volume."—*Brooklyn Eagle.*

PRINCE PRIGIO:

A Fairy Story. By Andrew Lang. With twenty-seven illustrations (eight full-page) by Gordon Browne. Square 12mo, cloth, $1.00.

Mr. Lang in his new fairy tale utilizes his wide knowledge of myths, and combines a wholly new series of adventures from the use and misuse of the old fairy gifts.

LETTERS ON LITERATURE.

By Andrew Lang. Foolscap 8vo, $2.00.

"They are delightfully frank and racy, rich as an argosy in learning that shines and sparkles, but true to the author's critical convictions as the English tar to his flag."—*The Independent.*

LOST LEADERS.

By Andrew Lang. 12mo, $1.50.

"They evince a width of observation, an incisiveness of expression, and a freshness of manner which render the volume very charming reading. . . . We recommend all who delight in the society of a scholar, a gentleman, and a wit, to procure this delightful volume."—*John Bull.*

PEN AND INK.

Papers on subjects of more or less importance. By Brander Matthews. With a poem by Andrew Lang and "An Epistle to the Author" in verse by H. C. Bunner. Containing articles on "The Antiquity of Jests," "The Philosophy of the Short Story," "Songs of the Civil War," and "Poker-Talk." Crown 8vo, half cloth, gilt top, $1.50.

"His book is excellent reading, and the good old phrase 'There is not a dull page in the book' will have to do duty once more at the hands of a reviewer who has read every page and knows whereof he speaks."—*William Walsh, in "Lippincott."*

NEW POETRY.

THE AFTERNOON LANDSCAPE.

Poems and Translations. By Thomas Wentworth Higginson. 12mo, cloth, gilt top, $1.00.

"So distinctly the work of a poet, and not of a mere verse-maker, that one is tempted to regret that there are not more of them."—*Boston Herald.*

THE BIRD-BRIDE:

A volume of Ballads and Sonnets. By Graham R. Tomson. Foolscap 8vo, $1.75.

"Of the ten (ballads) which are given, six, at least, we venture to predict, will take permanent place in ballad literature."—*Transcript.*

"A fine imagination, a remarkable strength of expression, and a great deal of individuality, characterize all these ballads and sonnets."—*The Critic.*

GRASS OF PARNASSUS.

A Volume of Selected Verses. By Andrew Lang. Foolscap 8vo, printed on hand-made paper, and bound in cloth, gilt top, $1.75.

"Daintily printed little volume. . . . Marked with the well-known grace, facility, and correctness of style that characterizes all Mr. Lang's verse."—*Christian Union.*

LEAVES OF LIFE.

Verses. By E. Nesbit, Author of "Lays and Legends." Crown 8vo, $1.50.

"That she possesses dramatic power is evident in 'The Ballad of Splendid Silence'; 'The Betrothal Song' shows that she can write delightfully on a love subject."—*The Critic.*

For sale by all booksellers. Sent on receipt of price by the publishers.

LONGMANS, GREEN & CO., 15 East Sixteenth Street, New York.

The Nation

VOL. XLIX.—NO. 1277. THURSDAY, DECEMBER 19, 1889. PRICE 10 CENTS.

Fine Art Gift Books.

ENDYMION.

By John Keats. Illustrated by W. St. John Harper. This beautiful poem is illustrated by numerous photogravures from original drawings made by W. St. John Harper, and printed in delicate tints. The most artistic triumph in bookmaking ever achieved. 1 vol., cloth, $15.00.

LALLA ROOKH.

By Thomas Moore. Illustrated with about 140 photo-etchings made from designs of the best artists in America, together with several from European and Persian artists, printed in colors, and the text of the poem is set in artistic style. In vellum cloth folio, with stamped ribbons, $15.00; full seal, $17.50.

RECENT ENGLISH ART.

A set of 16 beautiful photo-etchings from the best paintings of modern English painters, such as Sir Fr. Leighton, Leslie, and others, with descriptive text by Walter Rowlands. 1 vol., folio, cloth, $7.50.

Other volumes uniform with above are RECENT ITALIAN ART, RECENT FRENCH ART, RECENT GERMAN ART.

NOTRE DAME DE PARIS.

By Victor Hugo. With superb illustrations by the celebrated French artists Rossi, Bieler, and Myrbach. No other popular novel of this great historical edition compares with this. The drawings were reproduced in Paris by Guillaume et Cie, at a cost of over $3,000. 1 vol., 8vo, cloth, $3.00.

SALON CELEBRITIES.

Ten beautiful photogravures made by Goupil et Cie, from favorite pictures by noted artists, exhibited at the Salon in Paris, with descriptive text. Cloth, gilt, $3.75.

The companion volume to above is THE GOUPIL GALLERY OF PHOTOGRAVURES.

NATURE AND ART.

Illustrated with etchings by Rajon after Bonnat, Forberg, R. Swain Gifford, J. D. Smillie, H. Farrar, and others, from designs and engravings by A. F. Bellows, George Fuller, Wm. M. Hunt, and others. Cloth, full gilt, $5.00, full seal, $8.00; tree calf, $13.00.

FAIRY LILIAN.

By Alfred (Lord) Tennyson. Illustrated by the most distinguished artists of the day. The volume is a triumph of the printer's art, showing on each page a delicate border in tint surrounding the text or illustration printed in black. Cloth, gilt, $6.00; full seal, $8.00.

THE SONG OF THE RIVER.

By Charles Kingsley. With 16 original illustrations by Harper, Taylor, and others. Reproduced in photo-etching, and printed in colors by hand. Cloth, gilt, $6.00; full seal, $8.00.

THE EARL'S RETURN.

By Owen Meredith. Illustrated by photo-etchings and engravings from designs by W. L. Taylor. Cloth, full gilt, $6.00; full seal, $8.00; tree calf, $13.00.

For sale by all booksellers, or sent prepaid.

A SUPERB GIFT.

THE CENTURY DICTIONARY: An Encyclopedic Lexicon of the English Language.

Pronounced by press and public the most complete and scholarly dictionary of the English language yet published. To be completed in six volumes, containing definitions, etymologies, and encyclopedic information of over 200,000 common and technical words. The first volume, which was issued in May, was so well received that a third edition has become necessary to supply the demand. The second volume is now ready. The remaining volumes will be issued at regular intervals, and the entire work completed within about two years. At this season of the year we suggest THE CENTURY DICTIONARY as a superb Christmas gift. Nothing could be more useful or more thoroughly appreciated. In view of the approach of the Christmas holidays we have prepared a neat certificate of subscription, showing that the price of the entire work has been paid, and entitling the holder to the volumes as issued. The price of the DICTIONARY is from $60 to $90. Sold only by subscription. For further particulars, mode of subscribing, etc., address the publishers. A large pamphlet, containing full information and sample pages, will be sent upon receipt of ten cents in stamps.

BATTLES AND LEADERS OF THE CIVIL WAR: "The Century War Book."

This magnificent work, now completed, is recognized as the most authentic and important record of our civil war. It is full of the most thrilling narratives as well as the most accurate accounts of all the principal battles, campaigns, sieges, and marches, all written by participants. Nothing could be more interesting or valuable as a gift to any man or boy. To survivors of the war it is of special interest from the fact that among its contributors are numbered nearly all the prominent Federal and Confederate officers. Generals Grant, Sherman, McClellan, Johnston, Beauregard, Longstreet and scores of others have contributed. The illustrations, which number 1,700, include a remarkable collection of portraits, battle scenes, maps, diagrams, etc. Complete in four elegant volumes. Sold only by subscription. Price, for the set, from $20 to $40. For further particulars address the publishers.

The same, with back numbers bound in cloth..... 6 00

The Best Christmas Gift for Boys and Girls.

Nothing can more delight a bright boy or girl than to find at the top of the Christmas stocking a copy of ST. NICHOLAS, with an assurance from the jolly old Saint himself (through THE CENTURY CO.) that a year's subscription has been paid, and other copies are to follow.

There could be no better gift. ST. NICHOLAS has been called the "best magazine for young people," and it *is* the best, since it contains the best work of the best writers and artists. Each number offers a well-varied and beautifully illustrated selection of stories, poems, sketches, and articles on topics of importance and interest, so presented as to be readily understood by young readers and of interest to their elders. It is issued monthly. A new volume began with the number for November, 1889, when the magazine was enlarged and clearer type used in printing it.

THE CHRISTMAS NUMBER,

which may be bought at any book-store for 25 cents, will give you an idea of the character of the magazine. It contains an article on "The Boyhood of Thackeray," by his daughter; "Little Alvilda," a Norse nursery tale, by Hjalmar Hjorth Boyesen; the opening chapters of a story for girls, by Miss Nora Perry; "Buffalo Hunting," by Theodore Roosevelt, illustrated by Remington; one of a series of articles on Intercollegiate Foot-ball, by Walter Camp, with portraits of Yale, Harvard, and Princeton teams; Christmas stories, poems, etc.

THE JANUARY ST. NICHOLAS

will contain the first chapters of a stirring serial story by Wm. O. Stoddard; another fine article on Foot-ball by Walter Camp, with a supplementary paper on "The Drop-kick," by W. T. Bull, Yale's famous "back"; an instructive chapter on Foreign Intercourse in the "Routine of the Republic"; "The Enchanted Mesa," a legend of New Mexico in the Fifteenth Century; "Tracked by a Panther," a trapper's story; "Pilot-boat 'Torching' by Night"; "The Little Buttonwood Man," and other stories. The comical Brownies reappear in "The Brownies in the Studio." A number of poems, including "The Yule-Log's Song," by Harriet Prescott Spofford, complete the contents.

The twelve numbers of ST. NICHOLAS, when bound, will make two beautiful books of 550 pages each. Notwithstanding the enlargement, no increase has been made in the subscription price, which remains $3.00 a year; 25 cents a number. State with what issue you desire subscription to begin, and remember that the new volume began with the November number.

Booksellers, newsdealers, and postmasters take subscriptions, or remittance may be made directly to us—at our risk, if by check, draft, money order, express order, or in registered letter.

THE CENTURY CO., 33 East 17th Street, New York.

1167 Broadway, New York, under Coleman House.

The Book of the Season.

GREAT SENATORS OF THE UNITED STATES Forty Years Ago (1848 and 1849). With Personal Recollections and Delineations of Calhoun, Benton, Clay, Webster, Gen. Houston, Jefferson Davis, etc. By Oliver Dyer. Robert Bonner's Sons, Publishers. Price, $1.

'Great Senators' is emphatically the book of the season. The critics and reviewers give it unstinted praise. The New York *Tribune* concludes a two-column review of it thus:

This book will be read with the keenest pleasure by all who are old enough to have been brought up in the traditions of half a century ago, while it can be commended to young men as a treasure-house of information concerning perhaps the most striking and able group of statesmen the Union has known.

The New York *Times* says:

Mr. Dyer's relation with the great Senators of forty years ago was one very fortunate for the acquiring of fresh impressions. It is impossible to read his reminiscences without being aware that the impressions he reports are genuine.

The New York *Sun* says:

Among the recent contributions to American history none is worthy of more serious attention than a volume entitled *Great Senators*, by Oliver Dyer.

It would be easy to fill columns with effective extracts from this volume, but we must confine ourselves to two or three examples of incisive and impartial delineation. Mr. Dyer's analysis of Webster's individuality is the most searching that we have seen—indeed, it is the only one which accounts at once for the triumphs and the shortcomings of the great parliamentary champion of the Union.

The New York *Press* says:

In the book, "Great Senators of the United States Forty Years Ago," are told, as Dyer only could tell, stories of Calhoun, Benton, Clay, Webster, Houston, and Jeff Davis, with personal recollections and delineations. The personal descriptions given by Dyer of these great men are photographic in precision and lifelike as touched up by the anecdotal stroke of a master.

"Great Senators" is supplied to the trade by Robert Bonner's Sons. Any one who does not find "Great Senators" at the bookstores can obtain a copy, postage paid, by sending a dollar to Robert Bonner's Sons, corner of Spruce and William Streets, New York.

BOOKS IN THE FOREIGN AND ANCIENT LANGUAGES. } Subscription to foreign periodicals, Tauchnitz British Authors. Catalogues on application. CARL SCHOENHOF, 144 Tremont St., Boston.

The Bermuda Islands.

The Scenery, Physical History, and Zoölogy of the Somers Archipelago. By Prof. Angelo Heilprin, F.G.S.A., F.A. Geogr. Soc., etc. Large 8vo, cloth. 19 Plates. Price $3.50.

"A disciple of Darwin, Prof. Heilprin attacks the problem of the formation of the Bermudan rock; and rarely does one find so charming a combination of rhetoric and science. . . . With this volume for a field-book, one with even the rudiments of delight in the miracles of continuous creation could spend a happy season in this summer land."—*The Critic.*

". . . Two of the most important of scientific questions of the day are discussed in a manner charmingly clear and simple."—*Christian Union.*

". . . The whole discussion, together with the critical notices in the appendix, is full of interest."—*N. Y. Tribune.*

Among Cannibals.

An Account of Four Years' Travels in Australia and of Camp Life with the Aborigines of Queensland. By Carl Lumholtz. With over 100 illustrations. 8vo, $5.00.

"Mr. Lumholtz selected for his study the lowest race known to exist—a race only just entering upon the Stone Age. Here, in an unvisited corner of northern Australia, was an indubitably veracious picture of man's life in the infancy of the race. His book is made up of an extraordinary narrative and a series of brilliant pictures."—*Boston Transcript.*

The American Railway.

Its Construction, Development, Management, and Appliances. With 225 illustrations. Bound in half leather, 8vo, $6.00 *net.*

"This sumptuously made and illustrated volume consists of essays by specialists upon every branch of the American railway system. While the work is one for permanent instruction, its artistic side gives it all the attraction of a special Christmas publication. It should find a large circulation, for its matter is most valuable, while the manner of presenting the matter is attractive and interesting."—*N. Y. Tribune.*

"This is, beyond all compare, the greatest American work on railways. It is a great book and remarkably handsome besides."—*N. Y. Herald.*

The Viking Age.

The Early History, Manners, and Customs of the Ancestors of the English-Speaking Nations. By Paul B. Du Chaillu. With 1,400 illustrations. 2 vols., 8vo, $7.50.

"The author's greatest work. To the student of history the volumes will be invaluable, while to the general reader the attractive style, together with the profuse and admirable illustrations, will make them a mine of instructive pleasure."—*N. Y. Observer.*

"For readers who wish to reach a comprehensive knowledge of the old Northmen, this is the book most needed and most useful."—*N. Y. Independent.*

Aspects of the Earth.

A Popular Account of Some Familiar Geological Phenomena. By N. S. Shaler, Professor of Geology at Harvard. With 100 illustrations. 8vo, $4.00.

"The author has sought, as he says, 'to show the relation of natural forces to the fortunes of men, and thereby to secure, on the part of the reader, the interest which belongs to matters which affect the human welfare alone.' Earthquakes, volcanoes, cyclones, etc., have the strongest human interest and relations. The subjects are as interesting as the way in which they are treated, and the illustrations are not only numerous but interesting."—*N. Y. Tribune.*

Strange True Stories of Louisiana.

By George W. Cable. In an original and artistic binding. Square 12mo, illustrated, $2.00.

"A charming book, charmingly bound, printed, and pictured."—*Washington Capitol.*

"It is handsomely illustrated and will attract general attention, both because of its essential character and the excellence of the style."—*N. Y. Journal of Commerce.*

Sforza: A Story of Milan.

By William Waldorf Astor, author of 'Valentino.' 12mo, $1.50.

"It is an historical novel of the best type, for it is dyed through and through with the bright Italian tints of the epoch in which the tale is set. Nowhere does the narrative halt."—*Christian Union.*

"Full of local color and fidelity to nature. The characters are vigorously sketched. Indeed, the book as a whole may be called one of the best historical novels that have recently appeared."—*Boston Sat. Eve. Gazette.*

Said in Fun.

By Philip H. Welch, author of 'The Tailor-Made Girl.' With Preface by Robert Gordon Butler. Square 4to, $1.25. With full-page illustrations by

W. A. ROGERS,	ATTWOOD,	GIBSON,	OPPER,	STERNER,
BUSH,	HERFORD,	SHEPPARD,	TAYLOR,	"CHIP,"
KEMBLE,	SMEDLEY,	VAN SCHAICK,	FROST,	MITCHELL,
	SNYDER,		WOOLF.	

The brightest of Mr. Welch's witty paragraphs and sketches have been gathered from all quarters, and some unpublished matter has been added, the whole making, with the illustrations, a book full of the rarest fun in picture and text.

The Poetry of Tennyson.

By the Rev. Henry Van Dyke, D.D. 12mo, $1.50.

"This volume, in its estimate of Tennyson as a literary artist, and in its keen analysis of his deeper processes of thought is a really masterly effort."—*Boston Sat. Eve. Gazette.*

"It is a pleasure to read Dr. Van Dyke's book, so complete and well balanced is it, so marked by common sense and critical acumen."—*N. Y. Sun.*

English Lands, Letters, and Kings.

By Donald G. Mitchell. 12mo, $1.50.

"These chats make a most charming verbal incursion into England's past, from the beginning of English letters to the revels of Kenilworth."—*Philadelphia Times.*

"It is a bright, pleasant, chatty record, true to history, and full of useful hints and suggestions."—*Boston Gazette.*

DELIGHTFUL BOOKS FOR THE YOUNG.

Personally Conducted.

By Frank R. Stockton. With 46 Illustrations by Joseph Pennell, Alfred Parsons, and others. Square 8vo, $2.00.

A series of pleasant, informal talks with an imaginary party of young people to whom the author is showing the curious and interesting sights of the Old World.

"As humorous and delightful as have been his previous stories."—*Boston Traveller.*

Children's Stories in English Literature.

From Talesin to Shakespeare. By Henrietta Christian Wright. 12mo, $1.25.

"Miss Wright sets forth in simple, attractive language the lives and works of the great men in English literature. Miss Wright has never produced a book so thoroughly fascinating in every way as this."—*Boston Beacon.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 19, 1889.

The Week.

MR. CLEVELAND'S speech at Boston on Thursday was remarkable mainly for the uncompromising support which he gave to ballot reform and civil-service reform, or, in other words, to the two things for which the bad element in his party has the liveliest hatred. No one has ever stigmatized the enemies of ballot reform in stronger language. The followers of Hill can clearly expect no "concessions" in that quarter on this subject. Nothing could be better calculated than such utterances to strengthen Mr. Cleveland's hold on the new generation of voters and on men of all parties, who believe the time has at last come to provide proper bottles for the new wine. His popularity has been steadily growing ever since he left the Presidency, owing not less to the dignity and simplicity of his life in a situation of considerable difficulty and delicacy, than to the manly force and soundness of everything he says on public questions. Two little incidents of recent occurrence illustrate remarkably the growth of his popularity among classes which have long been alienated from his party, and which viewed his election in 1884 with more or less alarm. At the Chamber of Commerce dinner last month, in a gathering made up mainly of Republicans and protectionists, no one met with such enthusiastic applause as he did. More recently, at the breakfast given to Comte de Kératry by the American Copyright League, an audience of 250 literary men, or men engaged in intellectual pursuits, Mr. Cleveland's name was greeted with such prolonged and vigorous cheering that it seemed almost to put a slight by contrast on the guest and on the orators of the day. It was a tribute, in fact, such as perhaps no other American could count on from such an audience. We might go on to say that some of this growth of popular attachment Mr. Cleveland undoubtedly owes to the industry and political economy of his successor.

Gov. Hill's Albany organ, the *Argus*, makes an amusing attempt to assume that Mr. Cleveland's approval of ballot reform is not a rebuke to the Governor, but is in fact a concurrence with the latter's view. Says the *Argus:*

"Mr. Cleveland is as earnest an advocate of this great reform as is Gov. Hill. It is to be hoped that the next Legislature will not exhibit the same hostility to the reform as its predecessor. Mr. Cleveland's thoughtful, patriotic remarks should be read by every citizen who has the interests of good government at heart."

Mr. Cleveland's words have been read by thousands of such citizens, and we beg to assure the *Argus* that not one of them has failed to see that they constitute one of the most crushing rebukes to Gov. Hill which that shifty politician has ever received. It leaves him, in fact, almost entirely alone in the Democratic party in his fight against ballot reform, his only sympathizers being Tammany Hall and the forlorn ex-Butler organ in this city.

The brief speech which Mr. Cleveland made to an assemblage of Democrats at the Bay State Club in Boston, on the day following the merchants' banquet, was in its way as significant as the more formal one of the previous evening. As he was speaking to Democrats only, his words have additional weight as showing the position which he holds in his party, and the view which that party will have to adopt in following his leadership. He said:

"I want to say one word to you as Democrats about the questions of reform which are now agitating the public mind, and I don't propose to make a speech. I beg of you as Democrats not to be accused of lagging in the rear on any of those topics. The tariff reform, of course, is ours, and we don't propose to be robbed of it under any pretence whatever. All things good come to those who wait, and we are willing to wait. Let me tell you, gentlemen, that other reforms are as important, and let me tell you they should be kept abreast, and let me beg of you, so far as in you lies (although I don't believe the admonition is necessary), to see to it that the Democratic party will not be behind in any of them. We are the party of the people, and they cannot get that away from us. Let us, then, keep in mind the benefits of the people, their advantages, and their interests, and wherever we see them let us follow those, and we shall surely be right."

If the friends of Gov. Hill had any doubts about what Mr. Cleveland's preceding speech meant, so far as it applied to ballot reform, they could have none after reading this admonition to the Democratic party not to be "lagging in the rear" on any of the great reforms of the day. The party would be in the front on ballot reform, and New York would have been the first State to put such a law in practice, but for Gov. Hill.

Capt. Boutelle of the Bangor *Whig* has made a discovery about the Australian ballot system which outweighs as an objection anything that Gov. Hill has been able to invent. He says, in his own forcible and eloquent style:

"The attempt to build up some new, intricate, complicated, and but partially tested system, *invented for use among the exiled convicts of a penal colony of Great Britain*, as the absolute perfection of human wisdom, and to denounce every one who is not ready to abolish the simple, old-fashioned New England town-meeting methods, upon which our republican form of Government has stood unshaken for one hundred years of marvellous national development and prosperity, seems to us hardly less than absurd."

It is small wonder that, after bringing this charge against the system, the bold Captain should announce that "we shall decline to continue what seems a profitless discussion." It would obviously be "profitless" for a publicist of his calibre to learn that the Australian system was invented in 1858, and that the shipment of convicts to Australia ceased in 1839; that it was first put in use in South Australia, which never was a penal colony; that it was gradually extended to other divisions of Australia during the following twenty years, and that the number of convicts who have ever voted under its provisions in the whole of Australia in all probability does not equal the number who voted in Boutelle's ward in Bangor at the last election there.

It is obviously the Captain's belief that Australia is a small country, whose population consists mainly of exiled convicts and their descendants. If he will turn to an encyclopædia, he will learn that this is a mistake. He will discover that, while an island, Australia is in fact a continent, having an area nearly twenty-five times that of Great Britain and Ireland; that it is divided into five colonies, the smallest of which has an area of about 88,000 square miles, or nearly double that of the State of New York, and that the area of the other four ranges from 309,000 to 975,000 square miles each; that the total population in 1885 was nearly 3,000,000; that its revenues in that year were nearly $100,000,000, its imports $270,000,000, and its exports $217,000,000; that it had over 6,000 miles of railways and 31,000 miles of telegraph; that it had under cultivation over 6,000,000 acres of ground; that it raised 30,000,000 bushels of wheat, 5,000,000 bushels of oats, and 9,000,000 bushels of barley, maize, and other cereals; that it has six large cities—Melbourne, with nearly 300,000 population, Sydney, with 225,000, Adelaide with 70,000, and Victoria, Sandhurst, and Brisbane each with about 40,000; that there are universities in the three first-named cities, and well-equipped astronomical observatories; that all the colonies have a combined system of free and endowed schools, with a form of compulsory education which carries and enforces elementary instruction among all classes. This and much other valuable rudimentary instruction the Captain will find by consulting any competent authority.

The *American Wool Reporter*, at the request of leading merchants of Boston, has taken a census of the wool-manufacturers on the subject of free wool and ad-valorem duties, by sending to all manufacturers in the country two petitions, requesting them to sign the one which expresses their views and return it, so that it may be presented to Congress after the holiday recess. The result is somewhat surprising, 524 having signed the free-wool petition, and 196 the ad-valorem petition. "The astonishing features," says the *Wool Reporter*, "of this great list of names in favor of reduced duties on wool, lie not only in the number, but in the character of the signers. It has been many times asserted that the only manufacturers in favor of free wool were a few officers of large corporations, the number of whom did not exceed ten. Our list of signatures shows that the rank and file of smaller manufacturers are as willing to express their opinions in regard to wool duties as are the great leaders of the trade."

Subsidies for sorghum have been almost as popular in some parts of the country as subsidies for ships. New Jersey gave them a pretty thorough trial, but abandoned the effort a year or two ago. Kansas has been paying a subsidy of one cent per pound for sugar produced from sorghum, and the local communities have been "bonding" themselves in aid of individuals and corporations who have offered to erect sugar-factories there. The eagerness to vote their own and other people's money away in this fashion has even surmounted the barriers raised by the Supreme Court against such practices, for whereas the Court decided, a long time ago, that such bonds were absolutely void, and that no tax could be levied to pay either principal or interest thereon, the device was hit upon of issuing scrip instead of bonds and then refunding the scrip into bonds—all for sorghum. As this was an underhand scheme to circumvent the law, it was natural that rogues should come forward to rake in the proceeds. It was only necessary to show a process for making a superior article of sugar out of sorghum at a low cost in order to promote the issuing of scrip, which would naturally be turned over to the sugar-makers and sold by them for what it would bring. The various methods of treating sorghum were tried, but the favorite process was roasting. Some people called it the "mush" process. You take a given quantity of sorghum stalks and reduce them to mush, then add a barrel of real sugar to the mush, mix well, and turn out a barrel and a half of sugar of a better quality than was ever produced from sorghum before. Then pocket your subsidy and go to the next county. The mush process had a remarkable run, almost as remarkable as the electric-refining process here in New York. But it could not last for ever, because eventually the swindled communities would try to make sugar for themselves, and, neglecting to add any real sugar to the mush, the output would be disappointing. From Topeka the report comes that the State Board of Agriculture has discovered the trick and has gone in pursuit of the swindlers. Is not the State Board itself to blame for encouraging the sorghum subsidies in the beginning?

The problem of the utilization of the waste lands of our arid region is one that is attracting great attention at the present time. It has been assumed that these lands can be redeemed only by means of irrigation, and immense sums have already been spent in constructing irrigation works, and many hundreds of thousands of acres of land have thus been brought under cultivation. The matter is of so great importance that it has been brought to the attention of Congress, which has recently made large appropriations for the Geological Survey for the purpose of investigating the subject. It seems that the Agricultural Department, not to be behindhand in this important matter, has also been investigating and experimenting during the past season, and, according to the newspaper statements, has already settled it out of hand. The Agricultural Department accepts no conclusions of others, but tests everything itself. So in this matter, instead of accepting the verdict of the settlers in the far West, that, as a rule, crops cannot be raised there without irrigation, it set about testing whether this verdict is true. A spot near Garden City, Kansas, having been selected as a type of the arid region, the ground was broken and pulverized, and sown in various crops. A part of this land was mulched with straw, the rest being left naked. At harvest time it was seen that the mulched land produced a good crop, while upon the unmulched land nothing matured. Hence we are informed that, throughout the length and breadth of the arid region, it is only necessary, in order to insure abundant crops, to pulverize the soil thoroughly and mulch it with straw.

It is strange that among the many thousands of settlers no one has thought of this simple expedient, an expedient so often used in the East for a similar purpose. It is, however, possible that there may be some flaw in the experimentation or the reasoning of the Department in this matter. Indeed, some person envious of this signal success might say that Garden City, which has an annual rainfall of over twenty inches, and during the last season a rainfall 50 per cent. greater than the average, can scarcely be said to be a *type* of the arid region, where the rainfall ranges from 5 to 15 inches in average seasons, and that the results have no bearing on the question. There is, however, a serious side to this business. The frontier upon the plains of Kansas and Nebraska has for the past twenty years been the scene of constant conflict between man and the forces of nature, a conflict in which man is continually and hopelessly worsted. Every wet season upon the frontier has tempted thousands to settle in this border land, whence they have been driven back by the fear of starvation in the first year of normal rainfall. For the hardships and losses of these poor would-be settlers the railroads, with their exaggerated prospectuses, are largely responsible. This is a sufficiently grave matter, but it becomes even more grave when the Department of Agriculture, which is supposed to speak with authority, advises settlement upon these desert lands, and their cultivation without irrigation. If this advice is given under official sanction, thousands of families, accepting it, will seek homes in the desert perhaps only to suffer hardship and loss, and be finally driven out by starvation.

The case of Silcott, which touches the House of Representatives on a sensitive point, and pinches so many members of that body, ought to fix the attention of Congress, and of all our executive, legislative, and judicial authorities, on the inadequate extradition arrangements which we now have with other governments, and especially with Canada. Silcott is believed to have absconded to Canada, and to be in hiding there; but even if there and discovered, can he be extradited? Under the present plan of extradition by treaty, and enumeration therein of extraditable offences, he can be obtained from Canada only in case his offence is enumerated in the treaty. If he has committed forgery, he can be extradited, but he cannot be obtained under the treaty if his offence is embezzlement or other breach of trust. Nor, under the Supreme Court decision in Rauscher's case, can he be tried for embezzlement if extradited for forgery and, on trial for that offence, the proof is insufficient to convict. Great Britain, by a learned report made in 1878, and made by a Royal Commission which included such eminent publicists, judges, diplomatists, and bankers as Chief-Justice Cockburn, the Earl of Selborne (Roundell Palmer), Judge Blackburn, Recorder Russell Gurney, Judge Baggallay, Judge Brett, Sir John Rose, Judge J. Fitzjames Stephen, and Sir William Harcourt, has distinctly said that she is weary of such technicalities. The Commission reported that it is "the common interest of mankind" that criminals, having committed offences against the general well-being of society, shall not remain at large in a foreign State into which they have fled. Even without reciprocity, England should, said the Commission, surrender such criminals to a demanding Government. The Commission also stamped out, in so far as it could, the fussy technicality that a criminal extradited for one extradition offence should not be tried by the country recovering him for another offence, not political. The whole tenor of this learned report is that, with reciprocity, Great Britain will be glad to rid herself of all malefactors and criminals who have fled to her dominions after violating our laws, and the tendency is to show that she will consent to do it even without reciprocity, and on some such plan as is the basis of the recent Canadian legislation known as the "Weldon Act." Why use treaties at all, and why not, by concerted legislation, authorize the arrest and surrender of every escaping criminal (excepting a political offender), as is now done by and between the States of our Union?

Senator Sherman has reintroduced his Federal Election Bill, in substantially the same form as a year ago. Briefly summarized, it takes the control of the election of Congressmen entirely away from the people of a State, and turns it over to canvassing and electoral boards appointed for life by the President. Of course the Northern States will not submit to such treatment. Why, then, is it proposed? Apparently for no other reason than to make it the text for bloody-shirt speeches. But this is as short-sighted from the politician's point of view as from the statesman's. So far as the South is concerned, the agitation of such propositions insures its continued solidity for the Democrats, while, instead of making the North solid for the Republicans, the readiness of Republican leaders to support such schemes renders independent voters more and more suspicious of the party. In short, it is clearly a losing game all around.

We learn from a Republican organ that "the returns of the election of Congressmen in Indiana at the last Congressional election

show that 264,365 votes cast for Republican candidates for Congress elected only three Representatives, while 259,897 votes cast for Democratic candidates elected ten Representatives. This result," the editor says with truth, "is brought about by a most iniquitous apportionment of Congressional districts in that State by a Democratic Legislature," and he adds: "The Democratic journals in Ohio are urging the imitation of this iniquity in that State by the next Legislature." If the editor of the *Independent* had taken the trouble to consult his copy of the *Tribune Almanac*, he would have found that the apportionment of Congressional districts in Ohio by a Republican Legislature was such that, at the last Congressional election, 395,639 votes cast for Democratic candidates for Congress elected only five Representatives, while 416,520 cast for Republican candidates elected sixteen Representatives. If, therefore, the Democrats of Ohio should reapportion the State so as to elect three times as many Congressmen as the Republicans with about the same number of votes, they would only be imitating the "iniquity" of the Republicans. The *Independent* cannot denounce too severely such "iniquity," when committed by either party, but it should spare us the hypocrisy of pretending that either party is superior to the other in this matter.

The rumor has reached the hungry Republican politicians of Brooklyn for about the hundredth time that the President has decided to remove the Postmaster of that city and put a good Republican in his place. They are cheered by a similar rumor in regard to the United States Marshalship of that district. These changes would have been made long ago, in spite of the fact that in order to accomplish the first it will be necessary to remove before his term has expired the best Postmaster that the city has ever had, if the Republican politicians could have agreed upon a successor. The President is not at all troubled by his civil-service-reform pledges, but simply by a fear that he may make an appointment which will "divide the party" in Brooklyn. There are two leading candidates for the place, each of whom has strong party backing. There have been visits to Washington and conferences without limit in the hope of bringing about "harmony," and the President has devoted so much time and thought to the matter that it is small wonder he was able to give "only a hasty examination" to Mr. Windom's silver recommendations. It is a sad reflection upon the loyalty of Brooklyn Republicans that, in spite of all these Presidential exertions, they still refuse to unite upon a candidate.

The suicide of Mr. Franklin B. Gowen is one of the most shocking and unaccountable events of the year now drawing to its close. Ability, courage, and purity are great qualities in a man of affairs, and the late Mr. Gowen had them all, with the addition of a personal charm that found supporters for his largest schemes. But all this was more than neutralized by one single error of judgment. Not content to develop the Philadelphia and Reading Railroad as an instrument of transportation, not content to stake its fortunes upon its proper business under his own almost absolute management, he fell into the mistake of thinking it good policy for the railroad to own the sources of its most important branch of traffic. Adopting this idea, he persuaded his stockholders to put it into execution, and so created the mountain of debt which broke down the company, and, in spite of a successful reorganization, keeps it impoverished to this day. Other combined railroad and coal properties there were already, the railroad being generally a development of the coal interest, whatever may be thought of the wisdom of this development. But it was Mr. Gowen who conceived that it was a good thing for a railroad to buy the coal lands which should furnish it with freight. If his company could have paid for the coal lands in stock, there would have been less to say against his scheme financially; but, as bonds were the only means available for the purchase, the wildness of the scheme was pretty generally recognized. No one saw this more clearly than the owners of the lands which Mr. Gowen sought to buy; they sold at good prices, and promptly turned the bonds into cash. The example of Mr. Gowen did, however, find some imitators, though on a comparatively humble scale. The end is not yet, nor for the Reading Company alone.

The St. Paul *Pioneer-Press* thinks that whatever may be said of other countries, France has damaged her commerce by subsidies. She went into the subsidy business in 1881 on a grand scale, paying bounties for shipbuilding and also for navigation. During the nine years that the system has been in operation, the foreign trade of France has declined $202,000,000 in value, and the tonnage carried has also declined. The number of ships has, of course, increased, because building was stimulated by the bounties, but the foreign shipping in French waters has increased in an equal ratio, showing that the bounties were sheer waste. On the other hand, the French shipping that existed before the bounty law went into operation has suffered severe losses by the unnatural competition forced upon it. There is no country in which the practice of taxing the many for the benefit of a few, and calling it *la gloire nationale*, is so popular as it is in France. There is none in which the results have been so disappointing.

The number of strikes which have taken place in London since the dockmen's strike, is opening the eyes of a great many people to the inconvenience of treating all strikes as justifiable and even meritorious, provided the employer be a corporation. This was substantially the ground taken by a large part of the public in London, under the leadership of Cardinal Manning, in regard to the dockmen's strike. Nobody pretended that the dock companies could afford to pay higher wages to "casuals" than they were paying, or that they were not, all but one, on the verge of insolvency. What was said was, that it was a shame that the casual's livelihood should be so precarious, and that, as he sometimes got work from the dock companies, on them must fall the burden of improving his lot, and not on the sympathizing public. Why the stockholders, many of them very poor, should have to shoulder this responsibility, nobody ever explained. Cardinal Manning intimated that there was something unchristian in their reluctance to surrender, and the clergy of other denominations backed him up. When the strikers refrained from rioting, it was held that the case against the dock-owners was complete, and that they were morally bound to give such peaceable casuals regular employment on their own terms. The companies did accordingly compromise in such a way as to give the strikers the air of having triumphed. They have never had a quiet hour since. Their stock has depreciated $5,000,000. Repeated strikes have been ever since occurring, sometimes for one reason, sometimes for another, but always with the view of showing the power of the strikers over the employers. The same spirit has spread through the other employees of corporations in England. Doubtless they all have grievances, but the point to be noticed is, that when a strike of this kind succeeds under the leadership of a labor agitator who is not a fellow-workman of the strikers, and has no common interest with them, it is sure to be followed by a protracted attempt, or series of attempts, to take the management of the business out of the hands of the owners, and subject it to the rules and regulations of some trades-union.

At the time of the imposition of tariff taxes on agricultural products in Germany, the protectionists of that country maintained, with the usual fierce logic of their kind, that the consumer would not suffer, as there would be no enhancement of the price of the necessaries of life. In the light of those assertions the statistics given by the Munich correspondent of the *Evening Post* are of interest: "In January of this year 224 pounds of beef cost in Berlin 86.50 marks. In September it had risen to 103.40, an increase of 15 per cent. Pork had risen from 95 to 124.80, or 31.4 per cent. Veal had risen from 96.50 to 102.40, or 6.1 per cent., and mutton from 88 to 92.50, or 5.5 per cent. Compared with September, 1888, beef, pork, and veal had risen 7.7, 30, and 17.7 per cent. Mutton, owing to temporary causes, had fallen 3.3 per cent." A table recently published in the *Freisinnige Zeitung*, based upon official documents, sets forth the following list of increased prices since 1887: Wheat increased 17 per cent., barley 22 per cent., oats 43. The price of potatoes has decreased in the same period; but, unhappily for the protectionist argument, there is no tax on potatoes. Doubtless that omission will soon be made good, and potatoes be added to the number of agricultural products for which the landowners can get a higher price, but for which, in the mysterious way common to the working of protection, the consumer will have to pay no more than before.

WHY NOT PICTURES?

In President Harrison's message occurs the following passage: "The free-list can very safely be extended by placing thereon articles that do not offer injurious competition to such domestic products as our home labor can supply." The President makes no special mention of the tariff on works of art, but this passage seems to us to cover the ground.

The fact that, in the opinion of the interested parties, works of art "do not offer injurious competition" to our "domestic products" has been demonstrated time and again. The present duty of 30 per cent. on works of art was imposed in the face of a largely signed petition of American artists for the removal of the then existing 10 per cent. duty. Later, the Union League Club circulated among the artists and art institutions of the country a petition for the abolition of the present tariff on works of art. Among two thousand answers received to their circular, *seven* favored the retention of the present duty, while 90 per cent. of the answers received favored the total abolition of the tariff on works of art. The Society of American Artists has again and again recorded its protest against the present tariff, while, more recently, the most conservative of our artistic bodies, the National Academy of Design, has taken the same stand. At the last annual meeting of the Academy the following resolution was passed: "Resolved, That the present advalorem duty on foreign works of art is injurious to the best interests of art in this country, and that it should be replaced by a moderate specific duty or abolished altogether."

The last phase of this singular crusade by a "protected industry" against the law intended for its protection is the forming of the National Free Art League expressly to secure the abolition of the present tariff on works of art. Its membership is steadily growing, and it now has some thousand members in all parts of the country, including many of our most prominent artists—the names of many Academicians, including the President of the Academy, are on its rolls. It is, therefore, very evident that the artists of America think that foreign works of art "do not offer injurious competition" to their own, and they have given their reason for thinking so. The circular of the National Free-Art League says: "The price of a work of art *depends upon the individual reputation of the artist*, and a cause which enhances the price of foreign works of art has no beneficial effect upon domestic production." How right is this contention may be illustrated by the following little story which appeared in the Paris *Temps* on the 22d of last August:

"A few days since, an administrator's sale was held on the second floor of the Hôtel Drouot. It was an unimportant sale, and included a few pictures among which was a little panel, thirteen centimetres wide by ten high, representing a drunken soldier at a tavern door. In the right-hand lower corner of this little picture was an M with a reversed E astride of its first leg.

"The picture was bought for about a hundred francs (*une centaine de francs*), the *commissaire priseur* having announced it simply as 'a picture without a name.' . . . It became the property of a M. S——, who immediately ceded it to a M. F——. A few days later M. F——, wishing to get rid of his acquisition, offered it to an expert in Rue Lafitte, M. Bernheim *jeune*. 'But it is a Meissonier that you have there!' said the expert. Imagine the stupefaction of M. F—— to find himself the owner of an authentic work by the painter of '1814,' knocked down for a hundred francs by a Parisian *commissaire priseur!* We asked M. Bernheim to confide the little picture to us for a few moments, and we carried it to show to the master. No doubt was left! M. Meissonier declared it to be a work by himself."

Could anything more clearly demonstrate the futility of treating art as merchandise? Could anything show more conclusively that "the price of a work of art depends upon the individual reputation of the artist"? Can any one tell what may be the present mercantile value of that Meissonier? But that value depends upon the fact that it is a Meissonier, and as such it competes only with other Meissoniers. As a *picture*, competing with other pictures, its value was—one hundred francs! Pictures, *as pictures*, have no commercial value; Meissoniers have a great commercial value, but putting a tax on a Meissonier can only raise the price of that particular picture or of others by the same hand. If we had any manufacturers of Meissoniers in the country, they might be benefited by a tariff on Meissoniers; our painters of pictures are not helped by a tariff on pictures, and they know it better than any one.

If our Republican Congress agrees with our Republican President that "the free-list can very safely be extended by placing thereon articles that do not offer injurious competition to such domestic products as our home labor can supply"; if, as we believe, Congressmen would like to reduce taxation if they knew where to do so without hurting "American indnstries," why should they not begin by taking off the tariff on works of art?

WHEN DOCTORS DISAGREE.

It is reported that Chairman McKinley has already taken his tariff work in hand and set his Committee on Ways and Means thinking what they had best do. They will have no lack of advisers. To begin with, here are two eminent doctors of the protectionist faith, the Boston *Commercial Bulletin* and the Philadelphia *Manufacturer*, giving contrary opinions respecting the duties on wool. The *Bulletin* of December 7 discusses the subject in its usual learned way, and finds that "the present duty on carpet wool is an absurdity" and ought to be repealed; also, that the duties on certain other fibres ought to be repealed, and that Congress ought to confound the free-traders, and take the wind out of their sails, by passing "a measure which shall remove and reduce the duties which are obviously not only excessive, but unnecessary for the protection of American labor, a direct tax upon the American people as consumers, and of no corresponding advantage to them as producers."

The *Manufacturer*, as if anticipating what the *Bulletin* was about to say, gave its opinion of the free-wool campaign in its issue of December 2. It said first, in italics, that "the manufacturers who want free wool will not get it"—meaning, we suppose, that they will not get it from the present Congress; and in this we think that it is right. The reasons why they will not get it are stated with commendable frankness. It is to be hoped that the *Bulletin* and all the petitioning manufacturers, including the carpet-makers, will lay them to heart. Here are a few sample reasons why they will not get free wool at present:

"Any man who goes before that Congress with a demand that it shall in fact repeal the wool duties, must do so in full knowledge that he is asking the majority to break all its promises, to kick the platform to pieces, and to exhibit to the nation a betrayal of public confidence and a violation of sacred trust more shameful, we believe, than any act of treachery recorded in the history of American legislation. Such an appeal is merely a recommendation to the protectionists to put the last nail in the coffin of the Republican party. It demands not only a sacrifice of honor, but of existence. It is an invitation to suicide.

". . . Removal of the wool duties means free yarns and free cloth. It means more: it means that the whole protectionist structure will come rattling down about the ears of the manufacturers of this country; not only of manufacturers of woollens, but of all kinds of commodities. The wool schedule is the keystone of the arch. Take it out, and the entire fabric will tumble into ruin. The free-trader knows that fact well. It is beyond comprehension that a manufacturer of woollens does not perceive it."

The manufacturer of woollens can perhaps see as far into a millstone as anybody. He has needed to have pretty good eyesight to keep going all these years under the burden of a tariff of 55 to 75 per cent. on his raw materials. If he is now asking for the removal of these duties, and is going to fight for the same, he must have made up his mind to take all the risks and all the consequences. The Boston *Journal of Commerce*, a pretty good authority, estimates that about one-third of all the manufacturers have reached the fighting point. As to the carpet-men, probably they have all reached it, although a few are hesitating for political reasons, not liking to separate from their old friends. If the Senate tariff bill of last year, with its schedule of increased wool duties, is passed by the present Congress, not only will the carpet-men take the war-path, but a majority of all the manufacturers of woollen goods will do likewise. Such, at least, was the note sounded in the Whitman-Delano correspondence of October last.

There may be some manufacturers who would rather be ruined and sent to the poor-house than take any step which might bring harm to the Republican party. If there be any such, they are few in number. On the other hand, there are no wool-growers—at all events, none in the Wool-Growers' Association—who are afflicted with such squeamishness. They would kick the tariff to pieces with no more compunction than they would eat their breakfasts, and if the party went to pieces along with the tariff, they would not shed even a crocodile's tear. They have often said this, and there is no doubt whatever that they mean it. They are entirely frank, and as frankness is always praiseworthy, we shall not withhold our approbation. They have been in the tariff ring long enough to know that it is a sheer game of grab, and that the good of the country is

the last thing ever considered—indeed, is the one thing never considered—by the juntos who frame the schedules of duties on this, that, and the other. "Give us our share, we being the judge of what our share is, or the fat goes into the fire," is what they say. Can they make good their threat? They are few in numbers. They do not control directly five hundred votes in Ohio. They lost votes in that State at the recent election. They lost votes in the same State last year. Yet they have the ear of the non-wool-growing farmers, and it may be that although they cannot bring any votes to the Republican party, or even hold all that they have had heretofore, they could turn away a sufficient number to change the complexion of the next Congress.

A tariff is a question of dollars and cents. It has no moral attributes whatever. These belong to freedom only. The right of each man to possess and enjoy his own earnings and to exchange the products of his labor without Governmental interference is presumptively a God-given right. The burden of proof is on the other side. Let the wool-manufacturers, or those who have made up their minds to brave all the consequences of their demand for free wool, lay this fact to heart. If their demand involves the smashing of the protective tariff, as the *Manufacturer* says, it involves nothing but the tardy restoration of rights which ought never to have been denied. Surely no great harm can come from letting each tub stand on its own bottom.

MR. CHANDLER'S DEVICE AGAINST HOME RULE.

"Bill" Chandler has brought forward his Federal election law scheme, and we observe that the Boston *Journal*, and the *Kennebec Journal*, published at Augusta, Me., endorse it as a simple, just, and effective plan for the protection of the ballot, the latter organ saying that it "cannot see why it should not be a popular measure." Let us see. The bill provides that whenever, in any Congressional district, ten voters from each county, or ten voters from each voting precinct where the Congressional district is one county or less, shall make an affidavit that they believe the election will be unfair if held by the State officers, and shall petition the United States Circuit Judge to have the registration of voters and the election conducted by United States officials, the court shall appoint commissioners—one for each party, recommended by the two candidates for Congress—who shall register the voters, and, through the appointment of inspectors and clerks, recommended by them to the court for appointment, shall control the casting and counting of the votes. In other words, if this bill becomes a law, ten "cranks" in each of the four counties of Hancock, Kennebec, Somerset, and Waldo can require the election of Congressman in the Third District of Maine to be taken out of the hands of officials chosen by the people of Maine, and put in the hands of Le Baron B. Colt of Providence, R. I., Circuit Judge for the circuit which includes Maine. In like manner a few men in the northern peninsula of Michigan could transfer the control of the election of the Congressman for that district from the hands of Michigan men to those of the Circuit Judge for that circuit, Howell E. Jackson of Tennessee, a "wicked Democrat" appointed by Cleveland. It may be that such a system as this will be popular with Northern people who have for generations insisted upon controlling their own elections. We shall see when they come to understand the character of the measure.

As for the idea that any such device as this will cure the election evils at the South, it would be a waste of words to argue the point when so good a Republican organ as the Utica *Herald* has thus clearly exposed the futility of the scheme: "An objection to Senator Chandler's bill can be found easily in the provision that ten voters in every voting precinct of a Congressional district must, in order to secure Federal supervision of an election, make affidavit that they do not feel safe in voting under State regulations, or that they apprehend unfair practices. In Southern districts where voting is most dangerous, it would be as unsafe to make the required affidavits as it would to attempt to vote without Federal care. Congress has the right to insist that the ballot for members shall be free and fair, and if it is going to exercise its right, it should not substitute one danger for another." The truth is, that when the editors of the Utica *Herald*, the Kennebec *Journal*, and the Boston *Journal* have studied this subject as thoroughly as the editor of the Milwaukee *Sentinel* has done, they will have to accept the conclusion of that excellent Republican authority that the enactment of any Federal election law "would prove as ineffectual as the Pope's famous bull against the comet." Valuable testimony to the ineffectiveness of such measures is furnished by Joseph W. Henderson, a young colored man from Texas, who delivered an address at Hartford on Thursday evening, and who, in speaking of Kuklux outrages, declared that "the scoundrels down there drove their ponies at night even when Grant's troops were there." As the *Sentinel* has pointed out, the trouble is due to the prejudice of the whites against the rule of the negroes, and that prejudice "will produce its inevitable effects until it is greatly abated"—an abatement which can only come about through the slow processes of time, and which will be hindered, rather than hastened, by any interference on the part of the "Bill" Chandlers.

How strong is the prejudice even among Republicans in a Northern State against allowing the negro any share in the Government is freshly illustrated by a letter in the New York *Age* from H. C. Smith, editor of the Cleveland *Gazette*, an organ of the colored men in Ohio. There are five Fire Commissioners in Cleveland, four of whom are Republicans. The Fire Department has not a single colored member. Six months ago the Commissioners examined about twenty applicants for places in the Department. One of the twenty was a negro, and he secured the highest average of the whole number in both physical and mental examinations. Nevertheless he was not appointed and has not been appointed yet, while the Republican Commissioners keep on appointing white applicants who stood far below him. There are five Police Commissioners, four of whom are Republicans. About three months ago three colored men entered the examination for places in that Department, and passed with a high standing. Not one of them has been appointed, although forty white men who stood lower than the three negroes have since been given places. The only reason for this unjust discrimination in each case was the color of the skin, and Mr. Smith says that "the same kind of treatment has been given us by every city board controlled by Republicans from which we have asked anything." As long as white Republicans at the North thus openly and unlawfully manifest their prejudice against the few blacks in their States, it requires an uncommon amount of audacity for them to talk about forcing upon white Democrats at the South a rule to which they will not themselves submit.

THE SUPREME COURT.

The suggestion of an increase in the number of judges upon the Supreme bench of the United States is one which Congress may follow with the approval of the public. The nation contained less than four millions of people, nearly all of them along the Atlantic coast, when this court was constituted with six members; and eleven will be none too many for the highest judicial tribunal of a country whose population already reaches sixty-five millions, and is distributed across the continent.

There has been one period in our history when the court contained ten members, and the proposed change will make the number but one larger than it stood between 1863 and 1865, when the area of its authority was largely restricted by the civil war. Beginning with a Chief Justice and five associate justices in 1789, the number of associates was increased to six in 1807, to eight in 1837, and to nine in 1863, when Stephen J. Field was appointed by President Lincoln, making, with the Chief Justice, a bench of ten. Although the Republican party was then supreme in the executive and legislative departments of the Federal Government, the majority of the Supreme Court came down from the ante-bellum period of Democratic dominance, for Roger B. Taney, who had been appointed by Jackson in 1836, and for whose long life "Ben" Wade afterwards thought he had prayed perhaps a little too zealously during the closing years of Buchanan's term, still sat as Chief Justice, and beside him were James M. Wayne of Georgia, another appointee of Jackson (in 1835); John Catron of Tennessee, appointed by Van Buren in 1837; Samuel Nelson of New York, appointed by Tyler towards the close of his Administration in 1845; Robert C. Grier of Pennsylvania, commissioned by Polk in 1846; and Nathan Clifford of Maine, Buchanan's contribution to the

court in 1858. Lincoln on his inauguration found two vacancies, through the death, a few months before, of Peter V. Daniel of Virginia and the resignation of John A. Campbell of Alabama on the secession of his State, and a third soon happened from the death of John McLean of Ohio, the earliest of Jackson's appointees, dating from 1829. Noah H. Swayne of Ohio, Samuel F. Miller of Iowa, and David Davis of Illinois had been already appointed by Lincoln when Congress authorized an increase of the number of associate justices, and Mr. Field was named.

The Republicans were unwilling to trust Andrew Johnson with the appointment of any judges to this bench, and so, when Catron died in 1865, the number of associate justices was cut down to eight, and on Wayne's death, two years later, to seven. In 1870 the number of associate justices was raised to eight, but it has never since been carried as high as it was between 1863 and 1865, although the necessity for a bench of at least ten members—or, better, eleven, as is now proposed—has long been far greater than it was a quarter of a century ago.

Happily there is no reason why Democrats and Republicans, North and South, should not regard the proposed increase with composure. There is no longer any great question of constitutional interpretation regarding which there is a Southern and Democratic side, as opposed to a Northern and Republican side. The decisions of the Supreme Court during the past twenty years have settled the question of State rights beyond any possibility of reopening. The annulment of the Civil Rights Act in 1883, on the ground that it was unconstitutional in trenching upon the rights of the States, and the decision of the court in the Virginia debt cases in December, 1887, fully established what Justice Miller has styled "the autonomy of the States and their power to regulate their domestic affairs." Of this latter decision a despatch from Richmond, Va., the evening after it was rendered, said: "The decision of the Supreme Court caused great rejoicing here to-day. It is regarded by all classes as a fixed and final triumph of State sovereignty. Men tossed up their hats and cried, 'Hurrah for Virginia! Hurrah for State rights!'"

In view of such a record, it is a matter of little importance whether a new Justice of the Supreme Court is a Republican from the North or a Democrat from the South. The most important work done by the present Republican members has been their rendering of decisions which fully sustained the arguments advanced in Congress by such Democrats as Mr. Thurman against such unconstitutional measures as the Civil-Rights Act, and Mr. Thurman himself could have taken no stronger ground against that measure than did Justice Bradley, who rendered the decision in that case. To those who were familiar with the loose ideas of Mr. Lamar regarding such questions, as illustrated by his support in the Senate of the scheme to allow the Federal Government to interfere with schools in the States—a scheme certainly opposed to the spirit of the Constitution, and which so high Republican authority as ex-Justice Strong considers repugnant to that instrument—there was something absurd about the protests of Republican organs against his appointment, on the ground that he was "a State-rights man." The decisions rendered by the new Northern Republican appointee, Justice Brewer, on the bench of the Circuit Court, indicate that he is a much better State-rights man than his Southern Democratic colleague. Indeed, it is a curious fact that not only is Mr. Lamar a latitudinarian in such matters of construction, but that Justice Field, then the only Democrat on the bench, took the Federal, as opposed to the State, side in the Virginia controversy.

So long as service in the highest court makes Republican justices from the North render decisions which are hailed in the old capital of the Confederacy as the "triumph of State sovereignty," it is a matter of little consequence to the South, in the large view, whether new justices come from one party or the other; and the equanimity with which that section receives Judge Brewer's appointment shows that it recognizes this truth.

At the same time it would be a graceful thing for President Harrison to give the South further representation upon this bench if he is called upon to make more appointments, as is likely to be the case, not only through additions to the number of judges, but through the early withdrawal on pensions of the three judges who are now far past seventy years of age. Practically Mr. Lamar is the only representative of that whole section, Justice Harlan's residence and associations making him almost as much a Northern man as though he had lived in Cincinnati, instead of Louisville, when appointed. Democratic newspapers in Tennessee have mentioned Republican lawyers in that State who are worthy of this honor, and there may be such lawyers in other Southern States. If there are not Republican lawyers of the first rank in the Gulf States, a broad-minded Democrat might well be named. While it is not of importance, as a matter of principle, whether a new judge of the Supreme Court is a Republican or a Democrat, a resident of the North or of the South, it would conduce somewhat to the popular respect for the tribunal if it were not so one-sided in the political affiliations of its members as it will be when Justice Field's withdrawal leaves only Fuller and Lamar to represent a party which numbers fully half the voters of the country, and Lamar the only Southern man among the nine—or perhaps then eleven—members. There was a statesmanlike passage bearing upon this same question in the message sent by Lincoln to Congress on December 3, 1861, which may well be recalled twenty-eight years later:

"There are three vacancies on the bench of the Supreme Court—two by the decease of Justices Daniel and McLean and one by the resignation of Justice Campbell. I have so far forborne making nominations to fill these vacancies for reasons which I will now state. Two of the outgoing judges resided within the States now overrun by revolt; so that if successors were appointed in the same localities, they could not now serve upon their circuits; and many of the most competent men there probably would not take the personal hazard of accepting to serve, even here, upon the Supreme bench. I have been unwilling to throw all the appointments northward, thus disabling myself from doing justice to the South on the return of peace."

THE MARKET PRICE OF SILVER.

THE *Financial Chronicle* has touched the weak spot in Secretary Windom's silver project by asking the question, "What is the market price of silver?" The market price, it goes on to show, is the price at which a given quantity of silver can be sold on a given day. It is determined by the law of supply and demand. If you increase the quantity to be sold at this particular time, or if you lessen the demand, the market value declines. If you lessen the supply, or if the demand increases, the market value rises. Now, what will happen if the United States Treasury offers to take all the silver in the world at its market value at any time and at all times, and give its notes for the same, and then take the notes at par for all Government dues? In order to increase the market value it will only be necessary for the holders and producers to keep their silver off the market and converge it upon the Treasury. By keeping it off the market they cause the price to advance, because a certain amount will be wanted at all times, for manufacturing purposes if not for currency, and the sale of even the smallest quantity fixes the quotation for the day. Thus, although there is a quotation, there is really no market value in the commercial sense, because the law of supply and demand has ceased to operate. When one buyer offers to take all that can be brought to him at a fixed price, to wit, the price at which, say, 10,000 ounces are sold in London, the essential feature of market price is obliterated, because the essential feature is that if 11,000 ounces were offered in London, the market value would probably be less; if 100,000 ounces, it would certainly be less.

Therefore, issuing Treasury notes at market value is a misleading phrase. It really means issuing them at a fixed price for silver. What will become of the notes when issued? They will go back to the Treasury in payment of taxes. The plan provides that they may be counted as reserves of the national banks, but the banks would not be obliged to receive them. The revenue of the Government would soon consist of these notes exclusively if it should turn out that they were at the smallest discount compared with gold.

This is, in brief, the *Chronicle's* argument, and no flaw can be detected in it. It is all embraced in the idea, or rather axiom, that market value requires free play, and that there is no free play where one buyer agrees to take all offerings at a price momentarily fixed.

That Mr. Windom anticipated this objection, but underrated it, is evident from the following paragraphs in his report:

"It might be suggested that to issue Treasury notes on unlimited deposits of bullion would place the Government at the mercy of combinations organized to arbitrarily put up the price of silver for the purpose of unloading on the Treasury at a fictitious value.

"This danger may be averted by giving the

Secretary of the Treasury discretion to suspend temporarily the receipt of silver and issue of notes in the event of such a combination, and he might be authorized, under proper restrictions, to sell silver, if necessary, retaining the gold proceeds for the redemption of the notes.

"The existence of such authority, even if never exercised, would prevent the formation of any effectual combination of this kind, for the reason that a combination to control the silver product of the world would be very expensive, requiring immense capital, and could not be successfully undertaken in the face of the power lodged with the Secretary to defeat it."

The first answer to this is that a "combination" would not be necessary to bring about the result. What all holders of silver see that it is for their interest to do they will do without first forming a syndicate for the purpose. Each one will see that it is for his interest not to break the market, not to lower the quotation. The combination will form itself without the act of combining.

The remedy proposed is, that the Secretary shall be authorized to stop receiving silver whenever he sees fit, and even to become a seller "under proper restrictions." Another suggestion (not exactly a recommendation) is, that, in order to guard against an excess of deposits, the receipt of bullion might be limited to the production of this country, or of this continent, or of "new bullion." The practical difficulties in the way of enforcing this restriction are such that it may be left out of the reckoning at present. Then we have for our means of avoiding danger a proviso that the Secretary may receive silver or not receive it, just as he pleases, and if he thinks he has received too much at any time, he may sell the overplus. Limiting this power to "the event of a combination" signifies nothing, since it is the Secretary's judgment that determines the existence of the combination. He cannot pause to hear arguments or to take testimony upon this point.

Practically, therefore, the Secretary's plan is that he shall be authorized by Congress to receive silver bullion on deposit for Treasury notes occasionally, and to sell it occasionally, the notes to be receivable for Government dues, and to become part of the national currency if the banks choose to treat them as such. Mr. Windom was very strongly convinced of the danger of allowing the Secretary to expand and contract the currency at will by depositing public money in the banks and withdrawing it again. Upon this point he said:

"It involves the exercise of *a most dangerous power* by the Secretary of the Treasury whereby he may, if so disposed, expand or contract the currency at will and in the interests of certain favorites whom he may select."

But his silver project involves not only the same dangerous power of expanding and contracting the currency at will, but also the power to "rig" the silver market of the world by alternate buying and selling. And the peculiarity of the plan is, that without these discretionary powers the whole project is too dangerous to be thought of and quite inadmissible.

OUR WAY OF REFORM.

One of the puzzles of American politics to foreign observers is the persistent hopefulness or optimism of the public in the presence of a great many most discouraging phenomena. Mr. Bryce confesses that a "hundred times" in the course of his investigations he came across facts which disposed him to think the American experiment a failure, and just as often as he fell into this state of gloom, he lighted on some tendency or movement which showed him that there was everywhere diffused through the community a *vis medicatrix* which made despair seem a blunder.

Any one who wishes to penetrate the secret of this optimism can hardly do better than study the history of the two great parties since 1850. He will there see that the great reforms are nearly all brought about by the pushing of the abuses to an extreme. The process is usually a very simple one. The evil shows itself, is attacked by literary men, professors, theologians, and the like, who are ridiculed or denounced as visionaries or theorists. The smallness of their numbers as revealed at the first election or two excites merriment. The promoters of the evil feel more confident than ever, and are, in view of the feebleness of the opposition, astonished at their own moderation. They determine to have a better time than ever, or, in other words, to do a little more of the thing which the theorists say they ought not to do at all. They accordingly begin a steady and apparently most enjoyable progress towards some sort of extreme which the reformers have been denouncing as peculiarly odious. If it be slavery in which they take their pleasure, they convert it from a necessary evil into an undeniable good, surround it with religious sanctions, and make it an excellent basis for civil society and demand its extension to new fields. If it be a spirit of speculation and of venality in public life which the reformers are deploring, their enemies produce as a candidate for the highest office in the country somebody who openly and more than any one else represents in the public eye the money-making spirit, and pronounce him, as if in mockery, "the greatest living American." If it be the public use of the Government service for party or personal ends which the reformers decry, the theory is unearthed that the spoils system is a valuable American invention, intended to adapt the work of administration to democratic uses; and the work of distributing small places among personal adherents, though really the moral equivalent of embezzlement, is treated as the first and highest duty of the President and his Cabinet. If it be excessive duties on imports that are complained of, the protectionists not only go to work to raise the duties, but to make the collection of them more vexatious, and more complicated, and to increase the difficulty of obtaining redress for administrative blunders or misconduct.

It is actually in this way that the American people now get to the bottom of a question, and are enabled to decide when to take the broom in hand and cleanse the Augean stable. It is, of course, a cumbersome, and tedious, and terribly expensive process. It is not the process by which reforms in government will continue to be effected. It is a process which the growth of education and of better political habits will, no doubt, some day cast aside as slow and inadequate, and indeed somewhat barbarous in its simplicity. But it seems to be the process which at present is best suited to the average intelligence of the voting population.

Anybody who knows nothing about it, and is not aware that it is going on, may, therefore, readily deceive himself as to the political prospect in the United States at any given time. Nowhere in the world has the proverb that "the darkest hour is just before the dawn" been so frequently verified, and nowhere is a change for the better so close at hand as when things seem as bad as bad can be. Nothing, therefore, has done so much for the deliverance of the Government from the influence of that deadliest and most insidious of all powers, the money power, as the nomination of its great representative, Mr. Blaine, for the Presidency by the Republican party. Nothing has done so much to bring the public mind to a proper sense of the gravity of the spoils system as the violation by the party of its promises of reform and the wholesale removals perpetrated by Mr. Clarkson. Nothing has done so much to promote the cause of ballot reform as the lavish use of money made by the manufacturers at the last election, and the apparently triumphant and insolent supremacy of men like Wanamaker and Quay in Republican councils. Nothing has done so much to promote the cause of tariff reform as the attempt of the Senate last year to meet the demand for revision by raising the duties, and the attempt of the Treasury to harass the importers in the interest of the manufacturers, by open disregard of the judgment of the courts on rules of appraisement.

To all outward seeming, these things indicate the complete triumph of the lawless element in our politics, the class which makes the enrichment of the few through the corruption or indifference of the many, the goal of the national striving. But, in reality, they mean that the end is near, and that, as the Pennsylvanian spoilsman said, with a different meaning, "This hog is fit to kill." The danger of such a mode as this of reaching reform is, of course, that some day the enemy may not be as absurd or audacious as the efficient working of the system requires. But this is a very slight danger after all. Providence has never allowed any people to perish or come to grief for want of a reasonable supply of fools and knaves, and we may be sure we shall always have plenty of them in stock until the day comes when we shall depend less on object-lessons and more on the lessons of recorded experience for extrication from our difficulties.

CITY AND FARM IN CONNECTICUT.

The Board of Education of the State of Connecticut has just compiled its annual school census of the children of the State who are of the school age, namely, between four and sixteen years. Its returns give an

opportunity to show how swiftly in New England the decline of the country regions and the simultaneous growth of the cities proceed. The school census of Connecticut is usually made with the utmost care, and can be relied on for general precision. By using its ascertained ratio of 4.44, which the number of children in the State who are of school age bore to the whole population as found in the census year of 1880, we can derive the relative proportions for country and city variation.

In the year 1800 Connecticut had a total population of 251,002, of which 24,131, or only 9.6 per cent., was in the cities. In 1880 her population had risen to 622,700, of which 244,558, or 39.3 per cent., was in the cities. The new school census (1889) shows the number of children of school age in the State to be 159,234, of whom 77,117 are in the cities (or, more strictly speaking, urban towns) of New Haven, Hartford, Bridgeport, Waterbury, Meriden, Norwich, Danbury, New Britain, Middletown, New London, and Rockville (Vernon). Carrying out the ratio of 4.44, the present population of the State becomes 706,992, of which 342,398, or about 48.5 per cent., is in the twelve cities named. Allowing for the fact that the two cities of Danbury and Rockville have been incorporated since 1880, there would still remain about 44.6 per cent. of the population in the cities, which contained 39.3 per cent. in 1880. In the country towns during the nine years past, therefore, the population has fallen 5.3 per cent. of the whole, while in the cities it has risen in the same ratio. This computation gives to the country regions the benefit of the increased population of the many bustling factory towns like Derby, Ansonia, Winchester, and others. If these could be excluded, and only those towns be cited whose industries are exclusively or essentially agricultural, the showing would be very much more striking.

A better test is, perhaps, supplied by a contrast of the four urban counties with the four rural counties of the State. The latter are Windham, Litchfield, Tolland, and Middlesex, containing only the two cities of Middletown and Rockville, which together have a population not exceeding 21,000. Using the same ratio, the population of the two sets of counties this year would be approximately as follows:

Urban Counties.	Population.
New Haven	203,036
Hartford	136,280
New London	73,490
Fairfield	141,488
	554,294
Rural Counties.	
Litchfield	51,410
Windham	43,991
Tolland	23,873
Middlesex	33,424
	152,698

The urban counties now contain, therefore, about 78.5 per cent. of Connecticut's population. In 1880 the four urban counties named contained 467,099, while the rural counties—including their thriving factory towns—contained 155,601. During the nine years the urban counties have thus gained in population 87,195, while the rural counties have lost 2,903. The figures show graphically how steady and swift is the current that sets from the farms in Connecticut and all over New England towards the urban centres.

Some of the results of the impoverishment of the farm towns which the statistics suggest have often been depicted, in the cheapening of lands, the unbalancing of legislative representation, the growth of rural bribery, and other malign consequences. In Connecticut none has been more striking than the fiscal view that the two political parties in country towns take of the position of legislators, and the resulting "rotative habit" of passing the place around and sending untried men to make the laws. How steadily this custom has grown against the old habit of sending the country squires to the Legislature year after year, the subjoined table for the decades since 1780 indicates:

	Whole number of representatives.	Reëlected from previous year.	Per cent. reëlected.
1790	171	109	63.7
1800	189	102	54.0
1810	199	83	41.7
1820	204	53	26.0
1830	208	47	22.6
1840	212	27	12.7
1850	222	27	12.2
1860	236	30	12.7
1870	239	24	10.0
1880	246	23	9.3
1889	249	13	5.2

It would be interesting to find how the development of this rotative custom, which, within certain limits, measures the lowering of legislative *morale*, compares in the other New England States with that of Connecticut. Certainly, it is very marked everywhere, even in the States, like Massachusetts, where the little towns are bunched into districts, and where, consequently, each town thinks another town "hoggish" if it wants to send a member a second time, albeit he may be faithful, able, and honest.

ROBERT BROWNING.

THE death of Browning brings one stage nearer the too plainly approaching end of a literary age which will long be full of curious interest to the student of the moods of the mind of man. Time has linked his name with that of Tennyson, and the conjunction gives to England another of those double stars of genius in which her years are rich, and by which the spirit of an age has a twofold expression. The old opposition, the polarity of mind, by virtue of which the Platonist differs from the Aristotelian, the artist from the thinker, Shakspere from Jonson, shows its efficacy here, too, in the last modern age, and divides the poets and their admirers by innate preferences. It is needful to remember this contrast, though not to insist upon it unduly, in order to approach the work of Browning rightly, to be just to those who idolize him without offence to those who are repelled by him. The analysis of his powers, the charting of his life and work, is not difficult; but the value of his real achievement is more uncertain. Interest centres entirely in his poetry, for his career has been without notable incident, and is told when it is said that he has lived the life of a scholar and man of letters in England and Italy amid the social culture of his time. For the world his career is the succession of books he has put forth, and this is as he would have it; publicity beyond this he did not seek, but refused with violence and acrimony.

In his earliest poem, youthful in its self-portraiture, its literary touch, and its fragmentary plan, the one striking quality is the flow of language. Here was a writer who would never lack for words; fluent, as if inexhaustible, the merely verbal element in "Pauline" shows no struggle with the medium of the poet's art. This gift of facility was, as is usual, first to show itself. In "Paracelsus" the second primary quality of Browning was equally conspicuous—the power of reasoning in verse. These two traits have for a poet as much weakness as strength, and they lie at the source of Browning's defects as a master of poetic art. His facility allowed him to be diffuse in language, and his reasoning habit led him often to be diffuse in matter. In "Sordello" the two produced a monstrosity, both in construction and expression, not to be rivalled in literature. Picturesque detail, intellectual interest, moral meaning, struggle in vain in that tale to make themselves felt and discerned through the tangle of words and the labyrinth of act and reflection. But already in these poems Browning had shown, to himself, if not to the world, that he had come to certain conclusions, to a conception of human life and a decision as to the use of his art in regard to it, which were to give him substantial power. He defined it by his absorption in "Paracelsus" with the broad ideas of infinite power and infinite love, which in his last poem still maintain their place in his system as the highest solvents of experience and speculation; and in "Sordello" he stated the end of art, which he continued to seek, in his maxim that little else is worth study except the "history of a soul." His entire poetic work, broadly speaking, is the illustration of this short sentence. Such prepossessions with the spiritual meaning of life as these poems show made sure the predominance in his work of the higher interests of man; and he won his audience finally by this fact, that he had something to say that was ethical and religious. The development, however, of both the theory and practice of his mind had to be realized in far more definite and striking forms than the earlier poems before the attention of the world could be secured.

It would seem natural that a man with such convictions as Browning acknowledged, should be preëminently an idealist, and that his point of weakness should prove to be the tendency to metaphysical and vague matter not easily putting on poetical form. But he was, in fact, a realist—one who is primarily concerned with things, and uses the method of observation. His sense for actual fact is always keen. In that poem of "Paracelsus," which is a discussion in the air if ever a poem was, it is significant to find him emphasizing the circumstance that he had taken very few liberties with his subject, and bringing books to show evidence of historical fidelity. But, little of the dramatic spirit as there is in "Paracelsus," there was much in Browning when it should come to be released, and it belongs to the dramatist to be interested in the facts of life, the flesh and blood reality, in which he may or may not (according to his greatness) find a soul. Browning was thus a realist, and he chose habitually the objective method of art—but to set forth "the history of a soul." Had he been an idealist, his subject would have been "the history of *the* soul"; his method might or might not have been different. This change of the particle is a slight one, but it involves that polarity of mind which sets Browning opposite to Tennyson. He deals with individuals, takes in imagination their point of view, assumes for the time being their circumstances and emotions; and one who does this in our time, with a preoccupation with the soul in the individual, cannot escape from one overpowering impression, repeated from every side of the modern age—the impression, namely, of the relativity of human life.

This is the lesson which is spread over Browning's pages, with line on line and precept on precept. By it he comes into harmony with the very spirit of the century on its intellectual side, and represents it. The "history of a soul" differs very greatly according to circumstance, native impulses, the needs of life at different stages of growth, the balance of faculties and desires in it, the temperament of its historical period, the access to it of art or music or thought, and in a thousand ways;

and Browning devotes himself oftentimes to the exposition of all this web of circumstance in order that we may see the soul as it was under its conditions, instead of leaping to a conclusion by a hard-and-fast morality based upon the similarity of the soul in all men. The task happily falls in with his fine gift of reasoning, and increases by practice the suppleness and subtlety of this faculty of his. One might say, indeed, without close computation, that the larger part of his entire poetic work is occupied with such reasoning upon psychological cases, in the manner of a lawyer who educes a client's justification from the details of his temptation. Many of the longer poems are only instances of special pleading, and have all the faults that belong to that form of thought. "The Ring and the Book" is such an interminable argument, marvellous for intellectual resource, for skill in dialectics, for plausibility. "Bishop Blougram," "Mr. Sludge," "Prince Hohenstiel-Schwangau," and others, readily occur to mind as being in the same way "apologies"; and in these one feels that, while it is well to know what the prisoner urges on his own behalf, it is the shabby, the cowardly, the criminal, the base, the detestable, that is masking under a too well-woven cloak of words, and that the special pleader is pursuing his game at the risk of a higher honesty than consists in the mere understanding of the mechanism of motive and act. Yet this catholicity, which seems to have for its motto, "Who understands all, forgives all," is a natural consequence in a mind so impressed with the doctrine of the relativity of human life as was Browning's. The tendency of the doctrine is to efface moral judgment and to substitute for it intellectual comprehension; and usually this results in a practical fatalism, acquiesced in if not actively held. Here, too, Browning's mental temperament has another point of contact with the general spirit of the age, and allows him to take up into his genius the humanitarian instinct so powerful in his contemporaries. For the perception of the excuses for men's action in those of low or morbid or deformed development liberalizes the mind, and the finding of the spark of soul in such individuals does mean to the Christian the finding of that immortal part which equalizes all in an equal destiny, however the difference may look between men while the process of life is going on. Browning came very early to this conviction, that in all men, however weak or grossly set this spark may be, it is to be sought for. In this he is consistently philanthropic and democratic, Christian in spirit and practice, comprehensive in tolerance, large in charity, intellectually (but not emotionally) sympathetic. It is perhaps unnecessary to add that his love of righteousness is not so striking a trait.

But what in all this view of life is most original in Browning is something that possibly perplexes even his devoted admirers. Life, he says, no matter what it may be in its accidents of time, or place, or action, is the stuff to make the soul of. In the humblest as the noblest, in *Caliban* as in *Prospero*, the life vouchsafed is the means (adequate, he seems to say, in all cases) of which the soul makes use to grow in. He thus avoids the deadening conclusions to which his doctrine of relativity might lead, by asserting the equal and identical opportunity in all to develop the soul. He unites with this the original theory—at least one that he has made his own—that whatever the soul seeks it should seek with all its might; and, pushing to the extreme, he urges that if a man sin, let him sin to the uttermost of his desire. This is the moral of the typical poem of this class, "The Statue and the Bust," and he means more by this than that the intention, sinning in thought, is equivalent to sinning in act—he means that a man should have his will. No doubt this is directly in accord with the great value he places on strength of character, vitality in life, on resolution, courage, and the braving of consequences. But the ignoring of the immense value of restraint as an element in character is complete; and in the case of many whose choice is slowly and doubtfully made in those younger years when the desire for life in its fulness of experience is strongest, and the wisdom of knowledge of life in its effects is weakest, the advice to obey impulse at all costs, to throw doubt and authority to the winds, and "live my life and have my day," is of dubious utility. Over and over again in Browning's poetry one meets with this insistence on the value of moments of high excitement, of intense living, of full experience of pleasure, even though such moments be of the essence of evil and fruitful in all dark consequences. It is probable that a deep optimism underlies all this; that Browning believed that the soul does not perish in its wrong-doing, but that through this experience, too, as through good, it develops finally its immortal nature, and that, as in his view the life of the soul is in its energy of action, the man must act even evil if he is to grow at all. Optimism, certainly, of the most thorough-going kind this is; but Browning is so consistent an optimist in other parts of his philosophy that this defence may be made for him on a point where the common thought and deepest conviction of the race, in its noblest thinkers and purest artists, are opposed to him, refusing to believe that the doing of evil is to be urged in the interest of true manliness.

The discussion of Browning's attitude towards life in the actual world of men has led away from the direct consideration of the work in which he embodied his convictions. The important portion of it came in middle life, when he obtained mastery of the form of poetic art known as the dramatic monologue. A realist, if he be a poet, must resort to the drama. It was inevitable in Browning's case. Yet the drama, as a form, offered as much unfitness for Browning's genius as it did fitness. The drama requires energy, it is true, and interest in men as individuals; and these Browning had. It also requires concentration, economy of material, and constructive power; and these were difficult to Browning. He did not succeed in his attempts to write drama in its perfect form. He could make fragments of intense power in passion; he could reveal a single character at one critical moment of its career; he could sum up a life history in a long soliloquy; but he could not do more than this and keep the same level of performance. Why he failed is a curious question, and will doubtless be critically debated with a plentiful lack of results. His growth in dramatic faculty, in apprehension of the salient points of character, and grasp in presenting them, in perception of the value of situation, and power to use it to the full, can readily be traced; but there comes a point where the growth stops. Superior as his mature work is to that of his youth in all these qualities, it falls short of that perfect and complex design and that informing life which mark the developed dramatist. In the monologues he deals with incidents in a life, with moods of a personality, with the consciousness which a man has of his own character at the end of his career; but he seizes these singly, and at one moment. His characters do not develop before the eye; he does not catch the soul in the very act; he does not present life so much as the results of life. He frequently works by the method of retrospect—he tells the story, but does not enact it. In all these he displays the governing motive of his art, which is to reveal the soul; but if the soul reveals itself in his verses, it is commonly by confession, not presentation. He has, in fact, that malady of thought which interferes with the dramatist's control of his hand; he is thinking *about* his characters, and only indirectly *in* them, and he is most anxious to convey his reflections upon the psychical phenomenon which he is attending to. In other words, he is, primarily, a moralist; he reasons, and he is fluent in words and fertile in thoughts, and so he loses the object itself, becomes indirect, full of afterthought and parenthesis, and impairs the dramatic effect. These traits may be observed, in different degrees, in many of the poems, even in the best. In the dramas themselves the lack of constructive power is absolute. "Pippa Passes" is only a succession of dramatic fragments artificially bound together, and in the others the lack of body and interdependent life between the parts is patent to all. "In a Balcony," certainly one of his finest wrought poems, is only an incident. He is at his best when his field is most narrow—in such a poem as "The Laboratory."

There is a compensation for these deficiencies of power in that the preference of his mind for a single passion or mood or crisis at its main moment opens to him the plain and unobstructed way to lyrical expression. His dramatic feeling of the passion and the situation supplies an intensity which finds its natural course in lyrical exaltation. It may well be thought, if it were deemed necessary to decide upon the best in Browning's work, that his genius is most nobly manifest in those lyrics and romances which he called dramatic. The scale rises from his argumentative and moralizing verse, however employed, through those monologues which obey the necessity for greater concentration as the dramatic element enters into them, up to those most powerful and direct poems in which the intensity of feeling enforces a lyrical movement and lift; and akin to these last are the songs of love or heroism into which the dramatic element does not enter. Indeed, in our judgment, Browning's lyrical gift was more perfect than his dramatic gift; he knew the secret of a music which has witchery in it independent of what the words may say, and when his hand fell on that chord, he mastered the heart with real poetic charm. It was seldom, however, that this happy moment came to him, ennobling his language and giving wing to his emotion; and, such poems being rare, it remains true that the best of his work is to be sought in those pieces, comprehending more of life, where his dramatic power takes on a lyrical measure. Such work became more infrequent as years went on, and he declined again into that earlier style of wordy ratiocination, of tedious pleading as of a lawsuit, of mere intellectuality as of the old hair-splitting schoolmen, though he retained the strength and definiteness of mind which mere growth had brought to him, and he occasionally produced a poem which was only less good than the best of his middle age. The translations from the Greek with which he employed his age stand in a different class from his original poems, and were a fortunate resort for his vigorous but now feebly creative mind. At the end he still applied himself to the interpretation of individual lives, but in choosing them he was attracted even more uniformly by something exceptional, often grotesque, in them, and hence they are more curious and less instructive than the earlier work of the same kind.

The mass of Browning's writings which has been glanced at as the expression of the reasoning, the dramatic, or the lyrical impulse in his genius has attracted attention as wide as the English language, and it has been intimated that this success has been won in some degree on other than poetic grounds. It is fair to say, in view of the facts, that many who have felt his appeal to them have found a teacher rather than a poet. Two points in which he reflects his age have been mentioned, but there is a third point which has perhaps been more efficacious than his sense of the relativity of human life or his conviction of the worth of every human soul: he adds to these cardinal doctrines a firm and loudly asseverated religious belief. It is the more noteworthy because his reasoning faculty might in his time have led him almost anywhere rather than to the supreme validity of truth arrived at by intuition. This makes his character the more interesting, for the rationalizing mind which submits itself to intuitive faith exactly parallels in Browning the realist with a predominating interest in the soul. There is no true contradiction in this, no inconsistency; but the combination is unusual. It is natural that, in a time of decreasing authority in formal religion, a poet in Browning's position should wield an immense attraction, and owe something, as Carlyle did, to the wish of his audience to be reassured in their religious faith. Browning had begun with that resolution of the universe into infinite power and infinite love of which something has already been said, and he continued to teach that through nature we arrive at the conception of omnipotence, and through the soul at the conception of love, and he apparently finds the act of faith in the belief that infinite power will finally be discerned as the instrument and expression of

infinite love. This is pure optimism; and in accordance with it he preaches his gospel, which is that each soul should grow to its utmost in power and in love, and in the face of difficulties—of mysteries in experience or thought—should repose with entire trust on the doctrine that God has ordered life beneficently, and that we who live should wait with patience, even in the wreck of our own or others' lives, for the disclosure hereafter which shall reconcile to our eyes and hearts the jar with justice and goodness of all that has gone before. This is a system simple enough and complete enough to live by, if it be truly accepted. It is probable, however, that Browning wins less by these doctrines, which are old and commonplace, than by the vigor with which he dogmatizes upon them; the certainty with which he speaks of such high matters; the fervor, and sometimes the eloquence, with which, touching on the deepest and most secret chords of the heart's desire, he strikes out the notes of courage, of hope and vision, and of the foretasted triumph. The energy of his own faith carries others along with it; the manliness of his own soul infects others with its cheer and its delight in the struggle of spiritual life on earth; and all this the more because he is learned in the wisdom of the Rabbis, is conversant with modern life and knowledge in all its range, is gifted with intellectual genius, and yet displays a faith the more robust because it is not cloistered, the more credible because it is not professional.

The character of Browning's genius, his individual traits, the general substance of his thought, do not admit of material misconception. It is when the question is raised upon the permanent value of his work that the opportuuity for wide divergence arises. That there are dreary wastes in it cannot be gainsaid. Much is now unreadable that was excused in a contemporary book; much never was readable at all; and of the remainder how much will the next age in its turn cast aside? Its serious claim to our attention on ethical, religious, or intellectual grounds may be admitted, without pledging the twentieth century, which will have its own special phases of thought, and thinkers to illustrate them. Browning must live, as the other immortals do, by the poetry in him. It is true he has enlarged the field of poetry by annexing the experience that belongs to the artist and the musician, and has made some of his finest and most original poems out of such motives; and his wide knowledge has served him in other ways, though it has stiffened many a page with pedantry and antiquarianism. It is true that there is a grotesque quality in some of his work, but his humor in this kind is really a pretence: no one laughs at it; it arouses only an amazed wonder, like the stone masks of some mediæval church. In all that he derived from learning and scholarship there is the alloy of mortality; in all his moralizing and special pleading and superfine reasoning there enters the chance that the world may lose interest in his treatment of the subject; in all except where he sings from the heart itself or pictures life directly and without comment save of the briefest, there is some opportunity for time to breed decay. The faith he preached was the poetical complement of Carlyle's prose, and proceeded from much the same grounds and by the same steps: believe in God, and act like a man—that was the substance of it. But Carlyle himself already grows old and harsh. The class of mind to which Browning belongs depends on its matter for its life; unless he has transformed it into poetry, time will deal hardly with it.

To come to the question which cannot be honestly set aside, although it is no longer profitable to discuss it, Browning has not cared for that poetic form which bestows perennial charm, or else he was incapable of it. He fails in beauty, in concentration of interest, in economy of language, in selection of the best from the common treasure of experience. In those works where he has been most indifferent, as in the "Red Cotton Nightcap Country," he has been merely whimsical and dull; in those works where the genius he possessed is most felt, as in "Saul," "A Toccata of Galuppi's," "Rabbi Ben Ezra," "The Flight of the Duchess," "The Bishop Orders his Tomb in St. Praxed's Church," "Hervé Riel," "Cavalier Tunes," "Time's Revenges," and many more, he achieves beauty or nobility or fitness of phrase such as only a poet is capable of. It is in these last pieces and their like that his fame lies for the future. It was his lot to be strong as the thinker, the moralist with "the accomplishment of verse," the scholar interested to rebuild the past of experience, the teacher with an explicit dogma to enforce in an intellectual form with examples from life, the anatomist of human passions, instincts, and impulses in all their gamut, the commentator on his own age; he was weak as the artist, and indulged, often unnecessarily and by choice, in the repulsive form—in the awkward, the obscure, the ugly. He belongs with Jonson, with Dryden, with the heirs of the masculine intellect, the men of power not unvisited by grace, but in whom mind is predominant. Upon the work of such poets time hesitates, conscious of their mental greatness, but also of their imperfect art, their heterogeneous matter; at last the good is sifted from that whence worth has departed.

THE BRAZILIAN REVOLUTION.

TIJUCA (Rio de Janeiro), Nov. 22, 1889.

IT cannot be said that the advent of the Republic in Brazil was entirely unlooked for. It was only through the sagacity of old King Dom João VI.—who, on returning from his American colony to his native kingdom, is said to have advised his son, Dom Pedro, whom he left as Regent, to seize the crown himself, else it would fall into other hands or the country would become a republic—that the more popular form of government was not established in Brazil as it was in the emancipated Spanish colonies. But the new Emperor, Dom Pedro I., was so anxious to appear to be in consonance with the ideas prevailng about him that, when he dissolved the first Constitutional Convention of Brazil, he granted it a most liberal constitutional *charta*, abolishing hereditary aristocracy and privileges, creating a strong legislature, and in short assuring the Brazilians all the liberties and immunities of free citizens. Dom Pedro, however, soon began to lean too much to the reactionary Portuguese party, and the restless natives wound up their opposition by obliging him to abdicate in 1831 in favor of the second and last Emperor, of whose recent dethronement the telegraph must already have given you some news, which I now supplement by mail.

Dom Pedro II. was a liberal monarch, and, during his reign of fifty years, not only has democratic government gained ground, but one of the greatest reforms on behalf of human freedom has taken place in his country, owing mainly to his own enlightened and well-directed initiative. In 1834 the provinces were granted their own legislatures, and empowered to attend to nearly all local matters, though in practice all really important matters continued to be controlled by the central power in this capital. In 1871 Brazil declared that all children born thenceforth of slave mothers were free; and finally, in 1888, on May 13, a law was passed extinguishing slavery in Brazil altogether. These two last laws were countersigned by D. Isabel, the Princess Imperial, who, both times, happened to fill her father's place during his absence in Europe.

Now, whether the Emperor and his daughter, seeing the signs of the times, and convinced that the only monarchy possible in America was a most liberal, semi-republican one, promoted these reforms by assuming a virtue that was not theirs by instinct and education, or, as we are obliged to presume, they were really and sincerely liberal, it must have been apparent to them that every step they made towards pure democracy brought the country nearer and nearer to the Republic. Whenever the fictions of constitutional monarchy are destroyed, the republican forms will take their place. Hence, the idea of the Republic, though, till a short time ago, it had not been promulgated by any strong party, ran in the mind of everybody in Brazil. It was the firm, though latent, thought of every Brazilian of education that, if D. Isabel should ascend the throne at all, she would run great risk of being ejected from it at the first opportune crisis. Not only was she not so highly esteemed as her father, but her husband, the French Prince, Count d'Eu (a grandson of Louis Philippe), was by no means popular, though it is generally admitted that he has always behaved correctly, in public as well as in private life. Besides, D. Isabel, by signing the glorious law of complete emancipation, which is one of the greatest honors that any man or woman might aspire to, incurred the unmixed hatred of the slave-owners—and these slave-owners formed the most influential class in Brazil by reason of their social and political position as well as of their wealth.

But in spite of all these causes which led every thinking man to feel the first symptoms of the Republic, its advent last week was a stupendous surprise, both to the Brazilians generally and to the whole world. The old Emperor, infirm, and absent in his summer residence at Petropolis, was getting ready to open the annual session of his new Parliament, which had just been elected. It was thought that he might soon undertake another trip abroad. His ministers appeared strong; they certainly had managed to admit, in a Chamber of 130, only five or six Deputies in opposition. When, therefore, on the clear sky of November 15 the bolt of the Republic fell in Rio de Janeiro, the whole world was amazed at it, for even the Brazilians did not think that the storm would burst before the Emperor's death.

The immediate causes which brought the whirlwind are very plain. For some time the army and navy were—rightly or wrongly, it is for the Brazilian historian to say—rather insubordinate, and altogether disgusted with the civil power, whose concessions to them only seemed to excite in them a stronger yearning for recognition and influence. The Emperor, upon the formation of his last ministry, five months ago, had insisted upon giving the two military seats of the Cabinet to two military men, a general (who now turns out to have betrayed his colleagues) and a rear-admiral. Even then the military people got enraged at the ministerial policy of putting down the military power and bringing it well in subjection. In pursuing that legitimate purpose, the Ministers, indeed, had shown an absolute lack of tact, and irritated needlessly the army, and even persecuted ostentatiously some officers of both arms of the service. And it was when they thought that one of their spites, which led them to order one of the battalions to a distant province, was about to be carried out, and the Government had taken the material steps to force the battalion to march, that their very officers and soldiers gathered in one of the Rio squares, opposite the headquarters of the War Ministry, themselves revolted, held the whole Ministry in prison, in that department, and then, under the guidance of Marshal Deodoro (a brave and ambitious, but otherwise very common, man), and, reinforced by the Republicans and youth of the Brazilian capital, paraded the streets proclaiming the Republic. Even the

police force joined the sedition; nay, the naval battalion itself, which had been landed by the Naval Secretary, and the police force of a neighboring town, all deserted the Government. When the Emperor came down in the afternoon and tried to form a new cabinet, Deodoro had already organized a new, provisional Government. That was on Friday, the 15th. On Saturday the Emperor was held, incommunicable, in the city palace, with all his family; and late at night, or rather early on Sunday, he was leaving Brazil, exiled and deposed. On Monday the new self-made ministers were received at the departments without the least hindrance; the form of government of the vast empire had been changed, and the change had been acknowledged everywhere as legitimate and *de facto*.

But while the Republic in Brazil is due mainly to the sword (and here is one of its weakest points), it must be allowed that the military element alone would have accomplished nothing durable were it not for the aid from the Republicans themselves. These were powerless to establish any government, while the military alone could, at most, force the Emperor to change his ministry, and perhaps send him away to Europe; but neither of them separately could expect to lay the foundation of any firm government which would be recognized throughout the country and inspire the least degree of confidence. The truer patriots regret this birth-mark of a *pronunciamiento* in the Brazilian Republic; but it was unavoidable.

The great mass of the people (I believe I interpret their feelings faithfully) regret that the new Government should not have been established at the Emperor's death. They think it brutal that the poor old man, after half-a-century of honest hard work, should be thus packed off. The dictators, to be sure, provided him handsomely with $2,500,000, and assured him the continuance of his civil list, amounting to about $450,000 a year; but the blow given to his pride must have been as awful as it was rude. The Republicans, however, will say that, having defended a cause which they think vital to the happiness of their country, and an opportunity being open to them to lead that cause to a speedy, bloodless, and in every respect peaceful triumph, it would be absurdly illogical to expect that they should let that opportunity escape for the sake of the personal feelings of one man or one family, whoever they might be. On the other hand, the Brazilians who, in the first two or three days, did not offer any resistance, because they were simply overpowered by the suddenness of the change and by the terror that the military inspired, came at once to the conviction that, inasmuch as the Republic was to come some time or other, it was just as well that it had come, and that it immediately solved, without their aid, the great problem of the future which filled them with so much anxiety.

And yet it must be admitted that anxiety for the Brazilians is but begun. To destroy the Empire without civil war might have been a rather thorny task; but to construct a new government is a matter of almost overwhelming difficulty. To be republican is easy: the problem is, What kind of republic shall be constructed? The country is now virtually under a military dictatorship. The provinces, twenty in number, are now States of the "United States of Brazil," and either a military man or some heretofore entirely unknown Republican presides over each, assuming the new title of "Governor," as in the United States of America. While every class of people in the country is making up its mind to adhere to the Republic, it will take some time before things are settled enough so that the election for the Constituent Congress may be held. In the meantime the Brazilians for the first time in their history are under a dictatorship, though a dictatorship which claims to be a trustee of liberty for and on behalf of the people. The Government, while reserving to themselves all political freedom, and having begun to use it by abolishing the life character of the Senate, by dismissing the Council of State (a consulting body of twenty-four statesmen), and by abolishing the local parliaments—the Government, I say, have promised to respect the present civil, commercial, and criminal laws, as well as all contracts and obligations entered into by the Empire, including the public debt, home and foreign, which was quite important to people abroad, inasmuch as but five weeks before the revolution Brazil issued through the Rothschilds $100,000,000 of 4 per cent. bonds, at 90, with an annual sinking fund of half of one per cent., in order to redeem the 5 per cent. bonds of previous loans.

It is as yet too soon to forecast what will be the leading character of the Constituent Assembly, as people have been taken by surprise, and, indeed, have not any accurate idea of their new responsibility. If the election should be really free and unlike the last one for Deputies, we shall have an Assembly composed of the most conflicting ideas, inasmuch as Brazilians know nothing of what a true republic is. There will be, of course, the very conservative element, that will endeavor all it can to give great power to the President; there will also be the French-radical element that will not bear even the mention of a Senate in the new Magna Charta. It is impossible to say what will come out of it. Had these questions been thoroughly studied already, and could one have foreseen which way the greatest weight of opinion would turn, the new decree of the dictators, granting the franchise to every male citizen enjoying civil rights, twenty-one years of age and knowing how to read and write, would itself change any forecast that it might have been possible to make.

However, if the intention of the promoters of the revolution shall prevail, we shall have a constitution modelled much more after the American fashion than the French, though but little is known here of the first. In the three or four acts of the new Government dealing with these matters, the tendency to imitate the United States is not very successful. For instance, why prescribe in a sweeping manner the right of suffrage, a matter which should be controlled by the future States? We should have preferred to have the decree apply only to the election of the Constituent Assembly, and let that body decide the matter. Then, it is most difficult to apply practically the literary or educational test, as Mr. Bryce says he observed in Massachusetts. In my opinion, it is a mistake of the new Government to legislate any more than is strictly necessary; they should confine themselves to carrying the country in peace up to the inauguration of the definitive Government.

Another mistake has been made—and that perhaps irreparable—in ordering twenty-one stars to be inserted in the new flag (which will be like the old one, with substitution of a blue celestial sphere with twenty-one stars for the imperial arms). We are told that they are typical of the twenty provinces and of the Federal District of the capital. Now, the capital will in all probability continue to be Rio de Janeiro, and if so much prominence, of a quasi-State character, is to be given to Rio, there will be no end of trouble to the Republic. The provinces may not incur danger from militarism, but not so the Federal capital, where, of course, most of the officers will wish to be kept. Then, again, your Boss Shepherd, your Tweed Ring, your Philadelphia Gas Ring, are nothing to compare with the municipality of Rio de Janeiro, though the latter has been somewhat checked by the general Government. What will it be, then, when these twenty-one *vereadores*, with divided responsibility, enjoy the semi-independence that the extra star seems to imply?

Then, again, while the new men have abolished the oath, as prerequisite to taking office, they have ordered a fresh division of the religious parishes. Of course, the Constitutional Convention may upset all this; but it would have been just as well to commence right.

I should like to mention here the opinion of the press about the situation, but I cannot. The *Jornal do Commercio*, the oldest and most influential organ, has said nothing. The *Paix* and the *Diario de Noticias*, whose editors were among the promoters of the revolution and are in the new Ministry, confine themselves to hosannahs of no account. The other important sheet, the *Gazeta de Noticias*, has not said a word about the future Government. The fact is, that people are afraid to pledge themselves to anything. Thus, what the papers are full of is of *adhesões*—that is to say, notices of such and such men having accepted what is really the inevitable. Almost everybody, indeed, adheres to the Republic; for even the greatest and most enthusiastic friends of the Empire and the Emperor are well aware that the Republic has come to stay. In that respect we shall be well off: there is no room here for Legitimists or Orléanists or Bonapartists or Bragantines, except in a platonic and harmless way.

Of course, there are no parties now. What will be the tendency of the new ones to be formed it is difficult to say. Your States were already formed when they entered into the compact of the Confederation, and thence the Republicans and Federalists grew up from the first day on which their representatives met to discuss the nature of that compact—one party pulling inwards, so to say, and the other pushing outwards. But we have no real States here, each with its special development: we have been a highly centralized State, in spite of fine laws on paper. There are three or four provinces where local pride is great, but even they are accustomed to look to Rio de Janeiro for everything. In my opinion, the apple of discord will be offered by the proper division of power between the executive and the legislature. But let us wait and see. J. C. R.

THE FRENCH ÉMIGRÉS AT COBLENTZ.

PARIS, November 28, 1889.

THE history of the French emigration after 1789 has not yet been written. The times are still near us, though a hundred years have elapsed; the passions of 1789 and 1793 are still alive, and France is not yet quite impartial with regard to the actors in her great Revolution. It was said of the émigrés in 1814, at the time of the Restoration, that they had learned nothing and forgotten nothing. We have still much to learn, and much to forgive if not to forget.

M. Alphonse Daudet, the author of so many novels which have been universally read, has a brother named Ernest Daudet, who has devoted himself to the study of history and to journalism. In their childhood the two brothers heard

many stories about the emigration from members of their family, who were strong Royalists. (In the 'Rois en Exil' Alphonse Daudet has painted a royalist type which could only have been taken from nature.) Their great-uncle, an Abbé Reynaud, had emigrated to England; another uncle had gone to Russia; another member of the family had been killed in Nîmes during the Revolution. One of his aunts had conspired in the South. This subject of the emigration drew the attention of Ernest Daudet a few years ago, and he began researches in our archives, especially at the Foreign Office, where the papers of Louis XVIII., brought back in 1814, are kept. The Russian Government generously sent him copies of the papers of the émigrés, the correspondence of Louis XVIII. and the princes of his family with Paul I. and his successor, Alexander, the documents concerning the journeys of Dumouriez to St. Petersburg, the missions of Saint-Priest and D'Avaray; the correspondence of Cossé-Brissac, Viscount Caraman, the agents of the King, etc. Other documents were sent to him from Germany, Denmark, Sweden.

Three volumes of this 'History of the Emigration' have now appeared under these titles: 'The Bourbons and Russia during the French Revolution,' 'The Émigrés and the Second Coalition' (1797–1800), 'Coblentz' (1789–1793). This volume of 'Coblentz,' which is the third, is chronologically the first, and it ought to have appeared before the others. The inedited documents which have been chiefly used for this first episode of the emigration are the papers of Marshal de Castries, of Marquis de Larouzière, of the Duc d'Harcourt, and a copy of the letters of M. de Calonne.

In the month of July, 1789, Count Valentin Esterhazy was commander of Valenciennes. He had made his military career in France, and was a favorite of Queen Marie Antoinette. On the 18th of July he received the Comte d'Artois, the brother of the King; the three Princes of Condé followed in a second carriage—Condé, the head of the family, the Duc de Bourbon, his son, the Duc d'Enghien, his grandson. They were fleeing, with a few friends, before the Revolution. Many others followed. On this first list of the émigrés we find the greatest names of France. "We shall be back in three months," said cheerfully the Comte d'Artois to Esterhazy. They did not believe in the vitality of the Revolution; it was a mere storm, and they took shelter for a while in foreign lands. The two sons of the Comte d'Artois, the Duc d'Angoulême and the Duc de Berry, arrived soon after their father. The Comte d'Artois, after some hesitation, went to Brussels. In the south many French families took refuge in Chambéry and in Nice. All over France, the peasants had begun a sort of agrarian war; they ceased to pay their rents, and burned the châteaux. Taine has insisted upon this point, that the Revolutionary disorders became almost universal, and began spontaneously, in 1789, as soon as the Versailles Assembly had organized itself and had begun its constitutional work.

In October there was a new flood of emigration after the King and Queen had been dragged by force from Versailles to Paris and had virtually become prisoners. As soon as the Emperor of Austria heard of the arrival of the Comte d'Artois in Brussels, he wrote to his sister, the Archduchess, who was Governess of the Low Countries, that he would not tolerate the presence of the French princes in Brussels. The Prince left for Turin, where lived his father-in-law, Victor Amadeus of Savoy. He was allowed to remain there, and was joined by his family, by the Condés, and many courtiers.

What were the projects of the Princes? They wished to form a legion of noblemen and of volunteers, and to reconquer France, as Henri IV. had done. Had not Voltaire said of Henri IV., at the beginning of a famous poem—

"Je chante ce héros qui régna sur la France
Et par droit de conquête et par droit de naissance"?

Had not the great Condé, Turenne, and many others, allied themselves with Spain against Mazarin? The idea of a civil war did not appear monstrous in the eyes of the émigrés: it seemed natural to reconquer, sword in hand, what they considered as their rights. Louis XIV. had treated the English émigrés with the greatest generosity, and had helped them in every way. But the times were changed; the French émigrés counted upon the support of all the kings, but they soon found that all the kings and emperors had interests of their own, that they all desired a diminution of the strength of France; they were only roused to a common resistance after they had all suffered in turn and felt the weight of the Napoleonic despotism.

The kings had an easy excuse for doing as little as possible for the émigrés, as the official language of the French diplomats was completely at variance with their language. As long as Louis XVI. was still nominally King, they were not obliged to believe what the Princes said. They really never knew exactly if the King and the Princes were or were not secretly in unison, in what they differed or in what they agreed. The negotiations of the Comte d'Artois with the various courts were always of the most confused character. The émigrés themselves were divided and quarrelled incessantly; they lived in a cloud of false rumors. Condé seems to have had the clearest ideas; he had an equal antipathy for the republicans and for the monarchists like La-Fayette, Mirabeau, Tollendal, Mounier, of those who tried to preserve the life of the King if they could not preserve his authority. "I will," said he in his manifesto, "notwithstanding the horror which a descendant of Saint Louis must feel in shedding French blood—I will go at the head of the nobility of all nations and followed by all the faithful subjects of the kings, and try to deliver our unfortunate monarch." Upon which Esterhazy said: "I am afraid the Prince of Condé is not as adroit as William Tell: he will strike the head without hitting the apple."

Sybel says that the Queen had little sympathy with the émigrés: she did not believe in them; she did not wish to triumph through their efforts—first, because she did not believe in the possibility of reëstablishing the ancient régime, of which they proclaimed themselves the champions; and, secondly, because their triumph would have been in reality the annihilation of the King. At any rate, she thought that an open alliance with the emigration would put an end to all chance of a monarchical restoration. What she wished was to go with the King to La Vendée, to the South or to the East of France, and to call for the help of the Emperor Leopold, who was the successor of Joseph II. But Leopold remained indifferent; he contented himself with advising his sister to leave Paris. She was a prisoner, surrounded with spies and with enemies. Meanwhile Calonne, in Turin, was becoming the real leader of the emigration. He was trying to form a coalition. Louis XVI. was afraid of his influence and set against him Breteuil, who entered into relations with Fersen, Mercy, and Bouillé. Their plan was a flight of the King and the royal family to Metz. The Comte d'Artois had begun to sign papers with these words: "Considering the captivity of my brother," and to treat directly with the sovereigns. Condé had left Turin in disgust and was organizing a legion in Germany. The National Assembly threatened to send troops into the electorates in order to compel the German Princes, who had possessions in Alsace, to accept its decrees. Condé reviewed, on the plain of Neuwied, three thousand émigrés, who remained in the neighborhood of Worms.

On May 6, 1791, after the death of Mirabeau, Marie Antoinette wrote to Mercy: "You know that my opinion has been, as much as possible, that we could be helped only by time, mildness, public opinion. Now all is changed. Either we must perish or do the only thing that remains for us." She meant flight; she knew that flight was dangerous, perhaps impossible. Her friends worked in vain, and when the royal family went to Varennes it was arrested and brought back to Paris. From that moment the Comte de Provence, the eldest brother of the King, joined the Comte d'Artois; they decided to take no account of the official orders of the prisoner King. They organized together at Coblentz a little army independent of the army of Condé, which remained at Worms.

The Comte d'Artois sent Esterhazy to St. Petersburg, where he was favorably received. At Pillnitz the Emperor of Austria and the King of Prussia made a declaration favorable to the French royalists. Catherine had gone so far as to send two millions to the Princes, but she wrote at the same time that circumstances "did not allow her to enter actively into the affairs of France." She promised, however, "d'être de la partie" in the following spring. Meanwhile the Revolutionary Assembly pronounced punishment of death against all the émigrés (in the Report their number was estimated at 200,000), their wives, their children, "if they are more than ten years old," their debtors if they acquitted their debts. Their property was confiscated.

The military émigrés were at Coblentz, Mayence, Worms; there were many poor artisans and civilians in Soleure and Fribourg in Switzerland. Emigration was for some a fashion, for others a hard necessity. Misery was in waiting for all. A Princess de Vaudemont, born Montmorency, and widow of a Prince of Lorraine, sold books in Hamburg under an assumed name. The memoirs of Gouverneur Morris give many interesting details about the refugees at Hamburg. Chateaubriand, in his 'Mémoires d'Outre-Tombe,' gives the details of his life with the army of Condé, and afterwards in England. The emigration had at first its heroic phase, the period during which Condé and others thought that they could reconquer by force what they had lost. Then came the period of conspiracy, and finally came the period of total annihilation, when the greater number of the émigrés returned to France, and when so many became the courtiers, the officers, the servants of Napoleon and his family.

M. Ernest Daudet, in this volume on Coblentz, speaks only of the heroic period. He has not had at his command the correspondence of Condé and of his officers, which is still unpublished, and will probably remain so for a long time. He deals more with the Comte d'Artois, and enters minutely into the confused details of his vain negotiations with the courts. There are many interesting facts in the history of the relations of the émigrés with the Electors, with the King of Prussia, Francis II., and Brunswick. Condé was finally obliged to dismiss his troops, and many of his soldiers passed into the

Austrian service. The invasion of the Electorates by Custine threw the camp of the émigrés into the greatest confusion; the French Princes had to take refuge first at Liége, then at Hamburg. After the execution of Louis XVI., Monsieur (such was the name given to the Comte de Provence) proclaimed himself Regent of France, and made declarations which were not much noticed at the time in the great confusion created by the war. He proclaimed the young Dauphin, who was still alive and in the prisons of the Convention, King of France; and though he had not a regiment, nor any financial resource, and was respectfully ignored by the potentates of Europe, he announced his determination to stand by his historical rights, and flung, so to speak, the gauntlet before the Revolution.

The events which filled this terrible period give M. Ernest Daudet's book an intrinsic interest, which, unfortunately, has not been enhanced by a brilliant style nor a good classification of facts, nor a clear and dispassionate judgment of men.

Correspondence.

RACE PREJUDICE IN KANSAS.

To the Editor of The Nation:

Sir: In your issue of December 5, commenting on race prejudice, you refer to "the recent election in Lawrence, Kan., at which seven out of eight white Republicans refused to vote for the excellent party candidate for County Clerk, merely because he was a colored man." The colored vote of Lawrence is too large to be offended by any party that aims to elect its candidates, and, in fact, the Republican party has always dealt liberally with the colored man in our local politics. At the recent election no colored man was a candidate for County Clerk or any other office, and consequently the above alleged "knifing" of a colored candidate is fictitious, or should, perhaps, have been attributed to some one of the several other Lawrences in the United States.

POPE AND PRESIDENT.

To the Editor of The Nation:

Sir: Possibly I can supply "Natus" with a reason why, at the recent Catholic University banquet at Washington, the health of the Pope was drunk before that of the President. At the annual dinners of the Society of Sons of St. George at Philadelphia, the toast to the Queen always precedes that to the President. Some years ago I asked one of the managers of the feast why that order was observed, and he explained that, the British sovereign being a foreigner, it was thought to be no more than a fitting exercise of conventional courtesy towards the stranger to salute the foreign before the domestic ruler. Very likely the same consideration prevailed at the Catholic banquet, and I presume it was for a like reason that the foreign guest, Cardinal Taschereau, was placed to the right of the Chairman, and our own fellow-citizen, President Harrison, seated on the left.

Subject to correction by such argument as "Natus" may supply, I confess my belief that both practices to which I have alluded are, or were, right, according to the canons of good behavior in social matters. C. F. B.

Washington, December 13, 1889.

PETRARCH AND VOLTAIRE.

To the Editor of The Nation:

Sir: Your reviewer of Ten Brink's History of English Literature, in his appreciative and able criticism, says, among other things: "Ten Brink's parallel between Petrarch and Voltaire (p. 53) is as bold as it is novel to us, but we are not at all disposed to cavil at it." I hope I shall not seem to be detracting from the honor of the illustrious author, in admiration of whom I would not confess myself second to your reviewer, if I point out that the idea of instituting a parallel between these two geniuses is not original with Ten Brink. Five years ago Prof. Gustav Koerting, a distinguished Romance scholar, published a volume entitled 'Die Anfänge der Renaissancelitteratur in Italien,' on pp. 418–423 of which an extended comparison between the two occurs, accompanied with the suggestion, in a footnote, that some one should undertake a more detailed treatment of the subject. It would not be difficult to discover striking similarities in the estimates formed by these two modern historians of literature. Koerting speaks of certain differences "zwischen dem Begründer der Renaissancecultur und dem Hauptvertreter der sogenannten Aufklärungsperiode"; Ten Brink calls Petrarch "der Prophet des Humanismus, wie jener der Prophet der Humanität und der Aufklärung." Koerting says: "Selbstverherrlichung war für beide das erste und letzte Ziel alles ihres Strebens"; Ten Brink expresses the same thought, which, indeed, is obvious enough, with a difference: "Beide zeigen die Sensibilität und die Eitelkeit in gleichem Masse entwickelt." With respect to the contemporary and posthumous honors showered upon them, Koerting has these words: "Der Eine wie der Andere ist im Leben schon der Apotheose theilhaftig geworden und nach dem Tode Gegenstand begeisterter Verehrung geblieben"; Ten Brink's thought is not dissimilar: "Beiden wird schon in ihrem Leben die höchste Anerkennung zu Theil: eine bis zur Apotheose gehende Verehrung und—das theuerste Ziel ihres Strebens—der Lorbeerkranz." With the latter part of this sentence of Ten Brink's might be compared the following from Koerting: "Beide träumten ehrgeizige Träume von Lorbeerkronen, . . . und beiden wurde oft genug der Traum zur Wirklichkeit."

But I should be sorry to leave the impression that one parallel is a mere echo of the other. They differ greatly in length, Ten Brink's being much more concise. Ten Brink's characterization is more delicate, minute, and extended, while Koerting apparently has the merit of originating the comparison, unless, indeed, he in turn derived the idea from Lowell's essay on Rousseau and the Sentimentalists, in the first volume of 'Among My Books.' Lowell's comparison, it is true, is rather between Petrarch and Rousseau; but there is a suggestive likeness between certain parts of his judgment of Petrarch and the antithetically expressed opinions on p. 422 of Koerting's book. Albert S. Cook.

THE ANGELUS.

To the Editor of The Nation:

Sir: Apropos to your note on the Angelus in the *Nation* of December 5, 1889, permit me to quote the following from Larousse (ed. 1866), vol. i., p. 359:

"On croit que ce fut Louis XI. qui introduisit à Paris l'usage du triple son de l'angelus, dont quelques érudits font remonter la première origine au pape Urbain II. [died 1099]."

I subjoin a bit from Lamartine that seems to me to have suggested Millet's picture:

"C'est *l'angelus* qui tinte et rappelle en tout lieu
Que le matin des jours et le soir sont à Dieu.
A ce pieux appel le laboureur s'arrête.
Il se tourne au clocher—il découvre sa tête,
Joint ses robustes mains d'où tombe l'aiguillon,
Elève un peu son âme au dessus du sillon."

Yours truly,

W. H. Garrison.

Philadelphia, December 6, 1889.

SQUATTER HARDSHIPS.

To the Editor of The Nation:

Sir: While the proper means of diminishing the Treasury surplus has been causing so much trouble in both of the great parties, it has often occurred to me that a portion of this surplus, and a goodly amount at that, might well be applied to a more rapid completion of the various inland surveys. Without mentioning the many and excellent general reasons for completing all our surveys, I will refer to some particular ones that are applicable to the surveys of our frontier agricultural lands. People generally can have no idea how rapidly the good surveyed land has been "taken up" in the West. In Oregon and Washington there are to-day practically no desirable surveyed lands not occupied; and for several years immigrants have been obliged to seek homes in the unsurveyed country if they wished to find really good places.

The necessity of settling on unsurveyed land or holding land by squatter's right involves many injustices and risks to the farmer, which tend to keep any such community in a continuous uproar. This is brought to my mind to-day particularly by the marked article in the *Okanogan Outlook*, which accompanies this letter. To your average reader this article would not be very intelligible, so I will mention a few of the causes of dissatisfaction that all bona-fide squatters are subjected to.

The settler who goes away from the settlements and beyond the survey does so under many privations, and only because he hopes to secure a fertile homestead. When he has selected his claim, he cannot obtain a title to it till after it has been surveyed; and, instead of feeling secure of his possession after a five years' residence, he is obliged to remain there uninterruptedly, year after year, to hold it, by force frequently and never securely, till the survey has been made. I know many instances where a residence of twenty years would go for nothing if the squatter were to absent himself for six months; and, in case of a solitary squatter's dying, there is no adequate way to protect his heirs in their rightful inheritance. Often, and I may say generally, the claim-jumpers, who form a regular class in the wild country, band together to annoy the squatters by themselves squatting on his land until their demands for blackmail are satisfied, or until they are got rid of at the risk of the rightful occupant's life. This is possible, as apparently there is no court that has jurisdiction over unsurveyed lands. Another instance is where prospectors lay claims to land occupied only for farming, by filing one kind or another of mineral claim with the county (or mineral) recorder. No land, unless surveyed and properly filed upon at the Land Office, is secure from such depredation, as the mineral prospector has by law means of overriding the farmer and securing title to land by special survey.

A third and most universal complaint is that land which has been staked out by the squatter and improved, perhaps for years, *never* coincides with the lines of the actual survey; so that half of a squatter's improved claim may

be lost to him for the benefit of the first comer, while the original occupant must complete his acreage by taking land on either side which is often devoid of value. A little thought will enable any one to see many other hardships that are sure to be incurred by the squatter before he has secured his patent from the Government; and I can say from observation and experience that this deplorable condition exists in all unsurveyed lands that are fit for habitation.

To accomplish the necessary surveys would require a large expenditure; but such expenditure would not be simply a means of dissipating our "surplus," as has been objected to so many schemes that have been proposed for the reduction of the surplus. On the contrary, it is a matter of justice, and of necessity, that exists independent of our financial ability to accomplish, and is an undertaking which, if carried out with a care not to survey the useless and barren tracts, would be an unmixed good to the country at large. This work must be done before many years, and, if done now, will cost the Treasury no more than it would if done later; while it would be a paying investment for the intermediate period, as well as an act of justice to the frontier farmer.

To appeal to the practical politician, I might dwell upon the opportunities which such an expenditure would afford for the distribution of patronage and division of spoils. In making such an innuendo I strengthen my position by showing a benefit to accrue to the good and the bad, as, like the sun, it would shine for all.

GUY WARING.

BOSTON, MASS., December 11, 1889.

A NEW VOCATION FOR PEERS OF THE REALM.

TO THE EDITOR OF THE NATION:

SIR: The belted earl having ceased to be the leader of men in battle, and having vacated his position in the House of Lords as a factor in legislation, appears to be seeking new functions in which to distinguish himself. He is now engaged in promoting the investment of English capital in American securities, and has lately taken up the business of making and selling *pills*, *yeast powders*, and *safe medicines*. It is possible that he may not lead more people to mutual slaughter than he did in the olden times; but it is rather an extraordinary fact, a little out of the common course, to find the Earl of Crawford in the position of Chairman of the Board of Directors for "taking over," as they call it in England, the business of making and vending proprietary medicines in this country. He probably goes into this business in order to sustain a position in which he has become more ornamental than useful. Reference may be made to the full-page advertisement of a corporation of limited liability, with a capital of £550,000, which will be found on the last page of the last number of the *Economist* printed in London. How much English capital will come to the United States in compensation for this undertaking, one may not be able to compute, but one may be very sure that most of it, whatever the amount may be, will come to stay.

In olden times they called the man engaged in commerce a *merchant adventurer*. By what title ought the Earl to be greeted who ventures to induce his fellow-countrymen to adventure their capital into an undertaking in which the profit is in ratio to the amount spent on advertising the product rather than on the quality of the ingredients which are put into it? The slang term for an advertisement is an "ad." If we should add an "ad." to the title of him who ventures upon such a scheme, we find that we have fitted the title of *adventurer* upon one who is not a merchant; and the modern significance of this word corresponds to what they call in France a *chevalier d'industrie*—a noble title put to a base service. What other title would suit this case? QUERIST.

TWO FORMS OF THE "AUSTRALIAN" BALLOT.

TO THE EDITOR OF THE NATION:

SIR: All the recent election laws have commonly been called "Australian." I wish to draw attention to the fact that the Ballot Acts, in regard to the arrangement of the names on the ballot, may be divided into two groups.

In the first group are the acts of Massachusetts, Montana, Minnesota, Rhode Island, Wisconsin (the generel election law), Tennessee, and Kentucky. These follow the Australian, English, and Canadian system, in which the names of all candidates nominated for an office are placed together in alphabetical order.

In the second group are the acts of Indiana and Missouri, following the Belgian system, in which the names of the candidates nominated by a party are placed together, arranged respectively under the title of the office for which they have been nominated, Independent candidates being placed in a separate column.

The first system is fair to all. The second is in the interest of strict party voting.

M. WYMAN, JR.

CAMBRIDGE, December 12, 1889.

THE ABANDONED FARMS OF MICHIGAN.

TO THE EDITOR OF THE NATION:

SIR: While attention is directed to the "abandoned farms" of New England, it will be well to put in a bit of concurrent testimony from as far west as Michigan. Our last State census was taken in 1884, and shows that in the four years after 1880 fourteen counties actually lost population. In four other counties a single railroad centre in each county gained in population more than the county—in other words, these four counties would have lost population but for one growing city in each.

The special cause in this case was the attractiveness of Dakota, which was just then filling up rapidly with homesteaders. No future census is likely to tell a similar story. There are no more Dakotas left for homestead entry.

E. W. MILLER.

BIG RAPIDS, MICH., December 10, 1889.

THE REVIVAL OF AGRICULTURE.

TO THE EDITOR OF THE NATION:

SIR: Some time in September, I think, you called attention to the published statements, from the Commissioners of Agriculture for the States of Vermont and New Hampshire, concerning abandoned farms. In the first-named State about 30,000 acres were specified, generally with "fair" or "good" buildings and good soil, at an average price under $5 an acre. The New Hampshire catalogue itemized 233 farms, 26,871 acres, at an *asking* price of $291,875, or an average per acre of $10.86. A very interesting correspondence has followed in your columns, advancing reasons for the decay of farm values in New England, and suggesting remedies. Your journal, during the discussion, has shown editorially and in its correspondence some conspicuous instances of like disease common in Massachusetts. Throughout New England good farms, with comfortable buildings and productive soil, for sale under $10 per acre, are not exceptions in the real-estate market, but the rule, or, at least, common. In this State, New York, from my personal knowledge, in the Hudson River counties of Orange, Dutchess, Ulster, and Rockland—certainly a section of some agricultural renown, and with all facilities to which farming looks for success—the facts are not very much better: a 50 per cent. decline at least in prices during the twenty years of my experience. Indeed, I believe that the average farm here can be bought for $30 per acre. Of course, this is on the agricultural basis only; country places, commanding views, improved grounds, etc., have very different rating. On Orange Lake, a pleasure resort seven miles from Newburgh, a farm of 400 acres was sold within a month at $20 per acre in parcels.

Mr. Joel Benton, writing on "The Decadence of Farming" in the November number of the *Popular Science Monthly*, extends the shrinkage in farm values West to the Mississippi. He reports that in Illinois the mortgage indebtedness of farmers for borrowed money—not on deferred payments of purchase money of their farms—has increased 23 per cent. since 1880; that in the Western States farm mortgages amount to $3,422,000,000, equivalent to a debt of $200 per capita for each person, or $1,000 to each head of a family. So we may go on with testimony, and strengthening the evidence of students with the columns of advertisements in rural papers and from sale reports of foreclosures.

The reasons advanced by the several writers for this widespread and increasing condition of agricultural depression are:

(1.) The competition of machine work on the great, smooth prairie farms (note here, for later consideration, that rich partnerships or incorporated companies are the winning competitors). (2.) The many long lines of transportation, bringing all kinds of agricultural products, each from a specially favored locality, to the great Eastern markets, and so fighting one another for business on their competing extensions that freight for a thousand miles' haul costs no more than what he pays who labors but one hundred miles from the common market. (3.) Direct taxation, whereby the farmer's wholly *visible* estate is mulcted to the extent, actually, of from 2 to 4 per cent. of its *market* value, while the much invisible personalty of his town neighbor escapes. (4.) The tariff, artificially raising the cost of the farmer's necessities—his clothing, food, and tools. (5.) The scarcity of native farm laborers. (6.) That most other fields offer superior inducements to the money-loving, masterful man. (7.) Government bounties of citizenship and almost free lands, and virtually free transportation (by guaranteed bonds to railroads carrying immigrants to the bounty lands) to tramps from Europe—an unnatural and unnational squandering of resources, and the discounting of the inheritance of our children. (8.) The rough topography of the Northeast States, unfavorable to wholesale farming. (9.) The mechanical and uninteresting nature of farm work (as pursued by individual, not associated effort), compared with other industries now tempting the greatest range of tastes and energies by constantly developing novelties.

Such are the principal reasons I read in the authorities cited for the decline of farming. There are as many remedies proposed. But the symptoms are facts, the medicines empiric. The diagnosis made by so many earnest men is instructive and very interesting. I would come into the consultation with some minor observations and suggestions.

(a.) Farming, contrary to the ruling prac-

tice in other businesses, is, in the majority of cases, taken up or inherited without any other capital than that dead in a plant rigorously taxed (see 3 above). "Quick (cash) capital" ("G. B.," page 389 of your No. 1272) is wanting to give momentum, to properly equip, to meet wear, to provide for emergencies, or command improvements as inventions or ever-new markets demand; thus, also, without that æsthetic but essential margin, where business centres in the home, to make the farm attractive even in its business aspect, much less to make its domestic life sweet or comfortable beyond bare necessity. Other businesses providently lay by some art or grace, but this boasts no surplus save nature's alms.

(b.) In farm management there is the absence of well-defined, unremitted, clear business system. The administration and execution which together rule peremptorily in the ordinary town business practice, have but precarious existence, and the money showing (evident as the face of a clock) through all moments of the shopkeeper's, or manufacturer's, or broker's work, is put aside until some urgent call obliges the farmer to learn "the time." Finance is the foundation of business proper. It is but the porch or attic of the farmer's practice.

(c.) The *world* of trade is not studied by the farmer. He knows only the traffic of his market town and his county, and he is slow to "catch on" to the new and progressive. He repeats the accidental lessons of 1861-65, believing that what the exigencies of war-times required, and made profitable to him because of our then national circumscription, is the truth and his policy now. He does not care to hear of tariff reform. "But it is the impending truth—which will some day, and I think very soon, filter into the farmer's mind—that alone can save him."

I think that my (a) above is a principal cause of farm failure. The last half of that finding is an inherent result. In (b), too, are cause and effect almost inseparable. Where so large part of work is executive—bodily labor out of doors—administration and finance can have but small care; (c), also, is, in the very nature of farm life, isolated in comparison with the lot of the city man, where friction on all sides makes sharp and bright the receptive and ratiocinative faculties. The farmer travels the country road worn by heavy, infrequent traffic in certain ruts, out of which he is loath to turn his wheels; but the time comes when he must or be run down.

Our great farming industry—the very soil of national growth—is not going to the "demnition bow-wows." If the tide has long been running out, the time of ebb is near at hand. Organization by a class so widespread and cut off from congregation—as possible by initial masses of city population—is difficult; and diversity of objects—live-stock, wool, cereals, fruits, roots, vegetables, tobacco, etc.—weakens common action. If legislation, national and State, is desirable to *force* a new position—which may well be questioned—the farmers' influence and vote (about 30 per cent. of our population) can secure it by "pooling their issues."

Judge Nott (*Nation*, No. 1273) suggests partial and local relief by stocking large areas of the abandoned farms in Vermont and New Hampshire with "our indigenous animals which can brave the Northern winters, . . . half-bred buffalo, or the deer of the Adirondacks." Held and protected by a ring fence, he believes they would become semi-domesticated, and nearly as prolific as sheep. They would live mostly in the woods, otherwise waste land, and be helped through the winter with scattered stacks of mountain hay. Such husbandry might be profitable. That is a good subprovision. Indeed, deer-raising under similar conduct is now practised in a few instances, though not in New England, but it can only be exceptional—a makeshift. We want to prescribe for the whole body of agriculture.

Let us take it, then, into the line of regular business, as iron, coal, dry goods, shipping, banking, etc.; remove it from desultory practice and individualism, and treat it according to the fashion that the times demand for large affairs. Associated organization by partnerships or corporate companies, with money capital equal at least to the real-estate value, is my theory of cure for the ills of agriculture. On a modern battle-field, what can a thousand badly equipped bushwhackers do in comparison with a company of one hundred well-disciplined and equipped regulars? In the skilled commercial economy of the United States, how awkward and dispersed is the power of agriculture in proportion to its numbers! And why? Because everywhere it lacks concentration, organization, "quick" capital.

Ten (man-)units owning a thousand acres may perhaps work efficiently one hundred, while five men in united management could cultivate five hundred acres. Now, I want the ten hands of the five men and five brains to have but one head executive, and a common purse of ready cash equal in amount to what the five hundred acres, with buildings and tools, would sell for at forced sale. To illustrate in outline what I believe can be done generally in agriculture, and with success, let us suppose a capable syndicate of three to select, say, fifteen hundred of those abandoned acres in Vermont or New Hampshire at, say, $6,000. They should lie in a solid body and comprise about fourteen once separate farms, each having tenantable buildings, "fairly comfortable" and "good soil." It would be very well if five hundred acres stood in woods forty or fifty years old, but it is not probable that such timber has been spared where farms have been worked. Now, the three wise men with money will proceed to spend more than first cost to repair fences and walls, make the buildings tight and comfortable, and put the whole property in fair shape and on equal footing. If well done, it may stand them in at $10,000. Meantime, the three gentlemen, business men and money-makers, but, nevertheless, of benevolent imagination when a little indulgence of such kindly pleasure may not endanger their reputation for success, have agreed to graft an educational branch on their real-estate investment, on a plan which space will not permit me to particularize here, but which looks to the performance of much of their farm labor by young men who would like, on a business basis, to learn the theories as well as the practice of well-ordered farming under conditions of fair social advantages, and of less stolid drudgery than is the rule on the average farm. The inviting business basis is, that every young man matriculated in the School of Agriculture becomes both a laborer on the farm and a stockholder in the company. To capitalize the undertaking is the objective business point of the original syndicate, who exchange their investment for stock in the company, and, the total stock being figured at $———, the balance is put on the market. The president is the business manager and farm superintendent. He and the executive committee of the directors are supposed to be skilled both in agriculture and finance. Besides one resident, technical, general instructor in the academic department, and the president, all other house teaching is by lectures, say three or four for terms of three months each, continuous or dispersed over the year, and paid accordingly, as a lyceum or Young Men's Christian Association hires its lecturers. In this course would be (1) soil culture, cereals, grasses, and drainage; (2) stock-raising and roots; (3) fruits and market gardening; (4) forestry and farm mechanics. These subjects are merely suggested.

All officers, teachers, students, master laborers, and, indeed, all persons connected personally with the farm, are supposed to be stockholders in the company, each to the amount of at least $500. The student's course is three years at, say, $100. Each student must put in two hundred days' labor, eight hours per day, and as assigned at from 50 cents to $1.50, graded according to kind of labor and his ability therein. Students are lodged and boarded in the several farm-houses adapted to such purposes and let to keepers under the farm superintendent's governance, board and lodging being $350 per year. The main house of the company's farm is for lectures and recitations, library, laboratory, society and reading-rooms. The company runs a store, and blacksmith and carpenter shop combined. We may suppose that, with officers, students (50), and other contributing attachés, capital stock might be subscribed to the amount of about $40,000, of which $10,000 would be in the original plant, and perhaps $10,000 more in academic fittings, farm machinery, etc. If the company makes a profit, it will be disbursed up to 5 per cent. in dividends to stockholders, and the surplus go to increased farm investment or to a sinking fund.

Now, in this scheme we have, I think, farm education and practical labor under the organized, concentrated system and discipline of expert business method and object. We have brains, hands, real estate, and "quick" capital sufficient and adjusted to the undertaking. Association will not only supply impetus and means to success, but furnish, by the way, those social and mental bare places of ordinary farm life. No longer may we appositely quote:

> "But Knowledge to their eyes her ample page,
> Rich with the spoils of time, did ne'er unroll;
> Chill Penury repressed their noble rage,
> And froze the genial current of the soul."

For benefit to State and county of such a business coming into any rural dulness with life, example, and money, the charter of incorporation can well afford to exempt the company's personal property—the quick capital to vivify a considerable neighborhood—from taxation.

My illustration is but an unfilled drawing. With or without the academic background, it suggests that we may look to associated capital and the power of organized administration supporting business execution for the practical relief of agriculture, now crippled over a large area of our country. CLARENCE GORDON.

NEWBURGH, N. Y., December 7, 1889.

Notes.

WE learn that the late Gen. F. W. Palfrey had had the fifth volume of his father's 'History of New England' put in type and submitted to friends for correction. From the returns he had perfected the copy for the printer before he left home in October to make his last struggle for life. We may, therefore, expect the volume to be published before very long.

The Historical Society of Pennsylvania will shortly publish the Narrative of the Tory Dr. John Conolly concerning whom we lately

gave some particulars by way of correcting the new 'Dictionary of American Biography.'

A notable work on 'Kentucky Jurisprudence,' by Lewis N. Dembitz of the Louisville bar, is in the press of John P. Morton & Co. Its aim is to dwell on the peculiarities of Kentucky law, and to pass over those points in which it has made no departure from the common course of American law. The practitioner rather than the student has been in the author's view.

Still another biographical series looms up, "American Reformers," edited by Carlos Martyn, D.D., and published by Funk & Wagnalls. It will consist of twelve volumes, the editor leading off with Wendell Phillips, and also reserving to himself William E. Dodge and John B. Gough. Mr. F. B. Sanborn will write the life of Horace Mann; Mr. W. S. Kennedy that of Whittier, etc.

The poems of the late Mrs. Anna Holyoke Howard will be issued in book form in the spring. A sketch of her life and work will meanwhile appear in the December number of the *Young Woman's Magazine* (Brattleboro, Vt.).

The Albany Book Co. announce, to appear next month, 'An Experiment in Marriage,' by Charles J. Bellamy.

A reissue, by Gebbie & Co., Philadelphia, of Thomas Bridges's 'Burlesque Translation of Homer's Iliad,' originally published in 1762, is an event little to be expected; but the gross passages of the original, which were adapted to a very primitive taste, have been modified or starred so that the volume is decent in language. The editor, George A. Smith, has had little difficulty in making the work presentable, and he has reproduced with it the odd comic cuts which accompanied the 1797 edition. The volume retains a place among the curiosities of a classical library, but its humor is of a sort which scarcely appeals to a refined taste.

The same publisher and editor send us a 'Compendium and Concordance of the Complete Works of Shakspere; also, an Index of every Character in the Dramas and where they Appear.' Thirty-seven outline drawings accompany the text. The plan of the volume, which is both handy and useful for ready reference, is to give *seriatim* an account of the sources and plot of each play, such as one might look over hastily to refresh the memory before going to the theatre. This division is followed by a "Concordance of Familiar Gems," more than a hundred pages in length, arranged by catchwords; and an index to the quotations and one also to the characters of Shakspere are added. The style and type of the volume are excellent.

The Spenser Society begins its new series for the twenty-first year with a reprint of the 1622 edition of Drayton's 'Polyolbion,' Part I., of the execution of which it is superfluous to say that no pains are spared to make the volume as excellent typographically as is possible. The publications of this Society for the past twenty years have been of great value to students to whom originals are inaccessible, and have not been without influence on the literary taste of scholars. In adding this great monument of a past literary age to the list, the Society gives proof of the spirit in which the new series will be conducted, and affords matter for congratulation that its labors are not to end.

The author of 'English Idyls' (London: Sampson Low & Co.) is favorably known by the volumes of these writings which have previously been accompanied by photo-etchings, and which, by picture and text, have made a peculiar, original, and artistic view of English rural life, particularly in the Norfolk Broads, very attractive. Here we have text without the pictures, and are sensible only of a strange literary quality, which in some cases suffers from a pastoral blight in the language, but in others is exceedingly direct and fresh. Something of Arcadian distance, nevertheless, hangs over the whole, and makes one suspect even its most truthful realism. The book is entirely out of the ordinary—prose-poetry—and, for the philologist, it imbeds a number of provincial phrases, and for the student of folk-lore a few sailor superstitions, which have an extra-literary interest. Among the rest we notice the belief among old fishermen of the east coast that they turn into gulls when they die, yet they had no objection to killing them. "They hev been dead oncet, they hev been on earth oncet, and we hev got quite enough old men now." The children become kittiwakes, and the women don't come back at all. Several curious matters like this give a kind of salt to the poetic or rustic subject.

A new selection from the 'Letters of Horace Walpole' (G. P. Putnam's Sons), edited by Charles Duke Yonge, with several excellent portraits, in two finely bound and printed library volumes, brings this entertaining but voluminous correspondent within reach of the ordinary reader's leisure. The selection has been made with due regard to the various aspects of the whole body of letters, of which the range is wide, and also with a view to displaying the character of the writer. The political portion is more full than is necessary for an American reader, but not really disproportionate, all things considered. It would have been as well, we think, if the editor had given something more in the way of information with regard to the persons addressed, so that the reader might more easily reconstruct the social environment of the author.

In 'The Second Year of the Lookabout Club,' by Mary E. Bamford (Boston: D. Lothrop Co.), which one might call the club's second annual report, the reputation of the author, as a teacher of sound science and the art of seeing things, is well maintained, and the youthful audience for whom the book is intended will find no lack of interest in the manner or of profit in the matter of Miss Bamford's attractively illustrated volume.

The Washington Life Insurance Company of this city has published elaborate actuarial and medical statistics covering twenty-five years, with an historical sketch. Although, regardless of their conventional reputation, figures will lie, especially when in each other's society, these teach some interesting lessons. We have only space for one of them, the relation of weight to height in consumption. Out of 2,000 deaths, where 353 (or 17.65 per cent.) were from that disease, in 750 cases the weight was above the standard when insured, and of these only 41, or 5.47 per cent., proved consumptive, while of 560 at the standard 100 (or 17.86 per cent.), and of 690 below the standard 212 (or 30.72 per cent.), thus died.

The most tasteful of the not purely decorative calendars that have come to us is the 'Authors' Calendar,' issued by Greenough, Hopkins & Cushing, Boston. The authors who furnish the extracts for the first two leaves are Robert Browning and Martin Farquhar Tupper, both among the dead of the dying year.

Of the illuminated kind of calendars, that called 'The Calendar of the Seasons,' in four leaves, each containing a pleasing water-color design of child-life, by Maud Humphrey, is to be praised (Frederick A. Stokes & Bro.); but dainty ugliness is the only term to apply to the "Sunter Calendar," which comes to us from the same firm. Their 'America' ("My Country, 'tis of Thee") is illustrated with typical American landscape in chromo, and offers some pretty bits, not always in happy juxtaposition. The music of the hymn is appended. Finally, we can mention as above the average, and still from the same source, Maud Humphrey's 'Babes of the Nations,' with pleasing colored plates accompanied by verses by Miss Edith M. Thomas.

The late Philip H. Welch had a genius for producing what we may call bright legends for comic illustration. They were not always thus illustrated, but his untimely death has led his brother humorists with the pencil to prepare a memorial volume of quips, published and unpublished, from his pen, and to contribute appropriate designs (Charles Scribner's Sons). The volume, 'Said in Fun,' thus possesses a double interest, and the royalties on the sales will go to the fund for the benefit of Mr. Welch's widow and children.

From C. Klackner, 5 East Seventeenth Street, New York, we receive a significant engraving on wood, by Miss C. A. Powell, after a fresco, "The Resurrection," by John La Farge, in St. Thomas's Church in this city. Together with the decorative proscenic frame designed by Miss Powell herself, the block measures 10x12 inches. The rendering is full of color, and is very successful in its treatment of the foliage and the half-light, half-gloom of the picture. The edition is limited to 150 copies, printed on Japan paper and signed. We have called the engraving significant not only because of its technical merits, but because the effort to bring the highest products of our American school of wood-engraving into competition with etchings and steel engravings deserves to be noticed and encouraged in every way. Miss Powell was preceded some years ago by Mr. Closson in Boston, with a charming cut of a little girl on a bear-skin rug, and still more lately by Mr. G. Kruell of East Orange, N. J., in two masterly portraits of Darwin, of which we shall speak more particularly hereafter. No one can doubt that these specimens of Bewick's art will be prized increasingly as time goes on, or that they are worthy of a place in any cabinet of engraving.

In the November number of the *Centralblatt für Bibliothekswesen*, C. Haeberlin begins a series of contributions to the knowledge of ancient libraries and methods of book production. The first paper is devoted to a minute and careful study of the pre-Alexandrian editions of Homer. The remaining contents of the number consist of a paper on Belgian libraries, by V. Chauvin, several book reviews, and the usual library notes and news.

The Boston Book Co. has for sale a few copies of the remarkable facsimile of the 'Vestgöta Lagbok' noticed by us a short time since. We ought then to have mentioned the names of the editors of this difficult and highly successful undertaking, namely, Mr. Algernon Börtzell and Harald Wieselgren of the Royal Library of Stockholm.

At the next annual convention of the Modern Language Association of America, to be held at Harvard University on December 26, 27, and 28, President Charles W. Eliot will give an address of welcome to the delegates, and this will be followed by an address by James Russell Lowell, President of the Association. The following are some of the papers of more general interest to be presented at the different sessions: "Independent Literary Judgments" (Prof. Hunt, Princeton); "Russian Animal Folk-lore compared with that of the West" (Prof. Gerber, Earlham College); "The Saga of Walter

of Aquitaine" (Dr. Learned, Johns Hopkins); "Scandinavian Lexicography" (Dr. Dodge, Columbia); "A Forerunner of Bunyan in the Twelfth Century" (Prof. Francke, Harvard); "The Pronunciation of Fredericksburg, Va." (Prof. Primer, Providence); "The Relation of Shakspere to 'The Taming of the Shrew'" (Prof. Tolman, Ripon College); "Use of the Negative by Chaucer" (Prof. Kent, University of Tennessee); "Reading in Modern Language Study" (Prof. Joynes, University of South Carolina); "Requirements in German and French for Admission to College" (Prof. Fay, Tufts College); "Some Elizabethan Verse Critics" (Prof. Schelling, University of Pennsylvania); "A Tyrolese Passion-Play of the Middle Ages" (Prof. Schmidt-Wartenberg, University of Deseret). Prof. A. Melville Bell will preside and deliver an address at a special meeting of the Phonetic Section, when several technical papers will be read.

The American Historical Association will hold its sixth annual meeting on December 28–31, 1889, in Washington. The evening sessions will be in the lecture-room of the Columbian University. The morning sessions will be in the lecture-room of the National Museum, by permission of the Board of Regents of the Smithsonian Institution. The headquarters of the Association will be at the Arlington.

—The Philadelphia *Press* says that, years ago, when Thomas Hughes was in this country, the head of the house of Lippincott showed him over the Philadelphia establishment, the visit coming to an end with this *contretemps*: "'Now, Mr. Hughes, I want to show you one of our greatest publications, "Allibone's Dictionary." It contains some information about every author of any account in England and America. Now let us see, for example, what it says about Mr. Thomas Hughes.' So he turned to H, and, lo! the name of the author of 'Tom Brown's School Days' was not there." As this story is going the rounds of the press, it is likely to bring some undeserved discredit on Mr. Allibone. His Dictionary only professed to include "the first half of the nineteenth century"; and Mr. Hughes's first book, 'Tom Brown's School Days,' belongs to the second half. It was published in 1857, and published anonymously too, so that even if Mr. Allibone had intended to include books issued up to the date of his own issue (1858), he could not be expected to have got in Mr. Hughes's.

—Fifty-eight years ago the first steps were taken in Boston to form a society to promote the immediate abolition of slavery, which was actually launched with the new year (1832) by the concurrence of twelve men, very deficient in this world's goods, and of little or no repute with the respectable classes of society. Three of them were practical printers, and four were editors or publishers of papers. In both these categories belonged Oliver Johnson, who died in Brooklyn on December 10, and was the last survivor of the little group of apostles of the new agitation. The alliance between the then editor of the *Christian Soldier* and the editor of the *Liberator* (both papers saw the light in January, 1831), continued unbroken through the thirty-five years of stern conflict with hostile public sentiment and all the repressive and persecuting force of the Slave Power. When Garrison died, no one more naturally than Mr. Johnson became his biographer and posthumous defender; and the date on which the latter expired was, by a coincidence as pleasing as it was striking, the eighty-fourth anniversary of the birth of the elder abolitionist. Mr. Johnson had another peculiar distinction: he edited in turn nearly all the anti-slavery newspapers, the *Liberator* not excepted, ending with the organ of the American Anti-Slavery Society, the *National A. S. Standard* in this city, where his residence was thus finally fixed. He rendered in this way a very notable service to the cause of emancipation, and was distinguished for his good sense, good temper, and good judgment. He also occasionally took the field as a lecturer. Like most of his colleagues, he served for scanty wages in a spirit of self-sacrifice, and with the greatest fidelity to principle. While temporarily editing the *Liberator*, he was the innocent occasion of the explosion of sectarian jealousy of Garrison which ended in the memorable schism of the abolitionists in 1840, with important consequences for the nascent Liberty party.

— Like Mr. Garrison, Mr. Johnson withdrew from the anti-slavery organization and agitation after the close of the war and the abolition of slavery. He resumed an old connection with the *Tribune*, for whose founder he had a warm friendship; and was also, as a friend of Henry Ward Beecher and Theodore Tilton, associated with them in the editing of the *Independent* and the *Christian Union*. Other journalistic engagements could also be enumerated, and it may be said that from the days of his apprenticeship to his death at the age of eighty, Mr. Johnson was never out of touch with the printing-office. His theological belief passed from the strictest Calvinism to a species of Quakerism, and he became one of the founders of the so-called Progressive Friends at Longwood, Penn., where his remains have been interred. Mr. Johnson was born of Massachusetts parents in Vermont, on December 27, 1809. By his first wife, Mary Ann White, he had no children. His second wife, who survives him, with one daughter, is a daughter of the late Rev. J. S. C. Abbott.

—Although under one cover, the second number of the third volume of the *Journal of Morphology*, September, 1889, really represents two substantial treatises of 100 to 160 pages each, with many plates and figures in the text, the one embryological, the other palæontological, both full of original matter and most creditable to the writers and the editor. W. M. Wheeler's "Embryology of *Blatta Germanica* and *Doryphora decemlineata*" might not be recognized by all as a "study of the development of the cockroach and potato beetle." "Easily obtained at all seasons, of convenient size for dissection, and being but slightly modified descendants of the oldest [known] insects of geological time," the cockroaches have attracted the attention of no less than twenty investigators. The potato-beetle, on the contrary, "has not been studied heretofore from an ontogenetic standpoint; it is surprising that so common an insect, and one whose eggs present such advantages for embryological study, should have been overlooked." Probably thousands of farmers and city householders will not wait to master the somewhat technical details of the present article before wishing that its author might require unlimited numbers of both insects. Yet parts of the paper are not only nearly free from the not yet commonly understood terms of the "new embryology," but both interesting and important—*e. g.*, the description (pp. 299-302) of the remarkable oviposition of *Blatta*, the eggs coming from the right and left ovaries in regular alternation, and crossing to the opposite side of the capsule, and the account (p. 324) of experiments showing that, with this insect, "the force of gravitation has no perceptible effect upon the development of the eggs." The suggestion (p. 338) that two prior observers may have mistaken a minute ridge for a groove, illustrates Goodsir's dictum to students to train their eyes and faculties well upon visible parts before employing the microscope.

— Mr. Wheeler's remark on p. 347, that a certain hypothesis has at least the merit of utilizing the facts near at hand, and that it "might be called a *mechanical* explanation," leads naturally to the consideration of Prof. Cope's richly illustrated discussion of "The Mechanical Causes of the Development of the Hard Parts of the Mammalia." Did space permit, the introductory (historical) sketch might well be quoted entire. Lamarck ascribed some modifications of structure to the motions of the organic being. Spencer specified the effect of flexure in producing segmentation of the vertebral column. Cope, in 1871, insisted on the importance of motion in determining growth, and in 1872 declared that "growth-force must develop extent in the direction of least resistance, and density on the side of greatest resistance." Subsequently the subject has been elaborated in different aspects by the author and by Ryder, whose observations, and those of Harrison Allen, are cordially acknowledged. The keynote of the writer's view is struck in the following words from p. 139: "Thanks to vertebrate palæontology, we are now in possession of the [presumed] phylogeny of most of the lines of mammalian descent. . . . The more my attention has been directed, the more convinced I have become that, in the language of Lamarck, it is the habit that has given rise to the structures of animals, and not the structures which have forced animals to adopt their special habits." This is an important and suggestive aspect of the evolution doctrine, and may commend the doctrine itself to some who have forsaken the idea of direct creative interference, and welcome all evidence of secondary causes. Prof. Cope presents his facts and arguments with his usual force and with perhaps more than usual candor. There are frequent admissions of doubt and difficulty in special cases, *e. g.*, as to the long fifth toe of seals (p. 158), "the mechanical history of the human great toe" (p. 162, although a partial explanation is offered on p. 173), and the characteristics of the human carpus (p. 176). He does not, however, seem to realize the extent of his demand upon the reader's evolutionary faith in assuming that the elongation of the limbs may be due to *either* "impact or longitudinal strain; . . . the one acting by compression in the direction of the length of the bone (walking animals), the other by stretching (climbing forms)." Some doubting Thomas on the side of special creation or of evolution from other than mechanical causes might well object to this, as an example of the *obscurum per obscurius* to which the author objects—in other words, as an ascription of causative value to mere antecedents or even concomitants—*post* [or *cum*] *hoc*, *non ergo propter hoc*—and as an evidence that discussions morphological are not always strictly logical. Actual errors are hardly to be expected from such a writer in such a journal, but on p. 202 it seems to be implied that the muzzle is short, not only in the bull-dog, but also in the other domestic varieties and in the wild Canidæ, all of which are supposed to employ the canine teeth for prehension. The interesting suggestion on p. 203 that the mechanical cause of the peculiar direction of the nasal cavity in whales and porpoises is the constant pressure of a column of water, does not accord with the common belief that the pressure is at most intermittent, and that the material is mainly vaporized

breath with perhaps a slight admixture of water.

—A recent discussion in the Parisian *Intermédiaire* reminds one of the battle between the Big-endians and Little-endians as to which end of an egg should be broken. In his last comedy, "Marquise," Sardou maintains that a gentleman, escorting a lady either from table or from church, should offer her his arm, and always the left arm. The reason he gives is, that a man should keep his right arm at liberty, that if needful he may be able to give a cuff to any person who does not make way for the lady, or for the more peaceable purpose of opening a door which may bar her passage. A writer in *L'Intermédiaire* states this doctrine, but contends that it ignores a distinction, delicate indeed, but which ought by no means to be disregarded. In ordinary cases he admits that the left arm should be offered by an escort, and that for Sardou's reasons. In church, however, and in a salon, he holds that the *right* arm ought to be tendered. In churches and salons there is no danger, and a man ought not by his gestures or attitudes to show himself apprehensive. In a festive hall, accordingly, giving a lady one's left arm argues a suspicious temper, and may be taken as an insult by a supersensitive host. The Big-and-Little-endian feud was compromised by cleaving the egg in the middle. It is not clear that the etiquette of right and left arms can be so easily settled. In treating this matter *L'Intermédiaire* mentions an odd custom now in vogue on the French stage. At the Opéra a man never offers his arm or hand to a queen or princess, but presents to her a doubled fist (*le poing fermé*).

PENNELL ON PEN DRAWING.

Pen Drawing and Pen Draughtsmen, Their Work and their Methods: a Study of the Art To-day with Technical Suggestions. By Joseph Pennell. Macmillan & Co. 1889. Large 4to, pp. xxiv-318.

NOTHING could show more curiously than does this book the advantages and disadvantages of artistic criticism of art; nothing could exhibit more completely the qualities and defects of the artist turned critic. The introduction opens with the statement that "Only the writing on art by one who has technical knowledge of it is of practical value," and, scattered through the pages, there are many contemptuous flings at "a certain class of writers on art" whose "ignorance of the technique of any art is only equalled by their ability to write on it." No doubt the sneer is often justified, yet of many of the artists who make it it would hardly be too much to say that "their knowledge of their subject is only equalled by their inability to write clearly of it." The true critic, who knows his art and can tell what he knows, is a rare bird in the land, and when we have not a Fromentin we must generally choose between the clear exposition of the writer's little knowledge and the confused statement of the artist's learning. No doubt the latter is to be preferred by the student, but no doubt the former will be more appreciated by the public.

From the side of technical knowledge no one could be better equipped for writing of pen drawing than Mr. Pennell. He is himself a pen draughtsman of distinction, and he has made a thorough study of his subject. Assuredly he knows a good drawing when he sees it, and knows why it is good, knows in what the modern progress of the art consists, and how modern pen drawing differs from the ancient; but he does not succeed in making these things plain to his reader. He does not think with precision or write with method, and what he has to tell us must be picked out here and there amidst rambling remarks and endless repetitions.

His first chapter is on "Pen Drawing in the Past," and is intended to show the technical advance of modern pen drawing beyond that of the old masters; but he really gives us no help towards seeing in what the advance consists. He places the old and new drawings side by side, and assures us that the newer is the better; why, we must find out for ourselves. When he comes to his real subject, modern pen drawing, he has found no better method than to write detached notices and criticisms of each artist represented. The artists are roughly divided according to nationality, and that is all. Neither alphabetical, nor chronological, nor any other discoverable order is observed. Mr. Pennell's criticisms are often shrewd, often merely nugatory. They seem to have been written separately and put together afterwards, and he is always saying, "I have already said," when what he has already said may be a hundred pages further on; or, "I have remarked elsewhere," without giving any indication of where "elsewhere" may be. In the notice of Fortuny he gives great and deserved praise to that master as the founder of a new school of draughtsmen, but he makes no explanation of what constituted Fortuny's innovation. (We may say, briefly, that it was the substitution of the *spot* for the line, the using of lines to indicate the masses of shadow, and the suppression, to a great extent, of outline.)

After more than two hundred pages of these notices, we come to chapters on "Architectural Pen Drawing," "Pen Drawing for Book Decoration," "Technical Suggestions," etc.; and here, at last, one hopes to find some clear statement of what is good or bad in methods, of what a draughtsman with the pen should draw, and how he should draw it, of the qualities of things expressible by the pen, of the difference between intelligent and unintelligent use of line. Alas! one finds little more than directions as to what ink and paper to choose, and a recipe for "spatter work"!

Yet Mr. Pennell certainly began to write this book with a view to setting forth a body of doctrine, and, by means of much piecing together of scattered expressions, it is possible to find out what that body of doctrine is. The things Mr. Pennell deemed it worth while to say of pen drawing would seem to be these:

Pen drawing is a distinct art, with its own aims and methods, and should be confused with no other.

It is as worthy of serious treatment by artist and critic as any other form of art.

It has failed of serious consideration by the critics and the public because of the cheapness and universal diffusion of its results.

Its development as a separate art was nearly coincident with and largely dependent upon the invention of the various reproductive processes.

These processes allow more freedom to the artist, and reproduce his original work with less loss than any but the best engraving.

It is wrong to demand that the best engravers shall expend the time and labor necessary to painful reproduction of pen-and-ink work with a result no better than can be secured by a mechanical process in a tenth of the time.

The cheapness of illustration by process has, however, created a demand for it on the part of publishers which has resulted in a vast quantity of pen-and-ink work by men who either have no knowledge of art or no special fitness for pen drawing, and of pen-and-ink drawings of subjects not fitted for treatment by that vehicle.

The resulting monotony and badness of much contemporary illustration tend to increase the public contempt for the art of pen drawing, which the public takes to be a "cheap and nasty" method of illustration, and is a serious danger to the future of that art.

These propositions, which we take to be the fundamental ones of the book, we believe to be altogether true. That pen drawing is an art, and a beautiful art, capable at its best of results as lovely as those of etching or line engraving, though differing from them in quality, no one who has looked at some of the plates in this volume can deny. Neither can one fail to be convinced, by the wonderful variety of style and practice here shown, that the "monotony" of much modern illustration, which is so often complained of (and by this journal as often as by any one) is the result, not of the limitations imposed by "process" upon the individuality of the artist, but of the draughtsman's incompetence or unwise choice of subject matter. The old wood-engravers, when confined to facsimile, habitually "cut the blocks without the slightest feeling for the artist's work," or "when they did follow the original lines it was only because the artist drew expressly for them"; and the limitations imposed by the engraver were vastly greater than those of "process" reproduction, which only requires "a reasonably clean line, good ink, and white paper." The reason why so much modern work is bad is, that there is so much modern work. The number of men with a talent for pen drawing does not greatly vary, while the amount of work done vastly increases. Much of it, therefore, is done by men who are not artists, or are artists with no feeling for line, who are tempted to this method of work by the assurance of fidelity in the published result, or by competent pen draughtsmen who are asked by the publishers for pen drawings of subjects better fitted for treatment in tone. With the improvement of "process" reproduction of tone work, an artist who wishes to see his work published as he produced it will be no longer forced to work with the point, whether or not it is an implement suited to his idiosyncrasy, and meanwhile we may expect the gradual education of the public to understand and to demand good work, and to refuse bad.

It is a pity that the book which Mr. Pennell set out to write has not been written, for, as we have said, no one has a better equipment of technical knowledge for the task, and ample materials for it have been gathered. The book contains 158 drawings which are, for the most part, admirably selected and magnificently reproduced, either by process or photogravure, while some are printed from the wood block. It is to be regretted that the author's modesty has prevented his including any work by himself. One of his fine renderings of Gothic architecture would have been a valuable addition to the chapter on architectural drawing. The publishers have performed their part munificently, and the mechanical workmanship of the volume is nearly perfect. A feature worthy of all praise and of imitation is the exceptionally good list of drawings, with its full information of provenance, date, and manner of reproduction.

THE BEGINNINGS OF LANDSCAPE.

The Earlier English Water-Color Painters. By Cosmo Monkhouse. With fourteen engravings on copper and many other illustra-

tions. London: Seeley & Co.; New York: Macmillan & Co. 1890.

Of many of the artists to whom this volume is devoted most of us know little, and, perhaps, care less. Not only their works but their very names are unknown outside of England. We think it likely that to most students of art, as, we confess, to us, their individuality has been a matter of indifference. The importance of the English water-color school of the end of the last century and the beginning of this is indubitable, for out of it came Constable and modern landscape; but most of us, outside of England, have been content to begin with Constable, and to leave the earlier men, with a few exceptions, to their obscurity.

This indifference Mr. Monkhouse is hardly likely to disturb. The reproductions he gives us are inferior, and may not do justice to the originals; but they certainly confirm one's impression that most of the art of the time was of a singularly mild and drawing-masterly type. These tinted drawings of "Gentlemen's Seats" and absurd "Compositions" are the beginnings of modern landscape painting, but they are about as interesting in themselves as a child's copy-books, and present such a dead level of insipidity that any care to distinguish them one from another is impossible. Nor does the text interest one much more. The qualities of brilliant description, delicate analysis, keenness of vision, strength of characterization, which in that wonderful book, 'L'Art du dix-huitième siècle,' by the brothers Goncourt, make us almost see the things described and appreciate the most subtle and imponderable qualities of evanescent trifles; which, dealing with men of hardly greater importance than these English water-color "draughtsmen" (in a sense, of *less* importance, for they are the men of a decadence, not the forerunners of a revolution), make of each a vivid, living personality—such qualities are conspicuous only by their absence from Mr. Monkhouse's pages. In short, his book is dry, we will not say dull.

One or two amusing glimpses we get of the methods of those days, like this of the teaching of Paul Sandby, "the father of the English school of water-colors": "His practice," we are told, "was to give the students an original drawing of his own to copy, providing them with an etching [*sic*] in outline of the subject. The trees, buildings, etc., were lined very finely, as with a very sharp pen, just as they were in the drawing itself"! An even more eccentric method of teaching, which can hardly have been general even then, is thus described:

"'Cozens [Alexander] dashed out upon several pieces of paper a series of accidental smudges and blots in black, brown, and gray, which, being floated on, he impressed again upon other paper; and, by the exercise of his fertile imagination, and a certain degree of ingenious coaxing, converted into romantic rocks, woods, towers, steeples, cottages, rivers, fields, and waterfalls. Blue and gray blots formed the mountains, clouds, and skies.' An improvement on this plan was to splash the paint first upon the bottoms of earthenware plates instead of paper, and to stamp impressions therefrom on sheets of damp paper. This method of instruction he described in a pamphlet called 'A New Method of Assisting the Invention in Drawing Original Loose Positions in Landscape.'"

The general method of the earlier men is described in a quotation from W. H. Pyne:

"Previous to the practice of Turner and Girtin, drawings were shadowed first entirely through, whatever their component parts—houses, cattle, trees, mountains, foregrounds, middlegrounds, and distances—all with black or gray, and these objects were afterwards stained or tinted, enriched and finished, as is now the custom to color prints."

Of course all the work described and illustrated in the book is not of this desperately primitive sort. John Robert Cozens and Girtin would seem to have been men of some real force and originality, of whom one would like to know more; Bonington will always be interesting for his influence upon Delacroix, if for nothing else; Blake was a man apart, whom, as he had no influence whatever on the course of modern art, we need not discuss here; with such men as De Wint, Copley Fielding, and David Cox one feels that modern landscape painting has fairly begun. Finally, there is Turner, and of him we perhaps know quite enough.

There are two chapters devoted to this singular genius: one, in the middle of the book, dealing with his work up to 1802, the year of Girtin's death and his own election to the Royal Academy; the other, the last chapter of all, dealing with his later work. Mr. Monkhouse's treatment of him is not particularly luminous, though he says some true things. Turner's reputation in England (and, to a certain extent, here also) is colossal, and, in most criticism that one sees, apart from Mr. Hamerton's, the only question seems to be how and for what he is to be lauded. Mr. Henley, in 'A Century of Artists,' informs us that a reaction against the excessive praise of Ruskin and others is now in progress in England, and that, in certain quarters, denunciation of Turner is as wholesale as the praise of him has been; but such denunciation has not, as yet, reached us here. Apparently our author's admiration is, though kept under some restraint, almost as unbounded as that of Mr. Ruskin himself. The illustrations give a better idea of Turner than the text, and for the last two in the book we are duly grateful. They are two drawings of Newcastle-on-Tyne, one made by Girtin, according to Mr. Monkhouse, for Walker's 'Itinerant,' "probably between 1790 and 1800," and the other made by Turner for the 'Rivers of England,' "within a year or two before 1824."

Turner's drawing is evidently founded upon Girtin's. We should judge it highly improbable that he took the pains to go to Newcastle himself. Here was Girtin's drawing to his hand, and it gave him quite material enough for the kind of fantasia he was in the habit of improvising. Everything in Turner's drawing is at least hinted at in Girtin's, but the way in which Girtin's plain record of fact is transformed into a gorgeous Turnerian nightmare (Mr. Monkhouse speaks of its "infernal majesty") is curious in the extreme. "Nightmare" is no exaggeration: Turner's city is like one seen in a troubled dream—luridly magnificent, but rankly impossible in every line. Repose is carefully eliminated, and mass is everywhere subdivided into an endless maze of confusing and benumbing detail; church spires are lifted to a Babel-like elevation; the bridge across the river becomes Cyclopean in its stride; everything is colossal, yet wavering and uncertain, like a city in the clouds at sunset—and, like such a city, one expects to see it dissolve and transform itself before one's eyes.

That this is the work of a strong imagination no one can deny; but whether or not it is that of a great or healthy imagination is a different question. To us the imagination of Turner seems an eminently morbid and—let us risk the word—theatrical one. His conception of art was scenic and spectacular; his mind was operatic. Many of his little vignettes seem like sketches for the scenery of a *féerie*, and he would have been the greatest scene-painter that ever lived. His natural endowment was great, his knowledge of nature profound; but his carelessness of truth was supreme, and his influence, wherever exercised, has been almost unmixedly for evil.

When all is done, one lays down the book, less with the feeling that one has learned to understand Constable in studying the school from which he came, than with an increased wonder that an art so simple and manly, yet so imaginative—an art with such possibilities for the future within it—should have arisen from such a school, and one is more ready than before to "begin with Constable" in one's private history of modern landscape.

Mr. Monkhouse's style, which is never brilliant and seldom precise, is sometimes slovenly in the extreme; and there occur, now and then, sentences which might serve for specimens of "English as she is wrote"; *e. g.*, "They soon formed a real and original school of landscape, and also to feel their strength as a body" (p. 65). The book is handsomely printed on fine paper, but, unless Mr. Monkhouse is even more careless as a writer than we give him the credit of being, the proof-reading has not been impeccable. We give him the benefit of the doubt in the phrase, "one of the best of this class of designer" (p. 20).

MORE HOLIDAY BOOKS.

Cathedrals and Abbeys in Great Britain and Ireland. With descriptive text by Richard Wheatley, D.D. Harper & Bros. Folio.

Flora's Feast: A Masque of Flowers. Penned and Pictured by Walter Crane. Cassell & Co. 1889.

Flowers of Paradise. Music, Verse, Design, and Illustration by Reginald Francis Hallward. Macmillan & Co.

Gondolas and Palaces. Facsimiles of Colored Photographs, etc., etc., accompanied by Selections from the Text by Charles Yriarte. Frederick Stokes & Bro. 1889.

The book which stands at the head of our list contains 272 pages, perhaps half of which are occupied with full-page or double-page illustrations. These are nearly all wood-cuts, and the few exceptions are process prints from pen drawings. Most of the woodcuts are of the old-fashioned sort, in which an attempt is made to give all the details that the scale of the drawing allows, and in which a full system of light and shade is employed. Of course, a very great deal of skill on the part of the artist and wood-engraver alike is required to make such engravings at all satisfactory. They are not, and can hardly be, very charming as works of art, as their inevitable fate is to be monotonous and tame in effect. The generally too strongly emphasized shadows marking the architectural details contrast in an unfortunate fashion with the lighter spaces between, and any attempt to give diversity by attempted effects of shade stealing across one end or the other of the façade, or the top or the base of a tower, is apt to give an appearance of artificiality, without any very special charm. Then there is also the difficulty caused by architectural members too minute to be rightly expressed, and which the engraver can only indicate by meaningless scrolls and zigzags; these are almost certain to offend the eye of one who cares for the building which is represented. So that altogether there are pitfalls in the way of the maker of large general drawings of architecture—pitfalls which only the very able artist can escape. It is obvious that such drawings are chiefly made nowadays by the free use of photographs, either directly from the photograph, and corresponding with it in all respects, as far as the engraver's skill can follow it, or

worked up from photographs in cases where the general group has been drawn by the aid of the camera-lucida or in some other way. In some few cases, the work is very minute and delicate, and the architectural detail very closely followed, even to the sacrifice of any scheme of light and shade. These are certainly the most attractive. The architectural detail itself, or the black lines that represent it, gives variety enough to the design. The perspective lines, so strongly emphasized in all architectural compositions, prevent any sense of flatness; and chiaro-oscuro, in the ordinary sense, is not missed, as it might otherwise be. Thus, we think the little drawing of Salisbury Cathedral on the uppermost corner of the first plate in this book is one of the most valuable pictures which it contains. The view of St. Patrick's Cathedral, Dublin, in its tranquillity and absence of visible effort, is also interesting. The building, being very plain, without much variety in the way of niche or window-tracery, lends itself to the simple treatment adopted, and the picture is one of the pleasantest. Apart from these, and others like them, Mr. Hughson Hawley's large drawings are perhaps the most agreeable in the book.

The text consists of a series of notices of the cathedrals represented in the cuts, and, furthermore, of an introductory essay on the cathedral system. This essay contains the usual amusing attempt to show that English Gothic architecture rivals French on the whole, and excels in at least as many points as it yields to it. It gives us, also, the commonplace statements about the rise and the decline of Gothic architecture, as that the descent from its climax of excellence was "swift and certain," and that St. Paul's is the English "cathedral specimen" of the Renaissance style of architecture, which style is said to be "a revival of the Roman antique in triumphal arches, baths, and other edifices, but not of temple or church construction," and to be furthermore "a blending of different styles, which never acquired popularity with the English people." Such blundering treatment of the subject as is shown here is not universally characteristic, either of this essay or of the separate papers on the different cathedrals; for in dealing with each separate edifice or each separate branch of the subject, good authorities are to be had, and these authorities the author has known how to use. So far as we have examined the accounts of the origin, the first building, the different enlargements and varied fortunes of each cathedral, we have found the text satisfactory. It is not very full, and perhaps too ambitious an attempt is made to include everything in a small compass—history, legend, and tradition, analysis of the architecture, and detailed account of the monuments, etc., contained in each structure. It is, in short, a guide-book in little, and contains too great a variety of theme for adequate treatment of any department. The whole text, however, is a sufficient companion to the large plates, to display which is the primary object of this book; and it certainly may have value for persons not otherwise supplied with books on the church architecture of England.

'Flora's Feast' consists of forty pages of colored illustrations with verses forming a part of the design, the whole lithographed together, and printed in black lines, and in two or three colors for each page. The flowers of the year succeed one another in order. Each ptate is devoted to one or two flowers, and has generally one distich describing them. The designs themselves embody a certain personification of each plant, usually by representing a young maiden, or perhaps what the author would call a nymph, dressed in the petals, the calyx, the leaves, or some other part of the flower in question. Thus page 19 gives us

> "The little lilies of the vale,
> White ladies, delicate and pale,"

and the picture represents two maidens, drawing around themselves as a sort of outer garment a cloak of the large, enveloping green leaves of the plant, while they bend over their heads the flexible stems with their white bells. The idea of personifying the flowers in this way is not very happy. A serious effort has to be made to conceive of the plant as in any way embodied in the girl or young man who is masquerading in its spoils. The line, "The scarlet poppy-head ablaze," is illustrated by a black drum-major and black drummer, each of them in fantastic uniform, as if of the British army in some unknown period of the past, but the hats formed of the spreading blossoms; and, in order to account for the presence of the blossoms, and to give some idea of the whole plant, the drum-major has to carry the stem of the poppy as if it were his staff of office. Nor is this the most far-fetched of the fancies in the book. Perhaps the "white-flowered thorn," represented as a knight in polished armor, with a spiked mace, a crest of radiating points and exaggerated knee and elbow plates with thorny terminations, is the most disagreeable of all. But it remains to be said that the pictures have a great deal of the grace of Mr. Crane's work, and that the book is unusual in character, and, therefore, fitted to be a gratification to those who seek many Christmas gifts. It is printed on one side only of the paper, which is left folded at the edges, as many Japanese books are made, causing the reader inevitably to cut at least one of the sheets that he is not meant to cut, before he discovers the system on which the book is constructed.

'Flowers of Paradise' has its charm, which is partly in the simpler designs, printed in a brilliant red on a pretty, cream-colored paper, and partly in the unusual freedom of gesture in the more ambitious figure subjects. There are unnumbered shortcomings in the drawing, which is nowhere to be praised unreservedly; but in spite of this there is that other and not very common success that the children move and rest, cling to their mother's neck and climb her knees, with a certain reality of movement which is pleasant to see. The verse seems very unsatisfactory and, indeed, meaningless, until it is tried with its music, that fourth production of the author. Then it appears to be as sensible as other "words written for music," and lends itself readily to the simple melodies.

The book on Venice contains four colored prints of views in that city, which are all of them accurate, in their capacity of copies of photographs, but hideous in their violently contrasting hues. Printed with the text there are also small pictures, in the nature of vignettes, of fragments of the architecture of Venice. They are extremely inaccurate in every possible way. The text purports to be selected from the English translatiou of Yriarte's 'Venice,' and is so far of a certain value; but the extracts are brief and detached.

ADAMS'S ADMINISTRATION OF JEFFERSON.—II.

History of the United States of America during the First Administration of Thomas Jefferson. By Henry Adams. 2 vols. Charles Scribner's Sons. 1889.

It is difficult to overestimate the far-reaching effects of the Louisiana purchase on the Government and on the people of the United States. Some of these effects were foreseen at the time, as, for instance, when Livingston wrote that it extricated the United States from further complicity with the wars and intrigues of either France or England; that it enabled our country to take a great stride towards substantial independence in its territorial and in its economical relations; and that consequently it strengthened the bonds of the Union by giving an "increased parity of interests" to the several parts which composed it. The Union which before had been "voluntary" became now, as the late Alexander Johnston has remarked, a "fixed fact" planted in the physical geography of the country. And this tremendous change in our political geography wrought a natural change in the entire temperature of the national mind.

Mr. Adams is keenly alive to this great transformation, but he ascribes it chiefly to the new moods begotten in the heart and life of the nation by the questionable modes of the acquisition, and by the questionable measures which attended the incorporation of Louisiana in our political system. If the United States ever entered on the path which ultimately led (as the Southern States complained on the eve of secession) to "a consolidated democracy" seated in Washington, it entered on that path, he thinks, when it made, virtually, "a new Constitution and a Government of sovereign powers" by annexing Louisiana to the Union in a way admitted by Jefferson to be unconstitutional. Such an experience, he says, was "final" against all attempts to "restrain the Government from doing whatever the majority should think necessary."

There is doubtless a measure of truth in this view, but it must be remembered that to the great mass of the chosen guides of the American people at that time it did not seem so clear that the acquisition was unconstitutional. Why should the scrupulosity on this point of men like Jefferson and John Quincy Adams outweigh the contrary convictions of "strict constructionists" like John Taylor of Caroline and John Breckinridge of Kentucky, or the contrary admissions of Federalists like Gouverneur Morris and John Adams? If the incorporation of Louisiana into our Federal system wrought a change in the temper and constitution of the national mind (and we think it did), the transformation was due to a natural redistribution and recomposition of social elements and forces in the United States—to a slow and natural process of political endosmose, so to speak—and not to any supposed violence done to the Constitution in the forms of the acquisition or in the modes of governing Louisiana as a Territory. When the civil war came, it was seen that the acquisition of Louisiana had wrought, in the highest of all senses, for a "parity of interests" between the North and South, by putting its weights in the scale of Freedom as well as of Union. It seems to Mr. Adams that, at bottom, the doctrines of both the Federalists and Republicans in the matter of Louisiana's annexation "were fatal to the old status of the Union." "The Federalist theory," he says, "was one of empire, the Republican was one of assimilation." The difference was characteristic of the respective parties, and since the "old status" had to die, according to Mr. Adams, let us at least rejoice that the pall was borne by men who believed in the popular rather than in the imperial traditions of civil government.

Mr. Adams dispenses his justice to both the Federalist and the Republican party with an equal hand. He delights not in either. But we could wish that he had laid a little more emphasis on that remarkable debate in which the Federalist leaders sought, at the first "crisis" of the Louisiana question, to impale Jef-

ferson on the "horns of a political dilemma," as Mr. Adams justly describes it. We refer to the debate which arose in Congress when official notice had to be taken of the French occupation at New Orleans. That debate should not have been dismissed with a single brief sentence. The statement that "Ross of Pennsylvania, White of Delaware, and Gouverneur Morris of New York, assailed the Administration for the feebleness of its measures" in prospect of the French domination of Louisiana, hardly measures the gravity of the Federalist attitude. These Senators urged, with shrill vociferation of speech, the immediate military seizure of the territory in question, without waiting for the slow processes of a peaceful diplomacy. They sought to put Jefferson "in a hole," to use the slang locution of our modern politics. "Plant yourselves on the river, fortify the banks, invite those who have an interest at stake to defend it, do justice to yourselves, . . . and leave the event to Him who controls the fate of nations," exclaimed Ross. Jonathan Mason of Massachusetts (whose name is overlooked by Mr. Adams) welcomed aggressive measures because, if war came, we should have the navy of Great Britain on our side, and because necessity would combine with "wisest policy" to unite us with that country. Gouverneur Morris thought the Administration ought to have taken possession of New Orleans the instant Spain had violated our treaty rights by withdrawing "the right of deposit" secured to the Western States. Never was the political dice-box rattled more recklessly or ominously than by the Federalist leaders who played for high stakes in this huge game of politics.

The Republican leaders saw plainly enough the partisan motive of this fierce onset. It was hoped to array the Western States against the Administration, at the risk of provoking a foreign war. Yet they calmly met the onset by quoting Vattel and Burlamaqui against the "barbarism" of beginning war without first trying to preserve peace. Instead of Ross's resolutions, which proposed to call the militia of the Southern and Western States into active service at once, to the number of 50,000, the Jefferson majority in the Senate voted to raise 80,000 troops, to be summoned proportionately from all the States, whenever the President should judge it expedient. No sooner had this measure passed than Senator Hillhouse of Connecticut rose to express the hope that, in framing a bill for this purpose, the committee would limit by a geographical line the portion of the militia to be called out—adding significantly, that "he did not care whether the line should be the Potomac or the North River"! That remark had a grating sound as it fell on the ears of the Senate, and a Southern Senator, Robert Wright of Maryland, felt moved to say that liberal professions of zeal for the Western people were not worth much when they came from Senators who thought their militia "too well officered and disciplined" to move so far—for this was the strange reason given by Hillhouse for the wish he expressed.

This ill-omened observation of the distinguished Senator from Connecticut—an *obiter dictum* made early in the year 1803—naturally leads us to the interesting chapter in which Mr. Adams discusses the "conspiracy" framed by certain Federalist leaders in 1804 for a dissolution of the Union. There is perhaps nothing in this chapter that will be absolutely new to readers familiar with the literature of the topic, especially with the author's "New England Federalism," the Life of Plumer, and Lodge's Life of Cabot. But the evidence on the subject is here brought within a compact compass. It could have been enlarged and corroborated by much evidence drawn from other quarters—particularly from the newspapers of the time, as we shall briefly show.

It has been common to suppose that the "conspiracy" was confined to a secret cabal of New England Senators and members of the House of Representatives in Washington at that date. Mr. Cabot Lodge says that the plan of separation from the South "emanated entirely" from them. But reasons for a separation from the South had been propounded in New England long before the year 1804. As early as 1796 a disunion propaganda was set on foot in Connecticut. A series of most remarkable essays, signed "Pelham" and "Gustavus," was published in the Hartford *Courant* from 1796 to 1798, for the avowed purpose of convincing the New England States that they could save society and Christianity from impending destruction only by an early secession from the slaveholding States and from the Jeffersonian Democracy. The Hartford poets of the "Echo" and the "Spring-House" joined ready chorus with these prose manifestoes. Mr. Adams is entirely correct when he says that in the year 1800 the sense of nationality was less active in Connecticut than it had been ten or twenty or even thirty years before. New England clericalism and New England culture were alike hostile, at that date, to "democracy," and in this way the "best" elements of society became dangerous to the safety of the Union. As the democratic tide rose higher and higher, men of light and leading among the New England Federalists were more and more inclined to favor "the policy of at least saving New England," and differed from their representatives in Washington only as to questions of times and modes for initiating wise proceedings to that end.

Not that all these men joined the "conspiracy" of 1804. Very far from it. But they all felt that something must be done to save the New England civilization, because it was in peril and because it was worth saving. It is not to be supposed that the "conspirators" addressed themselves to their task with gayety of heart. On the contrary, Mr. Adams well expresses the exact truth when he says that it was "despair"—despair of otherwise saving the social, moral, and religious order—which drove the foremost of these leaders into a privy conspiracy. As it was a part of the plot that the State of New York should be the centre of the confederacy, Timothy Pickering and Roger Griswold were commissioned to sound Aaron Burr in order to bring that crafty politician into the secret. The defeat of Burr's candidature at the election for Governor of the State of New York in 1804 exploded the ill-assorted combination. But that the reader may see what was "in the air" at Boston before the explosion came, we here reproduce a few of the "set toasts" offered at a great Federalist banquet given at Concert Hall in that city on the 24th of April, 1804 (only a day before the New York election), in honor of Christopher Gore. The toasts ran as follows: "The Virginia Dominion: May it be limited by the Constitution or —by the Delaware." "May those who cause the dismemberment of the American Empire be alone subjected to its evils." Among "volunteer toasts," the following may be cited: "The Federal virtues are obliged to swarm from the seat of government: May they find a hive in the North." Or take the following "volunteer toast" in honor of Aaron Burr: "Aaron's rod: May it blossom in New York, and may Federalists be still and applaud while the great serpent swallows the less."

Readers of their Bibles who remember how Moses, at the brink of the Red Sea, commanded the Children of Israel to "stand still and see the salvation of the Lord," and how the rod of Aaron, when cast in the presence of Pharaoh, swallowed up all the serpent rods of the Egyptian magicians, will perceive that the Federalist chieftains present at that Boston banquet (there were a hundred and eighty of them—Harrison Gray Otis, General Lincoln, *et al.*) were wistfully looking to the "Mephistopheles of New York politics" as the anointed Moses or Aaron who should lead them out of the house of Virginian bondage. But the volunteer symposiarch had strangely forgot that the rod which blossomed in the Biblical story was not the same with the rod that swallowed serpents. Its bitter almonds were designed to be a testimony against rebellion; and though the rod of the New York Aaron never blossomed, it bore the bitterest fruits for the good and wise men who brandished it in the face of Jefferson. The news of Burr's overthrow in the New York election came, as we have said, only a few days later to dash all their plans and hopes to the ground. And a few months later all these plans and hopes were swept away by a new tide of emotions. The cabal was buried in the grave of Hamilton. He had set his face like a flint against the "conspiracy," and fell a victim to it in falling a victim to the balked ambition of Burr. So dense a cloud of obscurity soon closed over the "conspiracy" that, in the end, its very existence was evaporated into a myth, till John Quincy Adams came to show that the story had a solid nucleus of fact. But it never had any body in the heart of New England's "common people."

We have lingered so long on these great themes of Mr. Adams's history that we have left ourselves no room for comment on other important chapters in this work—the judiciary debate of 1802; the diplomatic tangle resulting from the claim to West Florida under the Louisiana Treaty; the Yazoo Claims; the impeachment trials of John Pickering and Samuel Chase; the dispute with Tripoli, fastening a war on the Administration which proclaimed that "peace was its passion"; the *sequelæ* of the Louisiana negotiation as it affected our relations with Spain; the "cordiality" with England, ending in the dinner-table "mortifications" of Anthony Merry; and, lastly, the hostile conspiracy formed around Jefferson (with small damage to his popularity) by New England Federalists, Louisiana creoles, and scheming adventurers under the supposed inspiration of Burr.

We observe that Mr. Adams sinks the famous (or infamous) "Resolutions of '98" under a flood of hostile criticism. We shall not undertake to pull up their drowned honor by the locks. *Non nostrum*, etc. But it may be questioned whether Jefferson should be historically responsible for the draft of the Kentucky Resolutions found among his private papers, and the existence of which was not known till the year 1832. It was thought such a hardship that Edward Peacham, in the times of James I. of England, should be convicted of treason because of "divers treasonable passages" in a sermon he had never preached, that the British judges refused to see him hanged for them. It was thought so hard and so criminal that Algernon Sidney should have been condemned and executed for "polemical writings" found among his papers that the Parliament of a later day rehabilitated his memory by a solemn act. Readers of Mme. de Sévigné's charming letters will remember the tears she sheds over Fouquet, who, in the time of Louis XIV., was condemned because of certain "re-

corded thoughts" which he said he had jotted down as they came to him in the wars of the Fronde, but which he had never published or acted on in his conduct of affairs. Mr. Adams, however, thinks it no more than strictly just to hold Jefferson to an historical responsibility for the suppressed paper, on the theory that it represented the real logic of his ideas, whatever abatements he may have made, in practice, for purely prudential reasons. But this theory assumes the whole question in dispute as to the real significance of the resolutions. So thoroughly is Mr. Adams persuaded that the intent of both the Kentucky and the Virginia "resolutions of '98" was revolutionary, that he will not allow any credit to the Virginia Legislature for "softening" its series, by striking out the word "void" in its application to the Alien and Sedition Laws —and that, too, though the word "void" was struck out to negative the very implication which Mr. Adams sees in the manifesto. He says that though the Legislatures of both the States "softened" the language of their resolutions, it none the less remains to be said that in declaring certain laws of Congress "unconstitutional," it was "with the additional understanding that whatever was unconstitutional was void." Of course, if words struck out of these resolutions, and words never known to exist until more than thirty years after their adoption, are to be read just the same between their lines, then there is no hope of saving these ill-famed documents. We decline to hold a brief for the defence of the miscreant declarations, but is it necessary to put them on the rack before they are handed over to the executioners?

We could wish that Mr. Adams, in casually referring to the fact that Jefferson removed Edward Livingston from office "for failing to account for thirty thousand dollars due to the United States Treasury," had bethought him to add that the defalcation arose from Livingston's misplaced confidence in a subordinate officer, and that the debt, with all the accrued interest, was fully discharged in the end. It would have seemed well to mention this fact even if Mr. Adams expects to do full justice to Livingston when he comes to treat on the famous "Batture controversy" which afterwards arose between that jurist and Mr. Jefferson.

It remains for us to say that the narrative style of Mr. Adams is vigorous in its grasp of materials, dignified in its tone, and correct in point of literary form. With the exception perhaps of an occasional slip in the use of the "nominative independent," this correctness of form is almost absolute, and such accuracy of style is in itself a guarantee for the truthfulness he has sought to bring to the substance of his narrative; for if the two are not identical, they are always close of kin. The proof-reading, too, has been careful, but on page 84 in the first volume there is an obvious misprint in the date of one of Cabot's letters, as cited in the text. It should be 1804, instead of 1840.

The Letters of the Duke of Wellington to Miss J. 1834-1851. Edited, with extracts from the Diary of the latter, by Christine Terhune Herrick. Dodd, Mead & Co. 1889.

THE singular episode in the last years of the Duke of Wellington which is revealed by these letters and accompanying papers, does not require any attention from the public. Miss J. was a young lady of good family who, after converting a murderer and restoring him to heaven from the gallows, became possessed of the idea that God, who she believed directed every trivial action of her life, intended her to convert the Duke. She was not aware at the time that he was the conqueror of Napoleon, but knew him only as a public man. She sent letters to him, and he, having the courteous habit of replying personally to all letters, acknowledged their receipt. What led him to call upon her, passes our surmise; but he did call, and was duly sermonized from the open Bible, to which his only reply was a declaration of love. Such is Miss J.'s account. He was then sixty-five years old and she twenty. The conduct of the Duke made Miss J. believe that God meant to glorify himself by making her the Duchess. She had fallen in love with the Duke. But, as the letters go on, it occurred to her that the Duke's intention had been misunderstood, and she wrote an indignant and most scornful letter, to which he replied by a formally worded note of apology. He afterwards pointed out to her that he could not make himself ridiculous by marrying her. The correspondence, far from stopping, continued for seventeen years, with an interval of four years. It is entirely tedious, except for the unconscious humor which occasionally results from the contact of two such persons. Miss J. indulged to the end her delusion that the Duke would at last be converted and marry her. She addresses him in affectionate terms, but at the same time loads him with complaints and with contempt for his worldly dignities. His signing his notes "W." and using a plain seal throw her into a fury of indignation; he then retreats to using the third person with all his titles, but this is more unsatisfactory; she rebukes him for burning her letters, thinking that it "was a sin in the sight of God to destroy epistles intended for his everlasting good"; she sends him letters for the Queen, warning her against the folly of confiding too much in her unregenerate counsellor, and asks him to deliver them, but he refuses. He, on his side, usually confines himself to acknowledging receipt of letters, or to interest in her health, or to information concerning his movements from place to place; time and again he suggests that she write no more, and more than once he, after some ridiculous complaint she makes of his conduct, refuses to write again, but to no purpose.

Her letters were frequent and long—one is mentioned of nineteen sides of paper; if they are not acknowledged, she sends copies of the previous ones with a new one; she, in the last resort, "defies" him in her Diary. He, however, did not often call after the first years. One day, after one of these calls, he was reproached for "brushing up his chair to me with so much familiarity"—an incident which causes her to demand back a lock of her hair she had given him in exchange for one of his own. The Duke, upon this, presents his compliments very sharply, denies ever having had a lock of her hair, and winds up: "The Duke is not aware that he has been guilty of *presumption*, of *daring presumption*." At all events, he gave up calling. So the correspondence drags on; and the wonder is that the Duke exhibited so much consideration and patience towards the monomaniac.

It all ends at last, to cap the irony of it to the worldly-minded, in Miss J.'s losing her property and falling ill and appealing to the Duke for money. She did this very unwillingly and on the solicitation of her sister; but the Duke could not get her to say how much nor by what channel, and, though apparently willing to assist her, it all ended in an "indignant" letter. Just before his death he finally stopped writing. She afterwards came to the United States, where she died. The story has now "leaped to light," but whatever construction be put upon it, the whole affair seems too trivial and ridiculous to call for publication. The Duke was certainly kind and forbearing, and Miss J. an unusually impertinent and troublesome person.

BOOKS OF THE WEEK.

Babes of the Nations. Frederick A. Stokes & Bro. $1.50.
Emmons, J. G. Mingled Memories: Poems. Brentano's.
For Love of Her: A Novel. Chicago: Rand, McNally & Co.
Haggard, H. R. Allan's Wife, and Other Tales. Harper & Bros.
Humphrey, Maud. Calendar of the Seasons. Frederick A. Stokes & Bro. 50 cents.

THOMAS NELSON & SONS'

Christmas Gift-Books

PEN AND PENCIL VOLUME FOR 1889.

RUSSIAN PICTURES DRAWN WITH PEN AND PENCIL. By Thomas Michell, C.B., author of 'Murray's Handbooks for Russia, Poland, and Finland,' etc., etc. With three maps and 124 illustrations. Imperial 8vo, cloth, gilt edges, $3.50.

"Mr. Thomas Michell has accomplished very well the task of stretching his text over so vast a territory. The cuts of Russian cathedrals, churches, and decorative work found in religious manuscripts of the Middle Ages are singularly interesting, while some effort has been made to depict the various types of people embraced under the Russian rule."—*New York Times.*

R. M. BALLANTYNE'S NEW BOOK.

BLOWN TO BITS; or, The Lonely Man of Rakata. A Tale of the Malay Archipelago. 12mo, cloth, covers in colors and gold, illustrated. $1.50.

The extremely violent nature of the volcanic eruption in Krakatoa in 1883, the peculiar beauty of those parts of the Eastern seas where the event occurred, the widespread influences of the accompanying phenomena, and the tremendous devastation which resulted, are all presented in a thrilling narrative for the juvenile world.

ACHIEVEMENTS OF YOUTH (The). By the Rev. Robt. Steel, D.D. 12mo, cloth extra. $1.25.

A series of examples selected from various spheres of thought and life, to illustrate what has been accomplished by youths who diligently cultivate their powers and opportunities.

ACHILLES DAUNT'S NEW BOOK.

CRAG, GLACIER, AND AVALANCHE. Narratives of Daring and Disaster. By Achilles Daunt, author of 'With Pack and Rifle,' etc. With 13 illustrations. 12mo, cloth extra. $1.

"The stories, helped by the thirteen illustrations, will stir the most sluggish blood into a quicker and perhaps a more healthy flow. Will find a host of readers among both the young and old."—*Journal of Commerce.*

NEW BOOK BY VERNEY LOVETT CAMERON.

AMONG THE TURKS. By Verney Lovett Cameron, C.B., D.C.L., Commander Royal Navy, author of 'Jack Hooper,' etc. 12mo, cloth extra, With 27 illustrations. 80 cents.

"It is a good book for boys, and will while away an hour or two for boys of larger growth, not without profit and pleasure."—*New York Times.*

THE FOOTSTEPS OF ST. PAUL IN ROME. An Historical Memoir, from the Apostle's landing at Puteoli to his death, A.D. 62-64. By S. Russell Forbes. 12mo, cloth extra. Illustrated. 80 cents.

"The work is a true historical study, and contains a wealth of material. The book is needed to supplement and correct the larger lives of St. Paul whose authors have never studied accurately some of the archæological questions involved."—*Public Opinion.*

FAVORITE BIBLE STORIES FOR THE YOUNG. With numerous illustrations. 16mo, handsomely illuminated board covers. 50 cents. Cloth extra, 75 cents.

HANDSOME EDITIONS OF

Robinson Crusoe and Swiss Family.

ROBINSON CRUSOE. The Life and Strange Adventures of Robinson Crusoe of York, Mariner. Written by himself. *Carefully reprinted from the original edition.* With Memoir of Defoe, a Memoir of Alexander Selkirk, and other interesting additions. Illustrated with upwards of 70 engravings by Keeley Halswelle. 12mo, cloth extra. Illuminated cover. $1.25.

SWISS FAMILY ROBINSON (The); or, Adventures of a Shipwrecked Family on a Desolate Island. *A New and Unabridged Edition.* With upwards of 300 engravings. 12mo, cloth extra. Illuminated cover. $1.25.

TWO CHARMING COLOR BOOKS.

YOU MAY PICK THE DAISIES. Beautifully illustrated in Monotints. 4to, with a very attractive cover, in colors and monochrome. 35 cents.

SILVER LININGS BEHIND EARTH'S CLOUDS. By E. A. Lempriere Knight. Beautiful landscape designs in colors and monochrome. Oblong, ribbon style, handsomely designed cover. 50 cents.

NEW AND CHEAPER EDITIONS OF

R. M. Ballantyne's Latest and Most Popular Books.

A Capital Series of ten Books for Boys. Handsomely bound and fully illustrated, for $1.00 each. 'The Giants of the North,' etc., etc.

MACMILLAN & Co.'s NEW BOOKS.

A Magnificent Volume. Choicely Illustrated.

PEN DRAWING AND PEN DRAUGHTSMEN.

THEIR WORK AND THEIR METHODS.

A Study of the Art To-day, with Technical Suggestions. By JOSEPH PENNELL. With nearly 200 Illustrations. Small 4to, $20.

"Since Mr. Hamerton's 'Etching and Etchers' we have had no such book as this. In its own definite field of Pen Drawing and Pen Draughtsmen it stands alone, . . . It is likely to remain unique for a long time to come."—*Independent.*

"Mr. Joseph Pennell has written a remarkable book on the branch of art he particularly affects—a book which comes, we believe, in the nick of time. Mr. Pennell's object is to bring out the varied beauties of which pen-work is capable, to teach people what is good, and to lead them to value that as it should be valued. The future of pen work seems to us secure, and we do not doubt that Mr. Pennell's sumptuously printed book will do much to popularize it."—*The Critic.*

"The most artistic of all holiday publications of this season is Mr. Joseph Pennell's sumptuous work."—*Dial.*

". . . It is the external beauty of the volume which naturally first appeals to the eye. . . . One is charmed before he opens the covers, and when he examines the well-nigh innumerable illustrations his admiration and his enjoyment increase ten-fold. The book covers new ground and deals with men and work the importance of which is everywhere recognized, but which has not hitherto been adequately treated. Mr. Pennell is himself an artist of experience and distinction, and in the preparation of this work he has had the coöperation of a large number of the leading illustrators and art publishers of this country and Europe. The volume is a splendid specimen of book-making, and it is one of the most beautiful illustrated works of years. It is alike admirable whether looked at as a beautiful illustrated book or as a careful and critical study of modern illustrators."—*Boston Courier.*

Profusely illustrated by Herbert Railton and Hugh Thomson.

COACHING DAYS AND COACHING WAYS.

By W. Outram Tristram. With numerous illustrations by Herbert Railton and Hugh Thomson. Small 4to. $6.00.

WESTMINSTER ABBEY. By the Rev. W. J. Loftie, author of 'Windsor Castle,' etc. With 12 plates and many minor illustrations. Imperial 4to, cloth, $7.50.

"Every American who has been in London loves Westminster Abbey, and all of them who can procure this beautifully illustrated history of it will prize it as one of their dearest treasures. Mr. Loftie writes of it with the devotion of a lover and the fidelity of an antiquarian student."—*Philadelphia Bulletin.*

"A picturesque and entertaining account of Westminster Abbey . . . which all visitors, and all persons who wish they were visitors, to Westminster Abbey, may unite in enjoying."—*Nation.*

THE EARLIER ENGLISH WATER-COLOR PAINTERS. By Cosmo Monkhouse. With thirteen plates after Turner, Girtin, Bonington, Cotman, De Wint, Sandby, Hearne, Barret, Prout, Cozens, Copley Fielding, Cattermole, and David Cox. Royal 8vo, cloth, $7.50.

"These reminders bring us to Mr. Monkhouse's starting point, which is the beginning of the modern art. As to the place, there is no dispute. Modern water-color painting began in England, and the history of the great English water-color school forms the brightest chapter in the history of English art. . . . An intelligent acquaintance with the school is aided materially by the excellent illustrations. There are fourteen photographic copper-plate reproductions of etchings, mezzotints, and drawings, and many minor illustrations."—*New York Tribune.*

Walter Pater's New Book.

APPRECIATIONS, with an Essay on Style. By Walter Pater, Fellow of Brasenose College, author of the 'Renaissance,' 'Marius the Epicurean,' 'Imaginary Portraits,' etc. Globe 8vo. $1.75.

"Will charm by the beauty of its literary workmanship as well as by the depth and fineness of its criticism."—*Boston Saturday Evening Gazette.*

"They will be read with interest as a finished expression of the opinions of one of the most earnest and widely cultured of living English critics."—*St. James's Gazette.*

F. Marion Crawford's New Novels.

SANT' ILARIO. By F. Marion Crawford, author of 'Mr. Isaacs,' 'Dr. Claudius,' 'Saracinesca,' etc., etc. 12mo, cloth. $1.50.

"The author shows steady and constant improvement in his art. 'Sant' Ilario' is a continuation of the chronicles of the Saracinesca family. . . . A singularly powerful and beautiful story. . . . Admirably developed, with a naturalness beyond praise. . . . It must rank with 'Greifenstein' as the best work the author has produced. It fulfils every requirement of artistic fiction. It brings out what is most impressive in human character, and what is most interesting in human action, without owing any of its effectiveness to sensationalism or artifice. It is natural, fluent in evolution, accordant with experience, graphic in description, penetrating in analysis, and absorbing in interest."—*New York Tribune.*

SARACINESCA. By F. Marion Crawford, author of 'Greifenstein,' 'Zoroaster,' 'With the Immortals,' etc. 12mo. cloth. $1.50.

"In the multitude of crude workers is there at least one novelist whose power is so brilliant, so fascinating, as quite to suggest a vision of paradise in the happiness of reading his fiction, and this delight is touched at high-water mark in the late novel, 'Saracinesca.'"—*Boston Evening Traveller.*

"Delights and interests more than anything he has written since he surprised the world with 'Mr. Isaacs.' . . . He has in 'Saracinesca' written a powerful story of modern Roman life, which is better even than his 'Roman Singer.'"—*Philadelphia Evening Bulletin.*

THE COMPLETE WORKS OF

ROBERT BROWNING.

Author's New and Uniform Edition. In sixteen volumes, globe, 8vo, cloth in box, $22.50. Enriched with more than one portrait of Mr. Browning at different periods of life and a few illustrations.

COLLEGE NEWS
IN THE
NEW YORK EVENING POST.

THE EVENING POST has for many years given much space to news from the colleges, and to editorial discussions and important correspondence on educational subjects. The system of special letters from the colleges, published once a week in this paper, has met so cordial a reception among students and graduates as to justify its continuance and extension. This feature will hereafter appear in each Friday's edition of THE EVENING POST, and every means will be used to make these columns a trustworthy source of information on the current topics of educational work and student life. They will contain not only letters from trustworthy correspondents in the leading institutions, but also special articles, some of which are now preparing, on the intellectual, social, and athletic activities of the college world.

Subscriptions will be received for Friday's edition of THE EVENING POST at $1.50 per year. Reduced rate for clubs. A special agent wanted at every college. Address

THE EVENING POST, NEW YORK.

Sold by Grocers everywhere.
W. BAKER & CO., Dorchester, Mass.

Back Numbers of "The Nation."

In response to frequent inquiries from subscribers:

An incomplete set of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

Complete sets, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

Single numbers not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., New York, dealer in back numbers of periodicals, who can frequently supply them, having purchased, a few years ago, a large quantity from the publishers. Mr. A. S. Clark, 34 Park Row, also has a stock on hand.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer, or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half-year. Two volumes per year have since been issued, Vol. XLIX. comprising the last half-year of 1889.]

*POSTAL DICTIONARY.—A HAND-*book of laws and regulations of the Post-Office Department, postage rates, etc., etc., comprising 150 titles in alphabetical order, besides detailed index. FOR ADVANCED STUDENTS. French European Magazine, bi-monthly, 24 numbers, 768 pages. Plays, stories, sketches, poetry, etc., by the best modern writers. Postpaid, $1.10 per annum. Specimen numbers mailed free to any address. E. ROTH, 237 South Broad St., Phila.

*THEODORE MUNDORFF, OPTI-*cian. Care of the sight. Brazilian pebbles, eyeglasses, opera-glasses, field-glasses, etc. 1167 Broadway, New York, under Coleman House.

The Nation

Is a weekly review of politics, literature, science, and art, conducted with the aid of the most competent writers obtainable. The list of contributors who have been employed more or less frequently during the twenty-three years of the journal's publication, has included most of the leading names in literature, science, art, philosophy, and law in this country, and many of corresponding eminence abroad. A bound volume of the *Nation* presents one of the most complete and accurate condensed records procurable of the world's current history, with impartial comment on questions which should occupy the attention of thoughtful men. Its Departments are:

The Week. Brief comments on the most important current events, domestic and foreign.
Editorial and Miscellaneous Articles. Careful and moderate discussion of prominent political and social topics.
Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.
Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.
Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.
Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.
Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

Terms, $3 per annum, postpaid. Address

THE NATION, 208 Broadway, New York.

Reading Case for the Nation,

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

Littell's Living Age.

Jan. 1, 1890, THE LIVING AGE enters upon its 184th volume. Approved in the outset by Judge Story, Chancellor Kent, President Adams, historians Sparks, Prescott, Ticknor, Bancroft, and many others, it has met with constant commendation and success.

A WEEKLY MAGAZINE,

it gives more than THREE AND A QUARTER THOUSAND double-column octavo pages of reading matter yearly; and presents, with a combined freshness and completeness nowhere else attempted,

The best Essays, Reviews, Criticisms, Tales, Sketches of Travel and Discovery, Poetry, Scientific, Biographical, Historical, and Political Information, from the entire body of Foreign Periodical Literature.

It is therefore invaluable to every American reader, as the only satisfactorily fresh and COMPLETE compilation of an indispensable current literature—*indispensable* because it embraces the productions of the

ABLEST LIVING WRITERS

in all branches of Literature, Science, Politics, and Art.

OPINIONS.

"There is no other publication of its kind so general in its bearing and covering the entire field of literature, art, and science, and bringing between the same covers the ripest, richest thoughts and the latest results of the time in which we live. . . . No one who values an intelligent apprehension of the trend of the times can afford to do without it."—*Christian at Work, New York.*

"Certain it is that no other magazine can take its place in enabling the busy reader to keep up with current literature. . . . By the careful and judicious work put into the editing of THE LIVING AGE, it is made possible for the busy man to know something of what is going on with ever-increasing activity in the world of letters. Without such help he is lost."—*Episcopal Recorder, Philadelphia.*

"It is one of the few periodicals which seem indispensable. . . . It contains nearly all the good literature of the time."—*The Churchman, New York.*

"Biography, fiction, science, criticism, history, poetry, travels, wha ever men are interested in, all are found here."—*The Watchman, Boston.*

"The foremost writers of the time are represented on its pages. . . . It is in the quantity and value of its contents *facile princeps*."—*Presbyterian Banner, Pittsburgh.*

"For the man who tries to be truly conversant with the very best literature of this and other countries, it is indispensable."—*Central Baptist, St. Louis.*

"To have THE LIVING AGE is to hold the keys of the entire world of thought, of scientific investigation, psychological research, critical note, of poetry and romance."—*Boston Evening Traveller.*

"No better outlay of money can be made than in subscribing for THE LIVING AGE."—*Hartford Courant.*

"For the amount of reading-matter contained the subscription is extremely low."—*Christian Advocate, Nashville.*

"Nearly the whole world of authors and writers appear in it in their best moods."—*Boston Journal.*

"It may be truthfully and cordially said that it never offers a dry or valueless page."—*New York Tribune.*

"It furnishes a complete compilation of an indispensable literature."—*Chicago Evening Journal.*

"It enables its readers to keep fully abreast of the best thought and literature of civilization."—*Christian Advocate, Pittsburgh.*

"In this weekly magazine the reader finds all that is worth knowing in the realm of current literature. . . . It is indispensable."—*Canada Presbyterian, Toronto.*

Published WEEKLY at $8.00 a year, *free of postage;* or for $10.50, THE LIVING AGE and any one of the American $4 monthlies (or *Harper's Weekly* or *Bazar*) will be sent for a year *postpaid:* or for $9.50, THE LIVING AGE and *Scribner's Magazine* or the *St. Nicholas.*

Now is the time to subscribe, beginning with the New Year.

Address. *LITTELL & CO., Boston.*

The Mother's Register.

*In any family, whether large or small, but es-*pecially where the number of children is large, a record of the constitutional peculiarities of each one, and the whole course of its physical development in sickness and in health, is certain to be instructive and may prove invaluable. Such a record is Prof. J. B. Fonssagrives's 'Mother Register,' consisting of a series of tables scientifically arranged for brief and convenient entries. A separate volume for boys and for girls. Price, post-paid, 75 cents per volume, or $1.25 for two volumes.

"By far the most practical record for the period of childhood that I have seen, . . . a separate part being devoted to the girl, in which are points of great importance as references in her after life. The completeness of its items and its convenient arrangement insure the entry of important events."—*C. E. Warren, M.D., in Babyhood.*

The Heimskringla:

Or, The Sagas of the Norse Kings. From the Icelandic of Snorre Sturlason. By Samuel Laing, Esq. Second edition, revised with notes, by Rasmus B. Anderson, LL.D., United States Minister to Denmark, author of 'Norse Mythology,' 'Viking Tales of the North,' and other works. With 2 maps. In 4 vols., 8vo, cloth, net, $20.00.

"Snorre Sturlason's History has in it a great of poetic fire, and deserves, were it once well edited, furnished with accurate maps, chronological summaries, etc., to be reckoned among the great history-books of the world."—*Thomas Carlyle.*

Napoleon at St. Helena.

By Barry O'Meara, Body Surgeon to the Emperor. A new edition with copious notes, Biographical sketches of Sir Hudson Lowe and the author, and other additions, including Appendices of great value, containing a complete Napoleonic Kalendar, the Napoleonic Roll of Honor, etc., etc. The whole embellished by colored plates, several portraits of Napoleon, woodcuts, and other illustrations. Two vols., demy 8vo, decorated cloth, $10.00.

A Book of Verses.

By William Ernest Henley. A new edition, with additional poems now first published. Printed on heavy paper, 16mo, cloth binding, $1.25.

CONTENTS: In Hospital—Rhymes and Rhythms—Life and Death (echoes)—Bric-à-Brac—Ballades—Rondels, Sonnets, and Quatrains—Rondeaus.

"A book of verse, in which there is more than one manly and beautiful poem."—*Robert Louis Stevenson.*"

The Life of Benvenuto Cellini.

New Edition. Translated into English by JOHN ADDINGTON SYMONDS. With a mezzotint portrait. Revised and cheaper edition. 1 vol., 8vo, handsomely bound in cloth, uncut, gilt top, $3.00.

This is the third edition of this work which the publishers have found it necessary to issue. The previous editions were both rapidly taken up and have gone out of print. Copies of them now only to be secured at much advanced prices.

Lyrics from the Dramatists of the Elizabethan Age.

Selected and edited by A. H. BULLEN, editor of 'Lyrics from the Song-Books of the Elizabethan Age.' Only 200 printed for America. 1 vol., post 8vo, cloth, gilt top, $3.75.

SCRIBNER & WELFORD

743-745 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 26, 1889.

The Week.

THE meeting of the Executive Committee of the Civil-Service Reform League last week ended in the appointment of a committee to investigate and report on the civil service of the Government, both in its relations to the Civil-Service Law and to the principle of civil-service reform. Mr. W. D. Foulke of Indiana, the well-known Republican civil-service reformer of that State, is the Chairman, will reside in Washington during the winter, and will do the greater portion of the work. Mr. Sherman S. Rogers of Buffalo, and Mr. Charles J. Bonaparte of Baltimore, also Republicans who voted for Harrison, and Mr. Richard H. Dana of Boston, are the other members. Mr. Henry C. Lea of Philadelphia declined to serve on account of his health, but he contributes handsomely to the expenses, and will print and distribute widely a pamphlet containing the civil-service reform pledges both of the President and of the Republican party, with some cognate matter. Due credit will be given by the Committee for whatever good in this field President Harrison has accomplished—for it must be admitted that his administration of the Civil-Service Act has been, on the whole, very faithful. In other words, it will extenuate nothing, and set down nothing in malice, but it will seek to let light in on the whole administrative machine.

Superintendent Porter of the Census Bureau is quoted as complaining of the assaults of the office-seekers, and describing his position as "waist deep in Congressmen" after offices for constituents. We are very glad to hear that he is having a bad time of it. Porter was last year the editor of a Republican organ which called for "the further extension of the reform system, already established by law, to all the grades of the service to which it is applicable"; and who yet, when appointed head of a bureau with 2,500 subordinates to which that system was applicable, opposed its extension so as to cover them. If he is now bored almost to death by the spoilsmen, it is just what he deserves.

The Republican Boys have adopted a new constitution, which, according to the best authorities, consolidates their Machine into the most compact trading organization that the city has ever seen. They have abolished the annual enrolment of members, and taken the question of admission of new members into their own hands. They have voted down a resolution forbidding trading by the district leaders, and have, by an overwhelming vote, decided that such trading is not only praiseworthy and patriotic, but is the chief thing that "we are here for." In fact, the Boys have "bounced" the Better Element, slammed the door of the fold behind them, and started business for themselves as a Trading and Dealing Company, all rights reserved, quick sales and prompt deliveries to the highest bidders, no matter what their political faith or previous condition of party servitude. "Tom" Platt, who had a scheme of his own for organizing the Machine to be used by himself alone for trading, is left completely in the cold, for the Boys are determined to have for themselves whatever profits there may be in the business. They propose to receive John J. O'Brien into the fold again at an early day, and by the time the next national campaign opens they will be in readiness for, and in expectation of, the briskest season of business that they have ever known.

How completely a secret ballot thwarts the best laid plans and hopes of the politicians was shown clearly by the result of the city election at Meriden, Conn., on Tuesday week. The city, for many years a Republican stronghold, has of late shown a steady Democratic growth, and was carried by Mr. Cleveland in 1888 by the handsome plurality of 339, as compared with 54 in 1884. Made presumptuous by success, the Democrats last week tried to put in a bad city ticket, and brought to its aid all the force of a compact and well-drilled local organization. The election was held under the new Connecticut Secret-Ballot Law, itself very imperfect as compared with the Australian scheme. Although the carefully kept tallies of the Democratic workers indicated that some 200 more voters of their party faith than Republicans entered the booths, and the Republican workers admitted Democratic success at the close of the polling, yet the count of the ballots brought forth a general Republican victory, with a majority of 243 for the candidate for Mayor. Not many examples of the kind are needed to show why the political bosses so obstinately resist ballot reform.

Speaker Reed's committee appointments average very well, and especial praise is due for the composition of the Committee on the Civil Service, nearly all of whom are known as stanch defenders of the existing law, and some of them as favorable to that "further extension of the reform system" demanded and promised by the Republican national platform. A good deal of foolish talk is heard about the fact that most of the chairmanships go to the West under Mr. Reed, while they went to the South under Mr. Carlisle. The explanation is that the strength of the party which is now dominant is in the West, while in the three previous Houses it was in the South. How little weight such matters have with the voters is shown by the fact that eight years ago a House of Representatives elected a Republican Speaker who gave the chairmanships to Northern Representatives, and that in 1882, after one session of that body, the people elected another House of Representatives, which contained 196 Democrats out of 325 members.

Senator Blair has secured from the Committee on Education and Labor a favorable report upon his "Bill to Promote Mendicancy," as was to have been expected, most of the members of that Committee having endorsed the measure time and again in the past. But though the Committee on Education and Labor may show no change, there has been during these years a revolution in the public sentiment of the country regarding the scheme until, as that Minnesota Republican journal, the St. Paul *Pioneer Press*, says, "nobody believes in it but a few sentimentalists and surplus-killers." A striking illustration of this change in sentiment is afforded by the present attitude of the Cleveland *Leader*, a thorough-going Republican organ of Ohio. At first the *Leader* favored the Blair bill, but now it considers "it quite certain, from the tone of the journals of the country, that the revival of the Blair Educational Bill or the introduction of any measure proposing national aid to education will meet with small favor." It points out that no part of President Harrison's message has been so earnestly dissented from by Republican newspapers as the section in which he endorsed this idea, and, after quoting the deliverances of the Hartford *Courant*, the Buffalo *Express*, and the St. Paul *Pioneer Press*, it says: "Such comments from journals in such widely separated as well as such strongly Republican sections cannot be misunderstood. They are by no means all that might be quoted. Papers that have endorsed the recommendation have done so for the most part in a merely perfunctory way, while many have treated it with silent disregard. It is very evident that public feeling has set in strongly against this scheme, and the less time Congress spends over it the better."

There is something almost sublime in the audacity of Gov. Foraker's friends in petitioning the President to appoint him as Minister to Russia. He has been repudiated in an unmistakable manner by his own party in Ohio after many years of service, being defeated by several thousands of votes while the remainder of the Republican ticket was elected; and simultaneously with this repudiation came the disclosure that he had been the adviser and abettor in an effort to defeat his competitor for the Governorship by means of a campaign forgery. He accepted that forgery as genuine, though it involved Senator Sherman and Congressmen McKinley and Butterworth of his own party, and he gave it to Mr. Halstead, the editor of the chief Republican organ of the State, who suppressed the Republican names on the forged document and published only that of the Democratic candidate for Governor. He himself used the forged document as genuine in his campaign speeches, and declined to make retraction when the forgery had been exposed. An investigation by Congress has been ordered, at which Gov. Foraker should testify. To send him to Russia

while this is pending would be scandalous. That such a proposal should be made is as preposterous as Mr. Halstead's conduct in continuing to denounce daily in his newspaper all kinds of reform and reformers as "frauds" and "humbugs," while at the same time confessing that he published so much of a campaign forgery as was damaging to his opponents, and suppressed so much of it as would have damaged his party friends.

Gov. Hill's conduct in depriving the Albany *Argus* of State printing which that paper has had, whenever the Democratic party has been in power in the State, for seventy-five years, and awarding it to his personal organ, the Albany *Times*, is exciting much comment for various reasons. The new editorial mouthpiece is a man who has served one term in the penitentiary, and is generally believed to have been entitled to another. In 1864, though he had been elected as a Democratic member, he received a "loan" of $1,200 from the Republicans, was elected by them to the Speakership, and organized the Assembly as a Republican body. In return for this service he was appointed to a Federal office by a Republican President, and, while holding that office, was found guilty of collecting fees for illegal purposes, and was sentenced to the Albany Penitentiary for a term of years. Since his assumption of editorial functions he has been a persistent "knifer" of his party's candidates, and has conducted a newspaper which has won neither the confidence nor the respect of any honest man in any party. The *Times* is not a Democratic but a Hill paper. In fact, except as the personal organ of the Governor, it has no excuse for existence. It has attacked Mr. Cleveland venomously for years, opposing his election to the Presidency in 1884 and in 1888. It has had this superiority to Gov. Hill, that it has done its fighting against its party's candidate openly. So far as ability, influence, and circulation go, it has none worth mentioning, being, in fact, one of the most insignificant newspapers in the State. That the Governor should openly take his stand in its support, after its political course of the past few years, thus coming out without further concealment as an anti-Cleveland man, is taken in many quarters as an indication that he was greatly enraged by Mr. Cleveland's Boston speech, and has decided to make "war" upon him. If this be the correct view of his conduct, we are inclined to the opinion that it is an excellent thing for the Democratic party.

The death of Henry W. Grady, editor of the Atlanta (Ga.) *Constitution*, removes the most conspicuous journalist in the South, for, although not yet forty years of age, his name was better known than that of any other editor in that part of the country. This sudden ending of his career is the more impressive from the fact that the disease which caused his death was contracted during his recent trip to Boston, where he made a speech on the race question which attracted national attention. Mr. Grady proved himself again by that speech, as by one delivered in this city two years ago, an exceedingly effective orator of that somewhat florid school which is steadily losing its old hold, but which still occasionally produces an effort of great power over the audience that hears it. His latest appearance was by far the most effective of all his appeals to the public, as it combined with abounding rhetoric an uncommon amount of sound philosophy upon the issues which underly the existing difficulties in the Southern situation.

The letter of a Little Rock correspondent of the *Evening Post* points out "two or three leading ideas" upon which satisfactory liquor legislation has been carried out—strange as it may appear to some readers—in Arkansas. Think of the license tax having been increased until it is $1,200 annually in towns and $700 in the rural districts, in such a remote and primitive community as Arkansas! Each county, moreover, is required to decide every two years, at the general election, whether license shall prevail during the next two years or not, and this must be determined by an affirmative majority—if, for example, a vote on the question be not taken, prohibition ensues. Moreover, in subdivisions of a license county, even ("within three miles of any church or school-house"), a majority of the men and women may exclude the sale of liquor from their neighborhood. This is the very flower of high license and local option. The correspondent's observation that the State has no power to punish violation of a liquor statute we understand as an approximate phrase, to be read in connection with his following sentences. Certainly there is no real power of suppression save through the courts and officers of those communities which are determined that the law shall be enforced. This letter makes it clear that New York may learn one lesson of civilization from Arkansas.

The *Dry Goods Economist* of this city has prepared a memorial to Congress showing how the duties on wool are strangling the woollen industry in this country, and the argument it offers is one of the strongest we have seen. It is by no means radical in its demands, being limited to a change in the rates from specific to ad-valorem. How the present rates operate to protect the European manufacturer at the expense of the American is shown by an illustration from actual experience. "This office," says the *Economist*, "had in its possession a short time ago"—

(1.) A sample of Cape wool that costs 8 cents per pound, on which the duty is 10 cents per pound, or 125 per cent.

(2.) A sample of "tops" made from the same wool, the cost of which was 33 cents per pound, on which the duty is 60 cents per pound, or 181 per cent.

(3.) A sample of yarn made from these "tops," the cost of which was 52 cents per pound and the duty 18 cents per pound and 18 per cent. ad valorem, or in all 70 per cent.

(4.) A sample of cloth made from the above yarn which, the cost abroad being less than 80 cents (about 78 cents) per pound, pays a duty of 35 cents per pound and 35 per cent. ad valorem, or, in all, 81 per cent.

That is to say, our American woollen-manufacturers are given the opportunity to try and earn a living under this beneficent tariff:

Raw wool	125	per cent.
Wool tops	181	do do
Yarn	70	do do
Finished cloth	81	do do

Is it any marvel that the foreign wool which we must import, either to supply the deficiency in our own clip or to furnish the necessary variety of stock, comes to us in the form of cloth under an American tariff which protects the European mill from 50 to 100 per cent.?

We understand that the movement represented by the *Economist* has the support of the leading houses in New York engaged in manufacturing and handling woollen goods.

"They manage these things better in France." So thinks Mr. T. C. Search, who writes a letter to the Philadelphia *Manufacturer* to show that the French tariff protects the *manufacturer* of woollens, not the operative in woollen mills, since the latter already works for lower wages than the English operative. The French principle, Mr. Search thinks, ought to be boldly avowed and frankly adopted in this country. As for the wool-grower, let him have whatever rate of duty Congress will give him. Then let the manufacturer have rates sufficiently high to insure him the home market anyhow. Let *him* be protected as well as labor. This view meets the approval of the editor of the *Manufacturer*, who thinks it very strange that the moment a manufacturer suggests that he needs protection *for himself* there should be a general howl of denunciation against the "robber baron." There is nothing like frankness. Will not Prof. Robert Ellis Thompson construct a reply on scientific grounds to the argument of Mr. Search?

The *Manufacturer* does some good work in the matter of Philadelphia local politics. In its last number it examines the notion, which has gained currrency in the Quaker City, that if McManes loses control of the Tax Office, he will be weaker politically than he has been for many years, and that therefore he is going to "make a bitter fight to retain the control." McManes, it should be observed, is not in the Tax Office himself, and does not desire to be. In fact, he is not in any office. He is one among a million or more of private citizens—an adopted citizen, too. But there is this peculiarity about McManes, that he is the only one of the million who will be cast down if he does not control the Tax Office, and the only one about whose control of the Tax Office there is any public agitation or concern whatsoever. Long familiarity with McManes's claim to control the Tax Office and the other offices has bred a habit of mind among Philadelphians to take all of McManes's claims as matters of course, like the weather. They are part and parcel of daily life. Citizens have insensibly acquired a mental posture which incapacitates them for looking at the Tax Office as a machine of their own devising for collecting revenue and paying it into the treasury. They see it, as it were, through an inverting telescope, at a long distance, and wrong side up; and they see McManes not as an ordinary taxpayer like themselves, but as a Khedive or Mahdi. Such, in sub-

stance, is the description which the *Manufacturer* supplies to the boss system in Philadelphia. Yet, if we remember rightly, this powerful journal has been in the habit of speaking lightly of New York as a city ruled by foreigners.

The October Consular Report, issued by the Bureau of Statistics for the Department of State, has a very interesting contribution, from Minister Abbott of Bogota, to the literature of the Pan-American movement, which we cordially commend to the attention of the enthusiasts who think that the reason why we have but little trade with South America is, that we have no subsidized steamers to carry the mails, or that our flag is so seldom seen in South American ports. He gives his reasons for the fact that practically "all commercial relations have always been with England and France." "The Colombian," he truly says, "may admire the institutions of the great Republic, but he is not for that reason willing to pay a friend, however dear to him, four cents for a yard of cotton cloth which he can buy of some one else for two-and-a-half cents." What is oddest in this controversy about South America is that all Americans do business on exactly the same principles as the Pan-Americans. Nobody here buys goods, either home or foreign, at higher prices than he would pay elsewhere because he admires the character of the maker and had known him as a boy. No one thinks of paying an English manufacturer who sympathized with the North in the rebellion 30 per cent. more for his cotton or cutlery than the same articles could be got for from a manufacturer who sympathized with the rebels. No American manufacturer refuses to seek a market in any district at home because the railroad which would carry his goods had no land-grant. Any American who acted in his business as some try to think the Pan-Americans act, would be considered crazy in the short interval which would elapse before his bankruptcy.

Mr. Edward Bellamy, author of 'Looking Backward,' who has discovered in what he calls "Nationalism" an easy device for abolishing all those ills from which the race has suffered ever since the creation of man, delivered a speech in Boston last Thursday which "closed with an eloquent picture of the peaceful and prosperous era which is to come when, Nationalism having triumphed, there shall be no tariffs, no race issue, no intemperance, no labor question, no poverty." We note but one omission in this beatific catalogue. Mr. Bellamy should have added, "and no human nature."

The pastor of the First Baptist Church (colored) in Kansas City, Kan., resorted to a device for circumventing his adversaries at a meeting held for the election of officers on Saturday week, which we commend to the attention of politicians charged with the fixing of primaries and caucuses. The church is rent by internal dissensions, as churches so often are, the pastor, the Rev. J. R. Jones, being at the head of one faction, which, however, contains only a minority of the members. Being unable to make head against his enemies by voting, Mr. Jones staved off defeat by calling on one of his own followers to "engage in prayer" whenever a hostile motion came before the meeting. The opposition bore with this for some time, but at last their patience was exhausted, and they fired a volley of chairs and hymn-books at G. W. Smith when, in response to the pastor's call, he took up the weary task of praying against time. "Then," says the despatch, "followed a general riot," in which the negroes' favorite weapon, the razor, was freely used, and much "pounding" was done with chairs. We believe there used to be scenes of this sort in some of the early councils of the Eastern Church, and Gibbon takes unseemly delight in recalling them; but the appearance of the razor in church quarrels is, we think, absolutely new, and rather startling. We wish it might be the means of throwing some light on the origin of the negro's love of the razor as a weapon both of defence and offence. We have never seen the matter adequately discussed, and yet it is very interesting. It can hardly be due to the connection of the colored race with the barber's business, because this business suggests the scissors to a fighting man much more cogently than the razor. The scissors are admirably adapted for stabbing, while apparently the handle of the razor makes it as dangerous for the owner as his adversary in anything like a tussle. The best thing that can be said for it is that it is, as a concealed weapon, very easy to carry, and a great deal of cutting may doubtless be done with it without inflicting mortal wounds. The despatch does not tell us what happened after the riot. It must be difficult for a church to take up "unfinished business" after an experience of this sort.

The way in which the city is being relieved of its electric lights is in all respects worthy of the way in which they were supplied. It is altogether suitable that a new system of municipal lighting, created under the superintendence of a butcher, a theatrical ticket agent, and a saucy young lawyer, should be got rid of by cutting down the poles with an axe and plunging the town in darkness. This is the way the King of Dahomey would deal with the problem, and we have, in the government of this city, been in many ways close imitators of that monarch's methods. We may feel sure, however, that no great city which has once been lighted by electricity, will go back permanently to gas. We shall have electric lights in New York again, but we shall get them in civilized fashion. They ought to have been supplied in the beginning under rules carefully drawn by a board of electrical experts, prescribing the size and nature of the wires, the intensity of the currents, the mode of transmission to houses and street lamps, so as to secure the maximum of light with a minimum of danger and inconvenience. What we want now is the abolition of the present Board by an act of the Legislature, and the creation of a new one composed of competent electricians. In other words, we must begin all over again. No company will, of course, embark in the business of supplying electric lights which is liable to have its errors or shortcomings remedied by the wholesale destruction of its property by bands of laborers armed with hatchets. We must have the whole matter put under a carefully prepared law, with its execution committed to competent hands.

The charges against the Dock Commissioners, the attacks on the Aqueduct Commissioners after the failure of the attempt to oust Gen. Duane, and the summary and curious way in which the street-cleaning problem was disposed of by the Board of Apportionment last week, make it plain that we are witnessing the full development of the Tammany policy. It is a very much shrewder and more careful policy than it used to be, and shows a much greater respect for public opinion than in old times. It has been greatly helped by the Fair project, which has done a good deal to turn public attention away from Mayor Grant's administration of the real affairs of the city, by the bungle of the electric-lighting enterprise under the auspices of the absurd Commission imposed on Mayor Grace, and by the blunder of Mayor Hewitt and the County Democracy in the election of Colonel Fellows to the District Attorneyship. All these things, and others like them, have prepared the public to treat Tammany with a consideration which nobody who remembers its last term of municipal office, expected to see before the close of the century at least. It has received this, too, in spite of several conclusive marks of indifference to the best interests of the city. One was the ouster of Mr. Bayles from the Presidency of the Board of Health; another was the appointment of Mr. Clark to the Corporation Counselship; another was the change in the chief examinership of the Civil-Service Boards; another still was the change made in the Excise Board in the interest of the liquor-dealers. All these were distinctly retrogressive steps, intended to undo, and actually undoing, the work of reform wrought by Mayors Grace and Hewitt. The way in which the street-cleaning problem has been disposed of is as good an illustration as one could desire of the way in which the Tammany régime approaches the real municipal questions. The condition of the streets of the city stands in the very front rank of these questions. The work of the Street-Cleaning Commissioner is clearly defined by law. It is in the power of the Board of Apportionment to allow him as much money as may be necessary for the purpose of doing this work, and it is the duty of the Mayor to see that he does it. Not only has no attempt been made to see that he does it, but the Mayor has declared openly that he knows nothing about the matter. His present attitude leaves him open to the suspicion that he is not much concerned about the matter as long as a certain number of good Tammany voters draw regular pay as street-cleaners from the city treasury; and the abolition of the contract system gives color to this suspicion.

POLITICAL TREND OF YOUNG VOTERS.

MR. CLEVELAND'S recent observation, to the effect that the enterprising and thoughtful young men of the country are turning to the Democratic rather than to the Republican party, is, as might have been expected, warmly disapproved of by the Republican press. The *Tribune* professes to doubt if he "conceived his words in truth and soberness," and expresses its belief that he is mistaken. As proof that he is mistaken, the *Tribune* gives two, and only two, reasons for thinking that young men cannot be attracted to the Democratic party. The first is Gov. Hill of New York, and the anti-reform attitude into which his leadership has conducted the Democratic party of the State. The second is free trade, which it declares to be the last analysis of tariff reform. Both these it regards as calculated to repel from the Democratic party all young men who are in the best sense enterprising and thoughtful.

It is noticeable that the chief organ of the party contents itself with stating the objectionable attributes, as it sees them, of the Democratic party, and does not mention any attractive attributes of the Republican party. Its statement of the former may properly be taken as the strongest that can be made, and as such is an interesting subject for analysis. So far as Gov. Hill is concerned, no one can question that he is a repelling influence of considerable force. He has unquestionably prevented many voters, both young and old, from leaving the Republican party by serving as a bugaboo of Democratic depravity. We are not disposed to underestimate in the slightest degree the harmful influence which he has exerted in this way. But when all is said that can be said on this point, the fact remains that Gov. Hill is an anomaly in his party. He has no following outside the State of New York, and his ascendency here is accidental, and will in all probability come to an end with his present term as Governor in 1891. In other parts of the country his party is unanimous in favor of the chief reform which he opposes, that of our election methods, and in this State an overwhelming majority of it is opposed to his attitude. He undoubtedly has control of the party's machinery, but he does not represent its best judgment or most advanced opinion. He may serve to frighten away some young voters hereabouts, but has very little effect of that kind in the country at large.

When we come to the *Tribune's* second bugaboo, that of free trade, we are inclined to the opinion that even the *Tribune* itself is aware of the fact that this has seen its best days. Our contemporary admits that "hundreds of young men leave college every year imbued with free-trade ideas," but declares that "very many of them, just as soon as they are confronted with a condition and not a theory, become protectionists." That depends upon the condition, and he is a very careless observer who has not discovered that the condition which confronts many of the young men who are manufacturers to-day is a very different one from what it was a few years ago. All through New England there are young manufacturers who are confronted with a condition of ruin to the business which they have inherited from their fathers unless they can break down the protection system sufficiently to secure free raw materials. The demands for free wool, free coal, and free iron come from these young men. They have discovered that their fathers, relying too implicitly upon the support of a high tariff, have not kept up with the rest of the world in regard to improved machinery and other methods for cheapening and bettering production. They find themselves with old mills filled with worn and antiquated machinery fit only to produce goods which the world no longer wants. To rebuild and refurnish the mills, to start on a par with other manufacturers and to keep going after they have started, they must have cheaper raw materials and a wider market in which to sell. It does not alter the convictions of the young men thus confronted to hold "Dave" Hill up before them, or to call them free-traders. They are fighting for existence, and they will vote with the party that favors the principles which are most likely to give them what they seek.

As for the young men who are not directly or indirectly interested in manufacturing, and who have come out of college "imbued with free-trade ideas," there are few of them who become protectionists. The young men of the country are mainly of the salaried class, and small-salaried at that. These are beginning to realize the tax which a high tariff levies upon them, in the item of clothing especially, and to a less degree in the other necessaries of life. The free-trade ideas which they have brought from college are only a part of those with which they were "imbued" there concerning the proper functions of popular government and their own duties as American citizens. They were taught high ideals in politics, taught respect for learning and experience, taught to look up to the scholars and thinkers of their own and other lands for guidance.

Now, what does the Republican party of to-day offer to the young men who have come from our schools and colleges with such ideals? In the first place, it offers them the spectacle of a President who came into office under the most solemn personal and party pledges to conduct his Administration upon reform lines, and who has broken every one of them in a more brazen manner than any previous President has ever done. It offers them an Administration conducted upon sordid business principles, with rejected and disgraced political bosses in charge of the distribution of public offices; with a shopkeeper, who was given his place because he raised a large sum of money for campaign purposes, in a Cabinet position which he is using for advertising purposes for his wares; with a Republican press whose principal editors have been muzzled by appointments by the President to public office, excusing and defending the President in all that he does, including the appointment of his relatives to office, and at the same time denouncing the college presidents and professors and other intellectual leaders of the country as "theorists," "visionaries," "humbugs," "free-traders," and "Democrats." Does all this constitute a magnet for "enterprising and thoughtful young men"? Are they going to be scared by the names of "free-trader" and "Democrat" when they hear the men whom they have been taught to honor above all others denounced as such? Are they going to be made to believe that the Republican party is a better party than the Democratic after this demonstration? What influence will it have with them to say, after the conduct of the Harrison Administration, that the country can obtain more reforms and a purer and abler public service under a Republican than under a Democratic President?

COMMERCIAL RETALIATION.

THE last number of *Bradstreet's* contains the outlines of a correspondence between Mr. Denison B. Smith, Secretary of the Toledo Board of Trade, and Secretary Blaine, touching the exclusion of American pork from France and Germany, and also the high rates of duty imposed by those and other countries of the continent of Europe on wheat and flour. The suggestion is made by Mr. Smith that retaliatory steps ought to be taken by the United States, and that one such step might be easily taken by the prohibition of French and German wines and other articles "not actually indispensable to our people." The reply of the State Department is given in these words:

> "I desire to assure you that this Department has used and is earnestly using all proper diplomatic means to effect the withdrawal of the German and French prohibitions. The ultimate questions of retaliation are for Congress to consider, giving serious weight to the problem of embarking on a policy of reprisals the logical consequences of which are not readily to be foreseen or limited."

It is now ten years since Germany began to discriminate against American pork. It is nearly that length of time since our Minister at Berlin got himself into hot water diplomatically by writing a confidential letter, which unluckily found its way into the newspapers, saying that the exclusion of American pork was a device to protect German industry rather than German health. From the time that Minister Sargent's letter appeared to the present, it has been a cardinal doctrine on this side of the Atlantic that the exclusion was an economical and not a sanitary measure, and that the same was true of the like measure adopted by France. There has been hardly any concealment in the latter country. The right of every producer to prey upon every consumer, and to be preyed upon in turn, is an article of faith in France, like transubstantiation; but it is not for us to challenge comparisons upon that point. If the French peasants and pork-butchers want to have the American article excluded, they would be much surprised at any opposition to so reasonable a demand. Very likely they would take the same ground that the Ohio shepherds have taken regarding wool, viz., that if their demand is not complied with, they will smash the whole system. Such a threat would be apt to bring any ministry to terms.

The subject might seem to divide itself into two parts, one relating to the absolute exclusion of our pork and the other relating to the excessive duties on our grain. But such a distinction would be unprofitable. A duty of 100 per cent. would suffice for all the purposes of exclusion. If France and Germany should ask us whether a duty of 100 per cent. on pork would suit us, we should say no, if we told the truth. Yet we have duties exceeding 100 per cent. on many articles of French and German manufacture. If it be said that it is invidious to treat our pork differently from other people's, we must still acknowledge that this is not the gravamen of our complaint, since, if France and Germany should respond by excluding other people's pork also, we should be no better satisfied than we are now. It would cost them very little to extend the exclusion to other countries, since it is only our competition that their pork-producers fear. Why, then, do they not do so? Simply because the act would expose as a sham the former pretence that our pork is diseased while other people's is not.

When we come to the high duties on cereals maintained by France, Germany, and Portugal, and which are likely to be adopted by Spain, the less we say about retaliation the better. Nobody can beat us at that game. In fact, we retaliated before they did. We had a duty of twenty cents per bushel on wheat when Germany had no duty at all. We have a tax of fifteen cents per bushel on potatoes now, while Germany admits them free. We have rather prided ourselves on giving the farmer his full measure of protection, and he has believed until lately that it was the acme of human wisdom to pay two prices for what he buys, without any chance to recoup himself on what he sells.

Now he discovers that other countries have learned the trick. There can be no doubt that the prices of our grains and our meats have been seriously depressed by the protective legislation and the protective decrees of foreign countries. The action taken by the Farmers' Alliance at St. Louis the other day and the letter of Mr. Denison Smith equally attest this fact. But is retaliation likely to yield any satisfactory result? Seeing that we "retaliated" fifteen or twenty years before France and Germany did, that we changed our commercial policy from low tariff to high tariff at a time when they were changing from high to low, that we really led the way to the slough of commercial restrictions in which all three countries now find themselves, would it not be the wisest course for us to lead the way back, instead of plunging in deeper by excluding French and German wines and other articles "not actually indispensable to our people"? Will a hair of the same dog cure the bite? We robbed Peter to pay Paul when we adopted the Morrill tariff. Will it help matters to repeat the operation on a larger scale? Why should the buyers of French and German wines be punished? What have they done that they should be selected for chastisement? They have contributed nothing to the embroilment between the three countries. Nor can it be shown that vicarious punishment inflicted upon them would cause France and Germany to change their policy.

On the other hand, there is good reason to believe that they would follow us in steps towards greater freedom of trade if they should see us moving in that direction. It was freely predicted by German publicists last year that if Mr. Cleveland were reëlected, the protection policy of Germany would receive a mortal blow; the example of a liberal commercial policy in the United States could not be resisted. German industry is staggering under the tariff, and German workmen are on the point of revolt against the high prices of food which the tariff has caused. German exports of manufactured goods declined 10 per cent. last year in the face of an increase of English exports, and this fact is now a subject of much agitation among the commercial bodies of the empire. It needs only a little pushing to topple over the protection system which Bismarck has reared. The one thing which would strengthen that tottering structure would be "retaliation" on the part of the United States. The Germans are a high-spirited people. Anything which should appeal to their pride and pugnacity would play into the hands of the land-owning aristocracy, for whose benefit the duties on food products are maintained. The thing which they could not long resist would be a policy of liberality and commercial conciliation on our part.

MR. WINDOM'S HUE AND CRY.

THE comments made in Secretary Windom's annual report on custom-house frauds are so diffuse, and so dispersed over the long document, that correct appreciation and concise criticism of them are difficult. Early in those comments is this statement:

"Foreign manufacturers are compelled to maintain their extensive establishments in order to manufacture at the minimum cost, and as this is the only country that will buy more than is needed for present demand, it becomes, at such times, the dumping ground for all manufacturing Europe. For a long time past a considerable proportion, at least of articles of certain lines of importations, has been of this class. They have been sold here below, in fact without regard to, the cost of production, the manufacturers looking to their own and foreign markets, which they control, for their profit."

It was not intended thereby, as we assume, to complain that our consumers are thus enabled to buy cheaply what they require, but to show that by such a process tariff taxes are lessened, and our manufacturers exposed to more severe foreign competition. Further on there is a complaint like that made by Secretary Fairchild, that foreign manufacturers, following now the general course everywhere, at home and abroad, send their goods and wares to the great markets on consignment to their agents in those markets. That course of business we cannot expect to stop. Our customs law has, however, attempted a remedy of what Secretary Windom intimates is an evil, but that remedy is not enforced. Any one can see what the attempted remedy is by glancing at the last sentence of section 2900 of the Revised Statutes, which prevents assessing of duty on less than the *invoice* value, and by glancing at a clause in section 2854, which declares that a manufacturer must invoice at "the actual market value at the *time* and place" of manufacture. If that law were executed, Mr. Windom's complaints should not exist. Our consumers of imported goods pay nearly a million a year to support consuls to enforce the invoice laws, but their efforts are useless. They really do not make any efforts worth mentioning. A column or two further on in his report the Secretary urges a repeal of an invoice requirement, when he says:

"The declaration should state that the invoice represents the actual market value of the merchandise in the principal markets of the country whence exported, instead of the time and place when and where procured or manufactured, as now required by the statute, so that the declaration may conform to the legal basis of appraisement."

That will permit the "dumping" manufacturer to do legally what the Secretary complains of, and it will modify section 2854. As the law now is, the tax must be levied on the higher invoice value, no matter how much less value the appraiser may report as dutiable value at *time of shipment*.

A little more detail and a reference to the Revised Statutes are needed to clear up, for the average Congressman, this mediæval business.

If the fair market value of a yard of silk, woven at Lyons, was, on the day of the completed weaving, 30 francs, but if, a year afterwards, that value had fallen to 20 francs, and the manufacturer then consigned it to New York for sale, he must (section 2854) put 30 (not 20) francs in the invoice as the invoice value. If the manufacturer inserts 20 instead of 30, the consul is bound to refuse to certify the invoice as correct, but he does not refuse. When the consignee enters the silk at New York, he must (section 2785) present the invoice which has been certified by the consul as a true invoice; he must, in his entry-paper, declare the value contained in the invoice; he can increase that value (never diminish it) only on one contingency (section 2900), which is when he believes the dutiable value greater than the invoice value, and then he may add on the entry to make market value, and avoid a penalty of 20 per cent. on the appraised value (confiscation of one-fifth), in addition to the ordinary tax, if the appraisement exceeds the entry by ten per cent. or more. On the other hand, the appraising officer must ascertain and report (section 2902) to the Collector the true market value at *time* of shipment (not of manufacture), which may be 20 (not 30) francs, but yet the Collector must (section 2900) levy duty on not less than 30 francs. We do not vindicate that law, but any Congressman can see that, if it were executed, foreign manufacturers could not dump their rubbish on us at rubbish valuations. It is not executed, because it cannot be by such consular and appraising officers as are now in the Treasury service. They might as well try to swim across the Atlantic. Our consuls know next to nothing of values; their verifications of invoices are perfunctory; our appraising officers blindly

follow the invoice values unless a rival importer or a manufacturer "puts up a job." But yet the protectionists fear that if they "let up" by the least bit, and alleviate the barbaric stringency of the laws, the protective system will come down with a run.

A long distance further on, Mr. Windom's report deals with what the author describes as "the *alarming* prevalence of undervaluation." Of course undervaluation abounds. It always has and always will under such a preposterous tariff as ours. Undervaluation is the rule and not the exception. Mr. Windom superficially endeavors to fasten the greater part of the evil on consigning manufacturers and on New York. He endorses this statement:

"During the last year the proportion of the importations for the whole country which are free of duty, or which pay purely specific rates, the latter including such articles of common use as salt, soda, tin plates, and glass, entered at New York, ranged variously from 34 to 63 per cent; while of articles subject to high advalorem rates, such as silks, embroideries, laces, leather, gloves, linens, cutlery, ornamental feathers, buttons, trimmings, hats, bonnets, etc., the proportion imported at that port ranged from 76 to 99 per cent., averaging over 85 per cent. of the entire importations of such goods into the United Seates. About 98 per cent. of all the silks imported into the country during the last year were entered at New York, and the average of such importations at that port for the last six years has been above 96 per cent. Fully 90 per cent. of these importations represented consignments on foreign account, and were, as a rule, undervalued."

That is a hit at New York, and takes no account of the fact that heavy and bulky articles are sent in order to save freight to the port nearest to the place of sale, while costly articles come, by the swift ocean greyhounds, to the Empire City and the Empire Market. The consular invoices and the appraisements of goods sent to ports other than the port of New York are quite as defective, and even more defective. Thereupon the Secretary exclaims:

"There is urgent need for radical reform in the system of appraisements. Under the present law it is practically *impossible* to secure uniform and just valuations. The provisions relating to the form of invoices and their consular authentication should be amended so as to give appraising officers in all cases more definite information of the actual transaction which the invoice is claimed to represent than is at present required."

But, excepting what we have mentioned, he does not and cannot suggest a change, safe for him and his party, in the law regulating invoices. As to appraisers, he commends Mr. Manning's plan for making reappraisements wholly by officials, in which a merchant shall not participate. He intimates no other remedy excepting this, which almost takes away one's breath:

"There is now no adequate means afforded by the laws for the *punishment* of fraud in the entry of merchandise. This is attested by the reports of the Secretaries of the Treasury during the last ten years. I concur in their repeated recommendations, that the statutes should be so amended as to enable the Government to obtain the forfeiture of merchandise, or its value, upon proof of false entry, placing upon the claimant the burden of proof to show innocence of fraud in the transaction. The Government is now required to prove affirmatively not only that the goods were falsely entered, but that such entry was made with fraudulent intent, and to obtain such proof is, as a rule, impossible."

When has "punishment" by forfeiture in court been attempted? Not in the port of New York by Secretary Windom. Why not, if he *knows* that custom-house frauds do so abound? "The last ten years," to which he alludes, cover a part of the period since moieties were abolished in 1874—thanks to Senator Bayard's efforts. Collectors do not seize for forfeiture now. They have not the pecuniary inducement which they had before 1874. But that repeal of moieties made no such change as Secretary Windom describes in the law of prosecution for forfeiture in court, or in the rule of presumption. Whoever wrote that part of his report was either profoundly ignorant of the law or intended to mislead Congress. There is law adequate to punish by forfeiture merchandise whose entry is actually tainted by "fraud." The law needs amendment in order to forfeit the *value* if the goods cannot be found. If the goods are in custody, the prosecution must now prove entry on a false value (if that be the charge), and, in addition, "an *actual* intention to defraud the United States" by that false entry. Under the law of 1863, if an entry was "*knowingly*" made by a false paper, the merchandise was forfeitable. An importer was presumed to *know* the law, and which papers the law declared false. If he presented such a paper, his goods were to be forfeited for a false paper intentionally presented, unless he could convince the jury that he presented it innocently or by mistake. The new law requires the prosecution to present facts convincing the jury that the acts were done "with an *actual* intention to defraud."

Why should a tariff law deprive an importer of his property, or consign him to prison, unless the Government has evidence that he had "an actual intention to defraud" the revenue? If Secretary Windom had read carefully Secretary Manning's correspondence with Mr. Justice Blatchford, published in the second volume of the Treasury report for 1885, he could not have blundered as he does. When he declares to Congress that "frauds" abound, does he not intend to say that "actual intention to defraud" abounds?

Mr. Windom and his party are between the hammer and the anvil, the devil and the deep sea. If they keep the preposterous and unconscionable invoice and collection laws on the statute-book, the laws will not and cannot be executed, smugglers and undervaluers more and more cut down dutiable values and customs taxes, and the administration of the custom-houses is more and more the scandal of scandals. But if, on the other hand, the present absurd taxes are maintained, and the monstrous stringency of the customs law alleviated, the customs revenues will be even more reduced—when the deterrent force of punishment is removed.

WAS WALPOLE CORRUPT?

No one who has made a considerable figure in the history of constitutional government has done so much service as an awful example of the evils of corruption as Sir Robert Walpole, who was Prime Minister in England under the First and Second Georges, and is generally acknowledged to have been one of the three greatest Ministers England has ever had, the other two being Pitt and Gladstone. For over a century his mode of managing the House of Commons has figured in innumerable speeches and articles as an illustration of venal government, and one of the cynical saying ascribed to him—"All men have their price"—has probably given comfort to more political knaves and pessimists than any other maxim, motto, or apothegm. (What he really said was, "These men have their price.") Sooner or later, however, all the villains in the human drama find somebody to say a good word for their memory, and Walpole has been lucky enough to find an apologist in Mr. John Morley, who has just published an extremely brilliant biography of him in the "English Statesmen Series."

Mr. Morley takes up the charges against him seriatim. The first and most famous is that Walpole used to buy the votes of members of the House for cash, which he paid without concealment. But this, Mr. Morley says, must be judged "in the light of political history." Shortly before Walpole's day the Secretaryship of State was sold for a few thousand pounds, just as the command of regiments was sold in our own day. Lord North "jobbed public loans"—that is, let in his own friends on "the ground floor"—long after Walpole's day. It was not considered at that time any more discreditable to buy the vote of a member of Parliament than it has been considered until now in England, or than President Arthur considered it, or Quay and Dorsey now consider it, to buy the vote of an elector. Members used to buy their seats in Walpole's day, and owners of rotten boroughs used to sell them, just as our bosses sell judicial and other nominations for "assessments." It probably would have been difficult to persuade a member who had paid heavily for his seat that it was any great harm to sell a vote to the Minister now and then to recoup himself. Mr. Morley, in fact, admits that Walpole did use bribery in one form or another when necessary to get or maintain his majorities, but he adds: "To say with some modern writers that Walpole organized corruption as a system, that he made corruption the normal process of parliamentary government, that he governed by means of an assembly which was saturated with corruption, is to use language enormously in excess of any produceable evidence and of all legitimate inference." A committee of investigation, mostly composed of his political enemies, sat on his career after his fall, and worked over it for ten years, and found no facts to support the allegations of bribery. "Two of the great heads of accusation," says Mr. Morley, "shrank up into miserable dimensions, and the third remained a matter of vague and unsupported inference."

The charge of using corrupt influence on elections Mr. Morley meets by showing that worse things were done by Walpole's successor than by him. Our managers would smile over the charges against Walpole under this head. He promised the Mayor of Weymouth a place in the revenue service in order to have a returning officer of the right

stripe; he dismissed some Custom-house officers for voting against the Ministry, and he advanced some money for legal proceedings in some boroughs. But then George III. bought boroughs wholesale, and got himself into debt thereby, and Lord North gave Lord Edgecombe fifteen thousand pounds for his boroughs, and Lord Falmouth seven thousand five hundred for his. But this is straining a point, because Mr. Morley has already pleaded that the traffic in boroughs was well established in Walpole's day, and he does not deny that Walpole engaged in it. What he says is, that "he never approached such a scale as this." To know whether this makes any moral difference in Walpole's favor, we must know what the comparative necessities of the two cases were. Had Walpole been as weak a man as North, and needed boroughs as much, he would doubtless have made as large purchases as the exigency called for.

Walpole was also accused of lavish use of the secret-service money which every minister has at his disposal. Mr. Morley says he spent no more of it than his predecessors and successors, and that the condition of foreign affairs was such as to account for his outlay, however large it was, without, in the absence of any direct proof, resorting to the bribery hypothesis. Moreover, if he had corrupted on the scale charged against him, it must have come to light somehow, and it never did. The kind of corruption which Walpole practised openly, without shame or scruple, was the reservation of every bit of the Crown patronage, small and great, for members of his own party, or, in other words, what we call the "spoils system"; but in this, says Mr. Morley, "he acted on the principle that is accepted in the United States, that is not disavowed in France, and that, although disavowed in Great Britain, has not even yet wholly disappeared here." The only case of direct bribery, in fact, proved against Walpole was the payment of £900, in two sums of £500 and £400 respectively, to two members, who required that amount to vote against a motion for an address to George II. asking him to settle £100,000 a year on his detested heir-apparent. The King grumbled a good deal at the amount, but Walpole held that, under the circumstances, the votes were cheap.

It will be seen from all this that Mr. Morley's defence is mainly a plea in extenuation. But he does take Walpole down from his bad eminence, and places him among the common herd of eighteenth-century corruptionists, although he towers above them all in parliamentary skill, in force of character, and in real devotion to the public service.

A CELEBRATED AMERICAN.

A RECENT number of the *Journal du Droit International Privé* contains a discussion especially interesting from various points of view to Americans. The advent of "Buffalo Bill," with his Wild West Show, in France appears to have awakened the attention not only of those merely seeking diversion, but also of lawyers and philanthropists. Aside from his being referred to in the *Journal* as "William le Buffle," he is treated with a degree of serious consideration in keeping with the importance of the legal questions which his appearance raised. The first of these is that of the extent of the protection afforded by the French law to his pseudonym and to his literary and artistic property. This question is discussed under three heads: first, his right to his name; second, to the translations of his works; third, to the scenic arrangement of his exhibitions.

By the French law of July 28, 1824, it was forbidden to put upon any commercial product a name other than that of its fabricator or proprietor, but this protection was accorded to foreigners only in case they were authorized to establish their domicile in France, or belonged to a country with which France had concluded a treaty guaranteeing reciprocity. In 1873 another law was adopted which dispensed with the necessity of conventional reciprocity, and required only actual reciprocity under the law of the foreign country. In 1869, however, there was concluded between the United States and France a convention for the protection of trademarks, which was regarded as satisfying the conditions of the law of 1824, and in 1881 the Government of the United States adopted a law which was considered as establishing legal reciprocity outside of any diplomatic arrangement. But this legislation applied only to commercial names. The patronymic of a foreigner has always received in France the same protection that the civil law accords to the names of citizens. A pseudonym has been granted a like protection, under the decisions of the courts. It is regarded as property, and may, without the observance of any previous formalities, be defended against appropriation by civil processes.

The literary works of the celebrated American in question consist of two books entitled 'Buffalo Bill's Wild West' and 'Buffalo Bill's Wild West Exhibition.' It is the opinion of the *Journal*, in respect to literary productions published abroad, that in general the foreigner enjoys in France only the protection accorded by the laws of the place of publication, whatever that protection may be, and only for the time that it continues in such place. But in respect to the publications of Buffalo Bill the matter was simplified by the fact that they were translated into French, and the translations printed in Paris and duly entered as French publications. This secured the full protection of the French law for the translations. Another question, however, arose as to the polychromatic representations of life in the Far West with which we are informed that the walls of Paris were covered, to the great distraction of passers-by. These, as artistic productions, enjoy under the French law the same, and only the same, protection as the literary works.

The combination of mimic scenes is regarded in France as a work of intelligence, and, as an intellectual creation, may be the object of appropriation. In such a case it is not necessary to inquire what protection such a representation would receive under the foreign laws. Thus it has been held by the French courts that a ballet composed of national dances of various countries so as to constitute a particular and distinctive combination is a subject of private property, which the laws will secure.

Aside, however, from questions of literary and artistic property, the exhibition of the Wild West Show in Paris provoked a controversy of a most serious and important character. Early in May one of the Indians met with an accident. Profiting by this circumstance, M. Joffrin, a member of the Municipal Council of Paris, at a session of that body held on May 31, invoked the spirit of 1789, and, with the approval of a certain number of his colleagues, offered a resolution to interdict the further representations of the celebrated American. This resolution is so remarkable that the full text should be seen. It is as follows:

> "The Council, considering that the great purpose of the Exposition of 1889 is to celebrate the centenary of 1789; that the Revolution of 1789 was the commencement of the emancipation of humanity, without distinction of sex, nationality, or color; that the Exposition and the fêtes of the centenary cannot, without ignoring that which is the reason for their existence, longer tolerate the odious exhibitions of Buffalo Bill—expresses the opinion that the Government should forthwith take measures to put an end to the exhibition."

This resolution was signed by eight members of the Municipal Council. Its consideration provoked a discussion more than animated. M. Georges Berry, a member of the Council, denounced the resolution as contrary to liberty. M. Joffrin replied in a spirited manner by asking of what liberty M. Berry spoke—whether of the liberty of the negroes who were prisoners? The discussion was continued, with increasing excitement, until M. Joffrin, amid interruptions, pronounced those who opposed his resolution to be ignorant of the facts, and declared that it was a shame, that it was unworthy of Paris and of the Government, to permit such spectacles for the pleasure of the depraved. This declaration produced an uproar during which M. Joffrin was unable to continue his speech. The general opinion of the members of the Council, who energetically disclaimed any ignorance of the character of the exhibition, was, as expressed by M. Dubois, that if the performers of Buffalo Bill were slaves, they were so voluntarily, and not within the letter or spirit of the principles declared in 1789. M. Dubois said that the show was a great attraction in an interesting quarter, and that M. Joffrin could not demand its suppression. The latter, arising to reply, was greeted with new interruptions, which were prolonged against the protests of the President of the Council, until the speaker was compelled to desist from further attempts to continue the debate.

The resolution does not appear even to have been put to a vote. Upon the debate the editor of the *Journal* makes the observation that if their ignorance of European culture did not deprive Red Shirt (*La Chemise Rouge*) and his companions of the pleasure of reading the proceedings of the Municipal Council of Paris, they would probably display a lively astonishment at seeing themselves treated as slaves.

THE AFRICAN ECLIPSE EXPEDITION—II.

NEARING ST. GEORGE HARBOR,
SIERRA LEONE, Nov. 18, 1889.

AT St. Vincent, in the Cape Verde Islands, some 800 miles off the coast of Senegambia, and in latitude 17° north, I found a small number of people who took a kindly interest in our work, among them Mr. Lloyd, the obliging manager of the Brazilian Submarine Cable Company's offices. Mr. Lloyd has been in the island twelve or fifteen years, and finds it a delightful climate. The residences of the officials are up in the hills, where a dustless air and very even temperature prevail.

From here diverge the three great lines of the South Atlantic cables, northward to Lisbon, eastward to Africa, and southwest to Brazil. The latter lines are nearly equal in length to those between the European and North American Continents. The general offices were well stocked with maps and charts of great value, showing the exact location of the submarine cables at every point in the ocean bed, and the depths at numerous places as well. In the grounds about the Cable Company's offices we found the meridian pier used by officers of the United States Navy some ten years since in determining the long chain of South American longitudes; and, hard by, Mr. Preston set up his instruments, and made a few observations for the magnetic elements. Pendulum-swinging of course requires too much time to be essayed until Loanda is reached.

Here, too, I received the severest damper yet felt, learning of the sad death of Commander Pullen at Bonny only a few hours before. Bonny is at the "corner" in the West Coast, and Commander Pullen was just conducting a series of experiments looking to an exchange of longitude signals with my own party at St. Paul de Loanda so soon as we should arrive there. In boating about the lagoons he was so unfortunate as to fall a victim to the malignant type of malarial fever which prevails in that deadly region. But for his untimely death our eclipse station might have been connected directly with Greenwich, through St. Vincent. As it is, we shall reach Greenwich from St. Paul de Loanda through the roundabout route of the Cape, Mozambique, the Red Sea, the Mediterranean, and trans-European lines.

Mr. Preston, of the United States Coast and Geodetic Survey, who accompanies the Expedition by the direction of the Secretary of the Treasury, has been indefatigable in availing himself of every opportunity afforded by the *Pensacola's* making port for coaling purposes. Fortunately for the progress of his work, if not for the progress of our ship towards the eclipse station, these opportunities have been frequent. First, at Fayal, in the Azores, on November 2 and 3, a complete series of magnetic observations was made, comprising the elements of declination, magnetic dip, and intensity. By the courtesy of Mr. Dabney, the American Consul at Horta, these observations were carried on in a secluded portion of the grounds surrounding the consulate. At St. Vincent, in the Cape Verde Islands, our stay being of uncertain length, the observations for magnetic declination were necessarily abridged, but the other two elements were satisfactorily determined.

Mr. Brown, the naturalist, has made good use of his opportunities at Horta and at St. Vincent. At the former a considerable collection of fish, shells, star-fish, and sea-urchins was obtained, some very beautiful specimens of the latter being brought away in their native rocks by chipping off the pieces with large chisels. Lava and minerals were also collected; and, fortunately for the expedition, I fell in with Mr. Howe, who generously gave his time to the naturalists, and materially assisted in the collections of shells, plants, and insects. At St. Vincent large amounts of fish, shells, lobsters, and shell-fish were procured, as well as fine specimens of sea-urchins, also birds and plants in abundance. As we near the coast of Africa, porpoises and flying-fish are encountered in large numbers; but the time is too short to delay the vessel for the capture of any specimens, even if it were supposed that they might be of use. Some curious observations, thought to be new, have been made on the caudal propulsion of the flying-fish while sustaining itself above the water. Some eight miles to the south of St. Iago, while the engines of the *Pensacola* were undergoing repair and the vessel was in a dead calm, Lieutenant Nichols shot from the stern a beautiful gannet, which, when brought aboard, was found to present some interesting peculiarities.

Mr. Orr, the anthropologist from Clark University, has been prosecuting his researches among the entire company on board, and it is doubtful whether either the captain of our good ship or the chief of the expedition will escape his callipers. Having begun low down, however, among the coal-heavers and others, he finds the ship's crew extraordinarily well developed. As might be expected, being picked men, their measures place them well above the ordinary standards. A large number of different races are represented, from the Aspinwall Indian to the Dane and Norwegian. After landing at St. Vincent and returning to the ship, the anthropologist was prepared to make a generalization, which seems indisputable, that the women of the Island are greatly superior to the men in physique, if not in intellect. One is prepared for easy assent to this conclusion if he stands on the wharf and observes the knots of masculine loafers, while women carriers are doing the most, if not all, of the work, bearing on their heads and sturdy necks not only loads of coals and fruits, but even heavy burdens of lumber.

No member of the expedition is happier or doing better work, or more of it, than Prof. Abbe, the meteorologist. In a former letter I gave, I believe, some account of special observations made by himself and his corps of assistants, drawn from the younger officers of the *Pensacola*. No repetition of the waterspout has yet exhibited itself, and the opportunity of a dozen or two waterspouts in a single morning must be indeed a rare one. Some of the instantaneous photographs of those interesting phenomena observed on the morning of October 22 have, on development, been found to show some rather remarkable characteristics which the pencil sketches failed to bring out.

The philologist and interpreter of the expedition, M. Heli Chatelain, is faithfully at work, day by day, on his 'Grundzüge des Ki-mbundu,' in which the elements of this language are compared with those of Kixi-kongo, Luba, Lunda, N-mbundu, Oshi-ndonga, and Otyi-herero. Its conclusion will enable one to form an idea of the mutual relations of the chief languages of Central West Africa.

Meanwhile, it is by no means forgotten that the total eclipse of the sun the 22d of December forms our main errand. By day the preparation of the instruments goes steadily on, and a variety of optic experiments by night. In the middle of the last week the pneumatic chronograph apparatus was got together, and several instruments, spectroscopic, polariscopic, and other, were coupled to it. Although this was the first occasion in which the automatic instruments had been tried, everything operated perfectly, photographic plates changing in precise routine, and exposing shutters opening and closing at appointed instants, while the time of every movement was recorded with entire accuracy to a small fraction of a second.

The publication of the bulletin of the expedition is making slow but certain progress on board the *Pensacola*. As may be imagined, the resources of our printing-office are in no wise vast; but Leaflet No. 6 is now on the press, and may be ready for issue from Saint George. As I write, the far-famed mountains of Sierra Leone are already on the horizon, genuinely our first glimpse of the Dark Continent.

DAVID P. TODD.

GWEEDORE.

DUBLIN, December 7, 1889.

THE circumstances surrounding the tragic end of District Inspector Martin at Gweedore early in the year, and the legal proceedings consequent on it, concluded only a few days ago, are singularly suggestive regarding the relations subsisting between the people and the Government in Ireland. It has come to this, that our rulers must have not only their own reporters to note all that is said at public meetings, but their own vehicles to convey them, their own magistrates and juries to try prisoners, their own jails, and their own wardens, and they must also have their own witnesses. In political matters and agrarian contentions the people cannot or will not testify against their own class, and their evidence in its favor is not always reliable. The police are kept more and more distinct from their countrymen as "a chosen generation, a peculiar people," whose advancement depends on the extent to which they can justify their superiors by incriminating the Nationalists. Their position is essentially wrong, and great are the temptations to which they are exposed in the disturbed districts. Armed with deadliest weapons, they are pitted against the people, aware that if they fall, no one will befriend or witness for them, and if they baton or shoot down, whatever public opinion or coroner's juries may say, they will be exonerated.

Gweedore is a desolate region in Donegal, between the Atlantic and the slopes of Errigal and Muckish, fringed with islands still wilder, from Tory on the north to Aran (not *Arran* of Galway) on the south. Doubtless many readers of the *Nation* who have approached Great Britain "north-about" have seen it, looking probably green and picturesque and refreshing enough, after a voyage; but, in reality, it is a miserable spot from which to wring a living. It has been inhabited only as the people have, by confiscations and evictions, been driven from the richer districts. There the land war has fiercely raged. As the people took up and improved little pieces of bog, their rents have been raised and raised, while old rights of pasturage and commonage were withdrawn. The land could not possibly produce the rents. They came largely from America, and from the earnings of laborers who, from the west especially, annually flock over to the hay and corn-harvesting in England and Scotland. Aggravating enough these poor tenants must be at times, especially latterly, since taking up the position that rent should depend upon the capacity of their holdings to leave a margin after affording themselves a maintenance. The feeling uppermost in my mind

when I visited the place some years ago, and now read descriptions of the wretched hovels from which the people are being evicted, is that no one ought to live under such conditions as satisfy them. Thus, however, they are content to exist, and their poverty is no excuse for wringing from them their last penny.

If we agree with Sir Walter Scott, that "everything is as moonshine compared with the education of the heart," and if we judge by the subsequent career at home and abroad of many born amid such circumstances, these poor tenants are superior to many apparently higher in the social scale. The judges who reduced their rents 33 per cent. in 1885 said: "They were admittedly an industrious people; and we, having heard the evidence very fully, came to the conclusion that they were an honest and veracious people." I myself was never more struck with the industry of a population than in Gweedore; the women even as they walked along the roads knitted, and for this knitting they were receiving at the rate of only six cents a pair for long stockings. The inquirer as to the highest civilization in the north of Ireland may well feel puzzled. Judging by neatness and cleanliness, trim gardens, white-washed houses and shining windows, the palm must be given to the Protestants; judging by morality and "education of the heart," it must be unhesitatingly awarded to the Papists so despised by them.

Father James McFadden has been for many years parish priest of Gweedore. He has been thus well described by a recent writer: "Gray-eyed, the strong, bull-dog face, lit up, like the tops of the Donegal Mountains in fair weather, by a smile that is sunshine itself." He has been the earthly Providence of his flock. In times of distress he has collected funds for them from far and wide. His fatherly attitude towards them was strikingly shown after a disaster that occurred in 1880, when a waterspout, breaking up in the mountains while he was celebrating mass, wrecked his church and drowned five of his congregation. He has been incessant in his efforts to establish markets for the small manufactures of the district. He hesitated long before leading his people into the land contests, but has stood closely by them ever since entering upon it. Last year he served six months' imprisonment for his utterances. I have before me a bulky pamphlet which he published after his release in justification of his course, giving a full history of 'The Present and the Past of the Agrarian Struggle in Gweedore.'

Last January another warrant was out against him for something he had said. For some days he evidently avoided arrest. It was well known that he was at home on the evening of Saturday, February 2. Next morning he openly walked to chapel, said mass to a smaller congregation than usual, and was returning home in his priestly robes of office through the chapel grounds when, in the midst of the dispersing congregation, he was arrested by District-Inspector Martin and seven constables. The Inspector drew his sword and brandished it over the head of the priest, down whose face blood was seen to flow (he having been in fact struck by a stone aimed at his arresters). A "wail" arose from the women in the crowd, and those persons below in the chapel-yard who either could not see what was happening or could see only partially, made a furious rush up the steps; there were some pieces of broken paling at hand, and, before Father McFadden could realize what was happening, the District Inspector was a corpse. It has never been suggested that the priest either by word or sign prompted the attack. A few days after the occurrence, Mr. Morley well said at Portsmouth:

"Let us condemn, for condemn we must, but let us understand. The circumstances of the Gweedore catastrophe are to be the subject of judicial proceedings, and therefore I will speak with great reserve; but I have a right to remark upon the infatuation of the authorities on that occasion. I dare say there are gentlemen on the platform who have been to Gweedore. It is one of the rudest and wildest spots in her Majesty's dominions. I doubt if there is in any part of her Majesty's dominions a people living a harder life than the people of Gweedore. They have got little patches of what is called soil, but which is really transported by their own hands on to a foundation of granite, and the average rent of the holdings in Gweedore is between 20s. and 35s. a year. You may therefore guess how wild, how rude, and how poor they are. They have only one friend—their priest. I am not going into the merits—it would be most unbecoming to go into the merits—of what happened the other day, but was there any occasion for arresting this priest? Now I'll put a parallel case to you. There is in Belfast a very popular clergyman of great authority and influence among the Protestants of that great city. I refer to Dr. Kane. He is also, I understand, high in position in the ranks of the Orangemen. I am obliged to use his name for the purpose of giving point to my argument. But supposing, in the excited days of 1886, Dr. Kane had made an incendiary speech, and, when I was Chief Secretary, I had found it to be the business of the Executive to arrest Dr. Kane: should I not have been insane if I had ordered or sanctioned the arrest of this popular clergyman upon the steps of Christ Church in Belfast, as he was coming out from performing his sacred functions, in the presence of a crowd of excited and enthusiastic Orangemen?"

The original charge against Father McFadden was at once dropped, and he was indicted for murder! The magnates of the county shortly met in Grand Jury and awarded £4,000 to the widow of the murdered man, to be levied off the district; overpowering forces of military and police were drafted into the place. Father McFadden's house and premises were ransacked from garret to barn. Cordons were stretched across the country, and every sheiling and mountain-hollow examined. Guards occupied the mountain passes, and the inhabitants were obliged to have passports for permission to walk in safety along the highways. Gunboats cruised among the islands, whose people were included in the general body search. Gangs of handcuffed peasants were driven into boats and spent the night on the open deck of a gunboat, tossing in a heavy sea, and exposed to hail-storms. Father McFadden and a number of accused were hurried to Derry Jail, some forty miles away. The prisoners were gratuitously subjected to severe hardships. Take the after evidence of one of them:

"That day we were driven on outside cars, in snow and cold and storm, a distance of thirty miles to Letterkenny. Each had his hands manacled across in front of him. I had only my waistcoat and a guernsey shirt. I never felt so cold as I did that day. I thought I had some trials of great cold gathering seaweed from the waves in frost and snow, but I never felt anything to compare with my sufferings from cold that day."

They were taken on one remand back to Gweedore, and on seven or eight occasions to Letterkenny. Upon each remand the magistrates easily gave in to another, on the assurance of the prosecuting constabulary officer "that, if further time were granted, he would be able to produce evidence against the reverend gentleman." After Father McFadden had been two months in close confinement, the charge against him was modified to conspiracy, and he was released on bail. In his absence, during these proceedings, evictions on the Olphert Gweedore estate were renewed, leading to the imprisonment of Mr. Conybeare, M. P., and others.

Twenty-three peasants were included with the priest in the capital charge, and all were returned for trial. Some of the police evidence was curious. With the exception of one, no policeman knew all the prisoners even by sight. Some were ignorant of the names and appearance of them all. One constable, at a critical point in the investigations, was ordered out of court for drunkenness. Another identified a man whom he declared he had seen 300 yards away on February 3, some days afterwards, "by the cut of his clothes." The chief witness, who identified fifteen in all, whom he had never seen before, failed to recognize one when their places in the dock were altered, and, after declaring he could identify no more than he saw in the dock, identified two others.

The prisoners were returned for trial in April. The state of doubt in which even the authorities were at this time regarding their guilt is shown by a telegram in cipher, intercepted and deciphered by the Nationalists, sent the following month from one of the officials in Dublin to another at Gweedore: "Met Ross [Crown Prosecutor], who hopes detectives may be left at Gweedore to try catch actual murderer of Martin."

Conviction of any one in the district under ordinary processes of law was most unlikely. The Crown exercised its right and changed the venue to a (for Ireland) notoriously Conservative district, the Queen's County, and at Maryboro', last October, 200 miles by road and rail from their homes, appeared a melancholy procession of about 150 prisoners and witnesses, some of whom could not speak or understand the language of their accusers. The town and court-house were occupied with a large force of military and police.

The prosecution was conducted by the Attorney-General, Peter O'Brien. The first accused, Coll, was put forward. The population of the Queen's County is 73,000, of whom 64,000 are Catholic. There were 217 names on the special jury list, composed of persons occupying premises valued at £100 and over, for the most part differing in race from the mass of the people and opposed to them in political feeling. The full panel was summoned; the prisoners had the right to challenge only twenty; the Crown had unlimited right of ordering to "stand by," so that the jurors were practically selected by the Attorney-General. The jury was "packed." Three hundred years ago Edmund Spenser, in his 'Eudoxus,' suggested that the Government in Irish trials should "Have care to appoynt either most Englishmen, or such Irishmen as were of the soundest judgment and disposition"; and from his days till the present, jury-packing has been one of the principal means employed in Ireland to conceal despotism under constitutional forms. There could hardly be any system more opposed to honesty and fair play or more galling to Catholics, and it is consequently resented by the mass of the people. It is a prominent feature in all trials connected, however remotely, with land or politics. The Attorney-General, O'Brien, is credited with having carried the art to perfection, being known as "Peter the packer." From the panel thus narrowed, as the names were called, every Catholic was rigidly excluded. Yet even by this jury Coll was declared guilty of manslaughter only. Another prisoner, Gallagher, was put forward. The packing went on. Several Catholics protested at being set aside, and two were fined £20 each for their temerity; one was admitted on the jury. The evidence was so weak that there was a disagreement; it

is now known that several were for acquittal.

The friends of Father McFadden and the prisoners were in high spirits—it was believed the packing was irretrievably damaging the Government in England—when the announcement came that a compromise had been concluded. Seven men, or their counsel for them, pleaded guilty to manslaughter, and were sentenced to from two to seven years' penal servitude; eight to misdemeanor, and received sentences of two to six months. In the course of passing these sentences, the presiding judge made an assertion rather serious for Nationalists engaged in political demonstrations in Ireland: "Every one concerned in resistance to the police in the execution of their lawful duties is responsible in the eye of the law for murder if any of the police are slain in the discharge of their duties." Father McFadden pleaded guilty to the technical charge of obstructing the police, and was liberated on his own recognizance.

This compromise was without doubt a masterly stroke for the Government. I have scarcely ever known a course pursued by the counsel of quasi-political prisoners in Ireland more generally condemned. At first, only that Mr. Healy, M. P., had been one of the counsel, nothing could have prevented popular suspicion and indignation. Subsequent public and private explanations have tended to convince most that, considering the danger of capital convictions, the best course was taken. A change of government might shorten sentences; it could not restore the dead to life. In some of the cases, it is said, there was little or no evidence to rebut what was known would be the testimony of the police. Why, then, it may be asked, did the Government consent to a compromise in these cases? Because the Government were unaware that there was no such rebutting evidence as there had been in the cases of Coll and Gallagher. This absence of evidence where it was wanted increases the probability that the strong alibis set up in Coll and Gallagher's cases were founded on fact. Father McFadden in his own case sacrificed veracity by acknowledging guilt where there was none, to save members of his flock from possible death or long terms of penal servitude. Coll received twelve years. Gallagher was released. The permissibility of some of the police evidence in Coll's case has since been considered on appeal by nine of the judges, and, after two days' argument, the verdict was, on the 20th ult., upheld by five, of whom Justice Gibson, who tried the case, was one; the remaining four judges being for setting it aside.

The second act in the after drama was the sale, accompanied by popular demonstrations of sympathy, last week, of property seized from the protesting Catholic jurors, who, on principle, declined to pay the fines imposed on them. The third and last act is that Mr. Peter O'Brien, perhaps the most generally unpopular man in Ireland, who has been reaping a golden harvest of fees in the direction of the two or three thousand cases under the Coercion Act, has, over the heads of many men of his own side in politics better qualified for the post, been appointed by Mr. Balfour Chief Justice of the Queen's Bench, with a salary of £5,000 per annum and valuable patronage. The Chief Justice is of all the judges supposed to shield the subject from oppression by the Crown. And the appointment was unnecessary. The judiciary of Ireland is out of all proportion compared to the judiciary of England and Wales. Mr. Balfour had power under an act passed by the present Government to transfer the Chief Baron of the Exchequer to the Queen's Bench, thereby amalgamating the two divisions and leading to an ultimate saving of perhaps £20,000 a year. But under present circumstances the Government cannot afford to dispense with any patronage. Before all, the forensic intellect of the country must be bribed. D. B.

THE EPILOGUE OF THE EXPOSITION.

PARIS, December 4, 1889.

BY the side of the great moral manifestation which the Exposition leaves as its chief souvenir, the financial results have been almost overlooked or regarded of secondary importance. Still, if 40,000,000 francs would be considered cheap for all they have realized for the country—a truce when storms were brewing abroad, as well as a flattering occasion for self-assertion; a deterrent against party quarrels at home; an incentive to production and a broad scattering of instruction—a glance at the balance-sheet will show the success to have cost even less.

The budget, it may be remembered, was fixed at forty-three million francs. Seventeen were supplied by the State, eight by the city of Paris, and eighteen by a private society. Three millions were set aside as a reserve fund in case of eventualities. The costs were estimated as follows: 31,650,000 francs for the works (canalization, parks, gardens, and the various buildings), 5,000,000 francs for the labor, 3,350,000 francs for the expenses of the administrative departments—a total of 40,000,000 francs. It is seldom that in public or private enterprises the expenses do not exceed the original estimates. The Exposition marks an exception to the rule, for at the end of January, 1889, when the bulk of the work was done, leaving only the decorative and finishing touches to be given, it was found that the calculations had overestimated by 3,000,000 francs the sum actually needed. Not too intent on economy, the Financial Committee applied nearly a million of the unexpended funds in the work of decoration, which was executed in a manner scarcely anticipated from the outset. This surplus smoothed another difficulty. The State had made a contract with a society of electricians, and saw fit to break it in order to close with more advantageous contractors. By paying a forfeit of 1,800,000 francs it regained its liberty. In addition, there were still left 300,000 or 400,000 francs, which were appropriated to medals, diplomas, and awards.

Now to examine the question of profits proper. Aside from the reserve fund of 3,000,000 francs, which remained untouched, another 3,000,000 francs were added through the Exposition-ticket combination (of which a word will be said later), and 2,000,000 francs coming from the concessions held by lessees of places of amusement and restaurants, cafés, etc., resulting in a total profit of 8,000,000 francs. The most practical judges certainly did not expect this. In face of the rich display, a deficit instead of a profit was predicted.

Long before the completion of the works, the private society which had furnished the 18,000,000 francs, had grown irksome to the State. They were too watchful of their own interests and exacted certain guarantees to insure the return of their money. They insisted on the abolition of free entrances—school-teachers, charitable institutions, even collaborators and exhibitors not excepted. The 2,270,000 "dead-heads" of 1878 were placed "à l'index." In short, they would have robbed the Exposition of its character for liberality. This state of things was bringing untold complications when, two months before the opening, M. Christophle, President of the Crédit-Foncier, made a proposition which enabled the State to get rid of its troublesome partners. The proposition offered 21,500,000 francs in exchange for the privilege of the emission of the Exposition bonds. The State jumped at it, paid off the 18,000,000 francs advanced by the private society, and scored in addition 3,000,000 francs net profit. This transaction was even worth more: it discounted the financial success of the Exposition. The 1,200,000 bonds, with twenty-five entrance tickets attached to each, insured 30,000,000 of paying visitors, whether the tickets were used or not. They were all subscribed for before the end of April.

Before turning from this avalanche of figures, it is well to say in what measure the Crédit-Foncier, the State, and the city of Paris were compensated. The Crédit-Foncier made 3,000,000 francs immediately out of the 30,000,000 francs for which the bonds were sold. Five and a half millions were reserved to make up the premiums of the lottery and reconstitute the capital in seventy-five years—very feasible with time for an accomplice. The State keeps 5,300,000 francs out of the 8,000,000, and profits by a surplus of 13,507,000 francs on the internal revenue and 11,010,200 francs on the monopolies. Its outlay is thereby fully compensated without insisting on the political advantages and the glory. To the city of Paris return 2,700,000 francs of the cash profits, and an excess of 9,000,000 francs taken at the city gates as entrance duty on extra provisions and liquids brought in during the six months.

But the Exposition leaves to the city of Paris a more tangible memento. Instead of returning to sandy desert, the Champ de Mars remains what we have seen it during the great fête—that is to say, the best in it is saved from the pick-axe, and a reinforcement of gardens is to extend over the space occupied by minor galleries and annexes now fast being pulled down. The Municipal Council realized too well the value of the chief buildings to allow them to be done away with like those that figured in other expositions. But the cost and size of those in question are not the only plea for their preservation. A fact that escaped many in the kaleidoscopic show of the summer is generally recognized now that the doors are closed. Iron as a material in combination with terra-cotta and enamel has acquired an æsthetic value. These structures, which had no other pretension than to serve temporary needs and to please, accidentally developed an art principle. For the first time in the "reign of iron" have such vistas been opened in industrial architecture, affording speculation as to future requirements. We do not mean by this that our *fin de siècle* has found a formula equivalent to that of the Maison Carré of Nîmes, or that the word monument is applicable to these first specimens. But as monuments they must be looked upon, for they are the first witnesses that French architecture is in a fair way to make amends for its negativeness since 1789.

It was with great reluctance that the State yielded the Champ de Mars to the city of Paris. This classic field had served so long as a manœuvring ground for the troops of the garrison that it seemed as if the War Office would not be intact without it. But the arrangements are agreeable to all. In place of the Champ de Mars, the city gives an important tract outside the fortifications which will serve as a future manœuvring ground. The new quarter inherited from the Exposition will extend the city westward. If its studied gardens and quincuncial plantations do not prove dangerous rivals to the old Tuileries or

Champs Élysées, at least everything will be done to draw from the latter the easily led Parisian. Many picturesque plans are rumored, beginning with the creation of an annual fair in Paris, after the pattern of those which have made Leipzig and Nizhni-Novgorod famous. But in reference to this the majority seem to think it attractive in theory alone; that a fair in France is too apt to take on the features of an exposition, and that a yearly commercial gathering would prove a failure here. More simple than this, in the buildings saved from the Exposition will be held those yearly assizes at which the Parisian public becomes in turn a votary of horseflesh, horticulture, fat cattle, and art. In other words, the horse and flower shows will find in Machinery Hall an expanse under glass such as they never had before; a track 300 yards in length by 100 in width for horsemen to gallop over, and later for the disposition of flower-beds. The thirty-yard gallery connected with the central dome, already tested for its sonorous acoustics during Exposition concerts, will be improved, if necessary, and utilized for musical festivals and popular concerts. The Palais des Arts Libéraux is already bespoken by M. Antonin Proust, Director of the Museum of Decorative Arts, which has never had a fitting frame at the Palais de l'Industrie. In addition to this collection there are numerous partial expositions claimed by industry or trade that can find room only with difficulty.

As to the Palais des Beaux-Arts, the first idea was to preserve it as it was during the Exposition, a temple of modern art. But here this great plan of centralization seems to be splitting against a resistance emanating from the Society of Painters themselves. They have many reasons for not wishing to be dislodged from the Champs Élysées: first, the light, which they declare to be unevenly distributed in the Palais des Beaux-Arts; secondly, the distance. This argument has more force than the former, as the light can be regulated. The Society of French Artists, an independent society of a few years' standing, do not paint pictures or model statues for a restricted public of amateurs. Their exhibition has got to be something besides an artistic competition and a market for their produce. It is the source of a fund of which every franc is scrupulously saved to form a capital out of which pensions will be given to the oldest and most distressed combatants, for whom the career did not prove remunerative. If their Salon is moved to the Champ de Mars, they think the question of receipts will be compromised. They have no faith in the neighborhood of the Eiffel tower to send them visitors.

Since the first of December the Tower has been closed to the public, and the flag will not float again until May. There is a plan on foot of adding another story to it—not on the summit, but an intermediary floor above the first platform. This would be devoted to a hotel—modern if ever hotel was—to be patronized not only by delicate tourists in quest of pure air, who prefer this altitude to a sojourn on the top of the Righi, but by lovers of novelty. Hitherto the Tower has not been considered as a place of entertainment, or a spectacle, but strictly as an object on exhibition. A proof of this is the fact that the City Bureau of Aid to the Indigent has not claimed the 9½ per cent. duty which public places of amusement have to pay into its coffers. Charity has lost some sixty thousand francs by this subtle distinction of the law.

LE COCQ DE LAUTREPPE.

Correspondence.

DUANE AND BACHE.

TO THE EDITOR OF THE NATION:

SIR: In your paper of November 28 appears an interesting letter, written by Mr. Worthington C. Ford, giving an account of some forged letters of Washington. The latter half of the letter, however, contains so much imaginative history as to make one question whether this letter of Mr. Ford's is not itself a forgery. It is as comprehensive in its assumption of information, and yet as contradictory and minutely inaccurate, as the modern dictionary.

In the next to the last column, Mr. Ford states:

"Duane, an Irish-American, and Bache, a connection of Benjamin Franklin, formed a partnership, and their paper, the *Aurora*, has never been surpassed, if equalled, in its libellous spirit. . . . This precious pair undertook to destroy the influence of Washington, for they feared he might be a Presidential candidate for the third time."

It is then suggested that, for this purpose, "they republished the forged letters," and added others, "but so garbled as to mislead the reader."

Mr. Ford seems to know who did all this, yet he says: "Washington . . . made an effort to discover the perpetrator—an effort that yielded no results."

William Duane, referred to above, was born in New York State. If to have Irish blood in him constituted him an Irish-American, it may be asked, Does any one ever become an American-American? B. F. Bache was undoubtedly "a connection" of Franklin's, being a favorite grandson, who was educated by him abroad as a journalist. He established the paper afterwards known as the *Aurora*, and continued to publish it till his sudden death by yellow fever in 1798. Shortly after this it was published by Col. Duane, who had been writing on it for some time previous.

The utter improbability that "this precious pair" could have formed the plot to destroy Washington's chance for a third term is shown by the fact that William Duane had not been in the country since he was a boy, being brought up abroad, and did not return here until the summer of 1796. He sailed from London May 16, and arrived in New York July 4. After staying in New York some little time, he came to Philadelphia, where he became editor of a paper published by Mr. Bradford, afterwards called the *True American*. Comparing these facts and dates with the time of the publication of Washington's Farewell Address, the middle of September, 1796, we see how imaginative is the theory of partnership, plot, and publication. There was not time enough.

Near the close of the letter it is stated: "The farewell to Washington on his leaving the Presidency, penned by Duane, has become a classic of unseemly libel." If Col. Duane really wrote what is here attributed to him, it could hardly have been published in the *Aurora*, for the following words form the opening of the actual response made by that paper to the Farewell Address, and are a fair sample of its dignified tone: "We are persuaded there is nothing we can say that will fully express the estimation in which his illustrious and important services are held by the citizens of this much-favored country."

A curious fact may be added, in further evidence of the careless literary or publication work of the present day. Col. Duane has been found useful in more ways than one to save trouble to the man of letters. A few years since, when *Harper's Monthly* published an illustrated centennial account of the Evacuation of New York, its author possibly saved himself trouble by inserting the likeness of Wm. Duane, and calling it that of James Duane, the first Mayor after the close of the war.

C. W. DUANE.

PHILADELPHIA, December 16, 1889.

JEFFERSON DAVIS IN PIERCE'S CABINET.

TO THE EDITOR OF THE NATION:

SIR: I have read with great interest your obituary notice of Jefferson Davis in the *Nation* of the 12th inst. It is evidently written by one who has studied American politics well and knows how to reason acutely. Whether his theory of the Southern secession in 1861 is entirely correct I will not inquire; but there is a misstatement of fact which seems to indicate that he has overlooked some important facts bearing upon the subject.

"From his [Davis's] return from Mexico," says your writer, "to the outbreak of the Civil War, he was in the Senate of the United States except during the Administration of Franklin Pierce (1853–1857), when he was Secretary of War." As a matter of fact, Jefferson Davis was in private life when Franklin Pierce invited him into his Cabinet. Upon the issue which the Compromise measures of 1850 sought to reconcile, Mississippi came near declaring her separation from the Union. The ultra State's-Rights party offered General Quitman for Governor in 1851. He was opposed by Senator Foote as the Union and Compromise candidate. The canvass was bitter and earnest; Quitman found that he was losing ground, and withdrew, and, at the last moment, Jefferson Davis, as a more prudent statesman of the same stripe, was induced to take his place on the ticket. Davis resigned from the Senate and led the forlorn hope, but in vain. Foote was chosen Governor, and Davis, the defeated candidate, retired to private life. His appointment as Secretary of War marked his new entrance into national politics.

Yours very truly, JAMES SCHOULER.

BOSTON, December 18, 1889.

THE "SOO" CANALS.

TO THE EDITOR OF THE NATION:

SIR: Referring to the Sault Ste. Marie, Mich., Canal, you say (No. 1274): "Its original dimensions, which had been increased in 1881, proved totally inadequate to accommodate the growing trade, so that a further deepening to twenty feet, and an enlargement of the locks—now the largest in the world—has been undertaken."

The writer of this paragraph does not seem to be fully informed as to the "Soo" canals. The canal of 1855 still retains its "original dimensions," but it is being enlarged now, and will be, when completed, larger than the canal of 1881, built alongside of the old one, and at present "the largest in the world." Moreover, the Canadian Government has begun a canal around the Ste. Marie's rapids, so that when it is completed there will be three canals at Sault Ste. Marie. Through the canal of 1881 (the old one not being open this season) there passed this season, up to November, 7,507,096 tons of freight.

F. E. R.

POPE AND PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: While "C. F. B.'s" suggestion is worthy of attention as to the relative places of the President and Cardinal Taschereau at the

Catholic University dinner, may they not have been assigned in forgetfulness of the principle that the President, as representing the imperial republic, is officially of imperial rank? Others seem to be confused here. Thus, the Shah is said to have held it impossible to visit this country on the ground that there was here no one of sufficient rank to receive him. And the English, I believe, took umbrage because President Grant declined to receive an invitation to dine with Prince Arthur (or Alfred) at the British Minister's, apparently assuming the superior, instead of admitting the inferior, rank of the Prince. May not the Catholics likewise have confused the intrinsic and the official rank of the President, and, remembering that a cardinal ranks with a mediatized prince (formerly much higher), have forgotten that he ought not to be seated higher than one to whom, for the time being, is due the precedence of an Emperor? C. C. S.

ANDOVER, MASS., December 20, 1889.

THE TRADE OF CHILE.

TO THE EDITOR OF THE NATION:

SIR: So much is being said about South American trade that the following figures, taken from the *Ferrocarril* of Santiago, Chile, of November 7, 1889, may be of interest:

The imports of Chile in 1888 amounted to $60,717,698, or $12,086,836 more than in 1887. The imports from Great Britain and Germany always show an increase. The principal imports from Great Britain are steel bars, ungalvanized iron tubes, iron bars; machinery for railways, mines, printing-offices, farms, machine shops; steam engines for various purposes; blooded live stock, refined sugar; thread, cotton, woollen, and silk cloths; ready-made clothing and underwear, iron bedsteads, furniture, carpets, coal, fine earthenware, prepared paints, tea, wines, and liquors. The increase for Great Britain was in 1888 over 1887, 28.77 per cent.; Germany, 20.75 per cent.; France, 12.37 per cent.

The exports increased in 1888 over 1887, $13,757,915. The principal exports are copper, silver, gold, nitrate, guano, hides, and agricultural products. The exports for 1887 and for 1888 were as follows:

	1887.	1888.
Great Britain	$44,977,972	$56,898,407
Germany	5,071,232	4,751,990
France	3,312,223	4,295,055
Peru	1,050,786	2,071,304
United States	2,611,384	2,070,694

The exports to Great Britain increased 26.50 per cent.; the exports to Germany and the United States decreased.

From 1844 to 1888 Chile exported 1,401,701,772 kilogrammes of copper, with a value of $467,394,422.—Truly yours,

RICHARD WARD GREENE.

WORCESTER, MASS., December 17, 1889.

KANSAS AND THE CONFEDERACY.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for December 12 there is a review of a book, 'With Lee in Virginia,' in which it is stated that Kansas joined the South. The reviewer calls this a mistake, but the author may have the belief that Kansas was rightfully part of the Confederacy. In a Confederate geography, published in 1864, all territory south of Nebraska and east of the Rocky Mountains is marked Confederate. I have also a Democratic campaign map which is marked by colors and colored lines to show:

(1.) Area of Rebellious States, population, 8,000,000.

(2.) All the territory held by our armies up to October 4, 1864.

(3.) Territory lost since the removal of Gen. McClellan and the issue of the Emancipation Proclamation.

Kansas is included in the "Area of Rebellious States."

O. H. DARLINGTON.

PITTSBURGH, December 18, 1889.

COLLEGE ATTENDANCE.

TO THE EDITOR OF THE NATION:

SIR: A remark having appeared in the *Nation* to the effect that the attendance at colleges and universities is less now in proportion to the numbers of the American people than it was fifty years ago, a number of letters have been written to and been published by you, accounting for this decrease in college attendance and suggesting remedies.

I deny the truth of your premises. I admit that the number of students in the four classes known as Freshman, Sophomore, Junior, and Senior is not as large now, proportionally, as it was in 1839, but that means only that not as many young men between seventeen and twenty-two are studying Latin and Greek and mathematics and physics now as boys between fourteen and eighteen or nineteen did at the earlier period. If you will count only the number of those who pursue liberal studies until they have reached the age at which their fathers and grandfathers usually received the degree of B. A., you will find that the number is greater now than it was at any previous date.

Some of your correspondents are wrestling with the difficulty which college students have who wish to enter, after graduation, the schools of law, medicine, or divinity, and who thus are put off to the age of twenty-five before they are in a position to earn their bread. Hence, it is said, men preparing for the professions cannot afford a college course; and a remedy is sought for. What is it? Germany and the countries sharing in its academic usages answer this question readily. Their philosophic faculties, with a three years' course, should correspond to the Sophomore, Junior, and Senior classes in American first-grade colleges. They do as to the age of students. But he who in Germany proposes to attend lectures in law, divinity, or medicine never studies "philosophy" first. He considers himself fully prepared by the *Gymnasium* for the scientific study of a learned profession, and the training for these professions is then conducted on a scientific plan. Courses for law students in comparative jurisprudence, for medical students in comparative anatomy, for divinity students in Semitic languages and Biblical criticism, are just as good means of higher education as the Greek tragedians or analytical mechanics; with the additional advantage that what a man has learned in the line of his profession, though somewhat ornamental, he will recollect more or less all his life, while what is foreign to his calling he will quickly forget.

What is amiss in the American university is the failure to recognize the professional schools as integral parts of the system. This is the humble opinion of L. N. D.

LOUISVILLE, KY., December 14, 1889.

TO THE EDITOR OF THE NATION:

SIR: There is reason to believe that the practice of allowing students to complete a collegiate course without much regard to the traditional four years prevails quite extensively in this State, and doubtless in the West generally. Without taking into account the wisdom of such action, college faculties have in many instances been constrained by those in authority over them either to allow this or submit to a shortening of the course—which might be done either by reducing the number of studies or accepting a poorer quality of work. Most Ohio colleges are more or less closely connected with preparatory departments; and not unfrequently young people from country and village schools present themselves for admission who have a fair knowledge of such subjects as can be taught through the medium of English, but who know nothing of any foreign language. Then, too, the standards of our high schools vary so much that hardly two are alike. Most of them teach no Greek, many no Latin, and a large number do not take their pupils far enough for admission to the Freshman class.

Our colleges and college preparatory schools have thus to deal with students who have all degrees of preparation and various motives, or no motive, for attending school. The young man of fairly mature mind, who voluntarily leaves home to seek an education because he feels the disadvantages of ignorance and appreciates the value of knowledge, will learn much faster than the boy who is sent to school; and of two students equally capable and ambitious, the one who is twenty years old will have considerable advantage over the boy of fourteen or fifteen, if both are put at the same subject. Further, a very large proportion of students in the Western States make their way through college by teaching or on borrowed money. It is, therefore, highly important to the former that they have plenty of time, and to the latter that they be allowed to go as fast as possible. Those are frequently thirty years old at graduation, and sometimes several years older.

I do not believe that the culture element in a course of study has much weight with a large majority of our students. The advantages of knowledge are usually tangible; but that it is better to spend four or five years on a course of study than three is incomprehensible to most young people. When the culture element is not emphasized by home influences, it is liable to receive scant recognition at the hands of young men and women in college. They yield to the pressure to get a diploma as soon as possible in order to take their place in the throng of those who are striving to make their way in the world. Many, perhaps most, of our young men who have wealth and leisure to pursue their studies as slowly as they like, go to Eastern colleges, either because their fathers were educated there, or because the fame of those institutions far overshadows any that we have. Those who seek an education nearer home are no way inferior to the temporary exiles, but their case requires different pedagogical treatment. It may not be absolutely the best, but it is relatively so. I believe if Ohio colleges should insist on four years of uninterrupted attendance on the part of students as a condition of graduation, in addition to the usual three preparatory years, it would decrease the attendance by one-third or more. C. W. S.

OHIO, December, 1889.

COLLEGE GRADUATES AND BUSINESS.

TO THE EDITOR OF THE NATION:

SIR: For fifteen years I kept an old-fashioned store on the wharf, and traded with the East Indies and South America. I was myself a

college graduate, and at that time, over fifty years ago, the merchants were averse to receiving graduates, preferring to take youths in their early teens, and insisting upon more or less menial work, such as opening and sweeping out the counting-room, trimming lamps, and, frequently, blacking boots—tasks imposed upon these unpaid apprentices, partly from economy, partly to supple the boy and take the nonsense out of him. We adopted a porter to perform all these chores, and, partly to give them a chance, preferred college graduates to boys a few years younger fresh from school. There was never an instance of bumptiousness or effeminacy; their duties within and without doors were performed more efficiently and more intelligently than by their associates whose minds had not been educed in college; they did not need so long an apprenticeship.

If you will look into the counting-houses of bankers and brokers nowadays, you will find principals and clerks mostly college-bred; you will find most of the factory treasurers, many of their selling agents, many of the railroad presidents college-bred.

Some years ago you informed your readers that in Germany the boys educated in the Gymnasiums for college, while surpassed at first in mathematics by boys educated in what we should call technical schools, eventually outstripped them. So it is in any sort of business; the general training must tell in the proportion as one rises to greater responsibilities and is called upon to solve more abstruse problems. Were I in search of a partner, I would choose not only a college graduate, but also a trained lawyer because of his training, which prepares him to understand any subject presented better than any layman can. Among my friends now past threescore, those who, for any reason, went from school to counting-room have never ceased to regret it, because of their fewer resources outside of business, their real or fancied disabilities, as well as for the loss of comradeship which becomes more and more sad as years roll on. SENEX.

DECEMBER 17, 1889.

CHAIRS OF PEDAGOGY.

TO THE EDITOR OF THE NATION:

SIR: The letters that have recently appeared in the *Nation* concerning the value of chairs of pedagogy in our large universities have been confined to *à-priori* reasoning. The recent discussions in the East in reference to the same subject had, curiously enough, the same method of treatment. It is quite possible that the older universities in the East are in no need of imitating their vigorous sisters in the West; but one naturally expects allusion to failures, if any can be discovered, in justification of hesitation or disapproval.

It is not necessary, however, to follow the star of empire to obtain arguments from experience. For many years the German universities have had professorships of pedagogy. Since 1876, chairs of the "Theory, History, and Art of Education" have existed in the Universities of St. Andrews and Edinburgh, Scotland. The science of education and the art of teaching are without question best understood in the country where they have longest been taught in the great seats of learning. In Scotland, says an eminent educator, these chairs "have done very much to promote education, . . . not only by raising the work of the schoolmaster in public estimation, but also by attracting attention to education as being not merely a question of machinery for the institution of schools, . . . but a question of principles and methods—in brief, a philosophy."

One of the most prominent and influential of American teachers has lately said that teaching is rarely, if ever, a profession. If not, the sooner it becomes so the better, and nothing will more quickly dignify the teacher's calling than a recognition of it by the great universities. Law and medicine have been transformed into professions by their reception into the homes of the liberal arts.

It is especially the province of the University to educate citizens. Such a duty is the only excuse for the existence of State institutions, at least. College graduates ought to be leaders of the people. They do become our lawmakers, and are the embodiment of the highest public opinion. They should be brought to appreciate educational needs, to have ideas concerning educational methods, to honor the art whose history is "so dreary," to aid understandingly the men whose profession has been sneered at from the time of "Flogging Orbilius" to "Squeers." It is the duty of a university to make known its advancement and to render its achievements generally useful. If methods are improving — and they certainly are — they should be made known, not only by example, but by precept.

Of course it is not only permissible for a State university, it is its bounden duty, to teach how to teach. The pedagogical chair in the University of Michigan ranks second to none in the culture value of the courses offered. It has surpassing influence throughout the State. The University as a State institution would feel bereft of its right hand if it could no longer rely on the assistance of the experienced teacher who teaches the best and latest methods, and keeps the schools throughout the State in sympathetic touch with the head of the system. It is a sign of great advancement that the universities of the Western States have seen and are profiting by the experience of the University of Michigan in this particular. A. C. MCLAUGHLIN.

UNIVERSITY OF MICHIGAN, December 7, 1889.

THE TEACHING AT THE UNIVERSITIES.

TO THE EDITOR OF THE NATION:

SIR: Very many who are, or have been, students will quite agree with the remarks of your correspondent in the *Nation* for December 12 on the lack of *teaching* in many of our higher institutions of learning. That this is by no means a new difficulty will be apparent from these words, which I quote from Goethe's Autobiography. Referring to his early experience at Leipzig University, he says:

"Professors, as well as other official personages, cannot all be of the same age; but then the younger ones teach, in fact, only that they may learn, and, if they are men of parts, seek to urge themselves on in advance of their age. Thus they pursue their own education altogether at the expense of their hearers, since these are not instructed in what is really of use to them, but only in what the professor finds it necessary to elaborate for himself. Among the oldest professors, on the contrary, there are many who have been for a long time stationary; they deliver in general only fixed views, and in the details much that time has already condemned as useless and false."

Herein, with his usual acuteness, Goethe not only points out the fact of poor teaching, but he suggests the reason. The truth is, teaching and original investigation are two distinct aims, which run counter to each other. The teacher gives himself up to developing his pupils' minds, the investigator to developing his subject. To accomplish original work in this day of specialism is an absorbing task, so that the investigator is more and more thrown out of sympathy with teaching. Instead of ministering to the student, he will tend to make the student minister to him.

The practical difficulty will be solved by the complete differentiation of the teacher's work from the investigator's. With increasing specialization, the one who contributes to knowledge and the one who stimulates knowing will become different individuals, and each will be kept to his single task.

In some of our most advanced institutions this evolution has already been partly accomplished, and in one I recall a professor, the best specialist in his department in this country, who has not taught a pupil for many years. Lecture-reading and recitation-hearing are but poor substitutes for real teaching, but the specialist will naturally grudge even these. At present there is far better teaching in the public schools than in the universities. Older pupils will, of course, need less help than the younger, but still one never outgrows the need for personal stimulus and direction.

HIRAM M. STANLEY.

LAKE FOREST UNIVERSITY, December 16, 1889.

Notes.

THE late Prof. W. F. Allen's 'History of Rome' is, we are glad to learn, all in type with the exception of the prefatory matter and the indexes, and will be published by Ginn & Co., Boston, a house whose beginnings were intimately associated with Prof. Allen and his brother, Rev. Joseph H. Allen, author of a 'Manual of Latin Grammar,' the first publication of the Messrs. Ginn. At a literary club in Madison of which Prof. Allen was a member, his last paper was on Historic Fiction: and on former occasions his themes had been Freedom of Speech and Thought, the Duke of Milan, Shakspere as a Person, History and Methods of Wood-Engraving, Coriolanus in History and in Shakspere, and the Roman Forum. These well illustrate the scope of his intellect and learning.

The Open Court Publishing Co., Chicago, announces for immediate appearance an authorized translation of Th. Ribot's 'Psychology of Attention.'

The first volume of a new series of brief biographies of English actors, which Mr. William Archer is editing, will appear early in the new year. It will be the life of Macready, by Mr. Archer himself, and will be followed in due season by volumes written by Mr. Joseph Knight, Mr. R. W. Lowe, Mr. Dibdin, and others.

Mr. Thomas G. Shearman of Brooklyn, N. Y., has offered, through the American Economic Association, a prize of $250 for the best essay on State and Local Taxation of Personal Property in the United States. It must not exceed 25,000 words, and must meet certain inquiries which are enumerated in the circular issued regarding the prize by Prof. Richard T. Ely of Baltimore, Secretary of the Association. December 1, 1890, is the date by which the essays must be in the Secretary's hands.

Before the year closes we must mention (and no more now) the completion of the great work edited by Mr. Justin Winsor, the 'Narrative and Critical History of America,' of which the eighth and last volume is before us (Boston: Houghton, Mifflin & Co.). In addition to the several chapters upon the later history of British, Spanish, and Portuguese America, on which we must defer comment, one remarks

the section concerning the historical chorography of South America, and the appendix on the manuscript sources of United States history (the Revolutionary in particular), and the comprehensive printed authorities (critically distinguished); a chronological conspectus of American history, and a general index to the eight volumes.

The seventh volume of the Comte de Paris's history of our Civil War has appeared in the French original (Paris: Calmann Lévy). It makes an octavo volume of 795 pages.

The fifth part of Dr. Murray's New English Dictionary is now being distributed (Macmillan & Co.). It carries the vocabulary to *Cling*.

From F. W. Christern we receive prospectuses of two notable undertakings—Auguste Vitu's 'Paris,' with 500 fresh designs, and the facsimile reproduction of the New Testament, Codex Vat., 1209, under the auspices of Pope Leo XIII.

We should have been glad to speak last week of the belated 'Salon de 1889' (Paris: Ludovic Baschet: New York: J. W. Bouton), but if any are now unable to use this beautiful volume for a gift, they can secure it as a record of an exhibition severely tested in comparison with the greater show in the Champ de Mars. M. Paul Mantz furnishes the indulgent but not undiscriminating letter-press, while a large number of canvases and sculptures are illustrated by the best of photogravures, mostly full-page and appropriately tinted. M. Mantz calls this emphatically the "Salon des femmes," for never have so many women participated; the sex is fairly represented in the selection here given. Moreover, Jeanne d'Arc, a perennial Salon subject, has this year inspired a small host, of which three are shown in the photogravures, all striking, viz.: E. Paupion's painting, and the rival equestrian statues by Paul Dubois (for Reims) and by E. Fremiet (for Paris), between which, to judge only from the engravings, our choice would be in favor of the former. There is a suggestion of a very lovely landscape in the "Alpes Maritimes; Vue prise à Antibes," by H. Harpignies. A certain interest, but not of composition, attaches to the canvas showing the collaboration of the *Journal des Débats*. An index of artists discussed (whether exemplified or not in the illustrations) is a desideratum.

The other day we described a Chicago edition of Ruskin's 'Sesame and Lilies,' and now we have the same work reprinted in the Messrs. Putnam's Knickerbocker Nuggets series, following the third English edition.

The alliterative 'Man and His Maladies,' by Dr. A. E. Bridger of London (Harpers), sets itself forth as a Popular Handbook of Physiology and Domestic Medicine. It does not appear to deliver false doctrine, but where the buying public for such books is or should be found is a mystery. This is a fair type of a class which contains knowledge, but that little knowledge which, if not dangerous, is perfectly unavailing in illness and unsatisfying in health.

The medicine which is not drugging is well exhibited in 'A Text-book of General Therapeutics,' by Dr. W. Hale White (Macmillan), which is the substance of his summer lectures at Guy's Hospital. Its climatology of America is neither accurate nor complete, but as a whole the book is a useful one in fact, and especially as leading students to look beyond dosing for methods of cure.

'The Bacteria in Asiatic Cholera,' by E. Klein, M.D. (Macmillan), is a careful scientific discussion of the causal relation of Koch's famous comma bacillus to epidemic cholera. Dr. Klein, an English investigator of great distinction, leads the opposition to the doctrine that the micro-organism referred to is the cholera cause, and this little volume clearly explains not only his views, but the steps by which he reached them. It has forty illustrations. In the present state of science the ultimate facts in bacteriology must be settled by a few experts of high attainment, but there is every reason to believe that Klein is right and Koch is wrong on this special point. At least, the impartial student must carefully examine Klein before accepting Koch. It may be that this publication has an unfortunate timeliness in view of the impending pandemic of influenza, for other plagues of this kind have been the precursors of cholera itself.

Longmans, Green & Co. publish the latest systematic treatise on 'The Diseases of Children,' by Drs. Ashby and Wright. It is chiefly remarkable as discussing both surgical and medical affections, the book thus traversing all the disabilities of childhood. As thus displayed, the numerous and serious ills that may befall the young leads to wonder that any escape with unimpaired health.

'Mother, Nurse and Infant,' by S. P. Sackett, M.D. (New York: H. Campbell Co.), is a plainly written book of advice for the use of the trio named, with especial reference to the time when the three first meet. It is better than the ordinary books of domestic medicine.

From the Art Lithographic Company we receive a large number of calendars and colored booklets more or less adapted to the season, and of German make. We cannot rate the best of them very highly in comparison with American productions of the same sort. Prof. F. E. Morse's "Musicians' Calendar" (Boston: Silver, Burdett & Co.) is dedicated this year to the musicians of America, a portrait of Prof. J. K. Paine forming part of the decorated background of the pad, whose several leaves contain dates of birth and death, with the usual extracts in prose and verse. E. Scott, 463 Hudson Street, sends us a calendar in the form of a Maltese cross, "Promises for the King's Children," gathered by Mary Lowe Dickinson, and printed upon the daily leaf.

Sun and Shade for December (New York: The Photo-Gravure Co.) is a Christmas number throughout. The seven plates succeeding the symbolical title-plate are copies of famous paintings by Bouguereau, Gérôme, Holman Hunt, Leonardo, etc. Interesting is the announcement that this unique periodical, devoid of letter-press, will hereafter reproduce the leading pictures in the collection of the Metropolitan Art Museum. Other useful features are also to be added, giving a little more unity to the editing.

Mr. Clarence Cook's *Studio* became a weekly on December 7, with the first issue of the fifth volume (new series). Ordinarily an eight-page paper, it will be enlarged on occasion, and on the first Saturday of every month it will give from three to five full-page supplements, consisting of etchings and various forms of photo-engravings. The *Studio* is published at No. 864 Broadway.

The *English Illustrated Magazine* (Macmillan) renews its form with the December number, the first of vol. vii. It now has a larger page with a single column and a much more condensed, yet still clear and comely typography. The most curious article is that on "The Cats of Ancient Egypt," by Prof. W. M. Conway, apropos of the recent discovery of a cat cemetery near Beni-Hasan, about a hundred miles south of Cairo.

That *Nature* (Macmillan) has completed its twentieth year is subject of congratulation on the part of the whole scientific world, and of all who appreciate its services in the ready interchange of observation and opinion. The editors fitly celebrated it on November 7 by reviewing the progress of science in the two decades since their weekly medium was established.

In *Petermann's Mitteilungen* for November Dr. O. Heyfelder gives an extremely interesting account of the present condition of the industries and commerce of the Khanate, in an article entitled "Bokhara on the Threshold of a New Era." In the industries the production of silk still holds the foremost rank, although Russian machinery is gradually driving out the primitive hand-looms of the people. The cultivation of cotton is rapidly increasing, the amount sent to Russia from the port of Usun-Ada, the terminus of the Transcaspian Railway, being 45,723,640 pounds for the first eight months of the present year. This is an increase of 12,347,920 pounds over that of the previous year, while the amount exported in 1887 was only 3,600,000 pounds. The author, who holds an official position in the city of Bokhara, describes briefly carpet-weaving and its allied industries, the leather, wood, and metal work and the pottery of the Bokhariots. Their ornamentation is often rich and strikingly beautiful, especially in their iron-work, but there is no originality in it. It is simply a slavish imitation of forms and designs handed down from time immemorial. This is illustrated by the fact that on some of the metal tiles of the present day there appear distinctly legible the Greek letters of the word βασιλεύς. The commerce is naturally almost wholly absorbed by Russia, the principal article imported from India and Persia being green tea, the only liquid stimulant of the natives. The railway has not destroyed the caravan service, goods requiring no haste in delivery being still transported across the desert on camels. The rates, however, have been greatly diminished by the competition of the railway. It is proposed to extend this road to Tashkend and Ferghana as soon as a route can be decided upon. A Government commission, also, was appointed in October last to examine a project of building a railway from the station Dushak, on the Transcaspian road, to Meshed in Persia.

The seventeenth part of 'Stieler's Hand-Atlas' (B. Westermann & Co.) is given over to Greater and Lesser Britain, its three plates showing the British Isles; Western Australia, Van Diemen's Land, and New Zealand; and a fifth of the United States.

The New York *Ledger*, in the hands of the sons of its founder, is undergoing a change of form and of character, with a praiseworthy striving for a higher order of literary collaboration than has been seen since Edward Everett was a contributor to its columns.

The *Woman's Tribune*, of Beatrice, Nebraska, will be published in Washington during the present session of Congress, with a view to prompting and to watching the action of that body respecting the interests of women.

The Association of the Colleges of Ohio will meet for the twenty-first time at Columbus on December 26-28. President Jordan, of the University of Indiana, will read an address on the "Evolution of the College Curriculum."

"N. D.," writer of a communication to this journal, in its issue of October 31, on "Light Reading for Colored Infants," is requested to send her address to this office.

—On the occasion of the recent jubilee in St. Petersburg, celebrating the fiftieth anniversary of Rubinstein's first public appearance as a musician, a Russian paper published a brief autobiographic sketch of him as a sort of interview. It contains little besides bare

facts. He relates that already in his eleventh year he made a tour of Europe. "At this age I appeared on the platform everywhere without the slightest embarrassment. I looked upon my concerts as a sort of game, an amusement; *i. e.*, I behaved like a child, as in truth I was." This absence of embarrassment doubtless helps to account for his subsequent successes; for the root of stage fever is vanity, and Rubinstein never was vain, but seems always to have looked upon "ovations" as a bore. This trait has not left him even now, when he has become universally acknowledged as the greatest musician and one of the greatest geniuses that Russia has ever produced. The 18th of November has been hitherto regarded by him as his birthday, but recent research shows that he was born on the 16th. His mother, born in Prussian Silesia, was of a distinctly Jewish type, as a Russian biographer states. She had a thorough musical training, and "to her, as my first music-teacher, I owe very much," says Rubinstein. He had two sisters and three brothers, the youngest of whom, Nicolai, is also well known as a musician and Director of the Conservatory at Moscow. His mother was a very severe teacher, unsparing in the use of the rod, as was customary at that time, "without indulging in any dreams of the future relating to me, as she herself told me afterwards. She simply gave me music-lessons because she herself was musical. Our repertory consisted of Hummel, Herz, Moscheles, Kalkbrenner, Czerny, Diabelli, Clementi, and other lights of the period." Villoing, the most distinguished teacher in Moscow, afterwards continued his education, refusing to receive any money therefor. "He remained my only teacher; after him I never had another music-teacher in my life, excepting later on in the study of the theory of music."

—An amusing story is told of how he handed his opera "Dmitri Donskoi" to the Director of the imperial theatres, who exclaimed, "I do not understand how any one can undertake to write a Russian opera; a Russian opera cannot and must not exist." It is chiefly Rubinstein's merit that different views regarding Russian music are now held in Russian circles; and he brought about this change partly through his own music and playing, partly through his influence as Director of the St. Petersburg Conservatory, which position he first assumed in 1862. Rubinstein never belonged to the "advanced" school, and this new institution gave rise to a rival free conservatory under Cæsar Cui and Borodin, whose motto was Liszt and Wagner. Of Wagner, Rubinstein was always jealous, because he could not help feeling that, but for the Bayreuth master, he himself might have been the greatest opera-composer of the period. As a Russian, moreover, he has no natural sympathy with Germans; yet he frankly writes that "as regards the musical endowments of this or that nation, the Germans are of all peoples the most musical—notwithstanding the current patriotic notion that the devil himself could not outwit the Germans, the prevalent pietism and mysticism, the concentration of all German power in bayonets, and their unity, which cuts culture like a sharp sword. If we place the number of musical persons in Germany at 50 per cent. of the population, then France has only 16 per cent., and England not more than 2 per cent. Notwithstanding the hospitality with which I have been received in England, I say frankly that for music they have neither feeling nor understanding. Music in its proper sense exists only in Germany—music noble and serious." The Russians and Scandinavians, he says, have beautiful popular melodies. "In France there is only one branch of music which prospers and is very much esteemed. True appreciation of the greatest musical productions is to be found only in Germany."

— A well-known antiquary and dealer in antiquities at Venice recently purchased a portrait by Lorenzo Lotto which, when cleaned and identified, proves to be a portrait of Columbus. Compared with the photograph of the Madrid portrait, it appears to have been taken some years later than that, and has the character of individuality which a good portrait always betrays, while there is just enough difference from the accepted portraits to show that it is a different version of the face. In costume it resembles the Madrid picture except that the white shirt which shows at the neck is lower, revealing more of the neck. It has a black mantle, with brown fur, and a scarlet coat. In the right hand he holds a map of the Atlantic countries in the spherical projection, and the left arm rests on a pile of books supporting an hour-glass. A landscape is seen through a window behind him. The portrait is full face. It is signed "Lauren's Lotos f." Lotto was one of the most important of the second-rate painters of the Venetian school, and especially noteworthy as a portraitist. He is generally supposed to have been born about 1480, but Morelli inclines to put his birth at an earlier date on account of the formed style of his picture of St. Jerome in the Louvre, which is dated 1500. He was at first a follower of Bellini, then of Palma the elder, and finally studied Titian as his model. The portrait of Columbus is rather in the vein of the oldest master, and may therefore be put in the first decade of the sixteenth century, as that was the part of his career which is marked by the Bellinesque characteristics. It is possible, but seems hardly probable, that the portrait was painted from life. Lotto travelled a great deal, and may have been in Spain, and indeed may have been sent by the Venetian Republic for the purpose of painting the discoverer, as the Signory showed a very great interest in him. In the preface to the translation of the account of the discovery of America, printed by the Venetian press, Angelo Trevisan, the Secretary of Domenico Pisani, the Venetian Ambassador at Madrid, says, in a letter to the Venetian historian Malipiero, "I was favored to see much of Christopher Columbus, and to strike up a great friendship with him. By his intercession I was enabled to send somebody to Palos, where are sailors and men who have travelled with Columbus, in order to get the map which your Magnificence desires, executed. Here there is only that of Columbus. With regard to the description, it was written by learned men. I copied it, but it is very long. I send at present the translation of the first book to your Magnificence." This translation was published in 1504, the original not till 1511. The Secretary further writes that he has brought the map with him, the embassy having been away nearly a year. While it is possible that Lotto might have accompanied the embassy to Spain, it is more probable that it had brought back a portrait of Columbus, as the custom had then obtained of collecting the portraits of distinguished people, and that this portrait was merely reproduced by the Venetian master.

—It is to be regretted that the exhibit of the United States Signal Service at the Paris Exposition was so meagre as to give no real idea of the scope of its work. The small exhibit in this department of all the foreign countries suffered from being scattered over a large area to such a degree that not only were the instruments difficult to find, but it was almost impossible to compare them with one another. The unsatisfactory representation of the United States in this regard is explained on the ground that the Signal Office had no money, and received no direct encouragement from any one, until urged at the last moment by the French Government. The office, moreover, was busy moving, and its records and instruments were scattered. The instruments shown were a barometer, and the new triple register for wind velocity and direction, and rainfall. There were also charts and other publications of the service. Richard Brothers showed the largest collection of registering meteorological instruments, and next to them came that of Usteri-Reinacher, the successors of Goldschmidt and of Hottinger of Zürich. The English photographic sunshine recorder, or heliograph, of Jordan, has been modified by Dr. Maurer of Zürich, so that there is but a single straight trace for the whole day, instead of the two curved traces representing the morning and afternoon sun, as heretofore. The hair hygrometer of Dr. Koppe deserves special notice, being probably the best of its kind. Two sets of registering apparatus were shown by the Dutch house of H. Olland, of Utrecht. J. Timtchenks exhibited in the Russian section an anemograph, for which he claims the originality of registering by a single symbol upon a revolving drum both the direction and velocity of the wind, although this claim can hardly be sustained entirely. Two registers for a maregraph were exhibited by J. A. Neergaard of Copenhagen. A curious pocket thermometer was shown by H. Pieroni of Athens, the whole thing being contained in a silver coin about the size of a silver dollar, and was sold at thirty francs. Its motor and transmitting mechanism are similar to those of the thermograph manufactured by the Draper Company of New York.

RECENT POETRY.

In advance of Sir Edwin Arnold's recent visit to this country, his publishers issued an edition, in two thick volumes, of his collected poems (Boston: Roberts Bros.). It seems a pity that, if this was to be done, it should not have been of longer planning, for the work is not really a new issue, but simply a binding together of the separate works, not quite uniform as to type and with the original paging—a thing quite exasperating to bibliographers. Yet the book is presentable to the eye, after all—thanks to the general good taste of the house which issues it; and it awakens new wonder as to the varied labors of such a busy man. Not even the kindliness inspired by the passing visit of this most cordial of Englishmen can conceal the fact that he has written too much, especially in the Oriental field; and to turn these pages will bring curiously back to older readers the period when literature was redolent of Moore's "Peris" and Southey's "blessed Glendoveers." The scholarship of the present interpreter of the far East is doubtless more accurate than theirs, and perhaps his poetic quality firmer; but it is certain that earlier bards, using these pretty Oriental names as counters, have played for fame and lost. It is in Sir Edwin Arnold's favor that the human element in his poems is far stronger than in those of his predecessors; and there is nothing stronger in modern English ballad literature —nothing in Macaulay or Lockhart or Kingsley—than his "The Rajah's Ride" and "The Rajpoot Wife." Nor are there many contem-

porary English poems which have touched the deepest chords of human experience more effectively than "He Who Died at Azan" (called here "After Death in Arabia") and "She and He." If, as seems to be the case, an author's permanent fame is adjusted to the high-water mark of his work, Sir Edwin Arnold's reputation may rest finally on these.

There is nothing in Mr. Aldrich's new poem 'Wyndham Towers' (Houghton) to remind the reader of Moore and Southey, but there is a certain Leigh-Huntish flavor which suggests another model, and one which has a marked influence on contemporary English verse from Andrew Lang onward. Nothing in Mr. Aldrich's longer poems has the grace and attractive sentimental flavor of "Rimini," nor can any one of his shorter lyrics, admirable as they sometimes are, be placed beside "Jenny Kissed Me"; but, for all that, there is something in common. A single brief drama of Mr. Aldrich's, "Mercedes," gave a glimpse of a strength which nothing else in his works has confirmed; nor does anything in 'Wyndham Towers' recall it, but it is a graceful English narrative, with the accustomed properties well used and a good many trite images—the unused talents like a sword rusting in its sheath, and the young girl like a May morning. It is curious to see how often this poet's most admired gems are really the mere resetting of what came first from some one else—as, in the last *Atlantic*, his pretty lyric, "Pillared Arch and Sculptured Tower," simply restates what Keats put much better in the famous lines beginning, "O sovereign power of love," with which the second book of "Endymion" opens. After all, there must be something of strength and originality, behind the grace, to carry a poem far down the stream of time.

Even the delicate carefulness of execution for which Mr. Aldrich is so much praised has its marked limitations in his blank verse. There are too many lines ending feebly with prepositions:

"The ivy of an idle legend on"
"Whom his soft mother had made favorite of"
"And this one time must needs lend hearing to";

or lines requiring a forced emphasis in the reading, as

"Man's foot came not there. It was hallowed ground";

or two consecutive lines with an unpleasing assonance in the ending, as

"And tell-tale places where the moonlight fell
Crept through the huddled shadows back to hall."

Nor can we find anything graceful or appropriate in the most salient and original image of the whole poem, where the author says of the aspect of his demure little heroine,

"If so much beauty had a tiger been,
'T had eaten him."

Finally, we notice that in order to make his verse flow smoothly, the author has to accent Màlay on the first syllable, and Proserpìna on the penultimate—in both cases contrary to the authorities. In spite of all these criticisms—the making of which is a compliment, since they imply that we are dealing with an artist in words—the poem is readable and vivacious; and there are a few lines, such as

"The moths on indolent white damask wings,"

which might have come from Keats, and a description of a sunrise (p. 61) that is good enough to have come from anybody.

Even the stanchest admirers of Mr. Swinburne must own, we should fancy, a visible loss of power in his third series of 'Poems and Ballads' (Worthington); yet the faith in an idol dies hard, and it is never quite safe to predict. Certainly the mouthing grandiloquence of his recent and conservative phase of life has little in common with the delicate music of his more ideal poems, or with the extraordinary vigor of some of his Revolutionary strains. The only poem in this book which has anything in common with the heroic strength of his "Song in Time of Order" is "A Jacobite's Farewell," which is worth, to our thinking, many times over, the forty pages of turgid gasconade under the name of "The Armada":

"A JACOBITE'S FAREWELL, 1716.

"There's nae mair lands to tyne, my dear,
And nae mair lives to gie;
Though a man think sair to live nae mair,
There's but one day to die.

"For a' things come and a' days gane,
What needs ye rend your hair?
But kiss me till the morn's morrow,
Then I'll kiss ye nae mair.

"O lands are lost and life's losing,
And whet were they to gie?
Fu' mony a man gives all he can,
But nae man else gives ye.

"Our King wons ower the sea's water,
And I in prison sair;
But I'll win out the morn's morrow,
And ye'll see me nae mair." (P. 167.)

Far more attractive to us than most of Mr. Swinburne's wide-mouthed lines are two new volumes that have come from the yet unexhausted genius of Scotland. One of these is 'A Book of Verses,' by W. E. Henley (Scribner & Welford), opening with an extraordinary series of poems, unique in literature, and drawn, it is said, from the author's actual experience in hospital. The theme might seem repellent, and it is, but there is no coarse French taste for merely physical horrors—as in the Salon pictures—while the uttermost realities of drug and knife are brought before us, and even of anæsthetics:

"Behold me waiting; waiting for the knife.
A little while and at a leap I storm
The thick, sweet mystery of chloroform,
The drunken dark—the little death in life." (P. 7.)

While thus waiting in hospital, the author sketches, as it were on his thumb-nail, inimitable pictures of surgeons, nurses, and patients—Mr. R. L. Stevenson among them—so that we feel that we have personally known them all. Later in the book he widens his range, but still keeps a tight grip on all he attempts to draw. Sometimes he verges on coarseness, sometimes there are echoes of Heine, but it would really be hard to point to any recent volume of so much promise from London. Here is a bit of local coloring which will have interest for all Americans, North and South. It is one of the hospital poems:

ROMANCE.

"Talk of pluck," pursued the Sailor,
Set at euchre on his elbow,
"I was on the wharf at Charleston
Just ashore from off the runner.

"It was gray and dirty weather,
And I heard a drum go rolling,
Rub-a-dubbing in the distance,
Awful dour-like and defiant.

"In and out among the cotton,
Mud, and chains, and stores, and anchors,
Tramped a squad of battered scarecrows—
Poor old Dixie's bottom dollar!

"Some had shoes, but all had rifles,
Them that wasn't bald was beardless,
And the drum was rolling *Dixie*,
And they stepped to it like men, sir!

"Rags and tatters, belts and bayonets,
On they swung, the drum a-rolling,
Mum and dour. It looked like fighting,
And they meant it too, by thunder!" (P. 33.)

The other Scotch book, in its way as remarkable, is 'The Bird-Bride, and Other Poems,' by Graham R. Tomson (Longmans). This name will be familliar to all lovers of ballad literature as that of the editor of the best collection yet made of 'Ballads of the North Countrie,' prefaced by the best condensed essay on that theme. The newspapers have not yet settled whether it is Mrs. Graham R. Tomson to whom we owe all this—although we have no doubts on that subject—or a rumored "Mrs. Sharp," who is further described as being Spanish in appearance and with rope-like coils of blue-black hair. But whatever her name or *chevelure*, she is one of the few persons in modern days who can produce a ballad. It is an art that still survives in Edinburgh—witness poor Sydney Dobell's 'Keith of Ravelston'—but he wrote only one conspicuous and triumphant ballad, and this lady half-a-dozen. "The Bird-Bride" appeared in *Harper's Magazine;* but it is no finer than "Pentyre Town," "Deid Folks' Ferry," "The Cruel Priest," and "The Blind Ghost," while "Le Mauvais Larron," rather a tragic poem than a ballad, is very likely to outlive the picture by Willette for which it was written.

These two volumes stand out distinctly amid the flood of triviality which just now passes for high poetic art in London. We can hardly link in this encomium the poem 'Divine Philosophy,' by Macmillan (London: Kegan Paul); for though the philosophy is that of Charles Darwin, the poetry takes us back to his grandfather Erasmus, which is a less pleasing association. We own to preferring a gay little book, 'Through Romany Songland,' by Laura Alexandrine Smith (London: David Stott), giving the words and the music of many gypsy songs of different countries.

There are always volumes of verse which have a certain simple and elementary value—we might perhaps almost call it culinary. They are like the doughnuts one still finds lingering on the breakfast-tables of otherwise ambitious rural inns, a connecting link with their old-time public of stage-passengers. Such books are, for instance, the curiously named 'City Legends' of Will Carleton (Harpers), and 'The Children, and Other Verses,' by Charles M. Dickinson (Cassell). Mr. Carleton as justly appeals in his preface to "his large family of readers" as Mr. Prang might point with pride to the number who purchase his chromos; and Mr. Dickinson says that his title-poem has been widely copied over the name of Charles Dickens, so that the son of the novelist here supplies a letter to disclaim the authorship. Having thus the substance of fame, why should these authors care for its shadow, criticism? The test of a breakfast-table, it may justly be said, lies in the appetite of the guests.

In the series of "Knickerbocker Nuggets," Mr. George Cary Eggleston edits two little volumes of 'American War Ballads' (Putnams). The little books are of very dainty execution as regards type and paper, but are disfigured by a great inequality of execution in the vignettes; some of these, as in the case of "Paul Jones's Victory" and "Sheridan's Ride," being simply grotesque. The selection of poems is fairly good, but far less admirable than that of Mr. Brander Matthews's 'Poems of American Patriotism,' published some years since. Unfortunately, too, the editor, by limiting himself to lyrics, excludes some of the finest poems of the war, such as Lowell's "Commemoration Ode" and Aldrich's "Fredericksburg" sonnet. There is also an unaccountable absence of alphabetical indexes to the poems, whether of author, titles, or first lines.

In the way of recent religious poetry, there are two notable translated volumes. One of these is a rhythmical version of Thomas à Kempis's 'Imitation of Christ' in the original metres (A. D. F. Randolph & Co.), which, for the first time, takes us back to the period when this Christian classic bore the name of 'Church Music' (*Musica Ecclesiastica*), and was known only in its rhythmical arrangement. Certainly the increased dignity and sweetness of the present form justify the translator in his labors and Canon Liddon in his preface. Another similar treatment of a yet older religious work is 'The Poetry of Job,' by Dr. George H. Gilbert of the Chicago Theological Seminary (Chicago: Mc-

Clurg), containing a new metrical version of this book of Scripture with an essay. Both parts are fine in conception and treatment, but cause some surprise that the author should omit all reference to his accomplished predecessor in the same work, the late Prof. Noyes of Harvard, whose 'Amended Version of the Book of Job' came as a revelation of new beauty to the last generation of American readers.

In the way of miscellaneous verse there is a little volume of rather light-weight verse by Walter Learned, called 'Between Times' (Stokes), with preliminary verses by George Parsons Lathrop, who is too hopeful, we think, of the career of a poet who compares autumn to "a decrepit citizen" (p. 5), and describes Psyche as spilling hot kerosene on Cupid's shoulder (p. 37). The inexhaustible vitality and drollery of Mr. Charles Godfrey Leland is exhibited *in extenso* in a new edition of 'The Breitmann Ballads,' very greatly enlarged (London: Trübner). There is at the end a curious glossary of jargon by the late Nicholas Trübner. Philip Acton's 'Songs and Sonnets' (Longmans) have in them a good deal that is commonplace, but nothing that goes further in that direction than this description of "Memnon and His Mate" in Egypt:

> "There sat the everlasting pair,
> Full twenty cubits in the air,
> Each in his monumental chair,
> A superhuman pile." (P. 45.)

'The Manx Witch, and Other Poems,' by T. E. Brown (Macmillan), is a curious book, written mostly in dialect, and with here and there gleams of real power, but chiefly interesting as a glossary. 'Before and After: Concerning Sergeant Thomas Atkins, Grenadier Guards, with Other Verses,' by R. St. John Tyrwhitt (Macmillan), is, on the other hand, chiefly interesting as theology, and not very much so even in that way. The Rev. Arthur Wentworth Eaton's 'Acadian Legends and Lyrics' (White & Allen), though the work of a theologian, is not theological, and has some agreeable local coloring from Evangeline's country. Mr. Francis Lucas, in 'Sketches of Rural Life' (Macmillan), has some stirring strains about hedgers and woodmen, such as will be dear to the readers of Thomas Hardy's novels. In 'Echoes of Thought,' by Emily E. Reader (Longmans), the modest name is well justified, and the most interesting echoes are those from Egyptian mythology. Mr. William Larminie versifies the Irish traditions in 'Glanlua' (London: Kegan Paul), but less successfully than it is done in the charming versions of Aubrey de Vere.

Several recent volumes of translations touch upon familiar ground. The editor of the "Chandos Classics" gives us a really valuable and well-edited volume of selected translations from the whole works of Horace (F. Warne & Co.). The collection includes the work of poets of every grade, from Ben Jonson to the present day, all united in the sincere effort to perform a feat which is in itself impossible. Far easier is the task of Mr. Henry Hamilton, who tries his hand at the first six books of Virgil's 'Æneid' (Putnams); but he destroys his chances of success, at the outset, by undertaking to render the dignified uniformity of Virgil into a variety of metres—a method which leaves his case as hopeless as that of the others. Mr. Justin H. McCarthy has given us a prose translation of the "Rubáiyát" of Omar Khayyám, printed daintily, but somewhat affectedly, in capitals, and prefaced by an introduction so dapper and jaunty that every lover of these extraordinary poems must wish that he had left them untouched. Surely neither Whinfield, nor Nicolas, nor Garner has succeeded in so denuding these magnificent verses of their peculiar thrill. That much of their glory is Fitzgerald's we know; it is only needful, in order to make sure of that, to open his "Agamemnon," and come upon such a quatrain as:

> "Call not on Death, old man, that, call'd or no,
> Comes quick: nor spend your ebbing breath on me,
> Nor Helena, who but as arrows be
> Shot by the hidden hand behind the bow."

Such a passage, like a comparison of equations in algebra, helps to determine for us the value of the two unknown quantities, x = Omar, y = Fitzgerald; we ask no more. If so much of the Persian is the Englishman, why not leave the matter there? They may well remain double stars, as Emerson says of Socrates and Plato. It is evident from Mr. McCarthy that he found the study of his author in the original Persian difficult; but we wish, in Dr. Johnson's phrase, that it had been impossible. A really delightful little book, still edited by the ubiquitous Mrs. Graham R. Tomson, is a volume of 'Selections from the Greek Anthology' in the "Canterbury Poets" series (London: Walter Scott). The little poems of the Anthology are to Greek literature what the Tanagra figurines are to Greek art: they admit us instantly to the whole world of home and private life. In spite of the labors of Bland, Merivale, and others, the best English rendering of these works has been in the prose volume of Bohn's Library. If the present compendium is better, it is largely due to the talent of a lady to us hitherto unknown and bearing the name of Alma Strettell—a name so quaint that we cannot help suspecting it to be simply a mask of the editor; not "M. Tonson come again," but Mme. Tomson, who certainly shows herself in the preface to be familiar with Meleager in the original. The versions under this name are uniformly terse, close, vigorous, and graceful; far surpassing those of Mr. Gosse, which are apt to have something of a cockney flavor, or of Mr. Andrew Lang, who modernizes Rufinus into *ballades*, and enfeebles the fresh, hirsute vigor of Theocritus with "meseems" and "winsome." Our chief objection to the editor's work, indeed, is that she falls sufficiently into the prevalent London Gallicism to employ two little French verses as a motto for her book, where they are as essentially out of place as would have been a Japanese vignette.

WILSON'S 'THE STATE.'

The State: Elements of Historical and Practical Politics. A Sketch of Institutional History and Administration. By Woodrow Wilson, Ph.D., LL.D. Boston: D. C. Heath & Co. 1889.

THE somewhat complicated title which Prof. Wilson has chosen for this volume suggests the difficulty in which he has been involved by his plan. There is room for doubt as to the wisdom of attempting to compress into one treatise an account of the political institutions of all times as well as an epitome of political history. The subject is too vast to admit of very thorough treatment within such narrow limits, and where so much must be omitted, there will always be differences of opinion as to what the omissions should be. It is, perhaps, on this account that, as the author observes, he has had no predecessors; that "no text-book of like scope and purpose has hitherto been attempted." As a consequence, the book is inconveniently large for a text-book, while it is not full enough for a book of reference. But, in spite of all difficulties and drawbacks, the work has been very well done. The best authorities have been followed, and followed intelligently, and the arrangement of details concerning modern institutions of government has evidently been elaborated with the most careful industry. The style is clear, and there is a certain vivacity in the narrative portions of the text that relieves the dryness of the theme.

The earlier chapters treat of the origin and development of government in general, substantially in accordance with the views of such writers as Maine, Lubbock, Spencer, and Bagehot. The ancient city is described in the spirit of Coulanges's essay, and the political history of the leading Greek states is given with considerable detail, and as it is to be found in the standard histories. On the other hand, the treatment of the political institutions of Rome is exceedingly meagre. Scarcely a dozen pages, or about the space given to that mere archæological curiosity, the government of Lacedæmon, suffice to bring us down to the period of the Empire. The subsequent changes are described with more fulness; still, to take one instance, it would not be very easy to determine from this account the nature of the administration of a municipality in the provinces at the time of the Teutonic invasion. The discussion of the influence of the Roman law could, perhaps, not very well be omitted in a treatise that is for this period mainly historical; but if positive law is to be described among the institutions of government, it is easy to see that, within such space as is here at command, the description must be inadequate. It would have been probably more effective to give more attention to the administrative methods and achievements of the Romans, and to relinquish their jurisprudence to the care of specialists.

As to the Teutonic peoples, the description is taken in the main from accepted authorities; but the student might get the impression that a true nobility existed among them in primitive times. Here, too, we think that the desire to emphasize contrasts leads the author to overlook the existence of personal allegiance among the Romans. It was undoubtedly more prominent among the Barbarians, but it prevailed necessarily under the Roman system of landed estates, and was conspicuous in many of their intestine broils, to say nothing of the extended relation of patron and client. In the account of the separation of the Papacy from the Empire, it is a rather serious omission to say nothing of the influence of the Lombards, and it is a still more serious error, or cluster of errors, to say that "the Pope, arrogating to himself the prerogatives of king-maker, crowned Charles the Great Emperor of the Holy Roman Empire—'Holy' because created by the authority of mother Church." The Empire did not become "holy" for some centuries, probably, after this event, and the title seems to have been assumed in opposition to the exclusive claims of the Church, which was disposed to look down upon the civil power as earthly and profane. In a work of such extensive range, it is highly dangerous for a compiler to vary in the slightest degree from his authorities, and to yield to the temptation to make his style graphic by adding touches of his own origination, which, however well meant, may mislead the ignorant and arouse distrust among the learned.

As the author approaches modern times he treads upon firmer ground, and his description of the political institutions of the leading European countries is perhaps the most valuable portion of his book, containing a good deal of matter that is not easily accessible. Neither Italy, nor Spain, nor Russia, however, so far as we have observed, receives the slightest mention; nor is there anywhere in the book, we believe, anything more than an allusion to the

political institutions of the Asiatic peoples. About one-third of the volume is devoted to the governments of England and the United States, an allowance of space that enables the author to give a comparatively thorough treatment to the complicated political machinery of these countries. But in many instances here he is, in our judgment, carried away by his passion for neat theories and sweeping generalizations. Desiring to make an effective contrast between the civilization of the New England colonies and those of the South, he represents the early settlers of Virginia as spreading far and wide in the pursuit of agriculture, while in New England "every circumstance invited to close settlement and trade, to the intimate relationships of commerce and the adventures of seafaring, rather than to the wide-spreading settlements characteristic of an agricultural population." While it is true that commerce after a time arose, no one who is conversant with the early history of New England would maintain that the primitive settlers were not in the main devoted to agriculture, or characterize their settlements otherwise than as wide-spreading; nor do the circumstances of the "long winters" and "bleak coast winds" seem to invite to "the adventures of seafaring" with irresistible persuasiveness.

The futility of such preconceived theories appears plainly enough when they are applied to the middle colonies, which,

"though possessed of a rich soil, had also fine seaports which invited to commerce; their climate was neither so harsh as that of New England nor so mild and beguiling as that of the Southern colonies. Their people, consequently, built towns and traded, like the people of New England; but also spread abroad over the fertile country and farmed, like the people of Virginia. . . . Townships they had, but counties also; they were simple and democratic, like the New Englanders, and yet they were agricultural also, like the Virginians."

Why a people may not be at the same time simple and democratic as well as agricultural is not explained; but, at all events, the diversity of the political institutions of the early colonies is not to be accounted for by such crude statements as these.

Upon another point in this connection—the process of institutional growth in the early colonies of New England—the author is not less superficial. The impression conveyed is, that the towns were in the first place independent communities, which were gradually brought into some kind of federal union. "The process is obviously federative from the first." "Gradually the towns . . . drew together into the colonies known to later times." "But at first these larger colonies were scarcely more than town leagues." We do not think that this impression would survive a perusal of the early laws of "The Massachusetts"; but we can do no more here than state that it is not to be accepted as in unquestioned correspondence with fact.

There are some chapters at the close of the book upon Law, and upon the nature, forms, functions, and objects of Government. It is of course impossible to deal fairly with such matters in a few pages, but there is much that is judicious in their treatment. Upon the whole, however, the book is not to be recommended without qualification as a text-book. The basis of scholarship upon which it rests seems to be scarcely broad enough or deep enough, and at the same time there are few teachers who have the scholarship with which to neutralize its mistakes. It is to be feared that a tendency exists among our rising school of historical writers to adopt rather a scientific vocabulary than a scientific method. We hear much talk of society as an organism; of growth and development, of crystallization, and integration, and solidarity. These are convenient expressions, but they may sometimes serve to conceal a lack of thought. It is quite possible to mistake a metaphor for a demonstration, and to deal so nimbly with abstractions as to make them pass for the concrete. It is well for every writer to bear in mind that the success of comparative methods depends upon minute and accurate observation, and that without this fund of knowledge the affectation of broad and sweeping generalizations can impose only upon the vulgar.

Appreciations. With an Essay on Style. By Walter Pater. Macmillan & Co. 1889.

THESE critical essays are gathered from Mr. Pater's occasional writings of the past fifteen years upon English authors. They are upon a lower level than his imaginative work, which is also so essentially criticism, and deal more directly with the actual work and individuality of men eminent for the qualities which he prizes. They are, of course, highly intellectual in matter, and controlled by the tastes and principles which make the positive part of the author's work in all his writings; the subjects are old, and consequently the interest lies in Mr. Pater's own treatment. He begins with Style. Originality of thought is not to be looked for in such a topic. The most to be required is freshness of presentation—some rearrangement of customary ideas, some felicity of restatement, some semblance of a new point of view. Mr. Pater resorts naturally to the aspect of the matter as seen from within, from the genius engaged in the production of literature instead of from the completed work; and therefore he interprets the structure which belongs to style as proceeding from mind, and the charm which it possesses as born of the soul. Mind and soul must be in style, and the expression of these must be submitted to the restrictions, depending on language, which lie in the province of grammar and rhetoric. He concludes with the assertion of the canon that the result will be great art in proportion to the value, compass, and serviceableness to men of the contents.

This is set forth in a refreshing way, however, and with seeming novelty; and, as hardly needs to be said, is interspersed with those brief, fine statements by the way which are so large a part of his attraction to the cultivated reader. He uses Flaubert as an example of the devotee to style, with effect, but too much in Arnold's manner to be pleasing in one whose own less didactic style is thus displaced. The same subject is practically taken up, also, in the last essay upon the meaning of the words "classical" and "romantic," upon which likewise there is nothing new to be said. The classical involves the predominance of mind, the romantic that of soul, in style, using the last word as meaning total expression; the one stands for manner as against matter, for authority as against experiment, for the customary as against the disturbing; both seek beauty, but the romantic seeks it with a curiosity and a delight in the strange which sometimes sacrifices beauty. In Greek and Roman literature itself, the romantic spirit is a living one. Such are the main lines of definition; and, as in the essay upon Style, the freshness of statement gives interest to principles which must be often repeated as time goes on.

The essays upon particular subjects are of more importance. Wordsworth, Coleridge, Sir Thomas Browne, Lamb, Shakspere, and the two æsthetic poets, Morris and Rossetti, are the titles. The discussion of Wordsworth's genius is admirable to a degree hardly to be expected from Mr. Pater, and illustrates the breadth of his appreciation of literary qualities. One feels, as he reads, that much of Wordsworth is being frankly suppressed and put out of sight. But what remains—the sense of nature to the solitary, the nearness of nature to peasant life as a fact observed, the theatre offered by peasant life for the display of primitive passion so finely relieved on a nature-background, the sensibility of Wordsworth to vague, speculative ideas of the race with regard to the animate soul of the universe and man's emergence from it at birth, and the great practical wisdom of the poet in morals—all this is fully recognized. And, in these special points, together with the fact that the high mood always brought to Wordsworth noble expression, Mr. Pater finds the greatness of his poetry. Coleridge exhibits so great a contrast to Wordsworth that it is painful to set them side by side. He stood, Mr. Pater says, for the reaction, or for the last struggle of the "absolute" with the incoming influence of the "relative" as the controlling spirit of modern thought; and in poetry the critic again points to the cadence of the verse, the sensuous perception of beauty, and the fantastic imaginative element in conception, which characterize his work. The remaining essays are of the same sort—not novel or original in matter, but gaining value from the treatment.

This method of treatment is familiar to all who are acquainted with the individuality of spirit in Mr. Pater's work. He seeks for excellence, and has a welcome for it, and actually prizes it, in whatever literature has to offer in illustration of human life on its ideal, its beautiful or poetical, sides. This sensibility, by virtue of which he really experiences the books he reads, is supplemented by a vigorous and highly cultivated intelligence which makes him seem at times more absorbed in general ideas, in the universal mood of an age, the characteristic state of culture then existing, than in the particular example of one or another author. These general world-old ideas, which literature does but repeat from century to century, these special qualities of a whole generation in different periods of history, have been so attended to by him that they have gifted him with a peculiar, and in our time unique, culture, of which his pages bear the stamp, whatever the subject may be. The value of these essays, therefore, is not easily described, is not indicated truly by such abstract of contents as we have given; it consists in the constancy and directness with which he brings commonplace, or at least not unusual, remarks on authors, into relation with the phases of past or modern culture, and in the illustration he sheds upon the authors from abstract ideas. His criticism is more often for the intellect than for the æsthetic sense. For this reason he succeeds best in his imaginative work, when he can construct his own characters. In dealing with other men's creations or personalities he is limited by their defects, and his exposition seems incomplete. Yet these essays upon Lamb, Browne, and especially upon Shakspere's *Richard II.* and *Biron*, are charming by their subtle and cheerful appreciation, their intimate understanding of individual traits, their generous praise, and their unceasing thoughtfulness upon the higher issues involved in every life, whether real or the creation of genius. If the critic appears less brilliant than in more important books from his pen, he seems perhaps more friendly and near at hand.

A Popular Treatise on the Winds: comprising the general motions of the atmosphere, monsoons, cyclones, tornadoes, waterspouts, hailstorms, etc., etc. By William Ferrel, M.A., Ph.D. John Wiley & Sons. 1889. Large 8vo, 505 pp. Tables, references, and full index.

THIS is a book to which studious readers, inclined towards physical geography, will turn with great interest; and if they persevere to an understanding of its thorough statement, meteorology will have gained something of the aspect of an exact science in their minds. It is a book to which teachers in particular can resort with confidence, and from which they can take mental discipline as well as example and instruction. It marks the rounding of a period in our meteorological history—a period in which we may justly take much pride.

Ferrel's first essay in meteorology appeared in 1856, when he was nearly forty years of age. It was published in so unconspicuous a periodical as the Nashville *Journal of Medicine and Surgery;* and the preface to the present volume tells us that the first essay was prompted by reading, in Maury's 'Physical Geography of the Sea,' an account of the excess of atmospheric pressure in two belts around the earth, at latitudes 30° north and south, and of its deficiency around the equator and at the poles. The student of elementary meteorology may appreciate how difficult it would be to explain the low pressure at the poles by means of the ordinary convectional theory of atmospheric circulation; for the decrease of temperature and the convergence of the meridians towards the poles ought, in the absence of other causes, to produce high pressure there. There is hardly a single text-book in use that makes adequate explanation of this curious contradiction of old theory by new facts, although the real meaning of it was given thirty years ago by Ferrel, when he ascribed it to the effect of a circumpolar whirling of the general circulation of the atmosphere, induced by the effect of the earth's rotation on the convectional interchange between equator and poles. The essential nature of the process is simply conceived, although its full mathematical expression is not yet attained. This discovery, like others by which Ferrel has given rational explanation to cyclones and tornadoes, has for its characteristic the careful deductive correlation of facts derived from meteorological observation with principles gained from physical study. The student of the history of method in scientific research will surely place high value on Ferrel's work, as illustrating the most admirable development of logical investigation, in which induction and deduction are rationally combined. Perhaps the reason that this combination has not been more often found among meteorologists is, that so few of them are sufficiently educated on the physical and mathematical side to allow it. The popular idea of a meteorologist, as one who keeps a record of the weather, is not so far wrong as we could wish it might be.

An account of the many interruptions in Ferrel's meteorological work may be found in the sketch of his life by McAdie, in the *American Meteorological Journal* for February, 1888. We need here only advert to his studies of ten years ago, when engaged in the Coast Survey on researches for the use of the Coast Pilot—which we cannot mention without smiling at the astonishment our hardy sailors must have felt on meeting the intricate formulæ prepared for their edification—and of later time, when occupied in the Signal Office in preparing a volume on 'Recent Advances in Meteorology,' which appeared in the annual report of the Chief Signal Officer for 1885. The greater part of these essays is beyond the non-mathematical reader, although the paragraphs in which theory is confronted with facts are highly instructive; and it is with the intention of reducing his studies nearer to popular reading that the volume here considered has been prepared. Our indebtedness for it must increase when we remember that it is completed after its industrious author has attained three score years and ten.

The full title of the volume gives sufficient indication of its contents, but its pages must be consulted to appreciate the fulness of knowledge with which it has been composed. It is not easy reading, and cannot be digested by those who have not made some previous beginning in its subjects; nor will readers unaccustomed to serious thinking find its style to their liking; but for teachers, as already said, and for students in a second course, it is simply invaluable. The only other work to be named with it is Sprung's 'Lehrbuch der Meteorologie' (Hamburg, 1885), in which the descriptive illustrations are fewer and the discussion is more condensed and mathematical. Ferrel's book has nothing of controversy—not because his studies have been universally accepted, but because he is satisfied to accept the verdict that will be given when his work is well understood. It contains little of the historical development of the questions treated, perhaps because their previous theoretical treatment is so insufficient; for it may be truly said that the greater part of the book is concerned with questions to which the author's own contributions outrank all others. Yet the reader would hardly suspect this, so impersonal is the style of presentation. It is occupied throughout with a minute, methodical statement directly to the point. The presentation is at times so deliberate that the reader would do well to make a brief outline of the contents of a chapter and their argumentative sequence, if he would possess them fully.

The method of the book is so characteristic of the author's work that we must recur to it again. Each problem is entered with the general facts concerning it in mind; the theory of the process by which the facts are to be explained is then followed out deductively to its extremest consequences; finally, these consequences are confronted with a greatly enlarged collection of facts in order to test the sufficiency of the theory. The comparisons here made between deduction and observation must go far towards convincing the student that meteorological theory has taken a very respectable position in the circle of the sciences. If we look for other examples of this method, we find that it is seen in essence in the work of Espy, as compared with the more simply inductive work of Dové; or again in the modern school of meteorology as a whole compared with the earlier school, of which Schmid's 'Lehrbuch' may be taken as the exponent; or, once more, in the German-Austrian school as compared with that prevalent in Great Britain, and represented by Buchan and Laughton. It is not so much the effort to combine inductive and deductive processes into a logical whole that characterizes Ferrel's work (for all investigators attempt the combination to a certain degree); it is the success of the effort, the distance to which the combination is carried, and the critical discussion of the sufficiency of its results, that distinguish Ferrel's writings. Only in recent years have others undertaken meteorological studies in this serious fashion—some of them, doubtless, inspired by Ferrel's success, others taking up the same method independently; but we believe that all these regard Ferrel's studies as marking the beginning of an epoch in mathematical and physical meteorology.

There is no place in a newspaper notice for extracts from so condensed a volume as this treatise is; but if our readers wish to appreciate its quality, let them first read up some of its topics in the best books of reference they can consult, and then turn to the same subjects in Ferrel's pages.

Cambridge: Brief Historical and Descriptive Notes. By J. W. Clark, M.A., formerly Fellow of Trinity College. Pp. 326. London: Seeley & Co.; New York: Macmillan & Co.

THIS is in many respects a singular book. The letter-press seems to be a *verbatim* reprint from a more showy but less handy volume issued by the same house in 1881. That book contained large etchings, of which the designs, reduced on wood, appear in the present edition. But there is not a word from author or publisher to show that the small book dated 1890 is a mere copy of the big book dated 1881.

Those who knew the old book well, and looked for something new, are naturally disappointed; but those who never saw the old will be tantalized. For one who has lived in Cambridge and knows University and town well, Mr. Clark's notes are very fragmentary; to those who never enjoyed that privilege, they are likely to be well-nigh unintelligible. It is not any too easy to discover the thread on which the notes are strung; but close examination seems to show that Mr. Clark reviews in chronological order, first, the existing remnants of Cambridge before the University existed, then the like remains in each college, and develops, as its date presents each piece, something of the College history. Not that this order is by any means strictly followed; for instance, Emmanuel College is discussed before Jesus College (out of regard for American ears, we do not, as any Cambridge man on the spot would certainly do, omit the word "college" after these names), though, from every point of view, Emmanuel is the later.

This singularly chosen order of chapters makes the book seem very desultory. The writer skips about topographically and historically, in a manner hard to follow even by an alumnus. Of the town he gives no plan, though it would not have been hard to overlay the lines of the modern sheets with the ancient ones in red, as in Burn's 'Rome,' so as to indicate the many changes—changes which Mr. Clark himself says make identifications difficult. St. Catherine's College, and the two founded between 1600 and 1800, are barely alluded to; and those which owe their growth to University expansion in this century—Girton, Newnham, Cavendish, and Selwyn—are wholly ignored. It may be said that this is because their buildings present no room for interesting architectural discussions. Then why fill out the book by a chapter on social life in Cambridge sixty years ago, the greater part of which may be found in print elsewhere?

But of the older colleges, even Trinity Hall and Corpus get in only over the wall, as it were, by virtue of the quaint library of the former and St. Benet's Tower near the latter. Mr. Clark seems fettered by the necessity of having some interesting bit of antique architecture which he can use as a peg on which to hang an indefinite amount of antiquarian matter in prose and verse, much of it curious and rare, much stale and cheap. And even in

those college histories which he expands most fully, there occur singular gaps. Why such faint allusions to the old Court of King's and the moving of its bridge? Why not tell how St. Peter's Church yielded its name to the miniature and now disused structure near the castle, becoming itself Little St. Mary's? Why no more, or, as to that, why nothing, about the lovely old gate opposite Trinity Hall? Why nothing of the discoveries in the "Labyrinth" of St. John's when the old chapel was destroyed?

Perhaps the non-Cantabrigian reader will be bewildered by this list. But he will be not less bewildered by Mr. Clark's book as it is. He will probably feel like Mr. Verdant Green's father, who "took back to the country a somewhat confused recollection of Oxford," after the guide had trotted him through "the 'alls, colleges, and principal buildings in an hour and a 'arf." There is no proportion in the book, a result perhaps due to Mr. Clark's admiration of the charming irregularities of what ancient bits of building survive in Cambridge, and his just contempt for the priggish and meaningless Italian structures of 1750–1800. We do not overlook the many good things in the book. Mr. Clark is a Cambridge boy, and loves his home. He shows a good deal of reading, and no little personal research; the English is good, and there is a pleasant air over the whole, such as the author himself brings into University society. The book is good enough to have been better; as it is, it reads as if written up to the pictures. There is some history; some archæology; some anecdote; a little original research; a great deal of not over-new padding, and no system—or at best an obscure one.

The English and Scottish Popular Ballads. Edited by Francis James Child. Part vi. Boston: Houghton, Mifflin & Co.

THE sixth part of this work deals mainly with the historical and quasi-historical ballads, those relating to war or personal adventure. The number contained in it amounts to thirty-three, and among these are some of the most widely known poems in ballad literature, such, in particular, as the "Battle of Otterburn" and the "Hunting of the Cheviot," or, as it is popularly called, "Chevy Chase." In addition to the numerous variants, there are between twenty and thirty pages given up to corrections and additions that still further illustrate the parts previously published.

In this meagre way we are compelled to notice the progress of a work which exhibits in a preëminent degree the results of the most patient investigation and of the profoundest learning in the special department that has been made the subject of inquiry. To every lover of literature it is gratifying to observe that this immense and toilsome task is so well on its way to completion, embodying and thereby permanently preserving as it does a wealth of information which it is almost hopeless to expect will ever be amassed again. It is extremely unlikely that future discoveries will ever add much to the quality or even to the quantity of what has been collected here. The appreciation of the work as well as its value will accordingly increase steadily with the flight of time. It is already noticeable that this quarry is beginning to be worked by those who are quick to seize upon what has been accomplished by the labor of others, and to put into popular form what they have themselves neither the knowledge nor ability to gather or to originate.

It is to be hoped that when this monumental work has been completed, the editor will not be discouraged from fulfilling the promise which he made more than thirty years ago to compose a History (or, as he termed it, an Essay on the History) of Ballad Poetry. No one is so qualified as he to write it; no one, it is to be feared, will ever again be so qualified. It will be a fitting conclusion to one of the greatest works of scholarship the present century has accomplished, and will remain an authority on its subject from which there will be no appeal.

Liberty and a Living. By P. G. Hubert, jr. G. P. Putnam's Sons.

THE author of this little book, a man of refined tastes, abandons his occupation in the town for a rural life on the south side of Long Island. With an income of $500 per annum he proposes to lead an existence of comparative liberty and freedom from care. His purpose is to show how, with a cash revenue of the above amount, supplemented by his own efforts as a fisherman, an oysterman, and a taker of crabs, a cultivator of the nimble bee and of small fruits and vegetables, not for profit, but for the sustenance of his family, one may accomplish that result. The experience of those who reside continuously throughout the year on the south side of Long Island, under moral conditions similar to those of Mr. Hubert, but equipped with a much larger income, free from the incentive or necessity to follow piscatorial or agricultural pursuits, and with ample occupation, does not quite sustain his optimistic portrayal of life there. He makes the impression of a young man, not free from illusions, but possessed of habits of industry and application and an admirable placidity and evenness of temper. Without the last, under the conditions of rural life on Long Island, within his environment, which must necessarily bring him into close material relations with the rude natives of the soil, he must needs have long since abandoned his experiment in disgust. What Mr. Hubert has evidently successfully accomplished is within the reach of very few not mentally and morally so well equipped as he.

Apart from the practical benefits which he extracts from its light soil and exhausted waters, Mr. Hubert is evidently a keen lover of the Long Island landscape. Upon this he is to be congratulated, in view of its depressing flatness and monotony. He writes most charmingly. Of the works treating of kindred subjects, his possesses a grace and interest comparable to the very best of those of his predecessors. There are many who long for just the very sort of life which Mr. Hubert portrays. Such may read his little book with profit and pleasure, and if they possess the admirable qualities which must surely belong to one who writes with such simplicity and evident contentment and sincerity, they cannot fail to attain to equally satisfactory results.

Natural History Object Lessons: A Manual for Teachers. By George Ricks. Boston: D. C. Heath & Co. 1889. 8vo, pp. 352.

THE author of this manual is an inspector of schools for the London School Board, and the book, from its "Boston, U. S. A.," on the title-page to its compact index, is British in every line. We have examined it with some care, and while we cannot recommend it for use as a finished product, we think it will be helpful to really intelligent and progressive teachers who know enough of natural history to discard obsolete systematic biology wherever they may find it, and yet would be grateful for a compend of economic fact and suggestion which would save them time in framing lessons. The scientific side of this book is inadequate and obsolete. The economic and encyclopedic side is much more what such a presentation should be. For ourselves we should prefer two books, such as Huxley for systematics and Simmonds's 'Commercial Products' for the rest, both being original authorities; but, for many, the accumulation of fact and suggestion in this book will be welcome, and its old-fashioned classification not a serious disadvantage.

BOOKS OF THE WEEK.

Cone, Rev. O. Essays, Doctrinal and Practical, by Fifteen Clergymen. Boston: Universalist Pub. House.
